It was impossible to find out in what way the sword is the seat of the tutelary spirit. It may be that it is constantly the seat of the spirit, but perhaps it is so only temporarily. The question is the same as in the case of the spirit-spear. The fact that the bands, the mirror, and the bells are often lacking argues against a permanent seat. On the other hand, one also finds swords that are provided with these. -- I once saw in a Chinese temple the sword of a deceased shaman, which

[28 cont.]

756
*778

[Note on foreign text p. 31-32 cont.]
was kept there for his successor. It was two-edged and on one side bore the Bear constellation engraved on it; on the other side was the name ... niang-niang, that is, ... mother. The name of that goddess has escaped me.

[32] The swords used by the shaman, however, are not always two-edged. The informant, it is true, claims that this is the case for the shamans of the Tujen; he commented that the Tujen formerly had had no two-edged swords, with the exception of their shamans. Among the same Chinese shamans, however, I also saw single-edged swords, which are called ma-tao, that is, horse-swords; they are easy to swing and formerly were used by horsemen.

[484]

Even while traveling, the shaman treats his sword with care and reverence. He wraps it in the red head-cloth and carries it upright in his arm in front of his chest, almost the way one carries a small child. When he puts up at an inn, he places it in a clean spot and first pays it reverence. At night he puts it under his neck roll. I was able to observe this on various occasions en route.

Besides the sword, which he must always use, the shaman has other objects that he can use, depending upon the kind of demons or ceremonies, for example: the hemp whip, which usually has a carved handle with a snake's head or death's-head; the demon fetters, likewise made of hemp with iron

[532]

[28 cont.]

756 rings at the end; the spirit-spear; the winnowing tray and the
*778 sieve (2).--He must make this equipment himself in accordance

> 2. [Foreign text p. 32.] In the case of one other temple shaman I also saw the bow and arrow as equipment. Incidentally, the shaman carries all the customary weapons. -- The spirit-sling is twisted out of hemp, wrapped in red cloth, and is about one meter long. The iron rings on it have a symbolic significance that I have forgotten. The Chinese, so far as I can recall, call the sling k'un-hsien-sheng, that is, spirit-binding string. In the accompanying photograph the shaman holds the sling with the ring in his left thumb.

[411]

with certain rules. He keeps it at home on the altar of his tutelary deity with the sword and the god's image.

756 The trance: The trance usually takes place in the house
787 in front of the altar. The shaman rinses out his mouth, washes
[783] his hands and face, presents an incense offering in the yard or
[782] before the altar, kowtows before the sword, and puts on his garb (3). The incense fire is maintained in the yard by other

> 3. [Foreign text p. 32.] He always puts on his costume with prayer.

men who also blow the conch (5).

> 5. [Foreign text p. 32.] Some claim that the shaman has to wash himself once more before the trance.

[576] Now a long, low table is placed in front of the altar, and the shaman sits on it in the Buddha position with his legs

[28 cont.]

756 crossed under him, his face turned toward the door, and his
787 back to the altar. He has placed his sword across his knees.
He holds a burning stick of incense upright in his hands in front
[576] of his chest, so that the smoke rises into his face. Then he
speaks the prayer of invitation to his tutelary spirit. Meanwhile
men make smoke around him with incense. Gradually his
hands begin to tremble; the movement passes to the arms,
chest, and head. Finally his entire body is trembling and
shaking, but especially the head with a violence that makes
the bells rattle. At this point the stick of incense is taken out
of his hand and he is given his sword (6). The spirit has now

6. [Foreign text p. 32.] The little stick is placed in the incense bowl.

[789] descended upon him. He begins to prophesy and to exorcise the demons.

The shaman may also choose another place for the trance, for instance, the temple, the house chapel, a mountain top,
* [778] an obo [a mound of stones dedicated to the mountain spirit], the yard. He never undertakes the trance on the kang in a side room. If there is a god's image with a soul on the household altar, he always sits down facing this image; in the case of the obo he must turn toward the obo. -- In front of the obo or on the mountain top he need not sit on a table, but can kneel on the bare ground. If he undertakes the trance in the yard of a compound, he goes to the side opposite the main house so that he has the round manger with the mani-tree before him and faces the main house. There he kneels upright on a white felt mat. The other ceremonies are the same.

The compound in which he undertakes the trance must first be swept clean; all the rooms are fumigated with incense. The [29] table or the mat on which he kneels must also be
[609] fumigated. -- There is no taboo for strangers, however; all may witness the ceremony. Women, however, may not enter
[562] the room in which the trance takes place.

[29 cont.]

756 787 Soothsaying: In the common form of soothsaying, the petitioner kowtows to the shaman in the trance and presents his request. He may also let an experienced man do the asking. The soothsayer then holds his breast-shield flat on his left hand, takes barley kernels from a little plate with the tip of the sword, and scatters them on the shield. From the pattern of the kernels he now gives his answer. Often he also moves in a violent trance and mumbles all kinds of disjointed words which a practiced man quickly writes down on paper and which afterwards are interpreted. In the trance, the soothsayer may speak any language, Tibetan, Chinese, Tujen, Mongolic, even if he has not learned it.

This soothsaying also precedes all the other ceremonies that he performs during the trance, such as exorcising demons, healing the sick, etc.

[562] Calling: The shamans are always men. When someone thinks that he has the ability to go into a trance, he goes to a quiet, remote spot and experiments with a staff, a sword, etc. In time he becomes proficient. He also becomes aware of which spirit takes possession of him. Frequently the people in [792] the village propose to a young man that he should try it once. * [778] If he then succeeds, they suggest that he have himself consecrated in the lamic monastery. -- Most shamans take up this 756 calling of their own accord. Those who receive the art from their fathers are not common. The shamans are always healthy, [158] normal men; they are only more easily excitable (7).

7. [Foreign text p. 32.] They do not form an organization of their own. True, I have been repeatedly told that in the sixth month on the first (?) or fifteenth day the shamans of the Hsi-ch'uan gather in a village near Tuopa (west of Hei-tsuei-p'u) and organize a kind of trance competition for an entire day. This custom, however, is supposedly recent.

[29 cont.]

756 Consecration: Once the young man has tested himself
787 and feels secure, he takes 12 loaves of steamed bread, three
792 loaves of baked bread, money, and a hada, and goes to the
*778 monastery. There he hands the gifts to a schooled lama with special praying power and requests the consecration.

First a test takes place. With the usual ceremonies, the shaman must put himself in a trance. He must indicate given objects; thorns are scattered on the floor and he is challenged to sit on them; whips are lashed in his direction, and in every possible way attempts are made to intimidate him. If he is a genuine shaman in a genuine trance, he is not afraid and is not injured. If his state is not genuine, he becomes frightened, backs away, or comes out of the trance.

At this point the presiding lama takes a hada (13),

[192] 13. [Foreign text p. 33.] Hada, Tib. k'a btags, is a scarf-like ceremonial cloth.

slings it around the shaman's neck, and asks which tutelary spirit revealed itself to him. The shaman then pronounces the name, kneels, and receives from the lama the instructions concerning his duties as shaman. Among these are the taboo and purification prescriptions, for example: he may not officiate when he
[783] is in mourning or when his wife is in confinement; also during this time he may not worship his tutelary spirit; after sexual intercourse and after enjoyment of tobacco and a considerable amount of liquor, he is unclean (11), and he must purify himself

[273] 11. [Foreign text p. 33.] Actually, liquor is not prohibited for the shamans. Here a Buddhistic prescription seems to be in effect, but in a weakened form, for a moderate consumption of liquor does not make the shaman unclean, only drunkenness does, although in the eyes of the Tujen this by no means represents anything morally objectionable.

[29 cont.]

756 before the [30] individual acts by inflicting wounds with the
787 sword, piercing his chest, licking red-hot iron, etc. Along with
792 this instruction, which is contained in certain Tibetan books,
the lama says the prayer of consecration over him.

*778 Then the shaman rises and washes his hands, face, and
[783] head with the water from the lama's holy can. He must likewise first rinse out his mouth. Then barley is thrown over him and he is fumigated with incense. The lama takes the hada that he had slung around his neck, makes a knot in it, folds it together, sticks it in a little rectangular red or yellow bag, and hangs this around the shaman; it is the amulet of his tutelary spirit and is called "protective fort" (8). In place of this hada,

8. [Foreign text p. 32.] It is unclear whether this hada is the seat of the tutelary spirit. In any case it is to be regarded as a protective amulet.

or together with this hada, the shaman may also wear on his chest a large case containing the figure of his tutelary spirit (9).

9. [Foreign text pp. 32-33.] The consecration ceremony might lead one to believe that the shaman is only capable of performing his office by means of it. In itself it has nothing to do with shamanizing. It is merely an official confirmation of one's capabilities, and also the people desire it. There
[184] are also shamans, however, who have not been consecrated in the monastery, especially among the people mixed with Chinese.

The consecration appears to admit the shamans to the position of lay monks, for among the monks there are also those who act as shamans and have certain prescriptions. Thus on the route from Hei-tsuei-tzu

[30 cont.]

756
787
792
*778

[Note on foreign text pp. 32-33 cont.]
to Shang-wu-chwang there is a village with a small lamasery [33] from which the shamans of Kumbum come, who appear especially on New Year's. As a missionary tells me, in the village there in quite recent times a young man was doing exercises almost daily, going into a trance on the river bank, fighting with a sword, shooting arrows, etc.

In any case all the lamaseries attach great importance to having a shaman who, possessed by the tutelary spirit dPekar, prophesies on New Year's. I observed these shamans in Kuo-mang-szu and Kumbum. In the Tujen lamasery, where a living shaman-monk was not to be found, I saw on New Year's a life-sized figure set up in full shaman regalia. At the sooth-
[791] saying on the fifteenth day, however, the spear-soothsayer acted in his stead in the temple yard, where the dances take place, before the hutukhtu, the assembled monks, and all the people. In Kuo-mang-
[562] szu I even saw a woman appear in the temple as a shaman, but she did not represent the usual type of sgurdien.

The lama does not put the shaman costume on his protégé. Usually he comes to the monastery without any costume and does not see to it until later. Frequently his own village helps to provide it. He makes the two-edged sword himself or has it made by the smith.

756 The tutelary spirit: The tutelary spirit always reveals
776 itself to the shaman; a lama cannot designate a tutelary spirit for anyone. The shaman often calls himself "spirit-
*[778] disciple" or "spirit-protégé." The spirit has its seat in the

[30 cont.]

756 sword. Frequently the shaman hangs an image of his tutelary
*778 spirit over the household altar. He must burn incense in front
[776] of it every day, just as before his sword; at certain times he
[782] sacrifices goats, sheep, or pigs to it.

The amulet cases with the image of the tutelary spirit
[439] are bought by the shamans in the monasteries or in the monastery
[792] markets. They are fairly expensive since they usually come from Peking, Shanghai, or Tibet.

756 Everything that the shaman does he does by virtue of his
776 tutelary spirit. As such the following come into consideration: the dragon gods, the tiger god, the great mother, and in general the many lower spirits of the yellow religion that can take possession of a person. Heaven, however, can never become the tutelary spirit of the shaman.

756 Task of the shaman: The sword-shaman is supposed to prophesy, heal the sick, conjure away storms, drive away demons.
463 He may not interfere in the activities of the lamas, Bon priests, or drum-shamans. For instance, he is not permitted to erect a mani-tree, but he may set up an ordinary mani-flag on the yard gate. Also, he may not undertake the ceremony of the pole-goat or hold sowing and harvest festivals; he does not officiate at funerals and weddings.

755 The ceremonies for healing the sick are quite manifold.
756 The following is the most common. First of all the shaman puts himself in a trance. Then a man brings him a large iron
[787] spoon filled with water. The shaman tears a piece of cloth from his protective mirror, throws it into the water, scatters some barley grains over it, and holds the spoon over the open [31] fire until the water boils and the cloth is thoroughly steeped. Then he takes out the cloth and gives the broth to the sick person to drink.

756 In order to purify or to punish themselves or in order to demonstrate their authenticity, they swallow fire, hold their
783 hand in the flames, pierce themselves with the sword, slit their bodies open, lick red-hot iron, etc.

[31 cont.]

Word List

192
756 The sword-shaman: sgurdien; gurdien (Tib. Tujen) (10); ku-wai-tien (Chin.); fa-la-tzu (Chin.); fa-shen-tzu-ti (Chin.); nañsuo (Tib.); Yao-shen-tzu-ti (Chin.); shen-ti-tzu (Chin.) = spirit disciple.

10. [Foreign text p. 33.] The Tujen strictly differentiate the sgurdien from the bō, the Chinese fa-shih, drum-shaman. The Chinese also make this distinction. They call the gurtum ku-êrh-tien or ku-wai-tien, which is nothing other than a phonetic imitation of the word sgurdien, which in turn comes from the Tibetan sku-rten, "body container." The gurtum is regarded as the container, the carrier of his tutelary god. See the precise explanation of the name in Part Two, "The Shaman Character of the Gurtum."

[787] To go into a trance: sgurdien bōdzia = the shaman has come down, (that is, he has begun to shake); fa-shen-tzu (Chin.) = to exc[illegible] the body; yao-shen-tzu (Chin.) = to shake the body.

[782] The prayer of invitation (before the trance): ǵsolkā (Tib. loan-word); ch'ing-tsan (Chin.) = praise.

Consecration prayer of the lama over the shaman: guo šguē (Tib. and Tuj.).

[792] Great lama: ching-fa ta-ti lama (Chin.) = lama with great power for prayer and magic.

*[778] The table upon which the shaman goes into a trance: t'iao-chuo-tzu (Chin.) = long table.

[31 cont.]

192 The shaman's sword: aradzi = two-edged sword; wadăm (Tib.) (12); chien (Chin.).

756

*[778]

12. [Foreign text p. 33.] wadam: Tibetan dpa-gdam = sword. -- sõnkuor: Tibetan skyon = protection, 'k[illegible] = little disks (Unkrig).

[776] The tutelary-spirit -- hada: šdien = the consecrated, as it is called before it is stuck in the bag; sõnkuor (Tib. loanword) (12) [see note 12 above] = protective fort, as it is called when it is inside the bag; the amulet is also called this.

*[778] Chest-mirror: mălõn (Tib. loanword); hu-hsin ching (Chin.) = the mirror protecting the heart.

Headcloth: tolgue bãnladzin = the head covering.

pao-chin = packing cloth (Chin.).

Rattles: xõnguor; ling-êrh (Chin.).

Plowshare: timur ndziesẽ; t'ieh-hua (Chin.).

Thorns: huang-ts'ê (Chin.).

[789] To banish devils: ilie sdzira; pudag sdzira = to banish filth.

Recompense for the shaman: hsiang-ch'ien = incense money.

[Pages 31-33 contain the notes given above as numbered footnotes.]

[33] 3. The Bon Priest*

791

* See "Notes," pp. 34-35 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

There are two kinds of Bon priests: the nomads and the

[33 cont.]

791 farmers (1). The Bon priests of the nomads are now found only

[792]

1. [Foreign text p. 34.] There are also Bon priests who live in monasteries. Such a monastery is found near the Tujen monastery Rgulõn. The inmates of this monastery, however, do not wear any special garb, but are dressed like laymen. The lamas prefer to invite them for certain ceremonies to exorcise demons. -- The other farmer-Bon are only very rarely seen any more. They live like everyone else, marry, and work the fields.

among the Fandse, although formerly some were also Tujen. They have a very long, thick queue, which they wear wound around the head, and a long red garment with a red or yellow belt. -- The present-day Bon priests of the Tujen have almost died out; they are ordinary farmers and are distinguished from the other shamans or soothsayers as follows:

Details

791 Clothing: They wear ordinary garb: in winter a fur, and in summer the long coat. They do not wear trousers (2). They

292

[177]

2. [Foreign text p. 35.] The fact that they do not wear trousers may indicate an origin from the Fandse, who formerly did not wear trousers, as is still customary for their women and lamas.

take off their shoes during prayer on the kang. They do not have any special official dress. [34] They only put a wreath of wild-pig bristles around the head (3), which are supposed to

3. [Foreign text p. 35.] The informant did not know why they have to be wild-pig bristles.

represent long hair.

[34 cont.]
000 represent long hair.

791 Equipment: Like the lamas, they have a bell, a large, two-
778 sided drum, a small double-drum (hourglass drum); for exorcising
534 demons they use a whip made of human skin and a bone flute.
[789] Furthermore, they have Tibetan books, sounding boards, and
thunderbolt.

[765] The drum was formerly made of human skulls, over which human skin was stretched for the drumhead. The whip had a handle of human bones. The flute was made of the shinbone of a full-grown girl who had not yet married and had lost her life through suicide or an accident. It is open at one end and cut off smoothly. This end serves as mouthpiece and is inlaid with metal. The other end has a small hole on each of the two condyles. The flute is wrapped with the girl's skin; it is sewed tight (5). The same skin is also used for plaiting the whip and

5. [Foreign text p. 35.] The reports vary concerning the bone from which the flute is made. Most of them say that it is the shinbone; others claim that it is the thigh bone. I did not learn anywhere that the periosteum had to be eaten. --The flute has an uncannily plaintive tone; it has an especially penetrating effect at night, when it is often heard in lamaseries. -- The Bon also try to drive away
[789] unpleasant events with the sound of the flute, for example, a punitive expedition, tax collectors, soldiers, etc., as happened in Kweiteh, for instance.

covering the drum. There are certain regulations for the manufacture of these objects. The Bon priest makes the implements himself (4).

4. [Foreign text p. 35.] What is here said concerning the making of the flute, drum, and whip is confirmed by other people, but no one has seen how they are made in detail. Some say it has to be a girl who has not yet

[34 cont.]

791
778
534

[Note on foreign text p. 35 cont.] menstruated; others maintain the opposite. At any rate, she has to be an unmarried person. In this connection cf. what is said in the section concerning death customs and cremation: that they are demons and are especially feared by demons.

791 [789] Activities: A special activity of the Bon priests is the erection of the pole-goat and conjuring away storms, as well as the making and conjuring of the figure-litter. Otherwise they have almost the same activities as the other soothsayers: they designate lucky days for housebuilding, traveling, etc.; they question fate concerning sickness and medicine, For soothsaying, [787] however, they use no special instruments; instead they have books from which they take everything. There are also Bon [755] priests who have learned to take the pulse and to prescribe medicines and are able to cure without magic. -- The Bon priests do not go into a trance, but only pray (6).

6. [Foreign text p. 35] The Bon are regarded with a kind of secret fear by the Tujen. They also have something to do with springs and mountains. It is said that they often dwell alone in tents in remote ravines and at wells throughout the summer. There they pray, conjure away storms, etc. Perhaps this seclusion contributes to the fact that all kinds of uncanny machinations are reported of them.

Word List

192
791

Shepherd-Bon: sënogsa (snagsa) (7); ch'an-t'ou peng-po (Chin.) = Bon with queue wound up.

[34 cont.]

192
791

7. [Foreign text p. 35.] dziliu: Tibetan dril bu = bell. -- kãṅgergë: Mongolic k'eng-gerge = drum. -- sënoġsa (snaġsa): Tibetan shags pa = sorcerer; shags bon = Bon priest. -- (n)duombora: Tibetan sdom = to bind, spu = hair, ra = wreath. -- šgãṅdõṅ: Tibetan rkaṅ = shinbone, duṅ = trumpet, snail. -- ndarë: probably a literary botching of the Sanskritic damaru (Unkrig).

Farmer-Bon: xuändie; su-jen peng-po (Chin.) = Lay-Bon.
Bon priest (in general): peng-po-tzu (Chin.).
Hair wreath of the farmer-Bon: (n)duombōra (Tib. and Tujen) (7) [see Note 7 above].
[778] Bone flute: šgãṅ-dõṅ (Tib. and Tujen); chuo-pa (Chin.) = shinbone (7) [see Note 7 above].
[534] Hourglass drum: ndarë (Tib. loanword) (7) [see Note 7 above]; pa-lang-ku (Chin.).
Bell: dziliu (7) [see Note 7 above]; ling-tang (Chin.).
Whip: p'i-pien-tzu (Chin.) = skin-whip.
Big drum: ta-ku (Chin.); kãṅgärgë.

[35]
792

4. The Lama (Lama-Reception)*

*See "Notes," pp. 41-43 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

There are many ceremonies to which a lama is invited.

[35 cont.]

792 A distinction is made between great and small lamas. The great ones are usually Living Buddhas (hutukhtu) (1).

792
796
574

1. [Foreign text p. 41.] The following presentation applies primarily to the reception of a hutukhtu. In case of lesser lamas the ceremonies are simpler. -- Divine images, for instance, the litter of the Kuan Yin, of the tiger god, etc., also receive a similar reception when they are brought into the house for exorcising evil. Unfortunately I was unable to take down the corresponding ceremonies. I once saw such a god's litter standing on a house roof. -- The lama-reception was observed by me personally.

Before one invites a lama, the house must be cleaned. A special room is prepared, in which the lama prays and sleeps. Then the people go to get him with horses. In the case of a great lama, the entire village participates in the reception. As soon as he enters the compound, incense is offered and the conch is blown. He is led into the house and given hospitality. Afterwards he gives the book-blessing in the yard and begins his ceremonies.

[36] [Fig. 3 appears here.]

792 The lama always makes a number of tormas, in front of
[778] which little water-bowls are offered. He also has with him the same objects that he has in the monastery. -- When he finishes the ceremonies he is paid. Usually the monks of the monastery are also fed at that time.

Details

792 Preparations: Before anyone invites a lama, he consults
796 with him about the time. The soothsayer sets the day for the
574 ceremonies accordingly. For instance, if according to the

[36 cont.]

Fig. 3

778
534

[532] a. Torma; b. torma; c. wumba-can of the lama; d. thunderbolt (dordzi); e. bell. (Drawing by a Tujen.)

792 soothsaying the setting up of a mani-tree is supposed to take place
791 on the fifteenth day of a given month, then the lama must come
574 a week in advance because a prayer service of several days always precedes it. Only the higher lamas stay for just a day. The preparations are always carried out by the master of the household with the assistance of the mother's brother.

On the day before, the yard and all the rooms of the house are swept clean. The men fumigate all the rooms with the red-hot stone and the incense fire, so that no demons will carry on their mischief. For the lama, the host reserves the best room in the main house, which immediately adjoins the chapel or the household altar. He spreads one or two layers of white or red felt mats on the kang and places two beautiful saddle-blankets over them, one for the lama and one for his assistant. The place on which the lama is to sit is indicated by a hada. The latter is regarded as an honored memento and is later hung by the household altar.

Between the two blankets there is a fire basin with a large teakettle. Behind it there is a kang table with the food: a [262] round wooden bowl of tsamba on which several pieces of buttered

[36 cont.]

792 bread have been placed in a pyramid and crowned with a red
796 date; a little box with tschürra (dry curds) for kneading tsamba;
574 a number of small [37] plates with black and white sugar, candy
[262] sugar, currants, and dates; a number of small plates of goods baked with sugar and oil. -- Later, when the lama performs his ceremonies, the things are cleared away so that an empty table is at his disposal.

Hutukhtus or higher lamas send ordinary, serving lamas to the people a few days in advance to prepare the room and the things needed for the ceremonies. They also help in the kitchen because they know best which dishes their hutukhtu prefers. They also see to it that the riding animals of the monastery are properly [492] accommodated.

The fetching of the lama: On the stipulated day the young men and boys of the village set out for the lamic monastery with the most beautiful and fastest horses. Some of them ride all the way to the monastery itself; some wait halfway. The hutukhtu [492] always rides on his own animal; it must be a white horse. The other lamas, on the other hand, may use any animals available.

When at the halfway point the lama meets the troop that has come to fetch him, the oldest man steps forward and hands the lama a hada. He accepts it and touches the kneeling man's forehead. Then the youngest with the fastest horses leap into the saddle and ride ahead at a wild gallop in order to announce the news of the lama's arrival in the village. The lama likewise tries to follow at a rapid pace. Only the old lamas take their time. This fetching is called single fetching. Sometimes the fetching is done in two or three stages; then it is called double or triple fetching. Each time the ceremonies of handing over the hada and of the blessing are repeated. In the case of the third troup, however, the fetchers are on foot, for they only go just outside the village.

Reception: As soon as the messengers come riding in, the entire village gathers in front of the house that has invited the lama. All are wearing their best clothes. On the threshing

[37 cont.] On the threshing
792 floor the women and children tirelessly perform their round
796 dances with song, so that one can hear them from afar; the
574 lama is supposed to see how joyfully they welcome him. Out-
[535] side the village all get off their horses; only the lama rides on alone. A man leads his horse by the reins.

As soon as he comes to the gate of the yard, a kang table is placed on the left side of the horse, and a white mat is put over it. The men help the lama out of the saddle, and all kowtow; only the women go on dancing without interruption. The lama steps out of the stirrups onto the table that has been set there and then strides toward the gate, where the master of the household is kneeling. He has placed a hada over his raised hands, and with it he extends to the lama a white bowl of milk with a cypress twig. The lama dips the twig into the milk, sprinkles the gate posts with it, and enters. The incense offering rises in the yard; people blow on all the conches they have. The men draw the lama forward with burning [38] sticks of incense and escort him to his room. There he sits down on the place indicated by the hada. The hada, however, is taken away.

792 The blessing: First of all, the lama rests with his com-
796 panions. The master of ceremonies pours him some tea and
574 invites him to fortify himself. Then the lama recites certain prayers. Meanwhile the yard fills with guests.
788 At this point the master of the household enters the guest room, hands the lama a hada, kowtows, and requests him to come out in order to bless the people. The lama gives him a few small gifts, which he has brought with him, with a hada. Then he rises and goes out. Outside there is an armchair with a cushion; the lama sits down on it, his back turned toward the main house; a white felt mat is spread in front of him.
[554] Now the people move past him according to rank, first the men, then the women. Each person bows low before him while he touches the forehead or the crown of the head of everyone with his prayer book. His assistant stands at his side. After this ceremony he again withdraws into the house. [Figs. 4 and 5 appear here.]

[38 cont.]

792
796
782
778

Prayer service: Now he begins his prayer service. Before each prayer service a few tormas are made; if he is a great lama, his assistants see to it. The tormas vary and represent offerings to the gods. In part they are left standing on the table, or they are taken to the household altar. Before that comes a series of little water bowls, grain bowls, liquor bowls (3),

3. [Foreign text p. 41.] There is a definite number and order for these little bowls. The water offering plays an important role in the monastic cult, cf. Kumbum, p. 251. The Tujen and Chia-Hsifan [Sifan] frequently present the water offering in the morning. Thus,

534
354
532

Fig. 4.

Fig. 5

Fig. 4. Two hourglass drums. (Drawing of a Tujen.) Fig. 5. Butter-lamp.

I once saw how an old man got up in the morning, washed himself, burned incense, put a large copper bowl and 12 little bowls of water on the household altar, kowtowed three times in the courtyard, one of these in the direction of Kumbum, kowtowed three times in front of the household altar, and then emptied the water bowls.

and butter-lamps, which are always kept burning. Later these tormas are either taken away or eaten by the family, and sometimes thrown

[38 cont.]

792 to the animals (2).

796
782
778
[192]

2. [Foreign text p. 41.] Concerning šdorma, the DMF writes (p. 338): "pyramidal figures made of grilled dough and offered to the spirits to ward off their evil influences. Cf. Tib. gtor-ma, id. (Mong. turma, tuurma, turuma...)" [translated from French]. Ch. Das characterizes (p. 527) the expression gtor-ma, which in turn goes back to a Sanskrit word, as cast offering: "sacrificial objects, i.e., that which is strewn or scattered or given away" [cited in English]. They are said to consist mostly of dough (rice, barley, etc.), to have a pyramidal shape, and are supposed to ward off dangers, to pacify the spirits, etc. -- Much has been written concerning the meaning of the gtor-ma; in this connection cf. the accounts in Filchner (Unkrig): Kumbum, Ch. XIV. The Tujen conceive of the torma as the seat of a demon or of a god or as spirit food. It does not remain a permanent seat, however, but only during the time of the ceremonies. The spirit is conjured into it by the lama. I was unable to ascertain the name balih among them. As spirit food they call it by the Chinese word szu-shih, that is, offering food, but there is another interpretation, namely "corpse," which also has the form szu-shih. This is what they call the

[38 cont.]

792
796
782
778

[Note on foreign text p. 41 cont.]
torma that at the conclusion of the tsam dance on New Year's is carried off and burned as the murdered enemy of the religion. -- They also call the mandala-figure torma, for instance, during the erection of the pole-goat. -- The fact that the torma has a sacral function for only a brief time explains why it is no longer given any attention after the ceremonies, but is thrown away, given to the animals to eat, or even eaten by the people themselves.

Insofar as I was able to establish among the Tujen, the tormas are always made only of tsamba and butter, and not, as Filchner (Unkrig) writes, loc. cit., out of sour dough. It may be that this kind of preparation is peculiar to the monasteries.

The cult implements of the hutukhtu are the same as those he uses at home in the monastery, to wit, the holy water-can with the peacock feather, the hourglass drum, the thunderbolt, and the hand bell. He always has these things ready at hand on the table. He always holds his mani-string in his hand. While praying he does not sit at the side, but behind the table, on the kang and facing the door. He lays his prayer book in front of him on his knees or on the kang table. Sometimes he also gives the [788] water blessing while the others prepare the tormas. For this purpose he has pure spring water poured into the [39] holy can; one of the assistants throws consecrated spices into it and places the can on a little plate with Tibet barley. The lama then recites the prayer of blessing over it.

792
796
574
465

Prayer fee: During the time of his stay the lama is entertained very hospitably. The master of the household, who is also called "master of gifts," must serve him personally. The

[39 cont.]

792 lama, however, does not have his principal meal at noon, like
796 the other guests, but only in the late afternoon. In order to en-
465 tertain him men and women dance and sing in the yard. Only in the case of very high hutukhtus is there no dancing.

[574] On the last day, after the lama's morning meal, but while
[535] he is still drinking tea on the kang, the master of gifts appears with the ceremonial helpers and with many words expresses his gratitude for the visit and the prayer. Then he hands him a tray with the gifts, over which a hada is spread, and the master of gifts announces what the lama is receiving for his services. This hada over the tray is called "speech hada." The things are put in front of the lama on the table and kowtows are made three times. The assistants, too, receive appropriate gifts.

The fee varies according to the wealth of the master of gifts, the position of the lama, and the ceremonies performed. Usually it consists of several back-baskets of bread (5), some

5. [Foreign text p. 42.] A back-basket holds 24 loaves. The red cloth is for the lama's clothing. Why only grain and money are thought of as a unity and designated by the same name, mbō, is unclear to me. According to the DMF, it comes from the Tibetan p'ogs, "fee."

pieces of mutton (4), silver money, and red cloth. Wealthy

[262] 4. [Foreign text p. 42.] Although
[782] Buddhism prohibits killing, the lamas, as well as the hutukhtus, eat flesh in all forms, as I repeatedly was able to observe. In the monastery Kuo-mang-szu I once noted that a sacrificial sheep, skinned and eviscerated, was set on a sacrificial table in front of the temple door. During

[39 cont.]

792
796
465
[262]
[782]

[Note on foreign text p. 42 cont.]
the subsequent prayer ceremonies, the master of gifts, who had sacrificed this sheep, had the flesh cooked and a piece served to each of the monks in the temple during a pause in the prayer. It is therefore not surprising that the lama receives a loin of mutton for his fee. Since the Tujen, however, do not sacrifice a sheep in the presence of a lama (cf. the chapter, "The Mani-tree"), it seems to be a matter of not performing the killing itself before the eyes of the lama or in the same yard.

people give much more, for instance, beautiful horses, ornamental pendants, cloth, etc. When it is a matter of great
[782] occasions, a prayer service is even ordered for the monastery during the time that the lama stays with the master of gifts. During these days the master of gifts provides all the monks with rice, sugar, butter, and tea. Even pilgrims who stay in
[788] the monastery during these days and "stop in" to honor and to pray for the master of gifts are provided for and also receive alms for the journey.

[782] The masters of gifts also usually donate the prayer tea for the entire monastery, which is drunk during the ceremonial
[272] in the prayer hall, for example, at funerals, etc. Often they also set up a great number of butter-lamps in the temple at this
[354] time, or at least they donate the butter for the lamps. [Fig. 6 appears here.]

792 Return: After the lama has received his gifts, he is cere-
796 monially escorted out of the gate of the yard. An incense offering is again presented, but otherwise no further ceremonies
574 take place. The white horse is brought up, a kang table with a felt mat is set up for mounting, and the lama is lifted into the saddle. Then the men escort him out of the village. There

[39 cont.]

792 is no actual escort in a procession with horses as at the recep-
796 tion. The lama rides back alone with his monks. Only the
574 gifts are brought after him on animals.

[40] The hutukhtus are always received in this festive manner. Lesser lamas, for instance, those who come just to pray at an obo, are accorded a simple reception. A similar procedure is followed for the Bon priests, shamans, and soothsayers. [465] They are not fetched ceremonially, and they are given only a moderate fee.

351
796 Taboo of the compound: At many prayer ceremonies of the lama, the compound is forbidden to strangers. This is
784 called "to forbid the door." Whoever is not present at the be-
[609] ginning of the performance may not enter the yard. On the
[792] other hand, people who were in the yard from the beginning
[211] may later come and go freely (7). In order to mark the yard as
[177]

7. [Foreign text p. 42.] According to other statements, this applies only to the occupants of the house. Guests who go away may not return.

prohibited (taboo), the master of the household attaches a cypress or fir twig or a sieve to the gate of the yard (8).

8. [Foreign text p. 42.] The informant

[534]

Fig. 6. Shells.

[532]

(Drawing of a Tujen.)

351 [40 cont.]
796
784
211
[177]

[Note on foreign text p. 42 cont.] maintains that formerly the Tujen used no sieve and that they learned of it from the Chinese. Nowadays paper is commonly used when it is a matter of a taboo that is not connected with the prayer service. Thus the people stick a rectangular piece of red paper to the gate intrados, on the right when, for example, there is sickness in the compound, and on the left when a woman is in confinement there. White paper is used when someone has died, a custom that probably comes from the Chinese.

[574] The taboo always lasts for several days, three, five, seven, always an odd number, and always as long as the lama is staying [792] at the house, as well as two days afterwards. If, for example, the lama is there only one day, the taboo lasts three days; if he is there three days, it lasts five days, etc. If he is in the house for seven days, however, the taboo lasts for an entire week after his departure (9).

9. [Foreign text pp. 42-43.] The taboo regulations mentioned here also apply to other religious ceremonies, even when no lama or Bon priest is invited. The taboo is then in force for only three days, however. -- Even the best friends are not admitted into the house, but are dealt with by the gate of the yard. For this reason they must first call out loudly so that someone will come out.

[43] Sometimes the people also say that in case of illness the yard is [751] marked not out of fear of the spirits, but

351 [40 cont.]
796
784
211
757

[Note on foreign text p. 43 cont.]
rather in order to give strangers a signal so that they will not be infected and will stay outside.

Word List

192
792 Lama: lama; ho-shang (Chin.).
Lama of the Yellow Sect: gẽlõñba (Tib.); sira lama.
Lama of the Red Sect: fulan lama.
Great lama: šge lama; ching-fa ta-ti lama (Chin.).
Small lama: mula lama.
Hutukhtu (6): sãñ (10); šge sãñ = great H.; mula sãñ = small H.
huo-fuo (Chin.) = Living Buddha; fo-yeh = Buddha.

6. [Foreign text p. 42.] The common people know little about the hierarchy among the monks. They know great and small lamas. Among the great they count the hutukhtu, the tsüordzi and the kãnbõ. According to their conception, a great lama is especially learned, knows many magical practices, and therefore has special power. The small lamas have only a little learning and are able to perform only minor ceremonies, for instance, the obo prayer.

[775] The hutukhtus are regarded as Buddhic incarnations. In this the common people do not differentiate between Buddhas and bodhisattvas. Among them everything is fuo-yeh, that is, Buddha-Father. They use this Chinese name for everything that is the seat of the spirit or a spirit itself, in other words, also for the incarnations

[778]
[775]

[40 cont.]

192
792
778
775

[Note on foreign text p. 42 cont.] (Tulkus), the spirit-spear, gods' statues with souls. Sometimes, for the sake of clarity, they designate the incarnations as huo-fuo (Chinese), that is, Living Buddha. The Tujen name purġan is usually used only for the spirits and the spirit seats with souls. Sometimes one hears the expression sãṅ or sãṅrẽ-dzi. I have never encountered the names Tulku, Hutukhtu, or Gegen, which in the Tujen language has the same meaning as sãṅ, the enlightened one.

192
792
796

10. [Foreign text p. 43.] sãṅrẽdzi: Tibetan saṅs = pure, rgyas = spread out. -- ġdzo: Tibetan ġzo = to remind, to bring to mind; dãṅwu: Tibetan daṅ po = first time; niwa: Tibetan gñis pa = second time; gdzänba: Tibetan gsum pa = third time. -- simier: Tibetan ǰis = fortune, mar = butter. -- sidar: Tibetan ǰis = fortune, dar = silk cloth. -- sändzõṅ: Tibetan ts'em bzaṅ = cloth good. -- dõṅsär: Tibetan bdun = seven, gser = golden; the seven golden ones. -- lamar: Tibetan la = wax (from the Chinese), mar = butter. -- dordzi: Tibetan rdo = stone, rje = master. -- bosẽ: perhaps from the Mongolic; püse = trade, business; cf. Chin. p'u-tzu. -- mäntsia: Tibetan maṅ = ample, ja = tea (Unkrig).

[40 cont.]

192 Lama-reception: lama ndziala.

792 Lama blessing: ndziärgän (Tib.) - in rows.

First fetching: ġdzõ dãñwu (Tib. loanword) (10) [see
796 Note on preceding page].

574 Second fetching: ġdzõ niwa (Tib. loanword) (10) [see Note 10 on preceding page].

Third fetching: ġdzõ ġdzãmba (Tib. loanword) 10 [see Note 10 on preceding page].

192 Tsamba bowl with buttered slices: simier (10) [see Note 10 on
262 preceding page].

796 Little plate with baked goods: sẽtoġ.

Sugar candy: ping-t'ang (Chin.).

Apple: hai-t'ang (Chin.).

Nuts: ho-t'ao (Chin.).

Dates: sa-tsao-êrh (Chin.).

Dry curds: tsũra (Tib., Tuj.).

Oil sticks: san-tzu (Chin.).

Filled loaves: taġur.

Oil pies: yu-pao-tzu (Chin.).

192 Speech hada: sidãr (Tib. loanword) (10) [see Note 10
796 on preceding page].

Red cloth (which one presents to the lama): sãndzõñ (10) [see Note 10 on preceding page].

Grain with money: mbõ.

Loin of mutton (also the entire sheep): ndžuãn.

[778] Torma: šdorma (Tib. loanword) (2) [see Note 2 above].

Little copper bowl with water, grain, etc.: dõñsär (Tib. loanword) (10) [see Note 10 on preceding page].

Butter-lamp: lamar (Tib. loanword) (10) [see Note 10 on preceding page].

[778] Holy water-can: wumbã (Tib. loanword).

Peacock's feather: k'un-ch'üo-mao (Chin.).

Thunderbolt: dordzi (Tib., Tuj.).

[41]

[534] Hourglass drum: ndarẽ.

Mani-string: mani.

[41 cont.]

192 Prayer fee: bosë (10) [see Note 10 on p. 67].

796 Tea provided in the lamic monastery: mäntsia (mändzia) (10) [see Note 10 on p. 67].

[784] Taboo of the compound: udie dzilä-; chi-men (Chin.) = to forbid the door.

[357]

Report

372

782

Every day at sunrise the house and yard are swept clean.

512 The housewife fans the family fire on the kang, around which

[356] young and old gather during the day. The master of the house

[783] washes his hands and face (1), takes some coals from the fire,

[515]

1. [Foreign text p. 46.] This ablution is undertaken for all religious activities, and it is also the common way of washing oneself in the morning. Since wash-bowls are unknown or have been used only recently, it is done in the following way: one takes a mouthful of water from a bowl and rinses the mouth; then he

372 [43 cont.]
782
572
[783]
[575]

[Note on foreign text p. 46 cont.]
takes a second mouthful and lets it run out of the mouth over the cupped hands and washes them; the third mouthful, allowed to run into the hand in the same way, serves to wash the face. This is repeated as desired, until one is clean. In case someone has a washbowl, he may under no circumstances forget to rinse his mouth, because that is part of the purification for a religious ceremony.

and puts them on the incense plate under the mani-tree out in the yard. There he blows on the coals to make a large flame, throws cypress twigs, butter, tsamba, flowers, spices, tea leaves, sugar, and a number of colored threads into it, and finally sprinkles the fire with pure water. Then, when the smoke rises up, the conch is blown, and the master of the house, as well as all those standing by, makes a three-fold [788] kowtow three times in front of the fire. With this the morning offering is concluded, and all go to their daily work.

Details

782 Persons: Usually the master of the household presents the [592] incense offering. In his stead, however, another male member [562] of the family may perform the act, but never women, unless there is no male person in the house and the children are still too small. Women may be present and make the kowtow, just as they also sweep the yard, set the things in readiness, and even hand them over for the offering. The conch is usually blown by someone who does not perform the offering. If the master of the household making the offering does it himself, it is done before the kowtow.

[43 cont.]

782 Time: The incense offering is to be given as early as possible, as soon as the morning twilight appears. One is not allowed to wait until the sun is high. Nowadays, even though [178] the families are no longer pious, [44] they will nonetheless give the incense offering at the least on the first, eighth, and fifteenth day of the lunar month. On these three days small butter- or [178] oil-lamps are also lighted in the house in front of the Buddha images.

782 Place: The usual place for the morning offering is the 778 yard. One may also go into the local temple or in front of the obo. This is also usually done on the above-mentioned three days. In the yard itself the fireplace is the incense plate on the central fort in front of the mani-pole (2). If there is no

[192]

2. [Foreign text p. 46.] The incense plate is called fdzãñ tše = incense terrace. The Chinese call it sang lu-tzu = cypress-incense oven. In many instances, the Tujen have taken over the Chinese incense oven. It looks like a small temple. Frequently people also make do with a small clay niche. The incense plate on the edge of the round manger is either a stone plate, a brick (tile), or a smooth layer of clay.

[177]

incense plate, the master of the household burns the incense in the central fort (round manger) itself, or on the ground in front of it. Each time, however, the area must first be swept. Worship in front of the fire does not take place directly in front of it; instead people go around the round manger, so that the round manger with the mani-tree, then the fire, then the main house, and finally the mountains behind it are before one. The other persons are also there. No one may ever stand between the fire and the main house.

[44 cont.]

782 Offerings: The fire[1] need not be taken from the hearth or
372 from the kang. It may be freshly lighted in the yard. It is all the same no matter which device is used for starting the fire, matches, flint, etc. To feed the fire when kindling it, straw is most commonly used. Malodorous fuels, like coal, dried dung, etc., which otherwise prevail in profane use, are not allowed.

782 The twigs of the cypress tree serve as incense (3).
824

3. [Foreign text pp. 46-47.] The cypress used for incense is the tuja tree, vulgar: tree of life. Everywhere in Tsinghai this tree is regarded as a superior tree, even among the Chinese, who prefer to use its wood for coffins. The Chinese name is pai-shu (pei-shu or pei-mu) = cedar, juniper, cypress. The Tujen word šgua is a contraction of the Tibetan šug-pa. šug-pa, as the juniper group is called, is native to Tibet: Juniperus excelsa, Juniperus squamosa, Juniperus communis. See Ch. Das, p. 1239 ff. saṅs šiṅ is given there as a synonym: wood of purity. saṅs, however, may also mean "to vaporize, to evaporate," etc.; cf. loc. cit., p. 1265: "evaporation" [cited in English]. Of the other synonyms, lha-yi šiṅ (gods-tree) should be mentioned because the informant, too, maintains that the tree is sacred to Lhamo. If genuine juniper is available, for instance, in wild mountain regions, it, with its berries, is preferred for the incense burning. The Tujen word fdzaṅ (šdzaṅ, saṅ), according to the informant, comes from the

[778]

[1] [i.e. the fire for the morning offering — ANALYST]

[44 cont.]

782
824

[Note on foreign text p. 46-47 cont.] Tibetan. Thus, it corresponds to bsaṅs (Ch. Das, p. 1316), "incense." -- In Mongolic the expression for this is sang idegen, "incense-food" (Unkrig). -- The Chinese, too, have taken over this word, at least in Tsinghai, and call the cypress-incense sang. In addition, they have the Chinese expression pei-hsiang: cypress-incense. They call the stick incense, in other words, the incense candles, simply hsiang or pan-hsiang (perhaps: blossom-incense); pan-hsiang is also used as a verb, to burn incense in honor of a person (rarely used). -- For "to burn incense" [47] the Tujen say fdzaṅ ġarġa, "to release incense (to let rise)." They differentiate two types. One is the "great incense," šge fdzaṅ. This incense offering always takes place in the open, and for it complete little branches and twigs are burned. The other kind is the "small incense," mula fdzaṅ. For the latter, not whole twigs, but cypress needles, which are first pounded into an incense powder, are scattered into the fire. It burns very rapidly and makes a great deal of smoke, but produces no wood-smoke. This type is preferred for incense offerings in the house and for fumigating objects at purification ceremonies.

[783]

[778] This tree is consecrated to the mother-goddess Lhamo. The blossoms are supposed to have a pleasant fragrance, no matter what color they are. The more manifold and colorful the kinds are, the better it is. To be sure, they are dried first, so that they will burn well.

[44 cont.]

782 Instead of butter, dry cream may also be used, regardless of whether the milk was boiled or raw. If no tsamba happens to be on hand (5), burned wheat or barley flour is permitted, but

5. [Foreign text pp. 47-48.] Even today the Tujen kitchen cannot be imagined without tsamba. They roast ch'ing-k'o (Chinese) or šbē (Tuj.), that is, spelt, kiln-dried unripe grain, and grind it in a handmill. This roasted-grain flour is eaten exactly as among the Tibetans (Fandse). After the consumption of butter tea, tsamba is [48] kneaded into a dry dough in the tea bowl with the remainder of the tea and the butter floating on it, and it is then eaten in the form of little pellets or little sausages. -- The tsamba that is used for the incense offering, however, may not be kept with the ordinary tsamba. Every family has a special little box for it. -- Concerning šdē, ch'ing-k'o, cf. Schröder, "Wedding Songs," for further details.

[262] [252] [171] [264]

[783] never bean flour, because it is unclean. In the case of the [263] sugar, there are no special prescriptions concerning the color; therefore they usually take the red because it is cheaper than the white.

The spices that are scattered into the fire as a fragrant [439] addition have been purchased in some Chinese apothecary shop. [824] They are called "earth-god spices," or simply "addition" (4).

[192] 4. [Foreign text p. 47.] The word rdzē, designated as a Tibetan loan-word, corresponds to rdsas (Unkrig); the equivalent given in the DMF, 'dre,

[44 cont.]

782
192

[Note on foreign text p. 47 cont.]
"evil spirit (?)" (p. 311), is misleading. Ch. Das (p. 1057) gives the meaning: "an article, thing, material, object" [cited in English], and further: de'i rdsas, "requisites for this purpose (sc., unclean matters); especially for sacrifices, sorceries, etc., hence also used as identical with magical agency" [cited in English]. This last signification is applicable to the accompanying gifts and offerings in connection with conjuring away demons; cf. rdzē in the chapters, "The Demon Escort," "The Figure Conjuring," etc. The explanation in the DMF (p. 311) is also in accord with this: "object that one releases with the aim of being freed from an evil (money or some other object is added to it), ransom" [translated from French]. rdzē, therefore, is to be understood in the very widest sense as outfit, utensils, provision of the gods (clothes, rings, viaticum), additions to the offering, etc., as is shown by the plethora of the incense gifts. These additions correspond extensively with the additions for the earth-god's urn (treasure urn), but they probably are to be traced back only to Lamaist influence, for in the Tujen songs that mention the incense offering they are never mentioned, in contrast to the tree of life, the water, and the flowers, which are never absent. The most important flower, mentioned again and again,

[177]

[824]

[44 cont.]

782
192
824

is the kanba; cf. Part Two, "The Incense Offering." This flower has a strong, very fragrant scent which can be perceived far and wide at the incense offering. The Tujen name corresponds with the Tibetan (Unkrig). Ch. Das (p. 140) translates k'am-pa as Tanacetum tomentosum and designates it as a "very aromatic plant growing in the high mountains of Tibet" [cited in English]. Dinand identifies the flower as the tansy, Tanacetum vulgare; cf. Handbuch der Heilpflanzen [Handbook of Medicinal Plants], p. 211, with illustration, Pl. XXIII, 2. According to G.A. Stuart, it belongs to the species Artemisia vulgaris, which is exceedingly aromatic. He distinguishes three kinds: Artemisia Indica, -- Sinensis (ai-hao), -- moxa; cf. Chinese materia medica, p. 52. -- From the use of the cypress and the flowers, one can conclude that from the outset the incense offering is to be conceived of, not as a burned offering, but as an aromatic offering. -- For further details concerning the incense offering, see Part Two. -- With respect to rdzē, cf. also the chapter, "The Earth-God Urn."

782
824

They are the same kinds as those the lama mixes in at the consecration of the wumba-water. The Tujen names have been lost. In Tibetan they are called "the good six." There are the following kinds: cloves, saffron, cardamom, marl (?), nutmeg, camphor.

782

Instead of the water, one can also squirt milk or barley wine into the fire. They are then no longer called milk or

[44 cont.]

782 wine, however, but "libation" (6). Nevertheless water is always

6. [Foreign text p. 48.] The informant observed that "libation" is otherwise only called tusa; only in the case of the incense offering would one say tsiab. The rite implies, however, that it is not a matter of a libation at all. Drink-offerings are always poured on the ground. Here, however, the water is sprinkled on the fire; in addition, in this case water is preferred to all other liquids and is regarded as the purest and most superior. This requires a different interpretation. As a loan-word, tsiab corresponds to the Tibetan c'ab. Ch. Das (p. 409) explains c'ab: "water in any form; but not used like c'u to signify a river" [cited in English]. He further mentions sna c'ab as water with which the monks moisten their tongues before starting a religious ceremony, in order to purify themselves, which is approximately the same as the above-described purification before the incense offering. In other words, the tsiab is nothing other than a purification of the fire by sprinkling it with water. Later the people came to think of it as an offering and used milk and wine for it. Nonetheless, the awareness has remained that it should really be water.

[783]

superior. It must be pure, from a well, a spring, or a river. Standing water, for instance, that from a kitchen tub, may not be drawn by anyone, however pure it might be. The water is sprinkled into the fire with a cypress twig (10).

[44 cont.]

782

10. [Foreign text p. 49.] For the water offering, cf. the chapter, "The Lama-reception, Note 3.

The threads are in the well-known five sacred colors. The material does not matter. The best, naturally, are silk threads. Wealthy [45] people throw a small bundle of each [556] color into the fire every time; poor people, on the other hand, merely cut off a little piece from each string, so that they will last a long time.

782 The conch comes from the east, from China or Tibet. It is said that none are found in the Koko Nor. Hence, not 534 every family has a conch. It is therefore not absolutely neces- [439] sary for one to be blown at the offering (7).

7. [Foreign text pp. 48-49.] The conch is the Triton horn, the Triton spiral. To the Tujen it is a symbol of purity and of the sublime. Accordingly, the word dön is also used adjectively for: pure, white, sublime, sacred. One could translate it simply as "conchlike." It is found in this sense especially commonly in songs. In order to blow it, one pierces the pointed end and edges it usually with metal; this serves as the mouthpiece. Colorful bands often hang at the other end, the horn; cf. the illustration. In spite of its dull tone, the conch resounds very far.

It is self-evident that the conch is not native to that region. The Tujen name is a phonetic imitation of the Tibetan dun; usually the Tibetans further add dkar, "white." In Mongolic this conch is called labai (Unkrig; Kov. 1958), which in turn is related to the Chinese la-pa,

[45 cont.]

782
534

[Note on foreign text p. 48-49 cont.]
"trumpet." Judging by the sign, however, this la-pa is itself a Chinese imitation of a foreign word. The Tsinghai Chinese have the designation pi-li for the shell-horn, but this evidently comes from the Tujen verb pilie (to blow), for instance, dõngẽ pilie = to blow the conch. The Chinese say ch'uei pi-li for this. Otherwise, the Chinese name for the Triton horn is simply luo (lo), and the conch-goddess taken over from Buddhism (Tib. Dun ma, Sanskr. Mangala śankha) is called pao-lo t'ien-nü, "heavenly elf of the preciousness-conch"; cf. Pander-Grünwedel, Pantheon, p. 105, No. 294; p. 115.

[171]

The shell-horn and its cultic use is old and widespread in India and the South Seas and has been taken over into Buddhism. The function of the conch in the Lamaist cult naturally cannot be explored further here. For an understanding of the Tujen custom, however, the following should be noted. The blowing of the conch brings harmony into the universe and [49] can release the hunger-spirits (Preta) and lead them into the paradise of joys (Tushita); cf. Pander-Grünwedel, loc. cit. Shells whose spirals do not run from right to left, as is usual, but the opposite way are especially valuable; cf. Ch. Das (p. 628): duṅ-dkar gyas 'k'il (Sanskr. dakṣiṇā varta śankha). The sound of such a conch cures sickness, and, if it is kept in the house, it pacifies quarrels and disturbances and guarantees harmony in the family. That

[755]
[578]

[45 cont.]

782
534

[Note on foreign text p. 48-49 cont.]
may also be the reason why the Tujen always try to obtain such a conch and blow it in the morning at the incense offering in the yard.

For the rest, the conch in itself is made to order for the offering. It formerly served as an offering bowl; cf. Ch. Das (p. 627). Today it is regarded as the third of the eight offerings (mc'od brgyad) or good-luck symbols (bkra ši rtags brgyad) as a sign of being turned in the right direction, sending out lovely sounds to the ten points of the compass; cf. Filchner (Unkrig): Kumbum, p. 21.

782
183

All these objects that have been enumerated are part of a complete incense offering. Since a family only rarely has these accessories on hand, the offering is usually given in the simple form, that is, people content themselves with cypress twigs, tsamba, and water-sprinkling. Not even butter and milk have been available recently among the Tujen.

[262]

782

Meaning: The incense offering is primarily to heaven, as is the first kowtow. In the second place, it is intended to honor the mountain and earth spirit, and in the third place all the other countless spirits. Oral prayers are not spoken, but one usually says or thinks: "Heaven knows it." The offering is a request for protection and pleases the spirits because of the distinguished gifts. Hence, the men give it at all religious ceremonies, for instance, at the sowing festival, at the veneration of the obo, at the sheep sacrifice, etc. It is left to burn for hours during the entire procedure. Since the Tujen have practiced the incense offering since time immemorial, it constantly recurs in the songs (8).

[776]

[177]

8. [Foreign text p. 49.] The incense

[45 cont.]

782
177

[Note on foreign text p. 49 cont.] offering is widespread everywhere among the nomads of Tsinghai and has been partially taken over by the Chinese. It is also practiced in all lamic monasteries. Even if it does not come from Buddhism, it has been taken up by it in the ritual and honored with "incense-sutras," which are recited during the burning of aromatic substances in honor of the gods. The additions superimposed on the original simple form also come from Lamaism. Concerning this original form, its origin and religious dedication to heaven, cf. Part Two.

783
372
[782]
[789]
[782]

The purification-fire: Aside from this incense offering, cypress incense is also burned on other occasions, but only for purification, for example, to fumigate the house to drive away the demons, to fumigate the sacrificial sheep, to fumigate the face and hands at religious ceremonies. This fire, however, is accorded no veneration; no kowtow is made before it; it is not sprinkled with water, and no butter or any kind of addition is put in it. It is not an offering. Should someone accidentally burn an actual incense offering, he can use even this for the purpose of purification (9).

[587]
[796]
[782]

9. [Foreign text p. 49.] On other occasions, too, the fire is used as a means of purification. For instance, according to an ancient custom, a Tujen widow, when she remarries, must step across a fire, just as among the Chia-Fandse the bride is led over fir-tree fire (sung-p'an). The fire-jumping in the night of the full moon after New Year's may have the same significance; cf. "The New Year's Festival," Note 6. Not only the fire has

[45 cont.]

783
372
782

[Note on foreign text p. 49 cont.]
this purificatory effect, however, but also the incense itself. This is shown by its name, "purity-wood," and by the use of bsañs as a verb, which, according to Ch. Das (p. 1316), means "to cleanse, to remove" [cited in English]. For this reason incense is also scattered in the water with the red-hot stone (ch'ü-t'an) that is used for cultic purification.

Word List

192
782
[824]

Cypress tree: šgua sdziödzē (3) [see Note 3 above].
Cypress: šgua.
Cypress incense: fdzañ (šdzañ, dzañ, sañ) (Tib. loanword).
Tsamba offering: fdzañ šdzam (Tib. loanword).
Tsamba (profane): talġa (11).

11. [Foreign text p. 49.] talġa: Tib. t'al ba or t'al k'a = powder, dust, ash; Mong. talxa = flour, rye flour, barley flour.

ġlu-smän: Tib. klu sman = the dragon medicine, bot. Angelica. There are four kinds, of which the black and the white are the best. The white Angelica is used against sickness from the earth-dragon. In Mongolic it is called luus-un em = dragon-medicine.

[824]
[757]

snaġsog: Tib. sna = many, and ts'ogs = kind. lisi = Tib. li-ši = Carophyllus. gušgum: Tib. gur-gum = saffron, crocus. sēsmiel: Tib. sug-smel (rmel) = cardamom; Chin. pai-tou kuan

[824]

[45 cont.]

192
782
824

[Note on foreign text p. 49 cont.]
(white bean-tressel). gagula: Tib. ka ko la = Amomum medium; Chin. ts'ao-kuo (straw-fruit). dzati: Tib. dsa tsi (Sanskr.) = nutmeg. ġawur: Tib. ga-bur (Sanskr.) = camphor (Unkrig).

Spices: ġlu (ġlo, ġlē) sëmän; ġlu (Tib. loanword) = earth-god;
sëmän (Tib. loanword) = medicine, spice (11) [see Note 11 above].

Känba flowers: känba.

Incense additions: rdzē (Tib. loanword) = additions, things.
snaġsoġ fdzäñ rdzē (Tib. loanword) = many kinds of incense additions (4), (11) [see Notes 4 and 11 above].

Cloves: lisi (Tib.); ting hsiang (Chin.) (11) [see Note 11 above].

Saffron: guśgum (Tib.); tsang hung-hua (Chin.) (11) [see Note 11 above].

Cardamom: sësmiel (Tib.); i-chi-jen (Chin.) (11) [see Note 11 above].

Marl: gagula (Tib); ts'ao-kuo (Chin.) (11) [see Note 11 above].

Nutmeg: dzati (Tib.); jou-kuo (Chin.) (11) [see Note 11 above].

Camphor: ġawur (Tib.); ping-p'ien (Chin.) (11) [see Note 11 above].

192
782

[46]

Milk (profane): sun.

Libation: tsiab (tsiaw) (Tib.) (6) [see Note 6 above].

[534] Conch: doṅ (Tib. loanword) = trumpet, horn (7) [see Note 7 above].

Heaven, you know it: tieṅgërë mudie.

[372] Purification-fire: sündur (Tib. loanword).

c: A Tujen yard of the settlement Ha-szu (Hsia-szu) on the way from Na-ling-kou to Yang-chüan. In the center of the yard, the central fort with the mani-tree. Summer, 1948. (To accompany the chapter: "The Mani-tree.")

000 [50]

2. The Arrow of Good Fortune*

*See "Notes," pp. 52-55 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

353
*778

In every good Tujen house there is an arrow. The tip is stuck in an urn of grain, in a crevice in the wall, or in a slit in a beam. Hadas, colorful ribbons, sheep wool, hair, etc. are [792] attached to the arrow. The arrow is consecrated by a lama or a Bon priest, and on this occasion it is venerated in the house. Later, however, it is not venerated any more. The arrow is [777] not the seat of a spirit, but rather guarantees good fortune and wealth in the family.

[50 cont.]

Details

777
*778 The arrow: Originally the people used a genuine arrow (2).

[411]
[171]

2. [Foreign text p. 52.] According to the reports of the old people, the Tujen arrows are exactly like those of the Fandse and Mongols in Tsinghai. These arrows can be seen in great numbers in every lamasery. Their average length is about one meter. Their feathering is usually radial and made of eagle feathers (ying-mao). The forms of the arrow tips are exceedingly manifold. The material is always iron. -- The children's bows and arrows are simple, crude toys, as in Europe. Nowadays the bow and arrow have disappeared from the life of the Tujen.

[178]

They are rare nowadays, since the Tujen no longer have the bow and arrow as weapons. The arrows were very manifold, however. Today, only a simple arrow shaft without tip and feathering is used for the most part. There are no prescriptions for its manufacture.

The urn: An ordinary clay urn or wide vase is used, such as can be obtained anywhere. Sometimes the urn is fitted up like the treasure-urn of the earth-god. In that case, however, not several scrolls, but only one is put in it. Also, fluid butter is not poured over the grain. The following kinds of grain are contained in it: wheat, black and white barley, light and dark Tibetan barley, but never beans, peas, etc. The urn may be of any color. It is not required for the arrow of good fortune, however. Sometimes the latter is simply stuck in a measure of grain or in a wooden cylinder, or no container at all is used and the arrow is stuck anywhere in the beams or the wall,

[50 cont.]
777 always inside the house. In such a case the arrow is not made or
*778 consecrated by a lama or Bon priest (3).

3. [Foreign text p. 52.] For the preparation of the urn, cf. the section: "The Earth-god Urn."

Attachments: Always and in all cases hadas and sheep wool are attached to the arrow. If the arrow is consecrated, a small copper mirror is usually also attached to it. -- When
[237] an animal is sold or given away, some of its hair is tied to the arrow, as in the case of horses, donkeys, and mules. The hair
[432] is taken from the mane or tail. Similarly, when a sheep is sold some wool is also tied on. Hog bristles, however, may never be tied to the arrow of good fortune. -- After a child's first haircut,
[302] on the first birthday, the downy hairs that have been cut off are rolled into a little ball, and a thread is drawn out of it, with
[852] which the ball is tied to the arrow; similarly the bow and arrow that the child seized as an oracle on this occasion is tied to it. -- When a daughter is married, a number of small strips of cloth
[585] are cut from the seam of her bridal [51] dress for the arrow. Also some hair of the bride, which was combed out during the hair-dressing and adornment on the eve of her being taken away, is carefully collected and attached to the arrow of good fortune (4).

4. [Foreign text pp. 52-53.] The fact that sheep wool is always attached to the arrow, as to the obo, seems to be connected with the sheep of good fortune; cf. below. F. Lessing (Yung Ho Kung, p. 148) would like to connect the little balls of wool (cotton) with the thread figures (mdos), which hold fast the demons. -- Occasionally, silk threads in the five sacred colors are also added. Hair

[51 cont.]

777
*778

[114]

[Foreign text pp. 52-53 cont.]
from a cow, when it is sold, is also tied to the arrow, but in no case hog bristles, as for example, L. Schram (Mariage, p. 58) maintains. L. Schram in this place generally confuses the arrow of good fortune with the spirit-spear. He designates with iang hstia a [53] "tige en fer" [iron shaft], which stands in a "gros et large socle" [large and wide base] and has a length of "deux à trois pieds" [two to three feet]. It is accorded a veneration "comme devant les esprits" [as before the spirits]. This never applies to a yãnsdzia, however, but in part only to a small spirit-spear. In the case of the latter, the tip and iron foot are visible so that it gives the impression of being entirely of iron. It is likewise stuck in a large stand and may have a length of about a meter. According to my informant, the arrow of good fortune is not venerated like a spirit among the Tujen, whereas the spear is. The other statements, however, fit the arrow of good fortune.

The urn also receives additions. For instance, some kernels of grain are always thrown into it when some is sold. Furthermore, during the night when the bride is fetched, the bridegroom's family brings a hada and bran for the bride's riding animal. Part of the bran is poured into the urn and the hada is tied to the arrow of good fortune.

[585]

Safekeeping: If the arrow of good fortune was consecrated and stuck in an urn or a bushel, the latter must always stand together with the arrow in the main house on the chest in front

[51 cont.]

777 of the Buddha image or, in case there is a chapel, kept in the
chapel. If it is stuck somewhere without an urn, this must also
*778 always be in the main house.

777 Construction and consecration: The arrow without the urn
*778 is prepared and provided with the attachment by the master of
the household himself without any kind of ceremony. It is then
782 fumigated once and stuck in its place with an incense offering.

In the case of an arrow with an urn, the lama is invited with the usual formalities. He makes his torma, sets up the little water-bowls, etc., just as on other occasions. Then he prays for a day or more and gives the prayer of consecration over the arrow. During this prayer the arrow is fumigated with cypress incense. Then the pot is brought, washed, and fumigated, while the lama prepares the scroll. The latter is also fumigated. After that, the grain is poured into the urn and the arrow stuck in it. The master of the household places the pot with the arrow in front of the lama on the kang, and the latter then attaches the individual objects. Each piece is first held in the incense and then handed to the lama. Everything is accompanied by the lama's prayer. It is also permissible for other persons, for example, the master of the household, to tie on the attachments. -- The master of the household then places the arrow-urn on the chest in front of the god's image with the usual offering gifts: little water-bowls, wine, grain, butter, milk, bread, etc. Outside in the yard the great incense offering is made, and inside all those present make a three-fold kowtow before the new arrow of good fortune. During the entire veneration, however, the lama remains seated on the kang and prays.

777 At noon a family festival[1] is celebrated with a banquet,
*778 and there is singing and drinking into the night. The lama
[527] stays until the following morning.

[787] Use and significance: The arrow is never used for sooth-
[585] saying because it cannot become the seat of a spirit, like the spirit-spear, for instance (5). Only once is it taken out of the

1 [to celebrate the consecration of the arrow of good fortune - ANALYST]

[51 cont.]

777
*778
787

5. [Foreign text p. 53.] The informant firmly insisted upon this statement, although the consecration, beribboning, mirror, and bells seem to argue that the arrow is a seat of the spirit.

777 house, namely, during the wedding. While the bride, amidst
*778 the weeping and wailing of the women, is led out to the thresh-
585 ing floor and mounts the riding animal, the father takes the arrow of good fortune and runs back and forth with it behind the bride, calling out the name of his daughter, who is led on the riding animal three times around the threshing floor before she rides off. The father wants to keep back the good fortune.

[52] The arrow holds together the good fortune and well-
[171] being of the household, as do the god of wealth and the treasure-
[432] urn among the Chinese. For that reason something is held back as "seed" and "root" from everything that is sold and attached to the arrow or added to the urn (6). With her marriage, the

192
777
*778

6. [Foreign text pp. 53-55.] One receives differing information among the people concerning the word yãṅsdzia. Some say yãṅ means "good fortune," whereas the informant subscribes more to the meaning "germ," root, seed, guarantee of good fortune." In the region of Bengbar (Hsi-ch'uan) the arrow is called yãṅbõ. The ... bõ could not be explained by anyone. The people derived the yãṅ from the Tibetan and said it meant "good fortune." Undoubtedly it is identical with the Tibetan g, yaṅ. The Chinese word ying-pao mentioned by F. Lessing (Yung Ho Kung, p. 139) is phonetically very reminiscent of the designation yãṅbõ. The Tujen have a third expression for

[52 cont.]

192
777
*778

[Note on foreign text p. 53-55 cont.]
the arrow of good fortune in the word yãṅdar. They interpret the yãṅ as "good fortune" and the dar as "to increase." The old man, however, would not let the dar be applied to the entire arrow, but only to the hada attached to it, and he is correct in this, for dar in Tibetan signifies "cloth, silk." He stated that the whole thing, including the urn, is always only called yãṅsdzia. It is unclear to me what the sdzia in this combination actually means. It is doubtful that it is a literary botching of mda', "arrow."

In order to determine the meaning of the arrow of good fortune in more detail, it is best to start from the Tib. word g, yaṅ. According to Ch. Das, the sense of wealth, fullness of life, treasures, state of well-being is connected with g, yaṅ. This is apparent from the corresponding combinations with g, yaṅ (cf. pp. 1149ff.). The very essence of good fortune, however, seems to be the sheep; metaphorically it is simply called g, yaṅ-dkar, "the white good-fortune." White is also the color of good fortune. But how, then, is the arrow of good fortune to be comprehended as the carrier of good fortune?

[822]

Its peculiar character becomes clearest at the wedding ceremony. When the bride departs from the parental house and is led three times around the threshing floor on horseback, the father of the bride runs behind the bride three times

777
*778
585

[52 cont.]

777
*778
585

[Note on foreign text p. 53-55 cont.]
with the arrow of good fortune and calls out her name. Meanwhile the attendants sing a song in which they conjure everything that the bride takes with her onto the arrow as a "germ," so that it might stay behind. -- The urn that holds the grain brought by the bride-fetchers is a similar matter. This urn is called g.yaṅ-bum in Tibetan and its meaning corresponds with that given by Ch. Das (p. 1150). It contains treasures: gold, silver, money, ornaments, etc. The arrow of good fortune and the urn of good fortune thus carry the germs and vital power of all the blessings of good fortune of the kin group [Sippe], be they animals, human beings, [54] treasures, or seed. They not only carry them, but also guarantee their preservation and increase. This conception, however, is not only found among the Tujen.

171
777
*778
[432]

The shepherd-nomads have a custom similar to that of the Tujen and the agricultural Fandse with their arrow of good fortune. When they sell animals, they tie some of the wool or hair to the tent post or to a string inside the tent. (G. Montell, p. 49, illustration, reports something similar from the Mongols.) This post or string has a special relationship to heaven. Among the agriculturalists the urn appears in accordance with the importance of the agricultural products. Thus, the Chinese likewise have a pao-p'ing, "treasure-vase"; similarly, the Lolo have an ancestral chest in which

[52 cont.]

171
777
*778

[Note on foreign text p. 53-55 cont.]
they keep the ornaments and mementos of the kin group in order to have a guarantee for the good fortune and wealth of the family; cf. Lin Yüeh-hwa: I chia. Above all, the arrow of good fortune seems to be of great importance among the Bon; cf. H. Hoffmann, Quellen [Sources], pp. 190, 184, 178. It plays a special role in the wedding customs of the Bon, as H. Francke has de-
[585] scribed them in the wedding songs. The wedding customs of the Tujen and their songs show a certain relationship with these Bon customs, which in itself is not surprising
[177] since up to the most recent times the Bon religion in Amdo had a strong influence. The conception of the tribal animals, mother-animals, mother-treasures, to which all other earthly animals, treasures, etc. go back, however, belongs to the world-view of the Bon; cf. H. Francke; Hochzeitslieder [Wedding Songs], pp. 8 ff. The tribal ani-
[533] mals are also celebrated in song by the Tujen in a song-cycle bearing the name xoni, "sheep." This song-cycle actually stems from the Amdo-Fandse, among whom it is called g, yañ-dkar, "white good-fortune," or g, yañ-dkar lug, "sheep of the white good-fortune." Although vari-
[825] ous animals are celebrated in song, the sheep stands in the center as the supreme blessing of good fortune.

777
*778
[772]

If one ties these conceptions together, it may be stated of the yãñsdzia: It bears within it the germs and origins of the gifts of fortune of this world. Living beings are allied more with heaven (are

[52 cont.]

777
*778

[Note on foreign text p. 53-55 cont.]
perhaps to be interpreted as astral), and the seeds, together with the other treasures, more with earth. The arrow represents the connection of the two (heavenly post, heavenly rope). This idea also fits in well with the pre-Buddhistic -- shamanistic world-picture with the world mountain and the individual realms. Cf. for instance, the representation in the mountain torma at the ritual of the pole-goat, where all of creation is put in miniature on a mandala. A germinally pre-formed world which maintains the actual, large world through its vital power is always fundamental. -- It would be interesting to pursue these conceptions across Asia; perhaps even the Inao and the "sending off" of the Ainu are connected with them.

[772]

The arrow of good fortune and the customs connected with it have passed into Buddhism and are practiced in all lamic monasteries. The arrow is found everywhere. The most important ceremony is the summoning of good fortune (g.yaṅ 'gug). This ceremony is reported in detail in F. Lessing (Yung Ho Kung, pp. 139-147), where further details concerning the Lamaistic use of the [55] arrow can also be found, but this does not belong here. Only one parallel with the popular custom among the Tujen should be mentioned, where Lessing describes the procession with the arrow of good fortune (p. 146): "After this interlude, the procession continues its way and finally returns to Hall II. They have absorbed all they can the elixir

[585]

[52 cont.]

777
*778
585

[Note on foreign text p. 53-55 cont.]
or vital forces (rasayana, Tib. bcud len, Mong. sime, shime) of heaven and earth, sun and moon, rivers and lakes, trees and herbs" [cited in English]. This corresponds precisely to the above-mentioned wedding ceremony of the Tujen at the departure of the bride, where likewise "the germs, vital force" are conjured in song onto the arrow with which the father runs behind the bride.

777
*778
[192]

The Tujen word for this "germ, seed," etc. in the songs is furie; cf. Schröder, Hochzeitslieder" [Wedding Songs]. furie is the Mongolic ūre (DMF, p. 111) and in meaning corresponds, like sime, to the Tibetan bcud in bcud len. len signifies "to seize, to grasp, to gather" (Ch. Das, p. 1220), and bcud, "sap, moistness, essence, force," etc. (p. 394). The meaning that my informant gave for the word yān is identical with this; cf. above. With regard to the expression bcud-len, Ch. Das writes (p. 394): "the art of extracting essences for prolonging health and longevity, such essences as being of different kinds ..." [cited in English]. He also mentions in particular the earth-force: "sa-yi bcud, the essence of the earth, by which the produce of the field, medicinal plants and precious metals and stones, etc., are said by Tibetans to be produced; therefore this essence is the natural fecundity of the soil ..." [cited in English]. More about this in another place (in the myth about the origin of agriculture).

[585] bride leaves the family, but it is desired that good fortune and wealth should not leave the home with her. For that reason clothing and bits of hair are also preserved on the arrow.

[52 cont.]

Word List

192
777 Arrow: sēmu.
Arrow tip: timurdē.
*778 Arrow feathering: sēmu fodie.
Arrow of good fortune: yãṅsdzia (1) (6) [see Note 6 above].

1. [Foreign text p. 52.] yãṅsdzia: Tib. g, yaṅ = good fortune, mda' = arrow. yãṅdżēw: Tib. g, yaṅ (the same), skyob = to protect. An offering to guarantee good fortune is designated by it. yãṅbo (-po): seems to be connected with the Tib. g, yaṅ-bum = urn of good fortune (Unkrig).

Urn: p'endzē (Chin.).
Urn with grain: yãṅ-dżēw = to fill with good-fortune seeds (Tib. loanword) (1) [see Note 1 above].
To fill the urn: yãṅdzēwrē ġada = to fill up with seed stuffing.
Attachments: yãṅ rdzē = seed attachments (additions).
Hada: kadaġ (Tib.).
Cloth remnants: sdziedzē dzüldēgãn = cloth remnants of all kinds.
Mane hairs: dzãṅgãṅ; tsung-kang (Chin.).
Black hairs: sul.
Ball of hair: fudzē sdzialaġ = downy-hair ball.
Sheep wool: ṅguasē.
Consecrating prayer: yãṅpo dgē (Tib. loanword) = arrow-of-good-fortune prayer (1) [see Note 1 above].
To prepare the arrow: ilieni yãṅsdziarē fuya = to tie everything to the arrow of good fortune.

[Pages 52-55 contain the notes given as numbered footnotes.]

[55] 3. The Mani-tree and the Central Fort *

100

* See "Notes," pp. 60-63 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

*778 In almost every Tujen yard a mani-tree is set up in the [357] middle of the central fort [Mittelburg] or round manger [Rundkrippe]. The mani-tree need not be erected at the same time as this central fort; it can be done later. The time is [791] determined by the soothsayer.

The mani-tree consists of a wooden mast with a tip, which represents sun and moon. Below this tip a five-colored cover is drawn over the mast-end, and below this mast-end flies the white mani-flag.

This flag is printed in the lamic monastery. At the same [792] time the master of the household invites a lama to raise the tree. The lama prays several days and on the last day undertakes [782] the raising. During these days the yard is taboo. The great [351] incense offering is presented three times daily.

[784] At the raising, the mast is brought into the yard, placed with its tip on the central fort, and the individual parts are attached to it. Once the pole has been set up, it is fumigated, [782] first with the red-hot stone and then with incense. The soothsayer takes some grains of barley from a plate with the spear tip and throws them over the tree, and the master of the household [56] [Fig. 7 appears here] dabs the tree with butter. Then the men dig a narrow deep hole in the central fort down to the level of the ground. The soothsayer again throws some grains of barley into it with the spear, and the master of the household also strews a few incense leaves in it. Then the men set the tree in the hole and draw it up. In order to make it stand firmly, it is wedged in at the base with stones and clay. The entire operation is done under the constant supervision of the spear-god cited.

*778

[822]

Fig. 7. Mani-tree and Central Fort.

The large urn in the center (1) is called Spirit-Naga-urn, the accompanying urns (2-5, three of which are visible), magical treasure.

[56 cont.]

782 Now comes the offering. Incense is burned on the fumi-
*778 gating plate under the mani-tree, while a table with the follow-
ing gifts is put in front of it (1): a number of small bowls of

1. [Foreign text p. 60.] One can also burn incense directly at the foot of the tree inside the round manger and set the offerings there.

barley wine, grain, pure water, a large bowl of tea, bread, butter- or oil-lamps, and two vases of colorful flowers. -- The lama comes out, sits down on the opposite side of the central fort on a white felt mat, and gives the consecrating prayer. Meanwhile all those present kowtow and blow the conch.

After the prayer, the offerings are cleared away. Water and wine are poured on the ground, and small pieces of the bread are thrown into the air. The little oil-lamps are left standing. Everything else is taken into the house.

*778 The master of the household gives the guests a meal; they
527 dance and sing and drink into the night in the yard around the
[792] new mani-tree -- The next morning the lama is taken home to
the monastery.

Details

791
*778 Persons: For praying, an ordinary lama, not a living
[782] Buddha, but sometimes a Bon priest, is invited. Everything can
[792] also be done without a lama, but then the performance lasts
[592] only one day because the praying is omitted. In this case the
master of the household himself erects the tree. The ceremonies are almost the same as with a lama. The soothsayer, however, may never be lacking, whether or not he is a spear-soothsayer, or the litter-bearers or the table-god soothsayer (2).

[787]

2. [Foreign text p. 60.] The soothsayer is invited in the morning and given hospitality. He calls down the spirit and then determines precisely

[56 cont.]

*778 [Note on foreign text p. 60 cont.]
791 when the ceremony is to begin.
787 The soothsayer himself never takes part. He merely determines the time and names the spirit under whose supervision everything takes place.

*778 [57] Time: The time determined by the soothsayer varies in length: one, three, five, seven days, if a lama comes; otherwise only one day. The raising itself takes one forenoon at most. It is always started in the morning. -- Usually the tree is erected in conjunction with the construction of the central fort. It may also be erected, however, on any other day of the year.

The tree: The tree must always have its bark removed. Its size varies according to the proportions of the yard and the kind of wood. Fir trees are usually the longest. There are no prescriptions concerning the material and the origin of the tree. It may be cut down as desired. Also, there are no special ceremonies connected with it. There are trees up to ten meters in height, especially when it is a matter of mani-masts for the entire village or a monastery. On the average, however, they are five to six meters long (3).

3. [Foreign text p. 60.] Nowadays a complete mani-tree in the center of the yard is found only rarely. Usually an old cracked pole without a flag, to which the animals are tied, stands in the round manger. -- The mani-tree does not need to be confined to the center of the yard. One can also see mani-trees on the massive yard walls, especially where these come together at a corner. There are also communal mani-trees that are erected by an entire village, usually

[621]

[57 cont.]

*778
[621]

[Note on foreign text p. 60 cont.] on a raised terrace with a beautiful incense oven in front of it. Frequently a mani-pole with a fluttering pennant also stands in the center of the obo. The most beautiful and largest mani-trees are found in front of the entrance gates of the Living Buddhas in the lamaseries; they are up to 15 meters long and bear flags up to five or eight meters long which are printed all over with Tibetan texts. -- Mani-poles are found even among the Chinese, although rarely.

[792]

[171]

The tip (4): The tip is cut out of a wooden board as thick

4. [Foreign text p. 60.] This tip also occurs again and again on chorten, temple roofs, coffins, in symbols, etc. -- The large mani-trees mentioned above in front of the yard of the Living Buddhas, however, usually have a golden ball in place of the sun-moon tip.

[792]

as a thumb, in the shape of a sun resting on a half-moon. A small semicircle sits on the sun, and the moon has a handle with which the tip is set on the end of the pole. Everything, sun, half-moon, and handle, is cut out of one piece. This tip, however, does not sit directly on the pole, but instead is stuck through a round wooden plate-sized disk that comes to rest vertically on the end of the pole (5). The sun with its attached

5. [Foreign text p. 60.] The old man knew of no name for the round disk through which the handle of the moon sickle is stuck. He thought

[57 cont.]

*778

[Note on foreign text p. 60 cont.] that this disk represented the wreath of rays of the stars. Sometimes one also hears that it represents the earth-disk. -- He designated the small round piece set on the sun as a star; accordingly, sun, moon, and stars would be on the tip. Nothing is known among the people about the other explanations of the Lamaistic occult interpretations, such as that of the sun as tilaka, of the moon sickle as bindu (drops), and of the attached piece as a flame-shaped nāda (sacrificial cry), etc. Cf. Note 9.

piece and the vertical disk are painted with a red color, for instance, red clay. The moon sickle is white. -- In place of this cut-out sun-moon tip, one can also tie a bundle of cypress twigs to the pole; this is also done later with the same ceremonies.

The cover: The cover, which covers the connection of the tip and the end of the pole, is sewed together out of five rings of cloth. Each ring has its own color. The cover is about 30 to 50 centimeters long and is adjusted according to the thickness of the tree. There are no regulations concerning the origin and nature of the material, but the cloth must be clean and whole. Both men and women may sew this cover, but usually the men do it. After the sewing, the cover is fumigated in the incense and placed on the household altar (6).

[192]

6. [Foreign text pp. 60-61.] The name of the cover is apparently nothing but a literary botching of the Tibetan rgyal-mts'an (pronounced rdzial-), of the victory-ornament

[57 cont.]

*778
192

[Note on foreign text p. 60-61 cont.]
(cf. Filchner, Unkrig, p. 21) that is part of the eight offerings (mc'od brgyad). Ch. Das (p. 313) explains the rgyal-mts'an (Sanskritic dhvajā) as a war banner or victory sign of Buddhism; it is the official standard of the Buddhists. One often finds it as garment trimming in various colors or as a cloth cylinder on flagpoles or on a post. Sometimes it is made of brass or wood. Furthermore, Ch. Das cites 11 kinds of rgyal-mts'an in Tibetan Buddhism, which fight the demonic powers.

The Chinese translation san (screen) might be misleading and point to the first of the eight offerings, the white screen, gdugs dkar (Sanskritic chattra); cf. Ch. Das, p. 69 (bkra šis ...), and Filchner, Unkrig, p. 21. -- The Tujen do not differentiate precisely here.

*778

The multicolored cover is found in the most diverse varieties: [61] as column drapes in the temples, as gigantic cloth bells or screens, on ceremonial standards, on trident masts, as curtains, etc. In other words, it does not represent a peculiarity of the mani-tree. Because the rgyal-mts'an also occurs as garment trimming (cf. above), the colorful ring-trimming on the sleeves of the Tujen costume is probably connected with it, which, indeed, is often drawn on as a cloth funnel.

[291]

The mani-flag: The flag consists of a long piece of white cloth. Usually it is cotton cloth, which can be bought in town. It should always be new and faultless. One leaves the original width of the cloth as it is, in other words, about 30 to 50 centimeters. The length depends on the mani-mast, for the flag is

[57 cont.]

*778 attached to the tree along the long side. On the average the length is 150 to 200 centimeters. The master of the household first takes this bolt of cloth to a lamic monastery where it is [782] printed with prayers and the picture of an air-horse in the monastery press, only on one side, however. About three-quarters of the flag is covered with prayers, and the lowest quarter with the air-horse. At home the man or the woman then sews a row of strings on one long side, with which the flag is tied to the pole. [58]. The other long side, fluttering in the breeze, is [822] provided with five tabs of cloth in the five sacred colors. The length depends on the flag. Usually they are about two fingers wide and a finger long. They may be quadrangular or triangular. The flag is likewise fumigated and placed next to the cover on the household altar. For these tabs, too, there are no regulations concerning the origin and nature of the material (7).

[192]

7. [Foreign text p. 61.] The mani-flag has various names; cf. below, Note 10. All these names apply in the first place to the horse-image, then to the flag, and finally to the entire tree. The image is the most important, especially when one considers that paper images are also in use.

*778 796 782 On every flag or every image there are the most varied sayings and representations, in Tibetan or Chinese or Mongolic. Sometimes the horse also bears on its back the sign of good fortune, nuru. These paper horses play [171] an important role in the ceremony of releasing the horses, which is performed by the Tujen as well as by the Chinese and Tibetans. This ceremony is practiced at certain times of the year, for instance, in the month of the

[58 cont.]

*778
796
782

[Foreign text p. 61 cont.]
New Year, very early in the morning, as I observed. On this occasion a great incense offering with a great many small dough-lamps are burned, bread, tea, and barley wine are offered, and finally a pack of paper horse-images with all kinds of inscriptions is thrown into the air and scattered in all directions by the wind. The entire ceremony takes place on a mountain. In case of misfortune anyone may undertake this ceremony at will.

*778 782 The sheep offering: When a lama has raised the mani-pole, then there remains the above-described offering of bread wine, flowers, etc. After that the lama withdraws into the [791] house. In the yard the spear-soothsayer divines once more [787] whether the spirits want another sheep offering or not. The soothsayer then announces the will of the spirit; sometimes the latter dispenses with a sheep offering; sometimes he wants to have it immediately, and sometimes only after a few days. [357] The yard must then remain taboo for that length of time. -- [784] The sheep offering is never given in the presence of the lama, [792] since it is, of course, always connected with the killing of the animal, and the lamas do not permit killing. The ritual of the sheep offering does not differ from the usual slaughter- and offering-ritual.

*778 Renewal of the mani-tree: If in the course of time the tree or the flag have suffered damage, they are renewed, that is, only the part that is damaged. The tattered flag is [372] burned, for instance, in the hearth or in a fire specially kindled for it, but always with pure firewood, never with the usual dry dung, for example. The unusable mani-tree is likewise burned. In no case may it be used for other purposes,

[58 cont.]
*778 say, as roof board. When the mani-tree or the part concerned is replaced, everything is done with the same ceremonies as at a new raising.

[357] The small mani-flag: Instead of the large mani-tree, a small pole with an air-horse pennant is frequently raised on the yard gate of the outer yard. This pennant is about an ell square and is printed only with the picture of the air-horse, or at most with a few brief Tibetan sayings as well. This pen-
[792] nant is also made in the monastery. No lama and no sooth-
[791] sayer is invited to raise this flag, however. The soothsayer merely determines a lucky day and a favorable hour. Every-
[357] thing is done without special ceremonies, even without an in-
[784] cense offering. The yard, however, is taboo for a few days. Some farmers raise both the large mani-flag in the yard and the small mani-flag on the gate.

357 The round manger: When a new compound is laid out,
*778 a round manger or central fort is always dug in the middle of the yard, exactly in accordance with the soothsayer's directions.
[791] For this purpose, the lama makes five treasure-urns, which
[792] are set in the pit. The pit is covered level with the ground and over it is raised a round wall of about two meters in diameter and one meter high. The lower three layers are stones; the upper layers, air-dried bricks. This circle is filled with clay and stamped down. In the center there is a pole or a cart axle,
[231] to which the animals are tied [59] when they are sunned and fed there during the day. For that reason the whole structure is called "round manger." It is also called "central fort," for it is the center of the yard and the buried urns protect the compound. The central fort is complete only when the mani-pole is raised. On the edge of the round manger, facing the main house, is found the fumigating plate. -- The making and burying of the urns is done with the same ceremonies that are performed in connection with the treasure-urn or the raising of a beńkań (chorten chamber). -- The round manger is painted
[527] white. After the raising, the master of the household holds a

[59 cont.]

357 *778 [527] [171]

festive banquet; the people sing and dance around the new central fort (8).

8. [Foreign text p. 61.] The round manger is also commonly erected by the Chinese. The farther east one goes, however, the rarer it becomes. In any case, among the Chinese the mani-pole in the round manger is lacking, and sometimes even the structure, in other words, the manger itself. For them it is important only that an urn be buried in the center of the yard, and the construction of every compound practically begins with this burial of the urn. This spot or the round manger is called chung-kung, that is, central fort, or yüan-ts'ao, that is, round manger. The ceremony is performed by the lay bonze or by a Tao-shih, temple bonze, but usually the geomancer indicates the spot where the urn (or the urns) is to be buried. This is connected, however, with the geomantic determination of the whole compound.

*778 539

Song: After the erection of the central fort or the mani-tree, the following song is popularly sung: "If one steps through the large gate, what then is round? If one steps through the large gate, then the round manger is round; half-yaks, mules, horses form a circle, and in the middle rises the mani-tree. If one steps into the kitchen, what then is round? If one steps into the kitchen, the kettle and lid are round; cups, bowls, and dishes form a round herd, the wooden spoon rises up in the middle. If one steps into the main house, what then is round? If one steps into the main house, the fire basin is round. Relatives and friends sit around it, and in the middle the wine jar rises up."

[59 cont.]

*778 Meaning: The mani-tree guarantees good fortune and
[777] peace for the household, yard, and people. The air-horse is a
symbol of fate. On its back it bears the precious stone of good
[772] fortune: nuru. The tree represents the world-mountain. Around
its peak circle sun, moon, and stars, and below lies the world
with the people, with house and yard and herds (9).

[351]

9. [Foreign text pp. 61-62.] This explanation by the informant indicates that only with the raising of the mani-pole is the compound complete, part of the world order, as is also expressed in other songs. It is based upon the Lamaistic conception of the world, according to which the world-mountain is in the center and everything else is situated around it. Among the lamas one always finds this interpretation, as it is presented symbolically in the monogram found everywhere, the nantšu wãńdãh. To be sure, the Tujen know nothing of the detailed interpretations of this monogram (cf. Note 3), nor of the parallel between this cosmic interpretation and the human body. -- Here it should also be noted that in this symbol the flat disk under the moon sickle is lacking, and furthermore that the colors are different; the small flame on the sun is green, the sun itself white, the moon sickle red; cf. Unkrig in Filchner: Kumbum, pp. 160-161.

[192]

[62] The word sdzi-ńkuor and the informant's translation, "center-round," phonetically and semantically give precisely the Tibetan word dkyil 'k'or; cf. DMF, p. 387, and Ch. Das, p. 56.

[59 cont.]

* 778
772
[192]

[Note on foreign text pp. 61-62 cont.]
The various meanings of dkyil 'k'or are given there, particularly as the equivalent of the Sanskritic word mandala, the magical circles and figures and representations of the divine dwellings, etc. (cf. the chapter, "The Pole-Goat"); furthermore, for the conception of the universe under consideration here, "According to the Buddhist cosmogony there are sa-yi dkyil 'k'or the sphere of earth, c'u-yi dkyil 'k'or the sphere of water, the ocean, rlun-gi dkyil 'k'or the atmosphere, me-yi dkyil 'k'or the sphere of fire; each forming a stratum over the other. The upper stratum, i.e. that which is beyond the atmosphere, is called the sphere of fire or light [cited in English] (Ch. Das, loc. cit.). If one puts this orthodox Lamaist explanation beside the old man's explanation, he sees how indigenous and alive this conception is among the Tujen, how it is literally built into the existential sphere.

* 778
772
782

The air-horse does not really seem to belong in this conceptual picture, and it could not be learned from the informant what the air-horse, in other words, the mani-flag, has to do with the world mountain, why it is attached to it. He thought that it would hang high on it and could flutter well in the wind, and, with its prayer and magical formulas, it would be the same as a prayer-mill that is likewise turned by the wind on the roof. Other

[59 cont.]

*778
772
782

[775]

[Note on foreign text pp. 61-62 cont.] explanations do not connect the air-horse with the round manger, either. Thus, one can hear that the magical formulas and prayers are carried to heaven on the air-horse. Others, again, believe that the air-horses are ridden by the wandering restless spirits and souls of the dead; in this way they would find the right way and come to rest. According to them, this is also the reason why these paper horses are released in such large numbers. Then the spirits are appeased and would no longer visit and molest human beings.

192
*778

Word List

(Cf. the drawing)

The mani-tree (tree and flag together): dardzioǵ (Tib.).
The mast: dardzioǵ gändzë (Chin.); mani-kan-tzu (Chin.).
The sun: nara.
The moon: sara.
For the round disk and the piece on the sun there are no specified Tujen names.
The cover: rdziala ntsam (Tib.); san (Chin.) = screen (6) [see Note 6 above].
The flag: dardzioǵ (Tib.); ta-ch'iu (Chin.); ki mori = air horse;
loňšda (Tib.); lu-ma (Chin.) = horse of good fortune;
lung-ma (Chin.) = dragon-horse (10).

10. [Foreign text pp. 62-63.] loňšda is the Tibetan rluň rta, air-horse; ki-mori is the literal Tujen translation of it.

[59 cont.]

192
*778

[773]

[Note on foreign text pp. 62-63 cont.] Concerning its meaning as "fate," cf. Part Two, II, 1, c. -- Perhaps the Chinese lung-ma is also only a phonetic imitation of this Tibetan rluṅ (air), which perhaps came about because the dragon-horse, which likewise is called lung-ma, appears in legends and tales as a wonder horse. In the Sining chronicle, in the chapter on the Koko Nor Lake, there is a passage concerning this dragon-horse. In certain times the T'u-yü-hun were supposed to drive their horses (quite bad ones, too) into the lake, and they would then couple with the dragon. The horses descended from them were supposed to be able to cover thousands of miles in a day.

[782]
[171]

For the paper prints of the air-horses the Chinese usually say lu-ma (good-luck horses). They claim that the above-mentioned "releasing" of these horses, fang lu-ma, is an old Chinese custom, whereas the Tujen, Fandse, and lamas claim it as their own tradition. -- In addition, the Chinese have gold-yellow paper leaves attached to house gates, animals, etc., which they burn on various occasions. They are called chih-ma [63] (paper-horses) or piao-ma (leaf-horses). Although there is no horse-image on it, many people derive the ...ma from "horse."

The ta-ch'iu is a Chinese literary botching of dardzioġ; one hears this expression mostly in the region of Tangkar. dardzioġ corresponds to the Tibetan dar lcog (DMF, p. 44); according to Ch. Das

[59 cont.]

192
*778

[Note on foreign text pp. 62-63 cont.]
this means "silk" and "tip" and is "a flag-staff about 10 or 12 feet high ... on house-tops, piles of stone, or on votive cairns" (p. 620) [cited in English].

The flag tabs: dardzioġ kilie = mani-flag tabs [Zungen, literally "tongues"].
Blue sky: kuguo tieṅgĕre.
White clouds: tsiġan uloṅ.
Yellow lama: sira lama.
Red lama: fulan lama.
Green earth: noġuon yäsĕ = green grass.
The round manger: yüän dzuor = round manger; yüan-ts'ao (Chin.) = round manger; sdziṅkuor (Tib.) = center-round (9) [see Note 9 above].
The incense plate: fdzaṅ tśĕ = incense-terrace.
The central urn (that is, central fort): lawum-ġluwum (Tib.) = spirit-urn -- earth-god-urn.
The four little urns: sĕnog-der (snaġ-der) = magical urns (11).

11. [Foreign text p. 63.] sĕnoġder: Tibetan snags = magical saying, spell formula, gter = treasure, storage chamber. Meaning: magical treasure chamber (Unkrig).

[Pages 60-63 contain the notes given above as numbered footnotes.]

*778

[63] The Obo*

* See "Notes," pp. 68-71 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

[63 cont.]

Report

*778 On the mountains in the vicinity of the villages, the Tujen like to erect an obo. This is a large stonepile over a pit in which all kinds of things are buried. On these stonepiles stands a large square wooden frame, in which all kinds of weapons, tree twigs, and mani-flags are placed. Frequently several smaller stonepiles run from the obo to the four points of the compass; there will be at least one row in the direction of the mountain ridge.

*778 782 [776] [792] [791] The obo is dedicated to the mountain-spirit. It protects the village and the individual family. The obo is venerated three times each month with an incense offering. Sheep sacrifices also often take place at the obo. On special occasions a lama or Bon priest is invited to pray before the obo. When air-horses are released, it is done preferably from the peak on which an obo stands. -- Every year a large folk festival takes place near the obo.

Details

*779 [621] [628] Place: The obo is always erected on a mountain height. A place by a pass is preferred. It need not be the highest mountain in the area. Each village may have its own obo, or several villages may erect an obo together. In the latter case they agree upon a favorable place between the villages (1).

[171]

1. [Foreign text p. 68.] The obo need not always be on a mountain. In other regions around Sining one finds obos on the plain, for instance, near Fandse and Chiafandse settlements. Even here, however, trees are almost always present. Nevertheless, the Tujen maintain that they would never build an obo on the plain, for, according to them, an obo belongs to the mountain-spirit and must

[63 cont.]

*778

[Note on foreign text p. 68 cont.] therefore stand on a mountain. -- They take the sacred place quite seriously. Thus, it is striking that for all Tujen villages mountain terrain is set aside, a piece of grass land with forest, where no agriculture may be carried on. Where the Chinese intervene, however, these mountain groves disappear. From these sparse remains one can imagine what the now bare agricultural land looked like in former times.

[621]

*778 784 The mountain on which the obo stands may not be defiled. No fields may be laid out there; the trees may not be cut down; the grass may not be cut; the ground may not be turned up. The animals that live there, for instance, hares, foxes, birds, are not hunted or killed. Everything must be left just as it grows [231] and thrives by nature; the cattle may not graze there at any [776] time. This place, namely, belongs to the mountain-spirit and is called sacred mountain.

*778 The obo pit: When the obo is erected, a pit is dug. All [792] kinds of valuables are put in it, primarily treasure-urns (earth-[791] god urns), as in the case of the central fort of the compound. [178] The obo is erected by a lama or Bon priest. No [64] Tujen of the present generation has seen this ceremony. The present-day obos still stem from olden times and are more and more falling into disrepair. Therefore no one knows any more precisely what is buried in the obo.

The stone mound: The height of the mound varies, depending on the circumstances. First an outer wall is put in layers in circular form. A large number of little stones are put inside the circle up to the edge, and these are supposed to be white stones. At every obo veneration additional stones are

[64 cont.]

*778 always thrown in, so the pile constantly grows. The outer wall of the mound is covered with whitewash. The twelve small stonepiles are called "obo children." An urn is buried under each of them.

The obo frame: The frame that is set on the stone mound has four strong corner-posts connected by crossbeams as thick as an arm. There are no regulations for its construction, not even for its material. When this frame falls into disrepair, it is replaced by a new one and the remains of the old one are used in any way desired. Depending on the size of the obo, there are frames from one to three meters long at the sides and up to two meters high. The frame serves entirely for holding weapons, tree twigs, and poles.

*778 Votive offerings: In the obo frame are placed wooden weapons, such as spears, swords, arrows, bows, and pikes, re-
782 cently even wooden rifles. Furthermore, tree twigs and mani-flags are stuck in between.

There are no regulations concerning the wood. Bunches of sheep wool are tied to both the weapons and the tree twigs. The spears are sometimes painted red and wound spirally with strips of black cloth. The swords are likewise painted black up to the handle. The flocks of wool on the spear tip are a substitute for the spear tassels, which on real spears consist of bundles of white yak tails colored red. The black color signifies iron. Formerly the spears were wound spirally with strips of tin.

[824] The tree twigs are usually from poplars, fir trees, and cypresses. Cypresses and fir trees are preferred. The leaves may be left on them. Smooth twigs with the bark removed may also replace the spears.

Other offerings, too, are thrown inside the frame on the stone mound, such as white stones, gold, silver, money, grain, sugar, butter, flowers, tea leaves, etc. Silk threads and hadas are tied to the obo frame; a silk string is drawn around the
[178] frame. Formerly the obo was draped with valuable cloths, but

[64 cont.]

*778 782 [178] nowadays the people are too poor. The silk threads and the long silk string are merely a substitute for them. Similarly, gold and silver are scarcely ever thrown on the obo any more.

Sometimes a string with 12 mani-flags is also drawn across the nearby pass from the obo-frame or from the mani-pole. This string is of black wool and is called "wolf string." Another string, on which 12 mani-flags are hung, is frequently run from the obo to a tree. This string is white and is called "mani-string."

782 [796] [65] The month offering: Usually the obo is venerated on the first, eighth, and fifteenth day of each lunar month (2).

2. [Foreign text p. 69.] There is no connection between obo and month. The days mentioned here are generally preferred for offering and cult, and for this the phases of the moon are decisive.

This is done usually by the master of the family. He goes to the obo very early in the morning with a spear or several twigs and all the other necessities.

First he gives the customary incense offering before it. Then he pours a bowl of barley wine on the ground before the incense fire. He places lances and twigs with bunches of wool on the obo, hangs silk threads on the frame, and throws his votive gifts on the mound, namely, butter, tea leaves, money, silver, etc., as much as he can afford. Then he goes around the obo three times from left to right, throws 108 small white [788] stones on it, and in doing so prays the om mani padme hum and in between calls out: "I throw at the white obo." Then he makes a threefold kowtow before the incense fire and facing the obo. During the entire ceremony the conch is blown by his companions. This is not necessary, however.

The sheep sacrifice: There are no definite prescriptions concerning the time of the sheep sacrifice. There are communal [621] sacrifices, at which the entire village participates for village

[65 cont.]

782 concerns, and there are private sacrifices which the individual
[621] gives for his family.

The communal sacrifice is usually given in summer after the erection of the pole-goat for a good harvest. A private sacrifice is undertaken at any time of year according to time and circumstances, for instance, in case of an illness or before an important undertaking. Since one man alone cannot carry out everything for a sacrifice, he invites several other men to it, who help him and afterwards consume the sacrificial meat. The person who makes the offering must also pay the cost.

The sacrificial rite does not differ from that of the other
[231] sheep sacrifice. Thus, the sheep is washed, has milk poured over it, is fumigated, etc. Usually a soothsayer is present.
[791] After the sacrificial meat has been boiled, several bowls of broth
[252] are scooped out. The offering-casts are made with it in the directions indicated by the soothsayer. These are always the same. Three bowls are thrown towards the north for heaven, three bowls each to the east, south, west, and north for the countless spirits, three bowls to the left of the incense offering for the mountain-spirit in the obo, three bowls to the right of the incense offering for the earth-spirit. Then follow three more bowls on the obo, and finally three additional bowls are poured before the spirit-spear. Then follows the offering meal,
[574] at which all the meat is consumed.

Before the sheep offering the general obo-veneration is first undertaken, as at the month offering.

[792] The obo prayer: Frequently a lama or Bon priest is in-
[791] vited to pray before the obo. This may last one to seven days, depending upon the request. Here, too, either the entire
[621] village or an individual person is the petitioner. Everyone pays personally for the expenses arising from it.

The prayer service begins with an incense offering of the people. Meanwhile the lama makes a šdorma. Then the people place the following offerings before the obo: three baked loaves, 13 steamed loaves, a bowl [66] of barley wine, flowers in vases, small bowls with honey, a cup of tea, black and white sugar, a bowl of tsamba with butter-disks.

[66 cont.]

782 Sitting before the obo, the lama gives the appropriate
[533] prayers, accompanying them on his hourglass drum and the bell. At the same time the people burn incense at several places, kowtow, and blow the conch. This service may sometimes last the entire day. When the lama is finished with the prayer, he takes the torma to a stone on the obo, sprinkles the obo with holy water, and casts barley on it, over which he lightly blows with his mouth. The people then take something from offerings that stand in front of the obo, pluck something off, and throw some of this into the incense fire and on the obo. The flowers are all thrown on the mound. Meanwhile others have already placed the spears, twigs, and mani-flags on the obo and have thrown the votive gifts on it, as at the month offering. Then all of them circle around the obo, throwing the white stones and praying the obo call. At this point all of them once more make a threefold kowtow, drink tea, and go home.

The prayer service may also last several days. Then people set up tents on the mountain and live and eat there.

527 The obo festival: Every year on the sixth day in the sixth
782 month an obo festival takes place. At these festivals the obo is venerated in the morning, as it is at the month offering. A sheep offering and the prayer service of the lama may also be connected with it.

527 All the people from the neighborhood, men and women, old and young, gather at the obo. If the obo terrain is too
[541] difficult and not level enough, they gather at the foot of the
[533] mountain or on a meadow. There the men hold horse races, people sit around the fire and drink and sing; they eat and
[439] dance and laugh. Chinese traders appear, set up their booths, and peddle their wares. -- Formerly, when the old weapons
[526] were still used, the horse races were followed by archery, spear throwing, and sword fights. Wrestling matches were especially
[178] popular. Nowadays this is no longer the case. Only the horse
[541] racing and the singing contests are still held. The mountain-
[533] spirit rejoices when the people are so gay (3).

[171] 3. [Foreign text p. 69.] The obo festival is also celebrated by the

[66 cont.]

527 [171]

[Note on foreign text p. 69 cont.] Mongols and Tangut. According to the informant, a day in the sixth month is always chosen, but it does not always have to be the sixth day. It is the time at which formerly the obos were erected, and it seems to be a matter of the yearly return. -- Nowadays these festivals have more or less degenerated into a Chinese commercial racket, as has, for instance, the festival in the New Year's month at Wei-yüan-pu (Huchu), which is really a Tujen festival. Only the horse racing and the singing of songs have remained from olden times.

[178]

*778 776 Obo and mountain-spirit: The obo is the dwelling of the mountain-spirit. Everything that grows on the earth, grass, trees, flowers, the wild animals, and human beings, belongs to him. From the obo he guards the welfare of the tribe (ayil) and protects animal and man. The wild and tame animals are his herd and the wolves his dogs. For that reason an offering is made to the mountain-spirit before the obo whenever the wolves become too destructive. He can keep them in check.

[782] [825]

The silk (cloths or bands) on the obo signifies the clothes of the mountain spirit; the white color of the obo wall, his eminence and his good fortune.

The obo is the armory of the village and of the mountain-spirit. In olden times it was from here that the men fetched their weapons for battle and for athletic contests. [67] And they brought them back here. Nowadays the Tujen are peaceful farmers; they no longer use their weapons. Therefore they surrender them to the mountain-spirit.

[411]

The mountain-spirit is given something from everything that is valuable: gold, silver, silk, etc. All the good fortune, the wealth, and the preservation of the village are guaranteed through him. The mountain-spirit provides the descendants;

[782]

[67 cont.]
*778 the little stone mounds signify fertility (4).
776

4. [Foreign text p. 69.] The Tujen distinguish three great spirits: the sky, the mountain-spirit, and the earth-god. It should be emphasized that the characteristics of the mountain-spirit come fairly close to those of the sky (cf. Part 2). -- The special sacrificial animal for the mountain-spirit and the sky is the sheep. -- To the earth one sacrifices pigs, and always in the compound, whereas one sacrifices to the sky and the mountain-spirit usually in the open. -- The ritual for the pig sacrifice is the same as for the sheep sacrifice: washing, fumigating, milk pouring, etc., which makes a very strange impression in the case of this animal, an indication that the pig sacrifice was not adopted until a later time and was confused with the sheep-sacrifice rituals.

[231]

539 The first obo: According to the Tujen legend of the Geser
*778 xaan, the first obo was erected in the golden age of mankind by the first xaan on earth, the Hamluo siergän:

"Everything was very good. It was a time of honey and fat. At the beginning of the three summer months he erected a regieńguo obo on the peak of the Rira-ntumbo. Hamluo siergän sank into contemplation. Of (sc. the three) Gadbo Huala, Šdonšdog Sienba, Sasin Dadma, one went to break cypress twigs, one to buy spices, and one to gather white stones. He sat in contemplation for a week. When a week had passed, he erected the regieńguo obo. In the obo he placed the mother dog Tsila, on whose body he scattered spice-medicine. He wrapped silk around its body. Then he sprinkled holy water over it. He invited the regieńguo lama, who recited the consecrating

[67 cont.]

539 *778 prayer. He prayed for seven days. On this obo they heaped white stones. Within the circle of the obo they piled large stones in layers. On the peak of the obo they stuck cypress twigs and tied wool from the white sheep to them. They covered the circle of the obo with white earth (5). They wrapped the obo with silk.

[822]

5. [Foreign text p. 69.] The white color is the lucky color of Lamaism. The white conch, the white earth-god urns, the white flocks of wool on the twigs of the tree of life are to be recalled. When someone starts a journey it is said: may your way be white. Among the Tulkus this is even symbolically expressed by scattering flour, chalk, etc. on the path. The monasteries are painted white, and the palace of the earth-spirit is supposed to be white.

[484]

[346]

In the days of the three summer months they threw at the obo, galloping on their horses. They threw white stones, they threw gold and silver, they threw grain and butter. And the life of man unfolded" (6).

6. [Foreign text pp. 69-70.] This passage is literally translated from the Tujen version of the Geser legend as it was dictated to me by a singer with the aid of the old man. It characteristically shows how closely the conception of the obo is connected with Buddhistic forms. Nothing is to be seen of the repeatedly asserted hostility between Buddhism and pre-Buddhistic cults. In lamic monasteries there are books concerning the erection of obos; I did not succeed in seeing such a book, however,

[67 cont.] [Note on foreign text pp. 69-70 cont.]

539
*778

or in learning anything further about the rites. I was merely told that there is a whole series of obo types, among them some that are not erected by by lamas. Furthermore the objects put in an obo pit were said to vary greatly. Preferably, urns, kettles, and implements were placed there.

In this myth a dog is buried in the obo, and, it seems, a live one. It is treated like other Lamaistic divine figures that are animated by a deity: it receives a silk garment, is sprinkled with holy water, and has spices cast on it; the votive prayer is given. It is a mother dog. The significance of this dog Tsila could not be determined. Presumably it was one of the tribal animals. The Chinese in the Tujen village Hua-ling-kou (Huchu County) claim that the [70] Tujen bury a dog in the obo. This dog is said to be their ancestor. My informant very definitely disputed this, and I was unable to obtain any further information concerning this contention. From where did people get this story? They said that it had been handed down in this form. At any rate, it is striking that the dog occurs in this Tujen myth. On the other hand, it is to be considered that the informant is well acquainted with the disparaging Chinese conception (also in the literature) that the barbarians are descended from dogs. -- The dog also plays a role among the Tujen as the provider of the first barley and furthermore, in connection with the weather fort of the dog yelping at the sky, hao t'ien chen (Chin.).

[648]

[67 cont.]

539
*778

[Note on foreign text pp. 69-70 cont.]
But this dog in the weather fort is connected with the dog of the same name of the hero Geser, hao t'ien ch'üan (Chin.).

For the rest, the basic features of the obo veneration appear in this myth: casting votive gifts, the circling (that is, on horseback, as is said to be done still among the neighboring Mongols), incense offerings. -- Weapons are not mentioned, but the cypress twigs that are stuck on the white stonepile are. -- And above all it is noteworthy that the obo is erected on the world-mountain and this probably gives the real connection and deeper meaning, which by no means need be Buddhist.

[772]

This suggestion would also correspond to what, for example, Bastian writes (Chinareisen [China Travels], pp. 395 ff.), that the obo represents the mountain Sumeru. And the many small stonepiles in the direction of the various points of the compass thus also fit into the same world-picture. Cf. Unkrig in Filchner: Kumbum, Note 1638.

[772]

The mani-strings are evidently likewise a Lamaistic product, perhaps a substitute for the sheep's shoulder bones formerly hung from them, which Bastian, loc. cit. p. 601, mentions. The Tujen no longer know anything about these shoulder blades. It cannot be explained why the two strings, the black and the white, are differentiated in this way here.

[67 cont.]

Word List

192
*778 Obō: laždzë (lawdzë, ladzë) (Tib. loanword) (7).
mao-chi (Chin.);these are the signs for reed - good fortune.
[776] Shan-shen (Chin.) = mountain-spirit (7).

7. [Foreign text p. 70.] The statement of the old man that the expression obō is unknown in his region was surprising to me. I found it confirmed; at least it is not used among the Tujen there, which is all the more surprising since the Chinese use the word obō the most. The Tujen almost exclusively use the Tibetan loanword laždzë (or lawdzë). Farther away, to be sure, there are Tujen who are familiar with both designations; laždzë is nothing other than the Tibetan la-rtse, "mountain top," according to Ch. Das (p. 1200): "the summit of a pass." The relationship to the cult of heights and the mountain-spirit is clear. -- Besides the foreign word obō (Mong. obuġa, DMF 296) the Chinese also have the name mao-chi.

The Chinese expression mao-chi has no logical meaning in itself. In the Tangkar chronicle I saw for it the sign for reeds (mao) and good fortune (chi); there are also other ways of writing it. This shows that a phonetic imitation of a foreign word is involved here. The original word for it, however, cannot be determined. In the region of the Chia-Hsifan around Kumbum the name shan-shen, that is, mountain-spirit, is used the most. With it the Chinese simply identify the obo with the spirit, which corresponds with the situation, since it is in fact the seat of the mountain spirit.

[776]

[67 cont.]

192 Obo mountain: lawdzë ūla.

*778 To erect obo: lawdzë paġguni.

Obo pit: lawdzë nukuo.

Stone mound: tašë soġdō.

Obo frame: lawdzë dziadzë (Chin.).

Whitewashing: tsiġandë budē.

Contents of the obo pit: rdzē.

[782] Votive offerings for the obo: lawdzë šdodlōdzān ntsuomdzia = weapons placed on the obo.

Spear: dzida.

Sword: wōldë.

Tree twigs: sdziōdzë aralaġ = (poplar) twigs;
šgua aralaġ = cypress twigs;
tāngërag aralaġ = fir branches.

Sheep wool: nġuasë.

Silk threads: torġuo šdadzë = silk threads.

Little white stones: mulġan (mula) tsiġan tašë.

Spear tassel: dzida mān dzioġ.

[68]

Grain: dzüldë tara = all kinds of grain.

Sugar: ġarā.

Gold: xaldān.

Silver: miēngu.

Mani-string: lang-sheng (Chin.) = wolf string.
kimori bōdoġ = air-horse string.

Obo call: garu (Tib.) lawdzë yara (Tib.).
šdo-o-od = the white obo from below I throw at (8).

8. [Foreign text p. 71.]
mändzioġ: Tibetan lcog = pennant, pinnacle, peak. The mān seems to come from the Chinese mang = pennant.
-- garu lawtsë yäre šdodla (obo call): Tibetan dkar (pronounced gar) = white,

[68 cont.]

192
*778

[Note on foreign text p. 71 cont.]
la rtse – obo, yar = upward, stod la = upward, to place on top. -- rēdziõn: Tibetan žon = to ride. -- yifula: Tibetan ri bo = mountain, hill, lha = spirit. -- ndziġdien: Tibetan 'jig = transitoriness, rten = container. A Buddhistic mode of expression for the world: the ten containers of transitoriness (Unkrig).

Little stonepiles: lawdzē dzidziġa = obo chicks.
Obo sheep-offering: lawdzē tada xoni šēṅlie = to sacrifice a sheep before the obo.
[782] The lama prays before the obo: lama lawdzē tada mošguni.
The offerings: yilenē šēṅlie = total offerings.
To dwell at the obo: lawdze tada sō-.
To set up a tent: bekārge posġuo-.
[541] Horse racing: mori holilġa = to make horses race.
Whose horse is fast: kāni mori gurdā?
[526] Shooting competition: sēmu sēmuda- = to shoot arrows.
Whose skill with weapons is great: kāni xuawu šgewa?
The young people wrestle: mula kunsgē walde-.
Whose strength is great: kāni kudzi šgewa?
Large and small sing together: šge mulasgē nigē dōlā-.
Whose songs are many: kāni dō uluona?
[541] Obo horse-racing: lawdzē šda rēdziõn (Tib. (8) [see Note 8 above].
[527] Obo festival: lawdzē šdodlō, mori holġani = to make the horses run pelting the obo.
[621] [757] The obo protects human beings: lawdzē ayili kun, ase, mulā-sēla, nasā, ġuosāni furõṅlāni = the obo of the village (kin group) protects human beings, animals, little children, from epidemics and strife.
[776] The mountain-spirit: yifu la (Tib.) (8) [see Note 8 above].

[68 cont.]

192 The game is cared for by the mountain-spirit: lawdzë
*778 udaġladzän sōwa (or fsüärëġwa) = birds (or game) are ruled by the obo.

The dog of the mountain-spirit (wolf): yifulani noxuę.
The old people relate legends: šdogu kunsgē xuęńge gulie-.
Whose legends are many: käni xuę uluona?
Large and small drink barley wine: šge mulā dërasēńgë udzi-.
Today is good: niudurġuo dur sēna.
In conviviality let us sit together: suġdzieńge sōldeya!
One does not know today what tomorrow will be: niudurë malõńguni li mudien.
With death it is all over: fugugē bura dzia.
We come into the world for nothing: ndziġdienë (8) [see Note 8 above]) arän nigē huę rëdziā- (nigë xue = once).

[Pages 68-71 contain the notes given above as numbered footnotes.]

[71] 5. The Chorten Chamber*

*778
346

* See "Notes," pp. 77-79 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

[621] In each Tujen village and sometimes also in individual
[351] compounds there is a chorten chamber. The actual name is hundred-thousand-house. This chamber looks like a small temple without doors. In it there are several sacred urns, which are buried under 100,000 small clay cones. In this cone-mountain is stuck the column of the sky, which is covered with all kinds of blessing formulas.

[71 cont.]

346 The chorten chamber is erected by the entire village.
*778 Everyone must give a hand. The lama comes and prays for
[621] seven days, makes a series of tormas, and manufactures the
[792] urns. On the seventh day the chorten chamber is built. Only little windows are left in it. In front of the chorten chamber the men burn incense and move in a circle around the chamber as at the obo. Through the window holes they then again throw in little chorten.

[621] The chorten chamber protects the village and the family
[777] from misfortune. It represses the evil earth-influences. [Fig. 8 appears here.]

Details

[361] Place: The chorten chamber is always erected outside
[791] the compound and outside the village. No attention is paid to paths. The place is more precisely designated by the soothsayer, not by the lama.

[72] Form: The groundplan of the chorten chamber is rectangular. Its size varies greatly. There are small chambers as high as a man and large ones with beautiful tile roofs and columned porticoes. There is never a door in the wall. Only at head level are square peepholes left, an ell square. There is no sun-moon disk on the roof, such as is otherwise common on temples. Usually a beautiful incense oven stands before the chamber. -- There are many kinds of chorten chambers. The one here is the most common; it is called "house-chamber," for there are also some that are not roofed (1).

[192] 1. [Foreign text pp. 77-78.] According to the informant, bẽn designates the same thing as the Tibetan 'bum (in many places also pronounced bẽn), that is, 100,000. kãn is the Tibetan word for house, but it can also mean temple, for example, in the word sdienkãn.

[72 cont.]

346
*778
192

[Note on foreign text pp. 77-78 cont.] Accordingly, beñ-kañ would mean: the chamber of the 100,000, or more freely and with reference to the sasa contained in it, chamber of the countless sasa, chorten chamber. In the DMF binkañ stands for it, with the explanation: "small temple with four doors, where one puts the idols and religious objects that one no longer wants to keep in the house (it is usually built at the exit of a village or at a crossroads)" [translated from French]. Cf. Tib. bank'aṅ, "store-room, treasury" [cited in English]. -- According to all the information available to me, the beñkañ never has a door; the informant

a
The urns are in the Tsatsa Mountain cones

a; Chorten chamber inside; b. chorten chamber outside.

also definitely denies that superfluous cult objects that one no longer wants to keep at home are put in it. The name might better be derived from bum-k'aṅ, "urn-house." bum-k'aṅ, namely, is also the central part of a chorten, which, of course, is urn-shaped.

[72 cont.]

346
*1778
192

[Note on foreign text pp. 77-78 cont.] According to W.A.Unkrig, the Mongolic rendering of it is bum-xan. In Mongolic linguistic usage this would be the same as cara-īngēr, with which a cremation house is designated, literally, "house of the frying pan" (communication). But even this interpretation seems doubtful.

The informant is probably correct with his explanation: bẽn = 'bum = 100,000, countless; and bẽnkãn = house of the countless (chorten). In the literature "Ts'a ts'a house" is used for it, for instance, A. Tafel, Tibetreise [Tibet Journey], II, p. 265. To be sure, Ch. Das, too, speaks not of a 'bum-k'an, but of a ts'a-k'an: "place, where ts'a-ts'a are kept" (p. 1017) [cited in English]. In general, these little clay cones are stored in huge quantities in chorten or dwellings, etc., and A. Tafel would like to connect this custom with the Bon religion; cf. op. cit., pp. 198, 265. At any rate, the popular belief of the Tujen ascribes great power to these ts'a-ts'a. Concerning the significance of the ts'a-ts'a in Buddhism proper, cf. the relevant works by Tucci.

Nothing specific, however, is designated by the name bẽnkãn; it is only a generic concept. As the lamas in the Mongol lamasery Dsadsang near Tangkar and in Kumbum say, there are two groups of bẽnkãn. First there are those without walls and roof, for example: log-log (a kind of stone pyramid); ndõn-ndõn; ser-wdziãl. Secondly, those with walls and

[72 cont.]

346
*778
192

[Note on foreign text pp. 77-78 cont.]
a roof, such as dzĕw-yi and ger-kăṅ. The kăṅ described here is this ger-kăṅ. Actually this name is a tautology, for ger is Mongolic and means house (tent), in other words, the same as the Tibetan kăṅ. Besides these names, there are other special designations for bĕṅkaṅ, such as mani bĕṅkăṅ, tsăla bĕṅkăṅ, dšōma bĕṅkăṅ, maridzĕ bĕṅkăṅ. Unfortunately all these types could not be inquired into precisely [78], nor likewise the meaning of the name and the contents of the bĕṅkăṅ. The many rĕduombĕṅ (7) [see Note 7 below], pyramid-like stonepiles which hold down evil demons, as is also reported in the Tujen myth of the female man-eater Măṅgudzĕ, probably also belong among the bĕṅkăṅ. For this function the Chinese have the expression pu mei-ch'i, that is, to plug up the (earth)veins' breath.

*778 Time: The chorten chamber may be erected at any time of the year, although the frost-free period is preferred because of the work on the walls. The soothsayer designates the specific [791] day and hour. -- The preparation, however, takes many weeks because the building material, the urns, and the clay cones must be manufactured. In addition, a small village festival [527] is always connected with the erection and for that reason the time after the harvest is preferred.

[621] Persons? All the persons of the village take part in the [496] preparations, men, women, and children. The leader divides the work among the individual families. At the erection and the [562] consecrating ceremonies, however, only men are active. Women [792] are kept away. -- The consecration of the urns and the service

[72 cont.]
*778 at the erection is undertaken only by a lama of higher rank.

[792] The urns: Altogether there are ten urns, two large urns up to 40 centimeters high and eight small urns. Concerning the purchase, the purification of the urns, etc., the same regulations apply as in the case of the earth-god urn (cf. the relevant section).

The contents of the urns: The large urns contain two layers of filling; in addition, a bundle of five prayer scrolls is stuck in each layer, in other words, ten scrolls, five in each of the two bundles, in each large urn.

The manufacture of these bundles is done in the following fashion: The lama takes a little stick of clean wood about ten centimeters long and as thick as a little finger. Around this he wraps a layer of leaves of paper printed with Tibetan texts. He [213] himself brings the wooden plates for the printing, since the texts vary according to the spirits represented by the scrolls. A very tight wrapping of silk thread in the five colors is put around this layer of paper, so that nothing can be seen of the texts. Then the lama takes five such scrolls and ties them together in such a way that the principal scroll is in the middle and the other four surround it symmetrically. Then a layer of silk or thin cloth, yellow or red in color, is put around this bundle, and finally the whole is once more wound tightly with silk thread in the five colors, like a thread-spool for spinning. -- Everything, the paper, the cloth, the threads, etc., are sprinkled each time with holy water and fumigated before use. -- Thus altogether four bundles are prepared.

[73] As extra features for the receptacle the following are used: mountain earth from sacred mountains (it must be taken from the peak); river water, pure spring water, which is sprinkled into the urn; wood from pure trees in the mountains, fir or cypress tops (foliage and bark from these trees are also permissible); grain, such as wheat, white beans, white rape, barley, and Tibetan barley (ch'ing-kuo); black and white sugar; Buddha gold, silver, little pieces of pearl, mother-of-pearl.

[73 cont.]

*1778 These extra features were supposed to represent the seven jewels, but they cannot be obtained, and hence the objects enumerated are used as substitutes.

In addition, all kinds of spices are put in it, which the lama himself brings. These are the 74 kinds of earth-god spices. In addition there are five strands of thread in the sacred colors, or even individual threads. They are placed vertically in the filling.

The filling is done in the following order: First the earth and the wood are placed inside and sprinkled with spring water. Then the first bundle of scrolls is set inside and filled out with the grain. Over that come the other extra features, up to half of the urn. Then the second layer with the second scroll bundle follows, exactly like the first one. Finally fluid butter is poured over the whole up to the edge, and precisely like the earth-god urn it is tied with a red or yellow cloth, sealed, and at the end where the seal hangs down it is painted with a nuru sign. Then the second large urn and the eight accompanying urns follow. The accompanying urns have no Buddha-bundles (2).

*1778
1776

2. [Foreign text p. 78.] The scrolls placed in the urns are supposed to represent certain spirits; according to the informant, the lowest scrolls represent the earth-god and the uppermost the mountain-spirit, each with its four companions. On the other hand, according to his statements, there seem to be many kinds of such spirits since the leaves of paper are correspondingly printed differently. Clarity could not be obtained. The leaves of paper, however, also act as magic, as is indicated by their name, snag, that is, magic(sayings). The cloth and thread wrappings represent the clothes of the spirit. -- There is

[73 cont.]

*778
776

suggested the assumption that in the case of the scrolls four spirits of the compass points are involved. The fact that the lama gives a special votive prayer over them means that the urn actually does become the dwelling of the spirits. -- The four accompanying urns are supposed to have the same significance as the other earth-god urns, in other words, additional gifts to the earth-god, or offerings. It may be, however, that they represent the points of the compass, just as is possible in the case of the central fort. -- Concerning the significance of the accompanying urns, there is no uniform popular conception.

*778 Consecration of the urns: All the urns are now placed together on one or two wooden trays, on which cypress leaves and barley grains have been scattered. The trays are brought by the master of ceremonies to the chest in front of the household deity. The lama makes a torma and places it in front of the urns. Now, after a butter-lamp has been lighted in front of each urn and seven little water-bowls stand in front of them, the lama sprinkles holy water over them and places the holy water-can on a little plate with Tibetan barley before the urns on the chest. Now he sits down on a felt mat and gives the votive prayer over the urns. He may also do this on his kang. Afterwards everything is again fumigated. In the yard, meanwhile, the great incense offering is burning.

*778
824

The sky column: As soon as the lama has come, the village elders present a petition to him and have him give the regulations for the tree that is to stand as the column in the chorten chamber. They then fetch a carpenter from the village

[73 cont.]

*778 and go into the mountains to look for the tree. The tree must
[824] be a wild one, not one planted by human beings. It must not be taken from inhabited places or from the edge of a path. The wood should be superior, at least fir or cypress wood.

[783] Before the carpenter sets to work, he washes his hands and face and rinses out his mouth. Then he fumigates his head and hands. He proceeds in exactly the same fashion with his tools. First he indicates on the trunk the four points of the compass; then he fells it and smoothes the four sides corresponding to [74] these directions, which the tree must also retain in the chorten chamber. The tree may be only six ells long, no more and no less. The width is about ten centimeters.

The trunk is brought home and planed smooth in the compound where the lama is staying, while the lama prays and outside the incense offering is burned. Then the carpenter brings it into the house and lays it by the lama on the kang. The latter first gives a prayer over the trunk and then inscribes
[242] Tibetan sayings on it in red. He usually uses red clay dissolved in water for this. The trunk thus inscribed is then wrapped with a yellow cloth and a number of threads is wound around it. The points of the compass are written on the cloth. Then the tree is put between the urns on the household altar and placed upright, propped against the wall. The little oil-lamps and seven water-bowls are renewed, and while a new incense offering is given in the yard, the lama sprinkles the trunk and gives the votive prayer over it (3).

3. [Foreign text p. 78.] The construction of this sky column is very similar to the making of the spirit-spear. -- The trunk need not always be smoothed. In the case of partially decayed bẽñkãñ one can see little trunks sticking out of the sasa-mountain with all their bark and without any further preparation, which allows an even more natural connection with the world-tree. It is

[74 cont.]

*778

[Note on foreign text p. 78 cont.] noteworthy that at all times the orientation of the tree as it grew must be preserved. -- Nothing further was learned about the name sõń-siń. The Chinese expression t'ung t'ien-chu, which is doubtless much more appropriate, is also used there for the center column in Lamaistic temples and for the center pole of the tent. In southern Kansu a large monolith bearing the same name stands somewhere in the mountains, as I was told by a missionary who was an eye-witness. This center pole plays a well-known role in the west of China, so nothing further need be said about it here.

[192]

The chorten: The chorten have the form of small clay cones and look like large eight-turreted chorten. The Chinese call them "red clay clods." Altogether there are supposed to be 100,000 little cones, but this number is not always adhered to, especially if the village is small. Three to four months beforehand, these little clay cones are poured into special wooden molds. The village elders apportion the number for each family.

[62]

The under-surfaces of the still damp little forms are tamped on Tibetan barley and incense which remain stuck to them as they dry. The average size is about the length of a finger; there are also larger ones (4). -- The finished chorten

[192]

4. [Foreign text p. 78.] With reference to the Fandse language, sasa is also pronounced dzadza (ts'a-ts'a). These clay cones not only have the shape (even if only roughly) of chorten, but they also frequently represent sacred figures which, according to the old man's

[74 cont.]

*778

[Note on foreign text p. 78 cont.] assertion, are likewise placed in the chorten chamber. At any rate, they are to be distinguished from the tormas, which are never made of clay; cf. Ch. Das, p. 1019, and A. Tafel, I, 221, II, 331.

are carried in a pile into a temple hall or into a clean yard. On the last day before the construction the lama goes there, sprinkles them with holy water, and prays over them. Then he makes a torma on the spot, which is placed before the clay cones with the customary seven water-bowls. After everything has been fumigated with incense, he gives the votive prayer and then goes back to his host.

*778
346
[791]

The erection of the chorten chamber: On the seventh day the spear-soothsayer appears very early in the morning. He divines in the yard, under the questioning of the leader, when and where the chamber is to be erected. Then he goes out and with spear-shaking indicates the precise spot by driving the spear into the ground there. The lama meanwhile drinks his morning tea.

Now the people bring everything, stones, beams, chorten, clay, straw, urns, in short, all that is necessary. For the lama a white felt mat is spread out in an easterly direction, a small kang-table is placed on it, and a delegation is sent to invite him ceremoniously and escort him to this spot. He takes his seat on the mat and begins his prayer, accompanied by bell and drum.

The soothsayer now takes away the spear, and the men scatter twigs of the tree of life and barley grains over the place where it was driven into the ground. Then they place the first large urn precisely on the mark left by the spear, and [75] each of the four other small urns at the four points of the compass. Behind these the sky column with the four points of the compass indicated on it is set up. It is not driven into the ground, but

[75 cont.]

*778
346

is held by hand for the time being while the men in great haste pile up the clay cones, basketful after basketful, over the urns and around the base of the column until the latter remains standing by itself. Once the urns are covered to a certain level, all kinds of additions are once more scattered over them, the kinds of things that the urns already contain and which have been left over for the purpose. Now, with the same ceremonies, the second layer follows with the next four urns, which are grouped precisely around their large urn, the latter being placed directly over the large urn below. And again the clay chorten are piled over them until finally the urns are buried under a pyramid and only the upper part of the column remains visible. -- The column comes to stand on the side of the urns facing a mountain, which, in this mountainous terrain, can be seen immediately.

Before the column is buried by the many chorten, it is sprinkled once more with holy water and fumigated (5). During

[532]

5. [Foreign text p. 78,] As monks in Kumbum said, before the erection of sky column, a floor drawing or a leaf of paper with a drawing is first placed on the ground (mandala). The informant was of the opinion that this is not always the case. It is noteworthy that this drawing has exactly the same name as the central fort, namely, sdziñkuor. This would indicate that in both cases the same thought is involved.

the entire ceremony, from morning until evening, the great incense offering is burned in front of the spot or at several places in the vicinity. At the conclusion, even the lama himself makes the incense offering before the consecrated and fumigated chorten-mountain with the column, while everybody kowtows.

Afterwards he again sits down on his mat and proceeds with his prayers. Meanwhile the chamber is built with great haste. First the four corner posts are erected and connected

[75 cont.]

*778 with one another at the same height at the top. The leader
346 brings 12 loaves and some liquor and places them on a tray before the chorten-mountain. The carpenters lay the ridge-piece by it. Into it they have drilled a hole, filled it with grain and butter, and closed it again with a wooden cover. The leader binds an ell of red cloth around this place -- it is the middle. Then they burn incense and kowtow. At the same time the tools are put on a small measure of grain before the loaves.
[483] The carpenters now climb on the frame and draw up the ridge-piece by ropes. The leader then throws two loaves of bread up to them, which they throw back; likewise the liquor is handed up to them, which they drink. Only now do the carpenters put the ridge-piece on the supports, exactly above the sky column. The latter, however, does not touch the ridge-piece, but towers up in the center, not quite reaching the ridge. --
[783] The ridge-piece is likewise sprinkled with pure water beforehand and fumigated with incense and the red-hot stone.

Now the carpenters again climb down, and the men begin to erect the wall between the corner posts. When these have reached about 50 centimeters, so that the chorten can no longer roll out, they pause. Once again incense leaves are scattered over the chorten-mountain and then work is resumed, evenly on all four sides. At head level a gap is left on each side. They immediately continue to build the wall up to the roof and everything is immediately covered with clay mortar. The roof is also [76] immediately covered. When everything is dry, the outside is whitewashed. -- If it is not finished on the same day, work is continued on the next day.

Towards the end the lama once again makes a torma and places it in front of the chorten chamber. One again burns incense, blows the conch, and kowtows. Then everyone, even the women, go around the chamber, as around an obo. -- Frequently the lama once again sprinkles the new chorten chamber
[527] with holy water after the whitewashing; then all go home and celebrate the event with a feast, singing, dancing, and drinking.

[782] Veneration of the chorten chamber: Later the chorten chamber is venerated on certain days by a procession around it

[76 cont.]

*778 and incense, as an obo is. On these occasions new clay cones
346 are thrown into it through the gaps. Usually this is on the first,
782 eighth, and fifteenth day of the month. At other times, too, however, in case of emergency and misfortune, the people venerate the chorten chamber. The procession always goes from west to east, in other words, not in the direction of the course of the sun.

*778 Meaning: The chorten chamber is connected with the
[776] mountain-spirit and earth-god. The column establishes the
[772] connection with the sky. The chamber holds down the hostile
[751] earth-influences. Thus it protects against misfortune and illness (6).

6. [Foreign text p. 79.] The urn, the mountain, and the tree are essential for the bẽṅkãṅ. Therefore it belongs in the same conceptual
[772] realm as the central fort in the yard, namely, the widespread myth of heaven and earth, joined (or separated) by the world-tree. In this connection, in the case of the central fort the mani-flag might be Lamaist-secondary, and in the case of the chorten chamber the sasa-mountain, which consists of the mani-cones, as they are sometimes called. -- Now that a house is built over it, it is probably quite secondary. It evidently only has the function of protection and no inner relationship to its contents. It is striking that the sky column likewise is not erected as the bearer of the ridge-piece; it is freestanding and does not extend to the beam.
[771] Also, in the case of the customs

[76 cont.]

*778
171

[Note on foreign text p. 79 cont.] connected with the erection of the chamber no inner relationship to the content finds expression. These are the same customs that are practiced in connection with all housebuilding by the Tsinghai Chinese.

Word List

192
*778

Chorten chamber: bẽṅkãṅ (Tib. loanword) = countless chamber (house) (1) [see Note 1 above].
ger-kãṅ, ger (Tuj.) = house, kãṅ = chamber.
ma-ni lou (Chin.) = mani-house (high house).

Sky column: sõṅ-siṅ (Tib. loanword) - protective tree (wood) (7).
t'ung-t'ien chu (Chin.) = to connect sky column.

7. [Foreign text p. 79.] sõṅ siṅ: Tibetan skyoṅ = to preserve, protect, siṅ = wood. -- sasa: Tibetan ts'a ts'a = little conical clay cones. -- sena: Tibetan sna = group, category. -- šder: Tibetan gser = gold. -- wsirẽ: Tibetan byi-ru (pronounced šuru) = coral. -- sõdãṅ: could ~~come~~ from the Chinese (?). ts'u-t'ang - vinegar-pool. -- sguora: Tibetan skor ba = to circle around. -- rẽduombẽṅ: Tibetan rdõ = stone, 'bum = 100,000 (Unkrig).

Clay chorten, clay cone: sasa (Tib. loanword), tza-tza (4) [see Note 4 above].

[76 cont.]

192 hung ni-tan-tzu (Chin.) = red clay clods.

*778 Gaps in the wall: tsiäṅguäṅ = windows.

The great urn: lha-wum (Tib.) = spirit urn (receptacle).

ġlo-wum (Tib.) = earth-god urn.

ġlo-wum gõṅluo (Tuj.) = earth-god urn receptacle.

The small urns: snoġ dër (Tib. loanword) = magic-urn.

Contents of the receptacle: rdzē (Tib.).

yang-wu (Chin.) = things.

Mountain-earth: sa-sena (Tib.) (7) [see Note 7 above]; siru = earth.

Water: tsü-sena (Tib.); fdzë = water.

Wood: siṅ sena (Tib.); mõdë = wood.

Buddha gold: sdzer (7) [see Note 7 above]; sädoġ (Tib.).

Mother of pearl ? wsirë (Tib.) (7) [see Note 7 above]; shan-hu (Chin.) = coral.

Precious stone: mädoġ (Tib.) = flower; chen-chu = jewel.

Earth-god spice: ġlo-smän (Tib. loanword).

Little water-bowl: dõṅsär (Tib. loanword).

Black incense: gukual

hei-hsiang (Chin.).

[782] Prayer of consecration: rami.

Red earth: fulan siru; huang-tan (Chin.) = yellow ocher.

[77]

[789] Magic formulas: snaġ (snoġ).

Mandala drawing: sdzi ṅkuor (Tib. loanword).

Ridge-piece: chung-leang (Chin.) = center beam.

Red-hot stone: ts'u-t'an, ch'ü-t'an (Chin.); sõdäṅ; sõdäṅ (7) [see Note 7 above].

Procession around the chorten chamber: sguora (Tib. loanword).

IV. Customs concerning the Human Being

* See "Notes," p. 622 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

846 Soon after the birth of a child one makes the happy event
[851] known to the family of the mother of the woman in childbed.
The mother then comes to visit her daughter. The other rela-
[431] tives, however, come only after one month. They bring gifts
and hold a feast. On the morning of this day the child is
[553] solemnly given a name, and in the evening it is brought before
the gate of the yard for the reception of the shepherd. Then
[527] there is singing and drinking and dancing into the night.
[852]

Details

Birth announcement: Three days after the birth of a
[851] boy or girl, the father-in-law of the woman in childbed takes
a little jug of liquor and some oil-baking and goes to the family
[273] of his daughter-in-law. It is immediately apparent why he has
come to visit, and he need only tell the day and the hour of
birth and whether it is a boy or girl. After they have drunk the
[593] liquor, the mother goes directly to her daughter in order to take
care of what needs to be done. She stays there a few days and
then often repeats her visit.

846 Conclusion of the confinement: Exactly 29 days after
431 the birth, in other words, on the thirtieth day, the parents and
nearest relatives of the woman in childbed appear at her
husband's house. They bring clothing for the child [621] and
[262] the woman (a long upper garment and shoes) and, further, four
large loaves of bread, oil-cakes, and other baked goods. The

[621 cont.]

846 431 [262] loaves of bread are round, about 30 to 40 centimeters in diameter, and about five centimeters thick. They have a large round hole in the center (1).

1. [Foreign text p. 622.] I learned nothing about the significance of the large round hole in the loaves of bread.

[858] [822] Other acquaintances and relatives also appear with gifts for the child, usually material for little dresses, blue for a boy, red for a girl.

553 791 [787] [592] Name-giving: On the morning of the same day the spear-soothsayer is invited. After he has drunk his morning tea, the master of the household gives the great incense offering in the yard, and the soothsayer divines whether he himself or the master of the family should give the child its name, and which name the spirit desires.

If the soothsayer gives the name, then bread, tea, and butter are brought on a tray. The mother takes the child in her arms and places herself in front of the soothsayer. The latter sets the spear aside, takes some butter from the tray with his finger, smears it on the child's forehead, and says, for example: "He shall be called mountain-spirit." This signifies that the [778] child is consecrated to the mountain-spirit and will be called by its name (3). After that he takes bread and offers it to the

551

3. [Foreign text p. 622.] The Tujen like to give names that refer to a spirit, for example: guãnbō-sdzia, that is, dedicated to the Guãmbo; ifulã sdzia, dedicated to the mountain-spirit; xaldan sẽrãṅ (Tib.) (5) [see Note 5 immediately following this note], golden palace; lǎsdze sẽrãṅ, pass-peak-palace; tuguãn ula, mountain of the Tuguãn. Girls' names are popularly given for special reasons, for example, tayin mdzuo, "full fifty," because

[621 cont.]

551

[Note on foreign text p. 622 cont.] the father or grandfather or someone else in the family was just fifty years old, but the mother's family has no influence on such names. For boys, instead of mdzuo (full) one says serãṅ, that is, roughly "sublime." Other names are, for example, wadma sdzig, that is, lotus flower, for girls; or wadma sdzia, that is, dedicated to the lotus, for boys. -- The Chinese, too, have a similar custom. They, for example, take a boy to the temple of the black tiger and then call him "dedicated to the black tiger," hei-hu-pao; or "dedicated to the mother," niang-niang-pao, when they have put the child under the protection of the mother-goddess in the temple. The Chinese pao and the sdzia of the Tujen have the same meaning.

[171]

5. [Foreign text p. 622.] sẽrãṅ: Tibetan sraṅ (?) = dwelling, settlement (Unkrig).

553 child to eat; he likewise offers it tea. It is not the child, how-
791 ever, but the mother who eats the gifts. Then everyone makes a threefold kowtow in the house to the soothsayer and the Buddha image, and outside to the sky.

If the spear-spirit desires that the family elder should
[592] give the name, the latter performs the same ceremonies, but the soothsayer supervises the performance with the trembling spear. Also, the kowtow is then made to the family elder. --
553 This ceremony is usually undertaken by the grandfather or
592 father, or by the man who is the master in the family (4). It
[792]

[621 cont.]

553 [592] [792]

4. [Foreign text p. 622.] A lama can also perform the ceremony. This is rarely done, however. Usually the father or kin-group elder does it.

is never a woman or a relative from the family of the woman in childbed.

Following the name-giving or in the course of the day, the mother with the child in her arms must kowtow to all the guests; for this she receives a small gift of money for the child. -- Towards noon the family holds a general feast, for men and women separately. On this occasion much barley wine is drunk, and there is singing and dancing.

[431] [527] [273] [562]

852 Reception of the shepherd: Towards evening, when the animals are expected back from the pasture, the father or the mother takes the infant in his arms and takes it out in front of the gate of the yard, where they meet the homecoming herd. The shepherd must give the child some money, and in return the father gives him a loaf of bread which he must eat immediately. This custom is called "to welcome the shepherd"; the Chinese say "to welcome the sheep" (2). -- The guests

[431] [553]

[171] [846]

2. [Foreign text p. 622.] The reception of the shepherd is also found among the Chinese, just as the termination of the confinement generally is almost the same among them. In the region of Hei-tsuei-tzu (Hsi-ch'uan) I learned from the missionary there, P. Frick, that the people place the child in the manger so that it may later own many herds and become a good horseman. This custom could not be confirmed for the Tujen.

[621 cont.]

852 take no further notice of this ceremony, but drink and dance
553 far into the night; then they gradually scatter. Only the closest relatives of the young mother stay until the next day.

[622]

192

Word List

846 To be in childbed: sara sōdzi = she sits out the month; tsuo yüeh (Chin.).

To terminate the confinement: sara durgeni = she terminates the month.

ch'u-yüeh (Chin.) = to step out of the month.

man-yüeh (Chin.) = to fulfill the month.

[852] Reception of the shepherd: asdzi dzēlie-; ying-yang (Chin.) = to welcome the sheep.

[Page 622 contains the notes given above as numbered footnotes.]

852
527

2. The First Birthday*

* See "Notes," pp. 623-625 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

[787] On the first birthday the father puts the child on the kang and
[302] places various things before it. From the object that the child
[778] grasps it can be seen what it will become in later life. After that its hair is cut and this is hung on the arrow of good fortune.

Details

852 787 The oracle: On the morning of the anniversary of the birth, the father brings the child into the main house or into the kitchen and sets it on the kang. He places a kang table with three little baked loaves of bread, five steamed loaves of bread, and a cup of tea in front of it. Next to it, for a boy, he puts a span-long bow with a small arrow, brush, paper, and money; for a girl, these are needle, yarn, ell, scissors, knife. The three little baked loaves signify the three Buddhistic world-
[776] spirits (2). The five steamed loaves symbolize the five blessings

2. [Foreign text p. 624.] It could not be ascertained which three names are individually involved. sãṅrēdzi (Illuminated One) is the title for the Tulkus; cf. section, "The Lama-reception," and Note 6 below.

[777] of good fortune: age, wealth, health, virtue, blessed death (1).
[171]

1. [Foreign text pp. 623.] Chinese and Tibetan conceptions are mixed in the explanation of these loaves, for the Chinese also have this birthday ceremony. The Chinese proverb, wu fu p'eng shou, the five good-fortune-[624] (signs) hold up the age-(sign). A custom at New Year's: The sign shou is written in the center of a red paper, and in a circle around it the five signs for good fortune, fu.

The parents give the child some of the bread to eat and let it drink tea, or the mother suckles it. Then they ask it to grasp at the things on the kang table. If the boy grasps
[778] money, he will be an industrious tradesman; if he seizes bow

[623 cont.]

852 and arrow, he will be a strong warrior; if he grasps brush and
787 paper, he will be a learned scholar. It is similar for the girl.
778 The object that is chosen by the child is hung on the arrow of good fortune (3).

3. [Foreign text p. 624.] Concerning the arrow of good fortune, cf. the appropriate section. Tying the object grasped by the child to the arrow is supposed to preserve the child's strength so it will develop in the direction indicated. On the arrow of good fortune in the yard of my informant, I saw a large number of miniature bows, arrows, and balls of hair of his children and grandchildren.

302 The haircut: The child still has downy hair because it
852 has not been shorn since birth. Now the father or some other man takes it in his arms and takes it into the yard. There another man shaves its head, regardless of whether it is a boy or a girl. One or two tufts of hair remain standing on the back of
[778] the head (4). The father twists the hair between the palms of

4. [Foreign text p. 624.] The tufts of hair that are left were probably intended as beginnings for the later hairdress (queue). It could not be determined whether they might perhaps have something to do with a con-
[171] secrated Buddha-tuft, as, for example, among the Lolo; cf. Lin Yüeh-hwa, I-chia. In any case the tufts of hair are nowadays shaved off again. Probably the tufts, like the custom as a whole, were taken over from the Chinese. The Chinese call these children's hair-tufts tsung-chiao

[624 cont.]

302
852

[Note on foreign text p. 624 cont.] (roughly = little head horn). To what extent they thereby characterize childhood is shown by the expression tsung-chiao chih chiao, friendship since childhood (literally, little head horn connection).

[778] his hands into a little roll and twirls one thread out of it with which he ties it to the arrow of good fortune. Formerly these strands were drawn through a coin with a hole in it, and this, together with the ball of hair, was hung on the arrow. The hair of the children thus remain on the arrow of good fortune throughout their lives.

852 [782] Then the father goes with the child and the arrow of good fortune into the yard and makes the great incense offering. On this occasion the child kowtows to the sky for the first time. After the offering the arrow is taken back to its original place (5).

[527]
[177]
852
171

5. [Foreign text pp. 624-625.] The first birthday celebration was evidently taken over from the Chinese there. An example of how it is practiced elsewhere in China, taken from J. Doolittle, Social Life (p. 90), will be presented here for the sake of clarity: "On the first birthday the mother is presented with another thank-offering, and other gifts of clothing and food are received by the grandmother on the maternal side. If it is a boy, a pair of shoes and a cap are found among other items of clothing; if it is a girl, then arm bands and head ornaments are also found among other articles of clothing. The preparations for the thank-offering

[623 cont.]

852
171

[Note on foreign text pp. 624-625 cont.]
are carried out by the grandmother on the maternal side ..." etc. "Before this festival is celebrated, a large bamboo sieve, such as the farmers use for screening the grain, is placed on the table before the ancestral tablets, where incense and candles have already been lighted. On this sieve are placed a series of coins, a pair of scissors, an ell measure, a copper mirror, brush, inks, paper, inkstone, one or two books, the abacus, a gold or silver ornamental object or some other implement, fruit, etc. The child wears the new clothes which it has just been given and is put on the sieve amidst the objects. Now it is a question of what the child grasps first, holds, and plays with. This moment has an exceedingly great fascination for the parents and assembled friends. It is said that the object the child seizes first indicates its later activities, profession, character, and position in the world. If the child is a boy and seizes a book or an object that has something to do with literature, such as a brush or ink, then one assumes that he will be a great scholar. If he grasps the money or [625] gold and silver objects, then he will be famous on account of his wealth and skill in acquiring money. Once in the Sung dynasty a girl, when she was a year old and had been set on the sieve, first grasped two little miniature weapons with one hand and with the other two vessels such as are used for certain offerings on state occasions. After a few minutes she laid these things

[623 cont.]

852
171

[Note on foreign text pp. 624-625 cont.]
down again and grasped a seal. She then no longer paid any attention to the things that lay before her. And now the result: this girl became chancellor of an imperial realm." -- The oracle at this birthday celebration corresponds essentially with that of the Tujen.

527

The Tujen celebrate birthdays otherwise, too, both men and women, but only from the forty-fifth year on. A feast is held, at which all the relatives take part. As presents, nine loaves of bread are customary. Eight steamed loaves signify the eight genii, pa-hsien, and one loaf represents the god of age, shou-hsing (star of age). Towards sundown, all go outside to the graves and give the ancestral offering. Then they go home and drink and dance into the night. -- As the names show, this custom is also borrowed from the Chinese. The Tujen originally had no ancestral offering; to the Chinese, on the other hand, the arrow of good fortune and the dance with song are foreign.

Report

[171] [574] The New Year is celebrated by the Tujen at the same time as by the Chinese. In the first days they rest from all work,

[625 cont.]

527 dance and sing, and visit one another. Only after the first full
[574] moon on the fifteenth day does ordinary life begin again.

Many days in advance, meat, cakes, etc. are prepared. During the night from the last day of the old year to the first
[782] day of the new year no one goes to bed. In the morning an
[888] offering is first made to the gods, the family elders are venerated, joy is welcomed (3), and the obo is venerated. In the afternoon

3. [Foreign text p. 628.]
[113] Concerning the types of bread, cf. Dom. Schröder, "Ying-hsi," Anthropos, 41-44, 1946-1949, p. 186, Note 3; the entire ceremony of the welcoming of joy is described in the same article.

relatives and acquaintances of the village visit one another.

From the second day on the people make New Year's
[628] visits outside the village, renew the animal consecration (6),

6. [Foreign text p. 629.] Cf. section, "The Animal Consecration."

[533] gather in the yard or on the threshing floor, sing legends and songs, and dance. It is a gay time.

---

[626] Details

Preparation: As much as a week in advance pigs or sheep
[262] are slaughtered, noodles are cut for provisions, the most varied kinds of oil-cakes are baked, especially the tagur bread and filled pastries (3) [see Note 3 above]. It is important to have
[273] a large quantity of barley wine, since a considerable amount is drunk everywhere on New Year's Day. The day before, the
[356] house and yard are swept, lanterns and lamps are made (1), and

[626 cont.]

527
[354]

1. [Foreign text p. 628.]
The lamps are large copper butter-lamps or the small copper bowls. -- If there is no mani-tree, the red lamp is hung on a roof slat in front of the door of the main house. This lamp is very likely copied from the Chinese celestial lantern. The Chinese, too, draw up such a lamp on a tall mast in the yard, like a flag, and let it burn every night. It is called t'ien-teng, that is, celestial lamp.

[177]

[356] the window newly plastered. In recent times the Tujen also
[177] write vernal sayings on red paper, like the Chinese, and paste them to the door posts. This was formerly not the case.

[573] Night watch: During the night before New Year's Day sleeping is not allowed. The old people say: "Please do not sleep tonight, the gods want to be welcomed early tomorrow morning." Therefore the master of the household stays up with his whole family. They partake liberally of tea, liquor, and the New Year's food, sing and converse until dawn.

527
782
[888]

New Year's morning: At the first cockcrow after midnight even the last stragglers put on their best clothes. Only the very old in the family remain lying on the kang. The master of the household puts large, burning butter- or oil-lamps in the room on the household altar. In the yard he hangs a red paper lantern with a butter-lamp to the mani-tree (1) [see Note 1 above]. It is attached to a transverse strip on it. Then outside, with the entire family, he gives the great incense offering, and everyone makes a threefold kowtow to the sky out in the open. The same is repeated before the household altar for the countless other spirits. During this time a stone is made red-hot in the
[783] hearth fire, and with this glowing stone all the rooms of the compound are fumigated. At the same time the conch is blown. The fumigation may also be done by women (2).

2. [Foreign text p. 628.] The

[626 cont.]

527
782
[783]
[789]

[Note on foreign text p. 628 cont.] The fumigating with the red-hot stone is supposed to purify the house and drive away the demons, like the exploding of rockets.

Then a second offering follows. The master of the household takes little sticks of incense, one for each member of the family, and lights them in the room above the lamp. Then he goes out around the mani-pole and, with all the members of the family, makes a threefold kowtow to the sky, facing the main house. He puts the little sticks in the incense oven on the round manger. Then the same ceremony is repeated in the house before the household altar, where the new little sticks continue to smolder in the incense basin. During the entire ceremony rockets and cannons are fired in order to scare away the demons. Together with the incense, yellow paper is also burned, exactly as among the Chinese (8).

[789]
[171]

8. [Foreign text p. 629.] As among the Chinese, the hearth-god is also carried off and on New Year's morning is again festively carried in. I was unable to learn anything concerning an original Tujen ceremony with respect to the hearth fire. Since time immemorial an incense offering has been made to the hearth-god, but it is uncertain whether on this occasion cypress twigs were thrown into the fire. Nowadays little sticks of incense are generally put on the wall behind the hearth, precisely as among the Chinese.

[776]
[372]

Another fire ceremony takes place in the first full-moon night of the year from the fourteenth to the fifteenth day. Young people light a series of little straw fires (10 to 15) on the path or on

[372]
[783]

[626 cont.]

527
782
[372]
[783]
[171]

[Note on foreign text p. 629 cont.]
the threshing floor and jump over them. It is said that this is done in order to become pure; others say it is only for fun. The Chinese there, who also have this custom, maintain that it is an old Chinese practice. They also tell a legend about it, which I have forgotten. It has something to do with a battle ruse of old heroes whose memory one wants to celebrate. -- For the purificatory fire, cf. section, "The Incense Offering," Note 9.

[177]

It is precisely in the New Year's practices that the strong mixture with Chinese customs appears, so that in individual instances it is impossible to say definitely what originally belonged to the Tujen. One can safely ascribe to them, however, the ying-hsi ceremony, renewal of the animal consecration, and above all the dancing and singing of songs, which the Chinese do not know.

[821]

The dances with song point to a close connection with the waxing moon, since they are usually performed at night on the fifteenth day, even throughout the night. It is almost as though the New Year's festival applies primarily to the new moon. After the first full moon, everything is quite suddenly broken off.

Once the incense ceremony is over, the master of the household places a table in the yard before the round manger. On it are put trays with five steamed loaves, five oil-loaves, three tagur loaves, and all kinds of baked goods (3) [see Note 3 above]. Then a bowl of barley wine is poured out and a

[626 cont.]
527 threefold kowtow is again made to the sky. The same ceremony
782 is repeated before the household altar for the other gods.

[627] Gratulation: Meanwhile, the old people of the
527 household have also arisen. Now they, too, pay their New Year's
888 reverence to the sky and the countless spirits. Then they sit
576 down on the kang with the master of the household and the family elder for tea and receive the kowtow from their sons and daughters. Then the general breakfast takes place. The children kowtow before their parents, the younger siblings before the older siblings, the younger cousins before the older cousins, etc. The old ones give younger ones some money.

171
527 The welcoming of joy: Towards midday the welcoming
[776] of the god of joy takes place. For this one drives the animals onto the threshing floor, makes an offering of bread and wine, burns incense, waters the animals, and again drives them home. This practice is exactly the same as among the Chinese (7).

[787] 7. [Foreign text p. 629.] At New Year's the Tujen also question all kinds of oracles in a way similar to that of the Chinese, for example, the feed oracle, in connection with which one feeds the animals with various kinds of bread in order to prophesy concerning the harvest (cf. Schröder, "Ying-hsi, and Note 3 above). Another oracle is the ice-breaking. Young boys and men go to the river, take a sheet of ice, and break it apart. In the break lines pictures of species of grain are recognizable; the species that appear most clearly may be expected to have the best harvest during the year. This oracle is also found among the Chinese.

[627 cont.]

527 782 Obo veneration: At the same time or still in the early hours of the morning some family representatives go outside to venerate the obo. On this occasion, after the stone throwing, the air-horses, which are printed on yellow paper, are released. They flutter and whirl about in the wind as a sign of good fortune for the family (4).

4. [Foreign text p. 628.]
Cf. section, "The Mani-tree,"
Note 7.

527 574 Gratulation visits: At midday the villagers visit one another. One takes five to six loaves of bread, sticks of incense, yellow paper, and a little jug of barley wine and goes to the family with which one is friendly. There the guest places the bread before the household altar, lights the little sticks, burns the paper, and pours a few drops of wine on the floor. After that he kowtows before the altar and gratulates the master of the household as well as the individual members of the family. [576] The one of lower standing or the younger one must always kowtow to the one of higher standing on this occasion. Then they sit down on the kang around the fire, drink tea or wine, converse, and sing. Sometimes a round of dancing also follows in the yard.

When women go gratulating, they take no wine, incense, or paper with them, but only bread and tea. They put the bread on the altar, pour some tea on the ground, and then kowtow. They never sit with the men on a kang, however.

It is obligatory that the younger relatives go to the older relatives. In any case on New Year's Day itself one stays in the village. Only from the second day on do the friends and relatives living farther away visit one another.

527 533 Entertainment: During the first 14 days of the new year the people meet every evening at moonrise in the yards. Incense is burned and singers who tell legends are invited. They take turns singing competitively, during which two persons grasp each other by a lappet of the coat. When one of them

[627 cont.]
527 cannot sing or sings incorrectly, his opponent cuts a piece from
533 the lappet. Thus one can sing away his whole garment in an evening.

Above all, the young people meet on the threshing floor and in a circle sing all kinds of songs. This lasts the entire
[883] night, especially at the first [628] full moon. Only towards morning do they stop. Boys and girls mingle freely in the circle. Small boys dressed in reversed hides represent demons and beat on pieces of wood; others imitate Chinese traders, play all kinds of tricks, etc. (5).

[535]
[171]

5. [Foreign text pp. 628-629.] These round dances are exactly like those among the neighboring agricultural Fandse and Chiafandse. Men and women and boys and girls form [629] a circle. One person leads the song and also indicates the dance movement. The others sing the refrain and repeat the movement together. They also dance in twos to the rhythm of the song. These dances are also performed generally at entertainments, for example, at a wedding, upon the arrival of the lama, etc. There are many kinds of the songs. They are divided into two groups: family songs, which are decent and are sung in the house; wild songs, whose content, taken from love-life, is usually quite crude. The melodies to a great ex-
[171] tent are the same as among the Fandse. Besides Tujen songs Chinese and Tibetan songs are also sung. The song
[539] given here is Tibetan in its original
[883] text. -- At these moonlight dances the young people spend the entire night out in the open, and more than

[628 cont.]

527
[533]
[883]

[Note on foreign text pp. 628-629 cont.]
one couple is seen disappearing off to one side. Concerning the types of songs, cf. Schröder, "Hochzeitslieder."

After the fifteenth day the common workaday life begins
[262] again. The many oil-loaves, however, are eaten for a long time.

[539]
[533]

Song: On New Year's the following song is popularly sung:

1. On New Year's one makes a kowtow to the sky, burns incense, and then one eats.
2. If you observe the laws of the emperor, in later life you will become a minister
3. If you do not forget the kind deeds of the parents, you will later live long.

Report

[792] Old people, men and women, invite the lama to bless and instruct them. This is a great family festival. It is prepared a long time in advance.

On a certain day acquaintances and relatives come and bring the old person presents and gratulate him. They are [574] treated with tea and cake. There is singing and dancing and a feast is held. The young people fetch the hutukhtu. When he arrives, the women of the village dance, and incense is burned in the yard. The hutukhtu blesses the guests at the feast and the old person.

In the afternoon the age-consecration is performed. The hutukhtu makes a number of tormas, which are carried off. Then the old person kneels on the felt mat before the hutukhtu, is blessed with holy water, receives instructions, and is girdled with a yellow sash. He then resembles a lay monk. The mother's [792] brother determines what compensation the hutukhtu is to receive. [465] The next morning the hutukhtu returns to his monastery.

The consecrated person must now observe special commandments, must withdraw on the first and fifteenth of the [785] month for meditation, and fast and pray. -- Not all people can afford this celebration, for it is very expensive.

[630 cont.]

Details

527
778
888

The consecrated person: The person may be a woman or a man. He must be advanced in age; usually he is around sixty years old. At this age they are pious and reflective and are better able to observe the prescriptions. Young people are eager for life, violent, and uncontrolled. The consecration is done only by an incarnation, hutukhtu, not by an ordinary lama.

[792]

Preparations: The preparations are carried out in consultation with the mother's brother. He determines the day and the hutukhtu who is to be invited. Since the whole village takes part in the celebration, money is saved a long time in advance. Sheep, pigs, or a cow are slaughtered; oil-baking, bread, and oil-sticks, san-tzu, are baked for provisions; the house and yard are put in order, liquor is distilled, new clothes are purchased, and the gifts for the hutukhtu are provided. The latter, a few days in advance, sends one or several monks who put the room in order for him and prepare the kitchen, so that he may live and eat worthily.

[604] [621] [262]

Gratulation and reception of guests: On the day set, the person to be consecrated puts on his best clothes and stays in a clean side room. The visitors, relatives, and [631] guests come early in the forenoon. They gratulate the person to be consecrated and bring a gift; usually they wrap a hada around it, which they solemnly hand to the person. The gifts are put on a chest in a room, usually in front of a household altar. Bread, oil-baking, cloth, hadas, silver money, etc. are given. A master of ceremonies is designated so that all may go according to custom and order.

[431]

Of the guests, the mother's brother is the person of greatest respect. One goes toward him and hands him a hada. When he comes, the person to be consecrated steps down from the kang and receives him. He then hands the gifts to him and is treated with tea and cake in the place of honor. Then everyone together drinks tea and liquor and breaks pieces of oil-sticks into the bowls. -- Aside from the mother's brother, the daughter's

[604] [431]

[631 cont.]

527 778 888 [431] husband and the daughter's children must give a hada and money to the person to be consecrated. In return they later receive greater remuneration when they depart.

[574] [562] Feast: The feast takes place in the yard, first for the men, then for the women. Three fields are divided off, right and left for guests, and in the center for the mother's brother with the two closest relatives. These three sit on a felt mat on even ground with their backs to the main door of the main house and have before them a low kang table with the dishes; they are served separately by the master of ceremonies. On the two fields to the right and left, straw is scattered in a square; heavy planks are put in front of it and sometimes also mats, which are to represent the tables. In the middle of each square there burns a fire in which tea and liquor are warmed.

[264] [574] The food is introduced with tsamba and tea, which is taken with butter and milk. Mutton or pork follows; the fatter it is, the better liked and more superior it is. A considerable amount is drunk. Rice follows as the main dish, which is mixed with butter and sugar and sweet roots. -- The women eat after the men. -- During the meal there are always some free, who sing and dance.

527 778 888 792 604 Settling the prayer fee: After the meal, the master of ceremonies pours out liquor for the mother's brother. The sons, daughters, and daughters-in-law kneel down before the mother's brother. The master of ceremonies hands him a hada and starts the negotiations over the price. The mother's brother demands expensive gifts and much money for the lama; the master of ceremonies, through his rhetorical skill, must gradually lower the demands, until finally a suitable sum is agreed upon. Then the sons and daughters stand up, kowtow, thank the mother's brother, and go. This is similar to what is done at the pai-ta before the cremation (1).

1. [Foreign text p. 634.] For further details, see chapter, "Customs concerning the Dead and Cremation." Here, too, the

[631 cont.]

527
778
886
792
[604]

[Note on foreign text p. 634 cont.]
prominent position of the mother's brother is particularly striking.

Arrival of the lama: The day before or early in the morning, horsemen have ridden to the lamasery to fetch the hutukhtu. He comes towards midday and is led into the house with the usual ceremonies. On the threshing floor before the yard gate the women dance and sing with all their might. In the yard the incense offering is burned and the conch [632] is blown. The lama is led to the kang in the main house; there he rests and drinks tea.

[604]

After a considerable time, the mother's brother and the master of ceremonies introduce themselves to him, give him a hada, and request him to bless the guests at the celebration. Outside, before the door of the main house, he sits down on a chair, and all pass by with bent heads, the mother's brother first. The hutukhtu touches the crown or the forehead of each one with his heavy prayer book. This is called the lama-blessing, from which the entire ceremony gets its name (2). --

[788]

2. [Foreign text p. 634.] Cf. chapter, "Reception of the Lama." I could ascertain no name other than lama ndziala; ndziala has a whole series of meanings, among others: to invite a hutukhtu. Because the age-consecration is the greatest familial religious event to which the hutukhtu is invited, it is simply called the "invitation." It is a ceremony in which a special relationship to monasticism is established through the consecration.

[192]

The person to be consecrated does not come, but waits until later.

[632 cont.]

527 The age-consecration: After the usual butter-lamps and
778 little bowls have been set before the household altar in the main
888 house, the assisting lama makes a few tormas, among them a
792 little one. The tormas are placed on a tray before the household altar.

On the floor before the kang of the hutukhtu a felt mat is spread and the little torma is put on it. The person to be consecrated enters, followed by the mother's brother and his children, kneels barefoot and bareheaded (the women without a headdress and with their braids hanging down) on the mat, kowtows three times, and remains kneeling before the torma.

The hutukhtu prays over the candidate for consecration. The latter holds out his cupped hands, into which the hutukhtu pours holy water from his can. He drinks it. There follows a second pouring into the cupped hands. The candidate for consecration rinses his mouth with it and spits the water twice over the torma. He washes his head with the third portion of water poured into his cupped hands. Finally the last pouring follows, with which he washes his face (4).

[783]

4. [Foreign text p. 634.] Washing, of course, plays an important role in all consecration ceremonies; even Buddha images are washed before they become "ensouled." In this connection, cf. also Filchner, Kumbum, pp. 267 ff.; Filchner, Om mani padme hum, pp. 137-141; furthermore the chapter, Customs concerning the Dead and Cremation."

After that the hutukhtu sprinkles him with holy water from the can and throws Tibetan barley over him, on which he has blown three times. He consecrates the water with the spices in advance, after the tormas are finished. For the sprinkling he uses the peacock feather, not a twig from the tree of life.

Now the master of ceremonies, the husbands of the daughters, and children take the torma that stands before the

[632 cont.]

527 candidate out into the yard and throw it away. The mother's
778 brother stays there, and after that only own children still appear.
888 They stand or kneel in the side room behind the person to be
792 consecrated and shut the door, because only a few people may be present. Only the person to be consecrated remains in the lama-room, kneeling before the kang.

The candidate for consecration now washes himself again in the manner described above, is again sprinkled with holy water, and has Tibetan barley thrown at him. The master of ceremonies takes an iron spoon, puts in it some of the red-hot material from the fire-basin of the lama, scatters pounded cypress incense on it, and the lama throws fragrant spices over
[713] it. The person to be consecrated is fumigated all around with this and is now completely pure. The hutukhtu gives the consecration prayer over him and instructs him regarding the com-
[785] mandments that he must observe from now on. These commandments relate to fasting, abstention, the prohibition against killing, prayer, etc. They vary somewhat for men and women. [633] The instruction is given in the Tujen language so that the candidate will understand it.

Now follows the donning of the yellow sash. It is about
[292] a hand wide and four to five ells long. It is not supposed to be silk. Silk mixed with cotton is permitted, but usually it is cotton. The candidate must provide it himself. This sash lies before the hutukhtu on the kang table and is fumigated at the same time as the person to be consecrated. It is not sprinkled with holy water. The assisting lama places the sash over the candidate's left shoulder and ties it together under the right arm
[292] with a yellow string that has likewise been fumigated. The cloth has the same name as the loop of cloth that the lamas throw over the shoulder.

Since the consecration does not take place until late afternoon, it has meanwhile become evening. Only now does the hutukhtu partake of the main meal. In the yard, however, the guests gather around the fire, warm their liquor, and sing and dance into the night.

The next morning the hutukhtu performs his usual morn-
[465] ing prayers, drinks tea, and receives his prayer fee: several

[633 cont.]

527 back-baskets of bread, meat, money, etc. -- The guests have
778 already each received a piece of meat or fat and four pieces
888 of oil-baking after the feast the day before. The mother's
792 brother, the daughters' husbands, and their sons receive eight
[431] oil-loaves, a larger piece of meat, and a hada, for they
[465] brought the candidate more gifts than the others. -- After the morning meal the hutukhtu returns to his monastery. He is not accompanied, but the gifts are taken to the monastery for him. A large kettle of tea is donated for the monks there and lamp-butter for the temple gods (3).

3. [Foreign text p. 634.] From this it is apparent how expensive the age-consecration is. For this reason alone it is very much respected. I recall the case of a young man who organized this festival for his aged mother. The people said: "The poor wretch wants to ruin his fortune for the sake of such respect. That would-be-great." On the festive day itself, however, they eagerly participated.

778 Duties and privileges of the consecrated person: The conse-
888 crated person is regarded as a lay lama or lay nun. Therefore,
[792] after death he is solemnly cremated in the crematorium blessed
[766] by the hutukhtu. The hutukhtu who consecrated him receives 12 steamed loaves and three tagur loaves when his candidate's death is reported and must pray especially for him. He also usually performs the death ceremonies.

[784] Now for the rest of his life the consecrated person may no
[262] longer drink alcohol, smoke, eat eggs or the meat of animals that have died or chicken meat; he is only allowed to eat the meat of slaughtered animals. He must abstain from sexual
[785] intercourse and every month he must withdraw for meditation. This is done on the first and fifteenth day; they are fast days and days of meditation. Usually the eighth day of the month is also added. On these days he solemnly makes the

[633 cont.]

778 incense offering in the morning. Then he withdraws to the kang,
888 drinks "empty tea," that is, pure tea without additions and without
[785] food. He meditates and prays on his mani-string. No one may disturb him, even when guests come; he likewise does not concern himself about anything. During this time he may not sleep. Also, he may not go into the temple or to the obo. Only in the afternoon does he partake of a meal, which, however, is better and more ample than usual (5).

[527] 5. [Foreign text pp. 634-635.] Concerning the whole affair, cf. Filchner, Kumbum, p. 199. The ceremony described here is much more detailed than there and also deviates somewhat. The name Upāsaka (or Upāsika) was not mentioned by the informant. Also, he did not know the prescriptions in detail. He did confirm, however, that after each commandment the candidate had to affirm that he would observe it. The old man had not had the consecration performed for him. The people regard the consecrated persons as lay gelong; one is reminded here of the similarity with the third order in the Christian Occident.

[792]

778 It is also clear from the commandments why young people are not considered for the consecration. To be sure, this consecration can be completed at any age at or after death; at that time even young people are no longer capable of transgressing the commandments. The age-consecration seems to be merely the last step of a series of consecrations of laymen which are undertaken parallel with the consecration stages of the lamas. The

[796]
[792]

[633 cont.]

778
796
[857]
[527]

[Note on foreign text pp. 634-635 cont.] The informant once mentioned a kind of baptism at which the dǰawdzi (Tib.) is prayed; in Chinese this prayer is called hsi-lien-ching, prayer of washing the face. Evidently the [635] ceremony observed by Filchner was such a boy's baptism; Om mani padme hum, loc. cit. Later there follows a second consecration for young people, which is called gãṅsgur (Tib.) (6) [see Note 6 below] after the corresponding prayer, in Chinese san-hun ching, prayer of the three souls. So the informant told me. Unfortunately I could no longer record these ceremonies.

192

Word List

778 Age-consecration: šge lama ndziala- = great lama-invi-
888 tation.
527 Master of ceremonies; kãṅguo.
To fetch the hutukhtu: ġdzõ niwa (twice) (or dãṅwu, if the first time).
Mother's brother: nëgä; achiu (Chin.); ayãṅ.
[601] Mother's brother's son: ku-chiu (Chin.).
Sash: ġëdzãn (Tib. loanword) (6).
[292]

6. [Foreign text p. 635.] gëdzãn: Tibetan gazn = the yellow sash of the lama costume. -- gõṅsõn: Tib. dgoṅ = solitude, soṅ = to go away; meaning, "to go into solitude." -- gëlõṅba: Tib. dge = virtue, sloṅ = to apply oneself, pa = belonging to; meaning, "one who applies himself to virtue." -- gesnien: Tib. dge = virtue, bsñen = to approach. -- gãṅsgur:

[785]

[633 cont.]

192
778
888
527

[Note on foreign text p. 635 cont.] Tib. dbaṅ = force, bskur = to consecrate, to transfer. This is a ceremony of the transference of force, at which each lama receives a secret name (Unkrig).

To admit to lama standing with prayer: gẽsnien dẑẽwla-.
[785] To observe a day of meditation: pi-chai (Chin.); gõnsõn (Tib. loanword) (6) [see Note 6 above].
Member of the Yellow Church: gẽlõnba (Tib. loanword) (6) [see Note 6 above].

Pages 634-635 contain the notes given above as numbered footnotes.]

[635] 5. Customs concerning the Dead and Cremation*

000

* See "Notes," pp. 650-658 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

763 If someone is close to death, his clothes are taken off,
764 if he is wearing any on the kang. He is washed, shaved, or in the case of a woman the hair is dressed, and tied in a crouching position immediately after the last breath. A piece of cloth is thrown over the shoulder, which is the sole garment of the dead.

764 Then he is put in a death-box, which looks like a portable house, and propped up with straw. The box is placed on the floor in a room, and the closest relatives hold a death-watch there. At each meal the people bring some of the food in front of the death-box, burn paper, and kowtow. Each

[635 cont.]

764 evening the neighbors and friends gather and pray for the dead, squatting in a circle. Some days before the cremation, the master of ceremonies invites a lama to conduct the death cere-
[792] monies and burn the corpse. First, however, the mother's
[604] brother must release the corpse; this is done the evening before at the meal, when he demands an accounting for the dead person and his interment.

The cremation is undertaken outside the village in a crematory, which on each occasion is built at a different place.
[792] The lama performs almost the same ceremonies on this occasion as at the fire-pouring. After the cremation the remaining bones are kept in a wooden chest and temporarily buried on the spot.
[765] Not until the next spring do the relatives transfer them to the
766 family cemetery. -- Small children are not buried. Adult girls are burned quietly without ceremonies in an isolated place.

765 The strict period of mourning lasts 49 days. As a sign of mourning, the men turn their clothing inside out, and the women remove their ornaments and certain parts of their headdress.

[636] Details

763 Preparation of the corpse: Shortly before death, the men
764 shave first the head and then the beard of the dying person. If death sets in too suddenly, however, so that they can no longer shave him alive, it is left undone. After the shaving, he is undressed and his hands, face, and feet are washed, not the entire body. The men do this for men, the women for women. The women keep their long hair, as do girls. The hair is parted in the center and two three-stranded braids are plaited, which hang down over the breast or the back. In the case of sudden death, the corpse is merely washed and the hair dressed; the washing is then done with only a damp cloth (1).

[823]

1. [Foreign text p. 650.] Why no water may flow over the corpse could not be discovered; probably it is feared that the water would thereby be made impure; it is counted among the basic elements.

[636 cont.]

775 Before the dying person draws his last breath, someone puts
763 a mani-ball, a piece of gold, a piece of silver, and a piece of
778 butter in his mouth. The mani-ball guarantees him an advanced
[262] age after the later rebirth (2). Gold and silver testify at the
[278]

2. [Foreign text pp. 650-651.] According to the informant, in the case of the mani-ball, mani-ruru, the pill that the Chinese call chen-ling wan, that is, the soul-shaking pill, is involved. According to Taoistic reports in the shen-hsien t'ung-chien, spirit-mirror, this pill is made from the sap of the legendary fan-hun-shu, that is, the soul-restoring tree. This tree grows on the coast of the western ocean. It is of black wood. If one strikes it, it sounds like the growling of a bull. Its root is brewed into a thick brew, and out of this brew the pill is made. The pill has an exceedingly strong scent (the tree can also be smelled miles away). This scent is called fan-hun hsiang, that is, soul-restoring scent. If after someone dies he is touched with this pill within three days or it is burned before him so that the smoke passes over him, or if the pill is put in his mouth, then he comes to life again. Under the Han emperors this kind of incense was supplied as tribute from the Yüeh-chih and supposedly brought dead persons to life in the palace. This pill also plays an important role in the medicine of the lamas. It is the so-called pill of immortality. The Tujen buy this pill in the monasteries. Its color is red. According to their

775 [636 cont.]
763
778
[278]
[192]

[Note on foreign text pp.650-651]. conceptions, to be sure, it cannot ensoul the dead corpse again, but it nonetheless brings the dead to life in another rebirth. -- W. Filchner (Unkrig), Kumbum, also mentions this pill on p. 400 under the name rilu, and in Note 1683 under the Tibetan way of writing it, ril bu. It is clear that the Tujen pronunciation reru (ruru) is merely a corruption of the Tibetan word. Ch. Das has two ways of writing it, ril po and ril bu (with the l silent); he translates both as "ball, globule," [cited in English], and for ril bu he also adds "pill" [cited in English], [651] without any further designations for them (pp. 1184-85). This ruru is to be distinguished from nuru, the Tib. nor bu or cintāmani, the Buddhistic wishing-jewel. -- According to the conception of the lamas and of the people, the ruru pill reproduces itself; cf. the chapter, "Earth-god Urn." Sometimes one meets lamas who firmly believe that Europeans, too, have this wonder pill of long life, which is why they live much longer than the Chinese and the Tibetans; they claim to know that there are people in Europe who are several hundred years old.

[648]

rebirth that he comes from a wealthy position and will again acquire gold and silver. Butter is the most superior daily food and is supposed to be that again in the later life.

[262]

[636 cont.]

764 As soon as no sign of life can be seen from the dead person, he is immediately put in a crouching position, before the corpse becomes rigid, on the kang on which he died (3). With

174
764

3. [Foreign text pp. 651-652.] The conceptions of the people vary concerning the crouch-box and the crouch-seat. Nothing concerning an ancient origin is known to them. Some believe that the corpse is put in a crouching position only because otherwise it would not fit in the death-box; in this case the box is viewed as primary and more important. The informant says to this that formerly the Tujen were unacquainted with cremation and did not have any death-boxes either. This was first introduced by the lamas. The dead were exposed on the mountains for the animals to devour, as the Fandse do today. He himself would prefer to be buried in Chinese fashion; he feared being tied up and cremated.

[177]

Others maintain that the Tujen buried their dead in coffins in former times. As proof they cite the case of an old Tujen village in Yungchwan where coffins were exposed by a mountain slide; these stemmed at least from the early Ming period. This evidence, however, indicates little when one considers that as early as the Han period Chinese military expeditions took place in the nearby Huchu valley.

Even without cremation, however, the death-box is found in Tsinghai, for instance, in the Bengbar Valley, a branch

[636 cont.]

174
764

[Note on foreign text p. 651-652 cont.]
valley in Hsi-ch'uan. The so-called Chia Hsifan (Village Fandse), who originally were Mongols and are Sinicized today, live there. They, too, exactly like the Tujen, put the dead in a crouching position in the crouch-box, although they do not cremate them, but bury them.

Furthermore, the Taoist monks and people who died in a sitting position are buried sitting in the crouch-box. There is an interesting corresponding expression for the death of such people, sōwā guei wōldzia, he has departed sitting, in Chinese tsuo-hua, that is, to be transformed sitting. The word sō- can mean "to sit" as well as "to contemplate." Such people are regarded as saints who, in contemplation, pass into another world. A death in this position is also regarded as especially honorable. A chorten is usually erected on the graves of these people. -- For the Taoist sitting burial, cf. the picture. This photograph was posed. The Taoist priest of Kanchiapu was happy to have himself photographed in his death-box and showed how he would be placed in the box. He kept this box standing in his temple and with pride showed each visitor this beautifully painted piece of carving. A very fine picture is also to be found in F. Dransmann, T'aishan-Kūfu Guide, p. 19. It is the mummy of the Taoist priest Suin, who at the time of Kanghsi worked for 60 years on the T'aishan and, crouching in the death-box, [652] was buried there in the "Grotto of the Immortal" (hsien-

[776]

[778]

[636 cont.]

174
764

[Note on foreign text p. 651-652 cont.]
jen tung). -- For the sitting burial in eastern Tibet, cf. Tafel, Tibetreise, I, 236-237, with drawing.

It is known everywhere that Tulkus and other lamas are cremated. In this connection cf. the description in Filchner, Kumbum, pp. 240-242. In the case of the sitting position of the lamas, the Taoist monks, and those who died in contemplation, however, the position is that of a sitting Buddha, with legs folded under and the hands at rest, whereas the position among the Tujen and the Chiafandse is quite different, namely, the fetal position.

Other explanations of the Tujen, perhaps the most widespread, say that the human being rests in this position in the mother's womb and is born so; naked and in the same position he then again goes back into the womb of rebirth, just as he came (reversed, to be sure). In this comparison, the earth or fire as the symbol of motherhood thrusts itself upon one, and the death-box (or among other peoples the sack or coffin) as symbolic womb. -- This explanation of the people has the most to it. It is grounded in very ancient religio-cosmogonic thought processes which closely connect birth and death. Skeletons in a crouching position occur from many cultures, and people in a fetal crouching position are repeatedly represented in the archaic high cultures, and to be sure in connection with the devouring

[775]

[636 cont.]

174
764

[Note on foreign text p. 651-652 cont.] figures (Chin. t'ao-t'ieh) and the underworld. Professor C. Hentze in his most recent works has extensively revealed these connections, and one is referred to them here. -- I learned nothing concerning the conception that the dead must be placed in a sleeping position, although it is known that the nomads there on the Koko Nor sleep in this position, which can sometimes also be observed among Chinese and Tujen during the day.

764 the arms bent, the hands are put with the palms together and pressed upright against the chest so that they touch the chin. The thumbs are not crossed. The wrists are tied together with a hemp string and this is placed around the neck so that the hands stay together and cannot fall forward. Then the thighs are pressed firmly against the chest and arms and the calves against the thighs, so that the feet and seat rest in one plane. The feet are wound with a hemp string so that they will stay in position (4). Now one takes a quadrangular piece of cloth,

171
764

4. [Foreign text p. 652.] The binding of the corpse is not regarded as tying down the dead person to prevent him from returning, as is the intention among the Chinese with the tying together of the feet. The informant claims that the binding has only the purpose of making the crouching position secure.

[775]

In view of the otherwise common use of sheep wool, it is striking that only hemp strings are taken. As a reason the people say that if one took wool, the dead would be reborn as an

[636 cont.]

764
171
[775]

[Note on foreign text p. 652 cont.]
animal with wool. In the case of hemp this is impossible, for one is not transformed into a plant.

[789]

The informant claimed to know nothing about hemp as a means of frightening off demons, as, for example, in the case of the hemp whip of the shamans. It may be that Chinese influence makes itself felt here, for the Chinese, too, use only hemp in connection with the dead, and it also plays an important role in the mourning costume (hemp belt, hair string, hemp veil, etc.). Strict mourning is therefore called simply "hemp mourning," ma-hsiao, among the Chinese.

764 about two ells square, cuts a round hole in the middle, and throws it over the dead person's head in such a way that the tips fall over the chest, back, and shoulders. This cloth is [766] called "death garment." It is yellow for persons who have received the age-consecration, white for young people. It does not matter what kind of cloth it is made of (5). -- All

5. [Foreign text pp. 652-653.]
The shoulder-throw is strongly reminiscent of the shoulder-collars of the shamans. A connection could not be discovered. The Tujen maintain that the cloth is usually taken off before cre-
[789] mation: later one uses it as an amulet, since it has great healing and protective power. With regard to this, the informant observed that one could indeed take off the white shoulder-cloth before crema-
[766] tion, but that it had no magical power and was used for profane purposes. The

[636 cont.]

764
[766]

[Note on foreign text pp. 652-653 cont.] yellow shoulder-cloth, on the other hand, which a dead person with age-consecration wears, must be burned with the corpse, just like the sash that he received at that time.

this must be done while the corpse is still flexible. Once it is rigid, it maintains its position virtually unchanged.

The death-box. The death-box is made either long be-
[171] fore death or not until death has taken place, as among the Chinese where the coffin is sometimes ready decades before-
[735] hand. Only poor people do not make the death-box until after the death. The box is always made of wood, but it does not matter what kind of wood it is made of; after all, it is not buried, as is the coffin among the Chinese, but is burned with the dead person. The box has the height of a litter or sedan chair; the dead person fits exactly into it. The bottom of the box extends into four carrying beams, [637] similar to a
[532] flat litter. The box [illustration appears here], however is not
[171] a simple wooden chest, but represents a small temple with roof and doors and often very rich carving, similar to death-box of the Chinese bonze (6). Unlike the latter, however, it has a sun

6. [Foreign text p. 653.] in the case of the coffin of the Taoshih the sun-moon attachment, the movable back wall, and the carrying pole are lacking. The corpse is usually put inside through the front door or from above, because the roof piece is removable.

and moon in the center of the roof, similar to the tip of a mani-pole; this is generally regarded as necessary. The box
[556] is painted and decorated according to the wealth, piety, and
[321] affection of the relatives.

There are no definite ritual prescriptions for the prep-
[465] aration of the box. The carpenter receives the usual fee for

764 [637 cont.]
465 his work and, in addition, twelve
322 loaves of bread, two ells of white cloth, and a small measure of wheat (six pounds). After the work is done, this measure of wheat is put on the house-
[782] hold altar, and the carpenter puts his tools on it. The master of the household sticks a few burning incense-sticks among them and puts the loaves before them. Then everyone makes a three-
[532]

Death-box
(Drawing of a Tujen)

fold kowtow (7). The carpenter does not receive the white cloth until the funeral meal.

[782] [776] [177] 7. [Foreign text p. 653.] This ceremony actually has nothing to do with the death-box. It is customary after all carpentry work; it is done to honor the tutelary god of the carpenter, Lu-pan-yeh. It is a Chinese custom.

764 Lying in state: If the box is already available at death, the corpse is immediately put in it. If it is not yet ready, then the people put the dead in a crouching position on the kang or on the floor of the room in which he died. First, however, they lay down a white felt mat as a pad; straw is not used. No one may sleep or live in the same room with the dead, only in an adjoining room. A table with 12 loaves of bread, which come from the deceased's own family, and a water-lamp stand before the crouching corpse.

[462] Putting the corpse in the box is always done by men. The
[593] son puts his father and mother inside. The father, however, never puts his son in; that is taken care of by the young brothers or cousins.

[637 cont.]

764 cousins. Female persons are also put in the box by men. Then, after the corpse has been propped up with straw, a board is slid in at the back from above. The men then wash their hands. The box is put in a room and placed on four raised clay bricks, so that it will be easy to pick it up later to carry it. A white felt mat is usually spread out beforehand. The box of a deceased master of the household or his wife always stands in the main house; in other cases it is put in the room in which the dead person used to live.

Next to the box there is a small, coffin-like little casket whose lid is pegged down like those of the Chinese coffins. It is the little casket in which the bones that remain after cremation are kept. Usually a rolling pin (noodle roller), which was 412 made at the same time as the coffin or death-box, leans 764 against the box (8). [638] Other rolling pins are not used at [322] all.

[177]

8. [Foreign text p. 653.] This custom, too, seems to have been borrowed from the Chinese. The rolling pin is called mien-kan or kan-ch'ang in Chinese. On the average it is one meter long and three to four centimeters thick. It is used principally to roll noodles. The rolling pin is also called pai-hu by the Chinese, that is, white tiger, because it can become the seat of the tiger god for soothsaying or shamanistic ceremonies, just as the spirit-spear becomes the seat of the spirit. The rolling pin is also handled in the following way: a man takes it with both hands and calls down the demon into it; then the roller shakes and trembles.

[778] [787] [776]

The enemy of the rolling pin is the threshing roller, lu-chu. It represents the dark (green) dragon, ch'ing-lung,

[776]

[638 cont.]

764
412
[776]

[Note on foreign text p. 653 cont.] the declared opponent of the white tiger. -- Furthermore, the white tiger is powerless against anything that comes from the dead or is connected with the dead; he fears coffins, death-boxes, burials, etc. For that reason coffin-making is the best opportunity for making a rolling pin, and therefore the rolling pin is propped against the death-box. The relationship of the tiger to the rolling pin is thereby neutralized. -- People very rarely have a rolling pin made other than at the time of a burial; the carpenter must then plane the pole on a threshing roller, the enemy of the white tiger. The millstone also has an effect similar to that of the threshing roller, for it crushes the provider of the "white," that is, the grain from which the flour comes.

[322]

[322]

764 all. As in the case of the crouching corpse, a small kang table with the gifts to the dead is also placed before the death-box.
171 Men and women kowtow before it, burn white paper, like the
[782] Chinese, and weep aloud (9).

9. [Foreign text p. 653.] Aside from the bone-casket I once saw a small wooden casket of coffin-like form beside a death-box. The people said a small manlike doll lay in it. It was supposed to keep misfortune and death away from the house. The informant had not yet seen that and thought that this custom had come from

[789]

[638 cont.]

764
171

[Note on foreign text p. 653 cont.] the Chinese. Among the Chinese I learned the following: If someone died on an unlucky day -- which the geomancer determines -- there is danger that he will take someone else from the family with him into the beyond. In order to prevent this, the family provides a substitute at the interment. They lay a human figure made of apricot or peach wood, which the demons particularly fear, in a miniature coffin. At the interment this miniature coffin is buried at the base of the grave and the actual coffin is put on top of it. -- The Tujen bury the miniature coffin under the bone-chest. The Chinese name for this custom is ch'ung-sang, that is, double interment. One would do better to translate it as "accompanying interment." It clearly has nothing to do with an escort for the dead and the double interment in the usual sense. A kind of after-consumer [Nachzehrer] is involved here.

[789]

764
782

Gifts for the dead: The Tujen make an offering of 12 loaves of bread and a water-lamp before the dead (10). First,

[171]

[354]

10. [Foreign text p. 654.] Death-gifts and offering regulations correspond with those of the Chinese. The water-lamp, shui-teng, is an earthen bowl which is half-filled with water, beans are usually also added. A layer of oil is poured on the water. A little wooden plate, into which a wick is stuck, floats

[638 cont.]

764
782
[354]
[171]

[Note on foreign text p. 654 cont.] on the oil. This is to prevent the wick from burning too far down into the bowl; in order to save oil, the lower half is filled with water. -- The Chinese dough-lamp of long life, ch'ang-ming teng, has nothing to do with this lamp; it is unknown to the Tujen.

the deceased's own family must present these gifts. A so-called paper-bowl also stands on the floor next to the bread and the water-lamp. After each meal some tea, soup, or milk is poured into it, and little pieces of meat, bread, vegetable, etc. [264] are thrown in, according to what the family has just eaten. Until the day of cremation the dead is always supposed to partake of the meals of the household. The paper-bowl is an ordinary earthen bowl; it gets its name from the fact that after the paper-burning the charred leaves are thrown in it (11). Along with the

[171]

11. [Foreign text p. 654.] The paper-burning is typically Chinese.

water-lamp it is emptied in front of the gate on the last day, when the death-box leaves the compound for cremation. It is not broken, but may be used again for other purposes.

764 On the third day after the death, the oldest married daughter of the household appears with 12 loaves of bread. Then 782 the family loaves before the death-box are replaced by the 593 daughter's loaves. This is called "bread exchange." This takes place each time a person makes an offering of loaves. The oldest daughter is followed in order by the younger ones, whether or not the corpse has already been put in the box. Unmarried [589] daughters of the household do not make offerings. Every time [152] someone offers loaves, he also burns white paper and weeps aloud; the men, it is true, do not weep (24).

[638 cont.]

764
262
177

24. [Foreign text p. 657.] A custom that is no longer practiced among the Tujen was the eating of oil-dishes on the eve of the cremation, bān-sān tsinani, that is, one cooks oil-dishes. The daughters and their girls (nieces) brought a measure of wheat flour and a jug of oil. Both would be roasted together in a kettle after the pai-ta and handed around. It was kneaded into dumplings like tsamba. -- Similar old Tujen customs have now been forgotten, according to the informant. The extensive customs of the Chinese are being adopted more and more, and in the foreseeable future the cremation of the dead will have yielded to the Chinese funeral celebration.

764
602
782

Only after the corpse is in the box do the other relatives come, and the same rite is repeated. These are only the relatives on the father's side, however. The other acquaintances and friends also make an appearance with them. The relatives on the mother's side come only on the day before the cremation, regardless of whether the dead person is a man or a woman.

With regard to the offerings for the dead, one must always distinguish whether a person of an older, a contemporary, or a younger generation is involved. The older generation never makes an offering to the younger, for example, the father never to the son. The man does make an offering to his wife, however, and vice versa. The man also makes an offering to his older sisters-in-law.

[561]
[593]

764
782

Of the offering of 12 loaves of bread that each one brings, he gets two back; ten are used in the house of mourning and are eaten by the relatives or guests. The loaves that are returned are called "returned plate."

[638 cont.]

292 765 [171] Mourning dress: Mourning is worn immediately after the death. It does not consist of a special white garb, as among the Chinese, but only of a change of dress.

During the period of mourning the men remove their colorful vests and take everything colored off their clothing, such as neck bands, sleeve edging, etc. Their long cloak is turned and worn with the lining, or in winter with the fur, on the outside. [302] They do not cut their hair, and they let the beard grow. The red or green trouser belt made of cloth is replaced by [639] a white or black one. Instead of the clothes-belt they wear a thick hemp string.

Like the men, the women also remove the colorful sleeve strips, trouser trimming, and shoe and boot ornamentation, especially everything red. The red or green skirt over the trousers is not worn at all. Instead of the colorful clothes, the woman puts on only a simple upper garment of one color. She takes off the ear pendants, arm bands, and the neck band, and [301] removes from her headdress all lace, tassels, and hanging strings, as well as the silver hair cap [Haarschale] and the little copper plates. She keeps only the simple, rigid frame of the headdress and covers its colorful strips uniformly by sticking green paper on them. She puts a blue cloth made of coarse linen over this as a head veil. She replaces her broad and colorful belt with a hemp string.

[602] [593] All the close relatives are required to wear mourning dress, those who also must give the death-offering. The only exception is the husband upon the death of his wife. He may not wear mourning.

764 782 [602] Prayer service: The prayer service is called "prayer tea." The relatives on the father's side assemble daily in the house of mourning; toward evening they sit on the kang around the open fire in the kitchen and pray the mani for the dead on their mani-string. When they are finished, they receive noodle soup and go home. This prayer service lasts until the day of cremation. One need not sit around the kang fire, however, but can also perform these prayers before the death-box itself.

[639 cont.]

764 782 792 The official prayer-service is undertaken by a lama, if possible by a hutukhtu. He is given a room of his own in the house of mourning, which ordinarily immediately adjoins the room in which the corpse is laid out, so that he can remain on the kang when he recites the office of the dead. A lama never prays directly before the corpse. A hutukhtu visits the house of mourning only on the day before the cremation, and stays there only one night. He also always undertakes the ceremonial cremation with the fire-pouring. Other lamas, on the other hand, may perform services in the house of mourning several days before.

[177] In recent times the Tujen also invite Chinese bonzes for the prayers. They adhere to their own rites. It also happens that bonzes and lamas are invited at the same time. Then the prayer rite is mixed. A cremation, however, is never carried out without some religious officiant first giving the prayers for the dead (12). Lamas of lower rank, who may not undertake the

[123] 12. [Foreign text p. 654.] The Tujen have no difficulties in inviting representatives of various religions for prayers. I was even requested once to give the Christian office of the dead. -- On the other hand, the Chinese Buddhists also invite the lamas to give prayers for the dead.

fire-pouring, or bonzes do not go along to the place of cremation, but remain in the house of mourning.

764 782 792 465 [604] For the prayer, the relatives, lamas, and bonzes receive a corresponding honorarium which is usually fixed by the mother's brother on the occasion of the demand for an accounting during the last mourning meal. The Chinese bonzes, to be sure, demand a fixed fee immediately upon being invited; otherwise they do not come at all. The other persons who say prayers, assistants at the cremation, etc. receive compensation in the form of alms on the eve of the cremation or on the morning after the cremation.

[640]

764 Hutukhtus and lamas of higher rank often harvest very
782 large fees; there are people who donate up to two or three horses.
792 When the relatives accompany the lamas back to the monastery,
465 they take along a block of brick tea and boil it in the large
[272] temple kettle for the monks, who sometimes also receive their
[262] own stipends so that they will pray for the dead. Wealthy people
[788] buy up to 300 pounds of rice for this purpose, cook it in the
[556] temple kitchen with sugar and butter, and feed the lamas with it.
[432] In addition, each monk receives a bowl of tsamba with pats of
butter. It is popular then to light butter-lamps in front of the
temple statues, sometimes up to 1,000 of them. Often a large
month-lamp is donated, which burns uninterruptedly day and
night for 29 days; during this time the monastery holds the
prayer service for the dead. -- Well-to-do families also donate
to the monastery the elegant clothing and the ornaments of the
dead, especially of the women. A lama then attaches the name
of the deceased to the garments and puts them in front of a
Buddha image in the temple. The garments are later sold by
the monastery. With the proceeds the monks hold further prayer
services for the rest of the soul of the deceased.

764 Demand for an accounting by the mother's family:
602 Whereas the bereaved of the deceased's own family maintain
a watch night and day kneeling beside the box (13), the relatives

[177]

13. [Foreign text p. 654.] This custom of the deathwatch also seems to be influenced by the Chinese. The bereaved kneel on straw to the right and left of the box, just as the Chinese kneel to the right and left of the exposed corpse. At night they huddle together and put a clay brick or tile underneath as a pillow, after the old Chin. saying: ch'in san, chen k'uai, that is, to sleep on straw, to put a (clay)-brick underneath. -- The deathwatch is compulsory for the generation that owes repsect, called

[640 cont.]

764
602

[Note on foreign text p. 654 cont.] hsiao-tzu in Chinese, who are the male descendants and relatives of the first and second degree, for example, younger brothers, younger cousins, grandsons.

on the mother's side do not appear in the house of mourning until the eve of the cremation.

764 They must be informed, however, immediately after the death; this is called "death announcement." The master of
602 ceremonies, with a small bottle of liquor, goes to the mother's
604 brother to announce the death of the latter's nephew or niece (14).

[763]
[273]
[178]
[171]
[212]

14. [Foreign text p. 654.] In recent times the Tujen announce the death to the mother's brother by means of a written communication, like the Chinese. The original practice, however, is the announcement with the liquor-jug, to which is tied a flock of wool.

[792] The two now consult as to how the funeral solemnities are to
[465] be arranged, how many monks are to be invited to pray, how large the fees are to be, etc. The mother's brother is intent upon setting demands as high as possible, whereas the master of ceremonies sets lower ones. Once they have agreed upon
[273] the approximate level, they drink the little jug of liquor together. If they do not agree, the master of ceremonies returns home with the liquor and he receives new instructions from the bereaved family. Sometimes this happens two or three times. A final arrangement is not made until the last day at the accounting in the house of mourning.

On the eve of the cremation, the mother's brother, and with him all the male relatives on the mother's side, appears in the yard of the bereaved. The women among the maternal

764 [640 cont.]
[602] relatives do not come (15). The mother's brother is solemnly
[604]

764
601
[171]

[592]

[177]

15. [Foreign text pp. 654-655.] Three groups of relatives are to be distinguished, which correspond to the kinship divisions of the Chinese there: 1. One's own family, dzienani kudë, Chin. pen-chia. To this belong the descendants in a direct line, son, grandson, grandchildren, even the daughters who are already married outside. They live together in one compound. 2. Cousinhood, dzienani šäni, Chin. tang-chia-tzu. These are the father's brothers and cousins, in practice all the relatives with the same family name. -- This group is obligated to provide for the interment, while one's own family (even the daughters) wear mourning dress and are subject to the strict mourning taboos. As soon as the daughters return to their husband's family, however, they take off the mourning. 3. Affinity by marriage, urog, Chin. ch'in-chia, ch'in-ch'i. Since among the Tujen here the Chinese expressions are now in use, the following names should be distinguished: ch'in-chia in the strict sense is the relationship of the sons-in-law with whom the daughters have married. They have another family name, wai-hsing. The family from which the mother comes is called wai-chia; here the brother of the mother is the person of respect who represents her interests. The family from which the mother of the father comes is called wei-chia; here, too, for the

[640 cont.]

764
601

[Note on foreign text pp. 654-655 cont.] father his mother's brother is the person of respect, who in case of death demands an accounting. Wei-chia and wai-chia have the same signs; only the pronunciation is different. Literally translated it means [655] "the outside family," in other words, not belonging to the male line. Instead of wai-chia one also says niang-chia, which designates the family from which the mother comes. This expression is also used for the family of the lama, who, of course, is unmarried. -- The wai-chia or niang-chia does not appear until the day before the cremation.

[792]

The mother's brother is solemnly

764
602
604
[782]

received by the master of ceremonies and led to the death-box. There he and his retinue offer the 12 loaves, burn paper, and kowtow. During this time all the relatives must express great bereavement and the women utter loud lamentations. The mother's brother also weeps. After this ceremony, the mother's brother is led into the house and onto the kang, where he is given tea and bread. He rests a little while. The other companions are given hospitality outside in the yard where everything is set up for the funeral meal and the ceremony of the accounting.

[641] The mother's brother is led into the yard and sits on a white felt mat which is spread out on the ground directly before the entrance of the main house. He sits with his back to the house, facing the mani-tree. A kang table is put in front of him. The other relatives on the maternal side sit on straw to the right and left of him in a semicircle. Boards which are supposed to represent tables are put in front of them. Now oil-baking, tea, and pastries are brought. The serving is done by the cousinhood on the father's side (16). After the first bite, the guests are

[273]

764
177

16. [Foreign text p. 655.] At the interment, the Tujen have the

[641 cont.]

764
177
[605]

[Note on foreign text p. 655 cont.]
following offices: 1. The master of ceremonies. He takes care of everything connected with the customs concerning the dead and the cremation. He is called by the Chinese name sang-kuan, that is, leader of the interment, or hu-sang, that is, protector of the interment. He is usually picked from the cousinhood. 2. The gift-guardian. He takes the offering loaves and keeps them in a special room. In Chinese he is called k'u-kuan, that is, treasure-guardian. -- The Chinese also put a secretary at his disposal, who notes what the individual guests have given. The Tujen do not have this. 3. The host. He is there solely for the lama and provides for his entertainment, for his animals, for the things needed at the ceremony, for paper to burn, etc. The Tujen call him känguo. In his place the Chinese have an incense-manager. 4. The female cook, called dziemā nienie by the Tujen. -- With exception of the känguo and the dziemā nienie, the officiants seem to have been taken over from the Chinese.

764 given some liquor, and the bereaved on the father's side come
604 in the circle with the master of ceremonies and kneel on the
[602] ground before the mother's brother. The master of ceremonies
[273] steps forward and invites the mother's brother to take a drink of
liquor. He hands him a hada and a piece of white cloth and
[537] requests him to present his wishes for the dead and to release
the corpse for the cremation.

[641 cont.]

764 604 537 [273] The mother's brother puts the hada over his shoulders, takes a swallow of liquor, and begins his speech. Usually he demands an accounting concerning the care of his protégé during the latter's illness and demands the small fees for the prayer service, saying that they should be ashamed of such avarice, the dead had always been a good person, the pride of his family, he deserved better; now at least one should give him a decent death-box and provide the most magnificent cremation possible; far too few lamas had been invited, but now they should recompense them with much money and rice and butter, etc.

[273] Every time that the mother's brother puts forward a wish or a complaint and pauses, the master of ceremonies has his liquor bowl refilled and calls upon him to drink. Then the master of ceremonies replies in the name of the paternal relatives, seeks to invalidate the reproaches, to lessen the demands, and to emphasize the efforts of the family. He says that the most expensive medicines were procured for the deceased during his illness, for how could one neglect such a virtuous person; moreover, everything that the family could do in his honor and for his soul would be done, but one should not demand the impossible; after all, one must die sometime; the times are bad, but they would gladly give the lama that and that, etc. -- So it goes back and forth between the mother's brother and the master of ceremonies, until a course is finally agreed upon and the mother's brother declares that now he is satisfied and will release the corpse. Now the mother's brother is invited to inspect the corpse, but he usually does not do this.

764 604 After this speech, the bereaved arise, kowtow three times before the mother's brother, and return to the deathwatch by the box. The mother's brother follows them and kowtows before the dead. Then alms are distributed to the guests, usually [431] coins. This is called "to do good," for it is advantageous for the deceased. Then the meal for the relatives on the mother's side [735] takes place in a large circle. Usually there is rice, but among poor people only noodle soup.

[775] [177] [642] The ceremony of the demand for an accounting has the purpose of releasing the soul of the dead for the migration

[642 cont.]

764 of the soul, according to the saying: if the mother's brother does
604 not open his mouth, the dead cannot migrate. When the soul has
775 no more demands to make on this world, then it leaves house and
177 home. Its demands are advocated by the mother's brother (17). --

17. [Foreign text pp. 655-656.] The people do not agree about the origin and meaning of this ceremony. The Chinese say that it was copied from them; the Tujen claim that it is an old custom of their ancestors. -- The Chinese also have the name bäda (pai-ta); they also say pai-wai for it. They have no special explanation for pai-ta; they interpret pai-wai as "to profit, to tain an advantage." There is no character for either word. This would not be so important, however, since there is a great number of dialectal expressions for which there are no characters. -- The informant believes that bäda is a Tujen word and means "to profit, to gain," exactly like the Chinese pai-wai. If this custom does not occur farther to the east, which would have to be investigated, then one could conceive of it as a borrowing from the Tujen.

[192]

The pai-ta of the Chinese is somewhat more extensive. First there is the donning of the white mourning cap, tai-hsiao, then the viewing of the corpse, wang-ku, that is, to view the bones; the mother's brother in this role is called ku-chu, that is, bones-master, an expression that the Tujen also have. Then follows the speech of the mother's brother, pai-wai. And when the negotiations on this

[642 cont.]

764
604
775
177

[Note on foreign text pp. 655-656 cont.]
occasion are concluded satisfactorily, then there follows first the kowtow with the offering for the dead before the corpse. Concerning the bone relationship, cf. Part 2, I, 2.

The speech of the mother's brother is somewhat different from that of the Tujen. He principally demands a magnificent coffin, elegant death-garments, and many bonzes for the interment. Indeed, he even reclaims things of the dead person, for instance, the cow that provided him with milk, as well as valuables that are desired as mementos, for, he says, since the beloved deceased no longer dwells among his relatives, one wants at least his personal objects out of affection. Everyone knows that this is done less out of affection than out of a desire for gain. [656] The quite un-Chinese demand for the milk cow is striking here, since the Chinese drink practically no milk.

Among the Tujen, the pai-ta makes a somewhat more selfless impression. The negotiations deal primarily with the lamas to be invited and their prayer fee, and this primarily so that the soul of the dead person will be satisfied and set out on its migration.

In the case of the pai-ta, therefore, a twofold viewpoint is to be differentiated, the social, which comes to the fore more among the Chinese, and the religious, which is of more concern among the Tujen. In the first case it is a matter of asserting the rights of the mother's family; in the second case, it is a matter of the conception

[642 cont.]

764
604
[775]
[177]

[Note on foreign text pp. 655-656 cont.] of the souls of the dead, who evidently are regarded as living corpses. This point is decisive in explaining the meaning. It is a matter of the peace and good fortune of the family, which are endangered by a restless soul if it is not satisfied and continues to wander about. This satisfaction is brought about by providing a decent interment (clothing, coffin) and the prayer of the lama. Then "the way is open" for the soul, as the Buddhists say; the significance of the above-mentioned proverb of the Chinese is shown here. How strongly this conception still affects even the Chinese is shown by the recast saying, wai-chia pu k'ai yen, wang-jen pu shang t'ien, that is, if the mother's family does not begin to speak, the dead will not ascend to heaven. -- With all this, however, it becomes clear how strong the rights of the mother's family are, and its concern for its members even beyond death.

If there is no actual mother's brother, then the one nearest to the mother's brother takes his place; this is the one who follows the mother's brother in the inheritance.

764
787
[763]

Time of cremation: As soon as the dead person draws his last breath, a relative goes to the soothsayer or Bon priest and has the day of cremation determined by the spirits. He does not enter the compound of the soothsayer, however, but announces himself in front of the large gate of the yard, because since he comes from the house of a dead person, he may not appear before the gods. Aside from the spirit-spear, spirit-table, spirit-litter, and the Bon priest, one may also ask a Chinese lay bonze. Lamas and Taoist bonzes never determine the time. Only the day is given, not the hour. As

[642 cont.]

764 a rule, all young people under 20 years of age, whether male or
[766] female, are cremated in the evening at sundown. Persons over 20 years of age are cremated in the morning at sunrise. The place of cremation is prepared the day before.

Place of cremation: The place of cremation is usually chosen by the master of ceremonies after consultation with the members of the family. Only ground that belongs to the deceased's own family or to the relatives on the father's side is considered. A dead person may never be cremated on strange soil or on land that belongs to the maternal relatives. Special preference is given to a spot on a steep ridge between fields, because the fire for the oven can most easily be set there. In
241 choosing the spot, one must see to it that the smoke will not
764 blow across a sown field. Therefore, after the sowing festival in the spring, a remote place is chosen in a ravine or on a
178 mountain where there are no more fields. Aside from the fact that the seed would be trampled, the smoke of a burning corpse is harmful for the growth and the harvest. Therefore nowadays, when even the most remote little mountain patches are planted, cremation is increasingly on the wane, especially in the valleys, and the dead are buried in coffins (19).

[177] [Foreign text p. 656.] This may not be the most decisive reason for the disappearance of the custom, however, but rather the general Sinicization. In remote ravines everywhere a place can still be found for cremation, for even the Chinese in the valleys cremate their adult, unmarried daughters in such remote places.

764 If the fire-pouring is undertaken at the cremation, then
792 the lama himself goes out to the field the day before and chooses a suitable spot. For this purpose he kneads a large torma
782

[642 cont.]
764 in the house and takes the torma to the place where he wants the
792 crematory to be built. The incense offering is then made in
782 front of the torma, but without any extra features, except tsamba
and butter; the lama sprinkles the fire with holy water. While
he then prays on a white felt mat, the others kowtow. In this
[776] way the lama requests the place for the cremation from the
mountain-spirit; the incense and the torma are meant for the
mountain-spirit. In making the choice, the lama takes into
account the evenness of the ground, since for these ceremonies
he needs a suitable place for the table and the mat he sits on.

764 [643] Erection of the crematory: Now [illustration ap-
333 pears here] an oven is built out of clay bricks. The torma is set
to one side, and no further attention is paid to it. First the men
build a quadrangular base, about two ells high and two ells
wide; on this they erect the round crematory, about four ells
high. It looks like a barrel. On the west side a broad longi-
tudinal slit remains open, through which the corpse is set inside.
On each side of the base a large hole is left for the firing. The
oven is calked with clay and lime and then is painted white (25).

25. Foreign text pp. 657-658.] The
crematory may be made in various
forms. The one copied from the
crematory of the lamas (cf. the draw-
ing made by a Tujen) is regarded as the
most superior one. Similarities with the
understructure of the chorten cannot be
[778] denied. On graves of persons who died
sitting up, I saw chorten which repre-
sented an almost exact copy of the
crematory, only slightly more rounded.
-- When the fire-pouring is undertaken
[532] at the cremation, the ground-drawing
is naturally also made, and usually not
on the ground itself, [658] but rather
one puts down a large leaf of paper with

[643 cont.]

764
333

[532]

Crematory, tab.
(Drawing of a Tujen.)

[Note on foreign text pp. 657-658 cont.]
the drawing on it; then the base is built on it. Several sheets are often pasted together. The drawing is sometimes so wide that it sticks out under the base. The ground-drawing naturally also varies in the decoration, but the thunderbolts and the lotus flower are always there. The oven with the corpse is thought of as borne by the lotus flower, out of which come the flames of the transformation of life during the burning. In this connection cf. the section, "The Fire-pouring," Note 4. -- There are certainly connections between the crematory and the bum-pa of the chorten.

[532]

[775]

764 The funeral procession: On the morning of the day set, the
[604] mother's brother and all the relatives of the deceased burn white paper in front of the box; they kowtow three times and start a loud lamention. Four bearers take the box with the corpse up on

[643 cont.]

764 their shoulders and carry it out to the yard gate. Before the gate the water-lamp and the paper basin are emptied. Here, too, the straw that served the bereaved as an underlayer during the deathwatch is burned. The procession goes to the crematory at a rapid pace. Old and young, men and women, follow in colorful confusion.

Young boys go with them. They carry straw, firewood, cypress twigs, a wooden bed or a door for the lama, a white felt mat, and a large iron kettle for melting the butter. At the oven, the men place the box on the ground. The relatives once more burn paper and throw themselves down to kowtow. Then 764 the master of ceremonies steps forward and addresses a few words 537 of farewell to the deceased. He says approximately the following: We have done what we could for you; we invited the lamas, we have prayed, we have given alms. We have made a beautiful box for you; you can be content. Therefore think no more of us and do not return to disturb the peace of our house. Be without care; we shall not forget you and shall continue to pray for you and to make offerings to you.

764 After this speech he distributes money among those [431] present. This is alms and is called "box-money." Now the [533] women once more begin the lamentation. They have a certain melody and express their grief in impromptu words. Then all go home. Only the master of ceremonies, two fire guards, the sons-in-law, the nephews, and the lama remain. The fire is serviced only by the master of ceremonies and the two fire guards. The sons-in-law and nephews assist with other operations.

Putting the corpse inside: The men who remained behind bring the litter to the west side of the oven where the broad slit was left. They put the litter with the back to this opening and draw the wooden wall out, so that the corpse is exposed in the back. Meanwhile the [644] fire guards have piled cypress twigs and wood on the oven floor. The corpse is now put on the firewood in the oven, the back to the east, the face to the west. [775] Then the slit is walled off. The face must be turned to the [823] west because the realm of the blessed is located there, to which he must now migrate.

[644 cont.]

764 The lama now takes his place on the bed or the door,
792 over which a white mat has been spread, on the west side of the oven. His face is turned toward the east, facing that of the dead person. Before him stands a little kang table with his cult implements. Next to it lie two pieces of sacking, on which two white cloth runners have been spread; the little plates with the spices and the materials for the fire-pouring (cf. the appropriate section) stand on that. On the white cloth there is also a tray with a torma. The lama prepared it in the morning in the house of mourning and brought it along. This torma rep-
[778] resents a spirit that protects the dead person and leads him west-
[775] ward into the land of rebirth. -- The lama comes from the west, the land of the Buddhas, and goes to the east; therefore he is seated opposite the dead person.

764 The fire preparation: Now the iron kettle is put on three
372 stones and a great fire is kindled under it; it does not matter how this fire is made. Several lumps of butter are thrown into the kettle and allowed to melt. The men then make the
[792] lighting pole, while the lama begins the prayers for the dead.

The lighting pole is a stick two to three meters long. Any wood desired can be used for it. A thick strand of cotton wadding is wound on one end. The master of ceremonies now brings a paper lantern, in which there is a small butter-lamp. It must be a butter-lamp; an oil-lamp or a candle is not permitted. In olden times there were no butter-lamps either, but wooden splinters from the oil fir. This lamp may not be lighted with ordinary fire, for instance, with the fire from the butter-kettle. It must be new fire which is struck from the flint on the first blow. If the master of ceremonies does not get a spark the first time, he may not try it a second time with the same stone. For this reason he keeps a whole series of flint stones in readiness (18). Now if the spark has fallen on the

[178]

18. [Foreign text 656.] In recent times matches are also used instead of the flint stones. In this case, too,

[644 cont.]

764
372
[178]

[Note on foreign text p. 656 cont.]
however, the match must burn at the first stroke; otherwise one throws it away and takes a second one.

tinder at the first blow and has ignited it, then the master of ceremonies takes a handful of straw, holds the glowing tinder in it, and blows the whole thing into a bright flame, with which he lights the butter-lamp. Then he soaks the lighting pole in the butter-kettle containing the fluid butter, holds it over the butter-lamp in the lantern until the head of cotton wadding flares up brightly, and lights the oven with it through the four fire holes. Meanwhile the lama proceeds with his prayers. As [792] soon as the flames rise high, the master of ceremonies takes the soul-guide torma and throws it from above into the oven onto the corpse; it is burned with it. Then the lama undertakes the fire-pouring.

764
372
792

Cremation and fire-pouring: The ceremony of the fire-pouring is the same as on other occasions. Only here the butter and the spices are thrown onto the [645] corpse in the oven, for which the lama holds the pouring-tube over the edge of the oven. The spices, however, are thrown into the flames by the master of ceremonies. The lama takes only a pinch each time and puts it on a [illustration appears here] little plate which the master of ceremonies holds in his hand. When the butter and the spices are used up, the lama ends his prayer and goes to the house. With him go the master of ceremonies, the sons-in-law, and the nephews.

764

Only the two fire guards remain behind. They shatter the box, burn it with the corpse, and wait until the corpse is completely reduced to ashes. This takes several hours. Then they put the little bone-casket that was brought along in one of the fire holes without the bones and cover it with earth. They put boards over the still smoldering oven, which they weight with rocks and lumps of earth so that dogs and wolves cannot get in, and then they go home. They leave the oven alone. After three days the bones are stored.

[645 cont.]

764 All who participated at the cremation wash their hands
[783] and fumigate them in a great incense fire in front of the yard
gate. Then they drink tea and hold a funeral meal. The lama
[792] usually returns to his monastery on the same day.

[415] Ladling spoon and pouring tube.
In the spoon, the thunderbolt, rdo-rja.
[532] (Drawing of a Tujen.]

764 The fire-pouring is undertaken only in the case of those
795 persons who have received a Buddhist baptism. Old people in
addition also receive the age-consecration and are regarded as lay
792 monks. If someone has died without the Buddhist baptism, it
[778] is performed after death. This is done by the lama with the
help of a chest mirror. Since no water may flow over the dead
person, the lama holds the chest shield in front of him so that
the head is mirrored in it. He pours the consecrated water from
his can over this mirror image and gives the baptismal prayer (20).

20. [Foreign text p. 656.] The fact that no water may flow over the dead person is not the only reason for the washing in the mirror. The mirror image is washed
[778] even in the case of living persons, just as at the consecration of Buddha images. In this connection cf. also Filchner, Om mani padme hum, pp. 137-141. In the passage, "Then he takes a little metal mirror, points its front side in all directions, and sprinkles it with a few drops of water from his cult vessel," it is not a matter of simply turning the mirror

[645 cont.]

764
795
792

[Note on foreign text p. 656 cont.]
back and forth, but in all probability it is to catch the mirror images of the boys who have been brought before the Kampo and to wash these images.

[778] One thus baptized may now also, regardless of his youthful age, receive the age-consecration and become a member of the monks. Through this, every person, whether man or woman, from the twentieth year on, is assured of having the fire-pouring [783] by the lama at the cremation. The fire-pouring is a purification for the dead, similar to baptism. [372]

764 Ordinary cremation: If no fire-pouring takes place, then no lama appears at the cremation. All ceremonies are dispensed 766 with. The cremation is likewise taken care of by the master of [792] ceremonies, the two fire guards, the sons-in-law, and the nephews. But no lighting pole is used, no butter melted, and no fire struck; rather, the oven is lighted with any piece of [372] wood or a match. Nonetheless insofar as possible one sees to it that cypress twigs are at hand for kindling the fire. This is desirable, but not essential.

764 [646] Bone storage and later interment: One waits three days for the bone storage. During these three days the members 602 of the family go to the oven every evening, burn paper there, kowtow, and pour tea and soup on the ground.

On the morning of the third day the relatives on the father's side gather in the house of mourning and drink tea. Afterwards they go to the place of cremation, that is, the men and women of the deceased's own family and at least one man, but no women, of the related families, and furthermore the master of ceremonies and the two fire guards. The relatives on the mother's side do not appear any more. At the [782] oven they make an offering of 12 loaves and several pieces of thin unleavened flat bread, burn paper, and set down tea. 764 After they have then kowtowed, men and women dig the bones out of the four fire holes and put them in the bone-casket. Only

[646 cont.]

764 the little bones go into it, however, for it is only an ell long and two handbreadths high. The lid is pegged down, like a Chinese coffin. The remaining bones are carried by hand, aprons, or in a back-basket to the nearest mountain height. Animals as a rule do not eat them because they are burned. Only sheep like to nibble on them. The bones decompose very rapidly, however.

The bone-chest is placed in the oven, weighted down with clay bricks, and then the oven is torn down so that it forms a little mound with the chest buried under it. This is always done if the cremation has taken place after the harvest during the period before the grave festival in the third month.

[765 769] At the grave festival, the Chinese ch'ing-ming, the bone-chest is buried in the communal family cemetery. The place of the cremation is leveled.

If the cremation is after the grave festival, then the oven is, to be sure, torn down and the place again cultivated, but the bone-chest is not buried at the place of the oven, but on a remote ridge of arable land in a field belonging to the deceased's own family. [765] Only at the next grave festival in the following year is it transferred to the family cemetery.

If the cremation has taken place on a distant mountain far from the family, then a tent is pitched there to wait until the third day, the bones are stored, and the chest is brought down in order to bury it on the ridge of a field on one's own land. [776 778 823] Such a cremation may never be undertaken on the peak of a mountain, but about halfway up. The peak is sacred to the mountain-spirit and may not be desecrated.

If the bone-chest has been buried in the oven or field, then the relatives burn white paper before it, throw pieces of bread on the bone-grave, and pour out tea before it for the dead. Then they kowtow and go home. The guests are treated with tsamba and butter in the house of mourning. The master of ceremonies receives 12 loaves of bread and two ells of white cloth; [465] the two fire guards are given six loaves each and two ells of cloth.

[646 cont.]
000 each and two ells of cloth.

765 At the next grave festival, which usually falls in the third
[769] lunar month, all the relatives gather at the kin-group cemetery for the offering to the dead; at that time the bone-chest is also transferred to it. A number of men go to the old burial spot at the place of cremation, dig up the chest, and bring [647] it to the cemetery without any ceremony. There they dig a small
[561] hole and put the chest in it. This is done only by men who are
[593] of the same generation as the dead person or of a lower generation. A father, for instance, would never bury his son, nor the uncle his nephew, etc.

765 As soon as the pit has been filled, the offering for the
769 dead takes place; the relatives burn paper and little sticks of incense, set down loaves of bread, meat, etc., pour out tea,
[782] liquor, and soup, and hold a little meal at the grave. Then everyone goes home. -- The transfer of the bones, however, need not be done at the next grave festival; sometimes one waits two or three years. The bones may not be interred, however, outside the period of the grave festival (21).

[192] 21. [Foreign text pp. 656-657.]
The Tujen word sẽn-min̆ is evi-
[177] dently merely a phonetic imitation of the Chinese ch'ing-ming. The informant said that the Tujen did not know about the grave festival in olden times, but that they have copied it from the Chinese, which indeed is confirmed by the precisely identical rites and the asserted former exposure of the corpse. -- The postponement [657] of a final interment of the bones until this feast, however, remains unexplained, especially since the Chinese usually bury their dead immediately in the cemetery. The
[777] informant observed in this connection that the Chinese inter their dead on

[647 cont.]

765
[769]
[777]

[764]

[Note on foreign text pp. 656-657 cont.] certain lucky days, but the Tujen have no special lucky days for the dead. The day of the ch'ing-ming, however, is always an unfailingly lucky day, and therefore one waits until then. On the other hand, he claimed that the Tujen formerly never had cemeteries, but buried their dead wherever they wished, although not in a common field; after the introduction of cremation this was all the more unnecessary. -- One can scarcely ignore here the probability of an original double interment.

The period of mourning: The actual period of mourning lasts 49 days. Originally the Tujen had no hundred-days [177] memorial; nowadays, however, they often imitate the Chinese in this.

During these 49 days after the storage of the bones, the chief mourner must go to the provisional grave daily at sundown [782] and burn incense there, pour out soup, and kowtow three times. On the forty-ninth day, however, the whole family goes out, makes an offering of tea, bread, and liquor, and burns paper. In former times on this occasion the men burned the hemp hair-string from their queue, and the women the paper parts of their headdress, which they wore as a sign of mourning. Since nowa- [178] days the queue and headdress have disappeared, this ceremony has been lost.

765 Starting from the day of death to the forty-ninth day after the bone storage, the members of the family of the dead 784 person may not pay any visits, not even to relatives. If they [574] want to speak to someone, they may not enter the yard, but must ask the people to come out before the yard gate. Even [796] more strongly are they forbidden to visit temples, to appear before the gods' images, to make incense offerings, or to [262] undertake other cult activities. -- During this time spiced

765 [647 cont.]
784 foods, white flour, butter, and milk are also prohibited. The
food consists of simple tsamba. All trips must be made on foot;
[262] one may not ride, but one is allowed to take a beast of burden
along. -- The mourners must abstain from marital intercourse;
[585] also, they may not appear at weddings, for that brings misfortune
to the bride. -- A bereaved shaman or soothsayer may not offici-
[783] ate during this time; in general mourning makes one unclean,
[796] and therefore he should not even be present at a religious event.

After the forty-ninth day these prescriptions automati-
[783] cally lapse. Special purification ceremonies are not necessary.
One again starts making the incense offering in the yard, shaves,
and pursues his daily activities.

769 Veneration of the dead: Aside from the grave festival,
at which all gather for the offering at the kin-group cemetery,
the Tujen have no veneration of the dead. There are no
ancestral tablets.

769 There is no further thought about the soul of a dead per-
son; it has started its migration. Most people know almost
775 nothing about any reward or punishment after death. They do
fear the dead, especially if [648] someone has died with claims
on or debts to the living, for instance, if the dead person had
been robbed, if a deed was unexpiated, etc. Then the soul
[777] haunts its old dwelling, brings misfortune and illness to its own
family, indeed, even discord and death. In such cases one
[791] questions a soothsayer concerning the cause of the misfortune,
and when it is established that a soul of the dead is involved,
it is determined in detail what still must be done for this soul.
[782] One goes to the grave, burns paper, and makes an offering
to the dead. If that does not help, one invites a lama to pray
for several days; the latter makes a special torma, which is
carried away so that the misfortune will be banished.

764 Youthful and unnatural deaths: Boys at the age of 15
885 years are reckoned as adults; they receive a cremation like the
adults, regardless of whether they are already married or not.
766 From one to 15 years of age, they are exposed on the field,

[648 cont.]

766 buried, or simply burned. No death ceremonies are undertaken. At the burning they receive no box, but are reduced to ashes, like the girls.

Like the boys, girls under ten years of age may also be exposed, buried, or burned. The corpse then usually becomes prey for dogs and wolves. Girls over ten years of age, however, must be burned, for at this time menstruation may set in, and their souls are then dangerous demons, of which even the other spirits are afraid (22). The burning is done without any ceremony

[775] [776]

766
775

22. [Foreign text p. 657.] Why the girls are so dangerous could not be clearly established. Perhaps the same notion as is behind the pai-ta lies at the root of it, namely, that the soul leaves this life dissatisfied, that is, that after the girl attained maturity she did not achieve her proper destiny in marriage. There is no death-marriage here, as, for example, in Shantung, so the soul cannot rest in peace. This soul demon, however, is destroyed through burning, according to the statements of the Chinese and Tujen. I know of a case in which a Chinese girl was exhumed and burned two years after her death because something uncanny was always happening in the family and one accident followed another. That, however, did not help either. -- Shamanistic conceptions, too, are certainly suggested. One need only recall that the Bon priests make the bone flute from the bones of such a girl and the whip from her skin.

[588]

[648 cont.]

766 and on the same day on which the girl died. If she died in the morning, she is burned in the evening; if she died in the late evening, she is burned the following morning. A man from her own family takes the corpse just as it is, with the clothes, over his shoulder, carries it to a remote ravine, digs a hole by a copse, piles straw and twigs in it, puts the corpse on top, and burns it. Usually a few other people also help. One does not wait until the dead girl is completely reduced to ashes, but leaves the still smoldering corpse behind and goes home. Dogs and wolves consume the remains. As soon as a girl has been married, however, 764 even if only for a few days, she receives an honorable cremation like any other woman, with all the ceremonies, with prayer, and with a death-box. This also applies to those daughters who [588] have not yet found a man, but who are married to the sky or the mani-tree.

762 If an adult, whether a man or a married woman, has 766 killed himself, he receives the usual cremation ceremonies without fire-pouring and without a death-box. Usually no one [782] is invited to give the prayer. At the final funeral meal, how- [604] ever, the mother's brother will demand a precise accounting concerning the causes of the suicide, especially if a woman is involved, and he will insist upon an honorable death rite with a death-box. Disputes are common at such times.

766 Those who lost their lives through violence, such as drownings, falls from heights, murder, etc., receive a cremation or interment like any other person of the same age.

[649] Those who died outside the yard, be it an ordinary death or through an accident or suicide, are always laid out outside of the compound, say, in a special tent or in a cave. If a suicide has taken place inside the yard, however, the person who has taken his life is laid out in the house.

792 Persons who have died far away are brought home. If 766 this is not possible, for instance, in the case of soldiers, a lama is invited. While praying he writes down the name of the de- [212] ceased on a stiff sheet of paper and sticks it in a measure of grain (wheat), which is then placed on a table in the room into which otherwise the death-box would have been brought. All the same ceremonies are now carried out in front of it, as though

[649 cont.]

792 an actual corpse were present. On the day set this sheet of paper
766 is burned in the field, but quite simply, without any oven and without a lama. No one bothers with the ashes. The lama writes
[212] the name on a second sheet, however, and this is put in the bone-chest, which is buried at the place of the burning (23) until the

[171]

23. [Foreign text p. 657.] The neighboring Chinese have a similar custom. They place the ancestral tablet of the dead person in a little coffin and bury it in the cemetery. This interment has legal force; when it is undertaken, it is regarded as proof that the person is actually dead. A parallel is found among the Chinese in the proxy wedding with a stuffed straw-man.

[212] transfer to the kin-group cemetery takes place at the grave festival. -- The signs that the lama writes are Tibetan.

Word List

192
764 Cremation: galdë awu- = to put in the fire.

To die: ugei (guei) wōldzia = he has passed away.

He died sitting: sōwa guei wōldzia; tsuo-hua (Chin.) = transformed sitting.

Death of a bonze: niesā sdzia = he has flown away. yü-hua (Chin.) = feathered transformed.

Death of a lama: siagladzia = he has turned to nothing.

[775] He is reborn: härga (xara) rëdzia = he has come back; sdziewa.

One has put him in the crouching position: ndañlalgadzia = he has been put in equilibrium.

The dead person: guei woldzän kun = departed person.

Death clothing (shoulder hanging): bōw-la (Tib. loanword) = white garment.

Death lament: dō tedzi ula.

192 [649 cont.]
764 Death box: odõṅ.
Bone-chest: mula odõṅ = little death-box.
[354] Water-lamp: fdzë dzüla.
Paper-bowl: tsialdzë pendzë.
To wear the clothing reversed: diela furula mõsë.
Prayer tea: rgē tsia.
[782] Prayer for the dead: xar(i)dzän kunë xuenuo mani sguorluo- = (to pray) in behalf of the deceased person afterwards the mani in the circle.
Prayer fee for the lama: mbõ (Tib. loanword).
Prayer alms: odõṅ dzied = death-box alms.
192 Own family: dzienäni kudë.
601 Relatives on the father's side: dzienani šäni = own relatives, those with the same family name.
Relatives on the mother's side, affinity through marriage: urog. Those with different family names.
[608] Artificial kinship: šäni funi = kinship-smoke. Neighbors and friends who take the place of relatives in performing services at the reception of guests, cremation, etc.

[650]
[764] Bone-master, mother's brother: tsigän yesëni daxu = the owner of the white bones;
ku-chu (Chin.).
Mother's brother: nëgä; achiù (Chin.).
Nephew (sister's son): dzie; wai-sheng (Chin.).
Son-in-law: kurgien; nü-hsü (Chin.).
Sister: agü.
Daughter: fsdzün.
192 He died as a rider: tsürog morina bagaldilä sdzia fugudzia.
He died as a settler: sänrëdzi liela guei wõldzia.
764 Burned bones: xuodzën yäsë = dry bones.
Crematory: taw (tab) (Tib.).
Lighting pole: xuämbar.
Lay bonze: lao shih-fu (Chin.) = old master.
Demand for an accounting: bäda; pai-ta (Chin.).
769 Grave festival: ch'ing-ming (Chin.); sëṅ-miṅ (21) [see Note 21
192 above].

3: Schröder--216 M-5 (1946-1949)1952-1953 AE9 Monguor AE9

[650 cont.]

192 Western paradise: hsi-lo shih-chieh (Chin.) = world of joys.

[775] Oil fir: yu-sung mu (Chin.).

[262] Thin flat-bread made with flour: kan pin-ping (Chin.) = little dry cakes.

782 [822]

241 V. Customs concerning Agriculture and Livestock

114 1. The Sowing and Harvest Thanksgiving Festivals * (1)

* See "Notes," p. 823 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

[113] 1. [Foreign text p. 823.] For this subject, cf. Dom. Schröder, "Das Herbst-Dankopfer der Tujen im Sining-Gebiet [The Harvest Thank-offering of the Tujen in the Sining Region]," Anthropos, 37-40, 1942-45, 867-873. -- The report there presents only the offering from the harvest thanksgiving festival as the old man described it at that time. It is interesting to point out that he seized upon this offering as typical of the festival and mentioned the entire celebration only incidentally, always with the indication that the shamans actually had nothing to do with the offering. When I later asked him why he had not described the entire festival in

782 [822 cont.]

241
114

[Note on foreign text p. 823 cont.]
detail, he gave the answer: "That was too much for one afternoon." Moreover, he had described the festival as it had taken place in his little village. It had always been celebrated very simply there; now he had let the festival die out completely for his village, and they would go to the neighboring village of Chichialing, where it is much longer and larger.

[178]

Here, too, nothing is presented in detail about the individual parts, as in the other chapters, because the material is too extensive and forms a subject in itself, which is to be dealt with in connection with shamanism. It should be stated in advance here, however, that they are probably not Tujen shamans, but Chinese shamans, who are found scattered over wide areas of western China.

[756]

Report

241
782

The sowing festival and the festival of the harvest thanksgiving are completely identical. Only in the autumn people have more flour and meat to celebrate the festival. Both festivals last several days. A definite number of days is not prescribed. At the festival one differentiates between the offering and the dances of the shamans. The offering is undertaken by the seed-master or the village elder. The dances last for an entire day; usually a market is also connected with them.

[756]
[535]
[443]

241
782
756
754

The shamans erect a pole in the temple yard, pray several days, send out sicknesses on the first evening, and from a distance kill children or cause them to become unconscious. In the evening of the final day, before they take down the pole, they take the sicknesses back; then the people struck by them become healthy again.

[822 cont.]

241 782 756 [292] The shamans are always men (2). They wear women's

2. [Foreign text p. 823.] The name for these shamans is bō, in other words, the typical Mongolic word. The Tujen strictly differentiate them from the other shamans and the Bon priests. They are the cult dancers designated by the Chinese as fa-shih, that is, sorcerer, or shih-kung, that is, teacher, whose chief goddess is the Niang-niang, that is, mother.

[776]

[534] clothes and a woman's hairdo. Their drum consists of an iron or wooden ring over which is stretched a sheepskin. They carry [535] the litter of the mother-goddess onto a threshing floor and dance before it. During the dance the drums are beaten. They do all [787] kinds of acrobatic feats, and one of them goes into a great trance and wounds himself.

241 782 The sowing festival takes place during the period from the third to the fifth month, the harvest festival in the ninth or tenth month. No village celebrates both festivals. There is no harvest festival where the sowing festival is held, and there is no sowing festival where there is a harvest festival.

[823] At the sowing festival one prays for protection against storms and for rain; at the harvest festival one expresses thanks for the harvest. [The notes given above as numbered footnotes appear here.]

000 2. The Pole-goat *

* See "Notes," pp. 829-830 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designation for them in the text.]

[823 cont.] 2. The Pole-goat

Report

241 789 791 778 When the seed has shot up in the early summer, one invites a Bon priest who prays on a mountain and erects the pole-goat. He comes to the seed-master on the day before, and on the following morning he goes with the men to the mountain. There they drink tea. The Bon priest sits on a felt mat. A low kang table is put before him so that he may place his cult objects upon it, and next to him is put an earthen vessel with tsamba, butter, and little gold leaves, as well as a bowl of water and red dye. He needs this for the torma. To this is added a little plate with barley and the holy-water can.

[782] First the men make the great incense offering, which is maintained throughout the performance. The Bon priest makes four little tormas, called "misfortune-tormas," which he places with all kinds of extra features on a tray. The seed-master goes in the four directions of the compass with the tray and each time throws away a torma.

[824] Then the Bon priest makes the "weather-torma." [825] Meanwhile the men slaughter a goat, stuff the hide, and put it on a tall pole. They lay this, together with the goat doll, before the Bon priest. He ties four little wooden wedges to its feet and a special wedge on the goat's forehead. He inscribes the wedges with Tibetan magical signs. Then the pole is set up, and the priest places the weather-torma, together with the extra features, before the pole. [782] A great incense offering and frequent kowtowing accompany this ceremony.

Then the priest goes to his place and makes the "mountain-torma." It has three layers and is the largest of all the tormas. He puts this behind the pole. Again incense is burned and all kowtow.

241 789 791 In the meantime other men have boiled the goat meat in the kettle. The seed-master now makes an offering of this meat to the gods. At the conclusion there is then a communal meal at which the remainder of the meat is consumed. Then all go home, but there is no singing and drinking as on other occasions. [782] [264]

[824 cont.]

241 789 791 [778] This is the ceremonial erection of the pole-goat. In the case of the simple type only one misfortune-torma is made, which represents the four others; there is also the weather-torma. The mountain-torma is omitted and no magical wedges are tied to the goat.

[782] [465] When one has undertaken the ceremonial erection, the Bon priest must come often during the summer and hold prayer services before the pole-goat. In the autumn, after the harvest, he receives from each family a certain measure of grain as compensation. In the case of the simple erection, without any summer prayer, only on the day itself is he given a large loaf of bread and a piece of meat from the loin of the goat.

Details

241 789 791 787 Time: The time of the erection is determined by the soothsayer, and in the local temple. It always falls in the period from the thirteenth day in the fifth lunar month to the sixth day in the sixth lunar month. One may also let the Bon priest determine the day. He uses three dice for this. He compares the numbers thrown with his soothsaying book and in this manner determines a day (2).

2. [Foreign text p. 829.] The time coincides with that in which the Chinese put their weather forts in order and drive in the thunderbolts (ch'a p'ai).

241 789 778 [621] [791] Place: The pole-goat is always erected on the highest mountain in the people's own local area, and only on one mountain and only one goat. Small hamlets or compounds may do it together; then the highest mountain of all these hamlets is chosen (1). -- The spot on the mountain itself is indicated by

1. [Foreign text p. 829.] If the mountain is too far away, one sets up a tent and lives there.

[824 cont.]

241 the soothsayer when the pole-goat is raised for the first time.
789 This spot is then always retained. A hole is dug there and covered
with a clod of earth or a rock so that it will not be destroyed by
778 the next year.

[791] The place is never taboo, regardless of whether the pole-goat stands there or not. One may pasture animals there, start a fire, etc. Women need not avoid it.

241 [825] Persons: Only a Bon priest may undertake the
789 performance, never a lama or a soothsayer. Nowadays the cus-
tom is scarcely ever practiced because the Bon priests have died
791 out. It is still found only in very remote mountain villages. The
[178] simple ceremony is performed by a Bon priest of the second class,
the solemn ceremony by a Bon priest of the first class because
[292] he has special magical power. The costume is that of the ordinary people since the Bon priest is, of course, a farmer. He merely needs to wear the forehead wreath and a long garment.

In addition the following act with him: the seed-master and his helper, the village elders, and generally all men, all soothsayers. It is enough, however, if only one soothsayer is represented, for instance, a sword-shaman, a spirit-table
[562] soothsayer, etc. Women must not witness the ceremony, but little girls may watch.

241 The pole: It does not matter of what wood and amidst
789 which ceremonies the pole is made. Usually it is a slender
poplar tree ten meters long. The village itself is responsible
778 for this pole. It is used every year and kept in the family of the
[621] annually alternating seed-master. It may be burned, cut up, etc. when it has served its purpose for several years.

The goat: Ordinarily it is a wool goat; color, age, sex, size, etc. are unimportant. It is true that the people prefer horned goats over the hornless. No one cares about the origin of the goat; it may be purchased, be a gift, etc. After it has been taken down from the pole in the autumn, the hide belongs to the seed-master, but it is so dilapidated that it is not usable.

[825 cont.]
241 It therefore, with the head, is left to be eaten by wolves and
789 dogs. The hide is not used for magic.
778

[791] The misfortune-torma: The Bon priest washes his hands and face and makes a little torma of tsamba mixed with butter about ten centimeters high and three to four centimeters wide. He puts it on a tray or a wooden plate. As extra features he adds in very small quantities: raw mutton or pork, leeks, beets, breadcrumbs, white and black sheep's wool, five kinds of grain, tea leaves, money, silver, gold, five little pieces of cloth, five-colored threads, and black and white sugar and puts a dough-lamp with a burning cotton wick beside them. These extra features also apply to the three other tormas, in other words, to all four little misfortune-tormas.

The extra features, along with the tormas, are thrown
[533] in all four directions of the compass, while the seed-master,
[782] amidst blowing on the conch, makes the great incense offering
[791] and the Bon priest prays the appropriate spirit conjuration. For the first four tormas the Bon priest uses only the sounding plate and the bone flute, not the double drum and bell.

In the case of the simple ceremony with only one misfortune-torma, naturally only one direction of the compass can be considered. This one is indicated by the Bon priest himself.
[791]

241 Making the pole-goat: The Bon priest does not concern
789 himself about the goat. The men fumigate and wash the goat
778 as usual and pour milk over it; while the goat shakes itself, they make [826] a threefold kowtow in a circle around it, because
825 the sky accepts the animal. Then the goat is slaughtered and
[787] the blood caught in a basin. In skinning it one does not slit open the belly side, but rather an incision is made below the tail which just suffices to pull off the hide from behind over the head. The head is cut off inside the hide so that it remains whole and unskinned within it. In the same fashion one cuts off the feet, leaving them in the hide. Only then is the skinned goat [illustration appears here] eviscerated and cut up, and the
[252] blood, with the scraps of meat, is stuffed into the cleaned intestines.

[826 cont.]

241 These intestines, together with the meat, are cooked in a kettle over
789 a hole in the ground.
778 The hide is tightly stuffed with any kind of straw in such a
[825] way that the head and legs stick out stiffly, and the pole is stuck
[252] in it from the rear up to the head. Thus the goat sits firmly upright on the pole and need not be tied on. Then the men fumigate goat and post with incense and lay it down before the Bon priest.

The raised pole-goa
(Drawing of a Tujen

[532]
[791] The weather-torma: The Bon priest meanwhile has finished the second torma, the weather-torma. It is exactly the same size as the first, that is, the four first tormas. With a prayer he puts it on a wooden tray with the following extra features: one to three butter-lamps, three little copper bowls with pure water, a little bowl of the barley wine, a little bowl of Tibetan barley or wheat, a little bowl of tea leaves, a little bowl of dough beans [Teigbohnen]. -- This torma also bears several colorful butter-flowers.

[791] During its preparation the Bon priest prays a special weather-prayer.
[782] Sometimes he also pastes some paper money on the torma. [Illustration appears here.]

Magic dagger, wooden peg, mpuru. (From the drawing of a Tujen.)

[826 cont.]

241 789 778 [791] The wedges: After making the torma the Bon priest inscribes the wedges. They are provided by the seed-master. They have the form of the Lamaistic magic dagger; they are three-edged, seven inches (23 centimeters) long, and one inch (3.3 centimeters) wide. Only the hardest wood is used; in that region there are only the three kinds: huang-san-tzu, hei-ts'u, hua-mu (7).

[824]

7. [Foreign text p. 830.] The names could not be identified; huang-san-tzu seems to be black sandalwood; hua-mu is birch. In any case it is supposed to be the hardest wood that can be found. Among the kinds of wood there, birch is in fact regarded as one of the hardest; people even make wheel rims out of it.

It does not matter whether all of them are made from one of these kinds or whether all the kinds are used. There are five wedges in all. The head of the wedge is notched into three parts (4).

4. [Foreign text p. 829.] The shape of the magic dagger varies. The grip in particular varies, but usually it is three stepped death's-heads. The daggers that I saw were all of iron. I also heard, however, that formerly there were daggers of human bones. In this way the three-edged pointed shape and the bone knob could be easily explained; it would also fit in well with the skull drum, skin whip, bone flute, etc. -- The black color signifies iron.

[765]

[826 cont.]

241 789 778 791 [217]

The seed-master places these wedges on the table before the Bon. The latter inscribes all three sides with Tibetan magic formulas. For this purpose he uses Chinese ink and the brush or the Tibetan bamboo pencil. The wedge that is intended for the head of the goat [827] has a black hada slung around it at the head and a black string or a small chain in the middle.

Then some of the wool is cut from the pole-goat lying in front of the Bon, a few threads are twisted together, and with these the Bon priest ties on the wedges, one on each foot and one between the horns. All five wedges have the tip downward. [788] He then sprinkles water from his holy-water can over goat and pole, takes a pinch of Tibetan barley, blows on it three times, and scatters it over the whole.

241 789 791 782 [821] [823]

The erection of the pole-goat and the offering: The men set the pole in the hole and wedge it tight with stones and earth. The goat must face the northwest because storms usually come from there. As soon as the pole is firmly set, the Bon brings the weather-torma, together with the extra features, to the foot of the pole, sets it down, and immediately returns to his place in order to continue the weather-prayer. Now he accompanies the prayer only with his drum and the bell. Again the men make a great incense offering amidst blowing on the conch.

241 789 778

The mountain-torma: Then the mountain-torma is prepared. It has three steps, is round, and looks like a pyramid with terraces about ten centimeters high. Altogether it is about 40 centimeters high. The torma is painted with soft butter colored red and is given the following extra features: on the first layer, water animals, frog, snake, fish, dragon, turtle, and, further, little stones, little lumps of earth, and finally a few squirts of water; on the second layer, mountain animals, deer, horse, yak, half-yak, sheep, goat, hare, fox, wolf, and a few little pieces of wood; on the third layer animals of the air, phoenix, eagle, peacock, magpie, dove, swallow, and, further, sun disk and moon sickle. On the uppermost tip are

[827 cont.]
241 placed various kinds of real flowers (3).

789
778

[782]

3. [Foreign text p. 829.] This is a representation of the world with animals and stars, in other words, a mandala. It is interesting that the informant designates this torma as an offering, as well as all the extra features of the torma, whereas the two other tormas represent spirits.

[791] These figures are all made in miniature from butter and tsamba by the Bon priest himself. He places the torma on the tray with exactly the same sacrificial extra features as in the case of the weather-torma. This torma is likewise brought to the foot of the pole, usually behind it and somewhat elevated. Lamps and little bowls are put in front of it. Thus, two tormas in all stand under the pole-goat. While the Bon priest goes back and continues his prayers, the men again burn incense.

[791]
[782]

The goat offering: The goat offering consists of the throwing of sacrificial meat. While the Bon priest rests from his prayers, the spear-soothsayer (or another) indicates the direction in which the offering is to be made and, with the shaking spear, supervises the performance. The seed-master takes a bowl of the broth from the kettle and throws it in the air for the sky in the direction indicated by the soothsayer. Then four throws in the four directions of the compass follow, and finally three throws toward the northwest for the weather-spirits. At each throw the men kneel down and make a three-fold kowtow.

241
789
782
[791]

With that the actual ceremony is concluded. The men sit down [828] around the kettle, consume the remaining meat, and drink tea. Then all go home, including the Bon priest. -- The tormas are either burned in the fire or simply left standing.

241
789
791

[828 cont.]

241 The veneration of the pole-goat: During the summer the
789 farmers appear singly or together before the pole-goat, make an
791 offering, pray, burn incense, and kowtow in order to protect the
782 seed from hail. The Bon priest also comes often to pray. In
former times he even pitched his tent for a longer period of time
and remained there in order to be constantly on hand for the
weather conjuration in case of storms. This is no longer the
case today. The weather conjuration is now done by the sooth-
sayer, usually the spirit-soothsayer.

Taking down the pole-goat: After the fifteenth day in the eighth lunar month, when the harvest has been cut, the pole-goat is again taken away. One no longer has the sooth-sayer determine the day, but instead acts according to the circumstances. The Bon priest is again invited; he again makes the tormas and prays. Usually a sheep is sacrificed.

241 Interpretations: The pole-goat is supposed to banish
789 bad weather and protect the harvest. The custom occurs only
among farmers, even among the agricultural Fandse. The
776 goat has special protective power because its head serves as an
825 anvil for the god Dāntsien Sāṅ. He is the smith in the weather
821 ministry (5). During storms he hammers his iron between the horns,
[171]

5. [Foreign text pp. 829-830.] The conception of the storm ministry bears a resemblance to the Chinese lei-pu (thunder division). It is uncertain, however, whether borrowings are involved. At any rate, in the popular tradition of the Tujen the Bon priest has a special connection with weather magic (cf. also Tafel, Tibetreise). -- Concerning the storm-god Dāntsāṅ (Dāntsien Saṅ) the informant knew nothing other than that there is an image of

[791]

[828 cont.]

241
789
776
825
821

[Note on foreign text pp. 829-830 cont.]
him in the monastery Rgulõn and that he is a tutelary god of the Bon. Dăntsien is evidently a Tujen corruption of the Tibetan dam-can, "keeping a vow" (cf. Ch. Das, p. 618). This is only a general title which could be applied to many gods. According to Grünwedel (Mythologie, pp. 187 ff.), Ch. Das (p. 618), and others, however, it refers to the Lamaistic terror-god rDo-rje-legs (pa), who rides on a goat (ram) and [830] was elevated to the tutelary lord (Dharmapāla) of the doctrine. H. Hoffmann denies that he is a Tantristic god and wants to designate him as an old Bon god, in which he is correct, as the ceremony described here indicates. He then continues (Quellen [Sources], p. 164): "There is an interesting statement by Jäschke, as yet unconfirmed, according to which Rdor-legs ... was an honorable village smith. ... At any rate it is noteworthy that Waddell also speaks of a 'demon blacksmith' [cited in English]." These surmises can now be confirmed by the ceremony of the pole-goat and the tradition connected with it. The dam-can is a smith-god of the Bon and stands in a special relationship to the weather conjuration and to the goat cult which, after all, likewise belongs to the realm of the Bon or is at least pre-Buddhistic. (Cf. the old name of Lhasa, which was originally called Ra-sa, Goat-place, and had a temple of the same name.)

[828 cont.]

241 during which lightning flashes and glowing hailstones fall to
789 earth. Through this the evil demons are killed, so no misfortune
821 befalls the seed and human beings (6).

[825]
[776]
[171]

6. [Foreign text p. 830.]
Weather magic plays an important role in all of Tsinghai. A pure Bon ceremony is involved here. Neither the Chinese nor the lamas practice it. And if it is correct that the nomads do not have it, this is an indication of the close connection of the Bon with agriculture. -- The Chinese engage in their weather magic through other shamans or through lay bonzes, exorcists, etc., never through a Bon priest. -- Only in very isolated instances does one find the pole-goat among the Chinese, and then it is along the border of the Tujen or Fandse region. I frequently saw one in a valley along the Pei-ch'uan river south of Hsin-t'ien-p'u, where there was a Chinese village; here they departed from the rule that it must be erected on a mountain.

[778]

Other types of weather conjurations are undertaken with help of the spirit-spear, the spirit-table, the spirit-litter, and with thunderbolts. All these things are the seat of deities. As soon as bad weather approaches, the corresponding bearers fetch these seats of the deities, summon the spirit, and station themselves out in the open facing the storm. Further details concerning these ceremonies in another place. The entire

[828 cont.]

241
789
821

[Note on foreign text p. 830 cont.]
weather conjuration of this region still seems to be an inheritance from the Bon. The conditions and customs connected with it are strongly reminiscent of the description given by A. Tafel for the Bon in eastern Tibet, Tibetreise, II, pp. 198 ff.

241
789
778

The first four tormas represent evil demons. They are driven away by the throwing. The extra features are given so that they will be content and will not return; they are things which one needs in daily life.

[982]

The second torma, weather-torma, represents the spirits of the weather ministry. The extra features are an offering to make them favorably disposed.

The mountain-torma represents the world-mountain. Sun and moon circle around it. This mountain is the spirit paradise. It is put under the pole so that the spirits will withdraw into this paradise and leave the human beings.

The wedges represent the magic dagger of the smith-god and his subordinates. They are the chief weapons against demons.

[791]

The Bon priest is also a pupil and subordinate of this smith-god. He especially venerates him and likewise uses the three-edged magic dagger in conjuring away the demons. At the temple

[535]

dances (tscham dances) the subordinate spirits of the weather-smith-god also appear with the dagger. Lamas never use the dagger. The three notches form three knobs which are supposed to represent the human skull. The demons especially fear this,

[765]

like all things that come from the dead, such as the bone flute, the whip of human skin, and the skull drum.

782

3. The Mountain Sheep-offering*

* See "Notes," pp. 834-835 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

After the erection of the pole-goat up to the time of the harvest a sheep is usually offered on a mountain top. This is [621] an occasion for the entire village. The people do this to ask [776] heaven, the mountain-spirit, and the spirits of the four regions of the world to protect the seeds. The offering may be repeated frequently, but only one sheep is offered each time. The [264] sacrificial meat is eaten by the participants at the conclusion.

Details

241 Time: At the erection of the pole-goat the soothsayer 782 determines how frequently during the summer and on what day a sheep is to be offered. He also indicates whether the spirits con- 787 cerned want to have this offering every year; sometimes it is [791] only once, and sometimes several years in succession. If there is no other occasion during this time, this soothsaying retains its validity. After this period has elapsed the soothsaying is done anew. -- If the village has erected a pole-goat, the offering always takes place in the period after it has been erected. If no pole-goat is present, then it may sometimes fall in the time of the erection of the pole-goat.

Place: The offering always takes place on the same mountain on which the pole-goat stands, and in front of the latter. Otherwise the soothsayer determines the spot. It must be kept for the time when the offering is due. For instance,

[831 cont.]

241 782 787

in the case of a three-year offering,* one may not choose one mountain the first year and another the second year (3). Even

3. [Foreign text p. 834.] The mountain must always be located in the people's own area. Actually such heights are always present near the villages. For example, not far from the informant's compound there is a mountain that bears the name Sheep-offering Mountain, xoni šënliedzin ula, because the offering always took place there. Among the partially Sinicized population it has retained the name hsien-yang ling, that is, Sheep-offering Height, or sheng-shan, that is, Sacred Mountain. After the greater part of the village (yang-chüan) became Christian, a high cross was erected there, and in place of the sheep offering, the people now pray there for the weather blessing.

[103]

[797] [778]

the place of the soothsaying is oriented accordingly. It is indicated where the next soothsaying will take place. It is always a mountain height, however, never a compound or a valley, as, for instance, in the case of private offerings (1).

241 782

1. [Foreign text p. 834.] The offering may also take place before an obo. It is to be differentiated from the obo offering, however. The obo is the seat of the mountain-spirit, and since the mountain sheep-offering is done especially for the mountain-spirit, the obo is preferred. Since, on

[831 cont.]

241
782

[Note on foreign text p. 834 cont.] the other hand, it is done for protection against bad weather, it is also popularly done before the pole-goat.

[562] Persons: As is the case for all religious ceremonies, the women are kept away. The participants are the seed-master, the village elders, and all other men and youths. Any kind of [791] soothsayer may appear on this occasion. It is important that at the actual offering some spirit is always summoned by the soothsayer and supervises the performance. -- Participation is also [784] prohibited to all who are in mourning and in whose compound there is a woman in childbed. -- People with empty utensils, for example, empty water pails, baskets, etc., may not come near. For this reason the gong is beaten before the offering, so that such persons will stay away (2).

[787]
[735]

2. [Foreign text p. 834.] The fear of an encounter with empty utensils is quite general in Tsinghai. It signifies poverty, vain endeavor, etc. Tujen express the wish, for example, before a journey: huodzēn sawa bi pēṅgë, that is, "may an empty vessel not appear." The Chinese, too, have similar expressions.

241
782
825

Sacrificial animal: As sacrificial animal only a sheep is considered, no goat and especially no pig. The sheep may be of any color and sex, even castrated. It must be at least a year old, however. A sheep that is too young would be an insult to the gods, aside from the fact that the meat would not be sufficient for the participants. Usually the [832] sheep is [621] purchased jointly. Every family must provide grain or money for this purpose; the owner is always given compensation. To be [784] sure, the sheep may not come from a family that is taboo at the time, for instance, through bereavement, childbed, sickness, etc.

[832 cont.]

241 Such families, however, must make their contribution. The
782 main thing is that the animal be healthy and without flaw. For
[825] instance, it may not be lame or blind. Also, ugly colors are
[621] avoided, for instance, a white animal with a black head, etc.

Objects used: For the offering one needs several iron kettles, several buckets of water, knives, ladling spoons, cords, blood basins, eating bowls, firewood, etc. In addition, one takes along all the equipment for the incense offering.

Slaughtering: The slaughtering is preceded by a great incense offering, which is maintained by the men throughout the ceremony. Anyone may repeatedly throw cypress twigs into it at will, offer barley wine, etc. At the same time the
[202] conch is steadily blown so that one can hear from afar that an offering is taking place on the mountain.

Young men bring the animal to the spot, untie it, and
241 wash it with their hands from head to tail. Then it is fumigated
782 with incense. Another places a white stone in the fire. When
783 it is hot, he scoops hot water out of a kettle with an iron spoon, puts the stone in the spoon, scatters pounded cypress leaves over it, and with it fumigates the sheep. All the men who helped with the slaughtering wash their hands and faces, rinse out their mouths, and fumigate themselves. All the implements are likewise washed and fumigated.

Now they form a circle around the sheep and pour milk
241 over its head and neck. It does not matter what kind of milk
782 it is. One may also use flour- or tsamba-water or even pure
787 water. A healthy sheep shakes itself at this pouring. This shaking is an indication that the sky accepts the animal. Then the men make a threefold kowtow in a circle around the sheep. After the milk has been poured over it, they let the sheep run free for a few steps and capture it again. In case the animal does not shake itself, they immediately fetch another.

241 The slaughtering is performed by the seed-master. His
782 helpers seize the sheep by its legs and horns, force it down on
231 the ground, and bend back its head so that the throat is tensed.

[832 cont.]

241 The seed-master then cuts through the throat and arteries with
782 a powerful stroke, and the helpers catch the blood in the basin
231 with constant stirring. None of the blood is supposed to fall on the ground. Any traces of blood are covered with earth. When the sheep has ceased bleeding, it is skinned. Sometimes the head remains attached to the hide, or it is cut off entirely with the hide, and placed to one side on the hide.

241 Now one usually takes a broad board, places the sheep
782 on it, and eviscerates it. Excrement and unusable scraps are
252 put aside. The intestines are cleaned in warm water and filled with blood and little bits of diced flesh from the scraps. The eviscerated body [833] is rinsed out with water and cut apart. The thighs are cut off, the loins and rib pieces are cut out, and everything is finally cut into little pieces so that it can be cooked more conveniently.

The cooking; In a kettle over a hole in the earth water is brought to a boil, in which the pieces of meat are cooked. Women may not help with the cooking. Spices, even salt, are prohibited for the sacrificial meat. The intestines filled with blood are also boiled.

During the cooking the men sit to one side, converse, pray their mani, or offer new incense. When the meat is done, it is taken out and cut into little slices on a board, including lungs, kidneys, liver, and heart. At the same time the ribs and other bones are broken. Now several bowlfuls are scooped from the broth in the kettle and some of the little pieces of meat are put in them. Then the soothsayer is called.

241 Soothsaying: The soothsayer invokes the spirit and indi-
782 cates in which direction the bowls must be emptied. He also
791 determines how many bowls must be offered in each case. There is always an offering to the sky and to the mountain-spirit,
787 and usually also to the world-spirits; only the number of bowls
[776] varies. If one wants to make an offering to still other spirits, this is especially requested by the soothsayer. The soothsayer continues to officiate until the conclusion of the offering and with the spirit invoked supervises the performance.

[833 cont.]

241 782 [791] Offering: The seed-master takes the first bowl and throws its contents toward the sky in the direction indicated by the soothsayer. Then the other bowls for the mountain-spirit and the other spirits follow. At each offering throw, the men kowtow in the appropriate direction. No one may pick up the little pieces of meat or so much as eat them. Dogs are kept away, at least until the end of the offering.

[264] Meal: After this offering the meat is taken from the kettle and divided among the men. They sit in a circle, drink tea, eat bread, converse, and laugh. After the meal all go home. Everyone takes his things with him.

Meaning: The offering is made for the protection of the seeds (4).

241 782 174 776

4. [Foreign text p. 834.] The meaning is no longer unambiguous now. The protection of the seeds is certainly involved, but whether the offering is primarily for the mountain-spirit or for the weather-spirits or for the sky is unclear. The mountain-height and the obo argue in favor of the mountain-spirit. The sky is always considered first, however. -- The old man said that in former times they had made the offering for the protection of the animals.

It is possible that originally a pure mountain-spirit or sky offering was involved, but that later, with agriculture, the weather-gods moved into the foreground, for hail and storms are feared primarily by farmers and not so much by shepherds.

[833 cont.]

241 782 171 Distribution: The mountain sheep-offering is practiced everywhere there are Tujen, even among the neighboring agricultural Fandse and Chiahsifan (5). In some regions it is also

5. [Foreign text pp. 834-835.]

241 782 231 The ritual of slaughter and offering described here is typical for all slaughtered offerings. In the case of goats and pigs the procedure is the same. Because the pig squeals too much when slaughtered (it is not unconscious), its mouth is tightly tied together. The pouring with milk is omitted for pigs. The sheep's mouth is likewise held shut. Perhaps this is a survival from a suffocation sacrifice.

241 782 In the case of longer festivals the slaughtered animal is not cut up immediately, but is tied to a longish table or frame after the skinning and the removal of the entrails, and in its natural position with the legs spread apart, if possible standing and with head raised. It is placed before the deity or the temple entrance in this fashion. Only at the conclusion of the festival is it cut up and boiled. Sometimes the cut-up uncooked parts are also presented before the deity.

The distribution of the sacrificial meat is usually done in the form indicated after the cooking as a meal. The hide is usually given back to the owner; the [835] head is received by the seedmaster or the officiating supervisor. Bon priests, lamas, shamans, etc. who

[833 cont.]

241
782

[Note on foreign text pp. 834-835 cont.]
have been invited often receive a loin, jou-fang-tzu (Chin.), that is, "meat square," or a thigh, etc. These are not cooked, but are laid aside for this purpose.

For the rest, there are always minor variations, but always the following sequence: purification (washing), slaughtering, offering, meal. Slaughtering, offering, and meal may sometimes be distributed over various days.

[171] the custom among Chinese, but not generally. The Chinese, however, do not go on the mountains for this purpose, but make the offering in the local temple.

4. The Procession around the Field*

*See "Notes," pp. 838-839 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

[835 cont.] 4. The Procession around the Field

Report

241
782 As soon as the seed develops ears in the summer, the procession around the field takes place. One hundred and eight
[778] men of the village, with the seed-supervisor, set out on the way to the nearest lamasery and fetch the 108 sacred books. On this occasion they present a large kettle of tea to the lamas; before the Buddha images of the monastery they make an offering of butter for the lamps. The Tujen of this region go usually to the monastery Rgulõñ (1); the way there takes an entire day

1. [Foreign text p. 838.]
Concerning the monastery Rgulõñ,
cf. the introduction and Part 2, II, 4.

each time. The books are brought into the local temple.

The procession takes place on the following morning. All the men of the village and all soothsayers gather in the temple yard. First a great incense offering is made. Then all
[791] the soothsayers do their soothsaying in succession, the spear-
[787] soothsayer, the sword-shaman, the litter bearers, the table-god bearers. As many soothsayers as are there must appear. One wants to find out through them how the weather and the harvest will be during the course of the summer.

Once the soothsaying is over, the procession starts moving. At the head goes the spear-soothsayer with the spear, then follow the shamans, the god-litter, the spirit-table, and the 108 book-bearers, one after the other. In this procession
[533] the drum beaters, trumpet and conch blowers, cymbal and gong beaters are in single file. Also, all the flags of the temple are taken along, and they are carried by the book-bearers, the flags over the left shoulder and the book on the back. Two men follow behind them, each with a large back-basket of straw, cypress leaves and incense additions, and a jug of pure water. Other men join on at will.

[788] During the entire procession the trumpets are blown, the drums beaten, and the Om mani padme hum prayed. The

[835 cont.]

241 782 procession moves from the temple directly to the nearest mountain and along the ridges across all the mountains of the entire village area. On each height the customary incense offering is burned by the two men, while the procession itself moves on. Towards midday, however, a halt is made on a height especially designated for this purpose. After the incense offering refreshments [264] are taken. The people bring bread, tea, and soup here in advance. Then the procession marches on. Not until evening does one return to the temple. On the following day the people take the books back to the lama monastery.

[836] Details

[562] Persons: Only male persons may take part in the procession, regardless of whether they are adults or boys, so long as they are strong enough to carry the heavy book and can pray the mani. The seed-supervisor determines how many persons each family must provide to make up the number of 108 book-bearers. If there are not enough people in one village, help is brought in from the neighborhood. Chinese are also admitted. -- In fetching and taking the books back to the monastery the number does not matter, so one person may carry two books. The Tibetan books are, to be sure, very large and heavy, since they are bound between two boards.

241 782 624 794 The seed-supervisor is changed every year at the harvest thanksgiving offering. He is charged with taking care of all the religious celebrations of the year. He is not the village mayor, however. Because his main concern is the seed, he is called seed-supervisor. The supervisor of the past year helps him (2).

[171] [797] 2. [Foreign text p. 838.] The Chinese, too, have such a religious supervisor who is chosen annually. Usually he is simply called t'ou-jen, that is, head man, or he is also called huei-t'ou, that is, meeting (festival) head; ch'ing-miao t'ou is also used,

[836 cont.]

241
782
624
794
[171]
[797]

[Note on foreign text p. 838 cont.] but only for the period of the sowing festival with the cult dances. -- The Christian missionaries have taken over this arrangement for their ecclesiastical celebrations and folk festivals. Thus, besides the community mayors there are also special supervisors who, for instance, organize the festival for processions or at Easter, accommodate the guests, slaughter the festival sheep, etc.

241
782
791

It is not absolutely necessary for there to be several soothsayers. If a village has several, however, they must all appear. If it has none at all, then it invites at least one from outside. A lama or a Bon priest is never invited.

Time: The time for the procession around the field is determined by the soothsayer at the pole-goat offering in the spring (aradziãn) on the thirteenth day in the fifth month. The procession itself must always be in the seventh month, when the seed is developing ears, because the greatest danger for the coming harvest is precisely at this time on account of the many and big storms during this month (3). The time is also often

241
782

3. [Foreign text p. 838.] Cf. the sections, "Mountain Sheep-offering" and "Pole-goat."

determined in the lamasery. Since, of course, there are many villages that want to hold the procession, it may happen that two villages set the same time. Therefore the seed-supervisor goes to the monastery a month in advance and inquires when the books are available. The day is determined accordingly. -- It is usually calculated that the ceremony will last three days, one day for fetching the books, one for the procession, and one for

[836 cont.]

241 taking them back. One day can be saved, however, if the books
782 are taken directly to the following neighboring community or fetched from there. In this case the monastery must be notified. The procession must begin at the first sign of dawn because otherwise one day would not be sufficient.

Place: Only one's own village area is considered for the
[628] procession.[1] It is not permitted, for instance, that two villages join together and hold only one procession in both areas. Also,
[346] the people always gather in the temple, for every village has at
[787] least one small temple; no soothsaying is done outside the temple or temple yard.

Objects: The books are not absolutely necessary. A book procession does not take place every year, but usually only every three years. In the other years the procession is held without books. The ceremonies [837] are the same, except that the monastery is not notified when the date is set; two days are saved that would have been necessary for the transportation of the books. Also, the number of participants need not be 108, al-
[801] though because of the sacred number it should be aimed at (6).

6. [Foreign text p. 839.] The book-carrying is a widespread custom in all lamic monasteries. In particular one can repeatedly see women who carry the heavy books, volume after volume like a rucksack on their backs, around the prayer halls of the temple, which often goes on for days, chuan miao (Chin.). Many Tujen women make such a vow in times of distress or sickness. -- It should also be recalled that a Tulku [Living Buddha] blesses the faithful by placing the book on their foreheads.

[1] [i.e. - Procession around the field. - ANALYST]

[837 cont.]

241 There are no rules about the musical instruments. [Illustra-
782 tion appears here.] Whatever one has is taken along. The temple
533 drum -- a barrel drum with a drumhead on both sides -- and the conch are always certain to be there. The drum is not very large and is carried on a belt in front of the chest so that it can be beaten on both sides. The conch shell is the same as that used at the incense offering. The trumpets are the
[177] ordinary Chinese shawms (la-pa); the cymbals and the gong are also Chinese.

241 Among the flags there are black,
782 red, yellow, etc. Usually they are provided with colorful borders. There are also flags with pictures, for example, of the mountain-spirit. Many flags also have Chinese sayings sewed on
[532] them, usually in white. There are no special Tujen names for the flags. The number is arbitrary.

Flags such as are carried during the procession around the field. (Drawing of a Tujen.)

Aside from the usual cypress incense the Chinese incense sticks are also popularly taken along; butter, water, tea, etc. are just as desirable as at other incense offerings. More recently yellow paper
[177] is also burned in Chinese fashion.

The soothsayers must always carry along their soothsaying tokens, that is, the objects that are the seat of the spirit, in other words,
[778] spear, litter, table, etc. During the entire procession, the spirit
[791] remains in the object concerned, which is signified by the shaking and rattling of the bells and the movement of the bearers.

241 Soothsaying: At the soothsaying one tries to learn as precisely
782 as possible when and where the heaviest hail will come down and
787 how one should protect himself against it, whether by means of offerings or prayer or the mani-tree, and the like. At this time the
[821] seed-master makes a brief speech to the spirit concerned, charging him with the duties that he must fulfill for a good harvest and telling him that he will be rewarded for his protection by an offering (4).

241 4. [Foreign text p. 838.] An offer-
782 ing is usually connected with the

[837 cont.]

241
782

[Note on foreign text p. 838 cont.]
soothsaying, for instance, a cock offering, grain or bread offering, etc., as I was able to observe.

Meaning: The purpose of the procession is to honor the gods so that they will protect the seed and provide an abundant harvest. [778] The sacred books have a special power. Above all, however, the gods that are taken along are supposed to spare the fields from hail and storms. -- The neighboring agricultural Fandse also have [171] this procession. The Chinese do not have it in this form (5).

5. [Foreign text pp. 838-839.] The Chinese have the procession in two stages. Once, when the seed comes up. Then the driving in of the thunderbolts in the weather forts on the mountain peaks takes place. They move with music and flags and the god-litter onto the mountain and take along the wooden wedges inscribed with magical formulas. They call this ch'a-p'ai, that is, "to drive in pegs." -- A second procession takes place later in the summer, and every 14 days, on the first and fifteenth day of each month. They call this procession chuan shan, that is, to march around (on the) mountains. On these occasions only flags or musical instruments are taken along. Formerly the conch trumpet was blown on these occasions, which otherwise is not used among the Chinese.

[177] As the informant related, the Tujen today have already to a great

[837 cont.]

241
782
171
177

[Note on foreign text pp. 838-839 cont.]
extent taken over this ch'a-p'ai, in other words, the procession with the driving in of thunderbolts, in place of the former aradziãn (pole-goat), and for the reason that there are hardly any Bon priests. The chuan-shan of the Chinese, however, is not the same as their procession around the fields, sguora. To be sure, it also took place in the summer, but every 14 days, whereas they would hold their field procession only once. Nowadays, however, when the Tujen are already half-Chinese, they would also do it more simply, but therefore more frequently, just like the Chinese.

It is difficult to say what is earlier. It appears that a Lamaistic custom is not involved, for one never invites a lama, and even the Buddhist books are unnecessary. There must always be a soothsayer, however, with the spirit invoked. It is therefore possible that this procession [839] is connected with the original shamanistic weather conjuration as it is still practiced today, and that the Buddhist books did not come in until later.

The Chinese field procession, on the other hand, makes an impoverished impression. Only flags and musical instruments are taken along. The people participate only very poorly, and the procession lasts only three to four hours. Formerly the conch was blown on these occasions, but no longer now. The conch, however, is a peculiar feature of the Tujen and Fandse, not of the Chinese. Furthermore, the field procession

[837 cont.]

241
782
171
177

[Note on foreign text pp. 838-839 cont.] is no longer held in many places. And this seems to be all the more the case the farther eastward one goes, in other words, into Chinese territory.

Thus it may be asserted with some degree of probability that the field procession is of neither Chinese nor Lamaistic origin. With the Sinicization of the Tujen, and the Fandse in particular, it was still practiced initially, then fell into disuse more and more, and finally was completely lost. -- On the other hand, non-original elements have been added, such as the Buddhist books and the Chinese musical instruments, probably also the god-litter, which almost always shelters the Chinese Niang-niang, the mother deity, and finally also the Chinese incense and the offering paper.

The Chinese thunderbolt procession will be described in more detail in a separate work. Here it should merely be noted that it is connected with the weather forts. These are found only in Tsinghai and its border region to southern Kansu. They might well belong to a shamanistic cycle of ideas.

VI. Customs in case of Misfortune for Man and Animal

1. The Animal-consecration*

* See "Notes," pp. 842-844 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

778
825
[777]
[782]
[787]
[791]

When the children die, the cattle are stricken, the harvest is battered, or other great misfortunes befall a family, a god is angry. One must appease him. Sometimes the god desires an animal. One learns from the soothsayer which god and which animal are involved (1). He summons the spirit

1. [Foreign text p. 842.] Here, too, the soothsaying can be done through the litter or the spirit-table,

[839 cont.]

778
825
787
791

[Note on foreign text p. 842 cont.]
with which then the performance is
likewise supervised.

into the spear, and one asks him, for instance, "Shall we consecrate an animal?" He answers, "Yes." "Do you want a goat, a hen, a horse?" [840] "No." "Do you want a sheep?" "Yes." "Shall we consecrate it to a god?" "No." "Shall we consecrate it to the sky?" "Yes."

Then the soothsayer sets the spear aside. Hastily the people run to fetch a sheep. They bring it into the yard, because one consecrates an animal to the sky only out in the open. A man holds in his hand a little plate with barley; on top of this he places a narrow red band. He stands next to the soothsayer, who again has invoked the god and amidst spear shaking supervises the action. Now once more there is an interrogation, during which one determines when the consecration is to be renewed.

The sheep is then washed from head to foot with pure water. The soothsayer takes some grains of barley from the little plate with the tip of the spear and throws them into the [783] incense, which is burned throughout the ceremony. Another puts some of the incense in a hollow tile and fumigates the sheep all around. Then he pours a bowl of milk over the animal's neck, back, and head. All the men kneel around the sheep in a circle, and when it shakes itself they make a threefold kowtow, for the sky has accepted the animal. The soothsayer sets the spear aside.

778
825
791

Now one takes the red band from the little plate, holds it in the incense, ties it in the wool on the sheep's shoulder, and lets the sheep run free. It may run where it will, for it belongs to the sky.

Each year this sacred sheep is again brought here in the first month from the first to the fifteenth day. Then the consecration is renewed in similar fashion before the spirit-spear and a new band is tied in the wool.

[840 cont.]

Details

778 Place: It is unimportant where the interrogation takes
787 place; first the spot must be swept clean and, in case it is in
[783] the house, fumigated. The hands and face are washed and the great incense offering is made in the yard.

If the ceremony is in an open field or in the pasture, the place is not swept, for field and pasture are always clean. Incense is always offered, however.

Sometimes the place of interrogation and that of the consecration are different, for instance, when during the interrogation in the house it turns out that the animal is to be consecrated to the sky. In that case, one immediately goes out into the yard and continues the performance there. -- If the animal is consecrated to the mountain-spirit, one goes outside the village on a hill or before the obo. Small animals, for instance, a hen, may be consecrated in the house before the household altar.

If the entire village consecrates an animal, then everything takes place in the temple yard, and likewise if several families jointly consecrate an animal. If there is no temple, a clean compound is sought.

Time: There are no special days for the consecration. It depends entirely upon chance, whenever illness, misfortune, etc. happen. The ceremonies are always undertaken in bright daylight.

[841] The people are always careful that the consecration follows immediately after the interrogation. For this reason they immediately fetch the animal. Sometimes it also happens that they do not immediately find an appropriate animal; then one to two days pass between the interrogation and the consecration. In this case after two days one continues amidst the same ceremonies. Only the purification of the place and of the people and the incense offering are repeated.

778 Consecration-master: The consecration-master may be:
562 an individual person, a family, a village, several families. It

[841 cont.]

778 is never women, however. It is true that a single woman may
562 promise an animal, for example, but in such a case other men, such as the mother's brother, undertake the interrogation and consecration. This may be done in the house of the woman.

778 Animals: As consecration-animals the following are per-
825 missible: horses, mules, asses, cows, sheep, goats, and even
[783] hens; pigs or dogs are never taken because they are unclean. In the case of all these animals, age, color, sex, or castration plays no role. White or male animals are not especially pre-
[178] ferred. Large animals are no longer consecrated now, because the Tujen no longer have the large herds and are too poor. Usually one promises sheep and goats. Hens are frequently chosen because they are the cheapest (2).

2. [Foreign text pp. 842-843.] In the Tujen monastery Rgulõn the choice of animals is different. A lama and a shaman related: one never consecrates dogs, and no hens, [843] only cocks, but these in all colors. Of the horses one takes only stallions; they must be black with a white spot on the forehead or grey (ch'ing-ma) of black-white mixed color. Of the mules one takes only females, no male animals. Their color is a bright reddish-brown. Belly, mouth, and eye-rings should be light. Of ordinary cattle and yaks one takes only black steers that have a white spot on the forehead; similarly among the sheep only black rams, flawless and with circular or doubly curled horns. -- I also saw such animals there in the monastery. The consecrated mule was especially beautiful; it looked almost exactly like a wild

[841 cont.]

778
825

[Note on foreign text pp. 842-843 cont.]

chiang. The rules mentioned here lead one to surmise that conceptions from lunar mythology (black-white, circular horns) are involved here. The preference for male animals, with the exception of the mules, is also striking. -- This rule is also decisive in profane life. People who have a high opinion of themselves ride only male horses (gelding), but female mules; the reddish-brown color with white mane and white tail is regarded as elegant. White eye-rings, belly covering, and white mouth are highly esteemed for all riding animals of whatever color and help to determine the price. -- It is also interesting that among the goats the lamas prefer not black, but reddish-brown bucks.

[554]
[492]
[435]

The old man said that the ordinary people would not bother with these rules unless they gave the animal to the monastery. Otherwise the color, age, sex, castration, etc. were unimportant, so long as the animal had no physical defects.

The released animals usually stay with their own herd or in the house, for they are used to it. If they run away, nobody bothers about it. A family always keeps horses, mules, and cattle at home and uses them as before. This was not the case originally, however; it is a deviation from the old custom, brought about by poverty and work in the fields.

[178]

A consecrated animal may never be killed. It must die a natural death. If it is eaten by a wolf, it need not be replaced. If an evildoer kills the consecrated animal, then the punishment of heaven or of the consecration-deity will strike him. Also, under no circumstances may one slaughter a consecrated animal for the offering; this would be tantamount to ordinary killing.

[688]
[782]

[841 cont.]

778 Regardless of how the animal[1] lost its life, its flesh may never be
825 eaten.

Furthermore such animals may not be sold or given away,
[262] for they belong to the god. One may give it to a monastery
[432] where it is cared for and protected until its death. -- An animal may not be acquired for the consecration with money; it must always be given as a gift.

There is no special watch over the consecrated animals, so that they can freely mount one another. The offspring are
[422] then counted as profane animals and fall to the original owner.

Whether the animal is pleasing to the god is manifested
[787] when the milk is poured over it. If it does not shake itself, one immediately fetches another; the ceremonies are then repeated. Every healthy animal shakes itself. If there is no milk, one dissolves tsamba or white flour in pure water so that it looks like milk. Some people take only clear water. This is not proper.

There are gods who ride the animals, for instance,
[776] Amtsiensa rides [842] on a wool-goat and Lamusa on a mule (3).

3. [Foreign text p. 843.] In the monastery Rgulõh each month (on the first or fifteenth day) consecrated riding animals are magnificently saddled and led onto the colonnade of the chief temple immediately in front of the entrance. There they are offered to the god (Fo-yeh) for riding; then one lets them
[792] run. -- Perhaps it is worth mentioning in this connection that the Tulkus (incarnation) of the lamic monasteries may ride only white horses, which otherwise are not regarded as superior.

It could not be discovered which
[171] gods are the riding gods. The Amtsiensa corresponds to the Chinese Tan-chiao hao-hua, and the Lamusa to the Chinese Lo-tzu t'ien-wang, that is, the heavenly mule-king.

[1] [Ke - a consecrated animal - See cat. 116, pp 248-249 - ANALYST]

[842 cont.]

778 [825] -- The name of the animals, however, is not taken from the deity concerned, but from the consecration band. Thus, the animals are called consecrated horse, consecrated sheep, etc. The Chinese say "sacred horse," "sacred sheep," etc.

Consecration bands: The bands are simply called "the consecrated." Although all the sacred colors are permissible, red or yellow is preferred for them. It does not matter where the band comes from or what material it is made of. Hada strips, pieces of clothing, wool or silk threads, anything is permitted. The size varies, but on the average it is an ell long and two fingers wide.

The band is supposed to be tied on the front part of the body and on the upper half of the animal, for instance, on the mane, forelock, or shoulder. In the case of hens one slings it around the neck. If the animal loses the band, it is not replaced. -- One can also tear off a band from the spirit-spear, from the spirit-litter, etc. In that case, however, it must later be replaced. Nevertheless these bands are not especially fumigated; they are already pure through their earlier designation (4).

4. [Foreign text pp. 843-844.] There are two names for the bands on the consecrated animal, which are valid both before the consecration and after the consecration. The one is the name šdien, exactly as for the bands on the consecrated spirit-seats (spirit-spear, -table, -litter). But whereas in that case one can call the object together with the bands šdien, here the animal together with the band is never called šdien, but only the band alone, an indication that the consecrated animal is not regarded as possessed by the spirit.

[192]

[825]

[842 cont.]

778
192

[Note on foreign text pp. 843-844 cont.]

The second name is šdier; šdier corresponds to the Mongolic seter; cf. DMF, p. 335, "sdier, ribbon or piece of material attached to the tail or to the mane of an animal consecrated to the deities running free. Cf. Mong. seter, ord. se't'er id." [translated from French]. -- The Tujen designate both the consecration band and the consecrated animal with šdier. This likewise agrees with Mongolic linguistic usage. According to W.A. Unkrig (communication), seter is a [844] band that is tied in the animal's mane or tail. seter also refers to the animal itself and the rite by which it is consecrated. For seter, Kovalevskij (1346) gives the Tibetan equivalents bsruń rtags. According to Jäschke (594 and 212) this means: tutelary-spirit sign, through which it is clear that the animal belongs to the tutelary spirit. Neither Jäschke nor Das have the word combination bsruń rtags.

778
[791] Renewal of the consecration: Usually the renewal takes place in the local temple. The soothsayer determines which day between the new and the full moon. This day of renewal must then be maintained for the life of the animal.

One may also choose the original place of consecration. -- Consecration-master, consecration-god, and consecration-animal must always remain the same. Only if an animal no longer shakes itself when the milk is poured over it is another one taken.

Also, old lost bands are not replaced at the renewal, but
[211] every year a new band is added, so the years of consecration can be determined by the number of bands.

[171] Distribution: The animal-consecration is practiced wherever Tujen live. The Chinese do not know it; only in

[842 cont.]

778 isolated instances do they copy it from the Tujen, where they
171 live with them. The Fandse (Tangut) and also the lamic monasteries do have the animal-consecration. There it is much more solemn (5).

5. [Foreign text p. 844.]
The animal-consecration among the neighboring Chiahsifan in Benbar (Hsi-ch'uan) is similar to the one described here. There, however, one only takes animals capable of reproduction, but no asses. The preferred colors are chestnut-colored hide with black mane and black tail (hung-tsao-liu) and eggshell-colored hide with black mane and black tail (yin-k'uo). In place of a band of material one takes small hand-sized rags (cut in the form of streamers) in the five sacred colors and ties them together. Usually they are tied in the mane. -- The consecration is not performed by private persons, but by the lama, shamans, or Bon priests. A one-day prayer service is connected with it. -- The animals are usually kept for use in the house, and even ridden, but a saddle that a woman has used may never be put on them. The renewal takes place every year on the same day of the first consecration.

One sees many riders with such beribboned animals.

[842 cont.]

Word List

192
778 Consecration-band: šdier (Tib. loanword).
hung-tzu (Chin.) = the red.

To tie on the consecration-band: šdier fuya-.

[825] The consecration-animal: šdier.

Sacred horse: šdier mori; sheng ma (Chin.).

Sacred sheep: šdier xoni; sheng yang (Chin.).

Sacred goat: šdier ima; sheng chia-la (Chin.), etc.

000

2. The Demon-escort *

* See "Notes," pp. 846-847 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

789 The demon-escort consists of leading the harmful spirit
[791] out of the house and releasing it in the distance. It is done upon
[777] the command of the soothsayer in case of family misfortune.

On a set day one invites a lama to the house. He prays
[792] for six days with the usual ceremonies and makes several tormas
with the appropriate additions, as on other occasions. The
[778] compound is taboo, and the master of the household makes the
[782] great incense offering three times a day.

In the evening of the sixth day the lama makes the actual
[778] demon-torma, which, with all kinds of provisions for travel, is
[792] placed on a table in front of the household altar.

On the seventh day one takes the torma, along with a
[825] riding animal carrying the travel provisions, outside the village

[844 cont.]
789 and releases the animal. It may run where it will; no one pays
[825] any attention to it.

Details

789 Persons: The demon-releasing may be undertaken by: a
792 lama, but not a hutukhtu, a Bon priest, a shaman, a spear-
soothsayer, or other soothsayers with litter, table-god, etc. The
791 six-day prayer service, however, is undertaken only by lamas
756 and Bon priests; this is the great releasing, [845] whereas the
ceremony performed by a shaman or soothsayer alone is the
little releasing. Even though at the great releasing the lama may
do everything himself, usually a soothsayer nonetheless goes
along (spear, litter, etc.). The members of the family take
care of everything else, getting the animals ready, gifts, etc.

789 The animals: The animals permissible are: horses,
825 cattle, sheep, goats, hens, and cocks. Those not permitted are
dogs, pigs, mules, half-yaks. Dogs and pigs are regarded as un-
[783] clean. Mules and half-yaks are incapable of reproduction; for
this reason, too, one does not take castrated animals. The rules
connected with the animal-consecration do not apply here. The
animals are ridden by the demons and carry the burdens on their
travels. The hens, however, can be burdened; one simply lets
them fly. They are therefore usually used only for the "little
releasing." Special ceremonies, such as washing and fumigating,
are not performed on the animals; also color and age are unim-
portant.

782
789 The travel provisions: The following things are packed
in the travel bag, which is usually woven out of wool: money
[484] (any kind of money, just so long as it is in circulation at the
[415] time), cloth (for instance, cotton, silk, linen, of any color),
a strand of unspun wool, cotton or silk threads (no wool threads),
tea leaves, baked or steamed loaves in any number desired, a
food bowl of porcelain or clay (no ordinary wooden one), new
men's clothing, elegant boots, cloth shoes, an elegant cap or an

[845 cont.]

789 elegant hat, black and white sugar, fresh good butter, a piece of
raw meat, dates, apples, and other fruits. All these things must
782 be new; they may not have been used even once, for otherwise
the demon is not satisfied and returns.

789 Releasing: In the evening of the sixth day the lama makes
a large three-cornered torma (1). The master of the household
[778]
[792]

1. [Foreign text pp. 846-847.] This form of torma can frequently be seen in lamaseries. They are especially reserved for demons. It is usually a pyramid of dough from 30 to 50 centimeters high. The types seem to vary. I saw some that were hung with intestines and bore death's-head figures (at the banishing of the mBarma in Kumbum); others had an arrow with a mani-wheel stuck in them, etc. Evidently the Tibetan zor, Mongol. = sor [847] (Unkrig), is involved. Ch. Das writes under zor, p. 1098: "reaping-hook, a sickle, a knife, esp. the weapons employed in combating the evil spirits in the gtor ma offerings, such as knife, sword, sling, bow and arrows" [cited in English]. There is a very detailed description of the manufacture, consecration, and use of the zor in Pozdneev, Skizzen [Sketches] (pp. 283 ff.): "A three-cornered pyramid, hollow on the inside, which is made of dough and colored a flaming red, is called zor. Figures are engraved on it with the burin, such as flowers, circles, fiery tongues, etc., as a result

[845 cont.]

789
778

[Note on foreign text pp. 846-847 cont.]
of which the whole pyramid is given the appearance of a fiery, flaming bonfire. The representation of a skull, which is likewise made of dough, is put on the tip. But then the same kind of skulls are placed at the foot of each of the three corners. An arrow is stuck in the middle of the pyramid, from which hadak hang, and which, instead of feathering, bears a little wheel ..." etc. (Translated by W.A. Unkrig.) Lessing maintains of the arrow in the zor: "To this arrow attached a 'ghost or spirit', as my informant put it" [cited in English] (Yung Ho Kung, p. 148). -- Whether and to what extent this arrow in the demon-torma is connected with the arrow of good fortune is unclear. One conceives of the zor most simply as bearer of the weapons that are feared by the demons. A similarity with the weapon-bearing and demon-combating gurtum is undeniable.

789 places it on a table in front of the household altar, but not on the altar. Alongside it he places the sack with the clothing and food provisions.

On the following morning, the seventh day, one in-
[791] vites the spear-soothsayer. After a good breakfast he summons
[787] the spirit and determines the exact hour in which the demon must be carried away. Usually it is done immediately following the soothsaying.

[791] A man takes the saddlebag, the lama the tray with the
[792] torma that represents the demon, and behind him follows the

[845 cont.]

789 spear-soothsayer amidst constant shaking; he must remain until
792 the end. They go in front of the yard gate. There another man
[791] waits with the animal. The master of the household places the saddlebag on the unbridled and unsaddled animal and leads it away by the head harness, followed by the lama, spear-soothsayer, and the other men. The procession goes out of the village by the usual route. Outside the village he leads the animal a distance across the fields, takes off its head harness, and chases it away, and to be sure in an uninhabited direction so that it cannot immediately run back into the village. On the [846] spot at which the animal was released, the lama sets down the torma. Before it a man erects a small wall of clay bricks with the broad side facing the village, so that the demon will not come back again. Then all go home. The animal is not supposed to run home again; no one bothers about what happens to it. It belongs to the demon. In case it does come running back again later, it is driven off with blows of a stick.

789 The simple releasing: Besides this ceremonial form,
791 there is also a simple releasing, which takes only half a day
757 or a whole day. One invites a shaman or a soothsayer, who escorts the things away. On this occasion there is no praying and no torma is made. The master of the household holds a hen in readiness and brings the traveling clothes and food on a tray before the household altar. The soothsayer or shaman invokes the spirit and, followed by the master of the household, goes with the tray out into the field. There a large pile of straw is heaped up. The things on the tray are flung into it and the whole is set afire. While the flames beat upward, the hen is allowed to fly away. -- If a soothsayer officiates, then the performance usually takes place in the morning. If a shaman undertakes the releasing, then it is not done until the late evening at the coming of darkness. The shaman follows
[787] in a state of trance and swings his sword in battle against the demon. Even if the shaman at the "great releasing" follows the lama in place of a spear-soothsayer, he performs this
[535] sword dance, but this is always in broad daylight (2).

[846 cont.]

789
184
171
[782]

2. [Foreign text p. 847.] There are similar spirit-releasings in many variations both among the Tujen and among the Chinese. The basic feature is the same everywhere: one releases the demon with many gifts so that it will not return. The ceremonial driving away of the mBarma demon in Kumbum is nothing other than such a releasing, only with a more complicated ritual and with the expenditure of enormous sums of money. The demon is represented there by his mother's brother, a selected man, while his image is burned together with the thread (mdos) towers. In the neighboring Huchu valley, for instance, in Kanchiapu, he is represented by the dough image and then is beaten to pieces by the children and eaten; in Tsungchai he is conjured into a kind of "town fortress" (tu-ch'eng) and this is burned; farther up in Kao-ch'iang-p'u he is put, with his belongings, on a little boat and allowed to float away.

789
792
[776]
[782]
[556]

Interpretation: The demon who disturbs the compound must be led away with all the gifts and conveniences imaginable so that he will not think back on his old location. The prayers of the lama and also the torma depend upon the demon. Regardless of whether it is a great or little exorcism, the effect is the same. Only the wealthy can afford large animals, and usually today it is only the lamic monasteries that undertake such an expensive ceremony.

[846 cont.]

789 If an evildoer steals the animal or the things,[1] the
776 demon will punish him.

755
789 Report

In order to protect the children from misfortune, one
791 invites in a Bon priest. He brings along a companion, and then
they hold a seven-day prayer service. During this time they
[777] make all kinds of figures out of tsamba.
[778] On the last day they place the figures on a paper litter
and take them with two tormas to a river bank or a road crossing.
[782] There everything is burned. Through this one prevents the sickness-demon from returning.

1 [ie - the animal and things used in the demon-escort ceremony - ANALYST]

[847 cont.]

Details

789
757
755 Time: Ordinarily the ceremony takes place when a child is sick. It can also be undertaken, however, as a preventive measure against [848] sickness. Then the third or ninth month is chosen by preference.

789
791 Place: One stays in one's own house and does not go into the local temple; the Bon priests also live in the compound. The place is taboo during these days. The burning of the objects must always be done outside the place.

789
782 The prayer service: For the prayer service the Bon priests bring along a large double drum, which is suspended from a beam (1), and, furthermore, sounding plates, a hand bell,
791
[534]

1. [Foreign text p. 849.] By means of a ring the drum is suspended from a beam in the room with a cord. The Bon sticks one finger of his left hand through the second ring on the drum and thus pulls the drum tight so that it does not swing back and forth. At the same time he also holds in his left hand a sounding plate. In his right hand he has drum sticks and the second sounding plate, so that through skillful handling he can beat both instruments at the same time.

bone flute, and Tibetan prayer texts. The prayer service takes place four times a day, namely, at sunrise, after the morning tea, at noon, and in the evening; the incense offering is made in the yard each time.

[848 cont.]

789 778 The litter: The litter looks like a death-box, in other words, it has the shape of a small temple with a movable door. Only it is almost entirely made of paper, even the sun-moon attachment on the ridge-piece. First a floor is made out of a soft clay plate. Into this plate, at the four corners, the Bon priest sticks poles about a meter long as columns, connects them with crosslaths, and thus makes a framework. This is covered by pasting paper on it. No particular color is required. The whole is set on two carrying poles so that it looks like a litter. [783] Then the men fumigate the litter with cypress incense. They do not use the red-hot stone. The work is not done on the kang, but on the floor.

789 778 791 532 The figures: First the Bon priest washes a clay vessel, fumigates it, puts tsamba and butter in it, and kneads them thoroughly. In all 81 figures are formed, nine kinds with nine pieces each. The kinds are: sheep, goat, hen, pig, dog, snake, frog, horse, and cattle. The Bon priests put these figures in the litter and fumigate everything together. -- The men of the household assist at the making of both the litter and the figures. [783] The Bon priests and men must wash and fumigate themselves beforehand each time; otherwise they may not give a hand. [782] The Bon priests accompany the work with prayers said by rote.

[782] The accompanying gifts: Since the figures are small, at most a handbreadth in size, there is still room in the litter for all kinds of accompanying gifts. These consist of Tibetan barley, white barley, wheat, beans, millet, and some small loaves of bread. To this are also added white and black sheep wool, white and black sugar, money, a raven's feather, some silver, and a sheet of paper on which the Bon priests have printed or drawn the images of the sickness-demons. Once everything has been placed inside, the door of the litter is [783] closed and sealed, and the litter is fumigated. Then it is put on the floor in front of the household altar. A three-cornered torma and a white horse's skull are in front of it (2). The skull

[848 cont.]

789
778
532
791

2. [Foreign text p. 850.] Whether the horse's skull represents the riding animal of the spirit could not be determined.

is not fumigated. On its forehead the Bon priests paste an image of a demon. Sometimes another torma is also made.

789 [849] The removal: In the evening of the seventh day
[787] the Bon priests determine by means of their soothsaying books
[791] the precise direction in which the litter must be taken away.
[533] They themselves do not go along, but stay on the kang and give the conjuration prayer to the accompaniment of the drum, sounding plates, and bell. Four men take the litter in their hands, not on their shoulders, and carry it in the given direction to the river bank or to a road crossing outside the village. Other men follow with a coal basin, a large back-basket of straw, the horse's skull, and the torma.

When the procession arrives at the designated place, the straw is piled on the ground and the litter set on top of it in the specified direction; in the same direction, the horse's skull is put in front of the door, and the torma is put behind the litter. So that everything will burn well, the people pile around some more straw and set fire to the whole thing. Without waiting to see whether everything goes up in flames, they hurry home and no one may look back.

Interpretation: The demon is carried away in the litter. During the burning he is released and goes in the direction that is indicated by the position of the door. So that he will not be perplexed about the path to take, a crossroads or the river, which, of course, have a definite direction, is popularly chosen.
[782] The animals and accompanying offerings are gifts for the long
[171] migration (4). -- The neighboring agricultural Fandse also have this custom.

[755]

4. [Foreign text p. 850.] This ceremony is very similar to the figure-conjuration of the shamans

[849 cont.]

789
755

[Note on foreign text p. 850 cont.] and to the demon-escort. I could not ascertain from the notes whether the Bon priest touches the sick person with the figures and thus transfers the sickness to them, as is the case with the shamanistic figure-conjuration. Cf. the following chapter, Note 5.

Word List

192
789 Figure-litter: šergundi; made up of šē (Tib.) = demon,
[778] rēgun = nine (Tib.); ndi (Tib.?) = complete (3) (5).

3. [Foreign text p. 850.] This explanation by the informant is uncertain.

5. [Foreign text p. 850.] šergundi: Tibetan bse = demon, dgu = nine, k'ri (pronounced thi) = litter. Meaning: nine-demons' litter. -- šbawog: Tibetan sbal (pronounced bal) = toad, frog; nag = black (Unkrig).

[791] Bon priest: xuāndzie (xuāndie).
[778] Demon-torma: dzuor (Tib.).
[825] Sheep: xoni.
Goat: imā.
Hen: tagu.
Pig: xge.
Dog: nogue (noxue).

755
[192]

1. [Foreign text p. 851.] I could not obtain any clarification concerning the actual name. It seems that the rdzõṅ in rdzõṅwa is the same as in dzõṅrē. The ceremony is quite similar to the one with the figure-litter.

[789]

Report

[756] In case of very severe illness one invites in a shaman who makes a series of figures, touches the sick person with them, and takes away the figures in the evening for burning.

[789] Afterwards he buries a series of objects in order to hold down the sickness-demon. The compound remains taboo for [357] all strangers during this time, three, five, seven, or nine days, [784] depending upon the sickness involved.

[850 cont.]

Details

755 778 532 [171] [789]

The figures: Nine kinds of things are needed for the figure-conjuration. 1. Five little paper men (2). They are

2. [Foreign text p. 851.] The Chinese, too, have these paper figures at their demon exorcisms; they call them wu-tao shen. Among them, however, it is not clear whether five or only one demon is involved. They are mentioned once in the shen-hsien t'ung-chien as wu-tao lei-shen, that is, five-way thunder-spirits, which punish human beings through wind, rain, water, fire, and epidemics.

about 10 to 20 centimeters high and of the type of the Chinese paper figures that are burned at the burial. Only here they wear Tujen dress, which depends on whether male or female demons are involved. One can also simply cut them out of a piece of strong paper, but usually they are stuck together in the form of a figure with the help of stalks of grass. 2. Five little tsamba men. They are not colored, but retain the characteristic tsamba color. Also, they wear no clothing and are represented as sexless. 3. A pig made of tsamba. 4. A hen or a cock made of tsamba. 5. A dog made of tsamba. 6. A sheep made of tsamba. 7. A goat of tsamba. 8. A cow of tsamba. 9. A horse of tsamba. These figures [756] are made by shamans with the help of a skillful man, in a way similar to the figures of the figure-litter.

755 782 Then they are put on a tray with the following accompanying gifts: a piece of raw pork, beef, or mutton, some pieces of cloth and threads in the five sacred colors for the five little men, and bread and money. The tray is set before the household altar, and a burning dough-lamp and a basin with cypress incense or a number of incense sticks are put in front of it.

[850 cont.]

755 The conjuration: As soon as it is dark the gurtum goes
756 into a trance in the usual fashion before the household altar.
[787] Then he rises, fights [851] the demons with his sword in the air, and goes to the sick person. The tray is brought after him. With his one free hand he takes one figure after another from the tray, touches the affected places on the patient with them while constantly swinging the sword and murmuring magic words, and puts them back on the tray (5).

[171]
[789]

755
782

5. [Foreign text p. 852.] The custom of transferring sickness to animals or animal figures is also reported of Siberian shamans elsewhere. In this case, however, the similarity with the above-described Bon custom is to be noted. Originally actual animals might have been sacrificed. It was Buddhism that first combated these sacrifices and abolished them. Then substitute figures arose for them. H. Hoffmann, Quellen [Sources], pp. 176 and 263, writes in this connection: "...prohibits for the hated rivals the sacrifice of animals. In this connection the interesting fact is mentioned that the Bon-po were forced to make images of yaks and sheep out of grain mush, as well as wooden deer heads with wide horns, which henceforth had to serve as substitutes at the sacrificial ceremonies. The first-mentioned dough figures, made by means of wooden molds, are still found today, it is worthy of note, even in the rites of the Lamaists"; cf. loc. cit., where the literature is also cited.

[851 cont.]

755 Then he storms out into the street, and the men follow
him with the things while he fights on with his sword. As soon
756 as they are out of the village and reach a crossroads, they stop.
A man piles a back-basket full of straw on the ground, and the
things from the tray are thrown into it. Then the whole thing is
set afire. They do not wait any longer, but quickly go home.

755 Burial of the magic objects: The shaman designates a
789 spot on the ground in front of the yard gate; the men immedi-
[787] ately dig a pit there. The shaman, still in a trance, puts nine
[756] kinds of things in it. First he puts a black food bowl on the floor
of the pit; he puts red-hot coals in the food bowl, pours pure
water over them, and puts in an iron knife, a small bow and
arrow, a magic wooden dagger, a black chain (3), and a piece

[778]

3. [Foreign text pp. 851-852.] The magic dagger and the black chain are also used in connection with the pole-goat; cf. the appropriate section. No clarification could be obtained concerning the type of wood used for this dagger. The informant called it [852] siraldzin; he translated it with the Chinese huang-san (shan) tzu in the sense of yellow-mountain (wood). In the DMF there is the translation "armoise," Artemisia. This could not possibly be involved here. It must be a very hard kind of wood.

of iron from a town gate. He inverts a large earthen vessel over the whole (4); the men fill the pit and level it off so that one

4. [Foreign text p. 852.] The chain binds the demons, and the vessel caps them.

[851 cont.]

755 can no longer see where the things are buried.

[789] Now all go into the house. The shaman awakes from his
[787] trance.
[756]

[852] 5. The Washing of the Sick*

* See "Notes," p. 854 [of the foreign text]. [In the translation the notes are given as numbered footnotes following the designations for them in the text.]

[852 cont.] 5. The Washing of the Sick

Report

755 The washing of the sick is undertaken by the sword-
[756] shaman at the coming of darkness. He puts himself in a trance
[787] as is customary during the incense offering, then throws a few kernels of Tibetan barley on his breast-mirror, which is held flat, and prophesies which illness is involved; then he under-
[357] takes the ceremonies. The taboo for the compound begins on
[784] the following day and, depending on the declaration of the shaman, may last three, five, or seven days.

The ceremony has three parts: the actual washing, fire-blowing, and the healing drink. The things needed for the washing are provided by the family itself.

Details

The washing of the sick: The washing takes place in the kitchen. The following things are needed for it: seven bowls of fresh water, an iron knife, a door lock, seven white stones, a bowl of liquor, some flowers, three, five, and seven pieces of paper with certain prayer texts, seven different things in all.

755 Now in the kitchen the hearth kettle is washed, fumi-
756 gated, and placed on the fire. The master of the household lights the fire and throws [853] incense twigs into it. Now the
[787] shaman, already in a trance, comes out of the main house into the kitchen; in his right hand he holds his spirit-sword, while he keeps his left hand free for the various actions.

First the seven bowls of water are poured into the kettle, and the shaman throws incense twigs and Tibetan barley into it. Then he thrusts his sword through his clothes into his chest as
[783] proof of his power and in order to purify himself. No blood flows.

Meanwhile the sick person is brought into the kitchen. The shaman bares the chest of the patient and thrusts the above-mentioned knife midway into it. No blood may flow. If the
[787] sick person bleeds, then he will not be healed; if he does not bleed, he will be saved. The shaman plasters the wound with one of the prayer sheets; he throws the knife into the kettle.

[853 cont.]

755 During this time a man heats the seven white stones in
756 the hearth fire until they are red-hot. Then he takes them out with an iron spoon and with it hands them to the shaman. The latter takes one stone after another in his mouth and spits them into the kettle. Then he throws the other things, the lock, the flowers, and the prayer texts, into the water and finally pours in the bowl of liquor. Now the sick person is completely disrobed, and the shaman washes him from top to bottom with his one free hand, scooping the boiling water out of the kettle with his hand. Then the sick person is put back on his kang in the house.

The water remains in the kettle, on the following two days, when the shaman has already gone, the people must repeat the washing. On the third day they pour out the water in front of the yard gate. They can use the things, the lock, knife, etc., again for ordinary purposes.

755 The fire-blowing: After the washing the shaman goes into the room of the sick person. During this time the men in
372 the yard start a strong fire with sheep dung and wood. They put
756 a plowshare in it and make it white-hot. A man puts a stick
[787] through the white-hot plowshare and takes it in to the shaman, who is still in a trance, but has given his sword to another man. Now he seizes the glowing plowshare with both hands with a hada that hangs from his breast-mirror, licks it with his bare tongue, takes a respectable mouthful of liquor, and turns to the sick person. He blows the alcohol out of his mouth over the
[273] plowshare in strong blasts, which each time makes a burst of fire shoot out toward the sick person. Then he takes the plowshare in front of the gate and places it at the foot of the yard wall. There the men immediately throw earth over it and wall it in.

755 The drink of the sick: Now the shaman again goes into
756 the room of the sick person. A man extends an iron spoon to him. He rips off a piece of the hada on his protective-mirror, places it in the spoon, and throws a few barley kernels in it. Then a man pours water into the spoon until it is full, holds it

[853 cont.]
755 in the hearth fire until the water boils and the cloth and barley
are thoroughly boiled. He hands this decoction to the sick person
756 who must drink it down immediately. With that the ceremony
is ended.

[854] The shaman rests from his exertions, eats his supper, and goes home.

6. The House-purification *

* See "Notes," p. 855. [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

755 If someone is seriously ill, then the shaman, with the
789 men of the household, undertakes a house-purification. On this
756 occasion the demon is conjured out of the house in a straw doll,
[783] dragged out of the village, and burned.

[854 cont.]

Details

755 789 [416] Things: Seven things are needed for the exorcism: 1. A torch. It consists of a stick wrapped with straw and soaked in oil. At least one torch is needed, but usually there are several. 2. A measure of small pebbles of any color. 3. An oil-pan. This is usually only a large iron spoon that is filled with oil and glowing coals to make a strong flame. 4. Bow and arrow. The arrow is wrapped with wadding at the tip; it is soaked in oil and lighted. 5. A hemp whip. It is usually very long, up to two meters. To make it, three tapering strands of hemp are plaited into a braid that is so thick at one end that it can just be held in the hand, whereas the other end tapers to a fine point so that it will crack well. 6. A live hen of any color or sex. 7. A straw man (3). It is very simple. One takes a long

[778] [171]

3. [Foreign text 855.] The Chinese, too, often use these straw dolls, which they throw on the field or on crossroads, likewise without shamans. -- In the Tujen monastery of the Yellow Sect, Rgulõh, I once also saw Bon priests who had been invited by the monastery to undertake a demon-conjuration on the fifteenth day of each month. They also made a straw man and said that the Namśri was conjured into it by their prayers. On the last morning, before sunrise, they tied this straw doll to a mani-pole and hacked it to pieces with their knives.

smooth wisp of straw, bends it in the middle, ties off the upper third with pieces of straw so that a head is formed, and transversely through this third draws a smaller wisp which represents the arms. -- All these things are provided by the people themselves.

[854 cont.]

755 789 [756] [787] Exorcism: Towards evening, when darkness begins to fall, the shaman goes into a trance before the household altar (1).

1. [Foreign text p. 855.] Before the exorcism the shaman divines, with barley on his protective mirror, which demon is involved.

During this time a man runs out of the village with the hen to a crossroads, twists or hacks off the hen's head, and with the fluttering [855] hen squirts the blood in all directions of the compass. [982] Then he throws away the hen as food for the demon and goes home. -- The straw man is put on the threshold of the main house or in the yard.

755 789 756 [787] [273] As soon as the shaman is in a trance, he jumps up and, running in wild leaps through all the rooms of the compound, performs the sword battle against the demon. The men follow him. Stones hail down on the ground. One circles around in the rooms with the torches. One man holds the oil-pan, takes mouthfuls of liquor, and blows it over the fire into the room, so that each time a red flash shoots out. Others crack the whip from room to room and shoot burning arrows at the floor. In this way the demon is driven into the straw doll. This is dragged by a hemp string or a straw rope out of the gate over the village street to the nearest crossroads, where the hen is lying. The shaman follows, fighting with his sword; stones, blows, fire-arrows, and flashes of fire rain down on the doll. It is left lying at the crossroads. The men pour the oil out of the pan over it, throw the torches, arrows, stones, etc. on it, and leave it smoldering (2).

2. [Foreign text p. 855.] This form of exorcism is the simplest of all. Usually all kinds of other ceremonies are connected with it. I once saw such a sword-shaman as he was trying to heal a child among the Chinese. He cast

[855 cont.]

755
789
756

[Note on foreign text p. 855 cont.]
about himself with sword and lance, hacked the hen to pieces, hacked up a straw man, swung a winnowing shovel and a sieve, danced, and foamed at the mouth.

In this way the demon is conjured away. The shaman goes home and has his supper.

7. The Earth-god Urn *

* See "Notes," pp. 858-860 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

If misfortune prevails in the house, then sometimes the

[856 cont.]

782 soothsayer determines that the earth-god is angry and wants to
[791] have an urn. This urn is buried in the ground on a day indicated
[787] by the soothsayer. All kinds of spices are to be found in the urn,
[777] put there by a lama. This is done after a seven-day prayer in
the family itself. During these days the compound is taboo.
[792] Usually there are several urns, because one does not bother the lama for merely one. After he has filled the urn with spices on the last day, he pours liquid butter over it, ties it up with a cloth, seals the string, and paints a nuru sign on the outside. Then the urn is fumigated and sprinkled with holy water, whereupon the master of the household places it on the chest before the Buddha image.

In front of the urn one places the usual little water-bowls, butter-lamps, grain-bowls, etc. The urn, however, does not stand on the bare floor of the chest, but rather a sheet of paper is first put down as an underlayer, a few cypress leaves and grains of barley are scattered over it, and the urn is put on top.
[792] Now the lama comes down from the kang, sits on the white felt mat in front of the urn, and gives the consecration-prayer (1).

[778] 1. [Foreign text p. 858.] As is always done on other occasions, here, too, a torma is made by the lama, which is carried out into the open. It was unfortunately no longer possible to inquire as to whether this torma is put on the place where the urn is buried, say, as an offering for the earth, which is to be injured, similar to what is done at the house, at the fire-pouring, at the crematory, etc.

791 During this time the spear-soothsayer is fetched. He
787 now gives the precise hour in which the urn is to be buried.
The master of the household puts the urn on a tray, and the
782 procession moves out to the area indicated by the soothsayer.
The soothsayer follows with the invoked spear-god and then

[856 cont.]
782 indicates precisely to the foot the spot where the urn is to be
[791] buried; he likewise determines the depth. Usually this is one
[787] to two ells. A few cypress twigs are put on the floor of the pit. Over them the soothsayer scatters a few barley kernels with the tip of the spear, and one or more flat white stones, depending on how many urns there are, are put on the whole, and the urn is put on it. Then on top of the urn is put a flat white stone, like a lid. Finally the space between the urn and wall is stuffed all around with cypress twigs, and everything is filled with earth, stamped down, and made level. Then the men burn cypress incense and kowtow in front of the urn thus buried.
[792] The lama remains seated on his mat in front of it for some time yet and finishes his prayers. Then all go home.

Details

782 The urn: The urn is an ordinary clay vessel such as is
415 baked in Tsinghai. Usually they are of whitish-yellow color, about 20 to 30 centimeters high, with a thick belly and a narrow neck. The urn for the earth-spirit must be uncolored and unglazed, at least on the outside, and must have a flat bottom. The master of the household buys the urn himself, washes it
[386] [857] thoroughly, and paints it on the outside with gypsum or lime water, for only white urns are given to the earth-spirit. At the conclusion, it is fumigated and ready for use by the lama.

782 Contents of the urn: There are five kinds of grain in the
824 urn, namely: blue Tibetan barley, red wheat, white barley, white rice (2), and yellow rape. The spices are the same as at

2. [Foreign text p. 858.] Why white is used twice here, white barley and white rice, is unclear. Otherwise rice is never used among the five kinds of grain and is not even present in Tsinghai. Perhaps this is an indication of a southern origin of the urn.

[174]

[857 cont.]

782 [824] the incense offering, the good six. To this are added little leaves of Buddha gold, little pieces of silver, corals, little pieces of mother-of-pearl, sometimes rare stones or water, and then five-colored silk threads, white and black sugar, tea leaves, and a few little balls of butter.

The filling: First a mortar with pestle, a large earthen vessel, and a clean iron kettle are provided. All these objects are thoroughly washed and fumigated in the incense fire. The spices are pounded to flour in the mortar and then poured by the lama into the vessel, where they are thoroughly mixed with the five kinds of grain. The quantity depends on the size of the urn. Meanwhile the master of the household melts a lump of butter in the iron kettle over the fire. The lama pours this melted butter into the grain and spice mixture with a spoon and thoroughly kneads everything together.

He puts this mixture into the urn, but only one-third of it. Over this first filling he puts a layer of the other additions, gold, silver, etc. Then the remaining two-thirds are added, almost up to the rim of the urn, and the liquid butter is poured on, almost to overflowing. The master of the household brings a yellow or red hada (or cloth), fumigates it, and hands it to the lama. He ties up the urn with it in three layers, in which the colors yellow and red may alternate. The thread that is wound around the cloth must also be yellow or red and is first fumigated. Once everything is thoroughly tied up, the knot is covered with sealing wax (3) and finally stamped with a seal

[439] 3. [Foreign text p. 858.] Latsia, as the sealing wax is called, is obtainable from Chinese traders.

that bears Tibetan signs. Afterwards the lama paints a nuru [778] jewel on the white urn with red pigment, usually red clay, [386] which is to signify a treasure. This makes the urn distinguishable as a treasure for the earth-god (4).

4. [Foreign text p. 858.] The Tujen call the symbol of good

[857 cont.]

782
778

[Note on foreign text p. 858 cont.]
fortune, which consists of several conchoidal eggs and is surrounded with flames, nuru. This is found very often in Lamaistic symbolism and is also borne by the air-horse. It is the cintāmaṇi. Cf. above: "Customs concerning the Dead and Cremation," Note 2.

782
792

Persons: The urn can only be made by a lama who possesses special powers. One never fetches a Living Buddha for it. The latter, however, may make and consecrate them in his monastery. -- Since one can also order the urns in the monastery (they are not in stock), the master of the household may fetch it from there and bury it at home without a lama. [791] It must always be done with the assistance of a soothsayer, however, and in the presence of an invoked spirit -- If one wants to bury several urns, however, this must always be done by a lama even if the urns were bought in the monastery. -- If one wants to have several urns made at home, then he fetches [35] [784] several lamas at the same time (5). -- Regardless of whether the

5. [Foreign text pp. 858-859.]
As the lamas in Kumbum maintain, there is a great number of treasure urns, and special prayers are used for each type. [859] The urns are preferably buried in obos. -- In [192] Kumbum the urns are usually called beṅba, which seems to be the same as the Tibetan bum-ba, vessel. Another name is xdĕr-wĕm, which probably corresponds to the Tibetan gter-bum, treasure vessel, Chinese pao-p'ing. The expression sĕnoġ-dĕr (cf. section, [778] "Mani-tree and Central Fort") perhaps

[857 cont.]

782
792
[778]
[192]
[784]
[357]

[Note on foreign text pp. 858-859 cont.] comes from the fact that the urn is consecrated with certain conjuration formulas, snags (dha-rani), in other words, represents a magic treasure.

urn is buried by one or more lamas or by the master of the household, the compound is always taboo during this time.

782
[778]

[858] Place: The place at which the urn is buried must always be chosen in such a way that no person or domestic animal can desecrate it. No one may run across such a place. For this reason roads and public places are avoided, for the place is, after all, not specially marked. Otherwise the urn may be buried anywhere, in the fields or in the pasture, in the yard or in the house. Indeed, one may even set it in yard and room walls and wall it up.

Significance: The contents of the urn are the treasures and yield of the earth, everything that belongs in the realm of the earth-god or of the mountain-spirit. One wants to please these two spirits through these valuables so that they will hold down the evil earth-influences and protect human beings from misfortune. It is as though gifts were being given to persons in office (6).

[776]
[777]

782
778

6. [Foreign text pp. 859-860.] According to this explanation, an offering to the earth-god is involved. The interpretation, however, might not suffice. One must consider the urn in its wider context. It repeatedly occurs in Tujen usage, with the arrow of good fortune, with the round manger, in the obo, in the chorten chamber, and, to be sure, in twofold form: in the one case as the seat of a deity, which through the formula scroll,

[858 cont.]

782
778

[Note on foreign text pp. 859-860 cont.]
silk wrapping, etc. is transferred into the urn; in other cases without this deity, as, for instance, the urns accompanying the central urn in the chorten chamber and central fort, or, as in the preceding section, alone. In this case it is to be conceived as a representation of the earth with its vital and germinating forces and its treasures, as was shown above in the section on the arrow of good fortune. In the other case the earth-god takes his seat in his realm (urn). The urn is simply a part of the representation of the world-picture (mandala), as the realm of the earth-god.

776
782

What these earth deities are is unclear. In any case the ġlu (Tib. klu) or Nagas belong among them. In addition, however, another earth-deity is venerated among the Tujen, which perhaps is of Chinese origin, for like the Chinese they also have a pig offering in honor of the earth-god and certain ceremonies for pardon that are connected with a grain offering. They are performed especially in connection with digging, housebuilding, etc., or when someone suffers harm while digging. Unfortunately I was no longer able to record these ceremonies. It cannot be definitely determined whether this earth-spirit is male or female.

[171]

Another group to be considered is sman. A part of the filling is called ġlu-smăn (Tib. klu-sman); cf. the chapter above, "The Incense Offering," Note 11. According to H. Hoffmann,

[858 cont.]

776
782

[Note on foreign text pp. 859-860 cont.]
Quellen (pp. 160 ff.), no clarification can be obtained concerning the Sman: "We can only conclude from the places at which they are mentioned, that earth-spirits or local spirits are involved." -- G. Tucci, Tib. Painted Scrolls (pp. 720 ff.), regards the Sman as the feminine counterparts of the gods and explains the connection between medicine and femininity in the following manner: "sman means either medicine or women. The connection between the two meanings is perhaps given by the implication that these sman were witches and that they were supposed to be possessed of the healing power with which, in shamanism, women are not rarely endowed" [cited in English]. And further below: "... but nothing prevents us from understanding 'lha and their wives' ..." [cited in English]. -- Therefore in the case of the treasure urn we would be dealing with the klu and their feminine counterparts, the sman.

782
171
789

The burying of the treasure urn is often equated by the Chinese with the burying of other vessels. These are two different things, however. Chinese and Tujen often put tea bowls, vessels, and the like, with the opening [860] downward, into the ground in order to exorcise and hold down the demons. This custom, however, originates from shamanistic practices, such as the Taoists also have. Thus the shamans there throw tea bowls in the air or on the ground so that the demons will be capped (this is done when the bowl falls with the opening down),

[858 cont.]

[Note on foreign text pp. 859-860 cont.]
for instance, at the erection of the weather fort, in the case of knife-climbing, disease exorcism, etc.

Word List

192 Earth-god: ġlu (glë).
782 Earth-god urn: sënoġ-der; sënoġ (Tib.) = to meditate; der (Tib.) = urn, bottle.
[776]
[778] To buy an urn: sënoġ-der bula; bula = to buy; but used only for the consecrated urn, otherwise "to buy" is called awu-.

Contents of the urn: rdzë (Tib.) (7).

7. [Foreign text p. 860.]
Concerning rdzë, cf. section, "The Incense Offering," Note 4. These additions are for the greater part designated by the Chinese as yao (yüo) and are not to be thought of merely in the sense of medicine. Everything possible that has a special effect falls under yao: minerals, powder, spices, little pieces of shell, gold, and silver, and the filling of the treasure urn. Lamas from Kumbum and Bengbar told me that there are about 30 to 40 types of treasure urns with different fillings. One of the most valuable is the one that contains mani-ruru (little balls). These little balls multiply, they "cast young," as the people say, and fill up the entire urn; cf. section, "Customs concerning the Dead," Note 2. Ch. Das (p. 874) calls the urn additions bum rdsas: "twenty-five articles (comprising

[858 cont.]

192
782

[Note on foreign text p. 860 cont.] consecrated objects and various sorts of medicines) required to be kept in the sacred-pot which contains the sacred water" [cited in English]. In his case, however, the holy-water urn, bum pa, is involved. Cf. the chapter above, "The Incense Offering."

All kinds of filling:	yilẽ tawa ndzuomladzi = all kinds -- filling -- being complete.
Urn binding:	ama budzin = opening-binding.
Sealing wax:	latsia (8).

8. [Foreign text p. 860.] latsia: comes from the Chinese; la-cha = sealing wax. nuru: Tib. nor bu; also called yid-bžin = a treasure that one desires (Unkrig).

[778] Jewel of good fortune:	nuru (Tib. loanword) (8) [see Note 8 above].
Buddha gold:	fo-chin (Chin.).
Coral:	šurẽ.
Mother-of-pearl:	mãdog (Tib. loanword).
[824] White rice:	tsigan tudurga; no-mi (Chin.).
Yellow rape:	sira yãnsgar; shen-ts'ai-tzu (Chin.) = spirit-rape.

[Pages 858-860 contain the notes given above as numbered footnotes.]

[860]

8. The Fire-pouring*

*See "Notes," pp. 867-870 [of the foreign text]. [In the translation these notes are given as numbered footnotes following the designations for them in the text.]

Report

In the case of family misfortune one sometimes invites in the lama so that he will undertake the fire-pouring. This lasts seven days. On the first day the lama comes with his companions. They make a small torma which one takes out into the open and throws away. After that the taboo for the yard is begun by hanging a cypress twig to the gate. On the second day three large tormas are made, which are placed on the household altar. The lama prays five times a day. On the sixth day, in the afternoon, the immediate preparations for the fire-pouring are made; two or three lamas take care of this, during which at least another one remains seated on the kang and continues praying. One fetches the spear-soothsayer. He determines, with the usual ceremonies of calling upon the spear-god, the place for the burning at the fire-pouring.

After that, the lama once more makes a torma and puts it on the place that the soothsayer has designated. He sits on a mat in front of it and prays the appropriate prayers, while the master of the household undertakes the great incense offering in the yard. Then the torma is taken out in front of the gate and thrown away so that the birds will eat it. The lama now rises from his mat and makes the ground-drawing on the burning-place, and with some bricks or clay bricks the people build a small [861] wall in front of it. The drawing is covered for the night with sacks or boards, so that no one will run across it and thereby pollute it.

On the seventh day, very early, the lama holds his prayer service. After breakfast the people prepare everything

[861 cont.]

782 outside for the ceremony, and the lama makes another torma of
792 pure butter. He takes this outside and puts it on the drawing of the burning-place. Then the ceremony of the fire-pouring follows, at which all kinds of wood and spices are burned.

The lama continues to pray until evening. The following morning he receives his fee and is taken back to the monastery. Sometimes, however, one keeps him a few more days for prayers. -- After the fire-pouring the yard remains taboo for at least another week.

[784] [351]

Details

[756] Persons: The fire-pouring may not be undertaken by shamans, but only by lamas. These are not ordinary lamas, however. Only the three top classes are considered for it: the Hutukhtu, the Tsŭordzi, and the Känpo. Usually three lamas are needed. It suffices if one of them belongs to the higher rank, but one often invites more (1).

[791]

1. [Foreign text p. 867.] Other Tujen claim that a Bon priest could also undertake the fire-pouring, which, after all, is to be expected, at least in the case of the black fire-pouring. The old informant, however, and other people, too, decidedly contest this. According to them, only a lama (gelõngba) is to be considered for this; the Bon priests, they claim, concern themselves only with demon exorcism.

782 The fire-pouring may be ordered by a private person (man or woman), by an individual family, or by the entire village. -- During the ceremony, the general avoidance pre-
[562] scriptions apply. Women may be present, but may not assist.

[861 cont.]

782 Place: Ordinarily the fire-pouring takes place in a compound. If the affair is organized by the village, then the temple yard is preferred. They may also go to a mountain, but not to its peak, only halfway up. -- The burning-place is always indicated in detail by a soothsayer. [791]

There are no further prescriptions concerning the location of the various types of fire-pourings, except for the black fire-pouring. It may never be undertaken in a yard, temple, or in the village. For it a very remote mountain region is sought and the people stay there in tents for several days.

[791] Time: The soothsayer determines the date days or weeks ahead of time. If the lama cannot come on the day set, then [792] he is asked to state the term, and the soothsayer then determines a day within this period. The ceremony always lasts seven days; the actual fire-pouring always takes place on the morning of the last day. There are no interdicted periods; it could also be undertaken when the family concerned is still in its period of mourning or when there is still a woman in childbed in the compound. In this case, the woman in childbed, for instance, would not be allowed to watch.

778 Tormas: Six tormas in all are made. 1. A small torma, 782 as always in connection with lama-visits. This is the misfortune-torma, after whose removal the compound is taboo. 2. On the [792] morning of the second day three large tormas follow. One of [351] them represents the god (Buddha), to whom the [862] fire-pouring [784] is presented. The other two, which are slightly lower, symbolize his two subordinate companions. The color of these tormas varies according to which god is involved. The tormas are put before the household altar or in the household chapel, and they are elevated in a box that is covered with a cloth or a board so that no animal (for instance, a cat) can desecrate them. The votive gifts are put in a row in front of these tormas: seven bowls of pure water, a bowl of barley wine, a bowl of sugar, a bowl of dough beans, and several small butter-lamps. These little lamps remain burning day and night until the conclusion

[862 cont.]

778 of the ceremonies. -- The three tormas are left standing until
782 three days after the fire-pouring and then are eaten by the members of the family. They may also be given to the domestic animals. In summer, however, they are often already so moldy that they are only fit for dogs. The names of the three tormas
[171] agree with the names of the gods that they represent. This is similar to the ancestral tables of the Chinese, which are likewise set up and venerated. -- 3. On the afternoon of the sixth day a fifth torma is made. It is smaller than the others and represents the earth- or mountain-spirit, for which reason it is also called earth-spirit (mountain-spirit) torma. The lama puts it on the place selected for the fire-pouring. In front of it, as votive gifts, there are: three bowls of water, a bowl of barley wine, a bowl of tea, a butter-lamp, and three sticks of incense. The lama sprinkles the torma with holy water from
[792] the wumba can, while the master of the household burns incense in front of it. Then the lama settles down on a felt mat and says a votive prayer in which he requests the earth-spirit to free the burning-place for the fire-pouring. After the prayer the torma is put on a wall or thrown away in the field so that the birds will eat it. The color of this torma is white. 4. Finally a sixth torma is made on the morning of the seventh day. It is not made of tsamba mixed with butter like the other tormas, but of pure butter alone. It represents the fire-god and is therefore colored a fiery red. Before the fire-pouring it is placed on the ground-drawing and afterwards burned with the rest.

782 The burnt offerings: For the actual fire-pouring the
824 following things are needed: 1. Firewood and twigs from the tree of life. They are supplied by the gift-master (that is, of the particular family). The firewood is an ell long. Formerly only fir wood was used; nowadays the wood of the white poplar is popular. One takes branch- and knot-free pieces as thick as an arm, which are split lengthwise. The length and being free of branch-knots are prescribed. 2. Butter, which is melted for the fire-pouring and poured into the fire. It must not be too old.

[862 cont.]

782 3. Two pieces of wood from the red and white sandal tree.
824 4. A large quantity of burning-spices, which the family itself must provide: white rape kernels, white hemp seeds, black hemp seeds, wheat, Tibetan barley, white peas, glutenous rice, white barley, certain Tibetan herbs, Tibetan flowers, a Tibetan species of reed-grass, and white grass from Tsinghai. 5. Consecration-wood. The consecration-wood varies according to the type of fire-pouring. For the [863] white fire-pouring one uses branches of the white poplar; in all there are 46 pairs of pieces of branch. Every piece has a length of nine fingerbreadths and must have formed three side twigs. These side twigs are cut off at a length of three fingerbreadths. The cut surfaces of the pieces must all run at right angles, not at a slant. The bark is left on; one may not damage it, otherwise the gift-master and his [753] relatives will later have a bad skin-eruption. In order to avoid its becoming torn, the cut surface is smeared with butter. Instead of poplar wood, tamarisk wood is also permitted. This by nature is very straight and free of branches. For this reason, in contrast to the pieces of poplar, they may not show any branch attachments. The length, however, must be the same. The color of the tamarisk wood is red (2). 6. The six spices of

2. [Foreign text p. 867.] Nothing could be discovered about the symbolism of the various types of wood. That would be interesting, especially on account of the requirement of the branch attachments.

the incense offering. They are likewise provided by the gift-master. 7. The 74 types of earth-god spices, which the lama brings with him, already pounded to powder.

782 Preparation of the burnt offerings: The lama prepares
[792] the burnt offerings on the afternoon of the sixth day. In each case he puts one kind of the burning-spices in an earthen vessel, mixes it with the five kinds of grain, pours liquid butter over it,

[863 cont.]

782 scatters over it the six incense spices and the spice-powder of the 74 earth-god spices, mixes everything together thoroughly, and in each case puts this mixture in two portions on a little plate, since at the fire-pouring he must throw the fire-offerings into the fire in two sequences, in other words, there are as many plates as there are kinds, each with two portions. In order to protect the spices from dust and impurity, they are individually covered with a sheet of paper. -- The 46 pairs of pieces of consecration-wood are put together on a separate tray. The lama sprinkles the burnt offerings thus arranged with holy water and has them [792] taken to the household altar.

782 Preparation of the place for the fire: In conjunction
532 with the preparation of the burnt offerings, the spear-soothsayer determines the place for the fire-pouring. He usually selects
[791] it in the yard. The lama puts the earth-god torma with the
[792] consecration-gifts on this spot. Once this has been removed, the lama measures off a rectangle about two ells square on the ground with a string whitened in gypsum or powdered lime. [Illustration appears here.] He beats the lines onto the ground, just as the carpenters do on wood with their black measuring string. Inside this square he draws a second, parallel rectangle that is about a handbreadth smaller. A frame is thus formed. Likewise with white powder and with the help of a wooden or leather pattern (3), he draws eight thunderbolts on this frame,

3. [Foreign text p. 867.] The patterns were formerly made of leather. Nowadays they are usually of wood or cardboard.

namely, one in each corner and one in the center on each side. The powdered lime is simply scattered over the pattern, and when he takes this away, [864] the contours of the drawing remain. The thunderbolts run parallel to the direction of the frame, in other words, they are not diagonal to it. Finally he

[864 cont.]

782 also draws two crossed thunderbolts in the center of the rectangle (4).

532

4. [Foreign text pp. 867-868.] As other people and lamas relate, there is a great assortment of different ground-drawings which evidently merely represent variations of the mandala. My informant, for instance, had one of his relatives draw the above-described figure. He explained it in the following way [868] (see figure below): The thunderbolts represent the four principal directions and the four directions between them. The circle with the crossed thunder-
[772] bolts signifies the foundation of the world-mountain rirā (Sumeru), for this rests on a golden disk. The thunderbolts signify the rest and stability and durability of the world's foundation. Originally they were supposedly made of gold as a sign of their indestructibility. The
[824] peonies are supposed to be the sum-bol of the flourishing familial good
[325] fortune. The same meaning also underlies the thunderbolt that is

Mandala at the fire-pouring.
(Drawing of a Tujen.)

[864 cont.]

782
532
824
[325]
[357]
[171]

[Note on foreign text pp.867-868 cont.] soldered into the ladling spoon for the liquid butter. -- The significance of the peonies corresponds to the custom of the lamaseries and of the Chinese, among whom peony shrubs of various colors are planted in the yard. Tujen and Chinese believe that a wealthy, affluent man always has a peony shrub before his door. -- Instead of the peony, lotus blossoms are painted in the case of the ground-drawing of the crematory. These represent the lotus on which the Buddha supposedly sat and from which the flames of transformation emanate. Cf. the chapter on cremation.

782
792
[333]
[532]

Now the men build a low wall with clay bricks on one side of the figure, while the lama says his prayers. This wall is terrace-shaped. The lower layer consists of two rows of bricks laid lengthwise; the second layer takes half the brick, and the third layer has only one brick. The whole wall, in other words, is six clay bricks high. The front and back side is coated with clay and lime and whitewashed. The vertical terraces remain free. With his pattern the lama again draws a thunderbolt on each of them, in other words, five thunderbolts altogether. This wall is to protect the lama from the fire, since at the pouring he is seated on level ground or only very slightly elevated (5). After the drawing, the lama again

[333]

5. [Foreign text p. 868.] There are also walls with four to six steps. According to the statements of others, the wall also bears the color of the fire-pouring concerned, and the ground-drawing likewise.

withdraws into the house for prayer.

[864 cont.]

782 The fire-pouring: On the morning of the seventh day,
[792] immediately after sunrise, the lama says his morning prayer, drinks tea, and makes the fire-torma. Meanwhile, after the incense offering, everything is prepared outside for the fire ceremony.

Next to the burning-place a large iron kettle for melting the butter is put on three stones. A pile of firewood lies next to it. A felt mat for the lama is put to the west of the wall, for he always sits facing east. Sometimes a broad kang table is set up, which serves the lama as a seat. On it is put a piece of wide cloth, which during the fire-pouring he places over his knees for protection, so that [illustration appears here] no liquid butter will drip on his clothes. Next to the seat one places the fire fan
[372] consisting of a piece of white cloth that is provided with two little parallel sticks, so that the lama can grasp it with both
[783] hands. The fire is fanned with it because one may not pollute it with his breath.

In front of the lama-seat and the wall there is a small table for the cult implements, prayer book, bell, etc. To the right of the seat there stands a small table on which to put the pouring-tube and the spoon. To the left, next to the lama-seat, one puts a wide board or a door taken off its hinges, over which one spreads a sack, and over that a white cloth runner. [Illustrations a, b, c, and d appear here.] [865] The tray with the pieces of wood and the 12 little plates with the burning-spices are on top of that. Furthermore the following are kept
[372] in readiness: several flintstones or a box of matches, a butter-lamp, a paper lantern, and a lighting pole such as is also used at the cremation.

782 Now the lama comes out with the fire-torma and puts it
792 in the center of the ground-drawing on a layer of cypress twigs. Around this the men pile up the prescribed firewood in the shape of an octogon that tapers toward the top, leaving an empty space in the center around the torma. They then fill this space with cypress twigs. The gift-master then ceremoniously hands a hada to the lama and requests him to begin the ceremony. While he goes to the other side of the pile of wood and makes a threefold

[866 cont.]

782 kowtow, there to the lama, the lama sprinkles the pile of wood
792 with holy water and scatters barley kernels on it, over which he has breathed three times.

[372] Now the gift-master strikes a spark from the flint at the first blow, catches it with hemp tow, blows it to a small flame in a little bundle of straw, and lights the butter-lamp with it. Then the paper lantern lamp is lighted with the light of the butter-lamp. The ceremony and the rules are exactly the same as at the cremation. Now one hands the lama the lighting pole.

[372] He holds its head of tow over the butter-lamp until it flames up and sets fire to the pile of wood with it. As soon as the fire flames high, all those present fall on their knees and make a threefold kowtow. In case the fire does not burn immediately,

[372] the lama fans it with the cloth fan. Now the fire-pouring follows.

The lama places the cloth over his knees, takes the pouring tube, lays it with the outflow over the wall, holds the handle with his left hand, and with his right hand pours spoonfuls of liquid butter into the funnel, so that it flows in a stream into the fire and flames up violently. After he has done this a few times, one hands him the little plates with the burnt offerings. With the first three fingers of his right hand, he takes one of the two portions each time and with benedictions throws it into the fire. Then some pieces of wood follow, then again pourings of (text continues on p. 299)

Arrangement at the fire-pouring.

concerning the Dead.") Photographs: Dominik Schröder.

(continuation of text)

782 butter, little plates, etc., until everything is burned in the fire.
792 The lama now gives the concluding prayer amidst the sound of his
percussion instruments and returns to the house. -- He cleans his
instruments, takes his meal, receives his fee, and on the follow-
ing day rides back to the monastery with his companions, unless
one wants to keep him there for other prayers that have nothing
to do with the fire-pouring.

[357] The compound remains taboo for seven days, and during
[784] these seven days the burning-place is left as it is. Afterwards,
the wall is torn down, and all traces of the ceremony are removed.
[333] The clay bricks can be used again for profane purposes.

[865 cont.]

782 776 Types of fire-pouring: There is a whole series of different fire-pourings, depending upon the deity concerned. Usually the fire-pouring is undertaken to honor the following deities: the horse-god, the cattle-god, the lion-god, and the water-faced Buddha.

[822] [866] Other types depend upon the color of the gods. Thus there is a red, yellow, white, and black fire-pouring. The tormas are also colored according to the colors of these gods, which they represent. Likewise, a special kind of wood is used for the 782 individual colors: for the red, tamarisk wood; for the yellow, [824] white thorn; for the white, poplar wood; and for the black, black thorn. The ceremonies are the same for the first three fire-pourings; only the prayers vary. -- The black fire-pouring in particular, however, deviates from the others (6).

782 184

6. [Foreign text p. 868.] Lamas report that there are many different types of fire-pourings, the four mentioned here being only the four main types, and that they have extensive books concerning the rites. -- The description of these orthodox Lamaistic rites would require a special study. In this connection, cf. Lessing, Yung Ho Kung (pp. 150-161). Only one of the many types practiced in the monastery is described there, and also only the phases "which can be easily observed by the inexperienced visitor" (p. 150) [cited in English]. Without going into a comparison with the above-described form, let it merely be pointed out here that the basic features are identical. Of the four main types characterized by Lessing, only the color agrees with the account given by my informant; he knew nothing

[866 cont.]

782
184

[Note on foreign text p. 868 cont.]
about the various forms of the burning-place (mandala) and the Tibetan-Chinese names. Also, the addresses of the fire-pouring are different (p. 151); in addition, other burnt offerings are enumerated there.

It must be noted that among the Tujen a simple, popular form is involved, which varies according to location and the situation of the population. It is only too understandable that the ordinary people know nothing about the complicated and in part tantric symbolism. It is enough for them if through the ceremony the gods provide for their welfare and protection and if the demons remain far away.

782 The black fire-pouring: The persons are the same. The [302] lama and his helper, however, smear their faces with soot. They [792] also wear black clothes. All objects are black, the torma, the felt mat, the wall, the ground-drawing, etc.

[372] Instead of firewood one takes pig or camel dung. Black sticks are stuck around the black torma on the ground-drawing; the intestines of a black sheep are suspended on them in garland fashion. The intestines are not cleaned, but are full of dung. In place of the butter one takes black linseed oil, and the dung is soaked in it so that it will burn better.

The burnt offerings are: black barley, black linseed, the seed of the wild rape, wheat mixed with black earth, dark beans, glutenous rice colored black, herbs colored black, etc.

[778] As votive offerings for the black tormas, which represent the demons, one takes milk from a black sheep and urine from a black donkey served in a black bowl, and, as incense, pig dung.

[866 cont.]

782 The place for the black fire-pouring is usually a remote
[792] ravine. One pitches black tents and lives there several days
with the lama in solitude. In no case may one undertake the
black fire-pouring in the vicinity of temples or human habitations.

[731] In case of epidemics, the black fire-pouring is used
[755] preferably, in order to annoy the demons of sickness and thus to
[777] drive them away, for with them the misfortune, too, disappears.

[776] Meaning: The fire-pouring is an offering for the gods;
through it they are supposed to be induced to turn away mis-
[792] fortune and sickness (7). The seven-day prayer of the lama is
[755]

782
372

7. [Foreign text pp. 868-869.] The whole gives very much the impression of a fire-offering. The informant, however, thought that it had nothing to do with it. According to him it was an offering to the appropriate
[776] Buddhas. The fire-god was also venerated with it, as the torma proved, but this was not the main thing. Nevertheless there is no doubt but that a fire-offering, Homa, is involved (cf. Lessing, loc. cit.). The Tujen name alone cannot be interpreted other than as a corruption of the Tibetan sbyin-sreg. sbyin is pronounced jin, which is very clearly to be seen in Note 8 (źūin-tsëǵ). Ch. Das, p. 940, writes under sbyin-sreg: "burnt offerings as made by Tantrik Buddhists, ... sbyin-sreg-gi [869] rdsas clarified butter, articles necessary for burnt sacrifices. ... sbyin-sreg-gi yam-šiṅ ... first wood necessary for the offering" [cited in English]. (For yam-šiṅ, cf. the Tujen foreign word yiew-siṅ.) "Homa is the

[866 cont.]

782
372

[Note on foreign text pp. 868-869 cont.] chief of all fire-sacrificials" [cited in English]. -- The DMF, p. 73, likewise has the expression dzuntsiog and writes: "name of certain libations and offerings" [translated from French]. Cf. Tib. t'sogs, "sacrificial offering" [cited in English]. Then it presents the expression lama dzuntsiog fudzuruna (= surina) and writes: "the lama performs the libations" [translated from French]. There can be no question of a libation here, and the ... tsiog (ts'og) is also not the Tibetan ts'ogs, which, according to Ch. Das (pp. 1032, 1033), means "accumulation," and, in connection with 'k'or, "offering in a circle (mandala)." Although the informant did not primarily emphasize the fire-offering, he nonetheless translated the dzuntsiog with the Chinese tao huo-t'an = literally, to pour on the fire surface = to undertake the fire-pouring. F. Lessing (p. 150) has for this the expression huo-t'an-i-kuei, roughly, rite of the fire-terrace.

782 just as important as the fire-ceremony. -- The fire-pouring is
792 widespread among the Tujen and Fandse. It is also undertaken
[171] in the lamic monasteries.

Word List (8)

192
782

8.[Foreign text pp. 869-870.] In addition to the names mentioned here, I also learned in the Mongol lamasery Tsa-tsang-szu and in the neighboring monastery Fu-hai szu or Hsin-szu (Guăm-basoma) west

[866 cont.]

192
782

[Note on foreign text pp. 869-870 cont.]
of Tangkar the following details and variations:

Fire-pouring: żüin (yüin)-tsēǵ; cf. the Tujen corruption dzun-tsioǵ.

Ground-drawing (mandala): sdziṅkuor (Tib.).

Separation wall: lämbän (Tib.). Cf. längaṅ (Tujen) and lan-kan (Chin.).

Pouring spoon: rgäṅ zär (Tib.).

Butter-spoon (for liquid butter): tombō (Tib.).

824
192
782

Firewood (which is placed in octagonal form on the burning-place): xsiǵ ǵa (Tib.).

Consecration-wood (which is thrown with the spices into the fire): yäm šeṅ (Tib.); cf. the Tujen word yiew siṅ.

Wood for the white fire-pouring: nia-rēx (Tib.) or, according to another pronunciation, niäw rsēǵ (Tib.); hsi-fan liu (Chin.) = Tibetan willow; chi-chua liu (Chin.) = hens-foot-willow.

Black thorn: tsērnaǵ (Tib.); or sdzirwa (Tib.); xara tsitsērnaǵ (Mongol.).

Wood for the red fire-pouring: uombō (Tib.); balaǵ (Mongol.); sa-liu (Chin.), probably the High Chinese sha-liu (= sand willow) is meant.

Tamarisk: sōgä. This word is Mongolic and Tujen in any case. The Chinese also say so-kai for it, evidently an approximation of the sound. I also heard this word from Tibetans. It is likewise used for the red fire-pouring. One prefers these switches for whip handles.

[866 cont.]

192
782
[824]
[322]

[Note on foreign text pp. 869-870 cont.]

Wood for the yellow fire-pouring: maġa (Tib.); dziãṅma (Mongol.); chien-yang liu (Chin.); the wood is used a great deal for mill wheels; it seems to be a kind of maple. I also saw it a great deal among carvers, who praise it as the best wood for carving.

[778]

Fire-torma: dãmbala (Tib.).

Yellow fire-pouring: sẽru dżiwi ẑũin tseġ (Tib.).

Red fire-pouring: ġõngẽ dżiwi ẑũin tseġ (Tib.).

White fire pouring: siwi dżiwi żũin tseġ (Tib.).

Black fire-pouring: dẑoġguei dżiwi żũin tseġ (Tib.).

Burnt offerings: rdzẽ (Tib., Mongol.).

Butter: marku (Tib.); dasu (Mongol.).

[870]

192
782
824

Grain: nie (Tib.); tara (Mongol.); the Mongols there designate Tibetan barley, ch'ing-k'o, with tara, which is simply grain.

Wheat: dẑõ (Tib.); budẽ (Mongol.).

Beans: tẑamã (Tib.); burdzieġ (Mongol.).

Barley: sõ (Tib.); sõtara (Mongol.); it is probably a combination of the Tibetan sõ and the Mongolic tara (grain).

White rape: yõṅgur (Tib., Mongol.); pei-ts'ai-tzu (Chin.).

Indian incense grass: gusia (Tib., Mongol.); wei-tzu ts'ao (Chin.); that is, reed. Evidently the kuśa grass designated by Filchner, Kumbum, p. 88 and Note 400, which supposedly stems from India, is involved here.

[866 cont.]

192
782
[824]

[Note on foreign text pp. 869-870 cont.]
Butter-tsamba: sŭosĕn (Mongol.); a mixture to which other additions are added.
Blue flowers: dżĕyăńgĕ (Tib.); gōxu (according to another dialect, kōku) dzidzigĕ (Mongol.); lăn-ts'ao (Chin.) = blue grass.
Individual additions: tsiawar rdzē (Tib.).
All kinds of additions: ondōń rdzē (Tib., Mongol.).

[824]

Monk's herb: durĕwā (Tib., Mongol.); ping-ts'ao (Chin.) = ice herb; tao-seng-ts'ao (Chin.) = Taoist-Buddhist monk's herb; instead of seng (monk), the sign for sheng is also written; that may be false, however. It is unclear to me which herb is involved.

All the names have been written according to the dialect of the monks in Tsatsang-szu, who mostly come from the region of Dulăn (Tsaidam).

Fire-pouring: dzuntsiog̀ (Tib. loanword) (9), suri = to pour fire-pouring, DMF 73.

9. [Foreign text p. 870.] Tsŭordzi: Tibetan c'os = doctrine, rje = master. The representative of the monastery abbot is designated by it, teacher. -- Kăńbō: Tibetan mk'an = master, po = particle. mk'an po = abbot of a monastery, professor, head of a lamasery. -- gaňsăr: Tibetan gaň sa? = tube. --

[824]

dziăńgōn: probably arose from the Tibetan gTsaň = Tib. province, and sňo = herb. -- ndoluwa: perhaps is connected with the Tibetan sgrol ba = the goddess Dolma, to

[866 cont.]

192
782
[824]
[776]

[Note on foreign text p. 870 cont.]
help, to save; otherwise called Tārā. -- gusia: Tibetan ku ša (from the Sanskrit) = botanical Poa cynosuroides. -- sāndoṅmani: can be analyzed into the Tibetan words seṅ (Sanskrit. siṁha) = lion, gdoṅ = face, maṇi = jewel. It is a goddess. -- šda(m)tsēni: can be analyzed into the Tibetan words rta = horse, mgrin (pronounced din) = neck, also voice; in other words: the horse-necked one, or the horse-voiced one. -- logoṅ: Tibetan klu (pronounced lu) = dragon, and gdoṅ = face. Literally, therefore, dragon-face (Unkrig).

[372] Fire-place: taw (Tib. loanword) = oven, hearth.

[778] Misfortune-torma: ġuaġ dor (Tib.).
ġuaġ = misfortune; prayer said during the preparation of this torma.

Earth-spirit torma: ġlū-šdorma.
Mountain-spirit torma: yifula-šdorma.
Fire-torma: ġal šdorma.
Earth-god spices: ġlu smān (Tib.).
dalān dierān sāmba smān = 74 pieces of spices.

[867]

[532] Measuring string: šdag paġdzin bōdoġ = pattern-drawing string.
Pattern: arasē xuar = leather model; tsialdzē xuar = paper model.

Burning-place drawing (mandala): tawni xuar.

[333] Wall: lāṅgāṅ (Chin. loanword).
Pouring tube: šge gāṅsār (Tib. loanword) = large spoon.
Ladling spoon for butter: mula gāṅsār = little spoon.
Spoon (profane): dzieġliu (Tujen).

[372] Cloth fan: ki yūelwa = air-cloth.
rloṅ yāg (Tib.).
Cloth (profane): bosē.

[867 cont.]

192 Lighting pole: xuãmbar.

782 Flint and steel: kidie.

[372] Fire struck with flint and steel: kidie ġal = flint-and-steel fire.

Ordinary fire: arãñka ġal.

At the fire-pouring pouring there is no loss through bad weather: dsuntsiog surẽwa, dierdzia sdzũen uguei.

At the black fire-pouring pouring the demons flee: xara dzuntsiog surewa, mõ iliesgẽ xuoluode pusa sdzia (sdzim).

[372] Firewood: taw siṅ (Tib.) = oven-wood.

Consecration-wood: yiew (ziew) -siṅ (Tib.).

192 Tibet-herbs: dziaṅgoṅ (Tib. loanword) (9) [see Note 9 above].

tsang ts'ao (Chin.) = Tib. herb.

782 Tibet-flowers: kãnba (Tib. loanword).

824 ta t'ou mao hsiang (Chin.).

White grass (from Tsinghai): ndoluwã (9) [see Note 9 above]; pai-ts'ao (Chin.).

Tibetan hard grass (reed): gusia (Tib. loanword) (9) [see Note 9 above].

tsang hsi-chi (Chin.).

Tamarisk?: guãnbõ (xuãnbo); sõgä.

Poplar wood: mõdẽ = wood.

White thorn: siraldzin = yellow thorn.

Black thorn: xara rẽguodzẽ.

192 Horse-god: šdamtsẽni (Tib. loanword) (9) [see Note 9 above].

782 ma-wang (Chin.).

Cattle-god: ndigsier (Tib. loanword); niu-wang (Chin.).

776 Lion-god: sãndoṅmani (Tib. loanword); shih-wang (Chin.) (9) [see Note 9 above].

Water-faced Buddha: logon rẽdziawu (Tib. loanword) (9) [see Note 9 above].

shuei-lien p'usa (Chin.).

121
771

Second Part: Analysis

An all-round picture of the Tujen religion can only be drawn within the frame of a broader cultural view, for which the other records from the rich treasure of legends and songs are also utilized. Over and above this, a judgment concerning the cultural and religious historical-relationships requires a comparison [171] with the neighboring Chinese, Tangut, Mongols, and Yugur (1).

[174]

1. A comparison with both the eastern part of north China (Tungus) and the southwest would also be very informative. The tradition of the Tujen speaks of an eastern origin, and the peoples upon whom they are superimposed in the present-day Amdo originally belonged to the Ch'iang, of whom large parts migrated toward the south into present-day Kham, Szechwan, and Yunnan. This conception has been advocated for a long time by the Chinese; cf. Jen Nai-Ch'iang-Schröder: Die Fandse, pp. 1 f. It has now been confirmed by Professor Doctor J. F. Rock for the Na-khi. A comparison

[202 cont.]

121
771
174

with their religion is justified all the more since it has preserved the pre-Buddhistic form in a much less corrupted state than the religion of the mother country, which lies within the effective range of the Yellow Church (Kumbum); see below, pp. 390 ff. In addition the Na-khi possess a religious literature in which the old customs are unequivocally fixed, and which J.F.Rock has worked over and published; for this whole subject, cf. J.F.Rock, Na-khi Kingdom; id., Naga Cult, I, pp. 2 f., and Muan Bpö, p. 7. Unfortunately, these works, which represent a treasure trove for knowledge of the pre-Buddhist belief in the Chinese-Tibetan border region, could not be adequately quoted here.

121
771
[171]

It is true that in the notes of the first part extensive consideration was given to this, so that now it is already established that the religion of the Tujen and of their Lamaistic neighbors do not differ from each other in many ways. A further analysis and summary of the question, however, [203] would grow into a series of special essays that would go too far beyond this work, which, after all, is primarily intended to be a survey.

The present material, however, is ample enough to characterize the basic features of the religious framework, which even a later and more precise treatment will scarcely change. This characterization will be attempted in a cross- and longitudinal section. The one offers a total picture of the religious world-view; the other shows the more or less interpenetrating layers of the religion.

[203 cont.]

I. The Total Religious Picture

776

1. The Deities

a) The Higher Deities

The higher deities are to be understood as those figures that do not belong among the so-called purġan, but are mentioned separately from these by their own names. These are heaven (tieńġëre), the mountain-spirit (yifula), and the earth-deity or earth-deities (ġlu; itoġa). They seem to be the older deities and will be dealt with later when the belief in a supreme god is discussed.

b) The Lower Deities

192 776 The lower deities can all be included under the generic name purġan. The word purġan is none other than the term customary in the literature, Burchan (Burkhan, Burkan), which, as is well known, stands for "god" in large parts of Central Asia. The origin of this name has not been clarified. Usually a connection with "Buddha" is assumed, and the word is derived from the compound Bud(dah)-Khan; see W. Schmidt, UdG, X, p. 573, with reference to the sources. This passage, which deals with the Tungus, emphasizes that there Burkan predominately refers to foreign deities, a situation that is quite close to that found among the Tujen. Another explanation connects the word with the Buddhistic grave-monument (oral communication from W. A. Unkrig), namely, purġan supposedly arose from the Mongolic suburġan. The word suburġan in turn is derived from the Tibetan spur-k'aṅ, house of corpses, cremation place. Since consonant clusters are avoided in Mongolic, a u was inserted between the s and the p for easier pronunciation, just as also happens in the case of other word derivations. Thus from spur, through the transformation of the p (which the Mongols do not have) to b, the word subur arose. The n in k'an is slurred into a simple n.

192 778 776 With suburġan (spur-k'aṅ) one designated the same thing as with the Tibetan mc'od-rten, chorten or stupa, which literally

[203 cont.]

192 means "offering container." The chortens now usually shelter
778 the ashes of Buddhist saints or their relics and frequently also
776 bear their pictures on the front side. Thus the meaning of an idol is connected with the whole. The chortens or stupas or suburgans are therefore the seat of a spirit or of a deceased person. A deity is present in them. They are the same as [204] what the Mongols or Tujen imagine under the expression purġan. This conception is confirmed, furthermore, by the urn shape of the stupa. In Tibetan the lower part is called bum-ba, urn, pot. As has already been shown in the case of the earth-god urn and the beṅkaṅ, urns are frequently the seat of a deity. This conception is also found elsewhere, and one might also connect the urn with the throne of the gods, which will not be discussed here. In any case, the Tujen word purġan is late and Buddhistic in origin.

776 All the inhabitants of the Buddhist, Bonist, and Taoist pantheon fall within the group of these lower gods insofar as the Tujen have taken it over. A special position seems to be oc-
776 cupied by the fire-spirit as hearth-god or god of the shaman
372 fire, whom Schram so strongly emphasizes in his book concerning marriage among the Tujen. I could no longer confirm any special veneration of the shaman fire, however. If one disregards the fire offering, which is included as part of the rite of the Lamaistic fire-pouring, there remains to the people only the hearth-god, who, however, is venerated no more frequently than among the Chinese, for example. The use of fire for purifica-
[783] tion (widow marriage, leaping over fire, fumigation, red-hot stone, etc.) seems to have nothing to do with a god. It can be explained purely magically, because the demons fear the fire. They are, of course, always regarded as unclean, as the common phrase, pudaġ ilie, dirty demon, proves.

776 Of the other gods who deserve special mention, there
[791] are the shaman and soothsaying gods, who animate or temporarily
[787] take possession of the spirit-spear, the spirit-table, and the divine images, for instance, the black and white tiger, the great mother, the dragon. Furthermore, an important role is
[177] played by the god of joy (at a wedding), who probably comes from the Chinese, the horse- and cattle-king, the world-directions spirits, and the gods of the weather ministry with the smith-god

[204 cont.]

776 of the Bon, the Dăntsien-Sang, who hammers his iron on the buck's head so that there is lightning and thunder (cf. "The Pole-goat," Anthropos, 47, 1952, pp. 823 ff.) [pp. 218 ff. above in the HRAF translation].

The remaining Lamaistic gods do not have the importance among the people that might be expected. They know of [796] Maitreya, whose image is displayed and venerated on the sixth [535] day in the sixth month after the temple dances in the yard of Êrh-ku-lung; furthermore, Tsongkhapa, the founder of the Yellow Church, in Chinese called pao-pei-fo-yeh, Precious-Stone Buddha, [791] and the soothsaying god Pekar, whom the people simply call [788] sgurdien (gurtum), and who often is set up life-sized with full [756] warrior equipment in the temple on pilgrimage days. This Lamaistic oracle-god, however, is venerated less by the people than by the true shamans. -- No identification of Buddha with the highest being (heaven) is to be observed among the people. Nothing higher than heaven is known. Cf. below (pp. 348 ff.).

c) The Demons

Aside from the countless spirits, the uluon purgan, the world is further populated by countless demons, the so-called [753] ilie. They harm human beings through disease, misfortune, [777] failure of crops, and bad weather. Especially feared is [205] the [731] plague-god Barma, Chinese wen-shen, epidemic-god, at whom the black fire-pouring is directed. The storm demons are com- [782] bated by the spirits of the weather ministry. They fear above all the red-hot projectiles that rain down to earth from the anvil of the Dăntsien-Sang and kill them.

The Lamaistic terror-gods, among whom the mother of the gods, Lha-mo, is best known to the people, are not regarded as demons. Their main task is not to torment human beings, but to protect the true Lamaistic doctrine from its enemies.

774 2. The soul- and world-picture

a) Conception of the Soul

[205 cont.]

774 Unequivocal statements concerning the conceptions of the soul among the Tujen could not be secured. It is true that several souls can be inferred from the death customs described, but the naming and peculiar nature of these souls remain vague.

192 Two designations for "soul" come into consideration:
774 namsü (namšë) and suniedzë. The word namsü is seldom used. According to the DMF (256), it corresponds to the Tibetan ñams-su. This independent connection cannot be confirmed in Ch. Das, but ñams alone is found there, p. 476, with the meaning: "...the soul, mind, spirit as an entity" [cited in English]. The su could at most still be an instrumental particle. One will probably not go wrong, therefore, if he equates namsü not with ñams-su, but with the Tibetan rnam šes, pronounced nam-še. Ch. Das (762) translates it with: "...the mind, knowledge, intellect, memory" [cited in English]. H.A.Jäschke, on the other hand, has for it the explanation (315): "3. in popular language: soul, e.g. of the departed..." [cited in English]. The much more frequently used word suniedzë has the same meaning. It is the equivalent of the Mongolic sünesün. Both namsü and suniedzë signify nothing uniform, for there are three souls: nigë
774 kundu ġuran namsü-i, or nigë kundu suniedzë ġuran-i; that is:
775 "There are three souls to a human being"; cf. DMF 256. And of what kind are these souls? toroñ yesë saġdzini, ġuordani sdziewa awura sdzini, ġurandani iliedu furani (cf. DMF 361), that is, "The first guards the bones, the second assumes the rebirth, the third transforms itself into a demon." Mostaert, op. cit., refers to Sanžeev, "Weltanschauung und Schamanismus der Alaren-Burjaten [World-view and shamanism of the Alar-Burjat]," Anthropos, 22, 1927, p. 585. The conception of the tripartition,
[171] however, is much more widespread; at any rate in Lamaistically influenced Asia it is found almost everywhere. Even the Tsinghai Chinese know of three souls: one goes into the underworld, one stays with the corpse (bones), one wanders around in the world. What is common to these three souls is that they can separate themselves from the body.

775 The bone-soul remains with the skeleton after death, at
764 least until the rite of the bāda has been completed, whereby it
604 is satisfied and becomes free. Its agent in this ritual and the

[205 cont.]

775 decisive authority is the mother's brother of the deceased. There-
764 fore among the people he is accordingly called tsiğan yesë daxu,
604 that is, "white-bone-master"; Chinese [206] ku-chu, that is, "bone-master." This soul finally becomes free at the cremation, at which, of course, the bones (better: the skeleton) are destroyed except for a few remains. The peculiarity of this soul[1] is its
775 clan [Clan] membership, as is expressed by the name of the
614 mother's brother and his importance. He is the representative
604 of the mother's kin-group [Sippe]. The Tujen, however, like
764 the Mongols and other tribes, determine the kin group according to the bones. Among the Tujen likewise the question as to the family is: "What are your bones," tsini yesë yan-i? Bones and clan (kin group) therefore are equated. Thus one has grounds for maintaining that the bone-soul is borne by the life principle of the clan and propagates itself in the clan. How is unclear. As clan-master, the mother's brother is also bone-master. He exercises more rights over his sister's child than the latter's actual father and also demands the final accounting. But what happens to the thus liberated soul? Perhaps a similar custom among the Manchuria-Tungus, specifically among the Birarčen [Birar] and Kumarčen, provides insight into this. S. M. Shirokogorov reports of their soul-migration into the underworld: "The second river is the Yellow River, after crossing which the soul meets with Mongoldai Nakču, i.e. Mongoldai 'senior of the mother's clan,' which examines the case before allowing the soul to cross the Black River beyond which Inmun-kan reigns" [cited in English] (Psychomental Complex, p. 142; as cited in UdG, X, p. 563). Mongoldai, the master of the mother's clan in the underworld, here does what the bone-master of the dead does in the upper world: he demands an accounting and investigates the condition of the dead person's soul. The result is also the same: the soul becomes free for its migration and the corpse free for the burial. I could not confirm this underworld correspondence for the bāda among the Tujen; at any rate, nothing drew one's attention in this direction. Perhaps the extension of the conception into the
[769] underworld is lacking among them because they practice

1 [i.e. - the "bone-soul", one of three souls of a human being - ANALYST]

[206 cont.]

775 practically no ancestor cult and therefore know of no ancestor
614 spirit like the Tungusic Mongoldai Nakču. Unconsciously, how-
604 ever, forgotten conceptions might still have an effect. At any
764 rate, a custom that is often explained as thirst for honor and
[769] avarice would in this way find a suitable explanation. In the case of the bāda the principal demands of the mother's brother are directed at the inviolability of the corpse (= no violent death) and a costly death-box, as well as splendid prayers for the dead. When, in connection with the underworld custom of the Tungus, one assumes that the dead person will reach the clan-master of the underworld in an honorable, fine condition and contented, then the care of the earthly clan-master for his clan members is thereby also documented, and the clan has a good reputation in the beyond. Father W. Schmidt sought to interpret similar conditions among other peoples meaningfully, and, to be sure, in connection with the double interment of the matriarchal agrarian culture. In the latter the fleshly parts are allowed to fall to destruction. They are of no significance for the further existence of the human being. The bones, however, which are carefully cleaned and then finally interred or supplied for the cult, are important. Moon-mythological ideas lie at the bottom of this procedure. The waning moon becomes thinner and thinner, until finally only [207] a "bone" remains, but the latter gradually clothes itself again with "flesh" and grows to become the full moon, a mirror image of the perishing and becoming of man. According to this conception, the skeleton is the "essential," the support; see UdG, X, pp. 742 f. If this meaning of the bones is so harmoniously a part of the moon-mythological matriarchal agricultural culture, then the striking arrangement among the Tujen, bones -- mother's clan -- mother's brother, is also explained. -- The sociological side of this custom will not be dealt with here.

775 The second soul goes to the western paradise (Tushita)
171 and waits there for a new rebirth. The incarnation into lower forms is regarded as punishment for a vicious and evil life, exactly in the sense of the Buddhist-Lamaist wheel of life. These conceptions, however, do not have much force among

[207 cont.]

775 the Tujen. For instance, one hears little about a Buddhist hell,
171 which plays a much more important role among the neighboring Chinese and is quite graphically portrayed in many temples. It is true that the Tujen like to consider the misfortune in this world as punishment for earlier transgressions. This soul, which
775 one could call "incarnation soul" or "private soul" -- in con-
764 trast to the clan soul -- becomes free for the incarnation through the transforming lotus fire at the cremation. The informant, at any rate, interpreted the lotus-mandala and the fire at the cremation in this sense and ascribed to them a transforming power. This does not mean that this soul remains in the body as long as, say, in an animated corpse. Rather, at the death of the person, the lamas are supposed "to open the way" through prayer, so that the soul may reach Tushita. To what extent such explana-
[171] tions correspond with the orthodox Buddhist doctrine will be left undecided. Any any rate, the conceptions of the people are vague.

775 Even more unclear are the conceptions about the third
776 soul, which is supposed to transform itself into a demon. Nothing is known about its fate and about the cause of such a transformation. Such a soul is feared, however. Perhaps it is this soul that in case of dissatisfaction after the bäda disturbs the
[764] human beings at the command of the clan soul, haunts the
[782] house and yard, and causes sickness and misfortune. At any rate, a great part of the offerings and prayers at the death rites is given out of fear of this soul. The constantly expressed wish to the dead person runs: "Forget us, be content, do not come
775 back." A natural discontent and a kind of missing of life's goal
776 are connected with the soul of unmarried adult girls. It be-
589 comes a demon who is so dangerous that even other demons flee from it, for which reason the Bon priests take the material for
[765] their bone flutes, their whip, etc. from the corpses of such girls. The discontent and non-fulfillment can only be accounted for in this case by the unmarried state, which, according to Tujen conceptions, goes against every natural ordinance for a female person. One may suspect that this soul-belief also has a strong
[588] effect on the custom that the Tujen call "to arrange the heavenly

[207 cont.]
775 hairdress," through which a girl is wedded to heaven and is no
776 longer burdened with the contempt suffered by unmarried women
[589] (see above). The fear of the female demon-souls [208] is also
[588] widespread among the Chinese, and there is only one way of
[171] being safe from them: the cremation. In the customs of the Tsinghai Chinese, this fear and contempt have their basis in the Buddhist conception that a woman is an unclean being and that this uncleanness is only removed through the man and his descendants. This attitude is strengthened through the fervent desire for sons and grandsons, which again is connected with the ancestor cult. These Buddhistic motives are certainly also decisive in part among the Tujen. Among them, too, the
[562] woman is regarded as unclean, even if not so harshly as among
[783] the Chinese. The veneration of the ancestors plays scarcely any role. Nonetheless, uncleanness and demonism are closely
[841] connected. A very common expression runs: pudag̀ ilie, unclean demon; a woman is also pudag̀ during her period.

The demon soul therefore seems to stand in a special relationship with the female principle. This suggests the surmise that it represents the flesh-(body)-soul in the human being, which stands in contrast to the bone-soul. In northeastern Tibet and elsewhere one encounters the conception that the bones of a person come from the man and the flesh from the woman. Among the Tujen, however, this relationship is difficult to determine
[614] because it is precisely the bone-soul that is related so closely to the mother's clan. This does not, it is true, exclude an individual assignment to the man (father), but it does not permit it to make its appearance through this unquestionably matriarchal trait.

775 From everything, one can see that the Tujen are little concerned about the after-life of the soul and the beyond. To them it is enough if they are left in peace on earth. The Buddhist conceptions are more theoretical. In actuality one not infrequently encounters a this-worldly fatalism which expresses itself in the saying: "Our life does not have much meaning"
[171] (literally: we have lived in vain). Even if the conception of the
[769] soul has much similarity to that of the Chinese, the Tujen

[208 cont.]

775 nonetheless know of no ancestor cult, and it is striking that they
[171] are not inclined to take this over from the Chinese. The offer-
[769] ings to the dead at the funeral celebration are rather to be under-
[764] stood as from the fear characterized above and from the ideas that the deceased would remain among the living and would need to
[782] partake of food and drink. Also, all the grave gifts, which are so important to the Chinese, are lacking among the Tujen.

774 Aside from death, the soul can escape and wander off even during life. This happens in dreams and during illness,
[513] indeed, even during ordinary sleep. How this is to be imagined
[753] is shown by a passage in the Geser legend, in which it is said that a scoundrel had fallen asleep and his souls, in the shape of a black and a white snake, had crept away out of his nostrils,
[756] for which reason he was unable to wake up. The recall of the
[755] soul is a frequently desired activity of the Tujen shaman. This catching of the soul is called: suniedzë xura-. It is unclear from this expression which of the three souls is involved.

[209] b) The World-picture

772 The world-picture of the Tujen extensively corresponds
[171] to the Lamaistic one, which, indeed, is essentially the same as in the ancient Orient, in pre-Buddhistic India, and in Central Asia. It has no pecularity.

In the center of the universe stands the mountain Sumeru (rira). The world is arranged around it in three layers. Sun, moon, and stars circle above. In the center is the surface of the earth with the various countries, human beings, and animals. Around the foundation of the world-mountain lie the underworld and the water. This conception is repeated in its entirety or in part in the religious life in pictorial form. It is found most unequivocally in the mandala-offering of the Bon during
[778] the erection of the pole-goat (mountain-torma). More or less clear variants of it are: the central fort with the mani-tree, the chorten chamber with the sky-column, the obo, the ground-drawings (mandala), at the fire-pouring, and at the cremation.

[209 cont.]

772 The sky-column and world-mountain (world-tree) are emphasized
778 above all at the central fort and the chorten chamber. In both cases, however, a strong emphasis on the realm of the underworld, which is represented by the urns, is also striking. The latter are nothing other than the realm of the Nagas, who play such an important role in the Bon religion and point to the pre-Buddhistic roots of the conception of the world. The arrangement of the urns and of the scrolls in the urns mirrors the world order in the four directions of the compass and their center.
[782] The treasure urns thus represent the wealth of the earth. At the same time they are regarded as an offering to the earth-deities, whereas the main urn is the dwelling of the deities. To what extent magical effects are intended still remains to be investigated. In this connection one must also take into consideration the burying of objects in general, as, for instance, in the case of the obo, the weather fort, the warding-off magic against sickness, the construction of a compound, etc.

The air-horse on the mani-tree (mani-flag) seems to be less closely connected with the world-mountain. Indeed, it is frequently set up separately. The connection with the mani-tree is probably due to the circumstance that it simultaneously represents the four directions of the compass (2). At the same

2. The five cloth tabs on the mani-flag (cf. Anthropos 47, 1952, p. 56, Fig. 7 [see p. 100 above in the HRAF translation]) are evidently a curtailment and combination of formerly variously colored air-horse flags; four of these are regarded as the bearers of the air-horse- or wind-master and are arranged according to the four directions of the compass. This conclusion comes from a Tibetan text, for whose French résumé I am indebted to Professor Doctor R. Stein (Paris).

[209 cont.]

772 time, an inner significance cannot be denied to it. The air-
778 horse is the symbol and the guarantor of the destiny of the family,
of the kin group. Human destiny, however, is fitted into the
[614] course of the world, just as the kin-group compound occupies its
[35] place in the world-structure. According to Tujen conception, a
compound is not "complete" if the central fort and mani-tree
are lacking. Through them the living space of the kin group is
given conformity with the living space of the other living beings.

The world is no rigid schema, however; this is proved by the significance of the arrow of good fortune. In its way, the arrow of good fortune also represents the world: the [210] urn symbolizes the earth with its fruit; the arrow, the connecting column to the sky. Frequently four other arrows corresponding to the four directions of the compass are added to the central arrow. The vital force in the arrow of good fortune is new and not observable in the other world-representations (central fort, mandala, etc.). The germs of things, the force of increase and of life, are conjured into it. It guarantees wealth, good fortune, and a full life. The tufts of hair from the animals and the grain in the urn signify that these things will not be lost to the owner even when he has sold them. The oracle-toys of the children on the arrow guarantee the development of the young person in the corresponding direction; the hairs and threads of clothing from the bride insure that despite the loss of the daughter her good fortune will not escape. The dynamism of the world is expressed on the arrow of good fortune, whereas on the mandala (central fort, etc.), more the fixed order. Here, however, the cosmic force, the sap of life, and germinal base are not to be conceived as mana, but are to be derived from their connection with the superposed heaven. The astral, heavenly order is not only the model of its earthly mirror-image; it also imparts to the world its force, which permeates both. The references in the chapter on the arrow of good fortune already offer several indications of this. These conceptions can still be pursued much further. Their threads are quite tangled; they extend back to very early cultural forms and are linked with the oldest kind of communication between heaven and earth. Old forms of sacrifice and having the deities present are linked

[210 cont.]
772 with it (3).
778

772
778
171

3. The arrow of good fortune, in other words, occupies the place of the tree of life, to which men, animals, and plants owe their existence and their development; cf. Uno Holmberg, Der Baum des Lebens [The Tree of Life], p. 69 f. Among the Na-khi this tree of life is the juniper tree (Juniperus). The well-being, wealth, and the unfolding of life of human beings are ascribed to it; cf. J.F.Rock, Muan Bpö, pp. 21, 42, 94. As the wood of life, the arrow of good fortune in the house also represents the world axis, similar to the central column in temples, chortens, god-figures (human spinal column), which is designated by the Tibetan name srog šiṅ, that is, the wood of life. H.A.Jäschke (Dictionary, p. 585) translates the expression with "axle, axle tree" [cited in English]. As a supplement, let it be mentioned that this srog šiṅ is probably also the equivalent for the Tujen name of the sky-column (sõn-siṅ) in the chorten chamber; cf. Anthropos 47, 1952, pp. 76, 78, 79 [pp. 143, 137, 143, in the HRAF translation]. (Personal suggestion from Professor Doctor R. Stein).

The conception of the arrow of good fortune as a personification of the god of life is no longer vital among the Tujen. That it may have this significance is proved by the Na-khi in southwestern China. Instead of the treasure urn with

[210 cont.]

772
778
171

the arrow of good fortune of the Tujen, they have a basket. In it, among other things, there is a miniature tower; it represents the god of life, called Ssu, Tibetan srog lha. The basket is his home. The miniature tower (t'a, "pagoda") may also be replaced by an arrow, so that this represents the god of life; cf. J. F. Rock, Naga Cult, pp. 146, 250, 251 (according to a personal communication). The significance of the god of life and his home agrees with the significance of the arrow of good fortune and the treasure urn. -- S. Hummel has also pointed to the arrow as the bearer of reproductive power and of the cosmic vital force; cf. Geheimnisse tibetischer Malereien [Secret Tibetan Paintings], pp. 8-14 passim.

Very ancient and widespread representations are involved here. The connection of god of life and ancestor and his seat in an urn or basket, etc. can be followed all the way to Indochina; and in the burial urns and Shang bronzes in ancient China are probably to be seen the forerunners of the pagoda as seat of the god of life or ancestors, whose modern modification is the ancestral tablet, and in a certain sense also the hearth-god tsao-chün, which is also called ssu-ming (director of life). This as a brief reference.

772
778

A special work concerning the

[210 cont.]

772
[778]

gurtum-shamans will go into the ideology underlying the whole (god of life, god of war, god of wealth, Pekar, tree of life, arrow of good fortune, spear, ancestral tablets, etc.); cf. also below, pp. 363-388.

[773] [211] The origin of the world is unfortunately recorded only in scanty documents. According to the Geser legend and the aphoristic wisdom of the people, the earth arose through a churning in the water like butter (cream) in milk. It floats on top and is held by a wooden post which one day will start to grow and develop leaves. Then the earth will tip over and bring on the end of the world. The physical sky floats over the earth on a golden peg (nail); in this connection, cf. DMF, p. 115 and p. 445. Here there are conceptions that at first glance contradict those described above, but they can nevertheless be con-
[171] nected with them indirectly. They are recently elaborated variants from Indian cosmology (churning with the world-column; turtle as earth-bearer) and are linked with Mongolic peculiarities (heavenly bell on a golden nail); in this connection, cf. W. Lüdtke, Die Verehrung Tschingis-Chans [The Veneration of the Genghis Khan]. Concerning the polar star as beacon, see further below, p. 883. Over against the earth with the wooden peg (modë ġadasē) stands heaven with the golden peg (xaldan
[821] ġadasē). Among the Tujen, however, the polar star is called xaldan ġadasē: xaldan because of its shining color; ġadasē because of its similarity to a nail head. Actually ġadasē means post, peg, nail, tack. The polar star, to be sure, is otherwise conceived as the axle of the sky. Thus, the greening world-tree (earth-wood) and sky-axle (star-gold) correspond with each other. Here, too, the comparison of two parts of the world that are supposed to correspond is suggested: the sky above, the earth below. The conception of the tilting and finally falling earth may go back to the observation that the polar star, the sky-axle, is not in the zenith, but in the north. The way the
[533] world-tree and stars belong together is poetically rendered in

[211 cont.]

772 the many riddle-songs of the Tujen, when they sing of the tree,
[533] which bears the sun, moon, and stars in its crown; cf., for example, Schröder, "Hochzeitslieder," loc. cit., Song I and II.
[171] Further connections will be passed over here. Only the great similarity of these songs to the wedding songs of western Tibet will be mentioned; see Francke, Tibetische Hochzeitslieder [Tibetan Wedding Songs].

772 With this harmonious conception of the world and its
779 close connection with human beings, one would also expect a projection of the macrocosm into the microcosm. In Lamaism, of course, these correspondences are carried through to the smallest detail and find their symbolic representation in the well-known syllable-monogram, the rnam bču dbaṅ idan; in this connection, cf. Filchner (Unkrig), Kumbum, pp. 160 f. These minute correspondences of the Lamaist monks, however, are too artificial for the people. They know nothing about them. Security in the great cosmos in which they literally build suffices for them. This world-feeling does not enter into sophisticated speculations.

[212] 3. The Religious Cult

a) The Basic Psychic Attitude

771 The inner attitude of the people toward the good spirits
776 is the consciousness of dependence upon them. They determine the well-being in this world, which, after all, is the focal point of thought, for one does not think much about the beyond. Hence the first thing a person does when misfortune or an unusual situation surprises him is to turn to a spirit, a mightier being, which can help here. How much this attitude dominates the common man is apparent from the above-mentioned basic thoughts of the informant, which provided the articulation of all the customs: "... now I shall tell you first what we do for the good fortune of the family, etc."; cf. "Introduction," Anthropos, 47, 1952, p. 15 [p. 16 above in the HRAF translation]. Everything is thereby subordinated to the religious

[212 cont.]

771 utilitarian idea. The Tujen give their offerings and prayers in
776 order to make the spirit world favorably inclined toward them
for the purpose of earthly well-being. They are not so submis-
[782] sive to the harmful demons, however, but instead face them
[789] with greater hostility and try to vanquish them with the help
of the good spirits or through magic.

b) The Offering

The Types of Offering

782 The Tujen distinguish the following types according to what is offered: the incense offering, food and drink offering, slaughtered offering, animal-consecration. -- Aside from the incense offering and the animal-consecration, they have a
[192] common name for the offering, namely, šeńlie, which corresponds to the Chinese hsien. Thus, they say, for instance, šdimie šeńlie-, to offer bread; tsidzig šeńlie-, to offer flowers; xonini šeńlie-, to offer a sheep (cf. DMF 376). This expression šeńlie may not be used for anything else.

The incense offering, which originally was an aromatic offering, has now been greatly extended by all kinds of additions, such as butter, tsamba, flowers, spices, silk threads. Here, too, however, the rule against giving anything that smells unpleasant is maintained. The use of butter and
[174] tsamba, which are the staple foods of the nomads there, implies an old pastoral custom. Concerning the original incense offering, cf. the chapter further below, "The Belief in a Supreme God."

The food offering principally includes bread, wine, butter, tsamba. One puts them down before the spirit, for instance, before the household altar, the obo, the mani-tree, the god's image, etc. When they are taken away and consumed, some is thrown to the deity concerned. Liquids are poured on the ground or squirted into the air. The custom of
[264] throwing something to the spirits before each meal belongs here, too.

[212 cont.]

782 The slaughtered offering, together with the animal-
[778] consecration, forms the group of animal offerings, of which one is bloody, the other unbloody. The bloody [213] animal-
[574] offering is carried out in three steps which are clearly differentiated by the people: slaughtering, presentation, sacrificial meal. The classic example is described above as the mountain sheep-offering. The actual presentation, usually in the form of the offering-throw, is designated by the term "offering." Often there is an interval of a whole day between slaughtering and presentation and the meal.

[787] The slaughtering is preceded by the washing and the
[778] milk-oracle, as well as the releasing and recapturing of the animal. It almost has the appearance of an abbreviated animal-consecration, at which the animal is likewise released.

The presentation may be done in two ways. Either the skinned whole animal is set up before the deity, or it is cut up immediately, boiled, and then the pieces of meat with the broth are thrown to the deity. It also happens that the thoroughly cooked pieces are put on plates in front of the altar, like bread or wine. Putting up the pole-goat is probably a remnant of
[171] Central Asiatic form, analogous to the hanging up of the hide of sacrificial animals among the Siberian peoples. Among the Tujen, however, no attention whatever is paid to the skeleton, since, of course, the animal is cut up and boiled with the bones.

782 The sacrificial meal is consumed by all the people, by men, women, and children. I do not know of any sacrificial
574 animals that are reserved for only certain groups. To be sure certain parts are reserved for certain persons as especially tasty, such as the loins, the head, etc. The sacrificial meal is not regarded as a profane act. It is regarded as part of the offering, there is the unequivocal expression for it: "This is a part of our offering."

782 A peculiarity of these offerings is still to be emphasized:
826 the fear of blood. The blood is not spilled but caught during the slaughtering and poured into the intestines. The blood belongs to the animal and is sacrificed and eaten with it. Traces of blood on the ground are immediately covered with earth and wiped away.

[213 cont.]

782 The pig offering proceeds like the sheep offering, however little appropriate the procedure is for this animal. -- The hen offering is done without much ceremony. The animal's head is cut or twisted off, the hen is swung around in a circle so that the blood squirts around, and then it is allowed to fly. I do not know whether the hen is consumed later. It certainly did not happen in several cases observed.

778 782 The animal-consecration is already unequivocally an offering in that the animal is given up by human beings as a voluntary gift to a god and normally may not be used any more.

I could confirm nothing about a human consecration, which Mostaert (DMF, p. 371 under sdien) mentions, unless the shaman consecration is meant, or the recommendation of a child to a tutelary spirit whose name it later bears. In any event the vow [831] of virginity could be regarded as an offering to heaven, as a sign [302] of which a girl lets her hair fall down freely; cf. DMF, p. 103. [588] One can also include its counterpart, namely, the marriage of a girl with heaven, whose sign is the "heavenly hairdo"; cf. Schram, Mariage, pp. 127 ff.

[214] Recipients of the Offering

782 776 To what extent heaven has a share in all offerings and what offerings are reserved for it will be discussed below. The pig is inadmissible as an offering for the higher deities (except for the earth), and the hen likewise. They are the sacrificial animals for lower gods and demons.

Whether there is an actual offering to the demons is questionable. In the case of the ceremonies dealing with the evil spirits, for instance, the demon-escort, the figure-litter, the various tormas, etc., one regards the accompanying gifts, designated as rdzē, as things that the demon needs or likes, for example, the riding animal, the clothes, the money, the wool, etc. Furthermore, aside from the intent to appease and to satisfy, there is also a certain contempt for the demon connected with these gifts, in that raw flesh, leeks, beans, and unclean intestines are offered to it, as though to a wild bestial creature.

[214 cont.]

782 This is intended to make him satisfied so that he will go away
776 and not return. Any feeling of awe and submissiveness, such as is characteristic towards a higher spirit and is manifested in the offering, is lacking. A similar notion of fear plays a contributing role here, which one also entertains for the souls of the dead, of whom it is expected that they will not molest human beings and will be content.

The Executers of the Offering

782 All these offerings can be assigned primarily to the
771 people as chief bearers. It is the most important religious activity of the ordinary people. It presupposes little, namely, a gift and an attitude. It requires no special schooling, no involved ritual, and no learning of prayers. The offerers are the family head, the seed-master, or the village elders. It is precisely these laymen themselves who at the purely Lamaistic ceremonies or those of the Bon and shamans perform the actual offering operation, for example, at the harvest thanksgiving festival and at the erection of the pole-goat or the central fort. Even the tormas, which, of course, can in part be regarded as offerings, are usually set up or carried outside by men from among the people.

c) The Prayer

782 The spontaneous and freely-formulated prayer is a natural matter-of-course among the Tujen. They are also conscious of this form of prayer when they maintain: "We farmers have forgotten our old prayers; everyone prays with his own words." (Cf. Schröder: "Herbst-Dankopfer [Harvest Thank-offering]," Anthropos, 37-40, 1942-1945, p. 872.)

Besides these spontaneous utterances they also still know
782 simple, brief prayer formulas to heaven and the gods, as when
788 they say, "Oh you spirits, do not be like human beings!" or when they uninterruptedly recite on their prayer-string "Om

[214 cont.]

782 mani padme hum," or when they turn to heaven with the old
788 saying, "Heaven knows." -- [215] They include these two types of prayer under the expression yandzila-, to implore, to request, and this is usually linked with the offering in order to express their attitude. The independent, pure prayer is quite rare.

The people are still not satisfied with this kind of prayer, however, but like to turn to the ritual, cultic prayer, for which
[463] there are the special professions of the priests: the Bon and the
[792] lamas and the Taoist monks. This is not to say that these are invited exclusively for the prayer, but how strongly the people
[791] connect praying with these professions is shown by the common designation that is used both among the Tujen and among the
[192] Chinese to differentiate them from the laity: nien-ching-ti jen, that is, praying person. This official praying is called luom mošē, to recite prayers, exactly as in the Chinese nien-ching. In the eyes of the people this is the classical, correct prayer, something rigidly formulated, recited according to definite rites, fixed by the sacred texts, like the sutra (luom) and the Chinese ching.

[463] Thus one can say that the offering primarily falls to the laity, but the praying to special professions.

4. Magic

789 I was unable to confirm hardly any true folk-magic.
756 There is a whole assortment of magic operations and the use of
[791] amulets, but in general the people fetch shamans, Taoist priests, Bon priests, and soothsayers for this. Since the main goal of magic is to ward off evil spirits, this task falls above all to the shamans, who, moreover, combat the demons with the help of their tutelary spirits. Thus, magic and shamanism are closely linked.

5. The Mixed Character of Tujen Religion

771
174 The customs of the Tujen clearly show that we are not dealing with a simple form of belief, but with a multi-layered

[215 cont.]

771
174

structure that has developed in the course of centuries. It is similar to the religion of the Mongols generally, which Pallisen in his dissertation would like to designate as syncretism. This is found even more among the Kansu Mongols, the Tujen. This syncretism is understandable for two reasons, one psychological and one historical.

Viewed psychologically, the East Asian, including the Mongol, is inclined to negotiation, to compromise, and to understanding toleration. The informant has formulated this accurately: "All religions are good. The goal is the same, only the paths are different" (cf. "Introduction," Anthropos, 47, 1952, p. 12)[p. 12 above in the HRAF translation]. 'One does not want to bind himself exclusively to one particular way, but wants to examine everything from a practical utilitarian viewpoint to see what is conducive to his happiness and well-being. One tries this with all the gods and is gladly prepared to take up into his heaven any useful spirit. Even Christianity in China would [216] long ago have fallen victim to this inclination, if it were not so decisively intent on a dogmatic and ritual separation. Otherwise one could soon rediscover it with its figures of saints, doctrines, and rites, say, in Lamaism, just as in actual fact such an influence is assumed from early Christian times.

The history and distribution of the Tujen has greatly favored this spiritual readiness and has brought them into close contact with the various religions. Whoever the original Tujen may be, all those who have reported about them are agreed that they have an active history of migration behind them and that their basic stock is Mongolic. Aside from their migrations, perhaps for several centuries in their present location, even if they have maintained their linguistic and racial peculiarities, they have had active intercourse with the most varied peoples, such as the Tangut, the former rulers of Amdo, with the Mongols of the various waves of invasion, and finally with the Chinese pressing in after them. Probably their original faith in pre-Lamaistic times was determined extensively by the Bon doctrine of the Tangut, until the Yellow Church from neighboring Kumbum then brought all Amdo under its influence. Finally,

[216 cont.]

771 Chinese civilization, which with agriculture also brought corre-
174 sponding religious customs with it, passed over them, even if it has only slightly penetrated into the religion.

This peculiar position, conditioned by history and en-
771 vironment, makes the religion of the Tujen a significant subject
792 in the religious history of Amdo and of the Chinese border region
174 generally, so that it is actually no longer simply a matter of the religion of the Tujen alone. The Tujen monks seem to have been aware of this advantageous position and have actively taken part in the investigation of the forms of belief of the border land, especially that of Lamaism. Through this they have won a certain learned and religio-political influence. An example of this is given by Cybikov in his introduction to the "Lam rim c'en po" (pp. XVI-XVII, translated by W.A. Unkrig), where he speaks of the Ch'ang-chia hutukhtu, who, as is known, comes from the Tujen lamasery Erh-ku-lung: "But whatever the situation may be. The home of the Ch'ang-ch'a hutukhtus occupies such a position between China, Mongolia, the East Tibetans, the Tangut, and formerly also the Uigur, that it had to serve as an arena for the contact between these peoples and for the formation of a tribe in which is embodied the traits of all four of these peoples. If one takes a look at the present-day situation exclusively, without historical considerations, according to our view it has contributed greatly to the fact that these lamas had to gain enormous influence on Tibetan and Mongolic affairs and on the relationship of these peoples to the Manchu dynasty." I found this confirmed when I visited the lamasery there. If we also disregard the observation of Cybikov concerning the ethnic formation of the Tujen, it must nevertheless be admitted that this people has taken over many religious traits from its neighbors. It is therefore also no accident that it was precisely a Tulku (Tuguān
[538] hutukhtu) from the Tujen monastery [217] who in the eighteenth century wrote the only known Tibetan book about all the Tibetan sects, including the Bon. He had the most varied forms constantly and directly before his eyes, just as even today the religious customs of the Tujen still represent a living catalogue of patterns in this respect.

[217 cont.]

771 Now, concerning the elements which make up these
174 customs, they fall almost entirely into four groups, each of which constitutes a special layer. These four layers are: the belief in a supreme god, shamanism, the Bon religion, and Lamaism. The layers, however, cannot simply be taken out of the whole structure, freed from all the extra features, and connected with a larger pervading stratum of the Central Asiatic religions. This is only possible in a larger context and would go beyond the bounds of this work, for the parts in question are of considerable temporal depth and embrace many peoples. In addition these layers have interpenetrated one another in that in each case the later one has absorbed the elements of the preceding ones. Thus, Lamaism, in spite of its original enmity toward the Bon religion, has nonetheless adopted much from it. The Bon faith, on the other hand, in turn has a strong shamanistic base, and an old sky-cult runs through all the layers.

771 A discussion of the two high religions, of the Bon and of
128 Lamaism, in their connection with the belief of the Tujen would
756 go too far. Shamanism can more readily be delimited, but it cannot be exhaustively presented either. So there remains the old sky-cult as a belief in a supreme god. This will be dealt with quite extensively in the following, whereas in the case of shamanism the presentation must be limited to a theoretical sketch. A special work will deal with it in detail for the whole western Chinese border region. The Bon religion and Lamaism will only be touched upon briefly.

II. The Layers of the Tujen Religion

114 771

1. The Belief in a Supreme God

In this section it is necessary to refer not only to the customs but also to the other sources and the scanty literature. Aside from the DMF and Mariage (by Schram), which offer a sparse yield for the religion, the other sources are still unpublished.
[538] They are available in the original texts, however. These are the Geser legend, the agriculture legend, the Moschus deer (the first part of the song cycle known under the name xoni, sheep), and a series of other songs and fairy tales, of which the wedding songs are appearing (Folklore Studies, Tokyo, 1952).

[217 cont.]

771 776 The belief in a supreme god among the Tujen must have been known to the people themselves at an early date. Tafel noted in his fairly reliable chapter: "The Turen [sic] of Wei-yüanpu are a very curious tribe. Many say that they have only one single god in which they believe. But they are, like the [218] Chinese, also Buddhists" (Tibetreise [Tibet Journey], I, p. 246). The author unfortunately does not tell who these "many" are. Probably they are the Tujen themselves. Tafel is right insofar as a true monotheism is unknown to the Tujen. On the other hand they do not share the same Buddhism with the Chinese. The Tujen are Lamaists, the Chinese, on the other hand, never or only as an exception. From the customs observed, it now appears incontestably that the so-called one god [821] of the Tujen is a supreme god who is venerated in the form of the heavens. One must, therefore, start from "heaven."

a) The Name "Heaven"

rëǧuo

772 For "heaven" the Tujen know two expressions, namely, 776 rëǧuo and tieńgëre. The word rëǧuo is little used and then only in the sense of the physical sky, firmament. It agrees entirely 192 with its Mongolic equivalent oktarǧui, which is to be equated [821] with the Tibetan mk'a or nam mk'a or gnam, and means: sky, empty space above the air, firmament, vault of the heavens, ether, atmosphere, air. Cf. Kovalevski, p. 430. Even among the following expressions that include oktarǧui, there is none in which oktarǧui is comprehended as a deity or spirit. Cf. op. cit., pp. 430-433. Thus it must be sharply distinguished from tengri (tieńgëre) and cannot be used synonymously with the latter. Only in the sense of the physical sky do they overlap. Among the Tujen, reǧuo is chiefly regarded as light-sky, bearer of brightness. One therefore likes to add the adjective kuǧuo (blue, light, bright), for instance, kuǧuo rëǧuo undurwa (the blue sky is high). The kuǧuo rëǧuo (light sky) stands in contrast to the [825] xara gadzier (dark earth). An appropriate bird is assigned to [539]

[218 cont.]

772 each of them as a symbol of brightness and of darkness. Thus,
776 in a wedding song it is said: xara gadzier mundzini xela; kuǵuo
192 rëǵuoni dzindzini xela (the black earth's dark bird calls; the
light sky's light bird answers). Here, it is true, the rëǵuo has
[825] been drawn into the -- probably Tibetan -- mythology of light
[539] and darkness, but nothing concerning a possible significance of the rëǵuo as spirit or deity is expressed by it. (Cf. Schröder, "Hochzeitslieder.") Even if the expression rëǵuo in its meaning as light-bearer corresponds approximately to the word tieńgëre, its deeper meaning is thereby exhausted and it will not be considered further.

tieńgëre

772 tieńgëre is the Tujen form of the written Mongolic
776 tengri or tngri. It may signify both the natural sky as well as
192 heaven as a deity. As natural sky it is provided with the same
821 adjectives as the word rëǵuo, in other words, with kuǵuo (blue), undur (high), etc. Like the latter, it also, as the daylight sky, stands in contrast to the dark earth. Our expression "heaven and earth" is always rendered among the Tujen by kuǵuo tieńgëre, xara gadzier (light sky, dark earth). They would never [219] simply say "heaven and earth." In this conception, the Tujen go hand in hand with their Altaic-Mongolic relatives. In his dissertation, Pallisen has presented the connection of light and heaven especially clearly: Among all Altaic peoples the sky is primarily perceived as the daylight sky. According to H. Vambéry and Barbier de Maynard, the concepts "the light," "brightness" in all Altaic languages belong to the same word family as tengri (Religion der Altmongolen [Religion of the Ancient Mongols], p. 123). Pallisen then appends the word lists for 13 languages, which are intended to illustrate this connection (op. cit., pp. 123 ff.).

The sky, however, is regarded not only as the embodiment of light, but it is also the bearer of the most important cosmic phenomena. This is expressed in many everyday phrases, for example: the sky rains; the sky is cold; the sky is hot; the sky thunders; the sky is cheerful, etc. Hence,

[219 cont.]

772 the heavens, even purely sensibly, stand in the consciousness of
776 the Tujen as something important, exalted, as that immeasurable
192 space of light embracing the world, in which the natural events
821 that so impress the simple human being take place. It is not the word rëguo that arouses this consciousness in them, but the word tieńgëre. Evidently, it is one of the oldest words that they, along with the other Altaic peoples, among whom it is charged with the same content, have inherited from hoary prehistory. It cannot be further analyzed etymologically.

772 For this reason, this very expression is excellently suitable
776 for designating what we call "God." Where the Tujen, who are,
192 after all, a branch of the Mongols, acquired the link between
174 the name tieńgëre and the concept "God" is not to be dealt with here. That belongs in the history of the religion of the Mongols or of the Altaic peoples generally. Father W. Schmidt has made it seem probable that it is not a matter of equating the highest being with the material heaven, but only of a transference of the name "heaven" to the supreme god; this must have happened at the time of the transition to herding in the great steppes where "they have before them the huge dome of the heavens unobscured in its entire extent and with all natural phenomena taking place in the sky"; cf. Schmidt, Religionsgeschichte [History of Religion], p. 256, UdG, X, pp. 128 ff. The question arises here: Does this also apply to the Tujen and in what way? How is the name tieńgëre used, as a generic or proper name? Does it actually signify God?

One must first of all go back to the general Mongolic conceptions, which, to be sure, know the same name. Pallisen in this connection comes to the following conclusion (op. cit., p. 126): "One can therefore say that in this stage of development Tengri meant something like 'God Heaven' as a proper name, not 'heaven god' and not 'god in heaven' or 'god of heaven,' as some researchers maintain.... Gradually, however, Tengri was used to designate the God of the Christians and of the Mohammedans, and finally, with the adoption of Buddhism, this word became equivalent to the Sanskritic Deva, and numerous deities of the Lamaistic pantheon, which in part were taken into it from the old folk-belief, were [220] then also called

[220 cont.]

772 Tengri, with the addition of a definite proper name (especially
776 the 33 tengri: ghutschin ghurban Tengri)." "In other words, for
192 the interpreters and for the numerous strangers generally who
174 stayed at the court of the great Khan and among whom many priests of all religions were also represented, the significance of Tengri as a generic name for "god" was already familiar and clear" (op. cit., p. 127). -- Later, according to Pallisen, along with Buddhism there came the term burxan, which is supposed to be a corruption of the Sanskrit word for Buddha and among the Mongols is supposed to have taken on the meaning of "idol, deity, spirit, god's image." (Concerning the origin of the word Burchan or purġan, cf. above.)

Among the Tujen this development is difficult to determine. I have often asked people how many tieńgëre there are. I always received the answer; only one. Only once did my informant observe that there were also other gods called tieńgëre. When he was then to name these gods, he did not know a single one. This is a sign of how secondary the significance of tieńgëre as a generic name must have been among the Tujen, since it could disappear from linguistic usage so completely without a trace, if it was ever present. Perhaps the above-mentioned observation of A. Tafel concerning a "single god" is to be traced back to a similar piece of information. The tieńgëre of the Tujen, in other words, does not entirely correspond with the tengri of the Mongols. Only the word purġan, which corresponds to the Mongolic burxan, has taken over the function of a generic name; purġan signifies not only the native gods, spirits, gods' images, but generally all the deities of the various religions. At times it may also designate a demon. It is used in a way similar to the Chinese fo-yeh, though to be sure never for a Tulku. The conception of a plurality, which, of course, is essential for a generic concept, is always connected with the word purġan.

772 According to all the information and on the basis of the
776 customs recorded, tieńgëre alone is reserved as the proper name
192 of the god-heaven. The bilingual Tujen generally translate it with the Chinese t'ien (heaven) or lao-t'ien (old heaven) or

[220 cont.]

772 t'ien-yeh (father "heaven"). The fact that this tiengĕre applies
776 exclusively to the heavenly being appears with special clarity
192 in the constantly used formula: šge tiengĕre, uluon purgan (the great heaven, the many spirits). Quite consciously here uniqueness is placed over against multiplicity and at the same time it is expressed that heaven possesses at least as much honor as the purgan, in other words, is also a deity, or can be a higher spiritual being. What the content of this god-concept is now, whether it is really a heaven as supreme god, is to be made clear in the following, and, to be sure, first of all in connection with the heaven cult of the people.

776
782

b) The Heaven Cult

After all that has been said up to now, it is established beyond doubt that the Tujen venerate the heavens. It can also be confirmed further from the popular literature, as will become clear below. Thus [221] here it is only a question of the what and how of the veneration of heaven (offering, prayer), insofar as it is appropriate to provide information concerning the god-concept and the conceptions linked with it, as well as the age and the position of the belief in a supreme god.

1) The Offering

782 As regards the form, the executers, and the sentiment of the offering, what is said generally about the offering applies. Here in first place the question arises: Are there offerings that in a special way are intended for heaven or that have a special relationship to it? This is quite generally the case with every offering insofar as it can be conceived as a primitial offering. In addition there are also other offerings which -- at least originally -- were reserved for heaven, among which the incense offering and sheep offering are the most important.

The Primitial Offering

[192] The Tujen do not know a special generic name for the primitial offering. They say, depending on the circumstances:

[221 cont.]

782 to throw the first (the first piece, the first drop, the first bowl,
192 etc.) to the heavens. For "first" they use the word toroṅ. As a number it can be adjectival and substantival, in other words, "the first" or "firstling." In addition, it also signifies a blessing, an advantage, for example: kuni toroṅ (the first of the people) is a man skilled in speech who can appear in public; or morini toroṅ (the first among horses), an especially fast and strong horse. In exactly the same way the gift at the primitial offering is simply designated as toroṅ. Whether a special blessing
782 is also to be indicated by it remains to be decided. I am not aware that especially good parts are taken for it; one does not take long to choose them, although care is always taken to see that they are not inferior, spoiled, or unclean. The primitial offering is always intended for heaven. Even where it is intended for several deities, heaven nonetheless stands in first place. Two kinds can be distinguished: the direct and the indirect.

782 The direct primitial offering is so generally widespread
264 among the Tujen that it strikes everyone who has ever observed the people at their meals. Usually it is done in the following
[826] way. In the case of beverages one dips the middle finger, which is the most superior one, into his drinking bowl, withdraws it again, and flicks the drop suspended from it into the air. This is done three times in succession. In the case of foods, for instance, bread or meat, a little piece is picked off and thrown high toward the heavens or backward over the shoulder. The direction in which one is seated does not matter. Sometimes it happens that one pours out a whole bowlful of the beverage. All confirm that they present this gift first to heaven before they themselves enjoy it. Only after heaven are they sometimes also thrown to other spirits.

782 The primitial offering is rooted deep in the consciousness of the Tujen. According to their view it must extend
773 back to the beginnings of humanity. Thus in the Geser legend
264 it is said of the first emperor Hamluo Siergān when he stopped on a [222] journey and boiled tea: "fulan tsiani sdzūlġano, tsiani toroṅni kuġuo tieṅgērdu tsiodlodzi" (when the red tea

[222 cont.]

782 boiled, he threw the first of the tea to the light heavens). The
773 firstling-offering is attested to even more clearly in the agricul-
264 ture myth (V. 680-690), when after long endeavor by the demiurge the first barley ripens and comes into the possession of human beings: "When after seven weeks they went to look, the barley was ripe. The head was bent over. With both hands they rubbed this (sc. the ear), which hung down like a whip. And when the kernels had come out, they wanted to make an offering to the light heavens. They offered that barley and bent their heads to the ground. But there was no way to eat." In other words, even before the people were able to make use of the blessing of the new food, they offered the firstling-gift to heaven. [192] The word ǰenlie, that is, to offer in the true sense, appears in the original text.

782 The indirect primitial offering is directed at the heavens only by the roundabout way of another offering. It is found in connection with almost all the offerings to the good spirits. In the religious customs one will scarcely find an offering that is not first made to heaven. This is shown by the actual offering act, the presentation, and the show of respect connected with it, the kowtow. Thus, the offering at the erection of the pole-goat, for instance, or even the obo offering is certainly intended for the weather gods or the mountain-spirit, and yet heaven receives the first three bowls; the other spirits come after it. Just as the human being first gives some of his goods to heaven before he uses them, so is it also in the spirit world. One could call this a primitial offering of the offering. There are naturally exceptions to this practice, as, say, in the case of the fire-pouring, torma, hen offering, etc., which belong more in the domain of Lamaism and of the Bon religion. By and large, however, the indirect primitial offering is always practiced.

The Incense Offering

In the section concerning the incense offering (see "First Part," Anthropos 47, 1952, pp. 43 ff. [pp. 69 ff. above in the HRAF translation]), it was emphasized that it is offered to heaven first and afterwards to the other gods. In the "Notes"

[222 cont.]

782 it was surmised that a primitial offering might likewise be involved, for it is the first offering of the day, in which man gives to heaven something of all things important to life. Arguing against the primitial offering, however, is the simple form of the incense offering, which consists essentially of the burning of fragrant things, of cypress twigs (4), flowers, etc. These,

[824]

4. When the popular word cypress is used here, the Thuja tree in the botanical sense is always meant; cf. Anthropos, 47, 1952, p. 46 [p. 72 above in the HRAF translation]. The Tujen name šgua (= Tibetan šug-pa) has several meanings. Among the Tujen the Thuja tree always represents the cypress, and above all the juniper (Juniperus), which in their region of cultivation occurs only infrequently and at most is encountered in the mountains. The difference is purely material; in the religion the Thuja tree takes over the position of the juniper and the cypress. Professor Doctor J.F.Rock, as a botanical expert, no longer found any cypress north of Minchow (Kansu), but he did still find ten species of juniper (personal communication).

however, are no longer foodstuffs if one disregards the water with which the fuel for the fire is sprinkled in order to purify it.

782 539 [171] [223] This simple form of the incense offering seems at the outset to have been reserved exclusively for heaven and is of great antiquity. It is also attested to among the Mongols as a heaven-offering, and among the Tujen it is found in numerous songs. Several citations will confirm this, first from the Geser legend. In Verses 1-6 the customs of the first human

782 539 [223 cont.]
beings are described: "One clothed oneself in tree leaves. One ate tree fruit. One lay on flower leaves. When one was thirsty, he drank water. At daybreak one burned great incense (šdeliedzi šge fdzañ ǵarǵani)." In Verses 38-42 it is related how the first emperor burns incense in order to perform a heavy task: "When he was supposed to churn together the earth on the immense spring water, this was terribly difficult. And burning a great incense offering, he implored the light heavens (šge fdzañni ǵarǵadzi kuǵuo tieńgērni yañdziladzia)." Verses 158-167 describe another incense offering of the first emperor. He gathers [824] flowers (kānba flowers = Artemisia species) on the shady side of the mountain, juniper twigs on the sunny side, scoops pure water from the river, and then it is said: "Climbing onto the high mountain he burned great incense, implored the heavens, implored the countless spirits... (undur ǵadadu ǵaridzi šge fdzañni ǵarǵaya, šge tieńgērni yañdziłaya, uluon purǵani yañdzilaya...)." The offering in this case is also presented to other spirits, but heaven is in first place. This is also emphasized by the fact that it takes place on a mountain. None of the purǵan is mentioned by name. The daily incense offering is mentioned in Verses 190-193: "Daily burning incense, he lived (sc. the first emperor). From below rose the great incense, and the smoke of the incense pushed open the gate of heaven; and the exalted [776] Sdeńlatsien-sañ (= the highest heaven lord) looked down." (Udurdu fdzañ ǵarǵadzi sōdzamba. dōrōdza šge fdzañni ǵarǵano, fdzañni funini tieńgērni udieni baǵa niedzia. Sdeńlatsien-sañ dorodzi nōdzia.) The relationship of the incense to heaven is unambiguous here. (For further details concerning the Šdeńlatsien-san, cf. below.) The passage concerning the heavenly wanderings of the first emperor, Verses 1221-1222, runs similarly: "Then on his wanderings he came before the great gate of heaven, and the smoke of the great incense pushed open the gate of heaven." (Di yōdzi tieńgērni šge udie tada kurdzia. šge fdzañni funini tieńgērni udieni baǵa niedzia.) On earth, namely, one burns incense during this time so that the undertaking of the journey to implore a ruler from heaven will succeed.

[223 cont.]

782 539 Further evidence is also found in the first part of the animal song cycle, the "Moschus deer." Verses 191-201 describe the incense offering in the following manner: "There is a procedure for catching the Moschus deer. Climb the north side (of the mountain) and pick green juniper twigs. Climb the sunny side and gather white känba flowers. Go down to the flat plain and gather yellow känba flowers. Go to the bank [224] of the river and burn great incense. Venerate the great heaven, implore the countless gods." (Šge fdzaṅbeṅ ġarġaya, šge tieṅgëre amudadzi, uluon purġan yaṅdzilaya.)

[533] Now one more example from the wedding song, "The Bird Pair." The pair, shepherd and shepherdess, sing alternately: "When the sun rises shining, we pick green cypress twigs. Climbing up the shady side, we gather white känba flowers. Descending to the flat plain, we scoop up clear water. Climbing up the high mountain, we burn great incense, and burning the great incense it is a good job when we are a pair." (Šge fdzaṅni ġarġaya; šge fdzaṅni ġarġadza, tsiari ġuori sguren-wa.)

782 174 These examples from the popular literature can be multiplied at will. The passages cited, however, suffice to secure the following conclusions: 1. The original form of the incense offering was extremely simple. Juniper twigs, flowers, and purification water belong with it. The offering was purely an aromatic offering. Although fire is naturally necessary also, it is nowhere mentioned. Not even the expression "to set afire" is used. The usual word "ġarġa" is the causative of "ġari-" (to generate, to produce, to rise) and refers here to the smoke. No foodstuffs are offered. The other additions, spices, etc., can be explained from Lamaism (5). Whatever in the way of

5. J.F.Rock also establishes for the Na-khi an original simple form, juniper twigs and butter; the other additions were not added until later; see Naga Cult, pp. 231 f.

foodstuffs is still offered in the present form should be conceived

[224 cont.]

782 as a combination of a primitial offering with the matutinal in-
174 cense offering. Even these gifts, however, may not have a bad odor, which wholly corresponds with the original meaning of the incense offering. 2. The incense offering, according to these texts, is already very ancient. Even if the legends are distressingly embellished from Lamaism, they nonetheless go back to pre-Buddhist conditions. This applies especially to the
[773] Geser legend. Lamaistic monks in Kumbum emphasize that the legend has nothing to do with their religion. In similar
782 fashion this type of incense offering is declared to be pre-
174 Buddhistic in western Tibet; cf. A. H. Francke, Tibetische
171 Hochzeitslieder, pp. 25 f. (Darmstadt, 1923). The pre-Buddhistic occurrence among the ancient Mongols has already been mentioned. The Tujen are of Mongolic derivation, and they also have religious links with the pre-Buddhist Tibetans, as is shown in the wedding customs and songs (6). -- How far the

6. For the distribution of the incense offering, see Anthropos, 47, 1952, p. 49 [pp. 80-81 above in the HRAF translation]. Its occurrence in ancient China also argues in favor of its being pre-Buddhist in character; cf. Jen Nai-Ch'iang-Schröder, Die Fandse, p. 183, where the ancient Chinese burnt offering is equated with the incense offering of the Fandse. The Na-khi juniper incense offering, whose great similarity with the incense offering of the Tujen and the Tibetans cannot be denied, is also pre-Buddhist; cf. the descriptions by J. F. Rock, Naga Cult, pp. 230 ff., and Muan Bpö, pp. 18, 34.

782 incense offering goes back is indicated by the hunting song cycle.
174 It was probably already practiced in the early period of a hunting
[538] culture and from there passed into the herding culture. It is

[224 cont.]

782 striking [225] that the agriculture myth does not mention the in-
174 cense offering. The conditions of the environment -- mountain pasture, forest, wild flowers, etc. -- do not fit in with agriculture (7). -- Here it may be asked whether the incense offering is

[824] [773]

7. The ancient nature of the incense offering is to be explained in the final analysis by the ancient nature of the juniper tree, which as world- and life-tree stands at the beginning of time; cf. J.F.Rock, Muan Bpö, pp. 18, 20, 21, 132, 143. Since it is the first tree of the world, even the first emperor (Geser legend) could burn only these twigs in honor of heaven. The incense offering therefore belongs in the world of the religious archetypes which became standard for the later human beings, just as the archetypes of the first human being, of the world-mountain and the tree of life, of heaven and earth, of the first obo, etc. extend back into that legendary period.

older than the primitial offering. In common with the latter it is mentioned in the legends before all other offerings. The first emperor already knows both offerings; the wedding song and the hunting song mention the incense offering, the agriculture myth only the primitial offering. The relationship of the two offerings to each other cannot be determined. 3. The incense
782 offering is always given either to heaven alone or to it in the first place. It is a true heaven-offering. It is only rarely directed to the other spirits, which, according to their collec-
[776] tive name, are called purgan and therefore are only of later Buddhist origin. Mountain heights seem to have been preferred
[823] in order to be closer to heaven. Even today this is still done. The Tujen are aware of this and give as the reason that it is

[225 cont.]

782 more suitable for heaven (8). The relationship to the supreme

[823]
[773]

8. Above all the rising smoke connects this offering to heaven; the expression ǵarǵa, to make rise, is especially to be noted here. The smoke is like a living column of heaven or a living road to heaven. The shamanistic significance of the incense offering comes from this; not only promotes the trance, but is at the same time the path and motive power of the journey to heaven. The first emperor of the Geser legend demands, for instance, that during his journey to heaven the incense offering not be interrupted; the rising smoke strikes against the gate of heaven and opens the entrance for him, and he shoots his incompetent companion on the tip of his arrow into the rising column of smoke, in which he descends to earth.

[756]

[773]

being is also expressed, for example, in the wedding songs from Khalatse (western Tibet). There, according to Francke, op. cit., pp. 25 f., it is said: "This blue smoke that rises upward signifies that no trouble will arise with brGya-byin, the lord of the gods."

The Sheep Offering

[825] The sheep as a sacrificial animal, according to the material available, is reserved in a special way for heaven and the mountain-spirit, even though it may also be offered to the other gods. It is never offered to the mountain-spirit alone without heaven, however. There are sheep offerings that apply only to heaven, namely at the sowing and harvest

[241]

[225 cont.]

782 thanksgiving festivals. (Cf. D. Schröder, "Herbst-Dankopfer
241 [Harvest Thank-offering]," Anthropos 37-40, 1942-45, pp. 867-874.)

That a true heaven-offering is involved is clearly expressed, loc. cit.: "It is already apparent from the entire offering performance and the words spoken in connection with it that it is an offering to heaven. To the question, 'You are therefore making an offering to the gods in the temple?' the old man responded: 'No, [226] we are making an offering to heaven... This offering is a veneration of heaven... I have already said it; we are thanking heaven for the yield of the year. He cares for seed and man and livestock'..." (Anthropos, op. cit., p. 873). The same statement must also apply to the sowing festival at which the ceremonies are almost the same.

782 Now it is striking that it is precisely in an agricultural
241 rite, sowing and harvest festivals, that a sheep offering takes
174 place. I was later able to visit many such festivals and to determine the actual form, which is more in keeping with the character of agriculture and shamans. In the valleys, namely, in the Chinese area of settlement, no sheep, but -- at least preferably -- a pig is offered. This pig is surrounded with many rites, among which a regular procession with the sacrificed pig takes place. The shamans accompany this procession with drum-beating and prayers. I observed it thus for instance in Tsung-chai and environs. In the mountains, on the other hand, among the Tujen, a sheep is sacrificed preferably, although the Tujen also keep pigs. There remains, therefore, only the one explanation that the original form of these agricultural festivals is connected with a pig offering and that the sheep offering of the Tujen has replaced this as a foreign body. The reason for this lies close at hand. The Tujen, according to their tradition, were once shepherds, and many elements of a herding culture can still be seen among them. With the transition to agriculture, the spring festival of the shepherds evidently became connected with the sowing festival, and the autumn festival of the shepherds with the harvest festival of the agriculturalists. Since, however, the sheep was a sacrificial animal that they were devoted to,

[226 cont.]

782 the Tujen did not want to give up the sheep offering at these
241 festivals. In the description of the festival it is, to be sure, very
174 strongly emphasized that the entire sacrificial rite in the narrower sense (slaughtering, etc.) has nothing to do with the shamans. The offerers are the elders, in other words, laymen. The shaman rite, mainly prayer service and dance, runs alongside it.

Therefore, in the harvest thank-offering and the sowing offering of the Tujen we have before us an old heaven-offering which is consciously fostered by the people and unequivocally applied to heaven.

2) The Prayer

782 What was said above about the spontaneous, unformulated,
788 and freely formulated prayer also applies to the prayer to heaven. Every person can express his need, his request, his gratitude, his feelings to the heavens, just as they come to him. One thing in particular, however, must be noted here. While the formulated prayer, the prayer service, is generally reserved for special professions and the offering more for the people, this does not wholly apply in the case of the prayer to heaven. I was unable to confirm that there are any actual prayers by religious officiants that apply only to heaven. Therefore, concerning the offering and prayer, there is no special class in relation to heaven. Both are the concern of the laymen, of the people, of the masters of the household or of individual persons.

Aside from my own observations, the personal prayer to [227] heaven is sufficiently attested to by the passages that were cited for the incense offering. There is almost always a prayer in connection with it, a supplication (yaṅdzi-) to heaven. And until now a prayer is also always connected with each offering, each kowtow to heaven, at least an inner one. (Cf. "Herbst-Dankopfer," Anthropos, 37-40, 1942-1945, p. 872.) The only prayer formulas of the people in the Tujen language are addressed to heaven, namely: tieṅgēre mudie (heaven knows); and tieṅgēre
[174] tsiad sadni wari (heaven, you hold justice). The formula tieṅgēre

[227 cont.]

782 mudie is already known from the early period of the Mongols, and
788 it attests to what an ancient heritage the veneration of heaven is
[174] among the Mongolic basic stock of the Tujen. There is usually a three-fold kowtow also connected with the prayer, whereby the person also wishes to indicate purely outwardly in a formal ceremony his submissiveness before the god-heaven.

c) The Nature and Characteristics of Heaven

Uniqueness

772 The discussion of the name has already indicated that the
776 designation tieṅgëre is reserved for heaven alone. It does not share this name as a title with any other deity, even, say, by adding a proper name of a certain deity to it. This unique position of heaven becomes even clearer when one considers it in relation to the other deities.

776 The position with respect to the gods in general. -- The offering, the many texts from the songs, and the other customs everywhere acknowledge heaven as the first. This is acknowledged briefly and concisely in the constantly recurring expression šge tieṅgëre, uluon purġan (the great heaven, the countless spirits). Heaven is the great one. It is especially set apart from the many other spirits. As the first it has a share in all offerings, for it -- before all other gods -- the first kowtow is made, the first dedication of the day. The Tujen express this: What would the gods be without heaven, he is their lord"; cf. "Herbst-Dankopfer," op. cit., p. 873. -- Heaven also has this position of pre-eminence over those deities who it might seem share the honor with him, for which reason they are to be mentioned briefly in the following.

773 The position with respect to the heaven-emperor of the
776 Geser legend. -- The Geser legend mentions three lords of heaven, among whom Šdeṅglatsien Saṅ is the highest. He lives with them in the immeasurable space of heaven, likewise

[227 cont.]

773 776 called tieńgëre here as the dwelling place of the gods. He has a spouse, sons and daughters, a magnificent residence, a splendid army. In short, the emperor of heaven and his realm are pictured in detail according to human conceptions of earthly khans. At the request of the earthly emperor his son is reborn in this world in order to free them from the evildoers. This is Geser Khan.

Next to this figure, however, there continues to exist the formless old tieńgëre, [228] as the above-mentioned citations from the Geser legend show. He is venerated through incense offerings, and one prays to him. Here is an old conception that has been taken into the legend. The legend itself is not of Mongolic origin, but perhaps belongs in the world of the Bon with their Tibetan homeland. Despite its repudiation by the Buddhists, it was embellished with many Buddhist additions, and the lamas play a certain role in it. Now, however, every people that claims the legend as its own, including the Tujen, has further incorporated its own material in it and wants to see in it in some way or another the foundation of its old popular customs. Therefore even if the figure of the heaven-emperor is accepted, the old tieńgëre nonetheless remains alive in the consciousness of the people and also makes his entry into the Geser legend; indeed, he continues to exist as the supreme deity in rank, regardless of whether this can be harmoniously reconciled with the other heavenly figure or not. The attitude of the people can best be rendered by the passage already cited above and given here in more detail, Verses 158 ff.: "Climbing onto the high mountain, he burned great incense, implored heaven (tieńgëre), implored the countless spirits (purgan), implored Sdeńlatsien Sań, implored Warintsien Sań, implored Sëma Lortsien Sań." In other words, heaven comes first, and only after the other gods the three rulers of heaven. The preeminent position of heaven cannot be more clearly expressed. It also clearly shows, however, how here two views still not blended together go along side by side and how little the people trouble themselves about inner coherence, but cling to what they have. The tieńgëre is the most important deity to

[228 cont.]
776 the people, and they do not want to be without it in the legend.
[773] The Šdenlatsien San has no significance in the customs.

The position with respect to the mountain-spirit and the earth-god. -- In the chapter concerning the obo, the incense offering, and in other places mention was made of a tripartition of the deities, namely, in the sequence: heaven, mountain-spirit and earth-god, countless gods. Since the mountain-spirit and earth-god are not included under the Buddhistic concept purgan, a pre-Buddhistic age is automatically suggested. In addition, the mountain-spirit has tasks that one could ascribe to heaven. What is the relationship to it?

776 The Tujen call the mountain-spirit yifula. A Tibetan
551 equivalent would be the word already mentioned earlier, ri-bo
192 lha (mountain-spirit). The informant, who himself bore this name, translated it, however, with the Chinese Shan-shen pao (mountain-spirit protection). (Concerning the name-giving, cf. above, "The Conclusion of the Confinement.") This leads, however, to a Mongolic analysis of the word. According to W.A.Unkrig, this is found in the combination: ibel (protection) and ula (mountain); cf. Koval., p. 282. The interpretation corresponds to the Chinese translation. Yifula thus would be appropriately rendered with "protector of the mountains."
776 Without settling the origin of the name, it can nevertheless be
171 maintained that the cult of the mountain-spirit in the obo festival is a Mongolic peculiarity from ancient times that is repeatedly reported in the literature. Among the Tujen, too -- as among the neighboring Tangut -- the obo festival occupied an important position; cf. "The Obo," Anthropos, 47, 1952, pp. 63 ff. [pp. 114 ff. above in the HRAF translation].

776 [229] The mountain-spirit is not a terror-god, but a mild, providing father, the lord of the animals, who watches over the welfare of the herds, who cares for plants and trees, and who is concerned about the increase of human beings. He is the guardian of the ayil (village, tribe) and guards its weapons. The people gather around him for playing and dancing,
[171] prayer and offering. Although the mountain-spirit is thus

[229 cont.]

776 concerned about the well-being of the people, it is striking that
171 he is not linked with the protection of seed and harvest. Otherwise, however, his tasks correspond to those of heaven, even if he is primarily a nature god who shares his character with the lord of the animals and forests of many Siberian peoples.

776 Nonetheless there is a difference between him and heaven. First of all heaven is given precedence, even in connection with all offerings to the mountain-spirit, for instance, the obo offering. Whereas the mountain-spirit has a fixed residence in the obo, his fort, and therefore is tied to the place, heaven retains its freedom with regard to locality. The mountain-spirit can also be a tutelary spirit of the human beings who are named after him; as assisting spirit he may enter into the shaman and take possession of him in the trance. This is altogether out of the question for heaven. People are surprised if one even asks about it. There are pictures and flags of the mountain spirit; he can animate a spirit-spear. Heaven is formless, imageless; no one knows what it looks like. -- Heaven has an exalted uniqueness even in contrast to the mountain-spirit.

[553] [756] [787]

174 Besides the mountain-spirit the earth-deity has its seat
776 in the obo, and, to be sure, in the layer of earth. Its name glu is doubtless the Tibetan klu, Naga, dragon. In Mongolic
[192] the word for it is lu, which is also much in use in the Tujen language. It corresponds to the Chinese lung (dragon). The customs-with the earth-god urn show the earth deity of the Tujen more in the Bonistic realm of the Naga cult than in the Mongolic. It is quite possible that two types have mixed here or that the ancient Mongolic has been covered by the later Bonistic-Lamaistic. According to Pallisen (op. cit., pp. 159 f.), the ancient Mongols practiced a cult of the earth-deity, who is probably to be thought of as female. There it bears the name itoga or, in the prevocalic version, etügen, and is conceived as the tutelary deity of the homeland earth. The characteristics that are attributed to this deity correspond to those of the mountain-spirit. It is also to be surmised that this deity is to be associated with the female shamans, who call themselves udugan

[229 cont.]

174 (udagan, idugan). (Cf. Koval., p. 386; Uno Harva, Die religiösen
776 Vorstellungen der altaischen Völker [The Religious Conceptions of the Altaic Peoples], p. 450.) As the ceremonies of the earth-god urn indicate, this deity has something to do with butter and silk (silk wrapping, butter-pouring), as well as with grain (barley filling). Something similar applies to the etügen, which, as a female deity, is endowed with the attribute "fat-faced" and "silk-faced." (Cf. N.N. Poppe, "Schaman. Handschriften [Shamanistic Manuscripts]," Vol. I, 196-197, Manuscript XI; statement according to W.A. Unkrig.) Further indications of the connection of the earth-deity with the origin of agriculture and corresponding Tujen myths must be omitted here.

776 [230] Now regardless of where the earth-deity of the Tujen came from, it, heaven, and the mountain-spirit form an ancient trinity which has divided up the world. According to the [821] general conception of the Tujen, heaven rules over the air space, the clouds, wind, lightning, sun, moon, and stars. The mountain-spirit rules over the surface of the earth; animals, human [822] beings, birds, forests, pastures, and mountains. The earth-deity rules over the interior of the earth: metals, rocks, treasures, the snakes and the worms, as well as the seed that slumbers in the earth. This division, however, does not exclude heaven from the other two realms. After all that has been said, he continues to be the lord of the gods and men. If he appears here as coadministrator of the layers of the world, he only seemingly surrenders his partial domains. One might better think of a splitting off of certain activities of heaven and their being made independent, as P.W. Schmidt assumes for similar cases among other Asiatic peoples.

The Knowledge of Heaven

776 After the preceding discussions, the further characteris-
782 tics of heaven automatically present themselves. Among these characteristics knowledge appear most clearly. Concerning this knowledge the informant gave the following information (Schröder, "Herbst-Dankopfer," op. cit., p. 873): "At the

[230 cont.]

776 incense burning you say: 'Heaven, you know it. What then
782 does heaven know?' -- 'Heaven knows all, he knows the attitude of my heart, he knows that I want to venerate him.' " -- This oft-cited saying in literal translation runs: heaven to know; freely, the heaven knows; or, the heaven is knowing. This is not a petitioning prayer, but simply a pure acknowledgment of this characteristic of heaven, and it implies, according to the explanation given, an omniscience.

Other expressions are found for this consciousness of the people. Thus, a frequently used oath-formula for a deposition, for example, runs: "Heaven is not high; heaven knows it (tieṅgëre undur guei; tieṅgëre mudiem)." The meaning is: Heaven is high, to be sure, but not so high that it would not know. (Cf. DMF 416, where this sentence likewise is designated as a "formule de serment" [oath-formula].) Another phrase that is often used runs similarly: "tsimi mō gedzi yidza, tieṅgëre mudiem. If (I) have done evil to you (if evil has happened to you), then heaven knows it"; cf. DMF 416. This especially emphasizes the knowledge of the inner attitude.

If one now adds generally that the whole veneration of heaven in offering and prayer is done under the presupposition that heaven also knows of human distress, it may be asserted that the people's consciousness of heaven simply as the knowing one is very much alive.

776 The belief in the knowledge is connected with the omnipresence of heaven. To be sure, it cannot be expressly ascertained, but the Tujen nonetheless have a conception of it when they say: "Heaven is there where one places it (tieṅgëre andzi tedza, andzi-i)." According to the linguistic usage this means: Heaven is everywhere. (Cf. DMF 416, where the same meaning is explained.) This phrase seems evidently to be determined by the strong impression [231] that the all-encompassing firmament makes on the unconstrained mind of the people, especially in the steppes and on the mountains on the Koko Nor. As far as one wanders, whether by day or night, the endless heaven extends
[772] over man. It is really an all-encompassing bell, which the Tujen imagine to be fastened to a nail in the universe.

[231 cont.]

The Power of Heaven

776 Heaven as giver of all benefits. -- As repeatedly appears in the individual chapters, all benefits come from heaven. It [241] gives rain and sunshine, causes the seed to thrive, and protects [782] man and animal from sickness. Man acknowledges this in the offering, especially in the primitial offering and the harvest thank-offering. The grain, the barley, is ultimately traced back to heaven by man. (Cf. above under the primitial offering, agriculture myth, p. 340.) Man owes even his clothing [773] to heaven. Thus it is said at the beginning of the Geser legend: "Heaven provided the benefit of clothing; a boot fell down from heaven (tieńgĕre dźog ńańladzia; tieńgĕrdza perlõńgĕ bõdzi rĕdzia)." (Verses 6-7.) -- That other gods are also called upon for various needs does not prejudice the fact that heaven is the cause of even these benefits. The case would only be otherwise if there were things which were ascribed to these spirits to the exclusion of heaven, which, however, cannot be demonstrated from the material available.

776 The moral power of heaven. -- The moral power of 577 heaven is expressed by the fact that man puts his conscience in 626 relation to heaven and acknowledges the latter as binding and entitled to sanction. For that which we would call conscience the Tujen simply uses the word heart (sgil); sgil is not the physi- [192] cal heart, but the inner attitude, heart in the figurative sense. Thus they say, for instance, sen sgil (good heart); tsini sgil diesẽn ugua (you do not have an honest attitude); tsini sgil ugua (you have no conscience). In these cases the Tujen translates the word sgil with the Chinese leang-hsin (conscience, honest spirit). (Cf. also DMF 348.) Now, as the two prayer formulas that were explained above demonstrate, heaven knows the inner attitude, it knows the heart of a man: "If I did evil to you, heaven knows it," "Heaven is not high, it knows it." Since these sentences are used as oath or vow formulas, it is not simply confirmation of heavenly knowledge that is given by them, but rather one tacitly also presupposes a sanction by

[231 cont.]

776 heaven that is based upon this knowledge. This is made even
577 clearer by the fact that one ascribes punitive power to heaven.
626 A much-used expression is: "tieńgëre dardzia, heaven has
punished (sc. him), that is, sent misfortune"; dari- means
[192] literally "to tame"; it is used predominantly for the taming of unruly
horses. Similarly it is also said when one humbles a proud person: "tolgue dari- (to force the head down)." (Cf. DMF 45.)
[777] The people popularly explain the blows of misfortune that strike
a person as a humbling and punishment by heaven.

776 [232] Above all heaven shows itself as a binding force
585 at the conclusion of a marriage. According to L. Schram
626 (Mariage, pp. 71 and 174), the actual act of concluding a marriage is the kowtow that the bridal people perform in the yard before heaven and the countless burchan. Heaven stands in first place. The significance of the act is shown by this solemnity,
[171] which crowns the other ceremonies. Precisely as among the
Chinese, this rite before heaven (among the Chinese without burchan) has the force of law, and the marriage is regarded as concluded. That an ancient conception lies at the bottom of
[533] this is shown in the song delivered, "The Bird Pair," which is
sung at every wedding. In it is described how shepherd and shepherdess at the incense offering regard themselves as a pair. (Cf. above, p. 343, where the incense offering is discussed.) Then, however, it is stated with unmistakable unequivocalness: "We venerate the great heaven and are a pair for life (šge tieńgërni amudadzi, nig[illegible]isëni dzawa dañlieya)." Likewise
[588] the marriage with the mani[illegible]e in the absence of a husband is
regarded as having the force of law before heaven; cf. Schram, op. cit., p. 127. The children born of the woman are called in Chinese t'ien sheng tzu (heaven's children). Before this marriage the girl is given the woman's hairdo; this is called
[302] in Chinese pao t'ien-t'ou (to apply the heavenly hairdo). --
The opposite also appears; a girl promises her virginity to
[831] heaven and as a sign of it lets her hair hang down: arin fsdzūn tieńgërde fdzë bōlgadzia (the pure girl lets her hair hang down for heaven). -- For the rest, the ancient Mongolic conception of the election of the Mongols by God and their task of rulership might still be exerting an effect among the Tujen.

[232 cont.]

776 773 Heaven and creation. -- Even though the Tujen ascribe to heaven all the benefits of life, this still does not mean that they also derive from it the origin of the world. They do not concern themselves about it. "The old man gave no clear answer to the question as to whether heaven had also created the earth and human beings, where they came from: 'Who knows that? Who asks about it? No one says anything about that.'" (Schröder, "Herbst-Dankopfer," op. cit., p. 873.)

According to the Geser legend a world with living beings was present from the very beginning. In this world there lived the "lama existing by virtue of himself" (arañ sūndē lama = P'an-ku). He is by no means God, for above him there already existed heaven, which threw down in a boot the first emperor, who was raised by this lama. It is then described how the earth became populated. Finally, there still exist original beings (original animals), and it is likewise not said where they come from. Here Buddhistic, Lamaistic, and ancient popular conceptions are intermingled and run side by side. Nowhere, however, is there mention of any creation; only the first emperor came from heaven.

The same is also found in the agriculture myth. This [241] deals with the outfitting of the earth by a Buddhistically conceived demiurge. At the center of it is the creation of the food base through the bringing forth of barley from the magical vase and the introduction of agriculture. [233] This demiurge also comes down from heaven in three steps. There is no mention, however, of any creation of the world or human beings, only of an arrangement of the world into a habitable living space. The myth begins: "In the olden days of yore when the race of human beings had been produced, there was neither sun nor moon, and the race of human beings existed in darkness. There was no chance to live." Where the human beings came from remains unresolved. It says only, sēmtsien kuni darladzia (the totality of human beings had been produced). One may assume, however, that heaven was involved, for the culture hero (who outfitted the earth) likewise comes from heaven, as does the first emperor of the human beings in the Geser legend, and later Geser himself.

[233 cont.]

776 Even less can be determined of any creative activity of
773 heaven with respect to the individual human being. To be sure, a current Tujen saying runs: suniedzëne tieńgëre xuradzia, heaven has taken the soul (DMF 361), but this expresses only the rulership of heaven over life and death. There is no mention of a creation of the soul. The Chinese also know a similar phrase: t'ien shou-la t'a-ti ling-hun.

777 Heaven and fate. -- A question suggested in connection
776 with the ancient Mongolic meaning of fate or good fortune, which has had its greatest elaboration in the sülde cult, is
192 whether something similar is to be found among the Tujen, say,
171 that there might be a fate standing over heaven. -- The Tujen know three expressions for "fate": dzieyan, šdiemdžël, kimori.

dzieyan is used predominantly in the sense of favorable conditions of life, for instance, when one says: "The girl has experienced a favorable fate," meaning that she has married into a good, wealthy family. The Tujen word corresponds to the Mongolic jayagan, but does not have the latter's essential content. The significance seems, rather, to have been transferred from the original jayagan to the Tujen expression šdiemdzël.

šdiemdzël, peculiarly enough, is now found not so much in everyday language as in song. Thus the Tujen songs popular-
[533] ly end with the verse: moṅgol kuni lõnšda (or kimori) darlagu, šdiemdžëlgë rëdziglaya, in order to erect the air-horse of the Mongols, let (us) lay (= build) a good-fortune foundation. This conception is linked with the image of the central fort. The air-horse is grounded in the central fort. Accordingly the šdiemdžël would correspond to the basis for fate, which is symbolized in the air-horse. Evidently, ancient conceptions are mixed here with more recent Buddhistic ones, whereby in connection with the Hayagriva figure, fate and horse are brought together. Linguistically the word šdiemdžël cannot be understood unequivocally. The second syllable ... džël, however,

[233 cont.]

777 is undoubtedly to be equated with the Mongolic dsol (dzol). Ac-
776 cording to Koval. (2386), it means: good fortune, salvation,
192 Koval. gives the Tibetan equivalent stes for it. When one notes
171 that the Tujen always insert an i before an e in Tibetan loan-
words, then the first syllable šdie(m) might be this Tibetan stes, whose final s is silent. The m would then be inserted in assimilation to the following dental. As regards its meaning, the Tujen translate šdiemdžël [234] with the Chinese yün-ch'i or t'ien-ming. They also, however, render kimori in the same way. It is thereby stated that fate is under the power of heaven, which Uno Harva also stresses for the Altaians and Mongols (Vorstellungen, pp. 144-145). In other words these Altaic-Mongolic conceptions can easily be linked with the kimori and šdiemdžël of the Tujen. According to Uno Harva, in the case of the guarantors of good fortune, the tutelary spirit of man, called zajači, is involved in the form of a double: "If a person is wealthy in his lifetime, zajači is also well-dressed, rides on a horse, and is gay" ... When the person dies, zajači disappears into heaven where he lives in the company of the gods" (op. cit., pp. 276 f.). The Lamaistic air-horse of the Tujen like-
777 wise bears on its back the guarantor of good fortune, the wish-
776 ing jewel, by virtue of which the human being obtains all that
171 seems desirable to him, in other words, good fortune. It has almost the effect of an amulet. Now, according to Uno Harva, when the tutelary lord of good fortune seems to be oriented more toward the individual person, then in the case of the sülde of the Mongols he is acting for the entire people, and, to be sure, through the khan; meanwhile, the historical development among the Chinggisiden made nine Tengri of good fortune out of it. Father W. Schmidt, in conjunction with Banzarov, characterizes the sülde in the following manner (UdG., X, p. 78): "Heaven guides the world like the khan and possesses its sülde ... The sülde of the khan is a reflection of the sülde of heaven ... The nine sülde-tengri, according to their character, are always there in order to protect. They are represented in warlike pose as though they were awaiting battle with someone, in the manner of riders ..." etc. Here, too, it is the riding

[234 cont.]

777 god of good fortune. It seems that further reminders of these
776 times still echo in the Tujen songs: of the fate of the Mongols,
171 which is based on good fortune; or of the sülde of the khan, which invisibly protects his subjects (UdG., loc. cit.). -- Whatever the connections may be, neither according to Uno Harva nor according to Banzarov-Schmidt nor in the conception of the Tujen themselves is there a fate or good fortune that is independent of the rule of heaven.

772 Summary. -- Everything that has been said about heaven
776 proves it to be an independent deity existing for itself, sharply separated from all other gods, ruling them and dominating the entire world. Its name is "heaven," not in the physical but in the personal sense. Everything pantheistic and animistic and every mana concept remains far removed from it. To be sure, it is not one god [monotheism] in the strict sense, but an authentic supreme god, a towering unique phenomenon among all the other deities. Because of this uniqueness the statement of A. Tafel about the Tujen can now be repeated in its correct interpretation: "Many say they have only one single god in which they believe."

[235] 2. Shamanism

121 Whereas the discussion of the belief in a supreme god
756 could be confined to the region of the Tujen themselves and the corresponding sources, this is not possible for shamanism, for which reason a detailed presentation would not be suitable for this work. It is reserved for a special study. Here the ground-plan can only be drawn in a sketchy fashion, merely representing a theory, because the detailed proofs must be omitted here. The question runs: Of what type is Tujen shamanism and where is it to be classified from the religio-historical standpoint? -- Three types are found among the Tujen: bö-shamanism (drum-shamans), gurtum-shamanism (warrior-shamans), and idol-shamanism (with the spear-soothsayer).

[235 cont.]

a) The bō or Drum-shamans

Characterization

756
192 The name: The Tujen name current throughout the land, bō, corresponds to the written Mongolic būge. Koval. (1242) gives for it the Chinese equivalent wu-jen, the Manchurian saman, the Tatar bugu, and the Tibetan lha-pa. The Russian expressions means: shaman, sorcerer; he translates it into French as: chaman, enchanteur. The Mongolic būge and all the other translations cited do not have any uniform meaning and can be used for the various types of shamans, exorcists, and even sorcerers.

The Chinese in the area and the Tujen translate bō with fashih, or somewhat contemptuously with shih-kung. The fa-shih call themselves only by this special name. According to communications (P. P. Eichinger, Bockwinkel), the name wu-shih is also in use in southern Kansu. It is important that all these designations are never permissible for the gurtum. The fa-shih are a special group that is to be clearly defined. (Space forbids going into an explanation of the names here.)

756 Clothing and equipment. -- The fa-shih wear an old
192 woman's costume without sleeves and usually patterned with pictures of dragons. Normally they have no head covering,
[531] but their hair is pinned up in the fashion of an old Chinese
[302] style for women, unless they are wearing an appropriate wig with hairknots, hair-bowl, and hairpin. These are not always available, however. On special occasions, they don the well-known five-part Buddhistic crown called p'ai-tzu.

756 Their essential equipment consists of the hoop drum, the hemp whip, and a three-pronged broad dagger. Other objects are added according to their functions.

756 Gods. -- Their principal deity is the great mother (ta
776 niang-niang), also called mother of the nine heavens (chiu t'ien nai-nai). In addition, they also venerate the black tiger

[The bō or Drum-Shamans]

[235 cont.]

756 and, depending upon the region, various local spirits. These
[776] gods predominantly come from the Taoist pantheon.

[789] [236] Activity. -- Their principal task is the weather
[241] conjuration, the sowing and harvest festivals, and curing sick-
[755] nesses.

756 Peculiarity. -- The bō or fa-shih are differentiated from
787 the other shamans by the fact that they have no trance. If one questions the people about it, one always receives the same answer: "fa-shih pu fa shen (the fashih do not go into ectascy)." Now that is not entirely correct. Namely, at the conclusion of the sowing or harvest festival, one of them attempts an imitation of the trance and wounds himself with the knife. This is called: "fa ta-shen (to produce a great trance)." It is not a trance at all, but at most a relic suggesting it; I was able to observe it several times. Thus the people are basically right when they do not accord ecstasy to them. -- The people sum up the main
756 characteristic, however, in the saying: "fa-shih ch'uei ku, t'iao
535 shen (the fashih beat the drum and perform spirit dances)." Drum and dance are the most outstanding. They always dance in groups before the image of the great mother in order to please her, or also before the sacrificial pig. These are not shamanistic individual dances in order to induce a trance, but are cultic group-dances that follow a definite ritual. One can therefore designate them as drum- or dance-shamans, although true shamanistic features are scarcely present any more.

Classification

171 Relationship to the more recent Siberian shamanism.
756 -- There are few similarities with Siberian shamanism. One could regard the drum as the most important continuation from Siberian shamanism. The relationship with the Tungusic and Mongolic-Manchurian shamanism is stronger. The drum has almost exactly the same execution and the same appendages as, for example, among the Mongols of the Kūrie-Banner. (Cf.

[236 cont.]
171 Heissig, "Shamanen," Folklore Studies, 3, 1944, p. 72, Figs. 1-
756 7; likewise Shirokogorov, Psychomental Complex, pp. 297 f.) The absence of the trance seems to fit in least of all with Siberian shamanism.

The relationship to China. -- First the distribution must be considered. According to personal observations and various reports by the Chinese and missionaries, the fashih type is spread over all of Kansu and Shansi and into the interior of the coastal provinces Hopeh and Shantung. In the Amdo region he is found wherever there are Chinese settlements, especially in the vicinity of Sining and Kweiteh (on the Yellow River). In type he fits in well with an agricultural people, precisely through the emphasis of the harvest ceremony and of the female appearance.

Almost all the origin reports that I was able to gather attest to the descent of the fashih from a woman, a first shamaness. She was brought to life from a female skeleton through a magic incantation by T'ai-shang lao-chün (a title of Lao-tzu) and received from him her shamanistic powers. In southern Hopeh today the fashih are still predominantly women. -- Furthermore, the fashih are always associated with the spirits of the dead and ancestors, which likewise agrees with the Chinese mentality.

[237] The origin legends and the deities also point to a close connection with Wuism or Taoism. (Cf. De Groot, Religious System, Vol. VI, Part II, 1187 ff.) The god-litter with the niang-niang is almost the same as the one pictured there. The Taoists, sworn enemies of the fashih, claim that the latter split off from them as a false sect. Whereas the Taoists represented an official and respected religion, the fashih, as bearers of the shen-chiao (spirit religion), led a despised existence up to the most recent times.

174 The position in Tsinghai. -- Apparently this Chinese
756 shamanism also came to Amdo with the Chinese settlers. There it has adopted various elements, diluted its original shamanistic character, and fostered the cultic group-dance. Since the

[237 cont.]

174 weather conjuration from the Bon was much practiced there, it
756 also took this over, which, indeed, was close to it in type. Probably the weather-conjuring Bon were absorbed by them.

The Tujen have likewise permitted their Mongolic shamanism to flow into this fashih shamanism and have transferred to it the original name, bō. A Tujen bō once said: "We have a common root with the Mongolic shamans." This shamanism has remained remote from Lamaism, as well as from the gurtum; a certain rivalry exists between it and them.

The question of the bō or fa-shih demands an extensive presentation of Chinese shamanism generally, which has already been undertaken.

b) The Gurtum or Warrior-shamans

Characterization

756 Appearance. -- Among the Tujen the gurtum wears a
292 red cloak that is held together with a cloth belt, a shoulder collar, a chest mirror, a Lamaistic amulet or a hada (ceremonial cloth) in the chest bag, a headcloth that covers the eyes, a garland of bells around his forehead, and on top of it the five-part Lamaistic crown. The most important piece of his equipment is the sword, without which he does not shamanize at all, so that really one should call the Tujen gurtum a "sword-shaman." He also uses other weapons, however, such as the spirit-spear and the knife. At major ceremonies he also works with sieve, winnowing-fan, and five little paper men called wu-tao shen in Chinese, which could be translated as "five-direction spirits."

The whole type of the gurtum is that of a warrior who exorcises misfortune in the demon battle. Aside from this popular image of his appearance, which is fairly complete, there are also simple, degenerated types who wear only the most necessary equipment, say, the headcloth, the chest
[177] mirror, and the sword, even over a modern European suit. At solemn sword battles, however, they also appear in full regalia.

[237 cont.]

756 The most distinguished form of the gurtum is undoubtedly
292 the Lamaistic temple-shaman. He appears in magnificent battle dress, with bow and arrow and [238] spirit-spear. On his back he carries little flags, like the former Chinese general, and thereby identifies himself as the leader of an army whose parts are represented precisely by these flags. When one sees these gurtum -- for instance, in Kumbum or Kuo-mang-szu -- one involuntarily thinks of the traditional heroes of the Chinese theater. On the other hand, in the rest of their equipment they remind one of the Lamaistic war gods who are regarded as protectors of the dogma. To be sure, in individual instances there are variations, but in general the type of these temple shamans remains the same, and they are designated in general by the same name as the people's gurtum.

756 Written Chinese also has the name hu-fa, which is a translation of c'os skyoṅ or Dharmapala. J. F. Rock also emphasizes their similarity to an army leader: "The Dharmapāla are demon-generals who execute the will of the tutelaries, or demon-kings. They are hideous and fierce-looking and each commands a horde of demons" [cited in English] (Na-khi Kingdom, I, p. 210, Note 26).

192 The shaman character. -- The word "gurtum," in Tujen
756 sgurdien, in Chinese ku-erh-tien or ku-wai-tien, stems from Tibetan Lamaistic terminology. It comes from the word sku-rten, and not, as F. Lessing believes, from skur-bltams, body shakers (F. Lessing, Mongolen, p. 143). According to Ch. Das (536), rten signifies something that supports, bears, or contains something; sku-rten, according to him, means the same as: the bearer or the container of a person himself, an image of the gods or Buddha. On page 89 he gives sku-rten as an abbreviation of the three aspects sku, gsuṅ, t'ugs-rten. According to page 91, sku-gsuṅ-t'ugs are the body, speech, and thinking, in other words the three realms of human behavior or suffering: deed, word, thought. Concerning the cosmic mythological co-ordination of these aspects with the world directions and the five c'os skyoṅ, cf. further below. The expression sku-rten, in other words, signifies that the gurtum is the container of a deity

[238 cont.]

757 that acts, speaks, and thinks in him. This, however, is nothing
[192] other than an express possession-shamanism reduced to a simple Busshistic formula. The gurtum represents a deity.

757 Whether one may appeal to the gurtum in the "classical"
171 sense as a shaman is a question that can only be answered with the final clarification of the shaman concept. In the investigation of shamanism up to now there has been too much concern with its Siberian form and special emphasis on the flight of the soul into the beyond as a "classical" characteristic, especially with the "bird type" of shaman (9). This is not the place to

[114]

9. The one-sided preference for Siberian shamanism is also unfortunately found in the excellent work by Mircea Eliade, Le Chamanisme, in which, to be sure, there are comparisons with other parts of the earth, and the "southern" and Buddhist influences are also taken into consideration, but they are dealt with only as secondary and unimportant; above all, however, the so characteristic stamp of Lamaistic shamanism in the figure of the gurtum is completely passed over.

go into this question in greater detail, which is reserved for later [239] treatment. It should nonetheless be stated in advance that the gurtum is a true shaman of the same shamanistic rank as the Siberian. Anyone who has had an opportunity to observe a gurtum will not regard him simply as one possessed. The gurtum is likewise as bound to the ritual requirements and forms as, say, his Siberian colleague: call (vision), tutelary spirit, testing, dress and equipment, ecstasy, etc. In addition, there is much to indicate that formerly he was also familiar with the flight of the soul.

[239 cont.]

756 The religious character. -- What has been said up to now about the nature and activities of the gurtum shows that they rest upon a passive and receptive basic attitude, a basic attitude that seems to be at variance with the warrior-shaman. The relationship of dependency, however, in the realm of "divine" possession, with regard to the possessor-spirit, is unequivocal. The active ability to coerce, the arbitrariness, which represents the basic element of magic, is lacking. The basis is religious, not magical.

[787] The gurtum himself can do nothing about his calling. It comes over him unwilled, sometimes against his will. One day he is seized by the spirit in a vision, put in ecstasy, and 756 recognizes by sight his future possessor. This being chosen is 792 acknowledged most strikingly in the search for a shaman by the monasteries. Even though the individual monasteries are anxious to have a gurtum, no monastery can designate or train one of its inmates for this purpose, although this would be expected in the case of tantristic Lamaism. They remain for years without the coveted shamanistic soothsayer, until one day someone who was chosen by a deity to be its vessel is found. The calling is a free gift that is not hereditary. It is known of the monastery Kumbum that for a long time it was punished by having to do without a gurtum in whom the oracle-god made himself present.

756 Everything that the gurtum does is done in the power of his possessor-spirit, like an instrument, and not because of cer- 787 tain actions, gestures, or formulas. The inducing of ecstasy is not a way of forcing the spirit to come down, but a ceremonial force transmitted through the calling, which does not rob the spirit of its freedom. The shaman only receives this power from his tutelary lord himself, and to be sure under certain preconditions, such as continence, donning the attire, invitation prayer. This prayer, as its name indicates, is not a magical [782] formula, but praise and a request; it does not have any effect in itself, just as the donning of the equipment alone would not draw down the deity.

Likewise the taming of the demons in the spirit battle of the trance, the soothsaying, healing, etc. are done through

[239 cont.]
756 the spirit in the shaman; he is actually the warrior, the sooth-
[787] sayer, the healer. His presence is essential. Therefore the
people also fall down before the gurtum and venerate him like
[782] a god. Finally, even the shaman himself has the duty of venerating
his tutelary spirit; he must burn incense for it, make offerings,
and pray to it. -- This religious character of the gurtum, how-
ever, by no means excludes all magic. His special position
suggests [240] that he also engages in magical practices, but
then not in his character as a shaman but as a human being
whom one especially trusts since he is in communication with
the spirit world; cf. above, p. 330.

Classification

171 Present-day Chinese shamanism in the form of the fashih,
756 wushih, or shihkung, as well as the earlier Wuism, has no direct
connection with the gurtum. The Chinese shamans are female
oriented, directed toward agriculture, and pass down their office
within the kin group; they have the dance and the drum, the
trance has become vestigial, and the rites are overlaid with
Taoistic elements. None of this applies to the gurtum. He is
the type of the manly warrior, knows no drum but weapons, and
no dance but battle. He cannot pass down his office, but re-
ceives it through individual calling. A certain enmity between
him and the fashih has already been indicated.

The present-day Siberian shaman likewise has a differ-
ent appearance. He, too, knows the drum and for the most part
practices a kind of dance. The shaman costume is not the uni-
form type like that of the gurtum and is hung with all kinds of
things, iron, feathers, figures, etc. In ecstasy he imitates the
[787] ascent to heaven or the journey of the soul which I could not
find in the case of the gurtum, even though Lessing (Mongolen,
p. 148) indicates such. Furthermore, there exists between this
type of shaman, who in Mongolic is called bō (bōge) and in
Tujen bō, and the gurtum a conscious contrast which Lessing,

[240 cont.]

171 loc. cit., also emphasizes. W. Heissig, too, has encountered
756 the difference between these two groups among the East Mongols; cf. Heissig, "Shamanen," p. 40. There the gurtum are also called "Lajing." Exactly like the Tujen, the Chinese, too, differentiate between the bö (fashih) and the gurtum (fa-la-tzu or ku-erh-tien).

Beyond doubt, therefore, the gurtum in his present form
[779] is affiliated with Lamaism. First of all his area of distribution coincides with that of Lamaism. One finds the gurtum in Tibet, Amdo, and Mongolia. To designate him as specifically Mongolic, as is done occasionally in the expression "the Mongolic gurtum," is misleading. To be sure he was described predominantly by travelers in the Mongolic region, but detailed studies concerning him were hitherto lacking. There is no original Mongolic name for the gurtum, and the general term bö (böge, bügü) for shaman is not applicable to him. All names are Tibetan.

756 But what position does the gurtum occupy in Lamaism?
776 His main task seems to be exhausted in the representation of the tutelary gods who constitute a special conceptual realm.
779 The three aspects that are included under the word sku have
174 already been indicated "gurtum." The Lamaistic tutelary deities also bear the collective name "the five bodies," along with the other name, "the five kings" (Mongolic: tabun xaǧan) or "the protectors of the [241] doctrine" (Tibetan: c'os skyoń). R. Bleichsteiner in his article "Srog-bdag, the lord of life" (Archiv für Völkerkunde, Vienna, V, 1950, pp. 104-138) has indicated the relationships between the three aspects, the directions and world-guardians, who to be sure correspond to the five tutelary lords. Evidently elements of various origins have been combined here in the speculative melting pot of Buddhism through the popular paralleling of microcosm and macrocosm. The presence of these figures and the cultic utilization are accomplished through the gurtum or, as he is also called as presenter of the tutelary deities, the sruń-ba (ma). In the case of the people's gurtum this relationship likewise makes itself apparent through the use of the wu-tao-shen cut in paper in various colors, which were mentioned earlier. It seems, however, that this relationship is more

174 [241 cont.]
756 external and applies to the actual temple-gurtum, whereas the
779 people's gurtum is more strongly connected with the mountain-
[776] spirit and obo.

The foreign character of the gurtum in Lamaism. -- Even though the present-day figure of the gurtum, as was just stressed, belongs to Lamaism according to his appearance, his name, and his conceptual realm, this affiliation is not as close as it might seem.

In the first place the shamanistic basis of the gurtum points away from Lamaism. To be sure, tantristic Lamaism has its special presuppositions for the vivifying and presenting of deities; in this connection cf. Glasenapp, in ZDMG, 90, 1936, p. 552 (cited from Hoffmann, Quellen, p. 206), and H. Findeisen, Eine Erscheinung Yamantakas [An Appearance of Yamantaka], pp. 2 f. The ensouling of the gods' idols also lies in this direction. These presuppositions, however, are not decisive for the shaman-nature of the gurtum. The religious character of the gurtum shuns these magically colored rites. His calling and his power are independent of Lamaism. The shaman is a layman. The same is confirmed by W. Heissig (op. cit., p. 40): "The Layičing, however, belongs to no spiritual community, but is a layman." Only when he has become a shaman does he receive his confirmation in the monastery and Lamaistic instruction. The customs described in the first part concerning the gurtum and the helplessness of the monasteries in the search for a temple-shaman illuminate this
[792] fact sufficiently. This naturally does not exclude the possibility that in individual cases a shaman's calling may fall to a lama. This is not the rule, however, as the great number of people's gurtums outside the monastery proves, at least in the Koko Nor region.

Furthermore, the tutelary gods represented in the
174 gurtum do not seem to be at home in Lamaism; in the case of
756 the people's gurtum with his link to the popular mountain-spirit,
776 this is to be expected from the outset, but it is no less true for
779 the c'os-skyoṅ, for where is the boundary line between the

174 756 776 779

[241 cont.]
original and the borrowed to be drawn in Lamaism? Bleichsteiner (op. cit., p. 111) writes: "The relationships of Pekar and the five kings generally are so manifold and complicated that an unravelling seems to be enormously difficult." This one fact, however, is probably firmly established: two of these kings, Pekar and dGra-lha, come from the pre-Buddhist realm.

[242] Even the name Pekar, of the possessor-spirit of that famous state-oracle of gNas-c'un, in its many forms has no satisfactory Lamaistic explanation. Although Tucci may have recently confirmed the view of Grünwedel, who in agreement with Schiefner derives the name dPe-kar from the Sanskrit word vihārā (= monastery), this explanation nonetheless gives too much the impression of an "ad hoc" one, because Pekar is just moved up as monastery protector. Bleichsteiner, unconvinced by this interpretation, increases the explanations of the name by one new one and derives the word Pekar from the Iranian; cf. A. Grünwedel, Mythologie, p. 182, Note 2; R. Bleichsteiner, op. cit., pp. 107 and 111 f.

Even more decisively than the name Pekar, Bleichsteiner designates the figure of Pekar as foreign: "With the exception of the legend ..., according to which the great magician Padmasambhava is supposed to have brought the demon Pehar or Pekar from the Indian monastery Odantapuri to the monastery founded by him, bSam-yas, as guardian and treasure protector, the sources concerning his origin from East Turkistan are fairly well in agreement." By way of confirmation he further cites Tucci: "The last-named investigator regards Pekar as a foreign tribal god that was later introduced into Tibet and converted to Buddhism by Padmasambhava." Bleichsteiner, op. cit., pp. 110, 111; cf. also H. Hoffmann, Quellen, p. 163.

Just as Pekar is the most important representative of the five world-guardians, or of the five c'os-skyoṅ, so dGra-lha is the main figure among the five personal tutelary spirits, who with Srog-bdag also has been moved up among the cosmic world-guardians. Here, too, the co-ordination of microcosm and macrocosm and their mutual interpenetration are to be emphasized. dGra-lha, who like Pekar appears as warrior, belongs

[242 cont.]

174 in the pre-Buddhist Bon layer. There can be no doubt about this
756 after the expositions of Bleichsteiner, who bases himself on
776 Hoffman; cf. Bleichsteiner, op. cit., pp. 108 and 118 f.;
779 Hoffmann, Quellen, pp. 171 f. Here let it be noted that among the Tsinghai Chinese these personal tutelary spirits are found in a Buddhist transformation, and to be sure in the so-called "golden lamps" which every man carries unseen on his body, and two of them on his shoulders.

It is unnecessary here to discuss the other figures of the five kings, since at this point no clarity concerning them can be obtained. The world-picture to which they belong, in spite of all the Buddhistic features, has such a broad base that it extends from Central Asia to India and into the ancient Orient, for even the world-mountain conception and the world-directions arrangement with corresponding guardians does not come from Buddhism in the final analysis, even though -- taken over and reinterpreted by it -- it may have been brought as on a "vessel" over extensive parts of the Orient.

The mountain-spirit, the principal tutelary spirit of the people's gurtum, is so evidently pre-Buddhist that it need not be discussed further here. It will be referred to again in the description of the weather forts in Tsinghai. Hoffmann (Quellen, pp. 159 and 166) has given a report concerning the mountain-spirits, with references to the pertinent literature. He classifies them as pre-Buddhist [243] gods under the type of the rGyal-po, to which the c'os-skyoṅ also belong. The picture of the mountain-god Kangchendzōnga permits one to see a certain similarity with the gurtum (pp. 166-167).

The position of the gurtum within Lamaism thus shows that he was not there originally. Both his being a shaman as such and the possessor-spirits represented by him come from earlier, non-Buddhist layers. Only the adaptation and
174 serviceability for the Buddhist community as its tutelary lord
756 (monastery), the speculative classification under the "aspects,"
779 the ritual embellishments during the testing and functioning of the gurtum, certain prayers, and finally the assimilation to the dress of the Buddhist deities are Lamaist, in other words,

[243 cont.]
756 all more or less unimportant elements. The type of the pro-
174 tective warrior, however, goes uniformly through the various
[779] representations. Thus the question of the origin of the gurtum
becomes the question of the origin of the warrior-shaman.

The Origin of the Warrior-shaman

This question cannot be exhaustively dealt with here within the framework of a presentation of the Tujen religion, since it is closely connected with the origin of shamanism in general. The following points are therefore to be regarded merely as sketchy hints for a later investigation.

Warrior-shamans and Bon religion. H. Hoffmann writes in his book (Quellen, p. 194) of the gNas c'un oracle: "He is, therefore, a living relic of the Bon religion in Lamaism, and to be sure of that side of the Bon religion that is extremely close to the shamanism of the Siberian peoples ..." On page 205 he comes back to the same observation after he has set forth in the same chapter the shamanistic elements in the Bon religion. The type of the Bon shaman pictured there, however, does not correspond to the type of the gurtum or warrior-shaman. The clothing is different, and the Bon shaman works with the hoop drum covered on one side (cf. op. cit., p. 201). A kind of kettledrum is also used. On his drum the Bon-pa rides heavenward in ecstasy. Hoffman quite correctly links this type of shaman with the present-day Siberian form of shamanism (pp. 202 f.). Two important elements, the hoop drum
[774] and the flight of the soul, do not appear with the warrior-
shaman. To be sure, in the temple, as I was able to observe in Kumbum and Kuomang-szu, large, double-sided drums were likewise beaten as the gurtum was transported into the trance, but only by the assisting lamas, and to be sure they were the drums that are otherwise used at the religious service. The hoop drum, however, of which Hoffman (op. cit., p. 203) gives an illustration, is not used. In the case of the gurtum the
[787] necessary connection between the drum and the ascent to

[243 cont.]

174 heaven is completely lacking. The type of Bon shamanism de-
756 scribed here seems rather to have its vestiges among the fashih
[789] in the Chinese Koko Nor region, whose close connection to the Bon religion was already surmised above, especially since these fashih (or bö) [244] are very frequently represented precisely in the region of Kuei-tê on the same river where today the Bon religion is still fairly strong. -- It is not to be disputed in any way that the type of the gNas-c'uń oracle is a survival from the Bon religion. However, just as the Bon religion generally is not a homogeneous structure, so the shamanism contained in it would also not have been of a uniform type. And precisely if the gNas-c'uń oracle is a survival from the Bon religion, this proves that here, too, as elsewhere, at least two shaman types were present: the Siberian drum-shamans and the warrior-shamans (10). An element that Hoffmann clearly characterizes,

10. The gurtum type of the gNas-c'uń oracle can be linked much better to Gšen-rab itself or to the Dto-mba Shi-lo of the Na-khi, the founder of Bon shamanism. The sign for Dto-mba Shi-lo is Ssu, in other words, the ancestor, tutelary god, and in the final analysis the god of life of the Na-khi family; cf. J.F. Rock, "Dto-mba Shi-lo," p. 45, Note 2. This establishes the connection with the basic figures of the other possessor-spirits of the gurtum,
776] who, to be sure, finally manifest themselves likewise as god of life. -- Furthermore, the Dto-mbas with their swords and demon battles ("sham battles" [cited in English]) resemble the gurtum; cf. J.F. Rock, op. cit., p. 77, Pl. 12.

however, must be considered in the case of the warrior-shaman,

174 [244 cont.]
756 namely, the connections between bird and shaman (p. 199 f.).

756 Warrior-shaman and tutelary-spirit heroes. -- In shamanism the tutelary or helping spirits play a decisive role. In the
776 case of the possession-shaman, and therefore also in the case of the warrior-shaman, these spirits are at the same time the possessor-spirits. What is most important about the warrior-figures of the tutelary spirits of the temple-shamans has already been said, when mention was made of the five kings, especially Pekar and dGra-lha.

171 The dGra-lha of the Tibetans has a counterpart in the
756 good-fortune tutelary lord of the Mongols as he has already been described above in the section on the cult of heaven (p. 359),
776 and to be sure in the figure of the dsayači and its extension in the sülde. The warlike character of the sülde tengri has been described in detail by the Mongol Dordschi Banzarov in his "Černaja vjera ili šamanstvo u Mongolov" (1846). Only a characteristic quotation from the version of Father W. Schmidt (UdG, X, p. 79) is to be given here: "The nine sülde-tengri, according to their character, are always there in order to protect us. They are represented in a warlike pose as though they were awaiting battle with someone, in the manner of riders, dressed in armor, wearing helmets on their heads, armed with swords and spears, holding a knout in one hand, a flag in the other. They are accompanied by falcons, as well as by a lion, a panther, bears and dogs." Father W. Schmidt notes in connection with this description: "Banzarow, as he states, has taken this presentation from Volume IV of the work by Mergen Diyanči; he wrote the book concerning the offerings presented to these genii." (UdG, loc. cit.) Concerning the relationship of the dGra-lha to the sülde or to the Mongolic good-fortune tengri and their warlike character, as well as their representation in the banner and on flags (jusun-sülde), Lüdtke has given a report, referring to Potanin, Waddel, Grünwedel, and other Russian as well as Mongolic sources; [245] See Lüdtke, "Die Verehrung Tschingis-Chans ...," op. cit., pp. 110-115. A supernatural double of the human being, who is conceived as a warlike tutelary lord and who shares and influences the weal and woe

[245 cont.]

171 of his protégé, is involved here; in this connection cf. also
756 Bleichsteiner (or Hoffmann), "Srog-bdag," pp. 118 f. It is not
776 possible to give here all the models and possible archetypes of these warlike doubles and "alter egos." They are very widely distributed in space and time, as is the belief in tutelary spirits generally, and extend back over the archaic high cultures into still earlier times (Megalithic); cf. Dominik Wölfel, Die Religionen des vorindogermanischen Europa. A special development is represented by the sülde banner of the Mongolic khans, which also attests to the fact that in the case of these tutelary spirits true localizations and seizure are involved.

174 That these tutelary spirits are connected with ancestors,
756 and in part identical with them, can likewise be amply docu-
776 mented, as it is repeatedly emphasized in the shamanism. One special feature is still to be pointed out: the shamanistic use of armor and weapons. My informant told me that the Tujen
[523] formerly had brought the weapons and equipment of famous popular heroes into the temple where they were stored. Then
[787] when a shaman who had been called put on this equipment, the powers and the spirit of the hero descended upon him. The shift of an old popular custom into Lamaism is evident here, for prior to this the protector and guardian of the ayil (tribe) was the mountain-spirit in the obo; he watched over the weapons, and in former times arms were also buried in the obo; cf. above, pp. 351 f., and the chapter on the obo, Anthropos, 47, 1952, pp. 63 ff. [pp. 114 ff. above in the HRAF translation]. Just as the popular festivals were later transferred from the obo to the Lamaistic temple, this also happened with the weapons and equipment and the associated donning of them by the shaman. This also explains the especially close connection of the people's gurtum with the mountain-spirit and obo and his warlike character still today. It is well-known that the obo has a special connection with the tribal lord and the latter's descendants. Like-
[773] wise it is told of Geser, who, to be sure, according to the Tujen version, was also the ancestor of the Tujen, how he donned the supernatural armor which is kept in readiness for the special task of the battle against the ills of mankind in heaven

[245 cont.]

171 Heissig reports similarly of the East Mongols: "In the
756 monasteries, according to tradition, weapons, helmet, and
776 war harnesses of famous, perhaps legendary Mongolic heroes are preserved... These heroes and their arms bear the name Coyjing (lit. coyijung). Once or twice every month, after previous praying and fasting, a number of lama-monks in the Kūriye-Banner are supposed to clothe themselves with the armor of the Coyijing and seize the weapons belonging to them. The spirits and powers of the heroes immediately come over their bearers and equipment. The lamas go into ecstasy..."; cf. Heissig, "Shamanen," op. cit., p. 41. Coyjing, of course, refers to the Tibetan co's-skyon. Here, too, however, the old conception
[523] continues to have its effect of preserving the powers of the old heroes for the succeeding generations by preserving the equipment and weapons.

756 [246] One could call this custom a shamanistic preserva-
523 tion of antiquities. At any rate, every visitor of Lamaistic temples and shrines is struck by the ample store of weapons, banners, etc. Perhaps the Tujen custom of presenting the clothing of the deceased to the monastery also goes back to this conception, even though today they are merely thought of as a bosē, a prayer fee. When a monastery lacks a shaman who can don the armor, an artificial figure is dressed in it. I once saw such a statue equipped with ancient weapons and exhibited in a sitting position in the gate of the soothsayer-temple at dGon-luṅ, just as the gurtum at the beginning of his trance is seated in the temple facing the image of his tutelary spirit. The people moved past this image and gave it the appropriate veneration. This figure is likewise called sgurdien.

171 The warrior-shaman is widespread, and was even in pre-
756 Lamaistic times. B. Laufer presents clear evidence for its presence in ancient China in his book, Chinese Clay Figures. He presents several illustrations of excavated statuettes and dates these back to the Chou period, to an "archaic period" [cited in English]); cf. the legend for Plate XVII. Laufer describes these figures expressly as shamans "in the act of throwing a spear during a struggle with demons" [cited in English]. On

[246 cont.]

171 756 page 277, he goes into greater detail regarding the interpretation of these figures: "In the grim faces ... the demoniacal power of these armored knights ... is well represented. The helmet-mask is formed by a bird's head with a strong flavor of the Indian Garuda ... a shawl is elegantly draped around the shoulders, and tied in a knot over the chest, the two iron breastplates being visible beneath it" [cited in English]. -- In other words, the same type of warrior as in the case of the gurtum is involved: with helmet, weapons, shoulder hanging, demon battle, etc. -- Certainly further evidence for ancient China could be cited, say, in conjunction with the recent publications of C. Hentze. -- Likewise such types may be demonstrable for India, Indonesia, and the ancient Near East in connection with the ancient Iranian warrior gods and the corresponding figures in Hinduism, Indra, Shiva, etc.; in this connection cf. R. Bleichstein (based on Grünwedel), op. cit., pp. 111-124.

174 756 825 [773] Warrior shaman and bird. -- The connections between bird and shamanism are stressed often enough in the literature. The bird type of shaman is one of the basic types. Usually, the original ancestor of the shaman, or the first shaman, is a bird or incarnated in a bird. The heroes of the folktales, however, are also often linked with a bird ancestor. For instance, the Geser of the Tujen is supposed to have been sent to earth as a cuckoo. If this relationship applies generally, then the warrior-shaman in particular can be linked with the bird figure. There has been an attempt to show that his armor goes back to the feather armor, in other words, to the shaman attire of the bird type. I cannot go further into the sources here. The feather helmet of the ancient Chinese shaman mentioned by B. Laufer and the feather-ornamented helmet of the gNas-c'un gurtum, as well as the report by Georgi in his "Alphabetum Tibetanum," point in this direction.

174 756 [247] This connection between warrior and bird only becomes meaningful if one understands it as a solarization of the ancestor hero. Both the mythologies of the most ancient Chinese excavations (cf. the works by C. Hentze) and the

[247 cont.]

174 Indic -- Ancient-Oriental conceptions show the bird (the Indian
756 Garuda) as a symbol of light in contrast to darkness which is popularly conceived as a snake (Garuda -- snake). The winged sun is a well-known phenomenon in Chinese antiquity, in the archaic cultures of the Near East, and in the religion of the Central American high cultures, as is the equating of sun bird and king or hero in Egypt. This motif of light battling against darkness, of the bird of light against the snake of darkness, is also so widespread in America that recently Paul Radin has set it up as a fundamental life-interpretation of the peoples; cf. Radin, "The Basic Myth of the American Indians," Eranos, 1949.

The warrior-shaman in the final analysis is none other than the mythical first bird that stands in a special relationship with the human ancestors and battles the forces of darkness, the evil in the world. He is thus drawn into the very ancient mythology of mankind and the very ancient experience of the battle between light and darkness as it has been formulated, say, by Von Ow for the life-interpretation of the Avesta: "The Eranic religion penetrated deeply into private life. According to the Avesta, the principal task was: to battle against the forces of darkness. This idea is supposedly symbolized by the clothing of the Eranian, which is regarded as armor" (Ow, Hom, pp. 142 f.).

The bird symbolism of shamanism is ambiguous. In Siberian shamanism the characteristic of flight comes more to the fore, in gurtum-shamanism more the characteristic of light. Finally, it is common to both that the shaman is defender of life. Light is life and stands in contrast to darkness and death. Therefore the shaman as representative of light and of life is necessarily also fighter and warrior.

c) Summary

174 Thus the circle closes around the Lamaistic gurtum.
756 The Lamaistic gurtum arose from two components, one pre-Lamais-
779 tic and one Lamaistic. The pre-Lamaistic component is the warrior-shaman. This in turn has two components; a special one, the development of the outward appearance from the fighting light-bird; and a general

[247 cont.]

174 one, the shaman as representative of the god of life (characterized by the tree of life, etc.).

756 Among the people Buddhism found in the warrior-shaman

779 a type which could be "converted" especially easily. It connected the tutelary figures of its religion with this popular shaman. It had been especially prepared for this type of possession-shamanism through the tantrist-magical realizations so that it could easily absorb it. What then remained of other shaman types was branded and fought as xara nom, black belief, by the new "orthodox" shamanism with the spread of Lamaism. This [248] opposition, dealt with much in the literature, is aptly characterized by Lessing in a conversation with his teacher: "... 'Then is a gurtum not a shaman?' I asked him. 'By no means, something much higher. What he invokes, those are the authentic spirits, not the unclean ones of the Bö (written in Mong. böge, shaman)' ..." (Lessing, Mongolen, p. 143).

d) Idol-shamanism

756 In what follows the justification for speaking of idol-

791 shamanism as a special matter will automatically appear. One

[778] could also call it simply "thing-shamanism," because a thing represents the person as shaman. Among the shamanistic idols the spirit-spear of the Tujen occupies a favored position.

The Spirit-spear

The relationship of soothsayer and spear. -- Here the difference in the shamanizing of a gurtum and that of a spear-soothsayer should be recalled (cf. the appropriate chapters in the first part, Anthropos, 47, 1952, pp. 18-33 [pp. 21-50 above in the HRAF translation]. Whereas the gurtum is completely

[787] possessed and in this state psychically closes himself off from the outside world, the spear-soothsayer remains in control of himself and awake. He does not go into ecstasy; only the spear is possessed by the spirit and affects the soothsayer. The soothsayer,

[248 cont.]

756 it is true, must have the special ability to "activate" the spear
791 and to interpret its movements in order to learn what the spirit in the spear wants, but he himself is not inwardly filled by it.

756 On the other hand, the relationship between spirit and
791 spear is much closer. It is the seat of the spirit and is treated as such. Like a shaman it receives a consecration, is clothed
778 with an "official garb": with bands, little bells, and mirrors. The people venerate it like a god that is present. In order to enter actively into a relationship with the world of men through soothsaying, healing, and exorcising evil, or in order to have an active effect on the outside world, this spear-idol needs a middleman who takes it in his hand and to whom it "speaks." This is the "idol-holder," the sdiendzẽn, rten 'dsin. He is not called a shaman, for it is not he, the soothsayer, but the possessed spear that is actually the shaman. The soothsayer is, as it were, merely a living extension of the idol, its loud-speaker.

778 How is the spear to be classified? As the spear is now used, it is to be regarded as a special kind of idol, as its name as spirit seat already suggests. The Tibetan compound rten-mduñ is not found in Ch. Das. However, analogous to the name sku-rten (gurtum) and corresponding to the character of the spear, the rten can here mean nothing other than container or visible representation of the deity: a weapon as seat of the deity. This suggests the question: Was the spirit-spear independent from the outset, or is it merely the tool of a shaman?

171 The spirit-spear as independent idol, in other words,
778 not as equipment of the shaman, is distributed throughout the Tujen and agricultural region of eastern Amdo. [249] One finds it frequently in temples and in family chapels, even among the Chinese. To what extent the Tangut nomads there possess it is beyond my knowledge. The spear must have had an
[174] independent significance in Lamaism even in early times, however, for one frequently encounters it in Lamic monasteries, and usually in conjunction with other standards (banners). The Geography of the Minchu-Hutukhtu is able to report: "In

[249 cont.]

171 Nanggardse there is a fearful chapel of the Gur, and in it there
778 is a lance (mduń) which is said by the worshipers to be sacred and is called 'remover of the thirteen enemies of the religion'"; according to W. Unkrig, Ms, p. 14. R. Bleichsteiner writes of a similar banner: "Another narrative reports on the victorious campaign of a barbarian prince across China, Hor and Grug-gug, during which he used a magical flag into which rNam-sras, the world guardian of the north, and eight companions had been conjured" ("Srog-bdag," p. 111).

The spirit-spear can easily be linked with other similar idols, such as Stabongonen, carriage axles, weather clubs, and noodle rollers among the Tujen, all of which are beribboned and hung with little bells and little metal disks. They, too, are used by a soothsayer in exactly the same way as the spirit-spear. This shows that it is merely one among the many shamanistic idols. That such stick-idols are very widespread not only in the Koko Nor region but also in other places in Tibet is shown from a remark by Jäschke: "... the local lha are not always represented by figures resembling human beings, but even by sticks, stones and similar fetishes" [cited in English], p. 599. And on page 7 he speaks of the Pekar idol, also cited by Bleichsteiner, and notes: "... consisting like most of the popular idols in those countries of a wooden stick or log decked with rags ..."; cf. also Bleichsteiner, op. cit., p. 112. Jäschke adds that this idol is certainly pre-Buddhistic. Such idols can be shown for all of northern Asia as far to the east as the Inao of the Ainu; for example, cf. Joseph Haekel, Idolkult und Dualsystem bei den Ugriern. The shamanistic use, however, seems nowhere to be so well attested to as in the case of the spirit-spear of the Tujen.

A second link can be established from the spirit-spear to the standard, flag, or banner. The spear as standard is an anciently known article, as are its sacredness and its veneration in the flag or standard cult. This cult was practiced above all by the Mongols in the form of the sülde veneration. Now
[174] it is well possible that this very sülde cult was "co-converted" to Lamaism along with the conversion of the Mongols, especially

[249 cont.]

171 since the Buddhists in their victory banner, the rgyal-mtsan, had
778 similar conceptions. The Mongolic Tujen would naturally also
have taken part in this change. Probably the spear-standard was
[174] at the same time also regarded as ancestor spear or clan idol; this
[614] fact is established beyond doubt for the nine-tipped sülde of
Genghis Khan. His spirit and his force have their seat in this
sülde; further details and relationships unfortunately cannot be
presented here; for that, cf., for example, the descriptions by
W. Lüdtke, "Die Verehrung Tschingis-Chans ...," in Archiv
für Religionswissenschaft, 25, 1927, pp. 110-115. In any case,
[614] it is striking how [250] each ayil (clan settlement) of the Tujen
is intent upon possessing a spirit-spear. Similar ideas can also
be shown elsewhere. For example, the Bhil in India are
acquainted with the clan spear at religious functions; see
W. Koppers, "Die Bhil ...," pp. 182 ff. Even more clearly
does the similarity with the spirit-spear and the connection
with the clan appear in the case of the clan standard of the
Chewsur [Khevsur]. The form of this standard with its bands,
the little bells, the ball-knob, etc. can scarcely be distin-
guished from the spirit-spear of the Tujen. Also, their clan
priest is practically a shamanistic soothsayer who works with
the spear standard. In view of the great significance that the
standards had among the Turks and Mongols (tuq-banner) and
in view of the lively history of these peoples, influences and
relics in the Caucasus are to be assumed from the first; cf.
Radde, The Chewsuren, pp. 100 ff., and Nioradze, Begräbnis,
pp. 10 ff. -- Sacral spears are abundantly known in Africa,
as are the gods' standards in the ancient Orient. The hitherto
not properly explainable Scythian pole appendages with their
hooks and prongs, perhaps for little bells and other hangings,
may also belong here. It is altogether possible that all these
standards are not simply representations and localizations of
deities, but were also used shamanistically in the manner of
the spirit-spear or the clan standard of the Chewsur.

Further connections also seem to exist between the
spirit-spear and the world-tree or the world-axle. One should
think for instance, of the cosmic significance of the jewel-
spear in the Japanese creation mythology, where it has a

[250 cont.]

171 778 function similar to the cosmic twirling pole in the milky original ocean of the South Asiatic world myth; see F. Numazawa, Weltanfänge [Original World], p. 345. Mention was made earlier of the world-pole among the Tujen; cf. above, pp. 319 ff. The conceptions connected with it are an ancient Mongolic heritage among them. The "golden nail" representing the world-pole, from which the dome of heaven is suspended, is interpreted among the Olöt Mongols as a banner that stands on the world-mountain Sumeru, and around which all the stars revolve. The same conception is found among the Ordos Mongols, where the golden nail or polar star is called 'the golden banner of the mountain Sumeru.' Among the Chalcha [Khalkha] Mongols this polar-star pole, like the jewel-spear among the Japanese, becomes the twirler with which one beats kumiss; see Lüdtke, op. cit., pp. 115, 118. Lüdtke would like to put the transformation of the world-pole into a banner in a later period, when the Mongols already possessed an extensively developed military organization. The Japanese jewel-spear, however, indicates that the basis of this conception goes back far beyond the Mongolic era (11). Accordingly, Lüdtke's view should perhaps be

11. The significance of the lance among the Ngadju Dajak [Dyak] in Borneo should be briefly pointed out here. The connection of lance, flag, tree of life, and "total deity" is still much more apparent and conscious there than in Central Asia and Tibet. Even the shamanistic priests as representatives of the "total deity" are much more strikingly involved in this conception than, for instance, the gurtum as representative of the god of life; cf. H. Schärer, Die Gottesidee, pp. 29 ff., 87, 148 ff.

corrected: "I would not want [251] to derive this whole

[251 cont.]

171 conceptual cycle from China either; there, too, to be sure, there
778 is a determining constellation called a 'standard,' not on the pole, however, but rather on the ecliptic" (op. cit., p. 117). At any rate, the astral spear or the standard is not merely the property of the Mongols (12). Here the similarity with the

12. The military flag cult of the Chinese in its well-known form is too recent to permit any ancient mythological conclusions; cf., for instance, Doolittle, Social Life, pp. 287 f.

cosmically conceived arrow of good fortune that was dealt with earlier should also be pointed out; see above, p. 321. -- After these references, which refer more or less to the spear alone, its significance in shamanism is easier to understand.

756 Spirit-spear and shaman. -- The spirit-spear stands in a
778 two-fold relationship with the shaman, once as world-tree and as weapon, and then as something independent and representative of the shaman.

171 In the case of Siberian shamanism, for which the sym-
756 bolism of the journey to heaven is so important, the shaman climbs up on the ladder, the tree, the pole, the bridge, etc.
778 into the world beyond. In the rite, therefore, the most varied representations of this earth-heaven connection appear. What, then, is more obvious than that the spear with its symbolism as world-tree or peak of the world-mountain should be drawn into it? Unfortunately, the evidence for a ritual use of the spear as heaven-ladder (bridge, bow) among the Central Asiatic peoples seems to be difficult to obtain. It must be all the more surprising that among the remote Australians the spear fulfills this function. M. Eliade cites Pettazzoni in this connection and says in his excellent work, Le Chamanisme, pp. 426 f.: "The bow being unknown in Australia, its place in the myth is taken by a lance which bears a long piece of material; the

[251 cont.]

756 lance having been implanted in the celestial vault, the hero
778 climbs all the way up with the help of the pennant" [translated
[171] from French].

However frequently the spirit-spear is used independently of a true shaman among the Tujen, it nonetheless is frequently enough part of the equipment of the gurtum. In his hand it is an important weapon. Just as the weapons and the armor of the ancient hero-ancestors endow him with special powers, so doubtless also does the ancestor spear. In the already-cited Geser
[773] legend of the Tujen, Geser takes the heavenly weapons for himself, which are all provided with the adjective sdier, for instance, sdier lēmu, sdier sēmu, etc., sacred arrow and bow. The things designated with sdier, however, are all adorned in a manner similar to the spirit-spear, above all with the colorful bands. This is supposed to express a consecration, a sacral
174 character. -- Now, however, when there is no true shaman, nothing remains but to make the spirit-spear independent.

756 It must represent the shaman and accordingly receives
778 a perfected outfit and an additional consecration, whereby,
791 as original weapon, it becomes an independent idol. It becomes tutelary-spirit possessed. As seat of the sülde it is from the outset already especially fitted for this. Since, however, it is not alive and cannot appear as a human being, [252] a man is appointed for it, the soothsayer. The latter takes over part of the operations of a true shaman, but without becoming the seat of a spirit himself. There takes place, as it were, a distribution of shamanistic functions: the essential, inner ones are peculiar to the spear; the unessential, outer ones to the soothsayer (13).

756
778

13. The shaman attire in other regions also has great similarity with the spear as spirit seat and effective unity with the shaman. It is "saturated" by spirits, who give signs of life by trembling, moving, etc.; cf. Eliade (Shirokogorov), Le Chamanisme, p. 143. Even though the spear as shaman equipment shares this property with the attire, this alone

[252 cont.]

756 778 still cannot explain its great significance and use.

The Other Idols

778 791 Just as the spirit-spear is the seat of a deity which is activated by a middleman, so also is a series of other idols. These may be: the table, the spirit-litter, weather club, carriage axles, noodle roller, etc. Of these the spirit-table and the god-litter are the most important.

The spirit-table bears its name unjustly, for it is not a [776] table, but the representation of an animal deity, the black tiger. This is confirmed by the fact that it is consecrated at the consecration of this tiger and is regarded as possessed by the latter. Furthermore, the intestines of the tiger are attached under the top, which, however, are not visible to the eye.

[787] The soothsaying with the table is done exactly as with the spear, except that it is held by two persons.

This deity, according to all the statements, is peculiar to the Chinese shamans. That it was originally foreign to the [776] Tujen is proved precisely by the superficial name given it, sirie purgan (table-deity), where in reality the top forms the back, the table legs are the tiger's legs, and the underside bears the intestines.

The spirit-litter has no Tujen name at all, but is simply called, as in Chinese, chiao-tzu or niang-niang chiao-tzu (litter of the mother). The litter is not the main thing, but the god's [532] figure sitting in it, which is executed as realistically as possible, with magnificent clothes, real hair, and flesh-colored face. The interior likewise contains the intestines, the heart, and the maternal organs. The figure is consecrated with the litter, at which time the inner organs are put inside.

This goddess likewise belongs to the Chinese shamans (fashih), who also undertake its animation. Frequently,

[252 cont.]
778 however, the lamas in the monastery do this. For soothsaying
791 the litter is taken up on the shoulders of four men, who then
[787] involuntarily follow the movements of the deity.

Summary

756 Both idol-shamanism and gurtum-shamanism form a unity
787 in their appearance. They have in common: the clothing
791 (= beribboning), the metal disks, the little bells or rattles, and possession by a spirit. They both belong in the conceptual realm of the connection [253] between heaven and earth and of the world- or shaman-tree that is hung with bells and mirrors; in this connection cf. the myths of the Golden or the songs of the Tujen, which tell about a tree that bears the sun, moon, and stars in its top. In the case of the human shaman all functions are united in one bearer, whereas in idol-shamanism these functions are divided between man and thing, but this division in turn constitutes a unity in the activities. There arises here the fundamental question: Is not the entire idol cult to be understood ultimately from this shamanistic standpoint? Does it not gain its real significance only through the living person? Certainly a great deal of what has hitherto been designated as "fetishism" or "idol cult" is at bottom merely a variant of shamanism, a static permanent form of that which the shaman represents for only a short period of time with great psychic upheaval: a direct link with the spirit world, culturally regularized, and ritually developed; making present and vivifying deities and demons that the human being wants to have with him.

Here it should be once more emphasized that these ideas are merely a sketch for a theory whose detailed presentation does not belong here.

3. The Bon Religion

791
779 Among the Bon there are three groups: the shepherd-Bon, the farmer-Bon, and the monastery-Bon. This division

[253 cont.]

791 is a purely popular one, and nothing about the inner relationship
779 of these groups to one another is indicated by it; they are probably not essentially different. The farmer-Bon have become most superficial and degenerate. They still wear as their sole distinguishing mark only the artificial brush garland, in order thus to imitate the massive braided turban of the shepherd-Bon; they have practically died out. -- The most important cultic
[765] implements of the Bon are taken from the human corpse: the
[534] double skull-drum covered with human skin, the whip plaited out of human skin (and probably with a bone handle), the thigh-bone flute, and the bone dagger. These implements are supposed to be taken from the corpse of an unmarried adult female person. By the special relationship to skeleton and corpse alone,
[174] the Bon might acknowledge an ancient Tibetan home, which, to be sure, is not only called the "snow land," but also the "land of corpses."

[789] Even though the Bon have much in common with the lamas, there is a series of ceremonies reserved for them, especially the various types of demon exorcism. They are even invited into the monastery by the lamas on the first and fifteenth day of every month, where they undertake these rites. Nothing more about a former opposition between
178 Buddhism and the Bon religion is to be noted here. It shares
791 with Lamaism the fate of gradual disappearance; indeed, in
779 its official form it has already preceded it in this. It is a striking fact that both the Bon religion and Lamaism wane as Chinese agriculture expands, although precisely the sedentary life [254] of the lamas in the large monasteries and the performance of the weather conjuration of the Bon should be especially appropriate for an agricultural culture. The reasons are certainly not religious in nature.

174 The Tujen, however, have probably preserved much
791 more of the Bon tradition than is recognizable at first glance.
779 The marriage customs and the popular poetry probably contain a great deal that would make this ancient layer clear and permit it to be followed deep into Tibet. It is difficult, however, to free everything from the Lamaistic embellishments.

[254 cont.]

4. Lamaism

779 The preceding accounts have repeatedly demonstrated
792 how great an influence Lamaism exerts upon the people. As the latest form it has also most strongly penetrated the entire religious life; it offers the people a large number of gods and saints; it gives them the mani-trees, prayer mills, treasure urns, chorten chambers, central forts, and obos; they have it to thank for a considerable part of the world-view. To be sure, one must differentiate the ecclesiastical Lamaism of the monasteries and monks from the popular Lamaism, which in its watered-down customs remains unburdened by complicated doctrines and tantristic rites. This popular Lamaism, however, would be unimaginable without the strong support and the permanent effect of the monasteries, which are already so closely linked with the people because their community is constantly renewed from the families of the people. An important piece of the religi-
792 ous picture would therefore be lacking if one did not at least in hasty strokes characterize the monastery, which for the Tujen of that region is their spiritual center. -- The relationships to Kumbum will be passed over, although they are not to be underestimated. One merely needs to recall that it was a Chi-t'u-szu (prince) who at the beginning of the eighteenth century through his personal pledge preserved Kumbum from Chinese revenge and destruction, so that his clan until the most recent
[624] times enjoyed monastic protection and the princes (T'u-szu) themselves on their visits were received by the lamas on their knees; in this connection, cf. Schulemann, p. 179.

The name of the Tujen monastery dGon-luṅ is Tibetan.
[103] dgon (pronounced gon) means literally "solitude, hermitage." In the figurative sense it has become the established expression
[192] for "monastery" (vihāra), because a monastery must be at least 1,000 steps away from any human habitation; cf. Ch. Das, p. 275; luṅ means "valley, district." Thus, dGon-luṅ is best rendered as "monastery-valley" or "monastery-district" or simply
[346] "monastery," for a lama monastery should not be imagined as

[254 cont.]

792 a closed building, but rather as a whole settlement with temples,
[346] halls, dwelling yards, chortens, chapels, little mani-houses,
and obos. To the Tujen there dGon-luń is simply the monastery.
[103] The official full name, however, is dGon-luń byams-pa gliń,
just as the full name of Kumbum is sKu 'bum byams pa gliń. Ac-
cording to B. Laufer, byams pa gliń means "temple of the
Maitreya"; see Filchner, Kumbum, p. V. Not [255] every
monastery has such a temple, and for this reason people always
like to mention it along with the monastery. The main temple
792 of dGon-luń contains such a gigantic image of the Maitreya
778 painted on silk, over ten meters long and several meters wide.
796 It is rolled up from the temple roof and allowed to hang down
over the front into the yard usually twice a year, namely, in
the first month after the tscham dances and on the sixth day of
the sixth month. The ceremony is called dšamba sguni dielgē,
that is, to hang out the Maitreya image; dšamba or šamba is the
Tujen pronunciation of byams-pa. The Chinese call the rite
simply shai Fuoeyeh, that is, to sun the Buddha. For the be-
[788] lieving populace it is the high point of the feast days; the
people make pilgrimages to the place in great crowds in order
to venerate the image with kowtows.

792 There is no Tujen name for the monastery; their desig-
nation Rgulõń (Rēgulõń) is only a corruption of dGon-luń. Even
103 the Chinese Êrh-ku-lung is nothing more than a derivation from
the Tibetan. Some people would like the êrh to be understood
as the Chinese "two," since it is supposedly the second monastery,
which was built anew after the destruction of the first; in fact,
one also often hears the name Ku-lung without this êrh. The
designation Yu-ning-szu, monastery for the protection of Sining,
has not prevailed among the people. It is used almost exclusively
in books and official documents.

792 The monastery corresponds to the Buddhistic require-
[361] ments in exemplary fashion, for it lies at the exit of a lonely
[346] forested valley and has been built up in part along its northern
[103] ridge, which bears the name Tuguān-ula, Tuguān mountain
[175] (Chin. T'u-kuan shan). A gigantic obo crowns its peak. Neither
oral nor written information concerning the founding of the

[255 cont.]

792 monastery could be obtained on account of the brevity of the visit.
175 The Sining chronicle reports nothing about it. Originally it seems to have been a Tibetan establishment. Until its destruction dGon-luṅ possessed great importance in Ambo. Then it was overshadowed by other monasteries. The patriotic monks in the first year of Emperor Yung-cheng had put themselves on the side of the Mongolic Koko Nor prince (ch'en-wang) bLo-bzan bsTan-'dsin. The consequence of this was that dGon-luṅ was destroyed by a Chinese punitive expedition in the year 1723 along with several other monasteries, among which was also sGo-maṅ-dgon (gSer-k'og-dgon-pa). Upon the request of the Tuguān Hutukhtu, who at that time resided in Peking, the emperor permitted the monastery to be rebuilt in 1733, as well as sGo-maṅ-dgon; cf. Hsü Kung-wu, pp. 113, 115; Schulemann, p. 179; Sining-Chronicle. After this reconstruction dGon-luṅ received the official name Yu-ning-szu and a memorial stone on which these events were noted. The text of this stone is reprinted in the Sining chronicle. One cannot see the stone itself. The lamas have immured it in order to be rid of the honorable but unpleasant memory. About 60 years ago the new monastery had to endure the Dunganen rebellion, which claimed the lives of many Tujen. It never again reached its old dimensions, of which an isolated remnant still remains, namely, the temple with the gurtum-deity dPekar and the spirit-spear of the monastery soothsayer.

792 [256] Today the monastery is under the county government of Huchu. Formerly it was independent with its lands,
[657] forests, and pastures and controlled many taxable Tujen villages. It numbers about 300 monks and several Tulkus, who are almost all Tujen. As affiliates under the supreme Tulku, the Tuguān Hutukhtu, its administrator mentioned to me also the following lamaseries: Man-t'ou-szu, a few kilometers northwest; Chin(g)-kang-ta-szu, 20 kilometers to the north; Chang-chia-szu, 65 kilometers southeast near Lotu; Hua-yüan-szu, 12 kilometers to the south, a Bon monastery; Hung-ku-szu, in the Lianchow region (Kansu); Ma-t'i(eh)-szu, in the Kanchow region (Kansu). These connections indicate how far the significance of the monastery must have extended. From the beginning it has been

[256 cont.]

792 a place for the cultivation of knowledge, and the fame of its learned Tulkus released the Tujen from their seclusion and drew them into the extensive domain of the Lamaistic world. The "Geography of Tibet," written in the Tibetan language by the Minchu Hutukhtu from the monastery sGo-maṅ-dgon around 1830, reports: "... the monastery dGon-luṅ, in which one counts up to 2,000 clerics and where formerly there lived: the two reincarnations lCaṅ-skya and Sum-pa mk'an-po, the author of the History of the Yellow Cap Doctrine, Žva-ser c'os byuṅ, 'T'uu-bkvan bLo-bzaṅ C'os-kyi Ni-ma, and other important learned personalities"; see MS, p. 40.

The importance of the lCaṅ-skya Hutukhtu has already been mentioned above on page 331. The first lCaṅ-skya Hutukhtu was born in 1641 in Amdo. His ancestors came from a region called the "Gray Meadows" (communication from Mr. Unkrig). This place name has been transferred to the person (lcaṅ-skya = meadow-gray). The child was recognized as a reincarnation of the Dharmaśvamin of the monastery dGon-luṅ and was called there at the age of eight. Then the young Tulku was sent to inner Tibet for study and returned again to Amdo until Emperor Kang-hsi called him to Peking. In the service of the emperor and of Lamaism the hutukhtu led an active life as church politician and scholar. His travels led him into Mongolia, to Tibet and Amdo, where, for instance, in 1709 he reformed the program of studies in dGon-luṅ and other monasteries and installed several Grand Lamas. He died in 1713; cf. Schulemann, pp. 177 f., where also further sources for a more detailed orientation concerning the hutukhtu and his earlier existences are given. The lCaṅ-skya Hutukhtu was counted among the four great church princes of Lamaism. He resided later in Peking, beside the Dalai Lama and Panchen Lama in Tibet, and the Jibtsun-Dampa in Mongolia; see Pander, "Geschichte des Lamaismus," ZfE, 1889, p. (202). In the European literature his name became known above all through Pander-Grünwedel's book, which under the title Das Pantheon des Tschang-tscha Chutuktu offers a description of the world of the Lamaistic gods, which is based upon an

[256 cont.]

792 illustrated work by this hutukhtu.

The other incarnation from dGon-luṅ, namely, the Tuguān Hutukhtu, is similarly famous. There is no explanation of this name. Perhaps it is a transference from the place to his person; it is better, however, to assume that the name of the mountain goes back to the hutukhtu, rather than the other way around. The Chinese way of writing the signs of this name [Illustrations a and b appear here] [257] varies as T'u-kuan, Tou-kuang, or T'ou-kuang, an indication that the phonetic imitation of a possibly Mongolic (Tujen) name, say, Toġan, is involved here. The Tibetan way of writing T'uu-bkvan is likewise quite strange, and therefore, according to Ch. Das, p. 577, the Mongolic name Toġan is rendered. As the first Tuguān Hutukhtu, Nag-dbaṅ c'os-kyi rgya-mts'o was called to Peking under Emperor Yung-cheng; he was born in 1679 and died in 1735; see Schulemann, pp. 178 f. The best known is his subsequent incarnation, the above-mentioned author of the work of religious history concerning the various Lamaistic and pre-Lamaistic systems and the Yellow Church; cf. Filchner, Kumbum, p. 181. He is supposed to have lived from 1702-1775 (communication from Mr. Unkrig). The Tuguān Tulkus likewise resided in Peking for the most part, whereby the relations to their tribal monastery dGon-luṅ did not suffer further; it is the case even today that many hutukhtus travel outside the country for years, in Tibet, India, Mongolia. In 1948, the present Tuguān Hutukhtu, according to the statements of his relatives from the Ch'ang-kou, had already been in Nanking in the ministry as expert for the Lamaist border region for more than two years. Curiously enough, his relatives were of the opinion that nowadays the Tuguān and lCan-skya (Ch'ang-chia) incar-
[775] nations are no longer differentiated and appear in only one representative. No clarification could be obtained from these statements. There seemed to be rivalries between the Li Clan and the Ch'ang Clan, who both claimed the incarnation succession.

In view of the pre-eminent position that these hutukhtus occupied in Peking, it is not surprising that many Tujen lamas

a: The temple yard of the Tujen monastery dGon-luñ. Left, the gable of the Tuguãn palace, Tuguãn-larõñ. In the background the foothill of the Tuguãn mountain, Tuguãn-ula. (Photo. Jos. Trippner.) b: Young Tujen woman in ancient dress.
142 Characteristic are: the high headdress, niudar, now prohibited;
292 the neck ring; the wide sleeve rings; the wide embroidered cloth
301 bands over the skirt. The pattern was the garb of a Tujen
531 princess. (Photo. Mission Archives, Sining.)

[257 cont.]

792 went there. Pander speaks (op. cit., p. 204) of Man-tzu or Chinese from Sining, who were accommodated in 13 temples in Peking (1889). These Man-tzu (= barbarians), however, could only have been Tujen, for the Chinese are not Lamaists, and the Tibetans (Fan-tzu) are specifically named by Pander. The monastery Sung-chu-szu is regarded expressly as a Tujen lamasery. Even today (at least up until 1948) almost all its monks come from the Sining region and are Tujen, as the monks from this monastery related during a visit home. To be sure the number has shrunk greatly.

771 These are all facts that must be taken into account in
792 judging the Lamaism of the Tujen. The people are proud of their famous monastery. It is their pilgrimage center. Young
[788] and old gather there at the festivals. They hold horse races
[527] and sing their old popular airs there. At the temple festivals with the magnificent dances the Lamist doctrine is deepened
[796] and clarified. In the venerable halls filled with incense they
[778] see their gods in magnificent statues, painted on silk, on walls and altars. There lie also the heavy sacred books of the Kandjur and Tandjur, which they bear on their backs around the sanctuary in order to free themselves from affliction or to fulfill a vow. In the temples and yards they watch the monks hold learned disputations, read the scriptures, recite the prayers. They invite them to undertake solemn religious services in their compounds, to give their children their names, to consecrate the old, [258] to bless the young, to pray for the dead, to cre-
[574] mate the corpses. The lama is a frequent and welcome guest in the family. Generally, the people seem to link themselves
[756] to the monastic life at the important stages of life. Even the
[778] shaman receives his consecration in the monastery. Every family was proud if one of its sons became a lama; indeed, it was even an unwritten law.

771 So it was, at least until the most recent times. Today, however, the young people no longer want to know anything
792 about becoming a lama. They prefer to attend the Chinese
177 schools and are intent on the new education. They despise the old and do not take it seriously anymore. What the

[258 cont.]

771 Minchu Hutukhtu wrote a hundred years ago in his "Geography
792 of Tibet" has already become true: "This home of the second Victorious Tsongkhapa was at one time famous in all Tibet ...
177 Now, however, it is not only under the pressure of the deluded Chinese and Mussulmanic doctrine, but there approaches the time when Tibetans and Mongols will believe the Kung-tzu, Lao-tzu, or the teacher Naniku of Ssei"; MS, loc. cit. If one thinks of the most recent events, even in that remote area, then one sees even this melancholy prophecy surpassed, for even the doctrines of a K'ung-tzu and Lao-tzu will no longer draw the Tujen into their jurisdiction. They, too, already belong to the past.

Conclusion

174 In the course of the work it became increasingly clear
771 that the religion of the Tujen no longer represents anything uniform and independent. Rather, it grew from roots of various origins into a colorful composite that is based on the varied past of the Tujen and their present-day homeland which lies in the middle between various peoples. In particular, however, Lamaism
[779] has fostered these international connections, even to Lhasa and Peking, and has contributed decisively to religious assimilation. In this respect, the Tujen share their fate with the neighboring peoples insofar as they are not Chinese. Their belief is linked to a common layer, which, as Lamaistic popular religion, extends over the entire area of influence of the Yellow Church. Thus, the principal questions raised earlier concerning shamanism, the Bon religion, the cult of heaven, etc. are not questions that can be resolved from the point of view of the Tujen alone. Their religion has a much more general significance. To be sure, a number of special characteristics can be established. These do not suffice, however, for drawing definite conclusions concerning the origin and ethnic affiliation of the people. And even less do they permit the delimitation of any individual Tujen groups, which certainly are present. As sources for such cultural-historical and ethnic relationships, almost

[258 cont.]

174 only the language with the folk literature still remains, perhaps
771 also the dress, but above all the tradition and the written history, which are chiefly contained in Chinese reports. This does not mean that the religion and ethnology are not to be considered; rather, they must be drawn upon in a complementary and explanatory fashion. [259] It is too late, however, to arrive at clear results in a purely folkloristic or ethnological way. That might still have been possible perhaps 50 years ago.

174 Now, however, the Sinicization of the Tujen approaches
177 its conclusion. For a long time with respect to religion they had
771 a strong support in the Lamaistic world and defied the Chinese influence, although they had taken over their agriculture many generations ago. Today, however, they have detached themselves from this support; indeed, the support itself has already become very decayed. The reasons for this cannot be discussed here. The Tujen are giving up themselves, their language, their religion. When their children have become grandparents, Chinese culture will again have incorporated into itself a new domain which will be differentiated from the other provinces only insofar as the Chinese proverb can be applied: "At ten miles the language is different, at a hundred the custom." -- And yet all are "Chinese." [The supplement to the bibliography appears here; see foreign text.]

Erster Teil: Das religiöse Brauchtum

I. Einleitung *

1. Der Name der Tujen

In der europäischen Literatur werden die Leute der in Frage stehenden Volksgruppe gewöhnlich *Tujen* (*Turen*, *T'ou-jen*, *T'u-jen*) genannt. Das ist der Name, den ihnen auch die Ch'inghai-Chinesen beilegen. *Tujen* heißt soviel wie Eingeborner, Mann vom Orte. Das chinesische *t'u* bedeutet Ort, Boden, Erde; und das *jen* bedeutet Mensch, Mann, Leute. Die Chinesen haben ihnen diesen

* Die Anmerkungen ([1], [2], [3] etc.) finden sich in dieser Arbeit nicht als Fußnoten, sondern als selbständige Unterkapitel und zwar jedes Mal unter der Überschrift „Anmerkungen". Vgl. zu diesem Kapitel p. 17.

Namen gegeben, weil bei ihrer Einwanderung diese Leute schon vorhanden waren. Sie wenden diese Bezeichnung auch auf andere Völkerschaften des Grenzgebietes an, z. B. in Szechuan ; damit ist über die ethnische Bestimmung nichts ausgesagt. Man darf aber nicht meinen, daß nun die Tujen tatsächlich die ersten Einwohner jener Gegend sind, wie P. A. VOLPERT es getan hat ; vgl. VOLPERT : Etwas über die *T'u-yen*, Ureinwohner Westkansus (Anthropos 18/19. 1923/24). Sie sind ihrer Tradition zufolge ebenfalls eingewandert, aber vor den Chinesen.

Im übrigen werden noch folgende Namen gebraucht : *Dalden*, *Dolden*, *Daldy* (PRZEWALSKI ; GRUM-GRŽIMAJLO u. a.) ; ferner *Dchiahour* (HUC und GABET); Kansu-Mongolen, Mongols of Kansu (DE SMEDT und A. MOSTAERT); Monguor (DE SMEDT und MOSTAERT). A. MOSTAERT möchte das Wort *Dalden* vom mongolischen *Dolot* ableiten, womit die Mongolen die Tujen benennen ; vgl. MOSTAERT, The Mongols of Kansu, p. 84 ; DMF, p. II (1).

Die Tujen selber bezeichnen sich mit *Moṅgol kun* (mongolische Menschen) oder *tsiġan Moṅgol* (weiße Mongolen) im Gegensatz zu den andern Kukunor-Mongolen, die sie *xara Moṅgol* (schwarze Mongolen) nennen. Der von P. A. MOSTAERT eingeführte Name *Monguor* geht auf diese Selbstbezeichnung zurück ; die von ihm fixierte Dialektvariante spricht das *l* nach *r* hin und hat vor dem offenen *o* noch einen *u*-Vorschlag. Die benachbarten Tanguten gebrauchen für die Tujen den Namen *Karloṅ*, der offenbar tibetischen Ursprungs ist. In der tibetisch geschriebenen Geographie des sMin-'Gyur (Minchu)-Hutuktu wird der Tujen-Stamm *rGya-Hor* genannt, gesprochen *Dyahor*, was also die gleiche Bezeichnung ist, die HUC und GABET benutzen. Auch heute noch ist dieser Ausdruck beim Volke im Gebrauch, welches ihn mit dem derben chinesischen Wort *tsa-chung* (Misch-Same), Bastard, wiedergibt.

An alle diese Namen knüpfen sich verschiedene Erklärungstheorien, die nicht hierher gehören. Keine Bezeichnung ist restlos eindeutig. Am ehesten kämen noch in Frage *Chiahor* und *Monguor*. Da aber *Tujen* am meisten eingebürgert ist, sei dieser Name auch an dieser Stelle weiter gebraucht. Das passendste wäre jedoch, die Selbstbezeichnung der Tujen anzunehmen : Weiß-Mongolen.

2. Die Verbreitung der Tujen

Das Hauptverbreitungsgebiet der Tujen in der heutigen Ch'ing-hai-Provinz liegt südlich vom Richthofen-Gebirge, und zwar im Dreieck, das vom Sining- und Taitungfluß gebildet wird. Das Kernstück in diesem Dreieck bilden die nördlichen Seitentäler des Siningflusses, nämlich das Sha-t'ang-ch'uan, das Ha-la-chih-kou, das Hung-nai-tzu-kou und das Shui-mo-kou. Fast der ganze Bereich gehört zur Stadt Huchu, welche im Oberlauf des Sha-t'ang-ch'uan liegt. Außer im Kreise Huchu siedeln die Tujen vorwiegend noch in dem Kreise Minho und als kleinere Gruppen in den Kreisen Lotu, Tatung, Kungho. Ihren Wohnbereich nennen die Tujen selbst *Amdo* (tibetisch). Ihre Gesamtzahl läßt sich nicht genau angeben, da die amtlichen Statistiken unzuverlässig sind. Ein Abriß einer Ch'inghai-Chronik (1943) setzt

Nach einer Karte aus: Anthropos 24. 1929, p. 144/45.

- Klöster.
- Chinesische Städte.
- Chinesische Dörfer.
- Tu-jen-Siedlungen.
- Tuo-chia 朵家, die Heimat des Gewährsmannes.
- Ch'ang-kou 長溝, die Heimat des jetzigen T'u-kuan Hutuktu, angeblich auch des lCańskya-Hu-tuktu 章嘉呼圖克圖.
- dGon-luń 多公隆, Êrh-ku-lung-szu 兒科隆寺 oder Yu-ning-szu 佑寧寺, das Tujen-Kloster Rĕgulŏń (Rgulŏń).

ihre Gesamtzahl für Ch'inghai schätzungsweise auf 27 000-30 000 fest; vgl. HSÜ KUNG-WU: *Ch'ing-hai chih-lüeh*. Andere Statistiken jüngster Zeit, besonders die der Zeitschrift *Hsi-pei-t'ung-hsün*, sind mir verloren gegangen. Die von P. M. HERMANNS angeführte Zahl scheint mir zu tief gegriffen; s. HERMANNS, Nomaden, p. 30.

Religiöses und geistiges Zentrum der Tujen des Kreises Huchu ist das Kloster dGon-luń, in der Tujensprache *Rĕgulōń* genannt [1] (*Rgulōń*).

3. Stand und Aufgabe der Forschung

Über die Tujenforschung ist nur wenig zu berichten. Die europäische Wissenschaft wurde erst in der zweiten Hälfte des vorigen Jahrhunderts auf diese Völkerschaft aufmerksam, nachdem die französischen Missionare HUC und GABET auf ihrer Tibetreise (1844-46) das Kukunorgebiet durchzogen und auch die Heimat ihres Reiseführers streiften, der ein ehemaliger Tujen-Lama war; vgl. M. HUC, Travels, p. 281. Nach ihnen kamen auch andere Forscher mit den Tujen in Berührung; so PRZEWALSKI (1873), POTANIN (1884), ROCKHILL (1891/92). D'OLLONE besuchte eine verwandte Volksgruppe in Südkansu (1906), aber nicht die Tujen von Ch'inghai. Ebenso hielt sich MANNERHEIM nur bei den Shera-Yögur auf, die man gerne mit den Tujen in Beziehung setzen möchte. 1905-1908 machte A. TAFEL seine Tibetreise und besuchte kurz die Tujen in der Gegend des heutigen Huchu. FILCHNER ist auf seinen Reisen nicht im Gebiet der Tujen gewesen, obwohl er Bilder von ihrer Tracht bringt. Die von diesen Forschern verfaßte Literatur im einzelnen anzuführen, erübrigt sich. Für nähere Angaben sei auf den Aufsatz von A. MOSTAERT verwiesen: The Mongols of Kansu; vgl. Literaturverzeichnis am Anfang dieser Arbeit. MOSTAERT erwähnt aber nicht A. TAFEL.

Alle diese Reisenden haben keine besondern Studien über die Tujen betreiben wollen, weshalb auch ihre Berichte nur kurz und mehr oder weniger allgemein gehalten sind, wie es eben bei großen Reisebeschreibungen nicht anders möglich ist. Sie begnügen sich meist mit Angaben über Kleidung, Sprache, Ortsnamen und die mutmaßliche Herkunft. Verhältnismäßig umfangreich ist das Kapitel, welches TAFEL den Tujen widmete; s. Tibetreise, Bd. I, pp. 241-257. TAFEL muß gute Berichterstatter gehabt haben, daß er bei seinem zweitägigen Aufenthalt in Wei-yüan-pu so zuverlässig berichten konnte. Seine kurze Darstellung orientiert zwar ziemlich gut über die Fragen, die mit den Tujen zusammenhängen, ergeht sich jedoch zu viel in umstrittenen Hypothesen über die Geschichte. Auch sie bietet, wie die oben angeführten Berichte, praktisch wenig Stoff, aus dem sich ein Bild über die Kultur der Tujen gewinnen ließe.

Die eigentliche Erforschung der Tujen setzt erst mit den Scheutvelder-Missionaren ein, die anfangs unseres Jahrhunderts im Amdo-Gebiet ihre Arbeit aufnahmen. P. DE SMEDT gab sich bald an die Erlernung der Tujensprache und sammelte umfangreiches linguistisches Material, das er mit dem bekannten Mongolisten P. A. MOSTAERT zu drei großen Werken verarbeitete: die Phonetik (Anthr. 24/25), das Monguor-Französische Wörterbuch

3: Schröder AE9 Monguor

(Peking 1933), die Monguor-Grammatik (Peking 1945). P. L. SCHRAM studierte die sozialen Verhältnisse der Tujen und veröffentlichte eine Monographie über die Heirat (Shanghai 1932). Alle diese Arbeiten erschienen, nachdem die Scheutvelder Missionare ihr Kansugebiet wieder aufgegeben hatten, das sie den Steyler Missionaren überließen. Nach ihrem Weggang geriet die Erforschung der Tujen wieder ins Stocken. Die Sprache war bereits ziemlich gut erfaßt. Es fehlten aber noch die Aufnahme der reichen Volksliteratur und der Vergleich mit den andern Tujendialekten in Kansu. Für die Soziologie war ebenfalls ein gutes Fundament gelegt. Jedoch die andern Bereiche waren noch nicht in Angriff genommen, so vor allem die Religion und materielle Kultur (Wirtschaft, Kleidung).

Als der Verfasser nun 1946 in jenes Gebiet kam, wollte er darum gerade an diesen Punkten ansetzen. Die Tujen sind bereits weitgehend sinisiert. Aber in ihrer Sprache, Religion und Kleidertracht konnten sie bis in die jüngste Zeit noch eine große Eigenständigkeit bewahren. Daher wurden vor allem die Sagen und Lieder aufgenommen, die religiösen Gebräuche studiert und die Tracht der Tujenfrauen beschrieben. Am anziehendsten erschien dem Verfasser die Religion, welche in der folgenden Arbeit behandelt werden soll. Die Darstellung ist nicht endgültig, wie weiter unten immer wieder deutlich wird; aber sie bringt doch das Grundlegende und Wesentliche.

Weil es nun über diesen Gegenstand fast keine literarischen Berichte gibt, mußten die lebendigen Quellen ausgenützt werden, welche dem Verfasser in seinem dreijährigen Aufenthalt (bis 1949) neben eigenen Beobachtungen zur Verfügung standen. Das waren in der Hauptsache ein hervorragender Tujen-Mann, ein lebendiges Buch seines eigenen Volkstums, und ein Tujen-Sänger mit einem Riesenschatz an Sagen, Märchen und Liedern.

Die Arbeit zerfällt in zwei Teile. Der erste ist eine kritische Darstellung der aus den Quellen gewonnenen Tatsachen, wobei einleitend die Haupt-Quelle selbst (der Gewährsmann) zu kennzeichnen ist. Der zweite Teil bringt die theoretischen Ergebnisse aus diesen Tatsachen, nämlich den Versuch, ein Gesamtbild der Religion zu zeichnen und die Schichten aufzuweisen, aus denen sie gebildet wird. Es handelt sich also nicht nur um einen freien Feldbericht, sondern auch um eine systematische Aufnahme des religiösen Bestandes und dessen Auslegung. Zu bedauern ist, daß diese Arbeit an Ort und Stelle wegen der plötzlich einbrechenden Unruhen abgebrochen werden mußte; und nur der Hilfsbereitschaft seiner Konfratres verdankt der Verfasser die Sicherstellung des gesammelten Materials. Neben den PP. EICHINGER und GRÜNEWALD, S. V. D., sei hier besonders des P. RICH. HAAS, S. V. D., gedacht, den bald darauf in der Kukunor-Steppe ein gewaltsamer Tod ereilte.

4. Die Quellen (der Gewährsmann)

Der Gewährsmann stammt aus Tuo-chia, d. h. Tuo-Heim, etwa 1 *km* östlich von Chi-chia-ling, das am Bergwege von Kan-chia-pu (im Sha-t'ang-ch'uan) nach Pai-nai (im Ha-la-chih-kou) liegt. Tuo-chia hat seinen Namen von der Sippe des Gewährsmannes und umfaßte früher vielleicht vier Gehöfte,

3: Schröder AE9 Monguor

von denen aber ein Teil durch einen Bergrutsch zerstört wurde. Jetzt sind nur noch zwei Höfe und der Tempel übrig. Die Tuo waren nicht immer hier ansässig. Sie stammen aus der Nähe des Tujenklosters Rgulöň, wo sie noch vor 100 Jahren zwei große Pferdeweiden besaßen. Später zog einer der Ahnen in die Nähe von Chi-chia-ling und bebaute das ziemlich ausgedehnte Bergland, welches dem Kloster tributpflichtig war, heute aber Privatbesitz der Tuo-Familie ist und dem Kreise Huchu Steuern zahlt. Es sind etwa 200 chinesische Morgen Land.

Der Bericht hat in erster Linie Geltung für diese Gegend, nämlich für die Tujendörfer Chi-chia-ling, Ta-yang-chüan, Hsiao-yangchüan, Sha-pa-kou bis hinein ins Na-ling-kou. Da aber nach eigener Beobachtung und der Aussage des Gewährsmannes die Sitten im Kreise Huchu ziemlich einheitlich sind, läßt sich der Geltungsbereich weiter ausdehnen, und zwar auf die Dörfer zwischen Huchu und Rgulöň. Diese Dörfer haben unter sich einen sehr regen Verkehr und sind weitgehend miteinander verwandt. Zahlenmäßig wäre mit diesem Bericht etwa ein Viertel aller Tujen des Sining-Gebietes erfaßt und zwar in einem Gebiet, das allgemein als ihr Verbreitungszentrum gilt.

Der alte Tuo ist Sippenältester und hat noch zwei jüngere Brüder, die mit ihm, seinen Söhnen, Sohnsfrauen und Enkelfamilien zusammen wohnen. Mit seinem Vornamen heißt er *yifula*, d. h. Berggeist, weil er bei der Namengebung dem Berggeist geweiht wurde. Er ist im Zeichen des Schafes geboren und zwar im zweiten Monat; das ist nach europäischer Rechnung im März 1883.

Der Alte ist, wie alle Tujen, Lamaist und hängt am Glauben und den Sitten seiner Väter. In der ganzen Umgebung ist er als einer der wenigen bekannt, die sich noch sehr gut im überlieferten Brauchtum auskennen. Darum lädt man ihn überallhin als Zeremonienmeister, Festredner, Opfervorsteher und Sänger ein. Fragt man in jener Gegend jemanden nach Sitten und Gebräuchen, dann erhält man gewöhnlich die Antwort: „Geh zum alten Tuo, der weiß es am besten."

Dazu besitzt er den Vorteil, der unter den Tujen selten ist, daß er die chinesische Klassikerschule absolviert hat. Er kann sehr gut lesen und schreiben, besser als die meisten der chinesischen Nachbarn. Geschichtsbücher, Klassiker, Ortschroniken usw., die zum Teil in der Literatensprache geschrieben sind, versteht er ohne Schwierigkeit. Die Fandse-Sprache beherrscht er nicht so, daß er fließend sprechen könnte. Aber er kennt die Termini der Lamas und weiß ziemlich gut bei einem Wort zu unterscheiden, ob es echtes Tujen oder ein Fandse-Wort ist. Er selber hat in seiner Jugend in chinesischen Zeichen eine Menge Fandselieder aufgezeichnet, die er übersetzen und erklären kann, auch einige Sagen und Reden. Von der Tujensprache behauptet er, sie sei früher auch geschrieben worden, nur habe man die Schrift verloren. — Die Sprache der Kukunor-Mongolen spricht er nicht. Er meint aber, man könne sie zur Not verstehen. Die Tujen wohnen auch zu weit von diesen Mongolen weg; nur die in der Nähe von Huchu haben über das Kloster Kuo-mang-szu hinaus eine lockere Verbindung mit den Mongolen am Tai-t'ung-Fluß.

Es war im Anfang nicht leicht, den Alten, der seit 20 Jahren nicht einmal mehr in dem nahegelegenen Sining war, zu mir auf die Missionsstation nach Kan-chia-pu einzuladen, obwohl der Weg nur zwei Reitstunden betrug. Im Spätherbst 1946 kam er einmal nur für einen Tag. Ich frug ihn damals über das Herbst-Dankopfer aus; das Ergebnis war ein Artikel, welcher im „Anthropos" 37/40 erschien. Der Alte wurde nicht klug daraus, was ich vorhatte. Zudem hatte ich ihn nicht respektvoll genug behandelt und den Fehler begangen, daß ich ihm nicht genug Branntwein anbot. Ich kannte ja noch nicht das Sprichwort der Chinesen: *t'u-jen chien chiu, chia-la chien liu*; frei übersetzt: „Die Tujen sind scharf auf Branntwein wie Ziegen auf Grünes."

Erst nach einem Jahre kam ich wieder in Fühlung mit ihm. Damals feierte ich in einer benachbarten Gemeinde ein Fest und ließ den Alten durch einen Boten zum Hammelessen einladen. Er erhielt den Ehrenplatz neben mir, tat sich gütlich am Fleisch und wurde von einem nach dem andern zum Trinkspiel aufgefordert, wobei er reichlich auf seine Rechnung kam. In diesem gehobenen Zustand verhandelte ein alter Chinese, sein ehemaliger Klassengenosse, mit ihm und erreichte die Zusage, daß er für einige Tage bei mir in der Station wohnen wolle. Als er hierauf im Januar 1947 erschien, wurde er aufs freundlichste empfangen. Er saß mit mir zu Tisch und bekam soviel Gerstenwein als ihm lieb war, wovon er aber auch eine gehörige Menge vertrug. Beim Abschied am Nachmittag schenkte ich ihm Zucker, Korinthen, Gebäck, Wurst und Zigarren, alles Sachen die dort nicht alltäglich sind, womit er zu Hause, wie er sagte, die Großzügigkeit des Europäers bewies, der ihn als vollen, ebenbürtigen Menschen behandelt habe. Als ich dann noch bei den Missionsschwestern eine kostenlose Krankenbehandlung für ihn und seine Frau veranlaßte, war sein Mißtrauen geschwunden; er erschien von da an immer wieder für einige Tage bei mir, und zwar genau auf das abgemachte Datum, was bei diesen Leuten erstaunlich ist.

Hier sei zur Ehre des Alten gesagt, daß er nachher überaus anspruchslos war. Er hielt auf seine Ehre und wollte ernst genommen sein. Im übrigen wohnte er mit den Angestellten der Missionsstation im gleichen Raum, schlief auf gleichem Kang und aß das gleiche Essen, obwohl ich ihm ein eigenes Zimmer und eigene Kost anbot. Er meinte: „Für mich alten Bauern paßt das nicht; ich will mit deinen Leuten zusammen sein, damit ich Gesellschaft habe." Nur an bestimmten Tagen, z. B. bei Festen oder Besuch, mußte er einen ordentlichen Trunk haben. Das regte ihn sehr zum Erzählen an, wodurch ich auf allerlei Dinge aufmerksam wurde, die ich mir merkte, um nachher mehr darüber zu erfahren.

Der Alte erhielt keinen festgesetzten Lohn. Er sagte: „Wir zwei sind jetzt aneinander gewöhnt wie Freunde. Wenn du mir ab und zu ein Stück Tuch gibst für Kleider, dann soll es schon recht sein." Es war eben Sache des Gesichtes. So bekam er denn ab und zu Tuch für sich und seine Enkel oder, wenn er krank war, einige Medikamente. Oder ich schenkte ihm zum Herbstfest ein Paar Spruchrollen, kaufte Tusche und Papier, schickte ihm ab und zu ein Krüglein Wein usw. Andererseits machte er mir an den üblichen Feiertagen seine Aufwartung oder schickte Gebäck, ein Stück Fleisch,

etwas Milch, so wie es zwischen guten Bekannten Brauch ist. Führte sein Weg zufällig an meiner Station vorüber, dann kam er kurz herein, um sich nach mir zu erkundigen. Auch seine Verwandten stiegen öfters ab, wenn sie ihre Säcke zur Wassermühle im Tale brachten, vor allem dann, wenn der Alte gerade da war. So versammelte sich mitunter eine ganze Menge Tujen, Männer, Frauen und Kinder im Hofe und waren zu Gast. Sie erzählten, sangen und lachten, und ich mußte sie gegen ein Entgelt an Weizen photographieren. Auf diese Weise war ich bald bei ihnen in den Bergen bekannt.

Eines Tages brachte mir der Alte einen jungen Mann heran und sagte: „Hier ist ein Tochtermann von mir; der kann alle Tujenlieder auswendig und weiß viele Sagen. Wenn du willst, wird er alles diktieren. Auch Bilder kann er malen." Natürlich wollte ich. So brachte ich eine ganze Reihe Lieder, Märchen und Mythen zu Papier, darunter auch die Gesersage. Er malte mir dazu eine Serie Bilder und sang mit unermüdlicher Geduld die einzelnen Melodien vor, bis ich sie auf der Flöte nachspielen und aufzeichnen konnte. Wenn wir dann abends bei einem Kruge Wein zusammen saßen, sangen die beiden Männer ihre Lieder, und ich blies die Flöte dazu. Dann fühlten sie sich wohl und meinten: „Nächstens werden wir alle herkommen, Männer, Frauen, Buben und Mädel; du schlachtest ein Schaf und sorgst für den Gerstenwein; und wir werden tanzen und singen."

Leider kam es nicht mehr soweit! Die Zeitereignisse machten einen längeren Aufenthalt nicht mehr möglich. Am 1. Juli 1949 nahm ich Abschied von den lieben Leuten, wie wir meinten, nur für einige Wochen. Tatsächlich aber sollte ich sie nicht mehr wiedersehen. Im Herbst des gleichen Jahres starb der alte Tuo, und mit ihm sank ein Stück alten Wissens ins Grab.

Meine Berichte über das Leben der Tujen sind also unvollständig, weil vorzeitig abgebrochen. Auch ging die Sammelarbeit nicht der Reihe nach. Bald diktierten die beiden nur Lieder. Bald erzählte mir der Alte von den Sitten; bald mußte ich für einige Wochen fort; bald drängte bei ihnen die Feldarbeit, so daß sie monatelang ausblieben. Zwischendurch konnte ich einiges selber beobachten und die Berichte kontrollieren; oder ich traf andere Tujen und ließ mir von ihnen erzählen.

Immer wieder fand ich, daß die Berichte des Alten die genauesten, reichhaltigsten und zuverlässigsten waren. Als ich einmal einen Teil der Altersweihe beobachten konnte, frug mich der Alte gleich: „Na, wie war es? Nicht wahr, ich habe doch alles richtig erzählt?" Er stand auf dem Standpunkt: „Ich alter Mann lüge nicht mehr." Mitunter sagte er auch: „Was ich sage, ist wahr; was ich nicht weiß, sage ich nicht. Ich habe alles selber daheim mitgemacht, geleitet und gesehen. Frag die andern." Er konnte mich auch vor andern warnen: „Was der sagt, ist nicht ganz richtig, der übertreibt; das ist noch ein junger Bursche." Auch unter seinen Landsleuten galt der alte Tuo als ein ehrlicher Mann; besonders sein Klassengenosse betonte dessen Zuverlässigkeit. Er vertrat auch mir gegenüber seine Auffassung, wenn ich meinte, ich hätte etwas so und so gesehen: „Pater, du hast dich vertan." Von einer Schönrederei mir zuliebe war wenig zu merken.

Als er einmal schwer krank war und mehrere Monate nicht aufstehen konnte, äußerte ich vor andern: „Wie schade, wenn der alte Tuo stürbe; er ist ein so ehrlicher, guter Mensch." Das hat man ihm später erzählt und es tat ihm sehr wohl. Wie ich einmal unbemerkt von meinem Zimmer aus feststellen konnte, bestärkte ihn das in seinem Ehrgefühl: „Was? Der Pater sagt, ich sei ein ehrlicher Mann. Ich bin es mir schuldig, daß ich die Wahrheit sage."

Das Haupthemmnis bei ihm war die Angst vor der Lächerlichkeit. Es dauerte lange, bis er sicher war, daß ich ihre Sitten achtete, nicht verurteilte und nicht als rückständigen Aberglauben brandmarkte. Man kann sich hierin auf die Dauer nicht verstellen. Mit sicherem Gespür merken es die Einheimischen, ob man ihnen mit Wohlwollen und Hochachtung entgegentritt oder ob man sich ihnen überlegen dünkt. Da der Alte kein Dummkopf war und auch manches chinesische Buch gelesen hatte, wußte er z. B. daß die Chinesen ihre Randvölker gerne als Barbaren abtun. Auch war ihm bekannt, wie die chinesische Umgebung die Tujen als rückständige „Eingeborne" belachte. Und schließlich hatte er gehört, daß die Christen vieles als Aberglauben bezeichnen, was den Tujen und den Chinesen lieb und teuer ist. So ist es verständlich, wenn er mitunter sagte: „Pater, wundere dich nicht, wenn ich das und das erzähle. Wir glauben daran." Oder: „Bitte, lache nicht darüber, wenn wir so etwas tun." Von seiner Seite aus wurde dieses Hemmnis weitgehend durch die echt tolerante Einstellung des Asiaten überbrückt: „Alle Religionen sind gut. Das Ziel ist gleich, nur die Wege sind verschieden." Von meiner Seite aus war die Haltung maßgebend, daß man jedes Menschen Überzeugung achten soll, der es ehrlich meint, auch wenn er objektiv auf falschem Wege sein mag. Dasselbe gilt auch für die Religion. Und wenn ich dem Alten sagte: „Ich glaube dies und dies, du glaubst das und das; aber darum bin ich doch nicht besser als du; es kommt auf das Gewissen an", dann stimmte er gerne zu. Es wurde auch nie der Versuch gemacht, ihn religiös zu beeinflussen. Vom Christentum wußte er wenig. Er empfand es aber auch nicht als Geheimnistuerei, wenn er sich bei meinen Leuten erkundigte. Sie betonten ihm stets: „Du kannst alles sehen und hören, was wir tun. Wir haben keine Geheimreligion. Alles sagen wir dir. Wenn du unsere Bücher lesen willst, kannst du sie haben." Eines Tages kam er mit der Frage: „Soll ich nicht Christ werden?" Ich sagte ihm: „Das hängt von dir ab. Das Herz des Menschen kann man nicht zwingen. Jeder soll nach seiner Erkenntnis handeln."

Sehr erleichtet hat es seine Offenherzigkeit, daß er so manche Ähnlichkeit zwischen den christlichen und Tujen-Zeremonien fand. So war er über die Feuerweihe an Karsamstag ganz überrascht. Er sah in der Kirche Altäre, Heiligenbilder, eine Öllampe. Er sah, wie sich die Christen auf die Knie warfen. Er wußte: auch wir opferten Brot und Wein, auch wir hatten einen Himmelsherrn, auch wir hatten eine heilige Mutter; auch wir verbrannten Weihrauch, hatten geweihtes Wasser, segneten Häuser und Vieh; auch wir beteten über die Kranken und salbten sie mit Öl; auch wir hatten eine Taufe; auch wir hatten eine Flurprozession und beteten den Wetter-

segen ; auch wir hatten einen Erlöser, ähnlich wie ihr Geser ; auch wir hatten Tempel mit feierlichem Gebet und Gottesdienst ; auch wir hatten Mönche und Nonnen ; auch wir hatten gute Engel und böse Dämonen.

So fühlte sich der Alte in unserer Umgebung immer mehr heimisch, wenn er auch nicht mehr vom Christwerden sprach. Am Schlusse war sein Urteil jedoch : „Euere Religion ist besser. Ihr helft den Menschen."

Unsere gegenseitige ehrliche Hochachtung hatte die Folge, daß mich der Alte in seinem Bekanntenkreis, vor allem bei den Lamas, ins rechte Licht rückte. Sie betrachteten mich als einen, der selber Religion hat und sich nicht über ihre Götter und Mönche lustig macht. So wurde ich denn auch eines Tages von einer Tujenfamilie als „Beter" für eine Leichenfeier eingeladen, was ich jedoch ablehnte. Kam ich in die Tujen-Lamaserie, dann wiesen mir die Mönche einen sauberen Raum an für die Messe. Sie verstanden, wenn ich für das „Opfer" reines Wasser erbat, wenn ich keine Störung liebte. Dann stellte ich ein Kreuz vor die Bilder der lamaistischen Gottheiten und feierte im Beisein von neugierigen, aber stillen Lamas das Meßopfer. Und wie ich niemals erwartete, daß sich die Leute z. B. hinknieten oder sonstwie Zeichen der Ehrfurcht gaben, genauso wenig erwarteten sie ein ähnliches Entgegenkommen von uns. Wenn übrigens gewisse Reisende berichten, wie sie sich hätten weissagen lassen oder wie sie sich von dem und jenem Hutuktu den Segen geholt hätten usw., so macht das auf die Bevölkerung nur wenig Eindruck, abgesehen davon, daß die Leute ein solches Verhalten durchschauen und oft nur als eine überflüssige Anstandsgeste gelten lassen.

Trotzdem ich auf dieses gute Einvernehmen hin allerlei zu sehen und zu hören bekam, weiß ich doch recht gut, daß ich lange nicht alles erfahren habe. Niemand wird gerne einem Ausländer alle Schattenseiten seines Volkes oder heikle Dinge erzählen. Das war bei dem ausgeprägten Ehrgefühl des Alten auch nicht anders zu erwarten. Er war z. B. nicht zu bewegen, die bekannten Berglieder zu diktieren, die oft recht derbe Anzüglichkeiten bringen. Dann sagte er : „Für mich Alten paßt das nicht, für dich auch nicht. Ja als ich jünger war ..." Tatsächlich sind jüngere Leute diesbezüglich freier. Aber auch dann fragen sie noch : „Sind auch keine Frauen in der Nähe ?" Nicht zu übersehen ist, daß der Alte genau wußte, daß meine Aufzeichnungen auch ins Ausland kommen sollten. Er erzählte mir von dem Gewährsmann des P. De Smedt, der diesem geholfen habe, Bücher zu schreiben und sogar weit fort in der Mongolei gewesen wäre. — Gewöhnliche ungebildete Bauern lassen sich leicht mit der Bemerkung abfinden : „Wenn du nach Europa kämst, würdest du da nicht fragen, was sie dort essen und trinken und was sie für sonderbare Sitten haben ? Was für Lieder sie singen, welche Götter sie verehren ?" Und man kann tatsächlich oft von den Leuten hören : *K'an i-ko jê-nao, k'an i-ko hsi-ch'a*, d. h. „Laßt uns mal den Trubel anschauen und was Seltenes sehen." Bei dem Völker- und Religionsgemisch in Ch'inghai sind die Leute hierin viel großzügiger.

Der Alte war sich sofort darüber klar, daß meine Aufzeichnungen ein Buch bilden würden. Und er war stolz darauf, dabei mitzuhelfen : „Ihr Europäer seid zu bewundern. Wir Tujen tun nichts, um unsern Nachkommen

unsere Geschichte aufzubewahren. In einigen zehn Jahren sind wir Chinesen geworden; dann weiß man nichts mehr von unserer Sprache, unsern Sitten, unserer Religion. Und du willst nun alles aufschreiben, damit nichts vergessen wird; dein Verdienst ist groß."

Ein anderes Hindernis bei der Aufnahme war das Alter des Gewährsmannes. Er ermüdete sehr leicht, machte Abschweifungen, konnte mitunter in der interessantesten Erzählung plötzlich fragen: „Lebt dein Vater noch? Wie alt ist er? Gehst du nächstens an den Kukunor?" — und dann verlief sich alles in einer zwanglosen abwegigen Unterhaltung. Oder er fühlte sich auf einmal unwohl, wollte gleich schlafen gehn usw. Offenbar hatte er etwa diese Einstellung: Ich bin hier bei einem guten Bekannten zu Gast, so wie bei meiner Sippe; man redet über dies und jenes, geht heim, wann man will, kommt wieder ... So kam es auch vor, daß er sich einstellte, wenn ich nicht zu Hause war, nur um die Leute zu besuchen, mit denen er so bekannt war. Als Sippenvater an ein freies, eigenherrliches Leben gewöhnt, war ihm aller Zwang verhaßt.

Schließlich ist noch zu berücksichtigen, daß es für einen Einheimischen nicht leicht ist, gerade das herauszugreifen, was dem Fremden wissenswert erscheint. Ihm ist alles selbstverständlich. Und auch der Fremde kann nicht auf einmal, auch nicht beim dritten und vierten Male alle Einzelheiten erschöpfend fragen. Aber auch hierin kam mir der Alte soweit wie möglich entgegen.

5. Die Aufnahme

Die Unterhaltung und Befragung geschah immer auf Chinesisch, eine Sprache, die alle Tujenmänner und fast alle Tujenfrauen sprechen, außer wenn sie unter sich sind. Heute sind in den meisten Dörfern Schulen, in denen Chinesisch die vorgeschriebene Unterrichtssprache ist. Da ich die Tujensprache erst lernen wollte, kam auch nur das Chinesische in Betracht; und bei unserer beiderseitigen Vertrautheit mit dieser Sprache war die Möglichkeit eines Mißverstehens sehr gering. Bei etwaigen Unklarheiten des Dialektes konnte der Alte immer die entsprechenden chinesischen Schriftbezeichnungen angeben; er erklärte dann den Sinn in verschiedenen Wendungen.

Der Alte ging davon aus, daß ich die Tujen-Sprache lernen wollte. Darum diktierte er mir über einen bestimmten Gegenstand kurze Sätze, die ich notierte; z. B. „Der Lama kommt. Man fegt das Haus. Man verbrennt Weihrauch. Die Lampen stellt man auf den Tisch, usw. ..." Leider habe ich diese Sätze nicht aufbewahrt. Danach gab er mir auf Chinesisch eine Wiederholung des Sinnes; einige Worterklärungen schlossen sich an. Das war jedesmal der erste Bericht. Diesen schrieb ich sofort in Deutsch auf. Manchmal fiel er sehr knapp, manchmal etwas länger aus. Immer aber war kurz und bündig der Gang einer Handlung, die Eigenart einer Zeremonie usw. zusammengefaßt. Da es mir aber tatsächlich nicht zuerst auf die Sprache ankam, sondern auf den Inhalt, frug ich nach jedem Bericht ergänzende Einzelheiten; bisweilen sofort anschließend, bisweilen erst im Laufe des Tages oder sogar nach mehreren Tagen, so wie es meine Berufsarbeit erlaubte.

Diese Einzelheiten fügte ich unter den entsprechenden Stichworten dem Erstbericht bei. Anfangs ließ ich auch die Tujenwörter im Text. Später aber setzte ich sie unter dem Stichwort „Ausdrücke" an den Schluß eines jeden Kapitels. Selbstverständlich begriff auch der Alte bald, daß es mir in erster Linie auf die Sache und nicht auf die Worte ankam. Darum überraschte er mich eines Tages mit folgender Bemerkung, welche die Grundlage zur Einteilung des Ganzen bot: „So, jetzt werde ich dir zuerst erzählen, was wir für das Glück der Familie tun, für das Glück des Einzelmenschen, für das Glück der Herden und Felder."

Zu den aufgezeichneten Berichten machte ich meine eigenen Beobachtungen, frug andere, verglich mitunter die Sitten der benachbarten Volksgruppen, fand bisweilen eine Bemerkung in der Literatur, und fügte diese Ergänzungen als eigene mit Zahlen versehene Anmerkungen zu jedem Abschnitt hinzu.

So hat jedes Kapitel zwei Teile. Der erste Teil bringt zunächst einen kurzen **Bericht**, dann unter bestimmten Stichwörtern die **Einzelheiten** dazu, und schließlich die **Wörterliste**. Dieser Teil hat ausschließlich den Gewährsmann zur Quelle. Der zweite Teil ist vom Schreiber selber, nämlich die numerierten **Anmerkungen**. Sie beruhen fast ganz auf eigener Beobachtung oder anderen Quellen, die jedesmal angegeben sind.

Es ist aber nun nicht so, als wäre der erste berichtende Teil ein wörtliches Diktat, das den Schreiber jeder weiteren Mühe enthoben hätte. Er mußte vielmehr alles nach ethnologischen Gesichtspunkten mit dem Alten erarbeiten, an Hand von stets wiederkehrenden Fragen, wie sie sich in den Stichworten spiegeln. Dabei sollte, soweit eben möglich, die schlichte und klare Ausdrucksweise des Alten beibehalten werden. Immer wieder habe ich ihm die einzelnen Kapitel an Hand meines deutschen Stenogramms in Chinesisch vorgelesen: „Höre einmal zu! Jetzt lese ich dir vor, was du gesagt hast." Hatte ich etwas nicht richtig wiedergegeben, sagte er sofort: „Das habe ich nicht gesagt; das ist so und so." Manchmal kam er nach einigen Tagen wieder und frug: „Kann ich noch einmal hören, was du notiert hast? Mir ist noch etwas eingefallen, schreibe das und das hinzu." Er wußte dann jedesmal genau, auf welchem Blatt die Stelle war, obwohl er nichts davon lesen konnte; ein Beweis für seine Aufmerksamkeit und sein gutes Gedächtnis.

Manchmal mag es scheinen, als bringe die sprachliche Einkleidung dieses ersten Teiles zu sehr meine europäischen Fachausdrücke und nicht die einfache Sprache des Gewährsmannes. Das ist aber nicht der Fall; denn sowohl im Chinesischen als auch in der Tujen-Sprache finden sich solche termini technici. Chinesen und Tujen haben eigene Wörter für Trance, Betrachtung, Opfer, Libation, Gebet usw. Sie unterscheiden zwischen Schlachtung und Darbringen eines Opfers, zwischen Mönch und Laie usw. Es sind ja Anschauungen eines Volkes, das nicht nur weitgehend vom Lamaismus mit seinen reichhaltigen religiösen Formen beeinflußt ist, sondern auch in regem Verkehr mit der chinesischen Kultur steht. Darum sei betont, daß alle Wörter am Schlusse eines Kapitels, die unter dem Stichwort „Wörterliste" stehen, vom Gewährsmann stammen, samt dem Hinweis auf eine etwaige tibetische

oder chinesische Herkunft [3]. Es ist nicht verwunderlich, daß so viele tibetische Fremdwörter aufgeführt werden; denn Tibetisch ist die offizielle Sprache des Lamaismus, der einen so breiten Raum im Volksleben einnimmt. Hier sei erwähnt, daß der Alte die Ausdrücke aus dem Tibetischen oder dem Mongolischen als „höhere Sprache" oder „Literatursprache" bezeichnet hat, eine Wertschätzung, die er dem Chinesischen nicht zubilligte.

Schließlich noch ein Hinweis auf die Eigenart dieser Arbeit. Sie stellt eine Volksreligion dar, und zwar die einer bestimmten Gruppe. Das besagt erstens, daß sich nicht alles für das Kukunorgebiet, auch nicht für alle Tujen, verallgemeinern läßt. Zweitens wird man keine Ausführungen über die Glaubenslehre, die offiziellen Riten oder geheimen Praktiken des klösterlichen Lamaismus und der höheren Bonreligion finden. Darüber geben die tibetischen und mongolischen Schriften Aufschluß. Es war auch nicht notwendig, die wesentliche Literatur hierüber heranzuziehen, wenigstens nicht in größerem Umfang. Zwar ist das nicht selten geschehen, aber doch nur dann, wenn es zum Verständnis der Volkssitten erforderlich schien. Mit Vorliebe wurde dabei vom Sprachlichen ausgegangen. Andererseits ist eine Darlegung der gelebten Volksreligion eine Hilfe für die Kenntnis der offiziellen Religion. Der Volksglaube mit seinen abwechslungsreichen Sitten wirft wieder neues Licht auf die Vielgestalt des klösterlichen Lamaismus, der so viele vorbuddhistische Züge aus dem mittelasiatischen Vorstellungsbereich angenommen hat.

6. Die Umschrift der Tujensprache

Der Umschrift für die Tujenwörter und die tibetisch-mongol. Fremdwörter liegt die Schreibweise des DMF zugrunde. Aus praktischen Rücksichten wurden jedoch die großen Buchstaben durch kleine ersetzt und die diakritischen Zeichen vereinfacht. Folgende Tabelle bringt zuerst die hier angewandte Schreibweise (S), darunter die von P. A. MOSTAERT im DMF (M) und darunter die Lautwerte des Anthroposalphabetes (A).

Konsonanten

	Laryngale	Velare [2]	Mediogutturale [2]	Praeguturale	Palatale	Palatalisierte [1]
S	*h*	*ġ x*	*g k*	*y*	*ż ś dż tś*	*s dz ts*
M	*χ*	*Ġ χ*	*G k'*	*y*	*Ż ś DŻ tś*	*ś DŹ tś'*
A	*h*	*ġ x*	*g kh*	*y*	*ż ś dż tśh*	*ś dź tś*

	Dentale	Dentilabiale	Labiale [2]	Liquide	Nasale
S	*d t s dz ts*	*f*	*b p w f*	*r l*	*ṅ n m*
M	*D t' s DZ ts'*	*f*	*B p' w f*	*r l,r*	*n n m*
A	*d th s dz tsh*	*f*	*b ph w ff*	*r l*	*ṅ,n n m*

[1] Nur vor den Diphtongen *ia, ie, id* und vor *i*.
[2] *g, g, b* tragen im Anthroposalphabet (A) das Enttonungszeichen „-".

g, ǵ, b, d sind immer stimmlos. Darum ist das Enttonungszeichen (-) überflüssig. *p, t, k, ts, s, tš, k* sind immer aspiriert, weshalb sich das Aspirations *-h* erübrigt. *d* und *t* werden nur in Verbindung mit *dz* und *ts* palatalisiert, so daß ein Palatalisationszeichen nicht notwendig ist. Dasselbe gilt für *s, dz, ts, sdz, sts,* die nur vor *i, ia, ie, iä* palatalisiert werden. z. B. statt des *dźia* (nach dem Anthropos-Alphabet) steht einfach *dzia*.

Das DMF hat außer *l* und *r* noch einen Zwitterlaut, der etwa dem englischen einmal angeschlagenen *r* entspricht, und setzt dafür immer *r*. Der Dialekt in der Gegend meines Gewährsmannes hat für diesen Zwischenlaut lange nicht so viele Belege. Die Leute unterscheiden dort fast immer zwischen *l* und *r* und fast immer im Sinne des Schriftmongolischen, wie ich später feststellen konnte. Nach dem DMF kann *ǵar* „Feuer" und „Hand" bedeuten; lautlich wäre kein Unterschied. Meine Gewährsleute hingegen sagen für „Feuer" ganz klar *ǵal* und für „Hand" *ǵar*.

Das *f* ist vor *u* immer bilabial und fungiert als Bilabial gerne für das tibetische Anfangs-*b* in Lehnwörtern; z. B. *fdzaṅ* (Weihrauch) für das tib. *bsaṅs*. Ferner ist bei tib. Lehnwörtern zu beachten, daß die stummen Konsonanten der Schriftsprache meist mitgesprochen werden.

Vokale

S	*i*	*ü*	*ē*	*ę*	*ĕ*	*ä*	*a*	*ō*	*o*	*u*
M	*i*	*ü*	*ē*	*ę*	*ę*	*ä*	*a*	*u*	*o*	*u*
A	*i*	*ü*	*ę*	*ę*	*ĕ*	*ą*	*a*	*o*	*ǫ*	*u*

Die Nasale sind *ā, ē, ō, ä*. Sie kommen meist in Verbindung mit *ṅ* vor. Ein Strich über einem Vokal bedeutet Dehnung. Die Diphtonge *ie, iä, ia, iu, io* sind immer steigend. Es gibt nur einen fallenden Diphtong, nämlich *ou*; dafür ist immer *ō* gesetzt, weil das *u* fast kaum wahrnehmbar ist. Eine Besonderheit stellt der Murmelvokal *ĕ* dar. Es ist in der Umgangssprache oft schwer feststellbar, ob es sich bei leichten Silben um *i, e, u* usw. handelt, besonders bei Kasusendungen. So findet sich mitunter im Text dieses *ĕ* für *i* und neben dem eindeutigen *i* des Nominativs oder Akkusativs oder für das *u* des Dativs usw. z. B. *morĕ* neben *mori* (Pferd) oder *morinĕ* neben *morini* (des Pferdes), oder *tieṅgĕrdĕ* neben *tieṅgĕrdu* (dem Himmel) usw.

Als Umschrift für das Chinesische ist die von GILES-WADE verwandt, für das Tibetische die von GRÜNWEDEL mit Modifizierungen, für das Mongolische die von UNKRIG.

Anmerkungen

[1] Der gewöhnliche chinesische Name ist Êrh-ku-lung szu, seltener Yuning szu. Über die Geschichte und Bedeutung dieses Klosters und seiner Tulkus (Ch'ang-chia und T'ukuan Hutuktu) vgl. die Ausführungen am Schlusse des zweiten Teiles.

[2] Bei Fertigstellung des Manuskriptes erfuhr ich, daß P. L. SCHRAM noch andere Monographien über die Geschichte und Gesellschaftsordnung der Tujen in Vorbereitung hat.

[3] Herr UNKRIG hatte die Güte, die Wortlisten nachzuprüfen. Dabei stellte sich heraus, daß der Gewährsmann ziemlich zuverlässig war mit seinen Angaben über die tibetischen Äquivalente. Wo es nötig schien (nicht immer), sind diese Äquivalente in der eindeutigen Form der Schriftsprache (tib. und mong.) den einzelnen Kapiteln hinzugefügt worden mit dem Vermerk: (UNKRIG). Herrn UNKRIG verdanke ich noch manch andern sprachlichen Hinweis und vor allem die Einsicht in die Lexika und lamaistische Literatur, die sonst nicht erreichbar war.

II. Bräuche um Religionsdiener

1. Der Geisterspeer-Wahrsager *

Bericht

Das Wahrsagen mit dem Geisterspeer heißt wie alle andern Arten des Wahrsagens durch eine Gottheit „den Geist befragen". Es geht so vor sich:

Man holt einen Geisterspeer, falls man nicht selber einen in der Familie hat. Dann lädt man den Wahrsager ein. Er wird mit Tee und Brot bewirtet. Unterdessen fegt man den Hof und den Ort, wo die Wahrsagung stattfinden soll. Im Hofe bringt man in der üblichen Form das große Weihrauchopfer dar, welches während der ganzen Zeremonie brennen bleibt. Der Wahrsager zieht ein langes Kleid an, nimmt die Mütze ab, wäscht sich Hände und Gesicht und spült den Mund. Dann tritt er vor den Speer, der entweder in den Boden gerammt oder von einem Manne gehalten wird, und macht einen dreifachen Kotou. Er erhebt sich, faßt den Speer mit beiden Händen in der Mitte des Schaftes und hält ihn senkrecht vor sich hin. In dieser Stellung betet er das Einladungsgebet. Während dieses Gebetes steigt der Geist herab. Der Speer fängt an zu zittern und mit ihm die Arme des Wahrsagers; man hört die Schellen rasseln. Jetzt trägt der Bittsteller seine Sache vor und erhält vom Geiste im Speer Anweisung, was er zu tun hat. Der Wille und die Antwort des Geistes offenbart sich aus den Bewegungen des Speeres, z. B. durch Stampfen, Hochspringen, Schütteln. Auch der Wahrsager frägt den Speergeist und teilt dessen Antwort mit. Ist die Wahrsagung vorbei, so betet der Wahrsager das Abschiedsgebet. Der Speer beruhigt sich und steht still. Der Geist ist fort, und der Wahrsager stellt den Speer wieder beiseite und macht seinen dreifachen Kotou.

Das Speerwahrsagen wird fast immer bei allen Zeremonien geübt, um den Geist als Zeugen herabzurufen. Die Wahrsagung geschieht dabei stets in der gleichen Weise.

Einzelheiten

Der Wahrsager: Der Wahrsager heißt „das Geweihte Fassender". Er geht mit dem Geist eine enge Verbindung ein, wird aber nicht von ihm besessen. Jedoch ist er nicht Herr über seine Bewegungen, sondern der Geist.

---

* Anmerkungen siehe pp. 23-26.

Dieser schüttelt den Speer und die Arme des Wahrsagers. Der Wahrsager kommt auch nicht in Extase, wie andere Schamanen, bei denen der ganze Körper bebt.

Nicht jeder ist fähig, vom Geiste bewegt zu werden und dessen Sinn zu erfahren. Erst durch Ausprobieren entdeckt man diese Eigenschaft; das geschieht meist allein an einem einsamen Ort. Wenn in einem Orte kein Wahrsager ist, so bitten die Leute den einen oder andern, den sie für geeignet halten, er möge es einmal versuchen, besonders wenn es dringend notwendig ist, z. B. bei einem heranziehenden Gewitter oder bei plötzlicher Krankheit. Eigene Schulen oder Lehrer gibt es nicht. Das Speerwahrsagen wird nicht in der Familie weitervererbt.

Die Speerwahrsager bilden eine besondere Art, die von andern Wahrsagern und Schamanen verschieden ist. Jeder übt für sich seine Tätigkeit aus. Unter sich stehen sie in keinerlei Verbindung und haben keine gesellschaftliche Sonderstellung oder Rechte. Auch haben sie keine eigenen Lehren oder Geheimnisse wie z. B. gewisse Schamanen. Es sind gewöhnliche Bauern mit Frau und Kind.

Wohl können auch Lamas, Bonpriester und andere Schamanen mit dem Speer wahrsagen, aber auch nicht alle; und dann hat das mit ihrem Stand nichts zu tun. Darum ziehen sie dabei nicht ihre eigene Amtstracht an, falls sie diese nicht so schon tragen.

Der Speerwahrsager ist nicht an einen bestimmten Geist gebunden wie z. B. der Schwertschamane, der nur seinen Schutzgeist herabrufen kann. Ein Speerwahrsager kann mit allen Speeren und allen Geistern wahrsagen, zu jeder Tag- und Nachtzeit und an jedem Orte, mag er auch 1 000 Meilen weit wandern.

Fig. 1. Geisterspeer.

Darum ist der Speerwahrsager der von den Tujen am meisten gebrauchte Wahrsager. Man hat fast in jedem Dorfe einen solchen, und er ist leicht zu finden, weil sonst keine besondern moralischen und gesellschaftlichen Voraussetzungen notwendig sind. So amtet er als Wahrsager und Geistrufer bei fast allen Unternehmungen, wie beim Hausbau, Orakel, Opfern, Festen, Reisen usw.[10]

Der Speer: Der Geisterspeer heißt schlechthin „das Heilig-Erhabene". Er sieht aus wie ein gewöhnlicher Speer, nur ist er schöner. Unmittelbar unter der sehr langen Spitze befestigt man eine Menge bunter Bänder in den

fünf heiligen Farben und Zeremonientücher (*Hada*). Ebenfalls unmittelbar unter der Spitze, aber durch die Bänder verdeckt, befindet sich ein Kranz von kleinen Schellen und eine Reihe von dollar-großen Metallspiegeln. Die Bänder heißen „Weihebänder". Sie können aus allen möglichen Stoffarten genommen werden, einerlei woher sie stammen und wozu sie bereits verwandt wurden. Durch die Bänder ist der Speer geweiht, so daß der Geist darin wohnt. Durch die Schellen verkündet er seine Tätigkeit. Die Metallspiegel stellen seine Allwissenheit dar, wodurch er alles wie in tausend Spiegeln sieht. Früher waren diese Spiegel aus Gold. Jetzt aber sind es gewöhnlich nur Kupferplättchen, die an einer Öse, ähnlich wie Knöpfe, angeheftet werden. Die Zahl der Bänder, Schellen und Spiegel ist nicht vorgeschrieben.

Die Herstellung des Speeres: Das Holz des Schaftes muß wild gewachsen sein. Nie darf selbstgepflanztes Holz oder solches von bewohnten, belebten Gegenden genommen werden; denn es ist nicht rein. Man sucht es darum in einsamen Wäldern und Bergen. Das vornehmste Holz ist Sandelholz. Da dieses aber selten ist, nimmt man meist die Bergesche. — Das Eisen ist gewöhnliches Schmiedeeisen. Über seine Herkunft bestehen keine Vorschriften. Man kann es kaufen, von alten Geräten abnehmen usw.

Jedermann darf einen Geisterspeer haben und jedermann kann ihn selber verfertigen, nie aber Frauen. Wenn der Besitzer jedoch einen schönen Geisterspeer haben will, geht er zu einem geübten Handwerker, Schreiner und Schmied. Die Regel verlangt, daß sich der Handwerker vor der Arbeit den Mund spüle, Gesicht und Hände wasche und diese über den Rauch von Zypressenfeuer halte. Auch die Werkzeuge werden abgeräuchert. Der Schmied wirft überdies noch Zypressenweihrauch in sein Schmiedefeuer.

Der Handwerker kann zu Hause in seiner Werkstatt arbeiten oder auch in der Familie seines Auftraggebers. Die einzelnen Teile werden getrennt angefertigt, also der Schaft vom Schreiner, Spitze und Fuß vom Schmied. Sie bringen die Teile zum Hause des Eigentümers. Dieser opfert dann auf der Lade vor dem Buddhabild zwölf Dampfbrote (oder gebackene Brote), ein rotes Stück Tuch und ein Maß Gerste. Die Handwerker legen ihre Instrumente auf das Getreide im Scheffel, und alle machen vor dem Buddhabild Kotou, während draußen das Weihrauchopfer dargebracht wird. Die Gerste erhält der Schreiner, die zwölf Brote mit dem roten Tuche erhält der Schmied.

Wer den Speer zusammensetzt, ist ganz gleich. Es sind keine besondern Zeremonien damit verbunden. Nun besorgt der Eigentümer Bänder, Schellen, Kupferplatten. Die Schellen sind die gewöhnlichen kleinen Rasselschellen, wie Pferde sie um den Hals tragen. Man kann den Speer in ein Lamakloster bringen oder auch zu Hause weihen lassen; die Zeremonien sind an beiden Orten gleich.

Die Weihe des Speeres: Den Speer kann kein gewöhnlicher Lama weihen; es muß ein lebender Buddha sein. Nur er hat die Vollmacht, einen Geist in dem Speer wohnen zu lassen.

Nachdem der Hutuktu in der üblichen Weise bewirtet ist, die allgemeinen Zeremonien des Lama-Empfanges vollzogen sind, und die Tormas

vor dem Hausaltar stehen, beginnt die Weihe. Junge Hutuktus nehmen sie in der Hauskapelle vor, alte jedoch bleiben auf dem warmen Kang im Haupthaus sitzen.

Der Hausherr rammt den Speer vor dem Lama in den Boden, falls er ihn nicht während der ganzen Zeremonie aufrechtstehend in seinen Händen hält. Ein anderer bringt auf einem Tablett die Angebinde für den Speer. Zuerst werden die Bänder, dann die Rasseln und die Spiegel angeknüpft. Will es ein Hutuktu nicht selber tun, so besorgt es ein assistierender Lama oder sonst ein Mann. Jedes Stück wird vor dem Anbinden in den Weihrauch gehalten, den man in einem Eisenlöffel bereithält.

Ist der Speer so hergerichtet, dann bringt ihn der Hausherr entweder in die Kapelle oder auf die Lade vor dem Hausaltar, wo er ihn in einen großen Ständer steckt. Er verbrennt vor ihm duftenden Sandelholzweihrauch, stellt brennende Öl- oder Butterlämpchen hin, opfert kleine Schälchen mit Gerste, Wein und Wasser und schließlich ein großes mehrpfündiges Weizenbrot. Der Hutuktu begibt sich jetzt selber vor den Speer und besprengt ihn mit dem geweihten Wumba-Wasser. Hierauf setzt er sich mit gekreuzten Beinen auf eine weiße Filzmatte vor den Speer und betet das Weihegebet. Dann erhebt er sich, nimmt von einem dargereichten Tellerchen eine Prise Tibetgerste, bläst darüber und wirft sie mit der rechten Hand über den Speer. Währenddessen machen alle Anwesenden vor dem Speer Kotou, die Männer im Raume selber, die Frauen vor der Tür im Freien.

Jetzt erst kann der Geist im Speere wohnen. Welcher Geist das ist, hängt ganz von dem Eigentümer des Speeres ab. Er teilt das vorher dem weihenden Hutuktu mit, und dieser betet ein dementsprechendes Weihegebet. In einem Speer wirkt immer nur ein Geist. Nie nimmt der *Tiengère* oder der Himmelsgott Sitz im Speer. Es sind immer gewöhnliche Geister, z. B. die Muttergöttin, der Tigergott, der Berggeist usw.

Nach der Weihe bleibt der Hutuktu bis zum folgenden Morgen im Hause und wird dann mit einem entsprechenden Lohne verabschiedet. Der Hausherr aber lädt seine Freunde und Bekannten ein und feiert mit ihnen bei Gerstenwein und Liedertanz bis spät in die Nacht das neue Ereignis.

Aufbewahrung des Speeres: Da auch ein ganzes Dorf einen Speer weihen lassen kann, so kommt es oft vor, daß dieser einfach im gemeinsamen Ortstempel aufbewahrt wird. Auch bei Privatleuten ist das leicht der Fall, weil der Tempel als der vornehmste Platz gilt. Im Tempel selber steht er in einem Holzständer auf einem der vielen Altäre neben den andern Göttern. Bisweilen lehnt man ihn einfach in einer Götternische an die Wand.

Will jemand den Speer in seinem eigenen Gehöft aufbewahren, dann ist eine eigene Kapelle erforderlich. Die meisten Hauskapellen werden gerade für so einen Speer hergerichtet. Auch hier kann er in einem Gestell stehen, an die Wand gelehnt oder in den Lehmboden gerammt sein. Es kommt nur darauf an, daß der Speer aufrecht steht. Man dürfte ihn z. B. nie flach auf den Altar legen. Vor dem Speere bringt der Hausherr öfters das kleine Weihrauchopfer dar. Es ist nicht erforderlich, daß ein Speer im Hause des

Dorfwahrsagers aufbewahrt wird, ja viele Wahrsager haben selber überhaupt keinen Geisterspeer.

Der Raum oder der Tempel, worin der Speer steht, heißt einfach „Heiligen-Haus". Im Gehöft ist es meist nur ein Zimmer. Dieses muß von allen andern Räumen durch eine Wand getrennt sein und eine eigene Außentür besitzen. Man darf die Kapelle nicht so anlegen, daß sie auch noch durch einen andern Wohnraum erreicht werden kann. Sie muß sich im Haupthaus befinden. Um aber jede Gefahr einer Verunreinigung auszuschalten, wird die Kapelle mit Vorliebe auf dem Dache des Haupthauses errichtet. In welchem Teil oder auf welcher Seite des Haupthauses sie sein soll, bestimmt der Wahrsager. Abgesehen von der Stille ist der Grund für diese strenge Trennung von den andern Räumen der, daß man beim Durchschreiten anderer Räume unrein werden kann, besonders dann, wenn sie den Frauen zugänglich sind.

Reinheitsvorschriften: Für gewöhnlich darf jeder Mann oder Junge den Speer berühren, ihn holen und fortbringen. Auch dürfen sie beliebig die Kapelle betreten. Nie aber dürfen Frauen den Speer berühren oder die Kapelle besuchen. Sie gelten immer als unrein. Für die Männer gelten aber überdies noch gewisse Tabuvorschriften.

Die Frau des Mannes oder irgend eine andere Frau in der Familie darf sich nicht im Wochenbett befinden. Erst zehn Tage nach Abschluß des Wochenbettes, d. h. 40 Tage nach der Geburt, ist der Mann rein. Hat er eine andere Familie mit einer Wöchnerin besucht, so ist er schon sofort nach Abschluß des Wochenbettes rein, d. h. 30 Tage nach der Geburt.

Trauertragende sind 49 Tage unrein, wenn es die eigenen Familienmitglieder des Toten sind. Sind die Eltern gestorben, dann gelten die Kinder 100 Tage als unrein. Hat jemand am Begräbnis einer fremden Familie teilgenommen, dann ist er nur 3 Tage unrein.

Diese Reinigkeitsvorschriften gelten auch für den Wahrsager. Er darf in dieser Zeit nicht die Kapelle betreten, erst recht nicht den Speer berühren oder sogar wahrsagen. Ist die Zeit abgelaufen, dann sind die Männer von selbst wieder rein; eine eigene Reinigungszeremonie gibt es nicht [1].

Wörterliste

Wahrsagen:	*purġandë sila* = den Geist befragen [2].
Speerwahrsager:	*šdiendzën*; *šdien* (tib.) = Geweihtes, Heiliges [4].
	dzën (tib. Lehnwort) = halten, fassen.
Geisterspeer:	*šdiendöṅ* [5]; *döṅ* (tib. Lehnw.) = Muschelhorn, erhaben, weiß, rein.
	purġän = Gott, Geist, Dämon.
	fo-yeh (chines.) = Buddha-Vater [5].
Die Weihebänder:	*šdien*; oder *xuon* (tib.); oder *sënisial* (tib. ?) [4].
Schellen (Rasseln):	*xöṅguor* [11].
Spiegel:	*xaldan mälöṅ* = Gold-Spiegel.
	xdzër (tib.) *mälöṅ* = Gold-Spiegel.
Sandelholz:	*dzändän mödë* = Sandel-Holz [11].
Berg-Esche:	*ġadani yärġë mödë* = des Berges Esche Holz [8].
Weihegebet:	*rami* (tib.).
Kapelle, Tempel:	*šdien kän* (tib.) = Heiliges Haus.

Einladungsgebet:	*ġsolhā* (*solhā*) (tib.).
	ch'ing tsan (chin.) = Lobpreis [3].
Der Geist ist da (sc. im Speer):	*purġān xārgādzi hurdzia* = Der Geist kreisend ankam.
Speer:	*sdzida* [4].
Speerspitze:	*tolġuę* = Kopf, Spitze [7].
Speerschaft:	*sdzida gāndzē* (chin.) = Speer Schaft.
Speerfuß:	*sdzida xuędē* = Speer Ende.
zweischneidige Spitze:	*niengān tolġuę* = platte Spitze.
Dreikant-Spitze:	*ġuran bulōndē tolġuę* = dreier Kanten Spitze.
Vierkantspitze:	*dieran bulōndē tolġuę* = vier Kanten Spitze.
Dreizack-Spitze:	*ġuran salā tolġuę* = drei Gabel Spitze.
Der Speer schüttelt sich:	*šdien* (*purġan, šdiendōn*) *bōdzia* [8].

Anmerkungen

[1] Die Reinigkeitsvorschriften sind dieselben wie bei den Chinesen in Ch'inghai; sie gelten für alle religiösen Handlungen und Tempelbesuche. Die Chinesen haben hierüber noch besondere Sprüche, die den Tujen fehlen.

[2] Dieser Ausdruck gilt sowohl für die Leute, welche den Gott befragen als auch für den Wahrsager, der den Geist herabruft. Die Chinesen sagen dafür *ch'ing fo-yeh*, d. h. „den Buddha-Vater einladen". Dieser Ausdruck gilt in erster Linie für den Wahrsager selber, im weitern Sinne bedeutet es jedes Befragen durch eine Gottheit, Wahrsagen, Orakel.

[3] Das Einladungsgebet ist je nach den herabzurufenden Geistern verschieden. *ġsolka* oder *solka* ist das tibetische *gsol k'a* (cf. DMF 354). Ch. Das (p. 1315) übersetzt es mit: „request, prayer". Es ist eine Bitte an den Geist, herabzusteigen. Der chinesische Ausdruck *ch'ing-tsan* besagt wörtlich „bitten, preisen". Tatsächlich sollen diese Einladungsgebete zugleich auch einen Lobpreis auf den betreffenden Schutzgeist enthalten, ähnlich wie die Schamanengebete.

[4] *šdien* heißt sowohl der geweihte, mit Bändern behaftete Speer als auch das Weiheband (oder die Bänder) selber, aber erst die Bänder nach der Weihe und losgelöst vom Speer. Die geweihten Bänder am Speere nennt man dem Gewährsmann zufolge mit den tibetischen Namen *xuon* (Seidentuch) und *sēnisial* (Seidenfäden). Diese tibetischen Namen sind sakral, wogegen im profanen Sprachgebrauch die Seide *turġuo* und die Fäden *šdadzē* heißen. Zum Gebrauch von *šdien* vgl. auch das Kapitel: Die Tierweihe, Anm. 4.

Zur Erklärung des tibetischen Lehnwortes *šdien* schrieb der Alte die chinesischen Zeichen *kung-fêng*, „verehren, weihen", hin. Um einen Gegenstand zu weihen, für die Götter zu bestimmen und besonders verehrungswürdig zu machen, knüpfe man ein Band daran. Später habe man den ganzen Gegenstand, die Figur usw. *šdien* genannt, ebenso die Bänder und Fäden, die den Speer heilig machten. Das DMF (p. 371) erklärt *šdien*: „pièce d'étoffe rouge ou jaune qu'on met aux idoles pour les vénérer, aux hommes ou aux animaux pour les consacrer aux dieux ou leur conserver la vie." Cf. tib. *rten* „visible representation, symbol, seat of deity" (?). Diese Erklärung, die sich auf einen andern Tujen als Gewährsmann stützt, stimmt fast ganz mit der des Alten überein. Er bemerkt dazu nur, daß es nicht nur rote oder gelbe Bänder, sondern auch solche von verschiedenen Farben sein könnten;

an Menschen würde man sie jedoch nicht heften. Rot scheint aber die wichtigste Farbe zu sein, wie aus dem chinesischen Namen *hung-hung-tzu*, „das Rote", hervorgeht.

šdien ist vom tibetischen *rten* abzuleiten; Näheres siehe im folgenden Kapitel: Der Gurtum; ebenso im 2. Teil. Hier sei nur bemerkt, daß *šdien* (*rten*) im engeren Sinne „enthalten, Behältnis" bedeutet, d. h. Geistersitz. Im weiteren Sinne kann man die obige Erklärung annehmen und es allgemein als „Geweihtes, Heiliges usw." übersetzen.

dzën = tib. *'dsin* = „halten, Träger". CH. DAS hat die Verbindung *rten 'dsin* nicht. Aber er bringt p. 1053 ähnliche Zusammensetzungen, z. B. *rdo rje 'dsin*: „the holder of the *vajra*". *šdiendzën* ist also vom Gewährsmann ganz treffend mit „Träger des Heiligen; das Geweihte Fassender" wiedergegeben worden.

[5] Wenn der Gewährsmann hier in *šdiendoň* das *doň* mit dem tibetischen *duň* (Muschel) identifiziert, so ist das bei ihm ein seltener Fall einer unzutreffenden Erklärung. Das lautlich gleiche *doň* hat zwar den Sinn von „Muschel, rein, weiß, erhaben" (vgl. das Kapitel: Das Weihrauchopfer), aber hier ist es nichts anderes als das tibetische *mduň*, „Lanze, Speer", bei dem das Anfangs-*m* stumm ist. Nasaliertes *u* wird bei den Tujen immer in *o* abgeändert. Das chinesische *tien-tung* (Geisterspeer), welches ebenfalls dem tibetischen Namen nachgebildet ist, ist lautlich eindeutiger. Sonst sagen die Chinesen einfach *mao-ch'iang* (= dem Sininger: *miao ch'iang*), d. h. Speer, Lanze.

šdiendoň müßte also im Tibetischen *rten mduň* heißen. In CH. DAS findet sich diese Zusammensetzung nicht. Es kann aber nichts anderes bedeuten als einen Speer, der Sitz eines Geistes ist. Näheres siehe im 2. Teil.

Das Wort *purgan* gebraucht man nicht nur für die Geister an sich, sondern auch für alles, was sie als Sitz wählen, jedoch nie für einen Tulku (lebenden Buddha). Die Chinesen hingegen benennen mit *fo-yeh* nicht nur die buddhistischen Götter und deren Idole, sondern auch die Tulkus, welche sie auch *huo-fo* (*fuo*), „lebender Buddha", heißen.

[6] Die gewöhnlichen Speere (*sdzida*) sind aus dem Volk verschwunden. Nur vereinzelt sieht man noch plumpe Spieße, die die Bauern mit in die Berge nehmen, um sich die Wölfe vom Leib zu halten.

[7] Die Geisterspeere wechseln mannigfach in Form und Schmuck. Es gibt Speere, die über zwei Meter lang sind, und solche von nur einem Meter. Die meisten dürften im Durchschnitt doch an zwei Meter herankommen. An manchen Speeren hängen schön zugeschnittene Bänder, z. B. am Tempelspeer des Wahrsagers von Êrh-ku-lung. Bei andern sind sie wieder wirr und wahllos angeknüpft. Von den oben genannten Formen ist die Vierkant-Spitze am häufigsten. Der Fuß sieht fast wie die Spitze selber aus, er kann kantig und rund sein. Zweizackige Spitzen kommen auch vor; aber der Gewährsmann hält sie für nicht so wirksam wie die andern Formen. — Zerbricht ein Speer, so wird der Schaft verbrannt. Der neue Schaft erhält wieder die Eisenteile des alten. Zerbrechen die Eisenteile, so werden sie wieder für einen andern Speer verarbeitet. Der neue Speer muß immer wieder der gleichen Gottheit geweiht werden wie der alte.

[8] Der botanische Name von *yärgë* war nicht eindeutig festzustellen. Den Erklärungen der Leute zufolge handelt es sich um die Eber- oder Bergesche. Nach andern könnte es auch die Tamariske sein. Das DMF spricht ebenfalls von einer Eberesche („sorbier") und gibt das mongol. Äquivalent *irgai* an, das es aber mit „chèvrefeuille" (Ziegenblatt) übersetzt (p. 489). W. A. UNKRIG (Mittlg.) setzt dafür das mongolische *xargai* mit der Bedeutung „Lärche, harzhaltiger Baum, Pinus larix". — Der chines. Name *hsün-mu* (*hsün-tzu*) ist ebenfalls nicht eindeutig.

[9] Die Tujen sagen nie *šdiendzën bödzia*, d. h. Wahrsager schüttelt sich. Wohl sagen sie *sgurdien bödzia*, d. h. der Schamane schüttelt sich. Beim Schamanen werden sie nie sagen *purgan bödzia*, d. h. der Geist schüttelt sich. Diese Unterschiede sind zu beachten; *bö-* ist reserviert für das, was in Bewegung ist, das ist der Speer und der Schamane, also *šdien* (= *šdiendöň* oder *purgän*) und *sgurdien*. *bö-* heißt eigentlich „herabkommen, niedergehen, anfangen, Arbeit beginnen" und wird auf das Medium des Geistes bezogen, nicht auf den Geist selber; denn dessen Herabkunft wird mit *kur-* (*kuru-*) bezeichnet, d. h. ankommen. Damit ist die Besonderheit der Trance von der Tätigkeit des Wahrsagers unterschieden. Auch die Chinesen haben hier einen klaren Unterschied im Ausdruck. Für die Trance sagen sie *fashen-tzu*, d. h. den Körper in Aufregung bringen; für das Rufen des Geistes beim Wahrsagen sagen sie *ch'ing fo-yeh*, d. h. den Buddha(vater) einladen.

Tatsächlich ist auch die Wirkweise des Wahrsagers von der des Schamanen leicht zu unterscheiden. Ich habe beides öfters beobachten können. Es sind zweierlei Verbindungsarten mit dem Geist. Beim Speerwahrsagen liegt das Bewegungszentrum im Speer und bleibt darin. Der Speer schüttelt sich und bezieht vom Wahrsager nur die Arme und ein wenig auch den Oberkörper mit in die Bewegung hinein. Der Körper ist ruhig; es ist nur eine eigenmächtige Bewegung des Speeres. Der Wahrsager ist dabei ganz für seine Umgebung aufgeschlossen, er beobachtet alles, was um ihn vorgeht, hört alles, auch wenn er sich zum Speer neigt und mit dem Geist darin zu sprechen scheint. Wenn er im Namen des Geistes redet, dann ist es in leichter normaler Sprache. Ist er fertig, dann stellt er den Speer beiseite, so wie wenn ein Handwerker sein Werkzeug niederlegt. Es ist an der ganzen Sache nichts Aufgeregtes. — Anders bei der Schamanentrance. Der Schamane hat auch Waffen, z. B. Schwert und Speer. Ich konnte beobachten, wie im Weihrauchnebel zuerst die Speerspitze zu zittern anfing, dann der Schaft. Vom Schaft aus griff das Schütteln auf den Arm über, dann auf die Brust bis in den nächsten Arm, schließlich auf den Kopf und den ganzen Körper. Das Bewegungszentrum liegt dann im Schamanen selber. Er wird fahl oder auch ganz rot. Man setzt ihm den schweren, viel zu großen Helm auf, der aber wegen des anschwellenden Kopfes trotzdem festsitzt. Er schäumt und redet abgerissene Worte in verschiedenen Sprachen. Er ist ganz nach innen gerichtet und nimmt keine Notiz von seiner Umgebung. Alles an ihm ist in Aufregung und Zittern. Nach der Trance ist er erschöpft und muß mehrere Stunden ruhen.

Für das Beenden des Speerwahrsagens hat man den Ausdruck *šdien* (*šdiendöň*) *džuoladzia*, d. h. der Speer ist fertig. Für das Aufhören beim

Schamanen sagt man *sgurdien dönladzia*, d. h. der Schamane ist fertig. Die eigentliche Bedeutung von *dzuo-* und *dön-* ist mir nie klar geworden.

[10] Außer dem Geisterspeer haben die Tujen noch andere Orakel, die in gleicher Weise angewandt werden, nämlich den Geistertisch, *sirie purgan*, und die Geistersänfte, chinesisch *chiao-chiao-tzu* genannt. Auch sie sind mit Schellen, bunten Tuchbändern und Metallspiegeln versehen und vom Lama oder von Schamanen geweiht. Als Geistertisch-Gott kommt meist der „schwarze Tiger" in Betracht und als Geist der Sänfte die Muttergöttin, chinesisch *niang-niang*. Sowohl der Tisch als auch die Figur der Göttin

Fig. 2

a: Geistertisch ohne Bänder (*sirie purgan*); *b*: Geistertisch mit Bändern (*sirie purgan*).

tragen Eingeweide samt den Genitalien. — Der Tisch ist nicht als Tisch aufzufassen, sondern als bildliche Nachahmung der Tierfigur mit vier Beinen und Rumpf, was durch die angebrachten Eingeweide noch bestärkt wird. Wenn beim Geisterspeer nur eine Person auf den Geist anspricht, so sind es bei der Sänfte und dem Tisch mehrere Männer. Den Tisch halten zwei Männer zwischen sich, wobei einer die Vorder- und einer die Hinterbeine packt. Beim Befragen stellt sich ein Mann vor sie hin und je nach der Antwort fängt der Tisch an sich zu schütteln, zu springen, sich aufzubäumen, zurückzuweichen usw., ohne daß die beiden Männer etwas dagegen tun könnten. Ähnlich ist es bei der Sänfte, die von vier Männern auf den Schultern getragen wird. Hier steht ebenfalls ein Mann vor der Göttin und frägt sie; und je nach der Antwort schüttelt sich die Sänfte auf den Schultern der Träger, treibt diese vorwärts, rückwärts, im Kreise usw. Die Männer behaupten, sie seien nicht Herr über ihre Bewegungen, so stark sei der Antrieb.

Bei all diesen Medien ist nicht das Wahrsagen die Hauptsache, sondern das zeitweilige Wirken des innewohnenden Geistes. Darum wird der Geist immer zitiert, wenn man eine religiöse Handlung vornimmt, bei der man seine Gegenwart wünscht, z. B. Opfer, Hausbau, Friedhofanlage usw. Er leitet alles, sieht alles, überwacht alles. Allerdings sind dazu immer Leute erforderlich, die auf die Bewegungen des Geistes reagieren können; denn es eignen sich nicht alle dazu.

[11] *xönguor*: mongolisch *xongxo*, mandschurisch *honggon*, stammt wohl aus dem Chinesischen, *chung* = Glocke. — *dzändän*: geht auf das Sanskrit zurück und bedeutet Sandelbaum (UNKRIG).

2. Der Gurtum (Schwertschamane) *

Bericht

Der Schwertschamane hat als wichtigste Waffe das Schwert, womit er gegen die Dämonen kämpft. Er vollzieht seine Zeremonien immer im Francezustand. Dann steigt sein Schutzgott auf ihn hernieder und verleiht ihm große Kräfte.

Ob einer Schamane wird, hängt von seiner Fähigkeit ab, in Trance zu kommen. Manche erben es in der Familie. Viele probieren an einem einsamen Ort. Sobald einer es gelernt hat, begibt er sich in ein Lamakloster. Dort wird ausprobiert, ob er echt ist. Wenn er echt ist, erhält er Belehrungen und ein Amulett. Er muß aber jedes Jahr einmal zu seinem Lehrmeister zurückkommen, um sich weiter auszubilden.

Die Schwertschamanen heilen Kranke, vertreiben Dämonen und wahrsagen. Dabei verwunden sie sich und die Kranken mit dem Schwert, brennen sich mit Feuer; aber wenn sie echte Schamanen sind, schadet es ihnen nicht.

Einzelheiten

Kleidung: Die Schamanen tragen ein gewöhnliches langes Kleid. Manchmal ziehen sie auch einen Rock an, ähnlich dem der chinesischen Bonzen, nur ist er rot. Sie gürten sich mit einem roten Gürtel. Auf der Brust tragen sie ein Amulett mit einer Götterfigur oder ein Beutelchen mit dem Hada, welches ihnen der Lama bei der Weihe gegeben hat. Es ist ihr Schutzgeist. Darüber werfen sie den breiten Schulterkragen. Dieser fällt mit den Zipfeln über Brust, Rücken und Schultern. Er ist von verschiedener Farbe und oft schön ausgeschnitten. Über den Schulterkragen hängen sie an einer roten Schnur den Brustspiegel. Dieser war früher aus Gold; jetzt ist er aus Kupfer. Der Schamane reibt ihn mit Weihrauchasche blank. Der Spiegel ist rund und hat einen Durchmesser von 15 bis 20 *cm*. In der Mitte hat er eine runde Erhöhung, worauf manchmal in tibetischen Zeichen der Name des Schutzgottes steht. An den beiden Ösen des Spiegels hängen mehrere bunte Hadatücher. — Auf dem Kopfe tragen die Schamanen ein rotes Kopftuch. Es ist etwa 50 bis 80 *cm* im Geviert. Ein Zipfel ist ungefähr in einer Breite von 20 *cm* abgeschnitten; an diesen Schnittenden befinden sich zwei rote Bänder; das Tuch sieht aus wie ein unregelmäßiges Fünfeck. Auf den Schnittrand nähen sie fünf kleine kupferne Pferderasseln. Das Tuch wird so über den Kopf geworfen, daß der Rand mit den Glöckchen über die Stirne läuft und die anderen Zipfel über Ohren und Schultern herunterfallen. Mit den Bändern binden sie das Tuch auf dem Hinterhaupt fest. — Über dieses Kopftuch binden sie dann eine fünfteilige Krone, ähnlich wie die der Lamas [4]. Die Krone trägt fünf Buddhabilder oder fünf Totenköpfe oder sonstige Zeichen. — Die Kleidungsstücke besorgt sich der Schamane selbst. Es gibt auch bestimmte Vorschriften, wie sie zu behandeln sind.

* Anmerkungen siehe pp. 31-33.

3: Schröder AE9 Monguor

Die Ausrüstung: Der Schamane muß immer ein Schwert haben. Es ist Sitz seines Schutzgeistes. Das Schwert ist meistens zweischneidig. Es hat keine bunten Bänder. Der Griff ist aus Holz. Für die Anfertigung des Schwertes gelten dieselben Regeln wie beim Geisterspeer. Das Schwert wickelt er zusammen mit seiner Krone in das rote Kopftuch und stellt es zu Hause aufrecht auf seinen Hausaltar. Davor verbrennt er Weihrauch und macht Kotou [1].

Außer dem Schwerte, das er immer benutzen muß, hat der Schamane noch andere Gegenstände, die er je nach Art der Dämonen oder Zeremonien gebrauchen kann. So die Hanfpeitsche, welche meist einen geschnitzten Griff mit einem Schlangen- oder Totenkopf hat; die Dämonenfessel, ebenfalls aus Hanf mit Eisenringen am Ende; den Geisterspeer; die Worfelwanne und das Sieb [2]. — Diese Ausrüstung muß er sich selber unter bestimmten Regeln herstellen. Er bewahrt sie zu Hause auf dem Altare seines Schutzgottes mit dem Schwerte und dem Götterbild auf.

Die Trance: Die Trance findet meistens im Hause vor dem Altar statt. Der Schamane spült sich den Mund, wäscht sich Hände und Gesicht, bringt im Hofe oder vor dem Altar das Weihrauchopfer dar, macht vor dem Schwerte Kotou und zieht die Kleider an [3]. Im Hofe wird das Weihrauchfeuer von anderen Männern weiter unterhalten, welche auch die Muschel blasen [5].

Nun stellt man vor den Altar einen länglichen, niedrigen Tisch, und der Schamane setzt sich mit unterschlagenen Beinen im Buddhasitz darauf, das Gesicht zur Türe und den Rücken zum Altar gewandt. Sein Schwert hat er über seine Knie gelegt. In den Händen hält er einen brennenden Weihrauchstengel aufrecht vor die Brust, so daß der Rauch ihm ins Gesicht steigt. Dann betet er das Einladungsgebet an seinen Schutzgeist. Währenddessen räuchern ihn Männer mit Weihrauch ringsum ab. Allmählich fangen die Hände an zu beben; die Bewegung greift auf Arme, Brust und Kopf über. Schließlich zittert und schüttelt sich der ganze Körper, besonders heftig aber der Kopf, daß die Schellen rasseln. Jetzt nimmt man ihm den Weihrauchstengel aus der Hand und reicht ihm sein Schwert [6]. Der Geist ist jetzt auf ihn herabgekommen. Er beginnt wahrzusagen und die Dämonen zu bannen.

Der Schamane kann sich auch für die Trance einen anderen Ort wählen, z. B. den Tempel, die Hauskapelle, einen Berggipfel, ein Obo, den Hof. Niemals nimmt er die Trance auf dem Kang in einem Nebenraum vor. Ist auf dem Hausaltar ein beseeltes Götterbild, dann setzt er sich stets mit dem Gesicht zu diesem Bild gewandt; beim Obo muß er sich zum Obo wenden. — Vor dem Obo oder auf dem Bergesgipfel braucht er sich nicht auf einen Tisch zu setzen, sondern kann auch auf dem blanken Boden knien. Nimmt er die Trance im Hofe eines Gehöftes vor, dann geht er auf die entgegengesetzte Seite des Haupthauses, so daß er die Rundkrippe mit dem Manibaum vor sich hat und mit dem Gesicht dem Haupthaus zugewandt ist. Dort kniet er sich aufrecht auf eine weiße Filzmatte. Die übrigen Zeremonien sind gleich.

Das Gehöft, in welchem er die Trance vornimmt, muß vorher sauber gefegt werden; alle Räume räuchert man mit Weihrauch aus. Auch der

3: Schröder AE9 Monguor

Tisch oder die Matte, worauf er kniet, müssen abgeräuchert werden. — Es herrscht aber für Fremde kein Tabu, alle können der Zeremonie zuschauen. Frauen dürfen aber den Raum, worin die Trance stattfindet, nicht betreten.

Wahrsagung: Bei gewöhnlicher Art der Wahrsagung gibt der Bittsteller dem Schamanen in der Trance Kotou und bringt sein Anliegen vor. Er kann auch einen erfahrenen Mann fragen lassen. Der Wahrsager hält dann seinen Brustschild flach auf der linken Hand, er nimmt mit der Schwertspitze von einem Tellerchen Gerstenkörner und streut sie auf den Schild. Aus der Lage der Körner gibt er nun seine Antwort. Oft bewegt er sich auch in heftiger Trance und murmelt allerlei abgerissene Worte, die ein geübter Mann schnell auf ein Papier schreibt, und welche nachher gedeutet werden. In der Trance kann der Wahrsager alle Sprachen reden, Tibetisch, Chinesisch, Tujen, Mongolisch, auch wenn er sie nicht gelernt hat.

Diese Wahrsagung geht auch allen andern Zeremonien voraus, welche er in der Trance vornimmt, wie Dämonenbann, Krankenheilung etc.

Berufung: Die Schamanen sind immer Männer. Wenn jemand meint, er habe die Fähigkeit, sich in Trance zu versetzen, so geht er an einen stillen, abgelegenen Ort und probiert mit einem Stab, einem Schwert usw. Mit der Zeit bekommt er Übung. Auch wird ihm bewußt, welcher Geist von ihm Besitz nimmt. Oft machen auch die Leute im Dorfe einem jungen Manne den Antrag, er solle es einmal versuchen. Wenn es dann gelingt, sind sie dafür, daß er sich im Lamakloster weihen lasse. — Die meisten Schamanen ergreifen diesen Beruf aus eigenem Antrieb. Solche, die die Kunst von ihren Vätern übertragen bekommen, sind nicht häufig. Die Schamanen sind durchweg gesunde, normale Männer; nur sind sie leichter erregbar [7].

Weihe: Hat der junge Mann sich selber erprobt und fühlt er sich sicher, dann nimmt er zwölf Dampfbrote, drei gebackene Brote, Geld und ein Hada und begibt sich zum Kloster. Dort übergibt er einem geschulten Lama von besonderer Gebetskraft die Geschenke und bittet um die Weihe.

Zunächst findet eine Probe statt. Der Schamane muß sich unter den üblichen Zeremonien in Trance versetzen. Man läßt ihn versteckte Gegenstände angeben, auf den Boden streut man Dornen und fordert ihn auf, sich darauf zu setzen, man schlägt mit Peitschen nach ihm und sucht ihn auf alle mögliche Weise einzuschüchtern. Ist er ein echter Schamane mit echter Trance, so fürchtet er sich nicht und verwundet sich auch nicht. Ist seine Sache unecht, dann gerät er in Angst, weicht aus oder kommt aus der Trance.

Nun nimmt der vorsitzende Lama ein Hada [13] und schlingt es dem Schamanen um den Hals und frägt, welcher Schutzgeist sich ihm geoffenbart habe. Der Schamane nennt dann den Namen, kniet sich hin und erhält vom Lama die Belehrung über seine Pflichten als Schamane. Darunter sind die Tabu- und Reinigungsvorschriften enthalten; z. B. darf er nicht amten, wenn er in Trauer ist, wenn seine Frau in Wochen liegt, er darf in dieser Zeit auch seinen Schutzgeist nicht verehren; nach ehelichem Verkehr, nach Genuß von Tabak und reichlichem Alkohol ist er unrein [11], und er muß sich vor den

3: Schröder AE9 Monguor

einzelnen Handlungen durch Verwundungen mit dem Schwert, Durchbohren der Brust, Ablecken von glühendem Eisen usw. reinigen. Anschließend an diese Belehrung, die in bestimmten tibetischen Büchern enthalten ist, betet der Lama über ihn das Weihegebet.

Dann erhebt sich der Schamane und wäscht sich mit dem Wasser aus der Weihekanne des Lama Hände, Gesicht und Kopf; ebenso muß er vorher seinen Mund spülen. Hierauf wird er mit Gerste beworfen und mit Weihrauch abgeräuchert. Der Lama nimmt das Hada, welches er ihm um den Hals geschlungen hatte, ab, macht einen Knoten hinein, faltet es zusammen, steckt es in einen kleinen, viereckigen, roten oder gelben Beutel und hängt diesen dem Schamanen um; es ist das Amulett seines Schutzgeistes und heißt „Schutzburg" [8]. Statt dieses Hada, oder zusammen mit diesem Hada kann der Schamane auch eine große Kapsel auf der Brust tragen mit der Figur seines Schutzgeistes [9].

Die Schamanenkleidung legt der Lama dem Schützling nicht an. Meist kommt er ohne alle Kleidung ins Kloster und besorgt sie sich erst später. Oft ist ihm das eigene Dorf bei der Anschaffung behilflich. Das zweischneidige Schwert macht er sich selber, oder läßt es vom Schmiede anfertigen.

Der Schutzgeist: Der Schutzgeist offenbart sich immer selbst dem Schamanen; ein Lama kann keinem einen Schutzgeist bestimmen. Der Schamane nennt sich oft „Geist-Jünger" oder „Geist-Schützling". Der Geist hat seinen Sitz im Schwert. Oft hängt der Schamane ein Bild seines Schutzgeistes über den Hausaltar. Er muß davor jeden Tag Weihrauch verbrennen, genau so wie vor seinem Schwert; zu bestimmten Zeiten opfert er ihm Ziegen, Schafe oder Schweine.

Die Amulett-Häuschen mit dem Bilde des Schutzgeistes kaufen die Schamanen in Klöstern oder auf Klostermärkten. Sie sind ziemlich teuer, da sie meistens aus Peking, Shanghai oder Tibet stammen.

Alles, was der Schamane tut, tut er kraft seines Schutzgeistes. Als solche kommen in Betracht: die Drachengötter, der Tiger-Gott, die große Mutter, überhaupt die vielen niederen Geister der gelben Religion, welche Besitz von einem Menschen ergreifen können. Der Himmel jedoch kann nie Schutzgeist des Schamanen werden.

Aufgabe des Schamanen: Der Schwertschamane soll wahrsagen, Kranke heilen, Wetter bannen, Dämonen vertreiben. In die Tätigkeit der Lamas, Bonpriester oder Trommelschamanen darf er sich nicht einmischen. So ist ihm z. B. nicht gestattet, einen Manibaum zu errichten; wohl aber kann er eine gewöhnliche Manifahne auf dem Hoftor aufstellen. Er darf auch nicht die Zeremonie der Pfahlziege vornehmen, keine Saat- und Erntefeiern abhalten; bei Leichenfeiern und Hochzeiten hat er nicht aufzutreten.

Die Zeremonien der Krankenheilung sind ziemlich vielfältig. Die folgende ist die häufigste. Zunächst versetzt sich der Schamane in Trance. Dann bringt ihm ein Mann einen großen Eisenlöffel mit Wasser. Der Schamane reißt von seinem Schutzspiegel ein Stück Tuch ab, wirft es in das Wasser, streut noch einige Gerstenkörner darüber und hält den Löffel über das offene

Feuer bis das Wasser siedet und das Tuch ganz ausgelaugt ist. Dann nimmt er das Tuch heraus und gibt die Brühe dem Kranken zu trinken.

Um sich zu reinigen oder sich selber zu strafen oder um ihre Echtheit zu beweisen, schlucken sie Feuer, halten sie die Hand in die Flammen, durchbohren sich mit dem Schwert, schlitzen sich den Leib auf, lecken glühendes Eisen ab usw.

Wörterliste

Der Schwertschamane :	*sgurdien* ; *gurdien* (tib. Tujen) [10] ; *ku-wai-tien* (chin.) ; *fa-la-tzu* (chin.) ; *fa-shen-tzu-ti* (chin.). *nänsuo* (tib.) ; *Yao-shen-tzu-ti* (chin.) ; *shen-ti-tzu* (chin.) = Geist-Jünger.
in Trance kommen :	*sgurdien bödzia* = der Schamane ist herabgekommen (d. h. er hat angefangen sich zu schütteln) ; *fa-shen-tzu* (chin.) = den Körper in Erregung bringen ; *yao-shen-tzu* (chin.) = den Leib schütteln.
das Einladungsgebet (vor der Trance) :	*ǵsolkä* (tib. Lehnw.) ; *ch'ing-tsan* (chin.) = Lobpreis.
Weihegebet des Lama über den Schamanen :	*guo ǵgué* (tib. u. Tuj.).
großer Lama :	*ching-fa ta-ti lama* (chin.) = Lama von großer Gebets- und Zauberkraft.
der Tisch, auf dem der Schamane in Trance kommt :	*t'iao-chuo-tzu* (chin.) = länglicher Tisch.
das Schamanenschwert :	*aradzi* = zweischneidiges Schwert ; *wadäm* (tib.) [11] ; *chien* (chin.).
das Schutzgeist-Hada :	*ǵdien* = das Geweihte, so genannt, bevor es im Beutel steckt ; *sönkuor* (tib. Lehnw.) [12] = Schutzburg, so genannt, wenn es im Beutel steckt ; auch das Amulett heißt so.
Brustspiegel :	*mälön* (tib. Lehnw.) ; *ku-hsin ching* (chin.) = das Herz schützender Spiegel.
Kopftuch :	*tolgue bänladzin* = den Kopf Einhüllendes. *pao-chin* = Pack-Tuch (chin.).
Rasseln :	*xönguor* ; *ling-êrh* (chin.).
Pflugschar :	*timur ndziesé* ; *t'ieh -hua* (chin.).
Dornen :	*huang-ts'ê* (chin.).
Teufel bannen :	*ilie sdzira* ; *pudaǵ sdzira* = Schmutz bannen.
Lohn für den Schamanen :	*hsiang-ch'ien* = Weihrauchgeld.

Anmerkungen

[1] Das Schwert scheint bei dieser Art des Schamanismus wesentlich zu sein.

In welcher Weise das Schwert Sitz des Schutzgeistes ist, war nicht herauszufinden. Es mag sein, daß es ständig Sitz des Geistes ist, vielleicht auch nur vorübergehend. Die Frage ist dieselbe wie beim Geisterspeer. Gegen einen ständigen Sitz spricht, daß daran die Bänder, der Spiegel und die Glocken oft fehlen. Andererseits findet man auch Schwerter, welche damit versehen sind. — Ich sah einmal in einem chinesischen Tempel das Schwert eines verstorbenen Schamanen, das man dort für den Nachfolger aufbewahrte. Es war zweischneidig und trug auf der einen Seite das Bärengesicht eingraviert ; auf der andern Seite stand der Name ... *niang-niang*, d. h. ... Mutter. Der Name jener Göttin ist mir entfallen.

Die Schwerter, die der Schamane gebraucht, sind aber nicht immer zweischneidig. Der Gewährsmann behauptet das zwar für die Schamanen der Tujen; er bemerkte dazu, die Tujen hätten früher keine zweischneidigen Schwerter gehabt, ausgenommen ihre Schamanen. Ich sah aber bei den gleichen chinesischen Schamanen auch einschneidige Schwerter, welche man *ma-tao*, d. h. Pferde-Schwerter nennt; sie sind leicht geschwungen und wurden früher von Reitern gebraucht.

Auch auf Reisen behandelt der Schamane sein Schwert mit Sorgfalt und Ehrfurcht. Er wickelt es in das rote Kopftuch ein und trägt es aufrecht im Arm vor der Brust, fast wie man ein kleines Kind trägt. Steigt er in einer Herberge ab, so stellt er es an einen sauberen Platz und verehrt es zuerst. Nachts legt er es unter seine Nackenrolle. Ich konnte das verschiedentlich unterwegs beobachten.

[2] Bei einem andern Tempelschamanen sah ich noch Pfeil und Bogen als Ausrüstung. Überhaupt trägt der Schamane alle üblichen Waffen. — Die Geisterschlinge ist aus Hanf gedreht, mit rotem Tuch umwickelt, und etwa 1 *m* lang. Die Eisenringe daran haben eine symbolische Bedeutung, die ich vergessen habe. Die Chinesen nennen die Schlinge, so weit ich mich entsinne, *k'un-hsien-sheng*, d. h. Geister fesselnder Strick. In der beigefügten Aufnahme hält der Schamane die Schlinge mit dem Ring im linken Daumen.

[3] Die Kleidung legt er immer unter Gebet an.

[4] Das Kopftuch ist nicht immer in dieser Art. Es gibt auch Tücher, die größer sind und die keine Schellen tragen. In diesem Fall binden die Schamanen ein eigenes Stirnband mit den Glöckchen um. — Die Krone ist nicht immer notwendig. Welche Bilder sich auf den fünf Zacken befinden, soll sich nach dem Schutzgeist richten. Ich habe auch Kronen gesehen, die keine Bilder trugen, sondern nur tibetische Zeichen.

[5] Manche behaupten, der Schamane müsse sich vor der Trance noch einmal waschen.

[6] Das Stäbchen wird ins Weihrauchbecken gesteckt.

[7] Eine eigene Organisation bilden sie nicht. Wohl hat man mir verschiedentlich erzählt, daß im sechsten Monat am ersten (?) oder 15. Tag die Schamanen des Hsi-ch'uan in einem Dorfe nahe bei Tuopa (westl. von Hei-tsuei-p'u) zusammenkommen und einen Tag lang eine Art Wett-Trance veranstalten. Diese Sitte soll aber erst neu sein.

[8] Es ist unklar, ob dieses Hada Sitz des Schutzgeistes ist. Jedenfalls ist es als ein Schutzamulett aufzufassen.

[9] Die Weihezeremonie könnte glauben machen, als ob der Schamane erst durch sie zu seinem Amte befähigt würde. Sie hat mit dem Schamanisieren an sich nichts zu tun. Es ist nur eine amtliche Bestätigung der Fähigkeiten, und auch das Volk wünscht sie. Es gibt aber auch Schamanen, die sich nicht im Kloster haben weihen lassen, besonders unter der chinesischen Mischbevölkerung.

Die Weihe scheint den Schamanen in den Stand der Laienmönche aufzunehmen; denn auch unter den Mönchen gibt es solche, die als Schamanen fungieren und bestimmte Vorschriften haben. So ist auf dem Wege von Hei-tsuei-tzu nach Shang-wu-chwang ein Dorf mit einer kleinen Lamaserie,

wo die Schamanen von Kumbum herstammen, welche besonders an Neujahr auftreten. Wie mir ein Missionar erzählt, hielt dort im Dorfe in jüngster Zeit ein junger Mann fast täglich Übungen mit Trance am Flußufer ab, Schwertfechten, Pfeilschießen usw.

Jedenfalls legen alle Lamaserien Gewicht darauf, einen Schamanen zu haben, der vom Schutzgeist *dPekar* besessen, an Neujahr weissagt. So beobachtete ich diese Schamanen in Kuo-mang-szu und Kumbum. In der Tujenlamaserie, wo ein lebender Schamanenmönch nicht zu finden war, sah ich auf Neujahr eine lebensgroße Figur in voller Schamanenrüstung aufgestellt. Bei der Wahrsagung am 15. Tage jedoch fungierte an seiner Stelle der Speerwahrsager im Tempelhof, wo die Tänze stattfinden, vor den Hutuktus, den versammelten Mönchen und dem ganzen Volke. In Kuo-mang-szu sah ich im Tempel sogar eine Frau als Schamane auftreten. Sie stellte aber die übliche Art der *sgurdien* nicht dar.

[10] Die Tujen unterscheiden den *sgurdien* streng vom *bö*, dem chinesischen *fa-shih*, Trommelschamanen. Auch die Chinesen machen diesen Unterschied. Den Gurtum nennen sie *ku-êrh-tien* oder *ku-wai-tien*, was weiter nichts ist als eine Lautnachahmung des Wortes *sgurdien*, welches hinwieder vom tibetischen *sku-rten*, „Leib-Behälter", kommt. Der Gurtum wird als Behälter, Träger seines Schutzgottes aufgefaßt. Die genaue Erklärung des Namens siehe im zweiten Teil: Der Schamanencharakter des Gurtum.

[11] Eigentlich ist Schnaps für die Schamanen nicht verboten. Hier scheint eine buddhistische Vorschrift mitzuwirken, aber in abgeschwächter Form; denn durch mäßigen Genuß verunreinigt sich der Schamane nicht, nur durch Trunkenheit, obwohl diese in den Augen der Tujen durchaus nichts moralisch Verwerfliches bedeutet.

[12] *wadam*: tibetisch *dpa-gdam* = Schwert. — *sönkuor*: tibetisch *skyon* = Schutz, *'k'or* = Scheibchen (UNKRIG).

[13] Hada, tib. *k'a btags*, ist ein schärpenähnliches Zeremonientuch.

3. Der Bonpriester *

Bericht

Es gibt zwei Arten Bonpriester: die einen sind Nomaden, die andern Ackerbauer [1]. Die Bonpriester der Nomaden finden sich jetzt nur noch unter den Fandse, früher gab es auch Tujen. Sie haben einen sehr langen dicken Zopf, den sie um den Kopf gewunden tragen, und ein langes rotes Gewand mit rotem oder gelbem Gürtel. — Die jetzigen Bonpriester der Tujen sind fast ausgestorben; es sind gewöhnliche Bauern und unterscheiden sich von den andern Schamanen oder Wahrsagern wie folgt:

Einzelheiten

Kleidung: Sie tragen gewöhnliche Kleider, im Winter einen Pelz und im Sommer den langen Rock. Hosen tragen sie nicht [2]. Beim Gebet auf dem Kang ziehen sie die Schuhe aus. Eine besondere Amtstracht haben sie nicht.

* Anmerkungen siehe pp. 34-35.

Nur legen sie einen Kranz von Wildschweinborsten um den Kopf [3], welche die langen Haare darstellen sollen.

Ausrüstung: Ähnlich wie die Lamas haben sie eine Schelle, eine große zweiseitige Trommel, eine kleine Doppeltrommel (Sanduhrtrommel); zum Dämonenbannen gebrauchen sie eine Peitsche aus Menschenhaut und eine Knochenflöte. Ferner haben sie auch tibetische Bücher, Klangteller, Donnerkeil.

Die Trommel wurde früher aus Menschenschädeln gemacht; darüber spannte man Menschenhaut als Trommelfell. Die Peitsche hatte einen Griff aus Menschenknochen. Die Flöte ist aus dem Schienbein eines erwachsenen Mädchens gemacht, das noch nicht verheiratet war und durch Selbstmord oder einen Unglücksfall ums Leben gekommen ist. Sie ist an einem Ende offen und glatt abgeschnitten. Dieses Ende dient als Mundstück und wird mit Metall eingefaßt. Das andere Ende hat auf den zwei Gelenkköpfen je ein kleines Loch. Die Flöte wird mit der Haut des Mädchens umwickelt; man näht sie fest [5]. Die gleiche Haut gebraucht man auch, um die Peitsche zu flechten und die Trommel zu bespannen. Es gibt für die Herstellung dieser Gegenstände bestimmte Regeln. Der Bonpriester fertigt die Geräte selber an [4].

Tätigkeit: Eine besondere Tätigkeit der Bonpriester ist das Errichten der Pfahlziege und der Wetterbann, ferner Herstellung und Bann der Figurensänfte. Sonst haben sie fast die gleiche Tätigkeit wie die andern Wahrsager, sie bestimmen Glückstage für Hausbau, Reisen usw.; sie befragen das Los über Krankheit und Medizin. Zum Wahrsagen gebrauchen sie jedoch keine besondern Instrumente, sondern sie haben Bücher, aus denen sie alles entnehmen. Es gibt auch Bonpriester, welche das Pulsfühlen und Medizinverschreiben gelernt haben und ohne Zauberei heilen können. — Die Bonpriester kommen nicht in Trance, sondern beten nur [6].

Wörterliste

Hirten-Bon:	*sunogsa* (*snagsa*) [7]; *ch'an-t'ou peng-po* (chin.) = Bon mit aufgewundenem Zopf.
Bauern-Bon:	*xuändir*; *su-jen peng-po* (chin.) = Laien-Bon.
Bonpriester (allgemein):	*peng-po-tzu* (chin.).
Haarkranz der Bauern-Bon:	(*u*)*duomböra* (tib. u. Tujen) [7].
Knochenflöte:	*šgäu-dön* (tib. u. Tujen); *chüo-pa* (chin.) = Schienbein [7].
Sanduhrtrommel:	*ndarë* (tib. Lehnw.) [7]; *pa-lang-ku* (chin.).
Glocke:	*dzilin* [7]; *ling-lang* (chin.).
Peitsche:	*p'i-pien-tzu* (chin.) = Haut-Peitsche.
große Trommel:	*la-ku* (chin.); *kängärgë*.

Anmerkungen

[1] Es gibt auch Bonpriester, die in Klöstern leben. Ein solches Kloster befindet sich nahe bei dem Tujen-Kloster Rgulön. Die Insassen jenes Klosters tragen aber keine besondere Tracht, sondern sind gekleidet wie Laien. Sie werden mit Vorliebe zu bestimmten Zeremonien des Dämonenbannes von den Lamas eingeladen. — Die andern Bauern-Bon trifft man nur noch sehr selten an. Sie leben wie jedermann, heiraten und ackern.

[2] Daß sie keine Hosen tragen, dürfte auf eine Herkunft von den Fandse hinweisen, die früher ja auch keine Hosen trugen, so wie es bei ihren Frauen und Lamas heute noch Sitte ist.

[3] Warum es gerade Schweineborsten sein müssen, wußte der Gewährsmann nicht.

[4] Was hier über die Herstellung von Flöte, Trommel und Peitsche gesagt wird, bestätigen auch andere Leute. Aber keiner hat gesehen, wie die Herstellung im einzelnen geschieht. Manche sagen, es müsse ein Mädchen sein, das noch nicht menstruiert habe, andere behaupten das Gegenteil. Jedenfalls handelt es sich um eine noch nicht verheiratete Person. Vgl. dazu, was im Abschnitt über Totenbräuche und Leichenverbrennung gesagt ist: daß sie Dämonen sind und von Dämonen besonders gefürchtet werden.

[5] Über den Knochen, aus welchem die Flöte gemacht wird, sind die Berichte verschieden. Die meisten sagen, es sei der Schienbeinknochen; andere behaupten, es sei der Oberschenkelknochen. Daß die Knochenhaut gegessen werden müßte, erfuhr ich nirgends. — Die Flöte hat einen unheimlich klagenden Ton; besonders eindringlich wirkt er des nachts, wie man es in Lamaserien öfters hören kann. — Auch unangenehme Ereignisse suchen die Bon mit dem Flötenton zu vertreiben, z. B. Strafexpedition, Steuereintreiber, Soldaten usw., wie es z. B. in Kueiteh geschah.

[6] Die Bon werden von den Tujen mit einer Art heimlicher Scheu betrachtet. Sie haben auch etwas mit Quellen und Bergen zu tun. Oft sollen sie einsam den ganzen Sommer hindurch in entlegenen Schluchten und an Quellen in Zelten hausen. Dort beten sie und bannen Gewitter usw. Vielleicht trägt diese Zurückgezogenheit dazu bei, ihnen allerlei unheimliche Machenschaften nachzusagen.

[7] *dzilin*: tibetisch *dril bu* = Schelle. — *kängergē*: mongolisch *k'enggerge* = Trommel. — *sṅoǵsa* (*snaǵsa*): tibetisch *sṅags pa* = Zauberer; *sṅags bon* = Bonpriester. — (*n*)*duombora*: tibetisch *sdom* = binden, *spu* = Haar, *ra* = Kranz. — *ǵändön*: tibetisch *rkaṅ* = Schienbein, *duṅ* = Trompete, Schnecke. — *ndarē*: wahrscheinlich eine Verballhornung des sanskritischen *ḍamaru*? (UNKRIG).

4. Der Lama (Lama-Empfang) *

Bericht

Bei vielen Zeremonien wird ein Lama eingeladen. Man unterscheidet große und kleine Lamas. Die großen sind gewöhnlich lebende Buddhas (Hutuktu) [1].

Bevor man einen Lama einlädt, muß das Haus gereinigt werden. Ein eigenes Zimmer wird eingerichtet, worin der Lama betet und schläft. Dann holen ihn die Leute mit Pferden ab. Bei einem großen Lama steht das ganze Dorf zum Empfang bereit. Sobald er ins Gehöft einzieht, wird Weihrauch geopfert und die Muschel geblasen. Er wird ins Haus geleitet und bewirtet. Danach gibt er im Hofe den Buch-Segen und beginnt seine Zeremonien.

* Anmerkungen siehe pp. 41-43.

Fig. 3

a: Torma; *b*: Torma; *c*: Wumba-Kanne des Lama; *d*: Donnerkeil (*dordzi*); *e*: Schelle. (Zeichnung eines Tujen.)

Der Lama macht immer einige Tormas, vor denen Wasserschälchen geopfert werden. Er hat auch die gleichen Gegenstände bei sich wie im Kloster. — Ist er mit den Zeremonien fertig, so wird er entlöhnt. Meistens speist man dann auch die Mönche des Klosters.

Einzelheiten

Vorbereitungen: Bevor jemand einen Lama einlädt, erkundigt er sich bei ihm nach der Zeit. Dementsprechend setzt der Wahrsager den Tag für die Zeremonien fest. Soll z. B. der Wahrsagung zufolge am 15. Tag eines Monates die Errichtung eines Manibaumes stattfinden, dann muß der Lama schon eine Woche vorher kommen, weil immer ein mehrtägiger Gebetsdienst vorausgeht. Einzig die höheren Lamas bleiben nur einen Tag da. Die Vorbereitungen trifft immer der Hausherr unter Hinzuziehung des Mutterbruders.

Am Tage vorher werden der Hof und sämtliche Räume des Hauses sauber gefegt. Alle Zimmer räuchern die Männer mit dem Glühstein und Weihrauchfeuer aus, damit keine Dämonen ihr Unwesen treiben. Dem Lama reserviert der Gastherr das vornehmste Zimmer im Haupthaus, das unmittelbar an die Kapelle oder den Hausaltar stößt. Auf den Kang breitet er eine oder zwei Lagen weiße oder rote Filzmatten und legt zwei schöne Satteltteppiche darüber, einen für den Lama und einen für seinen Assistenten. Die Stelle, worauf der Lama zu sitzen kommt, wird durch ein Hada bezeichnet. Dieses gilt als ein ehrenvolles Andenken und wird später am Hausaltare aufgehängt.

Zwischen die beiden Teppiche stellt man ein Feuerbecken mit einer großen Teekanne. Dahinter kommt ein Kangtisch mit dem Imbiß: eine runde Holzschale Tsamba, worauf mehrere Butterschnitten pyramidenartig zusammengestellt sind und mit einer roten Dattel gekrönt werden; ein kleines Kästchen mit Tschürra (Trockenquark) zum Tsamba-Kneten; einige kleine

Teller mit schwarzem und weißem Zucker, Kandiszucker, Korinthen, Datteln; einige kleine Teller mit Zucker- und Öl-Gebäck. — Wenn der Lama später seine Zeremonien vornimmt, werden die Sachen abgeräumt, so daß ihm ein leerer Tisch zur Verfügung steht.

Hutuktus oder höhere Lamas schicken schon einige Tage vorher gewöhnliche, diensttuende Lamas zu den Leuten, damit sie das Zimmer und die für die Zeremonien notwendigen Sachen herrichten. Sie helfen auch in der Küche aus, weil sie am besten wissen, welche Speisen ihr Hutuktu am liebsten nimmt. Sie schauen auch, daß die Reittiere des Klosters gebührend untergebracht werden.

Das Abholen des Lama: Am festgesetzten Tage machen sich die jungen Männer und Jünglinge des Dorfes mit den schönsten und schnellsten Pferden zum Lamakloster auf. Ein Teil reitet durch bis zum Kloster selbst; ein Teil wartet auf halbem Wege. Der Hutuktu reitet immer sein eigenes Tier; es muß ein weißes Pferd sein. Die andern Lamas hingegen können alle möglichen Tiere gebrauchen.

Trifft der Lama auf halbem Wege mit dem Abholertrupp zusammen, dann tritt der älteste Mann hervor und überreicht dem Lama ein Hada. Dieser nimmt es entgegen und berührt dem Manne, der sich hinkniet, die Stirne. Dann schwingen sich die jüngsten mit den schnellsten Pferden in den Sattel und reiten in rasendem Galopp voraus, um im Dorfe die Nachricht von der Ankunft des Lama zu melden. Auch der Lama sucht jetzt in schneidigem Trab zu folgen. Nur die alten Lamas nehmen sich Zeit. Dieses Abholen nennt man einmaliges Abholen. Manchmal stuft sich das Abholen auch in zwei oder drei Etappen; das nennt man zweimaliges oder dreimaliges Abholen. Jedesmal wiederholen sich die Zeremonien des Hadaüberreichens und des Segens. Beim dritten Trupp aber sind die Abholer zu Fuß; denn sie gehen nur eben zum Dorf hinaus.

Empfang: Sobald die Meldereiter eintreffen, versammelt sich das ganze Dorf vor dem Hause, das den Lama geladen hat. Alle haben ihre besten Kleider an. Auf der Tenne tanzen die Frauen und Mädchen unermüdlich ihren Liederreigen, daß man es schon weithin hören kann; der Lama soll sehen, wie froh sie ihn bewillkommnen. Vor dem Dorfe sitzen alle vom Pferde ab; nur der Lama reitet allein. Ein Mann führt sein Pferd am Zügel.

Sobald er vor das Hoftor kommt, stellt man auf die linke Seite des Pferdes einen Kangtisch und legt eine weiße Matte darüber. Die Männer helfen dem Lama aus dem Sattel, alle machen Kotou; nur die Frauen tanzen ununterbrochen weiter. Der Lama steigt aus den Bügeln auf den bereitgestellten Tisch und schreitet dann dem Tore zu. Dort kniet der Hausherr. Über seine erhobenen Hände hat er ein Hada gelegt und hält damit dem Lama eine weiße Schale Milch mit einem Zypressenzweig entgegen. Dieser taucht den Zweig in die Milch, besprengt damit die Torpfosten und tritt ein. Im Hofe steigt das Weihrauchopfer auf; man bläst mit allen Muschelhörnern, die man haben kann. Die Männer ziehen dem Lama mit bren-

3: Schröder AE9 Monguor

nenden Weihrauchstäbchen voran und geleiten ihn in sein Zimmer. Dort setzt er sich auf den durch das Hada bezeichneten Platz. Das Hada wird jedoch weggenommen.

Der Segen: Zunächst ruht sich der Lama mit seinem Gefährten aus. Der Zeremonienmeister gießt ihm Tee ein und fordert ihn auf, sich zu stärken. Hierauf betet der Lama bestimmte Gebete. Unterdessen füllt sich der Hof mit Gästen.

Der Hausherr tritt nun in den Gastraum, überreicht dem Lama ein Hada, macht Kotou und bittet ihn, herauszukommen, um das Volk zu segnen. Der Lama gibt ihm einige kleine Geschenke, die er mitgebracht hat, mit einem Hada. Dann erhebt er sich und geht hinaus. Draußen steht ein Schemel mit einem Sitzkissen; der Lama nimmt darauf Platz, den Rücken zum Haupthaus gewandt; vor ihn breitet man eine weiße Filzmatte. Jetzt ziehen die Leute dem Range nach an ihm vorbei, zuerst die Männer, dann die Frauen. Jede Person verneigt sich tief vor ihm, während er mit seinem Gebetbuch jedem die Stirn oder den Scheitel berührt. Ihm zur Seite steht sein Assistent. Nach dieser Zeremonie zieht er sich wieder ins Haus zurück.

Fig. 4

Fig. 5

Fig. 4: Zwei Sanduhrtrommeln. (Zeichnung eines Tujen.) Fig. 5: Butterlampe.

Gebetsdienst: Nun beginnt er seinen Gebetsdienst. Vor jedem Gebetsdienst werden einige Tormas gemacht; ist es ein großer Lama, so besorgen das seine Assistenten. Die Tormas sind verschieden und stellen Opfer an die Götter dar. Man läßt sie zum Teil auf dem Tisch stehen oder bringt sie auf den Hausaltar. Davor kommen eine Reihe Wasserschälchen, Getreideschälchen, Schnapsschälchen [3], Butterlampen, die immer am Brennen gehalten werden. Später werden diese Tormas entweder fortgebracht oder auch in der Familie gegessen, manchmal auch den Tieren vorgeworfen [3].

Die Kultgeräte des Hutuktu sind dieselben wie er sie auch zu Hause im Kloster benutzt: nämlich die Weihwasserkanne mit der Pfauenfeder, die Sanduhrtrommel, der Donnerkeil und die Handglocke. Diese Dinge hat er immer auf dem Tisch griffbereit. In der Hand hält er stets seine Manischnur. Beim Beten sitzt er nicht seitlich, sondern hinter dem Tisch, das Gesicht der Türe zugewandt, auf dem Kang. Sein Gebetbuch legt er vor sich auf die Knie oder den Kangtisch. Manchmal nimmt er auch noch die Wasserweihe vor, während die andern die Tormas fertigmachen. Er läßt sich dazu in die

Weihekanne reines Quellwasser gießen; einer der Assistenten wirft Weihegewürze hinein und stellt die Kanne auf ein Tellerchen mit Tibetgerste. Darüber betet der Lama dann das Weihegebet.

Gebetslohn: Der Lama wird während der Zeit seines Aufenthaltes sehr vornehm bewirtet. Der Hausherr, welcher auch „Gabenherr" genannt wird, muß ihm selber auftragen. Seine Hauptmahlzeit hält der Lama aber nicht wie die andern Gäste, mittags, sondern erst am späten Nachmittag. Um ihn zu erfreuen, tanzen und singen Männer und Frauen im Hofe. Nur bei ganz großen Hutuktus tanzt man nicht.

Am letzten Tage, nach dem Morgenimbiß des Lama, während er auf dem Kang noch Tee trinkt, erscheint der Gabenherr mit den Zeremoniengehilfen und bedankt sich mit vielen Worten für den Besuch und das Gebet. Dann übergibt er ihm ein Tablett mit den Geschenken, über die ein Hada ausgebreitet ist, und der Gabenherr verkündet, was der Lama für seinen Dienst erhält. Dieses Hada über dem Tablett heißt „Reden-Hada". Man stellt die Sachen vor den Lama auf den Tisch und macht dreimal Kotou. Auch die Assistenten erhalten entsprechende Gaben.

Der Lohn ist verschieden, je nach dem Reichtum des Gabenherrn, der Würde des Lama und der vollzogenen Zeremonien. Gewöhnlich sind es mehrere Kiepen Brot [5], einige Schaffleischstücke [4], Silbergeld und rotes Tuch. Reiche Leute schenken noch viel mehr, z. B. schöne Pferde, Schmuckgehänge, Tuch usw. Wenn es sich um große Anlässe handelt, wird sogar in der Zeit, in welcher der Lama beim Gabenherrn weilt, für das Kloster ein Gebetsdienst bestellt. Der Gabenherr beköstigt in diesen Tagen sämtliche Mönche mit Reis, Zucker, Butter und Tee. Auch Pilger, die während dieser Tage im Kloster weilen und für den Gabenherrn „Einkehr" halten und beten, werden mitbeköstigt und erhalten noch Almosen für die Reise.

Die Gabenherren stiften auch gewöhnlich, z. B. beim Beerdigen usw., für das ganze Kloster den Gebetstee, der während des Offiziums in der Gebetshalle getrunken wird. Oft stellen sie in dieser Zeit noch eine Menge Butterlampen im Tempel auf, oder sie spenden wenigstens die Butter für die Lampen.

Rückkehr: Nachdem der Lama seine Gaben empfangen hat, wird er feierlich das Hoftor hinausgeleitet. Man bringt wieder ein Weihrauchopfer dar. Aber sonst finden keine Zeremonien mehr statt. Das weiße Pferd wird herbeigeführt, ein Kangtisch mit einer Filzmatte zum Aufsteigen bereitgestellt, und der Lama wird in den Sattel gehoben. Dann begleiten ihn die Männer zum Dorfe hinaus. Einen eigentlichen Begleitzug mit Pferden, ähnlich wie beim Empfang, gibt es nicht. Der Lama reitet mit seinen Mönchen allein zurück. Nur die Geschenke werden ihm auf Tieren nachgebracht.

Fig. 6. Muscheln.
(Zeichnung eines Tujen.)

Die Hutuktus werden immer auf diese feierliche Art empfangen. Niedrigere Lamas, z. B. solche, die nur einmal zum Beten an einem Obo kommen, erhalten einen einfachen Empfang. Ähnlich verfährt man auch mit den Bonpriestern, Schamanen, Wahrsagern. Man holt sie nicht feierlich ab und gibt ihnen nur mäßigen Lohn.

Tabu des Gehöftes: Bei vielen Gebetszeremonien des Lama ist das Gehöft für Fremde unzugänglich. Das nennt man „die Tür verbieten". Wer bei Beginn der Handlung nicht da ist, darf den Hof nicht mehr betreten. Leute, die aber von Anfang an im Hofe waren, dürfen auch später frei ein- und ausgehen [7]. Um den Hof als verboten (tabu) zu kennzeichnen, heftet der Hausherr einen Zypressen- oder Tannenzweig oder ein Sieb an das Hoftor [8].

Das Tabu dauert immer mehrere Tage, drei, fünf, sieben; immer in ungerader Zahl, und immer solange, als der Lama im Hause weilt, und noch zwei Tage darüber hinaus. Ist z. B. der Lama nur einen Tag da, so dauert das Tabu drei Tage, ist er drei Tage da, so dauert es fünf Tage usw.; ist er aber sieben Tage im Hause, dann dauert das Tabu nach seinem Weggang noch eine ganze Woche [9].

Wörterliste

Lama:	*lama*; *ho-shang* (chin.).
Lama der gelben Sekte:	*gĕlönba* (tib.); *sira lama*.
Lama der roten Sekte:	*fulan lama*.

Teebewirtung im Lamakloster: *mäntsia* (*mändzia*) [10].
tabu des Hofes: *udie dzilä-*; *chi-men* (chin.) = verbieten, die Tür.

Anmerkungen

[1] Die folgende Darstellung gilt in erster Linie für den Empfang eines Hutuktu. Bei niederen Lamas sind die Zeremonien einfacher. — Auch Götterbilder, z. B. die Sänfte der *Kuanyin*, des Tigergottes usw., erhalten einen ähnlichen Empfang, wenn man sie zum Unheilbannen ins Haus bringt. Es war mir leider nicht mehr möglich, die entsprechenden Zeremonien aufzunehmen. Ich sah einmal eine solche Göttersänfte auf einem Hausdache stehen. — Den Lama-Empfang habe ich selber beobachtet.

[2] Zum *šdorma* schreibt das DMF (p. 338): „figures pyramidals faites de pâte de farine grillée et qu'on offre aux esprits pour écarter leurs mauvaises influences. Cf. tib. *gtor-ma* id. (mong. *turma*, *tuurma*, *turuma* ...)". Ch. Das kennzeichnet (p. 527) den Ausdruck *gtor-ma*, der wiederum auf ein Sanskritwort zurückgeht, als Wurfopfer: „sacrificial objects, i. e., that which is strewn or scattered or given away". Sie bestünden meist aus Teig (Reis, Gerste usw.), hätten Pyramidengestalt und sollen Gefahren abwenden, die Geister besänftigen usw. — Über den Sinn des *gtor-ma* ist viel geschrieben worden; vgl. dazu die Ausführungen in Filchner (Unkrig): Kumbum, Kapitel XIV. Die Tujen fassen das Torma als Sitz eines Dämons oder eines Gottes oder als Geisterspeise auf. Es bleibt aber nicht Dauersitz, sondern nur während der Zeit der Zeremonien. Der Geist wird durch den Lama hineingebannt. Den Namen *baliñ* konnte ich bei ihnen nicht feststellen. Als Geisterspeise nennen sie es mit dem chinesischen Wort *szu-shih*, d. h. Opfer-Speise; es gibt aber noch eine andere Deutung, nämlich „Leiche", das auch *szu-shih* lautet. So wird nämlich das Torma genannt, das am Schluß des Tšam-Tanzes auf Neujahr als ermordeter Feind der Religion fortgebracht und verbrannt wird. — Torma nennen sie auch die Maṇḍala-Figur, z. B. beim Errichten der Pfahlziege. — Daß das Torma nur für kurze Zeit eine sakrale Funktion hat, erklärt auch, warum man es nach den Zeremonien nicht mehr beachtet, es fortwirft, den Tieren zu fressen gibt oder es sogar selbst ißt.

Soweit ich bei den Tujen feststellen konnte, werden die Tormas immer nur aus Tsamba und Butter hergestellt, nicht aber, wie Filchner (Unkrig) a. a. O. schreibt, aus gegorenem Teige. Mag sein, daß diese Art der Zubereitung den Klöstern vorbehalten ist.

[3] Für diese Schälchen gibt es eine bestimmte Zahl und Ordnung. Das Wasseropfer spielt im Klosterkult eine wichtige Rolle, vgl. Kumbum, p. 251. Auch die Tujen und Chia-Hsifan bringen häufig des morgens das Wasseropfer dar. So sah ich einmal einen Alten, wie er morgens aufstand, sich wusch, Weihrauch verbrannte, eine große Kupferschale und zwölf kleine Schälchen Wasser auf den Hausaltar stellte, dreimal im Hofe Kotou gab, davon einen in Richtung Kumbum, dreimal vor dem Hausaltar Kotou gab und dann die Wasserschalen wieder ausleerte.

[4] Obwohl der Buddhismus das Töten verbietet, essen die Lamas, auch die Hutuktus, Fleisch in allen Formen, wie ich es immer wieder sehen konnte. Im Kloster Kuo-mang-szu beobachtete ich einmal, daß ein Opferschaf abgehäutet und ausgeweidet auf einem Opfertisch vor der Tempeltüre aufgestellt war. Bei den darauffolgenden Gebetszeremonien ließ der Gabenherr, der dieses Schaf geopfert hatte, das Fleisch kochen und jedem Mönche im Tempel während einer Gebetspause ein Stück servieren. Es ist also nicht auffallend, wenn der Lama zum Lohne eine Schafslende erhält. Da aber die Tujen trotzdem in Gegenwart eines Lama kein Schafopfer darbringen (vgl. Kapitel : Der Manibaum), scheint es nur darauf anzukommen, daß die Tötung selbst nicht vor den Augen des Lama oder im gleichen Hofe vorgenommen wird.

[5] Eine Kiepe enthält 24 Brote. Das rote Tuch ist für die Kleidung der Lamas. Warum nur Getreide und Geld als eine Einheit aufgefaßt und mit dem gleichen Namen *mbö* bezeichnet werden, ist mir unklar. Nach dem DMF kommt es vom tibetischen *p'ogs*, Lohn.

[6] Von den Stufengraden der Mönche weiß das gewöhnliche Volk wenig. Sie kennen große und kleine Lamas. Zu den großen rechnen sie die Hutuktu, die *tsüordzi* und die *känbö*. Nach ihrer Vorstellung ist ein großer Lama besonders gelehrt, kennt viele Zauberpraktiken und hat darum eine besondere Kraft. Die kleinen Lamas haben nur wenig Gelehrsamkeit und können nur kleine Zeremonien vornehmen : z. B. das Obogebet.

Die Hutuktus werden als buddhistische Inkarnation betrachtet. Dabei unterscheiden die gewöhnlichen Leute nicht zwischen Buddha und Bodhisattvas. Bei ihnen ist alles *fuo-yeh*, d. h. Buddha-Vater. Diesen chinesischen Namen gebrauchen sie für alles, was Sitz eines Geistes oder selbst ein Geist ist, also auch für die Inkarnationen (Tulkus), den Geisterspeer, beseelte Götterstatuen. Manchmal bezeichnen sie der Klarheit halber die Inkarnationen mit *huo-fuo* (chinesisch), d. h. lebender Buddha. Für die Geister allein und die beseelten Geistersitze gebraucht man am meisten den Tujen-Namen *purgan*. Bisweilen hört man den Ausdruck *säṅ* oder *säṅrë-dzi*. Auf den Namen Tulku, Hutuktu oder Gegen, das in der Tujensprache den gleichen Sinn wie *säṅ*, Erleuchteter, hat, bin ich nie gestoßen.

[7] Das gilt nach andern Aussagen nur für die Hausinsassen. Gäste, die fortgehen, dürfen nicht wiederkommen.

[8] Der Gewährsmann behauptet, die Tujen hätten früher kein Sieb benutzt ; das hätten sie von den Chinesen gelernt. Heute wird häufig Papier gebraucht, wenn es sich um ein Tabu handelt, das nicht mit dem Gebetsdienst zusammenhängt. So kleben die Leute ein viereckiges rotes Stück Papier auf die Torlaibung, rechts, wenn z. B. eine Krankheit im Hofe herrscht, links, wenn eine Wöchnerin da ist. Weißes Papier benutzt man, wenn einer gestorben ist ; eine Sitte, die wohl von den Chinesen stammt.

[9] Die hier erwähnten Taburegeln gelten auch für andere religiöse Zeremonien, auch wenn kein Lama oder Bonpriester eingeladen wird. Dann ist das Tabu aber nur für drei Tage in Kraft. — Auch die besten Freunde werden dann nicht ins Haus gelassen, sondern am Hoftore abgefertigt. Sie müssen darum vorher laut rufen, damit jemand herauskommt.

Manchmal sagen die Leute auch, man kennzeichne den Hof bei Krankheit nicht aus Geisterfurcht, sondern um Fremden ein Zeichen zu geben, damit sie sich nicht anstecken und draußen bleiben.

10 *sänrědzi* : tibetisch *saṅs* = rein, *rgyas* = ausgebreitet. — *ǵdzo* : tibetisch *ǵzo* = erinnern, zu Gemüte führen ; *dänwu* : tibetisch *daṅ po* = erstmalig ; *niwa* : tibetisch *gñis pa* = zweitmalig ; *gdzänba* : tibetisch *gsum pa* = drittmalig. — *simier* : tibetisch *šis* = Glück, *mar* = Butter. — *sidar* : tibetisch *šis* = Glück, *dar* = Seidentuch. — *sändzöṅ* : tibetisch *ts'em bzaṅ* = Tuch gutes. — *döṅsär* : tibetisch *bdun* = sieben, *gser* = golden ; die sieben Goldenen. — *lamar* : tibetisch *la* = Wachs (aus dem Chinesischen), *mar* = Butter. — *dordzi* : tibetisch *rdo* = Stein, *rje* = Herr. — *bosě* : vielleicht aus dem Mongolischen ; *püse* = Handel, Geschäft ; vgl. chines. *p'u-tzu*. — *mäntsia* : tibetisch *maṅ* = reichlich, *ja* = Tee (UNKRIG).

III. Bräuche um Wohnung und Siedlung

1. Das Weihrauchopfer *

Bericht

Alltäglich bei Sonnenaufgang werden Haus und Hof sauber gefegt. Die Hausfrau entfacht auf dem Kang das Familienfeuer, um das sich tagsüber alt und jung versammeln. Der Hausherr wäscht sich Hände und Gesicht [1], nimmt etwas Glut von dem Feuer und bringt es hinaus in den Hof auf die Weihrauchplatte unter dem Manibaum. Dort bläst er die Glut zu einer großen Flamme, wirft Zypressenzweige, Butter, Tsamba, Blumen, Gewürz, Teeblätter, Zucker und einige bunte Fäden hinein und besprengt schließlich das Feuer mit reinem Wasser. Wenn dann der Rauch hochsteigt, wird die Muschel geblasen, und der Hausherr sowie alle Umstehenden machen dreimal einen dreifachen Kotou vor dem Feuer. Damit ist das Morgenopfer beendet, und alle gehen an ihr Tagewerk.

Einzelheiten

Personen : Gewöhnlich bringt der Hausherr das Weihrauchopfer dar. Statt seiner kann aber auch ein anderes männliches Familienmitglied die Handlung vornehmen ; niemals jedoch Frauen, es sei denn, daß keine männliche Person im Hause weilt und die Kinder noch zu klein sind. Frauen dürfen auch dabei sein und den Kotou machen, wie sie auch den Hof fegen, die Sachen bereitstellen und sogar zum Opfer anreichen können. Die Muschel wird gewöhnlich von jemand geblasen, der nicht opfert. Tut es der opfernde Hausherr selber, so geschieht das vor dem Kotou.

Zeit : Das Weihrauchopfer soll möglichst früh dargebracht werden, schon beim Morgengrauen. Man darf nicht warten, bis die Sonne schon hochsteht. Wenn heutzutage die Familien auch nicht mehr fromm sind, so

* Anmerkungen siehe pp. 46-49.

bringen sie doch noch wenigstens am 1., 8. und 15. Tage des Mondmonats das Weihrauchopfer dar. An diesen drei Tagen werden dann auch kleine Butter- oder Öllampen im Hause vor den Buddhabildern angezündet.

Ort: Der gewöhnliche Ort für das Morgenopfer ist der Hof. Man kann auch in den Ortstempel oder vor das Obo gehen. Das geschieht auch meistens an den oben erwähnten drei Tagen. Im Hofe selber ist die Brandstätte die Räucherplatte auf der Mittelburg vor der Manistange [2]. Ist keine Räucherplatte da, so verbrennt der Hausherr den Weihrauch in der Mittelburg (Rundkrippe) selber oder auch auf dem Boden davor. Jedesmal aber ist der Platz zuerst zu fegen. Die Verehrung vor dem Feuer findet nicht unmittelbar vor diesem statt, sondern man geht um die Rundkrippe herum, so daß die Rundkrippe mit dem Manibaum, dann das Feuer, dann das Haupthaus und schließlich die Berge hinter ihm vor einem sind. Auch die andern Personen befinden sich dort. Nie darf jemand zwischen dem Feuer und dem Haupthaus stehn.

Opfergaben: Das Feuer braucht nicht vom Herde oder vom Kang genommen zu sein. Man kann es auch im Hofe neu anzünden. Dabei ist es ganz gleich, welches Feuerzeug benutzt wird, Streichholz, Feuerstein usw. Als Nahrung wird beim Entfachen meist Stroh genommen. Übelriechende Brennstoffe sind nicht erlaubt, wie Kohlen, Trockenmist usw., die sonst im profanen Gebrauch vorherrschen.

Als Weihrauch dienen die Zweige des Zypressenbaumes [3]. Dieser ist der Göttermutter *Lhamo* geweiht. Die Blumen sollen einen angenehmen Duft haben, einerlei von welcher Farbe. Je vielfältiger und bunter die Sorten sind, umso besser ist es. Allerdings werden sie vorher getrocknet, damit sie auch gut brennen.

Statt der Butter ist auch trockener Rahm statthaft, ganz gleich ob die Milch gekocht oder roh war. Hat man gerade keinen Tsamba zur Hand [5], so ist auch gebranntes Weizen- oder Gerstenmehl erlaubt, niemals aber Bohnenmehl, weil es unrein ist. Beim Zucker gelten keine Vorschriften bezüglich der Farbe; darum nimmt man gewöhnlich den roten, weil er billiger ist als der weiße.

Das Gewürz, das als wohlriechende Zutat ins Feuer gestreut wird, ist in irgend einer chinesischen Apotheke gekauft. Es heißt „Erdgottgewürz" oder einfach „Zugabe" [6]. Es sind dieselben Sorten, die der Lama bei der Weihe des Wumba-Wassers beimengt. Die Tujen-Namen sind verlorengegangen. Auf Tibetisch heißen sie „die guten Sechs". Es sind folgende Arten: Gewürznelken, Safran, Kardamom, Mergel (?), Muskatnuß, Kampfer.

Statt des Wassers kann man auch Milch oder Gerstenwein ins Feuer spritzen. Dann heißen sie aber nicht mehr Milch oder Wein, sondern „Libation" [6]. Das vornehmste ist jedoch immer das Wasser. Dieses soll rein sein, aus einer Quelle oder einem Brunnen oder einem Fluß. Abgestandenes Wasser z. B. aus einem Küchenzuber, darf niemand schöpfen, mag es auch noch so rein sein. Das Wasser wird mit einem Zypressenzweig ins Feuer gesprengt [10].

Die Fäden sind in den bekannten fünf heiligen Farben. Auf den Stoff kommt es dabei nicht an. Die besten sind natürlich Seidenfäden. Reiche

Leute werfen jedesmal von jeder Farbe ein kleines Bündel hinein, Arme hingegen schneiden von jedem Faden nur ein Stückchen ab, damit sie noch lange ausreichen.

Die Muschel kommt vom Osten, aus China oder aus Tibet. Im Kukunor soll man keine finden. Darum hat nicht jede Familie eine Muschel. Sie braucht deshalb auch nicht unbedingt beim Opfer geblasen zu werden [7].

Alle diese aufgezählten Sachen gehören zu einem vollständigen Weihrauchopfer. Da aber nur in seltenen Fällen eine Familie diesen Zubehör vorrätig hat, wird das Opfer gewöhnlich in der einfachen Form dargebracht, d. h. man begnügt sich mit Zypressenzweigen, Tsamba und Wassersprengen. Nicht einmal Butter und Milch ist neuerdings bei den Tujen vorrätig.

Sinn: Das Weihrauchopfer gilt in erster Linie dem Himmel, ihm gilt auch der erste Kotou. An zweiter Stelle will man damit den Berg- und Erdgeist ehren, und an dritter Stelle alle andern zahllosen Geister. Mündliche Gebete werden nicht gesprochen, wohl sagt oder denkt man gewöhnlich: „Der Himmel weiß es." Das Opfer ist eine Bitte um Schutz und gefällt den Geistern wegen der vornehmen Gaben. Darum bringen die Männer es bei allen religiösen Zeremonien dar, z. B. beim Saatfest, bei der Oboverehrung, beim Schafopfer usw. Es bleibt dann während der ganzen Handlung stundenlang brennen. Weil die Tujen das Weihrauchopfer seit alters gepflegt haben, kommt es auch immer wieder in den Liedern vor [8].

Das Reinigungsfeuer: Außer diesem Weihrauchopfer wird auch sonst Zypressenweihrauch verbrannt, aber nur um zu reinigen. So z. B. bei Ausräuchern des Hauses, um die Dämonen zu vertreiben, zum Abräuchern des Opferschafes, zum Abräuchern von Gesicht und Händen bei religiösen Zeremonien. Aber man zollt diesem Feuer keinerlei Verehrung, macht keinen Kotou, besprengt es nicht mit Wasser, gibt keine Butter und überhaupt keine Zutaten hinein. Es ist kein Opfer. Verbrennt einer jedoch zufällig ein richtiges Weihrauchopfer, so kann er auch dies für die Reinigungszwecke nehmen [9].

Wörterliste

Zypressenbaum:	*ǯgua sdziödzē* [3].
Zypresse:	*ǯgua.*
Zypressenweihrauch:	*ǯdzäṅ* (*ǯdzäṅ, dzäṅ, säṅ*) (tib. Lehnw.).
Opfertsamba:	*ǯdzäṅ ǯdzam* (tib. Lehnw.).
Tsamba (profan):	*talga* [11].
Gewürze:	*ġlu* (*ġlo, ġlē*) *sēmän*; *ġlu* (tib. Lehnw.) = Erdgott; *sēmän* (tib. Lehnw.) = Medizin, Gewürz [11].
Känba-Blumen:	*känba.*
Weihrauchzutaten:	*rdzē* (tib. Lehnw.) = Beigaben, Sachen. *snaġsoġ ǯdzäṅ rdzē* (tib. Lehn.) = vielerlei Weihrauch Beigaben [4,11].
Gewürznelken:	*lisi* (tib.); *ting hsiang* (chin.) [11].
Safran:	*gušgum* (tib.); *tsang kung-hua* (chin.) [11].
Kardamom:	*sēsmiel* (tib.); *i-chi-jen* (chin.) [11].
Mergel:	*gagula* (tib.); *ts'ao-kuo* (chin.) [11].
Muskatnuß:	*dzati* (tib.); *jou-kuo* (chin.) [11].
Kampfer:	*ġawur* (tib.); *ping-p'ien* (chin.) [11].

Milch (profan): *sun*.
Libation: *tsiab* (*tsiaw*) (tib.) [6].
Muschel: *dön* (tib. Lehnw.) = Trompete, Horn [7].
Himmel Du weißt es: *tieńgěrě mudie*.
Reinigungsfeuer: *sündur* (tib. Lehnw.).

Anmerkungen

[1] Diese Waschung wird bei allen religiösen Handlungen vorgenommen, und sie ist auch die gewöhnliche Art, sich morgens zu waschen. Da man keine Waschschüssel kennt, oder sie erst neuerdings gebraucht, geschieht es auf folgende Weise: Man nimmt aus einer Schale einen Schluck Wasser und spült den Mund; dann nimmt man den zweiten Schluck und läßt ihn aus dem Munde über die hohlen Hände laufen und wäscht sie; der dritte Schluck, in der gleichen Weise in die Hand laufen gelassen, dient dazu, das Gesicht zu waschen. Das wiederholt man beliebig, bis man sauber ist. Falls jemand eine Waschschüssel hat, so darf er auf keinen Fall vergessen, den Mund zu spülen, das gehört zur Reinigung für eine religiöse Zeremonie.

[2] Die Weihrauchplatte heißt *ʃdzäń tše* = Weihrauch-Terrasse. Die Chinesen sagen dafür *sang lu-tzu* = Zypressenweihrauch-Ofen. Vielfach haben die Tujen den chinesischen Weihrauchofen übernommen. Er sieht aus wie ein kleines Tempelchen. Oft behilft man sich auch mit einer einfachen Lehmnische. Die Räucherplatte auf dem Rand der Rundkrippe ist entweder eine Steinplatte, oder ein Backstein (Ziegel), oder ein glatter Lehmaufstrich.

[3] Die für Weihrauch in Frage kommende Zypresse ist der Tujabaum, vulgär: Lebensbaum. Dieser Baum gilt überall in Ch'inghai als ein vornehmer Baum, auch bei den Chinesen, welche sein Holz mit Vorliebe für Särge benutzen. Der chinesische Name ist *pai-shu* (*pei-shu* oder *pei-mu*) = Zeder, Wacholder, Zypresse. Das Tujenwort *šgua* ist eine Zusammenziehung des tibetischen *šug-pa*. *šug-pa*, womit die Juniperus-Gruppe benannt wird, welche in Tibet heimisch ist: Juniperus excelsa, Juniperus squamosa, Juniperus communis, s. CH. DAS, p. 1239 ff. Als Synonym ist dort *saṅs šiṅ* angegeben: Holz der Reinheit. *saṅs* kann aber auch „verdampfen, verflüchtigen usw." heißen; vgl. a. a. O. p. 1265: „evaporation". Von den andern Synonymen ist *lha-yi šiṅ* (Götter-Baum) zu nennen, weil auch der Gewährsmann behauptet, daß der Baum der *Lhamo* heilig ist. Hat man richtigen Wacholder, z. B. in wilden Berggegenden, so wird dieser mit seinen Beeren beim Weihrauchverbrennen bevorzugt. Das Tujenwort *ʃdzaṅ* (*šdzaṅ*, *saṅ*) kommt, dem Gewährsmann zufolge, aus dem Tibetischen. Es entspricht also dem *bsaṅs* (CH. DAS, p. 1316), „Weihrauch". — Im Mongolischen steht dafür *sang idegen*, „Weihrauch-Speise" (UNKRIG). — Auch die Chinesen haben dieses Wort übernommen, wenigstens in Ch'inghai, und nennen den Zypressenweihrauch *sang*. Daneben haben sie auch den chinesischen Ausdruck *pei-hsiang*: Zypressen-Weihrauch. Den Stäbchenweihrauch, also die Räucherkerzen, nennen sie einfach *hsiang* oder *pan-hsiang* (vielleicht: Blüten-Weihrauch); *pan-hsiang* wird auch verbal gebraucht, Weihrauch zu Ehren einer Person verbrennen (selten gebräuchlich). — Für „Weihrauch verbrennen" sagen

die Tujen *ʃdzaṅ garġa*, „Weihrauch entlassen (aufsteigen lassen)". Sie unterscheiden zwei Arten. Die eine ist der „große Weihrauch", *šge ʃdzaṅ*. Dieses Weihrauchopfer findet stets im Freien statt, und man verbrennt dabei vollständige Ästchen und Zweige. Die andere Art ist der „kleine Weihrauch", *mula ʃdzaṅ*. Dazu nimmt man nicht ganze Zweige, sondern zerstampft die Zypressennadeln zu Weihrauchmehl und streut es ins Feuer. Es verbrennt sehr schnell unter starker Rauchentwicklung, hat aber keinen Holzrauch. Diese Form bevorzugt man für Räucheropfer im Hause und zum Abräuchern von Gegenständen bei Reinigungszeremonien.

[4] Das als tibetisches Lehnwort bezeichnete *rdzē* entspricht dem *rdsas* (Unkrig); das im DMF gegebene Äquivalent *'dre*, „evil spirit (?)" (p. 311) ist abwegig. Ch. Das (p. 1057) hat dafür die Bedeutung: „an article, thing, material, object", und weiter: *de'i rdsas*, „requisits for this purpose (sc. unreine Angelegenheiten); especially for sacrifices, sorceries etc., hence also used as identical with magical agency". Diese letzte Bedeutung trifft zu für die Begleitgaben und Opfer beim Dämonenbann; vgl. *rdzē* im Kapitel: Das Dämonengeleit; Der Figurenbann usw. Damit stimmt auch die Erklärung im DMF (p. 311) überein: „objet qu'on met en liberté dans le but d'être délivré d'un mal (on y ajoute de l'argent ou quelqu'autre object), rançon." *rdzē* ist also im allerweitesten Sinn aufzufassen als Ausstattung, Utensilien, Proviant der Götter (Kleider, Ringe, Wegzehr), Opferbeigaben usw., wie ja aus der Fülle der Weihrauchgaben ersichtlich ist. Diese Beigaben stimmen weitgehend mit den Zutaten für die Erdgotturne (Schatzurne) überein. Sie sind aber wohl erst auf lamaistischen Einfluß zurückzuführen; denn in den Tujenliedern, welche das Weihrauchopfer erwähnen, werden sie nie genannt, ganz im Gegensatz zum Lebensbaum, Wasser und den Blumen, die nie fehlen. Die vornehmste, immer wieder genannte Blume ist die *kanba*; vgl. unten 2. Teil: Das Weihrauchopfer. Diese Blume hat einen starken, sehr wohlriechenden Duft, den man beim Weihrauchopfer weithin wahrnimmt. Der Tujenname stimmt mit dem tibetischen überein (Unkrig). Ch. Das (p. 140) übersetzt *k'am-pa* mit Tanacetum tomentosum und bezeichnet dies als eine „very aromatic plant growing in the high mountains of Tibet". Dinand identifiziert die Blume mit dem Rainfarn, Tanacetum vulgare; vgl. Handbuch der Heilpflanzen, p. 211, mit Abb., T. XXIII, 2. Nach G. A. Stuart gehört sie zur Species der Artemisia vulgaris, die überaus wohlriechend ist. Er unterscheidet drei Arten: Artemisia Indica, — Sinensis (*ai-hao*), — *moxa*; vgl. Chinese materia medica, p. 52. — Aus der Verwendung der Zypresse und der Blumen kann man also schließen, daß das Weihrauchopfer von Anfang an nicht als Brand-, sondern als Duftopfer aufzufassen ist. — Näheres über das Weihrauchopfer s. in Teil 2. — Zu *rdzē* vgl. auch das Kapitel: Die Erdgott-Urne.

[5] Tsamba ist auch heute noch nicht aus der Tujen-Küche fortzudenken. Man röstet *ch'ing-k'o* (chinesisch) oder *šbē* (tuj.), d. h. Spelt, Grünkorn, und mahlt es auf einer Handmühle. Dieses Röstkornmehl wird genau wie bei den Tibetern (Fandse) genossen. Nach dem Genuß von Buttertee wird Tsamba mit dem Rest von Tee und der darauf schwimmenden Butter in der Tee-

3: Schröder AE9 Monguor

schale zu einem trockenen Teig geknetet und dann in Kügelchen oder Würstchen gegessen. — Der Tsamba aber, der für das Weihrauchopfer gebraucht wird, darf nicht mit dem gewöhnlichen Tsamba aufbewahrt werden. Jede Familie hat dafür ein eigenes Kästchen. — Über *šbĕ, ch'ing-k'o* vgl. Näheres in SCHRÖDER: Hochzeitslieder.

[6] Der Gewährsmann bemerkte, daß „Libation" sonst immer nur *tusa* genannt würde; nur beim Weihrauchopfer würde man *tsiab* sagen. Der Ritus legt aber nahe, daß es sich gar nicht um eine Libation handelt. Trankopfer werden stets auf die Erde hingegossen. Hier aber wird das Wasser ins Feuer gesprengt; zudem wird Wasser an dieser Stelle allen andern Flüssigkeiten vorgezogen und gilt als die reinste und vornehmste. Das verlangt eine andere Deutung. Als Lehnwort entspricht *tsiab* dem tib. *c'ab*. CH. DAS (p. 409) erklärt *c'ab*: „water in any form; but not used like *c'u* to signify a river." Er erwähnt dann noch *sňa c'ab* als Wasser, mit dem sich die Mönche vor Beginn einer religiösen Zeremonie die Zunge netzen, um sich zu reinigen, was etwa das gleiche ist, wie oben die beschriebene Reinigung vor dem Weihrauchopfer. Das *tsiab* ist also nichts anderes als eine Reinigung des Feuers durch Besprengen mit Wasser. Später hat das Volk es als Opfer aufgefaßt und dafür Milch und Wein genommen. Es hat aber dennoch im Bewußtsein behalten, daß es eigentlich Wasser sein müßte.

[7] Die Muschel ist das Tritonshorn, die Tritonsschnecke. Den Tujen gilt sie als Sinnbild der Reinheit und des Erhabenen. So wird das Wort *dōň* auch adjektivisch gebraucht für: rein, weiß, erhaben, heilig. Man könnte es einfach mit „muschelig" übersetzen. Besonders häufig findet es sich in diesem Sinne in Liedern. Zum Blasen durchbohrt man das spitze Ende und faßt es meist in Metall ein; es dient als Mundstück. Am andern Ende, dem Schalltrichter, hängen oft bunte Bänder; vgl. Abb. Trotz ihres dumpfen Tones klingt die Muschel sehr weit.

Daß die Muschel in jener Gegend nicht heimisch ist, versteht sich von selbst. Der Tujen-Name ist die Lautnachahmung des tibetischen *duň*, meist fügen die Tibeter noch *dkar*, „weiß", hinzu. Im Mongolischen heißt diese Muschel *labai* (UNKRIG; Kov. 1958), was wiederum dem chinesischen *la-pa*, „Trompete", verwandt ist. Dem Zeichen nach ist aber dieses *la-pa* auch nur eine chinesische Lautnachahmung eines Fremdwortes. Die Ch'inghai-Chinesen haben für das Muschelhorn die Bezeichnung *pi-li*, die aber offensichtlich vom Tujenverb *pilie* (blasen) kommt, z. B. *dōňgĕ pilie* = die Muschel blasen. Die Chinesen sagen dafür *ch'uei pi-li*. Sonst ist der chinesische Name für das Tritonshorn einfach *luo* (*lo*), und die aus dem Buddhismus übernommene Muschel-Göttin (tib. *Duň-ma*, skr. *Mangala śankha*) heißt *pao-lo t'ien-nü*, „himmlische Elfe der Kostbarkeits-Muschel"; vgl. PANDER-GRÜNWEDEL, Pantheon, p. 105, Nr. 294; p. 115.

Das Muschelhorn und sein kultischer Gebrauch ist in Indien und der Südsee schon alt und weitverbreitet und in den Buddhismus übernommen worden. Die Funktion der Muschel im lamaistischen Kult kann hier natürlich nicht weiter erörtert werden. Zum Verständnis der Tujen-Sitte sei jedoch noch folgendes bemerkt. Das Muschelblasen bringt Harmonie ins Weltall und

d

c: Ein Tulku mit seinen Kultgerät beim Gebet. Vor ihm der Text, in der Linken die Manischnur. Im Hintergrund assistierende Lamas. Aufnahme im Kloster Fu-hai-szu, Mai 1948. (Zum Kapitel: Der Lama-Empfang.)
d: Gurtum aus Hei-tsui-p'u im Hsi-ch'uan. Aufnahme in seinem Gehöft, Herbst 1948. Wir durften nicht durchs Hoftor eintreten, sondern mußten übers Dach einsteigen; so wollte es der Schutzgeist. Der Gurtum hält in der Rechten den Geisterspeer, in der Linken die Fangleine und das Geisterschwert mit dem Griff nach unten. Er trägt nicht die fünfteilige Krone. Diese einfache Art des Gurtums ist in Chinghai weit verbreitet. (Zum Kapitel: Der Gurtum.)

[Follow p. 48]

kann die Hungergeister (*Preta's*) erlösen und ins Freudenparadies führen (*Tushita*); vgl. PANDER-GRÜNWEDEL, a. a. O. Besonders wertvoll sind Muscheln, deren Spiralen nicht wie gewöhnlich von rechts nach links, sondern umgekehrt verlaufen; vgl. CH. DAS (p. 628): *duṅ-dkar gyas 'k'il* (skr. *dakṣiṇā varta śankha*). Der Klang einer solchen Muschel heilt Krankheiten, und bewahrt man sie im Hause auf, so tilgt sie Streit und Unfrieden und gewährt Harmonie in der Familie. Das mag auch der Grund sein, warum die Tujen sich immer um eine solche Muschel bemühen und sie morgens beim Weihrauchopfer im Gehöfte blasen.

Im übrigen ist die Muschel auch schon von sich aus auf das Opfer hingeordnet. Früher diente sie als Opferschale; vgl. CH. DAS (p. 627). Heute gilt sie als drittes der acht Opfer (*mc'od brgyad*) oder Glücksymbole (*bkra šis rtags brgyad*) als Zeichen der Hinwendung nach der rechten Seite, nach den zehn Weltenrichtungen liebliche Klänge aussendend; vgl. FILCHNER (UNKRIG): Kumbum, p. 21.

[8] Das Weihrauchopfer ist unter den Nomaden Ch'inghais überall verbreitet und teilweise von den Chinesen übernommen. Es wird auch in allen Lamaklöstern gepflegt. Mag es auch nicht aus dem Buddhismus stammen, so ist es doch von ihm ins Rituale aufgenommen und mit „Weihrauch-Sutra's" beehrt worden, die bei Verbrennung wohlriechender Substanzen zu Ehren der Götter gebetet werden. Vom Lamaismus stammen auch die Zutaten, welche die ursprüngliche einfache Form überlagerten. Über diese ursprüngliche Form, deren Herkunft und religiöse Zuordnung zum Himmel vgl. den 2. Teil.

[9] Auch sonst wird das Feuer als Reinigungsmittel gebraucht. So muß z. B. nach alter Sitte eine Tujenwitwe bei Wiedervermählung über ein Feuer schreiten, ähnlich wie bei den Chia-Fandse die Braut über Tannenholzfeuer geführt wird (*sung-p'an*). Den gleichen Sinn dürfte auch das Feuerspringen in der Vollmondnacht nach Neujahr haben; vgl.: Das Neujahrsfest, Anm. 6. Doch hat nicht nur das Feuer diese Reinigungswirkung, sondern auch der Weihrauch selber. Das geht schon aus seinem Namen „Reinheits-Holz" hervor und aus dem Verbalgebrauch von *bsaṅs*, welches nach CH. DAS (p. 1316) „to cleanse, to remove" bedeutet. Aus diesem Grunde wird auch in das Wasser mit dem Glühstein (*ch'ü-t'an*), der zur kultischen Reinigung benutzt wird, Weihrauch gestreut.

[10] Zum Wasseropfer vgl. Kapitel: Der Lama-Empfang, Anm. 3.

[11] *talga*: tib. *t'al ba* oder *t'al k'a* = Pulver, Staub, Asche; mong. *talxa* = Mehl, Roggen-, Gerstenmehl.

ġlu-smdn: tib. *klu sman* = die Drachenmedizin, bot. Angelica. Es gibt vier Arten, von denen die schwarze und die weiße die besten sind. Die weiße Angelica ist gegen Krankheiten vom Erd-Drachen. Im Mongolischen heißt sie *luus-un em* = Drachen-Medizin.

snagsog: tib. *sna* = vielerlei, und *ts'ogs* = Art. *lisi* = tib. *li-ši* = Carophyllus. *gušgum*: tib. *gur-gum* = Safran, Krokos. *sěsmiel*: tib. *sug-smel* (*rmel*) = Kardamom; chin. *pai-tou kuan* (weiße Bohnenkrone). *gagula*: tib. *ka ko la* = Amomum medium; chin. *ts'ao-kuo* (Stroh-Frucht). *dzati*: tib. *dsa tsi* (skr.) = Muskat. *ġawur*: tib. *ga-bur* (skr.) = Kampfer (UNKRIG).

[Face p. 49]

2. Der Glückspfeil *

Bericht

In jedem guten Tujen-Hause findet sich ein Pfeil. Dieser steckt mit der Spitze in einer Urne mit Getreide oder in einem Mauerspalt oder in einer Balkenritze. An den Pfeil bindet man Hadas, bunte Bänder, Schafwolle, Haare usw. Der Pfeil wird von einem Lama oder Bonpriester geweiht und bei dieser Gelegenheit im Hause verehrt. Später jedoch verehrt man ihn nicht mehr. Der Pfeil ist nicht Sitz eines Geistes, sondern er garantiert Glück und Reichtum in der Familie.

Einzelheiten

Der Pfeil: Ursprünglich gebrauchten die Leute einen richtigen Pfeil [2]. Diese sind jetzt selten, da die Tujen nicht mehr Pfeil und Bogen als Waffen haben. Die Pfeile sind aber sehr mannigfaltig gewesen. Jetzt nimmt man meist nur noch einen einfachen Pfeilschaft ohne Spitze und Fiederung. Für die Herstellung bestehen keine Vorschriften.

Die Urne: Man gebraucht eine gewöhnliche Tonurne oder breite Vase, wie sie überall erhältlich ist. Manchmal wird die Urne hergerichtet wie die Schatzurne des Erdgottes. Dann kommen aber nicht mehrere, sondern nur eine Spruchrolle hinein. Auch übergießt man das Getreide nicht mit flüssiger Butter. An Getreide sind folgende Arten darin enthalten: Weizen, schwarze und weiße Gerste, helle und dunkle tibetische Gerste, niemals aber Bohnen, Erbsen usw. Die Urne kann von jeder Farbe sein. Sie ist aber nicht für den Glückspfeil notwendig. Manchmal steckt man diesen nur in ein Maß Getreide oder einen Holzzylinder; oder man gebraucht überhaupt keinen Behälter und steckt den Pfeil irgendwohin ins Gebälk oder die Mauer, allerdings immer im Hause. In einem solchen Falle wird der Pfeil jedoch nicht von einem Lama oder Bonpriester hergerichtet oder geweiht [3].

Angebinde: Immer und auf alle Fälle werden an dem Pfeile Hadas und Schafwolle befestigt. Ist der Pfeil geweiht, dann kommt meist auch noch ein kleiner kupferner Spiegel daran. — Verkauft oder verschenkt man ein Tier, dann wird auch von dessen Haaren etwas an den Pfeil gebunden, so bei Pferden, Eseln, Maultieren. Die Haare werden aus Mähne oder Schwanz genommen. Auch beim Veräußern eines Schafes wird noch einmal etwas Wolle angeknüpft. Nie aber dürfen Schweineborsten an den Glückspfeil gebunden werden. — Nach dem ersten Haarschnitt eines Kindes, am ersten Geburtstag, werden die abgeschnittenen Flaumhaare zu einer kleinen Kugel gewickelt und ein Faden daran ausgedreht, womit man die Kugel an den Pfeil bindet; ebenso knüpft man Pfeil und Bogen daran, welche das Kind bei dieser Gelegenheit als Orakel ergriffen hatte. — Wird eine Tochter verheiratet, so schneidet man einige kleine Streifchen Tuch von ihrem Braut-

* Anmerkungen siehe pp. 52-55.

3:Schröder AE9 Monguor

kleidsaum ab für den Pfeil. Auch Haare der Braut, die beim Frisieren und Schmücken in der Nacht vor der Wegführung ausgekämmt wurden, werden sorgfältig gesammelt und am Glückspfeil befestigt [4].

Auch die Urne erhält Zugaben. So wirft man immer einige Körner Getreide hinein, wenn man solches verkauft. Ferner bringt in der Nacht beim Abholen der Braut die Bräutigamsfamilie ein Hada und Kleie für das Reittier der Braut mit. Die Kleie wird zum Teil in die Urne geschüttet und das Hada an den Glückspfeil gebunden.

Aufbewahrung: Wenn der Glückspfeil geweiht wurde und in einer Urne oder einem Scheffel steckt, so muß diese immer mit dem Pfeil zusammen im Haupthaus auf der Lade vor dem Buddhabild stehn oder, falls man eine Kapelle hat, in der Kapelle aufbewahrt werden. Wird er ohne Urne irgendwo festgesteckt, so muß auch das immer im Haupthaus sein.

Errichtung und Weihe: Der Pfeil ohne Urne wird ohne jedes Zeremoniell vom Hausherrn selber zurechtgemacht und mit dem Angebinde versehen. Er wird dann einmal abgeräuchert und unter Weihrauchopfer an seinen Platz gesteckt.

Beim Pfeil mit einer Urne lädt man den Lama unter den üblichen Gepflogenheiten ein. Er macht sein Torma, stellt die Wasserschälchen auf usw., wie sonst auch. Dann betet er einen Tag oder auch mehr und spricht das Weihegebet über den Pfeil. Während dieses Gebetes wird der Pfeil mit Zypressenweihrauch abgeräuchert. Dann wird der Topf gebracht, gewaschen und abgeräuchert, indes der Lama die Spruchrolle fertig macht. Auch diese wird abgeräuchert. Danach füllt man das Getreide in die Urne und steckt den Pfeil hinein. Der Hausherr stellt den Topf mit dem Pfeil vor den Lama auf den Kang, und dieser knüpft nun die einzelnen Sachen an. Jedes Stück wird vorher in den Weihrauch gehalten und dem Lama angereicht. Alles wird vom Gebete des Lama begleitet. Es ist auch statthaft, daß andere Personen, z. B. der Hausherr, die Angebinde befestigen. — Hiernach stellt der Hausherr die Pfeilurne auf die Lade vor das Götterbild mit den üblichen Opfergaben: Wasserschälchen, Wein, Getreide, Butter, Milch, Brot usw. Im Hofe draußen wird das große Weihrauchopfer dargebracht, und drinnen machen alle Anwesenden vor dem neuen Glückspfeil einen dreifachen Kotou. Bei der ganzen Verehrung aber bleibt der Lama auf dem Kang sitzen und betet.

Am Mittag feiert man ein Familienfest mit Gelage, singt und trinkt bis in die Nacht. Der Lama bleibt bis zum folgenden Morgen.

Gebrauch und Sinn: Der Pfeil wird nie zum Wahrsagen benutzt, weil er nicht Sitz eines Geistes werden kann, wie z. B. der Geisterspeer [5]. Nur einmal wird er aus dem Hause genommen, nämlich bei der Hochzeit. Während die Braut unter Weinen und Wehklagen der Frauen hinaus auf die Tenne geführt wird und das Reittier besteigt, nimmt der Vater den Glückspfeil und läuft damit hinter der Braut hin und her, den Namen seiner Tochter rufend, welche auf dem Reittier dreimal um die Tenne geführt wird, bevor sie davonreitet. Der Vater will das Glück zurückhalten.

Der Pfeil hält Glück und Wohlstand des Hauses zusammen, ähnlich wie der Reichtumsgott und die Schatzurne bei den Chinesen. Darum wird von allem, was man veräußert, etwas als „Same" und „Wurzel" zurückbehalten und am Pfeile befestigt oder der Urne beigegeben [4]. Die Braut geht mit der Heirat aus der Familie fort; aber man will, daß Glück und Reichtum nicht mit ihr das Heim verlassen. Darum werden auch Kleider und Haarreste am Pfeil aufbewahrt.

Wörterliste

Pfeil:	*sĕmu.*
Pfeilspitze:	*timurdĕ.*
Pfeilfiederung:	*sĕmu fodie.*
Glückspfeil:	*yāṅsdzia* [1], [4].
Urne:	*p'endzĕ* (chin.).
Urne mit Getreide	*yāṅ-dĕw* = Glücks-Samen füllen (tib. Lehnw.) [1].
Die Urne füllen:	*yāṅdzĕwrĕ ǵada* = Samenfüllsel einfüllen.
Angebinde:	*yāṅ rdzĕ* = Samen Angebinde (Zutat).
Hada:	*hadag* (tib.).
Tuchreste:	*sdziedzĕ dzüldĕgān* = Tuchreste allerart.
Mähnenhaare:	*dzāṅgāṅ*; *tsung-hang* (chin.).
Schwarzhaare:	*sul.*
Haarkugel:	*fudzĕ sdzialag* = Flaumhaar Kugel.
Schafwolle:	*ṅguasĕ.*
Weihegebet:	*yāṅpo dgĕ* (tib. Lehnw.) = Glückspfeil Gebet [1].
den Pfeil herrichten:	*ilieni yāṅsdziarĕ fuya* = alles dem Glückspfeile anbinden.

Anmerkungen

[1] *yāṅsdzia*: tib. *g,yaṅ* = Glück, *mda'* = Pfeil. *yāṅdĕw*: tib. *g,yaṅ* (idem), *skyob* = schützen. Damit bezeichnet man ein Opfer zur Sicherstellung des Glücks. *yāṅbo* (*-po*): scheint mit dem tib. *g,yaṅ-bum* = Glücksurne, zusammenzuhängen (UNKRIG).

[2] Nach den Berichten der Alten sind die Tujenpfeile genau so wie die der Fandse und Mongolen in Ch'inghai. Man kann diese Pfeile in großer Anzahl in jeder Lamaserie sehen. Ihre Durchschnittlänge beträgt etwa 1 *m*. Ihre Fiederung ist meist radial und aus Adlerfeder (*ying-mao*). Sehr mannigfaltig sind die Formen der Pfeilspitzen. Das Material ist immer Eisen. — Die Pfeile und Bogen der Kinder sind einfache plumpe Spielzeuge, wie in Europa auch. Heute sind Pfeil und Bogen aus dem Leben der Tujen verschwunden.

[3] Zur Herrichtung der Urne vgl. d. Abschn.: Die Erdgott-Urne.

[4] Daß immer Schafwolle am Pfeil befestigt wird, ähnlich wie am Obo, scheint mit dem Glücksschaf zusammenzuhängen, vgl. weiter unten. F. LESSING (Yung Ho Kung, p. 148) möchte die Woll(Baumwoll)-Kügelchen mit den Fadenfiguren (*mdos*) in Verbindung bringen, welche die Dämonen festhalten. — Mitunter werden auch Seidenfäden in den fünf heiligen Farben hinzugefügt. Auch die Haare eines Rindes werden beim Verkauf an den Pfeil gebunden, auf keinen Fall aber Schweineborsten, wie das z. B. L. SCHRAM (Mariage, p. 58) behauptet. L. SCHRAM verwechselt an dieser Stelle überhaupt den Glückspfeil mit dem Geisterspeer. Mit *iang hstia* bezeichnet er einen

„tige en fer", der in einem „gros et large socle" steht und eine Länge von „deux à trois pieds" hat. Man zollt ihm eine Verehrung „comme devant les esprits". Das trifft aber niemals auf ein *yäńsdzia* zu, sondern zum Teil nur auf einen kleinen Geisterspeer. Bei diesem sind Spitze und Eisenfuß sichtbar, so daß er den Eindruck erweckt, als sei er ganz aus Eisen. Er steckt ebenfalls in einem großen Gestell und kann die Länge von etwa einem Meter haben. Der Glückspfeil wird, meinem Gewährsmann zufolge, bei den Tujen nicht verehrt wie ein Geist, wohl der Speer. Die andern Angaben passen jedoch wieder für den Glückspfeil.

[5] Der Gewährsmann bestand fest auf dieser Behauptung, obwohl die Weihe, Bebänderung, Spiegel und Schellen dafür zu sprechen scheinen, daß der Pfeil dennoch Sitz des Geistes ist.

[6] Über das Wort *yäńsdzia* erhält man beim Volke verschiedene Auskunft. Die einen sagen, *yäń* bedeute „Glück", wogegen der Gewährsmann mehr den Sinn von „Keim, Wurzel, Same, Glückgarant" unterschiebt. In der Gegend von Bengbar (Hsi-ch'uan) heißt der Pfeil *yäńbō*. Das ... *bō* konnte niemand erklären. Das *yäń* leiteten die Leute aus dem Tibetischen ab, und es bedeute „Glück". Zweifelsohne ist es mit dem tibetischen *g,yaṅ* identisch. Das bei F. Lessing (Yung Ho Kung, p. 139) erwähnte chinesische Wort *ying-pao* erinnert lautlich sehr an die Bezeichnung *yäńbō*. Einen dritten Ausdruck für den Glückspfeil haben die Tujen im Worte *yäńdar*. Sie deuten das *yäń* als „Glück" und das *dar* als „vermehren". Der Alte ließ jedoch das *dar* nicht für den ganzen Pfeil gelten, sondern nur für das Hada, das daran befestigt ist, womit er auch das Richtige trifft; denn *dar* bedeutet im Tibetischen „Tuch, Seide". Er meinte, das Ganze, samt der Urne, würde immer nur *yäńsdzia* genannt. Was das *sdzia* in dieser Zusammensetzung eigentlich bedeutet, ist mir nicht klar. Daß es eine Verballhornung von *mda'*, Pfeil, sei, ist zweifelhaft.

Um den Sinn des Glückspfeiles näher zu bestimmen, geht man am besten vom tib. Wort *g,yaṅ* aus. Nach Ch. Das verbindet sich mit *g,yaṅ* der Sinn von Reichtum, Lebensfülle, Schätzen, Wohlstand. Das geht aus den entsprechenden Zusammensetzungen mit *g,yaṅ* hervor (vgl. pp. 1149 ff.). Der Inbegriff des Glückes aber scheint das Schaf zu sein; es heißt metaph. einfach *g,yaṅ-dkar*, „das weiße Glück". Weiß ist auch die Glücksfarbe. Wie ist denn aber der Glückspfeil als Träger des Glückes aufzufassen?

Am deutlichsten wird seine Eigenart bei den Hochzeitszeremonien. Wenn die Braut vom Elternhaus aufbricht und auf dem Pferde reitend dreimal um die Tenne geführt wird, läuft der Vater der Braut dreimal hinter der Braut mit dem Glückspfeile her und ruft deren Namen. Währenddessen singen die Begleiter ein Lied, worin sie alles, was die Braut mitnimmt, als „Keim" auf den Pfeil bannen, damit es zurückbleibe. — Ähnlich ist es mit der Urne, welche das Getreide aufnimmt, das die Brautabholer gebracht haben. Diese Urne heißt tib. *g,yaṅ-bum* und ihre Bedeutung deckt sich mit dem Sinn, den Ch. Das (p. 1150) angibt. Sie enthält Schätze: Gold, Silber, Geld, Schmuck usw. Der Glückspfeil und die Glücksurne tragen also die Keime und Lebenskraft aller Glücksgüter der Sippe, seien sie nun Tiere, Menschen,

Schätze oder Saat. Sie tragen sie nicht nur, sondern gewähren auch deren Bestand und Vermehrung. Diese Vorstellung findet sich aber nicht nur bei Tujen allein.

Die Hirten-Nomaden haben einen ähnlichen Gebrauch wie die Tujen und Ackerbau-Fandse mit ihrem Glückspfeil. Wenn sie Tiere veräußern, dann binden sie etwas von der Wolle oder den Haaren an den Zeltpfahl oder an einen Strick im Zeltinnern. (Ähnliches berichtet G. MONTELL, p. 49 [Bild], von den Mongolen). Dieser Pfahl oder Strick hat eine besondere Beziehung zum Himmel. Bei den Ackerbauern tritt entsprechend der Bedeutung der Erdfrüchte die Urne hinzu. So haben die Chinesen ebenfalls eine *pao-p'ing*, „Schatz-Vase" ; ähnlich besitzen die Lolo eine Ahnenkiste, worin sie Schmuck und Andenken der Sippe aufbewahren, um dadurch eine Gewähr für Glück und Reichtum der Familie zu haben ; vgl. LIN YÜEH-HWA : I-chia. Vor allem scheint der Glückspfeil bei den Bon von großer Wichtigkeit zu sein ; vgl. H. HOFFMANN : Quellen, pp. 190, 184, 178. Eine besondere Rolle spielt er bei den Hochzeitssitten der Bon, wie sie H. FRANCKE in den Hochzeitsliedern beschrieben hat. Die Hochzeitssitten der Tujen und ihre Lieder weisen eine gewisse Verwandtschaft mit diesen Bon-Sitten auf, was an sich ja nicht verwunderlich ist, da die Bonreligion in Amdo bis in die jüngste Zeit hinein von starkem Einfluß war. Zur Weltanschauung der Bon gehört nun aber die Vorstellung von den Stammtieren, Muttertieren, Mutterschätzen, auf die alle andern irdischen Tiere, Schätze usw. zurückgehen ; vgl. H. FRANCKE : Hochzeitslieder, pp. 8 ff. Die Stammtiere werden auch von den Tujen in einem Liederzyklus besungen, welcher den Namen *xoni*, „Schaf", trägt. Dieser Liederzyklus stammt eigentlich von den Amdo-Fandse, bei denen er *g,yań-dkar*, „weißes Glück", oder *g,yań-dkar lug*, „Schaf des weißen Glücks", heißt. Obwohl verschiedene Tiere besungen werden, steht das Schaf als das höchste Glücksgut im Mittelpunkt.

Verbindet man diese Vorstellungen miteinander, so läßt sich vom *yańsdzia* behaupten : Es trägt die Keime und Ursprünge der Glücksgüter dieser Welt in sich. Die Lebewesen werden mehr dem Himmel zugeordnet (sind vielleicht astral zu deuten), und die Saat samt den andern Schätzen mehr der Erde. Der Pfeil stellt die Verbindung von beiden dar (Himmelspfahl, Himmelsseil). Diese Idee ordnet sich auch gut in die vorbuddhistisch-schamanistische Weltauffassung mit dem Weltenberg und den einzelnen Bereichen ein. Vgl. z. B. die Darstellung im Berg-Torma beim Ritus der Pfahlziege, wo die ganze Schöpfung in Miniatur auf ein Maṇḍala gebracht wird. Grundlegend ist immer eine keimhaft vorgebildete Welt, welche die wirkliche große Welt durch ihre Lebenskraft erhält. — Es wäre interessant, diese Vorstellungen über Asien hin zu verfolgen ; vielleicht ist sogar das Inao und das „Entsenden" der Ainu damit in Zusammenhang zu bringen.

Der Glückspfeil und die damit verbundene Sitte ist in den Buddhismus übergegangen und wird in allen Lamaklöstern geübt. Überall findet sich der Pfeil. Die wichtigste Zeremonie ist die Herbeirufung des Glücks (*g,yań 'gug*). Über diese Zeremonie ist in F. LESSING (Yung Ho Kung, pp. 139-147) ausführlich berichtet, wo auch Näheres über die lamaistische Verwendung des

Pfeiles zu finden ist, was aber nicht mehr hierher gehört. Nur eine Parallele zum volkstümlichen Gebrauch bei den Tujen sei erwähnt, wo LESSING die Prozession mit dem Glückspfeil schildert (p. 146): „After this interlude, the procession continues its way and finally returns to Hall II. They have absorbed all they can the elixir or vital forces (*rasayana*, tib. *bcud len*, mong. *sime*, *shime*) of heaven and earth, sun and moon, rivers and lakes, trees and herbs." Das entspricht genau der oben erwähnten Hochzeitszeremonie der Tujen beim Aufbruch der Braut, wobei ebenfalls „die Keime, Lebenskraft" im Liede auf den Pfeil gebannt werden, mit dem der Vater hinter der Braut einherläuft.

Das Tujenwort für diesen „Keim, Samen usw." lautet in den Liedern *furie*; vgl. SCHRÖDER, Hochzeitlieder. *furie* ist das mongolische *üre* (DMF, p. 111) und entspricht dem Sinne nach, wie *sime*, dem tibetischen *bcud* in *bcud len*. *len* bedeutet „fassen, ergreifen, sammeln" (CH. DAS, p. 1220) und *bcud* „Saft, Feuchtigkeit, Essenz, Kraft usw." (p. 394). Damit deckt sich die Bedeutung, welche mein Gewährsmann für das Wort *yän* geltend macht; vgl. oben. Zum Ausdruck *bcud-len* schreibt CH. DAS (p. 394): „the art of extracting essences for prolonging health and longevity, such essences as being of different kinds ...". Er erwähnt auch besonders die Erdkraft: „*sa-yi bcud*, the essence of the earth, by which the produce of the field, medicinal plants and precious metals and stones, etc., are said by Tibetans to be produced; therefore this essence is the natural fecundity of the soil ..." — Darüber an anderer Stelle mehr (in der Mythe über den Ursprung des Pflanzenbaues).

3. Der Manibaum und die Mittelburg *

Bericht

Fast in jedem Tujengehöft wird ein Manibaum errichtet, und zwar in der Mitte der Mittelburg oder Rundkrippe. Der Manibaum braucht mit dieser Mittelburg nicht zu gleicher Zeit aufgestellt zu werden, es kann das auch später noch geschehen. Die Zeit bestimmt der Wahrsager.

Der Manibaum besteht aus einem Holzmast mit einer Spitze, die Sonne und Mond darstellt. Unter dieser Spitze wird eine fünffarbige Hülle auf das Mastende gezogen, und unter diesem Mastende flattert die weiße Manifahne.

Diese Fahne wird im Lamakloster bedruckt. Zu gleicher Zeit lädt der Hausherr einen Lama ein, um den Baum zu errichten. Der Lama betet mehrere Tage und nimmt am letzten Tage die Aufrichtung vor. Während dieser Tage ist der Hof tabu. Täglich wird dreimal das große Weihrauchopfer dargebracht.

Bei der Errichtung bringt man den Mast in den Hof, legt ihn mit der Spitze auf die Mittelburg und knüpft die einzelnen Teile daran fest. Ist die Stange hergerichtet, dann wird sie abgeräuchert, zuerst mit dem Glühstein und dann mit Weihrauch. Der Wahrsager nimmt mit der Speerspitze einige Gerstenkörner von einem Teller und wirft sie über den Baum, und der Hausherr

* Anmerkungen siehe pp. 60-63.

Fig. 7. Manibaum und Mittelburg.
Die große Urne in der Mitte (1) heißt Geister-Naga-Urne, die Begleiturnen (2-5, drei davon sichtbar) Zauberhort.

betupft den Baum mit Butter. Hierauf graben die Männer in die Mittelburg ein schmales tiefes Loch bis auf die Bodenebene. Der Wahrsager wirft wieder mit dem Speer einige Gerstenkörner hinein, und der Hausherr streut noch einige Weihrauchblätter dazu. Dann setzen die Männer den Baum ins Loch und ziehen ihn hoch. Damit er einen guten Stand hat, wird er am Fuße mit Steinen und Lehm festgekeilt. Die ganze Handlung geschieht unter ständiger Aufsicht des zitierten Speergottes.

Jetzt folgt das Opfer. Auf der Räucherplatte unterm Manibaum wird Weihrauch verbrannt, während man davor einen Tisch mit folgenden Gaben stellt [1]: einige Schälchen Gerstenwein, Getreide, reines Wasser, eine große Schale Tee, Brote, Butter- oder Öllämpchen und zwei Vasen bunter Blumen. — Der Lama kommt heraus, setzt sich auf die Gegenseite der Mittelburg auf eine weiße Filzmatte und betet das Weihegebet. Dabei machen alle Anwesenden Kotow und blasen die Muschel.

Nach dem Gebet werden die Opfergaben abgeräumt. Wasser und Wein gießt man auf den Boden und wirft von den Broten kleine Stückchen in die Luft. Die Öllämpchen bleiben stehen. Alles andere nimmt man mit ins Haus.

Der Hausherr gibt den Gästen ein Mahl; man tanzt und singt und trinkt bis in die Nacht, und zwar im Hofe um den neuen Manibaum. — Am andern Morgen bringt man den Lama heim ins Kloster.

Einzelheiten

Personen: Zum Beten lädt man einen gewöhnlichen Lama, keinen lebenden Buddha ein, manchmal auch Bonpriester. Man kann auch alles ohne Lama vollziehen. Dann dauert die Handlung aber nur einen Tag, weil das Beten ausfällt. In diesem Falle errichtet der Hausherr selber den Baum. Die Zeremonien sind fast die gleichen wie beim Lama. Nie aber darf der Wahrsager fehlen, einerlei ob er Speerwahrsager ist, oder die Sänftenträger oder die Tischgottwahrsager [2]. Der Wahrsager legt nie selber Hand an. Er hat nur die Zeit zu bestimmen und den Geist zu zitieren, unter dessen Aufsicht sich alles vollzieht.

3:Schröder AE9 Monguor

Zeit: Die vom Wahrsager bestimmte Zeit ist verschieden lang; einen, drei, fünf, sieben Tage, wenn ein Lama kommt; sonst nur einen Tag. Die Errichtung selber nimmt höchstens einen Vormittag in Anspruch. Man beginnt immer morgens. — Meist wird der Baum im Anschluß an den Bau der Mittelburg errichtet. Er kann aber auch zu allen andern Tagen des Jahres errichtet werden.

Der Baum: Der Baum muß immer frei von seiner Rinde sein. Die Größe wechselt je nach Maßgabe des Hofes und der Holzart. Tannenbäume sind meist die längsten. Über das Material und die Herkunft des Baumes bestehen keine Vorschriften. Man kann ihn nach Belieben fällen. Auch sind keine besondern Zeremonien damit verbunden. Es gibt Bäume bis zu 10 *m* Höhe, besonders wenn es sich um Manimasten für das ganze Dorf oder ein Kloster handelt. Durchschnittlich aber sind sie 5 bis 6 *m* lang [3].

Die Spitze [4]: Die Spitze wird aus einem daumendicken Holzbrett geschnitten, und zwar in Form einer Sonne, die auf einem Halbmond ruht. Auf der Sonne sitzt noch ein kleiner Halbkreis, und der Mond hat einen Stiel, mit dem die Spitze auf das Stangenende gesetzt wird. Alles: Sonnenaufsatz, Halbmond und Stiel sind aus einem Stück geschnitten. Diese Spitze sitzt aber nicht unmittelbar auf der Stange, sondern wird durch eine tellergroße, runde Holzscheibe gesteckt, die wagerecht auf das Stangenende zu liegen kommt [5]. Die Sonne mit ihrem Aufsatz und die wagrechte Scheibe werden mit roter Farbe gestrichen, z. B. roter Erde. Die Mondsichel ist weiß. — Statt dieser ausgeschnittenen Sonnen-Mond-Spitze kann man auch einen Büschel Zypressenzweige auf die Stange binden; auch das geschieht später unter den gleichen Zeremonien.

Die Hülle: Die Hülle, welche die Verbindung von Spitze und Stangenende verdeckt, wird aus fünf Stoffringen zusammengenäht. Jeder Ring hat eine eigene Farbe. Die Hülle ist etwa 30 bis 50 *cm* lang und richtet sich nach der Dicke des Baumes. Über die Herkunft und Beschaffenheit des Stoffes gibt es keine Regeln, sofern das Tuch nur sauber und ganz ist. Sowohl Männer als auch Frauen können diese Hülle nähen; meistens aber tun es die Männer. Nach dem Nähen wird die Hülle im Weihrauch abgeräuchert und auf den Hausaltar gelegt [6].

Die Manifahne: Die Fahne besteht aus einem langen Stück weißen Tuches. Meist ist es Baumwolltuch, das man in der Stadt kaufen kann. Es soll immer neu und fehlerfrei sein. Man beläßt dem Tuch die originale Bahnbreite, also etwa 30 bis 50 *cm*. Die Länge richtet sich nach dem Manimast; denn die Fahne wird mit der Längsseite am Baume angebracht. Im Durchschnitt beträgt die Länge 150 bis 200 *cm*. Diese Tuchbahn bringt der Hausherr zuerst in ein Lamakloster, wo sie in der Klosterdruckerei mit Gebetssprüchen und dem Bilde eines Luftpferdes bedruckt wird, jedoch nur einseitig. Etwa dreiviertel der Fahne wird mit Gebeten und das unterste Viertel mit dem Luftpferd versehen. Zu Hause näht dann der Mann oder die Frau auf einer Längsseite eine Reihe Schnüre an, womit die Fahne an die Stange

3: Schröder AE9 Monguor

geknüpft wird. Die andere, im Winde flatternde Längsseite versieht man mit fünf Stoffzungen in den fünf heiligen Farben. Die Länge richtet sich nach der Fahne. Meist sind sie etwa zwei Finger breit und einen Finger lang. Sie können rechteckig oder auch dreieckig sein. Die Fahne wird ebenfalls abgeräuchert und neben die Hülle auf den Hausaltar gelegt. Auch für diese Zunge gelten keinerlei Vorschriften bezüglich der Herkunft und Art des Stoffes [7].

Das Schafopfer: Wenn ein Lama die Manistange errichtet hat, dann bleibt es bei dem oben beschriebenen Opfer von Brot, Wein, Blumen usw. Danach zieht sich der Lama ins Haus zurück. Im Hofe wahrsagt der Speerwahrsager noch einmal, und zwar, ob die Geister noch ein Schafopfer wollen oder nicht. Der Wahrsager gibt dann den Willen des Geistes kund; manchmal verzichtet dieser auf ein Schafopfer, manchmal will er es sofort haben, manchmal erst nach einigen Tagen. Der Hof muß dann solange tabu bleiben. — Man bringt nie das Schafopfer in Gegenwart des Lama dar, weil es ja immer mit der Tötung des Tieres verbunden ist, und die Lamas lassen keine Tötung zu. Der Ritus des Schafopfers weicht nicht von dem gewöhnlichen Schlacht- und Opferritus ab.

Erneuerung des Manibaumes: Hat im Laufe der Zeit der Baum oder die Fahne Schaden gelitten, so werden sie erneuert, und zwar nur der Teil, der beschädigt ist. Die zerfetzte Fahne wird verbrannt, z. B. im Herd oder in einem eigens dafür angezündeten Feuer, aber immer mit reinem Brennholz, nie z. B. mit dem üblichen Trockenmist. Der unbrauchbare Manibaum wird ebenfalls verbrannt. Auf keinen Fall darf man ihn für andere Zwecke verwenden, etwa als Dachlatte. Wenn man den Manibaum oder den entsprechenden Teil ersetzt, vollzieht sich alles unter den gleichen Zeremonien wie bei einer Neuerrichtung.

Die kleine Maniflagge: Statt des großen Manibaumes errichtet man öfters auch auf dem Hoftor des Außenhofes eine kleine Stange mit einem Luftpferdwimpel. Dieser beträgt etwa eine Elle im Geviert und ist nur mit dem Bild des Luftpferdes bedruckt, höchstens noch mit einigen kurzen tibetischen Sprüchen. Auch dieser Wimpel wird im Kloster hergerichtet. Aber zur Errichtung dieser Flagge lädt man keinen Lama und keinen Wahrsager ein. Der Wahrsager bestimmt nur einen Glückstag und eine günstige Stunde. Alles geschieht ohne besondere Zeremonien, sogar ohne ein Weihrauchopfer. Wohl aber ist der Hof einige Tage tabu. Manche Bauern errichten sowohl die große Manifahne im Hof als auch die kleine Maniflagge auf dem Tore.

Die Rundkrippe: Wird ein neues Gehöft angelegt, so wird auch immer mitten im Hofe eine Rundkrippe oder Mittelburg gegraben, genau nach Angabe des Wahrsagers. Zu dem Zwecke richtet der Lama fünf Schatzurnen her, welche in die Grube gesetzt werden. Die Grube wird eingeebnet und über ihr eine runde Mauer von etwa 2 *m* Durchmesser und 1 *m* Höhe errichtet. Die untern drei Schichten sind Steine, die obern Schichten Luftziegel. Diese Rundung wird mit Lehm ausgefüllt und festgestampft. In die Mitte kommt ein Pfahl oder eine Wagenachse, woran man die Tiere bindet,

wenn man sie tagsüber dort sonnt und füttert. Deshalb heißt das Ganze auch „Rundkrippe". Man nennt sie auch „Mittelburg"; denn es ist die Hofmitte, und die eingegrabenen Urnen beschützen das Gehöft. Die Mittelburg ist erst vollständig, wenn auch die Manistange errichtet wird. Auf dem Rande der Rundkrippe, nach dem Haupthause hin, befindet sich die Räucherplatte. — Die Herrichtung und das Eingraben der Urnen geschieht nach gleichen Zeremonien wie bei der Schatzurne oder bei Errichtung eines *beňkaň* (Tschortenkammer). — Die Rundkrippe wird weiß gestrichen. Nach der Errichtung hält der Hausherr ein Festmahl; man singt und tanzt um die neue Mittelburg [8].

Lied: Nach der Errichtung der Mittelburg oder des Manibaumes singt man gerne folgendes Lied: „Tritt man durchs große Tor, was ist dann rund? Tritt man durchs große Tor, dann ist die Rundkrippe rund; Halbyaks, Maultiere, Pferde bilden eine Runde, und mitten darin ragt der Manibaum empor. Tritt man in die Küche, was ist dann rund? Tritt man in die Küche, so ist Kessel und Deckel rund; Tassen, Näpfe und Schalen bilden eine runde Schar, der Holzlöffel ragt mitten darin empor. Tritt man ins Haupthaus, was ist dann rund? Tritt man ins Haupthaus, so ist das Feuerbecken rund. Verwandte und Freunde sitzen darum, und in der Mitte ragt der Weinkrug empor."

Sinn: Der Manibaum verbürgt Glück und Frieden für Haus, Hof und Menschen. Das Luftpferd ist Sinnbild des Schicksals. Auf seinem Rücken trägt es den Edelstein des Glückes: *nuru*. Der Baum stellt den Weltenberg dar. Um seinen Gipfel kreisen Sonne, Mond und Sterne, und unten liegt die Welt mit den Menschen, mit Haus und Hof und Herden [9].

Wörterliste
(Vgl. Zeichnung)

Der Manibaum (Baum und Fahne zusammen): *dardzioġ* (tib.).
Der Mast: *dardzioġ gändzë* (chin.); *mani-kan-tzu* (chin.).
Die Sonne: *nara*.
Der Mond: *sara*.
Für die runde Scheibe und den Aufsatz auf der Sonne gibt es keine eigenen Tujen-Namen.
Die Hülle: *rdziala ntsam* (tib.); *san* (chin.) = Schirm [8].
Die Fahne: *dardzioġ* (tib.); *ta-ch'iu* (chin.); *ki mori* = Luftpferd; *loňšda* (tib.); *lu-ma* (chin.) = Glückspferd; *lung-ma* (chin.) = Drachen-Pferd [10].
Die Fahnenzungen: *dardzioġ kilie* = Manifahne-Zungen.
Blauer Himmel: *huguo tieňgëre*.
Weiße Wolken: *tsiġan uloň*.
Gelber Lama: *sira lama*.
Roter Lama: *fulan lama*.
Grüne Erde: *noġuon yäsë* = grünes Gras.
Die Rund-Krippe: *yüän dzuor* = runde Krippe; *yüan-ts'ao* (chin.) = Rundkrippe; *sdziňkuor* (tib.) = Mittel-Rund [8].
Die Räucherplatte: *fdzaň tšë* = Weihrauch-Terasse.
Die Mittelurne (i. d. Mittelburg): *lawum-ġluwum* (tib.) = Geisterurne-Erdgotturne.
Die vier kleinen Urnen: *sënog-der* (*snaġ-der*) = Zauber-Urnen [11].

Anmerkungen

[1] Man kann auch unmittelbar am Fuße des Baumes in der Rundkrippe Weihrauch verbrennen und die Opfergaben niederstellen.

[2] Der Wahrsager wird am Morgen eingeladen und bewirtet. Er ruft den Geist herab und bestimmt dann genau den Anfang der Zeremonie.

[3] Heute findet man nur noch selten in der Hofmitte einen vollständigen Manibaum. Meist steht in der Rundkrippe eine alte rissige Stange ohne Fahne, woran die Tiere angebunden werden. — Der Manibaum muß nicht immer auf die Hofmitte beschränkt sein. Man sieht Manibäume auch auf den massiven Hofmauern, besonders wo diese in der Ecke zusammenlaufen. Auch gibt es gemeinsame Manibäume, die ein ganzes Dorf errichtet, meist dann auf einer erhobenen Terrasse mit einem schönen Weihrauchofen davor. Häufig steht auch in der Mitte des Obo eine Manistange mit flatterndem Wimpel. Die schönsten und größten Manibäume befinden sich vor den Eingangstoren der lebenden Buddhas in den Lamaserien, die bis zu 15 *m* Länge haben und bis zu 5 bis 8 *m* lange Flaggen tragen, die über und über mit tibetischen Texten bedruckt sind. — Sogar unter den Chinesen findet man Manistangen, wenn auch selten.

[4] Diese Spitze kommt auch immer wieder vor auf Tschorten, Tempeldächern, Totenladen, in Symbolen usw. — Die großen erwähnten Manibäume vor den Höfen der lebenden Buddhas jedoch haben statt der Sonnen-Mond-Spitze meist eine goldene Kugel.

[5] Für die runde Scheibe, durch die der Stiel der Mondsichel gesteckt wird, wußte der Alte keinen Namen. Er meinte, diese Scheibe stelle den Strahlenkranz der Gestirne dar. Manchmal hört man auch, sie vertrete die Erdscheibe. — Den kleinen runden Aufsatz auf der Sonne bezeichnete er als Stern; so wären denn Sonne, Mond und Sterne auf der Spitze. Von andern Erklärungen der lamaistischen Geheimdeutungen, wie der Sonne als *tilaka*, der Mondsichel als *bindu* (Tropfen) und des Aufsatzes als flammenförmiger *nāda* (Opferschrei) usw. ist bei den Leuten nichts bekannt. Vgl. Anm. 9.

[6] Der Name der Hülle ist offenbar nichts anderes als eine Verballhornung des tibetischen *rgyal-mts'an* (gespr. *rdzial-*), des Sieges-Schmuckes (cf. FILCHNER, UNKRIG, p. 21), welches zu den acht Opfern gehört (*mc'od brgyad*). CH. DAS (p. 313) erklärt das *rgyal-mts'an* (skr. *dhvajā*) als Kriegsbanner oder Siegeszeichen des Buddhismus; es ist die amtliche Standarte der Buddhisten. Oft findet man es als Kleiderverbrämung in verschiedenen Farben oder als einen Stoffzylinder auf Fahnenstangen oder an einem Pfahl. Mitunter wird es in Messing oder Holz angefertigt. Dann führt CH. DAS elf Arten des *rgyal-mts'an* im tibetischen Buddhismus an, welche die dämonischen Mächte bekämpfen.

Die chinesische Übersetzung *san* (Schirm) könnte irreführen und auf das erste der acht Opfer hinweisen, den weißen Schirm, *gdugs dkar* (skr. *chattra*); cf. CH. DAS, p. 69 (*bkra šis* ...) und FILCHNER, UNKRIG, p. 21. — Die Tujen unterscheiden hier nicht genau.

Die mehrfarbige Hülle trifft man in den verschiedensten Spielarten

an : als Säulenumhänge in den Tempeln, als riesige Tuchglocken oder Schirme, an Zeremonienstandarten, an Dreizack-Masten, als Vorhänge usw. Sie bilden also keine Besonderheit des Manibaumes. Weil das *rgyal-mts'an* auch als Kleiderverbrämung vorkommt (cf. oben), so ist vielleicht der bunte Ringenbesatz der Tujentracht an den Ärmeln damit in Verbindung zu bringen, der ja oft als Stofftrichter übergezogen wird.

[7] Die Manifahne hat verschiedene Namen, vgl. weiter unten Anm. 10. Alle diese Namen gelten in erster Linie für das Pferdebildnis, dann für die Fahne und schließlich für den ganzen Baum. Das Bild ist dabei das wichtigste ; zumal wenn man bedenkt, daß auch Papierbilder im Gebrauch sind.

Es gibt auf jeder Fahne oder jedem Bild die verschiedensten Sprüche und Darstellungen, auf Tibetisch oder Chinesisch oder Mongolisch. Manchmal trägt das Pferd auch noch auf dem Rücken das Glückzeichen *nuru*. Diese Papierpferde spielen eine große Rolle bei der Zeremonie des Loslassens der Pferde, die sowohl von Tujen als auch Chinesen und Tibetern vorgenommen wird. Diese Zeremonie wird zu bestimmten Jahreszeiten, z. B. im Neujahrsmonat morgens in aller Frühe geübt, wie ich es beobachtete. Dabei wird ein großes Weihrauchopfer mit einer Menge kleiner Teiglampen verbrannt, Brot, Tee und Gerstenwein wird geopfert, und schließlich wird ein Pack papierene Pferdebilder mit allerlei Aufschriften in die Luft geworfen und vom Wind in alle Richtungen zerstreut. Das Ganze findet auf einem Berge statt. Auch sonst kann jeder bei Unglück diese Zeremonie beliebig vornehmen.

[8] Die Rundkrippe wird häufig auch von Chinesen errichtet. Aber je weiter man nach Osten kommt, umso seltener ist sie zu finden. Auf jeden Fall fehlt bei den Chinesen die Manistange in der Rundkrippe, manchmal auch sogar der Aufbau, also die Krippe selber. Wichtig ist ihnen nur, daß eine Urne in der Hofmitte vergraben wird ; und jeder Gehöftbau beginnt praktisch mit diesem Vergraben der Urne. Diese Stelle oder die Rundkrippe heißt *chung-kung*, d. h. Mittelburg, oder auch *yüan-ts'ao*, d. h. Rundkrippe. Vorgenommen wird die Zeremonie vom Laienbonzen oder von einem *Tao-shih*, Tempelbonzen ; meist aber gibt der Geomant die Stelle an, wo die Urne (oder die Urnen) vergraben werden soll. Das hängt aber mit der geomantischen Bestimmung des ganzen Gehöftes zusammen.

[9] Diese Erklärung des Gewährsmannes besagt, daß erst mit Errichtung der Manistange das Gehöft vollendet ist, eingeordnet in die Welt, wie es auch bei andern Liedern zum Ausdruck kommt. Sie beruht auf der lamaistischen Vorstellung der Welt, derzufolge in der Mitte der Weltberg steht, um den alles andere gelagert ist. Bei den Lamas findet man immer diese Deutung, wie sie ja auch symbolisch in dem überall zu findenden Monogramm, dem *nantšu wändän*, dargestellt wird. Allerdings wissen die Tujen nichts über die Einzeldeutungen dieses Monogrammes (vgl. Anm. 3), auch nichts von der Parallele dieser kosmischen Deutung mit dem menschlichen Körper. — Es ist hier auch zu bemerken, daß in diesem Symbol die flache Scheibe unter der Mondsichel fortfällt, und ferner, daß die Farben verschieden sind ; die kleine Flamme auf der Sonne ist grün, die Sonne selbst weiß, die Mondsichel rot ; vgl. UNKRIG in FILCHNER : Kumbum, p. 160-61.

Das Wort *sdzi-ṅkuor* und die Übersetzung des Gewährsmannes mit „Mittel-Rund" gibt lautlich und dem Sinne nach das tibetische Wort *dkyil 'k'or* genau wieder; vgl. DMF, p. 387 und CH. DAS, p. 56. Dort werden die verschiedenen Bedeutungen für *dkyil 'k'or* angeführt, im besonderen: als Äquivalent des Sanskritwortes *maṇḍala*, die magischen Kreise und Figuren und Darstellungen von Götterwohnungen usw. (vgl. das Kapitel: Die Pfahlziege); ferner für die hier in Frage kommende Vorstellung vom Weltall: „According to the Buddhist cosmogony there are *sa-yi dkyil 'k'or* the sphere of earth, *c'u-yi dkyil 'k'or* the sphere of water, the ocean, *rluṅ-gi dkyil 'k'or* the atmosphere, *me-yi dkyil 'k'or* the sphere of fire; each forming a stratum over the other. The upper stratum, i. e. that which is beyond the atmosphere, is called the sphere of fire or light." (CH. DAS, a. a. O.) Hält man diese orthodoxe lamaistische Erklärung neben die Erklärung des Alten, so sieht man, wie volkstümlich und lebendig diese Weltvorstellung bei den Tujen ist, wie sie buchstäblich in den Lebensraum hineingebaut wird.

In dieses Vorstellungsbild scheint das Luftpferd eigentlich nicht hineinzugehören, und es war auch vom Gewährsmann nicht zu erfahren, was das Luftpferd, also die Maniflagge, mit dem Weltenberg zu tun habe, warum man sie daran anbringe. Wohl meinte er, sie würde daran so hoch hängen und könne gut im Winde flattern und wäre mit ihren Gebets- und Zauberformeln dasselbe wie eine Gebetsmühle, die auf dem Dache auch vom Winde gedreht würde. Andere Erklärungen bringen das Luftpferd auch nicht mit der Rundkrippe zusammen. So kann man hören, auf dem Luftpferd würden die Zauberformeln und Gebete in den Himmel getragen. Wieder andere meinen, die Luftpferde würden von den umherirrenden unruhigen Geistern und Totenseelen geritten; so würden sie den rechten Weg finden und zur Ruhe kommen. Das sei auch der Grund, warum man diese Papierpferde in so großer Zahl loslasse. Dann wären die Geister beruhigt und würden nicht mehr die Menschen aufsuchen und belästigen.

[10] *loṅšda* ist das tibetische *rluṅ rta*, Luftpferd; *ki-mori* ist die wörtliche Tujenübersetzung davon. Über seine Bedeutung als „Schicksal" vgl. 2. Teil, II, 1, c. — Vielleicht ist das chinesische *lung-ma* auch nur eine Lautnachahmung dieses tibetischen *rluṅ* (Luft), die sich deshalb nahelegte, weil das Drachenpferd, das ja ebenfalls *lung-ma* heißt, in Sagen und Erzählungen als ein Wunderpferd auftaucht. In der Siningchronik steht im Kapitel über den Kukunor-See ein Passus über diese Drachenpferde. Zu gewissen Zeiten würden die *T'u-yü-hun* ihre Pferde (auch ganz schlechte) in den See treiben, welche sich dann mit dem Drachen paarten. Die von ihnen abstammenden Pferde könnten an einem Tage tausende von Meilen zurücklegen.

Für die Papierdrucke der Luftpferde sagen die Chinesen meist *lu-ma* (Glücks-Pferde). Das oben erwähnte „Loslassen" dieser Pferde, *fang lu-ma*, beanspruchen sie als eine alte chinesische Sitte, wohingegen die Tujen, Fandse und Lamas sie für ihre eigene Tradition ausgeben. — Daneben haben die Chinesen noch goldgelbe Papierblätter, die sie bei verschiedenen Gelegenheiten verbrennen, an Haustore oder Tiere usw. anheften. Sie heißen *chih-ma*

3:Schröder AE9 Monguor

(Papier-Pferde) oder *piao-ma* (Blatt-Pferde). Obwohl kein Pferdebildnis darauf ist, leiten viele Leute das ... *ma* von „Pferd" ab.

Das *ta-ch'iu* ist eine chinesische Verballhornung von *dardzioġ*; man hört diesen Ausdruck meist in der Gegend von Tangkar. *dardzioġ* entspricht dem tibetischen *dar lcog* (DMF, p. 44); dieses bedeutet nach CH. DAS „Seide" und „Spitze" und ist: „a flag-staff about 10 or 12 feet high ... on house-tops, piles of stone, or on votive cairns" (p. 620).

[11] *sënoġder*: tibetisch *sṅags* = Zauberspruch, Bannformel, *gter* = Schatz, Vorratskammer. Sinn: Zauberschatzkammer (UNKRIG).

4. Das Obo *

Bericht

Auf den Bergen in der Nähe der Dörfer errichten die Tujen gerne ein Obo. Das ist ein großer Steinhaufen über einer Grube, in der allerlei Sachen eingegraben sind. Auf diesen Steinhaufen steht ein viereckiges großes Holzgestell, wohinein man allerlei Waffen, Baumzweige und Manifahnen steckt. Oft laufen vom Obo in den vier Windrichtungen noch mehrere kleinere Steinhaufen; zum wenigsten eine Reihe in Richtung des Bergesrückens.

Das Obo ist dem Berggeist geweiht. Es beschützt das Dorf und die Einzelfamilie. Jeden Monat verehrt man das Obo dreimal mit einem Weihrauchopfer. Am Obo finden auch öfters Schafopfer statt. Bei besondern Anlässen lädt man einen Lama oder Bonpriester ein, damit er vor dem Obo bete. Wenn man Luftpferde losläßt, so tut man das mit Vorliebe von der Höhe, auf der ein Obo steht. — Alljährlich findet beim Obo ein großes Volksfest statt.

Einzelheiten

Ort: Das Obo wird immer auf einer Bergeshöhe errichtet. Man bevorzugt einen Platz an einem Engpaß. Es braucht aber nicht der höchste Berg in der Gemarkung zu sein. Jedes Dorf kann sein eigenes Obo haben. Es können auch mehrere Dörfer zusammen ein Obo errichten. Dann einigt man sich auf einen günstigen Platz zwischen den Dörfern [1].

Den Berg, worauf das Obo steht, darf man nicht entweihen. Man darf keine Felder dort anlegen; die Bäume dürfen nicht abgeholzt werden; das Gras darf man nicht schneiden; den Boden nicht aufwühlen. Tiere, die dort hausen, z. B. Hasen, Füchse, Vögel, werden nicht gejagt oder getötet. Man muß alles so lassen, wie es von Natur wächst und gedeiht; nicht einmal das Vieh darf dort weiden. Dieser Ort gehört nämlich dem Berggeist und heißt heiliger Berg.

Die Obogrube: Bei Errichtung des Obo wird eine Grube gegraben. Dahinein kommen allerlei Kostbarkeiten, hauptsächlich Schatzurnen (Erdgotturnen), ähnlich wie bei der Mittelburg des Gehöftes. Das Obo wird von einem Lama oder Bonpriester errichtet. Von der jetzigen Generation hat kein

* Anmerkungen siehe pp. 68-71.

Tujen mehr diese Zeremonie gesehen. Die heutigen Obos stammen noch aus alter Zeit und zerfallen immer mehr. Darum weiß keiner mehr genau, was in das Obo vergraben wird.

Der Steinhügel: Die Höhe der Hügel ist verschieden, je nach den Umständen. Zuerst wird eine Außenwand kreisförmig aufgeschichtet. In diese Rundung kommt eine große Menge kleiner Steine bis zum Rande, und zwar sollen es weiße Steine sein. Bei jeder Oboverehrung werden immer neue Steine dazugeworfen, so daß der Haufen immer wächst. Die Außenwand des Hügels wird weiß getüncht. Die zwölf kleinen Steinhaufen heißen „Obokinder". Unter jedem wird eine Urne vergraben.

Das Obogestell: Das Gestell, das man auf den Steinhügel setzt, hat vier starke Eckpfosten, welche durch armdicke Querbalken verbunden sind. Regeln für dessen Herstellung gibt es nicht, auch nicht für das Material desselben. Wird dieses Gestell baufällig, so ersetzt man es durch ein neues und verwendet die Reste des alten ganz nach Belieben. Je nach der Größe des Obos gibt es Gestelle von 1 bis 3 *m* Seitenlänge und bis zu 2 *m* Höhe. Das Gestell dient einzig dazu, Waffen, Baumzweige und Stangen zu halten.

Weihegaben: In das Obogestell kommen Waffen aus Holz, wie Speere, Schwerter, Pfeile, Bogen, Hellebarden; neuerdings sogar Holzgewehre. Ferner steckt man Baumzweige und Manifahnen dazwischen.

Über das Holz gibt es keine Vorschriften. Sowohl an Waffen wie an Baumzweigen werden Schafwollbüschel angebunden. Die Speere sind manchmal rot bemalt und mit spiralförmigen schwarzen Tuchstreifen umwunden. Die Schwerter sind ebenfalls bis zum Griff schwarz gestrichen. Die Wollflocken an der Speerspitze sind Ersatz für die Speerquasten, welche an richtigen Speeren aus weißen Yakschwanz-Büscheln bestehen, die man rot färbt. Die schwarze Farbe bedeutet Eisen. Früher umwand man die Speere spiralenförmig mit Blechstreifen.

Die Baumzweige sind gewöhnlich von Pappeln, Tannen und Zypressen. Bevorzugt werden Zypressen und Tannen. Man kann auch die Blätter daran lassen. Geschälte, glatte Zweige können auch die Speere ersetzen.

Auf den Steinhügel innerhalb des Gestelles werden auch andere Opfergaben geworfen, so kleine weiße Steine, Gold, Silber, Geld, Getreide, Zucker, Butter, Blumen, Teeblätter usw. An das Obogestell bindet man Seidenfäden, Hadas; um das Gestell zieht man eine Seidenschnur. Früher behängte man das Obo mit kostbaren Tüchern. Aber jetzt sind die Leute zu arm. Die Seidenfäden und die lange Seidenschnur ist nur ein Ersatz dafür. Auch Gold und Silber werden fast nicht mehr auf das Obo geworfen.

Manchmal zieht man vom Obogestell oder von der Manistange aus noch eine Schnur mit zwölf Manifahnen über den Engpaß in der Nähe. Diese Schnur ist aus schwarzer Wolle und heißt „Wolfsschnur". Eine andere Schnur wird häufig noch vom Obo bis an einen Baum geführt, woran zwölf Manifahnen hängen. Diese Schnur ist weiß und heißt „Manischnur".

3: Schröder AE9 Monguor

Das Monatsopfer: Gewöhnlich wird das Obo am 1., 8. und 15. Tag eines jeden Mondmonates verehrt [2]. Das geschieht gewöhnlich vom Familienherrn. Er begibt sich mit einem Speer oder mehreren Zweigen und allem andern Zubehör in aller Frühe zum Obo.

Zuerst bringt er davor das gewöhnliche Weihrauchopfer dar. Dann gießt er eine Schale Gerstenwein vor dem Weihrauchfeuer auf den Boden. Hierauf steckt er Lanzen und Zweige mit Wollbüscheln aufs Obo, hängt Seidenfäden ans Gestell und wirft seine Weihegaben auf den Hügel, nämlich Butter, Teeblätter, Geld, Silber usw., so wie er es sich gerade leisten kann. Dann geht er dreimal von links nach rechts um das Obo herum, wirft 108 kleine weiße Steine hinauf und betet dabei das *om mani padme hum* und ruft dazwischen: „Das weiße Obo bewerfe ich." Hierauf macht er vor dem Weihrauchfeuer zum Obo gewandt einen dreifachen Kotou. Während der ganzen Zeremonie wird von Begleitern die Muschel geblasen. Das ist aber nicht notwendig.

Das Schafopfer: Für die Zeit des Schafopfers gibt es keine festen Vorschriften. Es gibt gemeinsame Opfer, an denen sich das ganze Dorf für die Dorfanliegen beteiligt; und es gibt private Opfer, die der einzelne für seine Familie darbringt.

Das gemeinsame Opfer wird meist im Sommer, nach Errichtung der Pfahlziege für eine gute Ernte, dargebracht. Ein Einzelopfer wird je nach Zeit und Umständen zu allen Jahreszeiten vorgenommen, z. B. bei Krankheit, vor einem wichtigen Unternehmen. Da aber ein Mann allein nicht alles zu einem Opfer erledigen kann, lädt er dazu noch mehrere Männer ein, die ihm helfen und nachher das Opferfleisch verzehren. Wer das Opfer darbringt, muß auch für die Kosten aufkommen.

Der Opferritus unterscheidet sich nicht von dem der andern Schafopfer. Das Schaf wird also gewaschen, mit Milch begossen, geräuchert usw. Meist ist auch ein Wahrsager dabei. Nachdem das Opferfleisch gekocht ist, werden vom Sud mehrere Schalen geschöpft. Damit vollzieht man die Opferwürfe in den vom Wahrsager angegebenen Richtungen. Diese sind immer gleich. Drei Schalen wirft man nach Norden für den Himmel, je drei Schalen nach Ost, Süd und West und Nord für die zahllosen Geister, drei Schalen links neben das Weihrauchopfer für den Berggeist im Obo, drei Schalen rechts neben das Weihrauchopfer für den Erdgeist. Dann folgen drei weitere Schalen auf das Obo, und schließlich gießt man noch drei Schalen vor den Geisterspeer hin. Dann folgt das Opfermahl, wobei alles Fleisch aufgezehrt wird.

Vor dem Schafopfer wird zuerst die allgemeine Oboverehrung vorgenommen wie beim Monatsopfer.

Das Obogebet: Oft lädt man einen Lama oder Bonpriester ein, um vor dem Obo zu beten. Das kann 1 bis 7 Tage dauern, je nach dem Anliegen. Auch hier ist entweder das ganze Dorf oder eine Einzelperson der Bittsteller. Jeder kommt selbst für die daraus entspringenden Unkosten auf.

Der Gebetsdienst beginnt mit einem Weihrauchopfer der Leute. Währenddessen macht der Lama ein *šdorma*. Dann stellen die Leute folgende Opfergaben vor das Obo: drei Backbrote, dreizehn Dampfbrote, eine Schale

Gerstenwein, Blumen in Vasen, kleine Schalen mit Honig, eine Tasse Tee, schwarzen und weißen Zucker, eine Schüssel Tsamba mit Butterscheiben.

Der Lama betet vor dem Obo sitzend die entsprechenden Gebete, die er mit seiner Sanduhrtrommel und der Schelle begleitet. Die Leute verbrennen dabei an mehreren Stellen Weihrauch, machen Kotou und blasen die Muschel. Dieser Dienst kann mitunter den ganzen Tag dauern. Ist der Lama mit dem Gebet fertig, dann bringt er das Torma auf einen Stein auf dem Obo, besprengt das Obo mit Weihwasser und bewirft es mit Gerste, über die er leicht hinbläst. Hierauf nehmen die Leute von Opfergaben, die vor dem Obo stehen, pflücken etwas ab und werfen davon ins Weihrauchfeuer und auf das Obo. Die Blumen werden sämtlich auf den Hügel geworfen. Unterdessen haben andere schon die Speere, Zweige und Manifahnen auf das Obo gesteckt und die Weihegaben darauf geworfen wie beim Monatsopfer. Dann umkreisen alle das Obo, die weißen Steine werfend und den Oboruf betend. Nun machen alle noch einmal einen dreifachen Kotou, trinken Tee und gehen nach Hause.

Der Gebetsdienst kann auch mehrere Tage dauern. Dann schlagen die Leute Zelte auf dem Berg auf und wohnen und essen dort.

Das Obofest: Jährlich findet am sechsten Tag im sechsten Monat ein Obofest statt. Bei diesen Festen wird morgens das Obo wie beim Monatsopfer verehrt. Man kann auch ein Schafopfer und den Gebetsdienst des Lama damit verbinden.

Alle Leute aus der Nähe, Männer und Frauen, Alt und Jung, kommen beim Obo zusammen. Ist das Obogelände zu schwierig und nicht flach genug, dann versammelt man sich am Fuße des Berges oder sonstwie auf einer Wiese. Dort halten die Männer Pferderennen ab, man sitzt ums Feuer, trinkt und singt, man ißt und tanzt und lacht. Chinesische Händler stellen sich ein, schlagen ihre Buden auf und bieten ihre Waren feil. — Früher, als man noch die alten Waffen gebrauchte, schlossen sich an die Pferderennen Bogenschießen, Speerwerfen und Schwertkämpfe an. Besonders gerne hielt man Ringkämpfe ab. Heute ist das nicht mehr der Fall. Man übt nur noch das Pferderennen und das Wettsingen. Der Berggeist freut sich, wenn das Volk so lustig ist [3].

Obo und Berggeist: Das Obo ist die Wohnung des Berggeistes. Ihm gehört alles, was auf der Erde lebt, Gras, Bäume, Blumen, die wilden Tiere und die Menschen. Vom Obo aus bewacht er Wohl und Wehe des Stammes (*ayil*) und beschützt Tier und Mensch. Die wilden und zahmen Tiere sind seine Herde und die Wölfe seine Hunde. Darum bringt man dem Berggeist vor dem Obo ein Opfer dar, wenn die Wölfe zu schädlich werden. Er kann sie bändigen.

Die Seide (Tücher oder Bänder) am Obo bedeuten die Gewänder des Berggeistes; die weiße Farbe der Obowand seine Erhabenheit und sein Glück.

Das Obo ist das Waffenhaus des Dorfes und des Berggeistes. Hier holten in alten Zeiten die Männer ihre Waffen zu Kampf und Wettspiel.

Hierhin brachten sie sie zurück. Jetzt sind die Tujen friedliche Bauern, ihre Waffen brauchen sie nicht mehr. Darum übergeben sie sie dem Berggeist.

Von allem, was kostbar ist, schenkt man dem Berggeist etwas: Gold, Silber, Seide usw. Durch ihn wird alles Glück, der Reichtum und Bestand des Dorfes gewährleistet. Der Berggeist spendet die Nachkommenschaft; die kleinen Steinhügel bedeuten Fruchtbarkeit [4].

Das erste Obo: Nach der Tujensage vom Geser-*xaan* wurde das erste Obo im goldenen Zeitalter der Menschheit vom ersten *xaan* auf Erden, dem *Hamluo siergän*, errichtet:

„Es war alles sehr gut. Es war eine Zeit von Honig und Fett. Zu Anfang der drei Sommermonate errichtete er ein *regieńguo*-Obo auf dem Gipfel des *Rira-ntumbo*. *Hamluo siergän* versank in Betrachtung. Von (sc. den Dreien) *Gadbo Huala*, *Šdonšdog Sienba*, *Sasin Dadma*, ging einer Zypressenzweige brechen, einer Gewürze kaufen und einer weiße Steine sammeln. Eine Woche saß er in Betrachtung. Als eine Woche erfüllt war, errichtete er das *regieńguo*-Obo. In das Obo setzte er den Mutterhund *Tsila*. Auf dessen Leib streute er Gewürzmedizin. Seinen Leib umwickelte er mit Seide. Dann sprengte er Weihwasser über ihn. Den *regieńguo*-Lama lud er ein. Der betete das Weihegebet. Sieben Tage betete er. Auf jenes Obo häuften sie weiße Steine. Im Kreisrund des Obo schichteten sie große Steine auf. Auf den Gipfel des Obo steckten sie Zypressenzweige und banden daran Wolle vom weißen Schaf. Das Kreisrund des Obo bestrichen sie mit weißer Erde [5]. Mit Seide umwickelten sie das Obo. In den Tagen der drei Sommermonate bewarfen sie, auf den Pferden galoppierend, das Obo. Weiße Steine warfen sie, Gold und Silber warfen sie, Getreide und Butter warfen sie. Und der Menschen Leben entfaltete sich. [6]"

Wörterliste

Obö:	*lašdzë* (*lawdzë*, *ladzë*) (tib. Lehnwort) [7].
	mao-chi (chin.); es sind die Zeichen für Schilf-Glück.
	Shan-shen (chin.) = Berggeist [7].
Oboberg:	*lawdzë ûla*.
Obo errichten:	*lawdzë paġguni*.
Obogrube:	*lawdzë nukuo*.
Steinhügel:	*tašë soġdö*.
Obogestell:	*lawdzë dziadzë* (chin.).
weißtünchen:	*tsiġandë budë*.
Inhalt der Obogrube:	*rdzë*.
Weihegaben für das Obo:	*lawdzë šdodlödzän ntsuomdzia* = auf das Obo gesetzte Waffen.
Speer:	*dzida*.
Schwert:	*wöldë*.
Baumzweige:	*sdziödzë aralaġ* = (Pappel)zweige;
	šgua aralaġ = Zypressenzweige;
	tängërag aralaġ = Tannenäste.
Schafwolle:	*ńguasë*.
Seidenfäden:	*torġuo šdadzë* = Seiden-Fäden.
kleine weiße Steine:	*mulġan* (*mula*) *tsiġan tašë*.
Speerquaste:	*dzida män dzioġ*.

Getreide :	*dzüldē tara* = allerlei Getreide.
Zucker :	*ġarā.*
Gold :	*xaldān.*
Silber :	*miŋgu.*
Manischnur :	*lang-sheng* (chin.) = Wolfsschnur.
	himori bödoġ = Luftpferd Schnur.
Oboruf :	*garu* (tib.) *lawdzē yāra* (tib.).
	šdo-o-od = das weiße Obo von unten her bewerfe ich [8].
kleine Steinhaufen :	*lawdzē dzidziġa* = Obo Küken.
Obo-Schafopfer :	*lawdzē tada xoni šēŋlie* = vor dem Obo ein Schaf opfern.
Der Lama betet vor dem Obo :	*lama lawdzē tada mošguni.*
Die Opfergaben :	*yilenē šēŋlie* = gesamtes Opfern.
Beim Obo hausen :	*lawdze tada sō-.*
Ein Zelt aufschlagen :	*bekärge posġuo-.*
Pferderennen :	*mori holilġa* = Pferde rennen lassen.
Wessen Pferd ist schnell :	*käni mori gurdā* ?
Wettschießen :	*sēmu sēmuda-* = Pfeile schießen.
Wessen Waffenkunst ist groß =	*käni xuawu šgewa* ?
Die jungen Leute ringen :	*mula kunsgē walde-.*
Wessen Kraft ist groß :	*käni kudzi šgewa* ?
Groß und klein singen eins :	*šge mulasgē nigē dölā-.*
Wessen Lieder sind viel :	*käni dö uluona* ?
Obo Pferderennen :	*lawdzē šda rēdziöŋ* (tib.) [8].
Obofest :	*lawdzē šdodlō, mori holġani* = das Obo bewerfend die Pferde rennen lassen.
Das Obo beschützt die Menschen :	*lawdzē ayili kun, asē, mulā-sēla, nasā, ġuosāni furöŋlāni* = Das Obo des Dorfes (Sippe) beschützt Menschen, Tiere, Kleinkinder, vor Seuchen und Streit.
Der Berggeist :	*yifu la* (tib.) [8].
Das Wild wird vom Berggeist betreut :	*lawdzē udaġladzān sōwa* (oder *fsüärēġwa*) = Vom Obo regierte Vögel (oder Wild) sind.
Der Hund des Berggeistes (Wolf) :	*yifulani noxuŋ.*
Die alten Leute erzählen Sagen :	*šdogu kunsgē xuŋŋge gulie-.*
Wessen Sagen sind viel :	*käni xuŋ uluona* ?
Groß und klein trinken Gerstenwein :	*šge mulā dērasēŋgē udzi-.*
Der heutige Tag ist gut :	*niudurġuo dur sēna.*
In Gemütlichkeit laßt uns zusammensitzen :	*suġdzieŋge söldeya* !
Heute weiß man das Morgige nicht :	*niudurē malöŋguni li mudien.*
Mit dem Tode ist's aus :	*fugugē bura dzia.*
In die Welt umsonst kamen wir :	*udziġdienē* [8] *arāŋ nigē huŋ rēdziā-* (*nigē xue* = einmal).

Anmerkungen

[1] Das Obo muß nicht immer auf einem Berge sein. Man kann auch in andern Gegenden um Sining Obos in der Ebene antreffen, z. B. bei Fandse- und Chiafandse-Siedlungen. Aber auch hier sind fast immer Bäume dabei. Die Tujen jedoch behaupten, sie würden nie ein Obo in der Ebene bauen; denn ein Obo gehöre dem Berggeist und müsse daher auf einem Berge stehen. — Sie nehmen es mit dem heiligen Ort ziemlich ernst. So ist es auffallend, daß bei allen Tujendörfern Berggelände ausgespart wird, ein Stück Grasland mit Wald, wo kein Ackerbau betrieben werden darf. Wo aber Chinesen dazwischen kommen, verschwinden diese Berghaine. An diesen spärlichen Resten kann man sich vorstellen, wie das jetzt kahle Ackerland früher ausgesehen hat.

3:Schröder AE9 Monguor

[1] Zwischen Obo und Mond besteht keine Beziehung. Die hier genannten Tage werden allgemein für Opfer und Kult bevorzugt, und dafür sind die Mondphasen maßgebend.

[2] Das Obofest wird auch von den Mongolen und Tanguten gefeiert. Dafür sucht man, nach Aussage des Gewährsmannes, immer einen Tag im sechsten Monat aus, es braucht aber nicht immer der sechste Tag zu sein. Es ist die Zeit, in welcher früher die Obos errichtet wurden; und es scheint, daß es sich dabei um die jährliche Wiederkehr handelt. — Heute sind diese Feste mehr oder weniger in einen chinesischen Markttrubel ausgeartet, wie z. B. das Fest im Neujahrsmonat bei Wei-yüan-pu (Huchu), das eigentlich ein Tujenfest ist. Aus der alten Zeit sind nur noch das Pferderennen und das Liedersingen geblieben.

[4] Die Tujen unterscheiden drei große Geister: den Himmel, den Berggeist und den Erdgott. Hervorgehoben sei, daß die Eigenschaften des Berggeistes ziemlich nahe an die des Himmels heranreichen (vgl. Teil 2). — Das eigentliche Opfertier für den Berggeist und den Himmel ist das Schaf. — Der Erde opfert man Schweine und zwar immer im Gehöft, wogegen man dem Himmel und Berggeist meist im Freien opfert. — Der Ritus beim Schweineopfer ist der gleiche wie beim Schafopfer: waschen, abräuchern, Milchguß usw., was sich bei diesem Tier recht befremdlich ausnimmt; ein Hinweis, daß das Schweineopfer erst später übernommen und mit den Schafopferriten versehen wurde.

[5] Die weiße Farbe ist die Glücksfarbe des Lamaismus. Es sei an die weiße Muschel erinnert, die weißen Erdgotturnen, die weißen Wollflocken an Lebensbaumzweigen. Wenn jemand eine Reise antritt, so sagt man: möge dein Weg weiß sein. Bei den Tulkus wird das sogar bildlich vorgeführt, indem man bei ihrem Aufbruch Mehl, Kalk usw. auf den Weg streut. Weiß sind die Klöster gestrichen, und weiß soll der Palast des Berggeistes sein.

[6] Dieser Passus ist wörtlich aus der Tujenversion der Geser-Sage übersetzt, wie sie mir von einem Sänger mit Hilfe des Alten diktiert wurde. Er ist charakteristisch dafür, wie eng die Vorstellung vom Obo mit buddhistischen Formen verbunden ist. Von der immer wieder behaupteten Gegnerschaft zwischen Buddhismus und vorbuddhistischem Kult ist nichts zu merken. Es gibt in Lamaklöstern Bücher über die Errichtung von Obos; es ist mir aber nicht gelungen, ein solches Buch zu sehen oder näheres über die Riten zu erfahren. Nur erzählte man, es gäbe eine ganze Reihe von Oboarten, darunter auch solche, die nicht von Lamas errichtet werden. Auch sei es ganz verschieden, was alles in einer Obogrube beherbergt würde. Man bringe darin mit Vorliebe Urnen, Kessel und Rüstungen unter.

Bei dieser Mythe wird ein Hund im Obo begraben, und wie es scheint, ein lebendiger. Er wird behandelt wie andere lamaistische Götterfiguren, die von einer Gottheit beseelt werden, erhält ein Seidengewand, wird mit Weihwasser besprengt, mit Gewürzen beworfen; das Weihegebet wird gebetet. Es ist ein Mutterhund. Welche Bewandtnis es mit diesem Hunde *Tsila* habe, war nicht festzustellen. Vermutlich gehört er zu den Stammtieren. Chinesen in dem Tujendorf Hua-ling-kou (Kreis Huchu) behaupten, die

Tujen würden einen Hund ins Obo eingraben. Dieser Hund sei ihr Vorfahre. Mein Gewährsmann stritt das entschieden ab, und ich konnte auch sonst keine weitere Auskunft über diese Behauptung erhalten. Woher die Leute diese Erzählung haben? Sie sagten, das sei so überliefert. Jedenfalls ist auffallend, daß auch in dieser Tujenmythe der Hund vorkommt. Andererseits ist zu bedenken, daß der Gewährsmann wohl um die herabsetzende chinesische Auffassung weiß, welche (auch in der Literatur) die Barbaren von Hunden abstammen läßt. — Der Hund spielt bei den Tujen noch eine Rolle als Spender der ersten Gerste; ferner bei der Wetterburg des zum Himmel schreienden Hundes, *hao t'ien chen* (chin.). Aber dieser Hund in der Wetterburg wird in Verbindung mit dem gleichnamigen Hund des Helden Geser gebracht, *hao t'ien ch'üan* (chin.).

Im übrigen sind in dieser Mythe die Grundzüge der Oboverehrung vorhanden: Bewerfen mit Weihegaben, Umkreisen (und zwar zu Pferde, wie das noch bei benachbarten Mongolen sein soll), Weihrauchopfer. — Waffen werden nicht erwähnt, wohl aber die Zypressenzweige, die auf den weißen Steinhaufen gesteckt werden. — Und vor allem ist bemerkenswert, daß das Obo auf dem Weltenberg errichtet wird und somit wohl der eigentliche Zusammenhang und tiefere Sinn gegeben ist, der durchaus nicht buddhistisch zu sein braucht.

Mit diesem Hinweis würde auch übereinstimmen, was z. B. BASTIAN (Chinareisen pp. 395 ff.) schreibt, das Obo stelle den Berg Sumeru dar. Und auch die vielen kleinen Steinhaufen in Richtung der Weltgegenden ordnen sich so in das gleiche Weltbild ein. Vgl. UNKRIG in FILCHNER: Kumbum, Anm. 1638.

Die Manischnüre sind offenbar ebenfalls ein lamaistisches Ergebnis, vielleicht ein Ersatz für die früher daran aufgehängten Schafschulterknochen, die BASTIAN, a. a. O. p. 601, erwähnt. Von diesen Schulterblättern ist bei den Tujen nichts mehr bekannt. Warum man hier die beiden Schnüre, die schwarze und weiße, so unterscheidet, läßt sich nicht klären.

[7] Überraschend war mir die Aussage des Alten, daß man in seiner Gegend den Ausdruck *obō* nicht kenne. Ich fand das bestätigt; zumindest wird er unter den dortigen Tujen nicht gebraucht, was umso verwunderlicher ist, als die Chinesen das Wort *obō* am meisten gebrauchen. Die Tujen haben fast ausschließlich das tibetische Lehnwort *lašdzē* (oder *lawdzē*). Weiter entfernt gibt es allerdings Tujen, die beide Bezeichnungen kennen; *lašdzē* ist weiter nichts als das tibetische *la-rtse*, „Berg-Spitze", nach CH. DAS (p. 1200): „the summit of a pass". Die Beziehung zum Höhenkult und Berggeist ist eindeutig. — Neben dem Fremdwort *obō* (mong. *obuǵa*, DMF 296) haben die Chinesen noch den Namen *mao-chi*.

Der chinesische Ausdruck *mao-chi* gibt an sich keinen vernünftigen Sinn. In der Tangkar-Chronik sah ich dafür die Zeichen von Schilf (*mao*) und Glück (*chi*); es gibt auch andere Schreibarten. Das beweist, daß es sich hier um eine Lautnachahmung eines Fremdwortes handelt. Welches aber das Originalwort dafür sein soll, ist nicht festzustellen. In der Gegend der Chia-Hsifan um Kumbum ist der Name *shan-shen*, d. h. Berggeist, am gebräuchlichsten. Damit identifizieren die Chinesen das Obo einfach mit dem Geiste, was ja auch der Sache entspricht; denn es ist ja der Sitz des Berggeistes.

• *mändzioğ* : tibetisch *lcog* = Wimpel, Zinne, Spitze. Das *män* scheint aus dem Chinesischen zu stammen, *mang* = Wimpel. — *garu lawtsë yäre šdodla* (Oboruf) : tibetisch *dkar* (gesprochen *gar*) = weiß, *la rtse* = Obo, *yar* = nach oben, *stod la* = nach oben, auflegen. — *rëdziön* : tibetisch *ston* = reiten. — *yifula* : tibetisch : *ri bo* = Berg, Hügel, *lha* = Geist. — *ndzigdien* : tibetisch *'jig* = Vergänglichkeit, *rten* = Behälter. Eine buddhistische Ausdrucksweise für die Welt : die 10 Behälter der Vergänglichkeit (UNKRIG).

5. Die Tschortenkammer *

Bericht

In jedem Tujendorfe und mitunter auch bei Einzelhöfen findet sich eine Tschortenkammer. Der eigentliche Name ist Hunderttausend-Haus. Diese Kammer sieht aus wie ein kleiner Tempel ohne Türen. Es sind darin mehrere heilige Urnen, welche unter 100 000 kleinen Tonkegelchen begraben sind. In diesem Kegelberg steckt die Himmelssäule, die mit allerlei Segensformeln beschrieben ist.

Die Tschortenkammer wird vom ganzen Dorfe errichtet. Alle müssen mithelfen. Der Lama kommt und betet sieben Tage, macht eine Reihe Tormas und richtet die Urnen her. Am siebten Tage wird die Tschortenkammer gebaut. Man läßt nur kleine Fenster darin. Vor der Tschortenkammer verbrennen die Männer Weihrauch und ziehen im Kreise um die Kammer herum wie beim Obo. Durch die Fensterlöcher werfen sie dann wieder kleine Tschorten hinein.

Die Tschortenkammer schützt das Dorf und die Familie vor Unglück. Sie unterdrückt die schlechten Erdeinflüsse.

Fig. 8

a : Tschortenkammer innen ; *b* : Tschortenkammer außen.

Einzelheiten

Ort : Die Tschortenkammer wird immer außerhalb des Gehöftes errichtet und außerhalb des Dorfes. Auf Wege nimmt man keine Rücksicht. Der Ort wird vom Wahrsager näher bestimmt, nicht vom Lama.

* Anmerkungen siehe pp. 77-79.

3: Schröder AE9 Monguor

Form: Der Grundriß der Tschortenkammer ist rechteckig. Die Größe ist ganz verschieden. Es gibt kleine Kammern in Mannshöhe und große mit schönen Ziegeldächern und Säulenumgang. Niemals befindet sich eine Tür in der Wand. Nur in Kopfhöhe läßt man quadratische Luken von einer Elle im Geviert. Auf dem Dach befindet sich keine Sonnen-Mondscheibe, wie sonst häufig bei Tempeln. Vor der Kammer steht meist ein schöner Weihrauchofen. — Es gibt viele Arten von Tschortenkammern. Diese hier ist die häufigste, sie heißt „Haus-Kammer"; denn es gibt auch solche, die nicht überdacht sind [1].

Zeit: Die Tschortenkammer kann zu allen Jahreszeiten errichtet werden. Man bevorzugt aber die frostfreie Zeit wegen der Mauerarbeiten. Im einzelnen gibt der Wahrsager Tag und Stunde an. — Die Vorbereitung beansprucht jedoch viele Wochen, weil man das Baumaterial, die Urnen und die Tonkegelchen herrichten muß. Zudem ist immer ein kleines Dorffest mit der Errichtung verbunden, weshalb man mit Vorliebe die Zeit nach der Ernte wählt.

Personen: Bei der Vorbereitung beteiligen sich alle Personen des Dorfes, Männer, Frauen und Kinder. Der Vorsteher verteilt die Arbeit auf die einzelnen Familien. Bei der Aufrichtung und den Weihehandlungen jedoch sind nur Männer tätig. Frauen hält man fern. — Die Weihe der Urnen und den Dienst bei der Errichtung nimmt nur ein Lama von höherem Range vor.

Die Urnen: Im ganzen sind es zehn Urnen, zwei große Urnen bis zu 40 *cm* Höhe und acht kleine Urnen. Über den Kauf, die Reinigung der Urnen usw. gelten dieselben Vorschriften wie bei der Erdgotturne (vgl. den betreffenden Abschnitt).

Der Inhalt der Urnen: Die großen Urnen enthalten zwei Schichten Füllsel, dazu wird in jede Schicht ein Bündel von fünf Gebetsrollen gesteckt, also in jede große Urne zehn Rollen zu je fünf in zwei Bündeln.

Die Herrichtung dieser Bündel geschieht in folgender Weise: Der Lama nimmt ein Stäbchen aus sauberem Holz von etwa 10 *cm* Länge und der Dicke eines kleinen Fingers. Darum wickelt er eine Schicht mit tibetischen Texten bedruckter Papierblätter. Er bringt zu diesem Druck selber die Holzplatten mit, da die Texte je nach den Geistern verschieden sind, welche durch die Rollen dargestellt werden. Um diese Papierschicht kommt mit Seidengarn in den fünf Farben eine ganze enge Wickelung, so daß man von den Texten nichts mehr sieht. Dann nimmt der Lama fünf solcher Röllchen und bindet sie zusammen, und zwar so, daß die Hauptrolle in die Mitte kommt und die andern vier sie symetrisch umgeben. Um dieses Bündel kommt dann eine Lage Seide oder dünnes Tuch von gelber oder roter Farbe, und schließlich wird das Ganze noch einmal mit Seidengarn in den fünf Farben eng umwickelt wie eine Fadenspule beim Spinnen. — Alles, das Papier, das Tuch, die Fäden usw. werden jedesmal vor dem Gebrauch mit Weihwasser besprengt und abgeräuchert. — So werden im ganzen vier Bündel fertiggemacht.

Als Gefäßbeigaben werden gebraucht: Bergerde von heiligen Bergen (sie muß vom Gipfel genommen sein); Flußwasser, reines Quellwasser, welches in die Urne gesprengt wird; Holz von reinen Bäumen in den Bergen, Tannen- oder Zypressenspitzen (auch Laub und Rinde von diesen Bäumen ist statthaft); Getreide: Weizen, weiße Bohnen, weißer Raps, Gerste, Tibetgerste (*ch'ing-kuo*); schwarzer und weißer Zucker; Buddhagold, Silber, Perlstückchen, Perlmutter. Diese Beigaben sollten die sieben Kleinodien darstellen. Man kann diese aber nicht besorgen und nimmt daher diese aufgezählten Dinge als Ersatz.

Außerdem kommen noch allerlei Gewürze hinein, die der Lama selbst mitbringt. Es sind die 74 Arten des Erdgott-Gewürzes. Dazu kommen noch fünf Fadenstränge in den heiligen Farben oder auch einzelne Fäden. Sie werden senkrecht in die Füllung gesteckt.

Das Einfüllen geschieht in folgender Ordnung: Zuerst wird die Erde und das Holz eingelegt und mit Quellwasser bespritzt. Dann wird das erste Rollenbündel eingesetzt und mit dem Getreide ausgefüllt. Darüber kommen die andern Beigaben bis zur Hälfte der Urne. Hierauf folgt genau wie zuerst die zweite Schicht mit dem zweiten Rollenbündel. Schließlich wird das Ganze bis zum Rande mit flüssiger Butter übergossen und genau wie bei der Erdgotturne mit einem roten oder gelben Tuch zugebunden, versiegelt und an dem Ende, wo das Siegel herabhängt, mit einem *nuru*-Zeichen bemalt. Dann folgen die zweite große Urne und die acht Begleiturnen. Die Begleiturnen haben keine Buddhabündel [8].

Weihe der Urnen: Alle Urnen werden nun zusammen auf ein oder zwei Holztablette gestellt, auf die man Zypressenblätter und Gerstenkörner gestreut hat. Die Tablette bringt der Zeremonienmeister auf die Lade vor dem Hausgott. Der Lama macht ein Torma und setzt es vor die Urnen. Nachdem nun vor jeder Urne eine Butterlampe angezündet ist und sieben Wasserschälchen davor stehen, sprengt der Lama geweihtes Wasser darüber und stellt die Weihwasserkanne auf ein Tellerchen mit Tibetgerste vor die Urnen auf die Lade. Jetzt setzt er sich auf eine Filzmatte und betet über die Urnen das Weihegebet. Er kann das aber auch auf seinem Kang tun. Danach wird alles wieder abgeräuchert. — Im Hofe brennt dabei das große Weihrauchopfer.

Die Himmelssäule: Sobald der Lama gekommen ist, werden die Dorfältesten bei ihm vorstellig und lassen sich die Regeln angeben für den Baum, der als Säule in der Tschortenkammer stehen soll. Sie holen dann einen Zimmermann aus dem Dorfe und gehen in die Berge, den Baum zu suchen. Der Baum muß wildgewachsen sein, nicht von Menschen gepflanzt. Er soll nicht von belebten Plätzen und vom Wegesrand genommen sein. Das Holz sei vornehm, wenigstens Tannen- oder Zypressenholz.

Bevor der Zimmermann Hand anlegt, wäscht er sich Hände und Gesicht und spült den Mund. Dann räuchert er Kopf und Hände ab. Genau so verfährt er mit seinen Werkzeugen. Zunächst bezeichnet er am Stamm die vier Himmelsrichtungen; dann fällt er ihn und glättet die vier Seiten entsprechend

diesen Richtungen, die der Baum auch in der Tschortenkammer beibehalten muß. Der Baum darf nur 6 Ellen lang sein, nicht mehr und nicht weniger. Die Breite beträgt etwa 10 *cm*.

Der Stamm wird nach Hause gebracht und im Hofe, worin der Lama weilt, glatt gehobelt, während der Lama betet, und draußen das Weihrauchopfer verbrannt wird. Dann bringt ihn der Schreiner ins Haus und legt ihn zum Lama auf den Kang. Dieser betet zunächst ein Gebet über den Stamm und beschreibt ihn dann mit roten tibetischen Sprüchen. Meist benutzt er dazu rote Erdfarbe, die in Wasser aufgelöst wird. Der so beschriftete Stamm wird dann mit einem gelben Tuch umwickelt und mit einigen Fäden umwunden. Auf das Tuch werden die Himmelsrichtungen geschrieben. Man bringt den Baum hierauf zwischen die Urnen auf den Hausaltar und stellt ihn an die Wand gelehnt aufrecht. Die Öllämpchen und sieben Wasserschalen werden erneuert, und während im Hof ein neues Weihrauchopfer dargebracht wird, besprengt der Lama den Stamm und betet das Weihegebet über ihn [3].

Die Tschorten: Die Tschorten haben die Form von kleinen Lehmkegeln und sehen aus wie große, achttürmige Tschorten. Die Chinesen sagen dazu „rote Lehmklöße". Im ganzen sollen es 100 000 Kegelchen sein. Man hält sich aber nicht immer an die Zahl, besonders wenn das Dorf klein ist. Schon 3 bis 4 Monate vorher werden diese Lehmkegelchen in eigenen Holzformen gegossen. Die Dorfältesten verteilen dabei die Zahl auf jede Familie.

Die Unterflächen der noch feuchten Figürchen werden auf Tibetgerste und Weihrauch getupft, die beim Trockenwerden daran hängen bleiben. Die Durchschnittsgröße ist etwa eine Fingerlänge; es gibt auch größere [4]. — Die fertigen Tschorten bringt man auf einen Haufen in eine Tempelhalle oder in ein sauberes Gehöft. Der Lama begibt sich am letzten Tage vor der Errichtung dorthin, besprengt sie mit Weihwasser und betet darüber. Dann macht er an Ort und Stelle ein Torma, welches mit den üblichen sieben Wasserschälchen vor die Tonkegel gestellt wird. Nachdem alles mit Weihrauch abgeräuchert ist, betet er das Weihegebet und geht dann wieder zu seinem Gastherrn.

Die Errichtung der Tschortenkammer: Am siebenten Tage erscheint in aller Frühe der Speerwahrsager. Er wahrsagt im Hofe, unter Befragung des Vorstehers, wann und wo die Kammer zu errichten ist. Dann geht er hinaus und gibt unter Speerschütteln genau die Stelle an, indem er den Speer dort in den Boden rammt. Der Lama trinkt unterdessen seinen Morgentee.

Jetzt bringen die Leute alles herbei, Steine, Balken, Tschorten, Lehm, Stroh, Urnen, alles was eben notwendig ist. Für den Lama breitet man mit der Richtung nach Osten eine weiße Filzmatte hin, stellt einen kleinen Kangtisch darauf und schickt eine Abordnung, die ihn feierlich einlädt und zu dieser Stelle geleitet. Er nimmt auf der Matte Platz und beginnt sein Gebet, von Schelle und Trommel begleitet.

Der Wahrsager nimmt nun den Speer fort, und die Männer streuen Lebensbaumzweige und Gerstenkörner über die Stelle, wo er eingerammt war. Dann setzen sie genau auf die Spur des Speeres die erste große Urne und

je nach den vier Himmelsrichtungen die vier andern kleinen Urnen. Dahinter wird die Himmelssäule mit den vier bezeichneten Richtungen aufgestellt. Sie wird nicht in den Boden gerammt, sondern man hält sie vorläufig noch fest, dieweil nun die Männer in aller Eile die Tonkegel Kiepe um Kiepe über die Urnen und um den Fuß der Säule anhäufen, bis diese von selbst stehen bleibt. Sind die Urnen so bis zu einer Fläche eingedeckt, dann streut man noch einmal allerlei Beigaben darüber, wie sie bereits in den Urnen enthalten sind und die man dafür übriggelassen hatte. Jetzt folgt unter den gleichen Zeremonien die zweite Schicht mit den nächsten vier Urnen, die genau um ihre große Urne gruppiert werden, welche unmittelbar über die untere große Urne zu stehen kommt. Und wiederum werden die Lehmtschorten darüber gehäuft, bis am Schlusse die Urnen unter einer Pyramide begraben sind und die Säule nur noch mit dem obern Teil zu sehen ist. — Die Säule kommt auf die Seite der Urnen zu stehen, nach welcher ein Berg liegt, was bei dem bergigen Gelände sofort zu ersehen ist.

Bevor die Säule von den vielen Tschorten begraben wird, wird sie noch einmal mit Weihwasser besprengt und abgeräuchert [8]. Während der ganzen Zeremonie, von morgens bis abends, wird vor der Stelle oder auch an mehreren Stellen in der Nähe das große Weihrauchopfer verbrannt. Am Schlusse bringt sogar der Lama selbst vor dem geweihten und abgeräucherten Tschortenberg mit der Säule das Weihrauchopfer dar, während alle Kotou machen.

Danach setzt er sich wieder auf seine Matte und fährt mit seinen Gebeten fort. Währenddessen wird in aller Eile die Kammer gebaut. Zunächst werden die vier Eckpfosten aufgerichtet und oben miteinander in gleicher Höhe verbunden. Der Vorsteher bringt zwölf Brote und etwas Schnaps und stellt sie auf einem Tablett vor den Tschortenberg. Die Schreiner legen dazu den Firstbalken. Darin haben sie ein Loch gebohrt und dieses mit Getreide und Butter gefüllt und wieder mit einem Holzdeckel verschlossen. Der Vorsteher umbindet diese Stelle — es ist die Mitte — mit einer Elle roten Tuches. Dann verbrennt man Weihrauch und macht Kotou. Dabei werden die Werkzeuge auf ein kleines Maß Getreide vor die Brote gelegt. Die Schreiner steigen nun aufs Gerüst und ziehen an Stricken den Firstbalken hoch. Der Vorsteher wirft ihnen dann zwei von den Broten hinauf, die sie aber wieder zurückwerfen; ebenso reicht man ihnen den Schnaps, den sie austrinken. Jetzt erst legen die Schreiner den Firstbalken auf die Stützen, genau über die Himmelssäule. Diese berührt jedoch nicht den Firstbalken, sondern ragt frei nicht ganz bis zum First in der Mitte empor. — Der Firstbalken wird vorher ebenfalls mit reinem Wasser besprengt und mit Weihrauch und dem Glühstein abgeräuchert.

Jetzt steigen die Schreiner wieder herunter, und die Männer beginnen, zwischen den Eckpfosten die Mauern hochzuziehen. Haben diese etwa 50 *cm* erreicht, so daß die Tschorten nicht mehr herausrollen können, so machen sie eine Pause. Man streut noch einmal über den Tschortenberg Weihrauchblätter und arbeitet dann weiter, auf allen vier Seiten gleichmäßig. In Kopfhöhe bleibt auf jeder Seite eine Lücke. Es wird gleich bis zum Dach weitergemauert und alles sofort mit Lehmmörtel verputzt. Auch das Dach wird

sofort gedeckt. Wenn alles trocken ist, wird die Außenseite mit Kalkmilch geweißt. — Wird man nicht am gleichen Tage fertig, so arbeitet man am folgenden Tage weiter.

Gegen Schluß macht der Lama noch einmal ein Torma und stellt es vor die Tschortenkammer. Man verbrennt wieder Weihrauch, bläst die Muschel und macht Kotou. Dann ziehen alle, auch die Frauen, um die Kammer herum, wie um ein Obo. — Oft besprengt der Lama noch einmal die neue Tschortenkammer nach dem Weißen mit Weihwasser; dann begeben sich alle nach Hause und feiern das Ereignis mit Festgelage, Singen, Tanzen und Trinken.

Verehrung der Tschortenkammer: Später wird die Tschortenkammer zu bestimmten Tagen durch Umzug und Weihrauch verehrt, ähnlich wie ein Obo. Dabei wirft man durch die Luken neue Lehmkegel hinein. Meist ist das am ersten, achten und fünfzehnten Tage des Monats. Aber auch sonst, bei Not und Unglück verehren die Leute die Tschortenkammer. Der Umzug geht immer von West nach Ost, also nicht in Richtung der Sonnenbahn.

Sinn: Die Tschortenkammer steht in Verbindung mit dem Berggeist und Erdgott. Die Säule stellt die Verbindung mit dem Himmel her. Die Kammer hält die feindlichen Erdeinflüsse nieder. So schützt sie vor Unglück und Krankheit [6].

Wörterliste

Tschortenkammer:	*bönkän* (tib. Lehnwort) = zahllos Kammer (Haus) [1].
	ger-kän, ger (tuj.) = Haus, *kän* = Kammer.
	ma-ni lou (chin.) = Mani-Haus (Hochhaus).
Himmelssäule:	*sön-sin* (tib. Lehnw.) = Schutz-Baum (Holz) [7].
	t'ung-t'ien chu (chin.) = verbinden Himmel Säule.
Lehmtschorten, Lehmkegel:	*sasa* (tib. Lehnw.), *tza-tza* [4].
	hung ni-tan-tzu (chin.) = rote Lehmklöße.
Mauerluken:	*tsiönguän* = Fenster.
Die große Urne:	*lha-wum* (tib.) = Geist Urne (Gefäß).
	glo-wum (tib.) = Erdgott Urne.
	glo-wum gönluo (tuj.) = Erdgott Urne Gefäß.
Die kleinen Urnen:	*snog der* (tib. Lehnw.) = Zauber-Urne.
Gefäßinhalt:	*rdzë* (tib.).
	yang-wu (chin.) = Sachen.
Bergerde:	*sa-sena* (tib.) [7]; *siru* = Erde.
Wasser:	*tsü-sena* (tib.); *fdzë* = Wasser.
Holz:	*sin sena* (tib.); *mödë* = Holz.
Buddhagold:	*ldzer* [7] *sädog* (tib.).
Perlmutter?	*wsirë* (tib.) [7]; *shan-hu* (chin.) = Koralle.
Edelstein:	*mädog* (tib.) = Blume; *chen-chu* = Juwel.
Erdgottgewürz:	*glo-smän* (tib. Lehnw.).
Wasserschälchen:	*dönsär* (tib. Lehnw.).
Schwarzer Weihrauch:	*gukual*
	hei-hsiang (chin.).
Weihegebet:	*rami*.
Rote Erde:	*fulan siru*; *huang-tan* (chin.) = gelber Ocker.

Zauberformeln: *snag* (*snog*).
Mandalazeichnung: *sdzi ńkuor* (tib. Lehnw.).
Firstbalken: *chung-leang* (chin.) = Mittelbalken.
Glühstein: *ts'u-t'an*, *ch'ü-t'an* (chin.); *sŏdăń*; *sŏdăn* [1].
Umzug um die Tschortenkammer: *sguoza* (tib. Lehnw.).

Anmerkungen

[1] *bĕń* bezeichnet dem Gewährsmann zufolge dasselbe wie das tibetische *'bum* (vielerorts auch *bĕń* gesprochen), d. h. 100 000. *kăń* ist das tibetische Wort für Haus; es kann aber auch Tempel bedeuten, wie z. B. im Wort *šdienkăń*. *bĕń-kăń* würde demnach soviel heißen wie: die Kammer der 100 000; oder freier mit Rücksicht auf die darin enthaltenen *sasa*: Kammer der zahllosen *sasa*, Tschortenkammer. Im DMF steht dafür *bińkăń*, mit der Erklärung: „petit temple à quatre portes où on met les idoles et les objets religieux qu'on ne veut plus conserver à la maison (on le construit d'ordinaire à la sortie d'un village ou sur un carrefour)". Cf. tib. *bank'ań* „store-room, treasury". — Nach allen Erkundigungen, die mir möglich waren, hat der *bĕńkăń* nie eine Tür; auch daß man darin überflüssige Kultobjekte unterbringt, die man zu Hause nicht mehr behalten will, streitet der Gewährsmann entschieden ab. Eher noch wäre der Name von *bum-k'ań*, „Urnen-Haus" abzuleiten. *bum-k'ań* ist nämlich auch der mittlere Teil einer Tschorte, der ja urnenförmig aussieht. Nach W. A. Unkrig lautet dafür die mongolische Wiedergabe *bum-xan*. Dieses wäre im mongolischen Sprachgebrauch gleich dem *caraïngĕr*, womit man ein Leichenverbrennungshaus bezeichnet, wörtlich „Haus der Bratpfanne" (Mittlg.). Aber auch diese Deutung scheint zweifelhaft.

Der Gewährsmann dürfte schon Recht haben mit seiner Erklärung: *bĕń* = *'bum* = hunderttausend, zahllos; und *bĕńkăń* = Haus der zahllosen (Tschorten). In der Literatur wird dafür „*Ts'a ts'a*-Haus" gebraucht, z. B. A. Tafel: Tibetreise, II, p. 265. Auch Ch. Das spricht zwar nicht von einem *'bum-k'ań*, wohl aber von einem *ts'a-k'ań*: „place, where *ts'a-ts'a* are kept" (p. 1017). Auch sonst werden diese Tonkegelchen massenweise in Tschorten oder Wohnungen usw. aufbewahrt; und A. Tafel möchte diese Sitte mit dem Bontum in Verbindung bringen; vgl. a. a. O. pp. 198, 265. Jedenfalls schreibt der Volksglaube der Tujen diesen *ts'a-ts'a* eine große Kraft zu. Über die Bedeutung der *ts'a-ts'a* im eigentlichen Buddhismus vgl. die entsprechenden Arbeiten von Tucci.

Mit dem Namen *bĕńkăń* ist aber auch nichts Einheitliches bezeichnet; es ist nur ein Gattungsbegriff. Wie Lamas in der Mongolenlamaserie Dsadsang bei Tangkar und in Kumbum erzählten, gibt es zwei Gruppen von *bĕńkăń*. Erstens solche ohne Wände und Dach: z. B. *log-log* (eine Art Steinpyramide); *ndŏń-ndŏń*; *ser-wdziäl*. Zweitens solche mit Wänden und Dach, wie *dźĕw-yi* und *ger-kăń*. Der hier beschriebene *kăń* ist dieser *ger-kăń*. Eigentlich ist dieser Name eine Tautologie; denn *ger* ist mongolisch und heißt Haus (Zelt), also dasselbe wie das tibetische *kăń*. Außer diesen Namen gibt es noch andere Sonderbezeichnungen für *bĕńkań*, wie *mani bĕńkăń*; *tsäla bĕńkăń*; *dšŏma bĕńkăń*; *maridzĕ bĕńkăń*. Alle diese Arten konnten leider nicht mehr genauer

erfragt werden, ebenso nicht mehr die Bedeutung der Namen und der Inhalt der *bĕńkăń*. Zu den *bĕńkăń* gehören wahrscheinlich auch die vielen *rĕduombĕń* [7], pyramidenartige Steinhaufen, welche böse Dämonen niederhalten, wie es ja auch in der Tujenmythe von der Menschenfresserin *Măńgudzĕ* berichtet wird. Die Chinesen haben für diese Funktion den Ausdruck *pu mei-ch'i*, d. h. verstopfen der (Erd)adern Hauch.

[2] Die in die Urnen gesetzten Rollen sollen bestimmte Geister darstellen; dem Gewährsmann zufolge wären die untersten Rollen der Erdgott und die obersten der Berggeist, jeder mit seinen vier Begleitern. Andererseits scheint es aber nach seiner Aussage viele Arten solcher Geister zu geben, weil die Papierblätter dementsprechend verschieden bedruckt werden. Klarheit war nicht zu gewinnen. Die Papierblätter wirken aber auch als Zauber, wie ihr Name *snag*, d. h. Zauber(-sprüche), besagt. Die Tuch- und Fadenwickelung stellen die Kleider des Geistes dar. — Naheliegend ist die Annahme, daß es sich bei den Rollen um vier Weltenrichtungsgeister handelt. Daß der Lama ein eigenes Weihegebet über sie betet, bedeutet, daß die Urne tatsächlich Wohnung der Geister wird. — Die vier Begleiturnen sollen denselben Sinn wie die andern Erdgotturnen haben, also Beigaben an den Erdgott oder Opfer. Es mag aber auch sein, daß sie die Weltgegenden darstellen, wie das ja auch bei der Mittelburg möglich ist. — Über den Sinn der Begleiturnen herrscht keine einheitliche Volksauffassung.

[3] Die Herrichtung dieser Himmelssäule hat sehr große Ähnlichkeit mit dem Geisterspeer-Anfertigen. — Der Stamm braucht nicht immer geglättet zu sein. Bei halbzerfallenen *bĕńkăń* kann man auch Stämmchen mit voller Rinde und ohne weitere Bearbeitung aus dem *sasa*-Berg herausragen sehen, was eine noch natürlichere Verbindung mit dem Weltenbaum zuläßt. Beachtenswert ist, daß immer die gewachsene Ortung des Baumes beibehalten werden muß. — Über den Namen *sŏń-siń* war nichts weiter zu erfahren. Der chinesische Ausdruck *t'ung t'ien-chu*, der wohl viel zutreffender ist, wird auch dort für die Mittelsäule in lamaistischen Tempeln und die Mittelstange des Zeltes gebraucht. In Südkansu steht irgendwo im Gebirge ein großer Monolith, der denselben Namen trägt, wie mir ein Missionar als Augenzeuge erzählte. Dieser Mittelpfahl spielt im Westen Chinas eine bekannte Rolle, so daß hier nichts weiter gesagt zu werden braucht.

[4] *sasa* wird auch in Anlehnung an die Fandsesprache *dzadza* (*ts'a-ts'a*) gesprochen. Diese Tonkegelchen haben nicht nur die Form (wenn auch nur ungenau) einer Tschorte, sondern sie stellen auch oft Heiligenfiguren dar, die, der Bestätigung des Alten zufolge, ebenfalls in die Tschortenkammer hineinkommen. Auf alle Fälle aber sind sie von den Tormas zu unterscheiden, die nie aus Lehm verfertigt sind; cf. CH. DAS, p. 1019; A. TAFEL, I 221, II 331.

[5] Wie Mönche in Kumbum sagten, wird vor Errichtung der Himmelssäule zuerst noch eine Bodenzeichnung oder ein Blatt Papier mit einer Zeichnung auf den Boden gebracht (*maṇḍala*). Der Gewährsmann meinte, das sei nicht immer der Fall. Bemerkenswert ist, daß diese Zeichnung genau so heißt wie die Mittelburg, nämlich *sdziṅkuor*. Das würde besagen, daß es sich in beiden Fällen um den gleichen Gedanken handelt.

[6] Beim *bĕṅkăṅ* sind wesentlich die Urne, der Berg, der Baum. Darum gehört er in denselben Vorstellungsbereich wie die Mittelburg im Hofe, nämlich den weitverbreiteten Mythos von Himmel und Erde, verbunden (bzw. getrennt) durch den Weltenbaum. Hierbei dürfte bei der Mittelburg die Maniflagge lamaistisch-sekundär sein und bei der Tschortenkammer der *sasa*-Berg, der aus den Manikegeln besteht, wie sie mitunter genannt werden. — Daß nun ein Haus darüber gebaut wird, ist wohl ganz nebensächlich. Dieses hat offenbar nur die Funktion eines Schutzes und keine innere Beziehung zu seinem Inhalt. Es ist auffallend, daß die Himmelssäule auch nicht als Träger des Firstbalkens errichtet wird, sie steht frei und reicht nicht bis an den Balken heran. Auch bei den Bräuchen bei der Errichtung der Kammer kommt keine innere Beziehung zum Inhalt zum Ausdruck. Es sind dieselben Bräuche, wie sie sonst bei jedem Hausbau der Ch'inghai-Chinesen geübt werden.

[7] *sŏṅ siṅ* : tibetisch *skyoṅ* = bewahren, schützen, *šiṅ* = Holz. — *sasa* : tibetisch *ts'a ts'a* = konische Tonkegelchen. — *sena* : tibetisch *sna* = Gruppe, Kategorie. — *šder* : tibetisch *gser* = Gold. — *wsirĕ* : tibetisch *byi-ru* (gesprochen *šuru*) = Koralle. — *sŏdăṅ* : könnte aus dem Chinesischen stammen (?). *ts'u-t'ang* = Essig-Lache. — *sguora* : tibetisch *skor ba* = umkreisen. — *rĕduombĕṅ* : tibetisch *rdŏ* = Stein, *'bum* = 100 000 (UNKRIG).

Zur Religion der Tujen des Sininggebietes (Kukunor)

Von DOMINIK SCHRÖDER

(Erste Fortsetzung)

IV. Bräuche um den Menschen

1. Die Vollendung des Wochenbettes *

Bericht

Bald nach der Geburt eines Kindes macht man der Mutterfamilie der Wöchnerin Mitteilung von dem frohen Ereignis. Die Mutter kommt dann ihre Tochter besuchen. Die andern Angehörigen kommen aber erst nach einem Monat. Sie bringen Geschenke und halten ein Festmahl. Am Morgen dieses Tages wird dem Kind feierlich ein Name gegeben, und am Abend bringt man es vor das Hoftor zum Empfang des Hirten. Dann singt und trinkt und tanzt man bis in die Nacht.

Einzelheiten

Geburtsmeldung: Drei Tage nach der Geburt eines Knaben oder Mädchens nimmt der Schwiegervater der Wöchnerin ein Krüglein Schnaps und etwas Ölgebäck und begibt sich zur Familie seiner Schwiegertochter. Man sieht schon gleich, warum er zu Besuch kommt, und er braucht bloß noch den Tag und die Stunde der Geburt mitzuteilen und ob es ein Knabe oder Mädchen ist. Nachdem sie dann den Schnaps getrunken haben, begibt sich die Mutter gleich zu ihrer Tochter, um nach dem Rechten zu sehen. Sie weilt einige Tage dort und wiederholt dann öfters ihren Besuch.

Abschluß des Wochenbettes: Genau 29 Tage nach der Geburt, also am 30. Tage, stellen sich die Eltern und nächsten Verwandten der Wöchnerin im Hause ihres Mannes ein. Sie bringen Kleider für das Kind

* Anmerkungen siehe p. 622.

und die Frau (ein langes Obergewand und Schuhe), ferner vier große Brotfladen, Ölkuchen und anderes Gebäck. Die Brotfladen sind rund, etwa 30 bis 40 *cm* im Durchmesser und etwa 5 *cm* dick. In der Mitte haben sie ein großes rundes Loch [1].

Auch die andern Bekannten und Verwandten erscheinen mit Geschenken für das Kind; meist mit Stoff für Kleidchen, blau für einen Knaben, rot für ein Mädchen.

Namengebung: Am Morgen des gleichen Tages lädt man den Speerwahrsager ein. Nachdem er seinen Morgentee getrunken hat, bringt der Hausherr im Hof das große Weihrauchopfer dar, und der Wahrsager wahrsagt, ob er selber oder der Familienherr dem Kinde den Namen geben soll, und welchen Namen der Geist wünscht.

Gibt der Wahrsager den Namen, dann bringt man auf einem Tablett Brot, Tee und Butter. Die Mutter nimmt das Kind auf den Arm und stellt sich vor den Wahrsager. Dieser setzt den Speer beiseite, nimmt mit dem Finger etwas Butter vom Tablett, streicht sie dem Kinde auf die Stirn und sagt z. B.: „Er soll Berggeist heißen". Das bedeutet, daß das Kind dem Berggeist geweiht ist und nach dessen Namen gerufen wird [3]. Danach nimmt er Brot und reicht es dem Kinde zum Essen, ebenso bietet er ihm Tee an. Aber statt des Kindes genießt die Mutter die Gaben. Hierauf geben alle im Hause dem Wahrsager und Buddhabild und draußen dem Himmel dreimal Kotou.

Wünscht der Speergeist, daß der Familienälteste den Namen gebe, so vollzieht dieser dieselben Zeremonien; der Wahrsager jedoch beaufsichtigt die Handlung mit dem bebenden Speer. Auch dem Familienältesten gibt man dann Kotou. — Diese Zeremonie nimmt gewöhnlich der Großvater oder Vater vor oder der Mann, der Herr in der Familie ist [4]. Niemals ist es eine Frau oder ein Verwandter aus der Familie der Wöchnerin.

Anschließend an die Namengebung oder auch im Laufe des Tages muß die Mutter mit dem Kinde auf dem Arm allen Gästen Kotou geben; dafür erhält sie ein kleines Geldgeschenk für das Kind. — Gegen Mittag hält die Familie ein allgemeines Festmahl, für Männer und Frauen getrennt. Man trinkt dabei viel Gerstenwein, singt und tanzt.

Empfang des Hirten: Gegen Abend, wenn man die Tiere von der Weide zurückerwartet, nimmt der Vater oder die Mutter den Säugling auf den Arm und geht mit ihm vor das Hoftor, wo sie mit der heimkehrenden Herde zusammentreffen. Der Hirte muß dem Kinde etwas Geld geben, und der Vater schenkt ihm dafür ein Brot, welches er sogleich essen muß. Diese Sitte heißt „den Hirten bewillkommnen", die Chinesen sagen dafür „die Schafe bewillkommnen" [2]. — Die Gäste lassen sich durch diese Zeremonie nicht weiter stören, sondern trinken und tanzen bis in die späte Nacht: dann zerstreuen sie sich allmählich. Nur die nächsten Verwandten der jungen Mutter bleiben bis zum folgenden Tag.

Wörterliste

in Wochen sein:	*sara södzi* = sie sitzt den Monat ab; *tsu yüeh* (chin.).
das Wochenbett beenden:	*sara durgeni* = sie beendet den Monat.
	ch'u-yüeh (chin.) = aus dem Monat treten.
	man-yüeh (chin.) = den Monat erfüllen.
Empfang des Hirten:	*asdzi dzëlie-*; *ying-yang* (chin.) = die Schafe bewillkommnen.

Anmerkungen

[1] Über die Bedeutung des großen runden Loches in den Brotfladen erfuhr ich nichts.

[2] Der Empfang des Hirten findet sich auch bei den Chinesen, wie denn überhaupt die Beendung des Wochenbettes bei ihnen fast gleich ist. In der Gegend von Hei-tsuei-tzu (Hsi-ch'uan) erfuhr ich von dem dortigen Missionar P. FRICK, daß die Leute das Kind in die Krippe legen, damit es später viele Herden besäße und ein tüchtiger Reiter werde. Bei den Tujen war diese Sitte nicht festzustellen.

[3] Unter den Tujen kommen gerne Namen vor, die einen Bezug auf einen Geist haben; z. B. *guänbö-sdzia*, d. h. dem *Guämbo* anvertraut; *ifulä sdzia*, dem Berggeist anvertraut; *xaldan sërän* (tib.)[5], goldener Palast; *lašdze sërän*, Paß-Gipfel-Palast; *tuguän ula*, Berg des *Tuguän*. Mädchennamen werden gerne nach besonderen Anlässen gegeben, z. B. *tayin mdzuo*, volle fünfzig; weil der Vater oder Großvater oder sonst jemand der Familie gerade fünfzig Jahre alt war; keinen Einfluß hat aber auf solche Namen die Mutterfamilie. Bei Knaben sagt man statt des *mdzuo* (voll) *serän*, d. h. etwa „erhaben". Andere Namen sind z. B. *wadma sdzig*, d. h. Lotosblume, für Mädchen; oder *wadma sdzia*, d. h. dem Lotos anvertraut, für Knaben. — Auch die Chinesen haben eine ähnliche Sitte. Sie bringen z. B. einen Knaben in den Tempel des schwarzen Tigers und nennen ihn dann „schwarzem Tiger anvertraut", *hei-hu-pao*; oder „der Mutter anvertraut", *niang-niang-pao*, wenn sie das Kind im Tempel der Muttergöttin zum Schutze dargeboten haben. Das chinesische *pao* und das *sdzia* der Tujen haben gleichen Sinn.

[4] Auch ein Lama kann die Zeremonie vornehmen. Das geschieht jedoch selten. Meist macht es der Vater oder Sippenälteste.

[5] *sërän*: tibetisch *sran* (?) = Wohnung, Siedlung (UNKRIG).

2. Der erste Geburtstag *

Bericht

Beim ersten Geburtstag setzt der Vater das Kind auf den Kang und legt ihm verschiedene Sachen vor. Aus dem Gegenstand, den das Kind ergreift, ist ersichtlich, was es im spätern Leben wird. Danach schneidet man ihm die Haare und hängt diese an den Glückspfeil.

* Anmerkungen siehe pp. 623-625.

Einzelheiten

Das Orakel: Am Morgen des Jahrestages der Geburt bringt der Vater das Kind ins Haupthaus oder in die Küche und setzt es auf den Kang. Davor stellt er einen Kangtisch mit drei kleinen gebackenen Broten, fünf Dampfbroten und einer Tasse Tee. Daneben legt er für einen Jungen einen spannelangen Bogen mit einem kleinen Pfeil, Pinsel, Papier und Geld; bei einem Mädchen sind es Nadel, Zwirn, Elle, Schere, Messer. Die drei gebackenen Brötchen bedeuten die drei buddhistischen Weltengeister [2]. Die fünf Dampfbrote versinnbildlichen die fünf Glücksgüter: Alter, Reichtum, Gesundheit, Tugend, seliger Tod [1].

Die Eltern geben dem Kinde von den Broten zu essen und lassen es Tee trinken, oder die Mutter stillt es. Hierauf fordern sie es auf, nach den Sachen auf dem Kangtisch zu greifen. Greift der Knabe nach Geld, so wird er ein tüchtiger Händler, ergreift er Pfeil und Bogen, so wird er ein starker Krieger, greift er nach Pinsel und Papier, so wird er ein Gelehrter. Ähnlich ist es bei dem Mädchen. Das Ding, das vom Kind gewählt wurde, wird an den Glückspfeil gehängt [3].

Der Haarschnitt: Das Kind trägt noch Flaumhaare, da es seit der Geburt noch nicht geschoren wurde. Nun nimmt es der Vater oder sonst ein Mann auf den Arm und bringt es in den Hof. Dort rasiert ihm ein anderer Mann den Kopf, einerlei, ob es ein Knabe oder ein Mädchen ist. Auf dem Hinterkopf bleiben ein oder zwei Haarbüschel stehen [4]. Der Vater dreht die Haare zwischen den Handflächen zu einer kleinen Kugel und zwirbelt noch einen Faden heraus, womit er sie an den Glückspfeil knüpft. Früher zog man diese Strähne durch eine Lochmünze und hing diese mit der Haarkugel zusammen am Pfeil auf. So bleiben die Haare der Kinder das ganze Leben am Glückspfeil.

Danach geht der Vater mit dem Kind und dem Glückspfeil in den Hof und bringt das große Weihrauchopfer dar. Dabei macht das Kind zum ersten Male dem Himmel Kotou. Nach dem Opfer wird der Pfeil wieder an seinen ursprünglichen Platz zurückgebracht [5].

Wörterliste

gebären:	*tŏrŏ-.*
Geburtstag:	*tŏrŏdzän udur*; oder zusammengezogen: *tŏrŏdzŭdur.*
Geburtstag feiern:	*tŏrŏdzŭdur nogdzi-.*
jene Frau hat geboren:	*nie bieri tŏrŏdzia.*
Wann bist du geboren?:	*tsini kidzie tŏrŏwa?*
ja ich feiere wirklich:	*nogdzidza ligunadzi.*
die drei Weltengeister:	*dier xsèm sänrèdzi* [6] (tib. Redeweise).
die fünf Glücksgüter:	*wu-fu* (chin.).

Anmerkungen

[1] Bei Erklärung dieser Brote mischen sich chinesische und tibetische Vorstellungen; denn auch die Chinesen haben diese Geburtstagszeremonie. Bekannt ist das chinesische Sprichwort: *wu fu p'eng shou*, die fünf Glück-

3: Schröder AE9 Monguor

(Zeichen) halten das Alter-(Zeichen) empor. Ein Brauch an Neujahr: In die Mitte eines roten Papieres wird das Zeichen *shou* geschrieben und im Umkreis die fünf Zeichen für Glück, *fu*.

[2] Um welche drei Namen es sich im einzelnen handelt, konnte nicht ermittelt werden. *sǎnrèdzi* (Erleuchteter) ist der Titel für die Tulkus; vgl. Abschnitt: Der Lamaempfang; ebenso unten: Anm. 6.

[3] Über den Glückspfeil vgl. den betreffenden Abschnitt. Daß die vom Kind ergriffenen Dinge an den Pfeil gebunden werden, soll dem Kinde die Kraft erhalten, sich in der angegebenen Richtung zu entwickeln. Am Glückspfeil im Gehöft meines Gewährsmannes sah ich eine ganze Menge von Miniaturbogen, Pfeilen und Haarknäueln seiner Kinder und Enkel.

[4] Die zurückgelassenen Haarbüschel sind wahrscheinlich als Ansätze für die spätere Haarfrisur gedacht gewesen (Zopf). Es war nicht festzustellen, ob sie vielleicht etwas mit einem geweihten Buddha-Schopf zu tun haben, wie z. B. bei den Lolo; vgl. LIN YÜEH-HWA: I-chia. Jedenfalls werden die Haarbüschel heute wieder abrasiert. Wahrscheinlich sind die Büschel wie die ganze Sitte aus dem Chinesentum übernommen worden. Die Chinesen nennen diese kindlichen Haartuffen *tsung-chiao* (etwa = Haupt-Hörnchen). Wie sehr sie damit das Kindesalter kennzeichnen, ergibt sich aus dem Ausdruck *tsung-chiao chih chiao*, Freundschaft seit dem Kindesalter (wörtl. Haupt-Hörnchen Verkehr).

[5] Die erste Geburtstagsfeier ist offenbar von den dortigen Chinesen übernommen. Ein Beispiel dafür, wie sie sonst in China geübt wird, sei der Klarheit halber im Anschluß an J. DOOLITTLE: Social life (p. 90) gebracht: „Beim ersten Geburtstag wird der Mutter ein anderes Dankopfer dargebracht, und andere Geschenke an Kleidung und Essen werden von der Großmutter mütterlicherseits entgegengenommen. Wenn es ein Knabe ist, so befinden sich unter anderen Kleidungsstücken ein Paar Schuhe und eine Mütze; ist es ein Mädchen, dann finden sich unter anderen Kleidungsstücken noch Armbänder und Kopfschmuck. Die Vorbereitungen zu dem Dankopfer werden von der Großmutter mütterlicherseits getroffen" ... usw. „Bevor man dieses Fest begeht, wird ein großes Bambussieb, so wie es die Bauern zum Getreidesieben gebrauchen, auf den Tisch vor den Ahnentafeln gelegt, wo bereits Weihrauch und Kerzen angezündet sind. Auf dieses Sieb legt man einen Satz Geldstücke, eine Schere, ein Ellenmaß, einen Kupferspiegel, Pinsel, Tusche, Papier, einen Tuschestein, ein oder zwei Bücher, das Rechenbrett, einen goldenen oder silbernen Schmuckgegenstand oder sonst ein Gerät, Früchte usw. Das Kind trägt die neuen Kleider, die man ihm gerade geschenkt hat, und wird auf das Sieb mitten zwischen die Gegenstände gesetzt. Nun kommt es darauf an, was das Kind zuerst ergreift, festhält und damit spielt. Dieser Augenblick hat für die Eltern und versammelten Freunde einen überaus großen Reiz. Man sagt, daß der Gegenstand, den das Kind zuerst ergreift, auf die spätere Tätigkeit, Beruf, Charakter und Stellung in der Welt hinweist. Ist das Kind ein Knabe und ergreift ein Buch oder einen Gegenstand, welcher etwas mit Literatur zu tun hat, wie Pinsel oder Tusche, dann nimmt man an, daß es ein großer Gelehrter wird. Packt es das Geld oder

Gold- und Silbersachen, dann wird es berühmt wegen seines Reichtums und Geschickes, sich Geld zu erwerben. In der Sung-Dynastie ergriff einmal ein Mädchen, als es ein Jahr alt war und auf das Sieb gesetzt wurde, zuerst zwei kleine Miniaturwaffen mit der einen Hand und mit der anderen zwei Gefäße, wie sie für gewisse Opfer bei staatlichen Anlässen gebraucht werden. Nach einigen Minuten legte es diese Sachen wieder hin und ergriff ein Siegel. Danach achtete es nicht mehr auf die Sachen, die vor ihm lagen. Und nun das Ergebnis: Dieses Fräulein wurde Kanzler eines Kaiserreiches." — Das Orakel bei dieser Geburtstagsfeier stimmt im Wesentlichen mit dem der Tujen überein.

Auch sonst feiern die Tujen den Geburtstag, sowohl Männer wie Frauen, aber erst vom 45. Lebensjahre an. Es wird ein Festmahl gehalten, an dem sich alle Verwandten beteiligen. Als Geschenke sind neun Brote üblich. Acht Dampfbrote bedeuten die acht Genien, *pa-hsien*, und ein Brot stellt den Gott des Alters dar, *shou-hsing* (Alters-Stern). Gegen Sonnenuntergang gehen alle hinaus an die Gräber und bringen das Ahnenopfer dar. Dann gehen sie heim, trinken und tanzen bis in die Nacht. — Wie die Namen beweisen, ist auch diese Sitte den Chinesen entlehnt. Die Tujen kennen ursprünglich kein Ahnenopfer; den Chinesen hingegen ist der Glückspfeil und der Liedertanz fremd.

[6] *dier xsēm sāṅrēdzi*: *xsēm* = tib. *gsum* = drei; *saṅrēdzi* = tib. *saṅs -rgyas* = ausgebreiteter Glanz = buddhistisch: Titel für Inkarnationen. — *dier* läßt sich nicht identifizieren; es muß aber tibetisch sein und soviel wie „Region, Welt" bedeuten. Ich möchte es mit den drei Welten der Bon in Zusammenhang bringen; vgl. HOFFMANN: Quellen, p. 139; FRANCKE: Hochzeitslieder, p. 5 ff. — Auch den Chinesen ist diese Dreiteilung bekannt; man denke nur an das taoistische *san-ching* oder das buddhistische *san-chieh*.

3. Das Neujahrsfest *

Bericht

Das Neujahr feiern die Tujen zur gleichen Zeit wie die Chinesen. In den ersten Tagen ruhen sie sich von jeder Arbeit aus, tanzen und singen und besuchen sich gegenseitig. Erst nach dem ersten Vollmond am 15. Tage beginnt wieder der Alltag.

Schon viele Tage vorher werden Fleisch, Kuchen usw. vorbereitet. In der Nacht vom letzten Tag des alten zum ersten Tag des neuen Jahres geht niemand schlafen. Des Morgens opfert man zuerst den Göttern, verehrt die Familienältesten, bewillkommnet die Freunde [3], verehrt das Obo. Am Nachmittag besuchen sich Verwandte und Bekannte des Dorfes.

Vom zweiten Tag an geht man zu Neujahrsbesuchen außerhalb des Dorfes, erneuert die Tierweihe [6], versammelt sich im Hofe oder auf der Tenne, singt Sagen und Lieder und tanzt. Es ist eine fröhliche Zeit.

* Anmerkungen siehe pp. 628-629.

Einzelheiten

Vorbereitung: Bereits eine Woche vorher werden Schweine oder Schafe geschlachtet, Nudeln auf Vorrat geschnitten, die verschiedensten Sorten Ölkuchen gebacken, vor allem das *tagur*-Brot und gefüllte Teigpasteten [3]. Wichtig ist eine große Menge Gerstenwein, da in den Neujahrstagen überall viel getrunken wird. Am Tage vorher werden Haus und Hof gefegt, Laternen und Lampen hergerichtet [1] und die Fenster neu verklebt. Neuerdings schreiben die Tujen auch Frühlingssprüche auf rotes Papier wie die Chinesen und kleben sie auf die Türpfosten. Das war früher nicht so.

Nachtwache: In der Nacht vor Neujahr darf nicht geschlafen werden. Die Alten sagen: „Heute nacht wollet nicht schlafen, morgen früh wollen die Götter bewillkommnet werden." Darum bleibt der Hausherr mit seiner ganzen Familie auf. Man tut sich gütlich an Tee, Schnaps und dem Neujahrsessen, singt und unterhält sich, bis es Morgen wird.

Der Neujahrsmorgen: Beim ersten Hahnenschrei nach Mitternacht ziehen auch die letzten Nachzügler ihre besten Kleider an. Nur die ganz Alten der Familie bleiben auf dem Kang liegen. Der Hausherr stellt große, brennende Butter- oder Öllampen im Zimmer auf den Hausaltar. Im Hofe hängt er eine rote Papierlaterne mit einer Butterlampe an den Manibaum [1]. Sie wird an einer Querleiste an ihm befestigt. Dann bringt er mit der ganzen Familie draußen das große Weihrauchopfer dar, und alle machen dem Himmel einen dreifachen Kotou im Freien. Das gleiche wiederholt sich vor dem Hausaltar für die zahllosen andern Geister. Während dieser Zeit glüht man im Herdfeuer einen Stein, und mit diesem Glühstein werden sämtliche Räume des Gehöftes ausgeräuchert. Dabei wird die Muschel geblasen. Das Ausräuchern kann auch von Frauen besorgt werden [2].

Danach folgt ein zweites Opfer. Der Hausherr nimmt Weihrauchstäbchen, für jedes Familienmitglied eins, und zündet sie im Zimmer über der Lampe an. Dann geht er hinaus um die Manistange und macht, zum Haupthaus gewandt, mit sämtlichen Familienmitgliedern dem Himmel einen dreifachen Kotou. Die Stäbchen steckt er in den Weihrauchofen auf der Rundkrippe. Hierauf wiederholt sich die gleiche Zeremonie im Haus vor dem Hausaltar, wo die neuen Stäbchen im Weihrauchbecken weiterschwelen. Während der ganzen Zeremonie werden Raketen und Böller abgebrannt, um die Dämonen zu verscheuchen. Zugleich mit dem Weihrauch wird auch gelbes Papier verbrannt, genau wie bei den Chinesen [6].

Ist die Weihrauchzeremonie vorbei, so stellt der Hausherr einen Tisch in den Hof vor die Rundkrippe. Darauf kommen Tablette mit fünf Dampfbroten, fünf Ölbroten, drei *tagur*-Broten und allerlei Gebäck [3]. Danach gießt man eine Schale Gerstenwein aus und macht wieder dem Himmel einen dreifachen Kotou. Die gleiche Zeremonie wird vor dem Hausaltar für die andern Götter wiederholt.

Gratulation: Mittlerweile sind auch die Alten des Hauses aufgestanden. Sie erweisen nun auch dem Himmel und den zahllosen Geistern ihre Neujahrsverehrung. Dann setzen sie sich mit dem Hausherrn und den Familienältesten zum Tee auf den Kang und nehmen von ihren Söhnen und Töchtern den Kotou entgegen. Danach findet das allgemeine Frühstück statt. Die Kinder machen vor ihren Eltern Kotou, die jüngern Geschwister vor den ältern Geschwistern, die jüngeren Vettern vor den ältern Vettern usw. Die Alten geben den Jüngeren etwas Geld.

Bewillkommnung der Freude: Gegen Mittag findet die Bewillkommnung des Freudengottes statt. Man treibt dazu die Tiere auf die Tenne, opfert Brot und Wein, verbrennt Weihrauch, tränkt die Tiere und treibt sie wieder heim. Dieser Brauch ist genau derselbe wie bei den Chinesen [7].

Oboverehrung: Einige Familienvertreter begeben sich zu gleicher Zeit oder noch in früher Morgenstunde hinaus, um das Obo zu verehren. Bei dieser Gelegenheit werden nach dem Steinwurf die Luftpferde, die auf gelbes Papier gedruckt sind, losgelassen. Sie flattern und wirbeln in alle Winde zum Glück für die Familie [4].

Gratulationsbesuche: Am Mittag besuchen sich die Dorfbewohner gegenseitig. Man nimmt fünf bis sechs Brote, Weihrauchstäbchen, gelbes Papier, ein Kännchen Gerstenwein und begibt sich zur befreundeten Familie. Dort stellt der Gast die Brote vor den Hausaltar, zündet die Stäbchen an, verbrennt Papier und gießt einige Tropfen Wein auf den Boden. Danach macht er vor dem Altar Kotou und beglückwünscht den Hausherrn sowie die einzelnen Familienmitglieder. Der Niederstehende oder Jüngere hat dabei immer dem Höherstehenden Kotou zu geben. Dann setzt man sich auf den Kang ums Feuer, trinkt Tee oder Wein, unterhält sich und singt. Manchmal schließt sich auch noch im Hofe eine Tanzrunde an.

Wenn Frauen gratulieren gehen, nehmen sie keinen Wein, keinen Weihrauch und kein Papier mit, sondern nur Brote und Tee. Das Brot stellen sie auf den Altar, gießen etwas Tee auf den Boden und machen dann ihren Kotou. Sie setzen sich aber nie mit den Männern auf einen Kang.

Es ist Pflicht, daß sich die jüngeren Verwandten zu älteren Verwandten begeben. Allerdings bleibt man am Neujahrstage selber im Dorf. Erst vom zweiten Tage ab besuchen sich die entfernter wohnenden Freunde und Verwandten.

Belustigungen: In den ersten vierzehn Tagen des Neuen Jahres treffen sich die Leute immer wieder abends bei Mondaufgang in den Gehöften. Man verbrennt Weihrauch, lädt Sänger ein, welche Sagen erzählen. Man singt im Wechselgesang um die Wette. Dabei fassen sich je zwei Personen am Rockzipfel. Wenn einer den Wechselvers nicht kann oder falsch singt, schneidet ihm sein Gegner ein Stück vom Zipfel ab. So kann jemand an einem Abend sein ganzes Kleid versingen.

Vor allem treffen sich die jungen Leute auf der Tenne und singen im Reigen allerlei Lieder. Das dauert die ganze Nacht, besonders beim ersten

3: Schröder AE9 Monguor

Vollmond. Erst gegen Morgen macht man Schluß. Jungen und Mädchen mischen sich zwanglos im Kreise, kleine Buben, mit umgedrehtem Fell bekleidet, stellen Dämonen dar und schlagen auf Hölzer, andere machen chinesische Händler nach, treiben allerlei Possen usw.[5]

Nach dem 15. Tage beginnt wieder das gewöhnliche Leben der Arbeit. Aber man zehrt noch lange von den vielen Ölbroten.

Lied: Auf Neujahr wird gerne folgendes Lied gesungen:

1. Auf Neujahr gibt man dem Himmel Kotou,
   verbrennt Weihrauch und dann ißt man.
2. Wenn du die Gesetze des Kaisers hältst,
   wirst du im spätern Leben Minister.
3. Wenn du die Wohltaten der Eltern nicht vergißt,
   wirst du später lange leben.

Bewillkommnung der Freude:	*ying hsi* (chin.).

Anmerkungen

[1] Die Lampen sind große kupferne Butterlampen oder die kleinen kupfernen Schälchen. — Ist kein Manibaum vorhanden, dann hängt man die rote Lampe an eine Dachlatte vor der Türe des Haupthauses. Diese Lampe dürfte wohl der chinesischen Himmelslaterne nachgemacht sein. Auch die Chinesen ziehen eine solche Lampe an einem hohen Mast im Hofe wie eine Fahne hoch und lassen sie jeden Abend brennen. Sie heißt *t'ien-teng*, d. h. Himmelslampe.

[2] Das Ausräuchern mit dem Glühstein soll das Haus reinigen und die Dämonen vertreiben, ähnlich wie das Raketenknallen.

[3] Über die Brotarten vgl. DOM. SCHRÖDER, Ying-hsi. Anthropos 41-44. 1946-49. p. 186, Anm. 3; im gleichen Artikel ist die ganze Zeremonie der Bewillkommnung der Freude beschrieben.

[4] Vgl. Abschnitt: Der Manibaum, Anm. 7.

[5] Diese Reigen sind genau so wie bei den benachbarten ackerbauenden Fandse und Chiafandse. Männer und Frauen, Buben und Mädchen bilden

3; Schröder AE9 Monguor

einen Kreis. Eine Person singt vor und gibt auch die Tanzbewegung an. Die andern singen den Refrain und wiederholen gemeinsam die Bewegung. Auch zu zweien tanzt man im Rhythmus des Liedes. Diese Tänze werden auch sonst bei Belustigungen aufgeführt, z. B. bei Hochzeit, bei Ankunft des Lama usw. Von den Liedern gibt es viele Arten ; man teilt sie in zwei Gruppen ein : Familienlieder, die anständig sind und im Hause gesungen werden ; wilde Lieder, die meist recht derben Inhalt aus dem Liebesleben bringen. Die Melodien sind weitgehend dieselben bei den Fandse. Man singt neben Tujenliedern auch chinesische und tibetische. Das hier angefügte Lied ist im Urtext tibetisch. — Bei diesen Mondscheintänzen verbringen die jungen Leute die ganze Nacht im Freien, und mehr als ein Pärchen sieht man abseits verschwinden. Über die Liederarten vgl. SCHRÖDER : Hochzeitslieder.

[6] Vgl. Abschnitt : Die Tierweihe.

[7] An Neujahr befragen die Tujen auch allerlei Orakel ähnlich wie die Chinesen, z. B. das Futterorakel, bei dem man Tiere mit verschiedenen Brotarten füttert, um daraus über die Ernte zu wahrsagen (vgl. SCHRÖDER, Yinghsi ; und oben, Anm. 3). Ein anderes Orakel ist das Eisbrechen. Junge Burschen und Männer gehen an den Fluß, nehmen eine Platte Eis und brechen sie auseinander. In den Bruchlinien sind Bilder von Getreidesorten erkennbar ; die Arten, die am deutlichsten hervortreten, lassen im Jahre die beste Ernte erwarten. Dieses Orakel ist auch bei den Chinesen zu finden.

[8] Ähnlich wie bei den Chinesen wird auch der Herdgott fortgebracht und am Neujahrsmorgen wieder feierlich eingeführt. Über eine originelle Tujenzeremonie bezüglich des Herdfeuers konnte ich nichts erfahren. Dem Herdgott wurde von jeher ein Weihrauchopfer dargebracht, aber es ist unsicher, ob man dabei Zypressenzweige ins Feuer warf. Heute werden allgemein Weihrauchstäbchen hinterm Herd an die Wand gesteckt, genau wie bei den Chinesen.

Eine andere Feuerzeremonie findet in der ersten Vollmondnacht des Jahres vom 14. zum 15. Tag statt. Junge Leute zünden auf dem Wege oder auf der Tenne eine Reihe kleine Strohfeuer an (10-15) und springen darüber. Man sagt, das tue man, um rein zu werden ; andere meinen, es sei nur zum Spaß. Die dortigen Chinesen, die auch diese Sitten haben, behaupten, es sei ein alter chinesischer Brauch. Sie erzählen auch eine Sage darüber, die ich vergessen habe. Sie hat etwas mit einer Kriegslist alter Helden zu tun, deren Andenken man feiern will. — Zum Reinigungsfeuer vgl. Abschnitt : Das Weihrauchopfer, Anm. 9.

Gerade in den Neujahrsbräuchen tritt die starke Vermischung mit chinesischen Sitten hervor, so daß sich im einzelnen nicht bestimmt sagen läßt, was ursprünglich den Tujen zugehört. Man kann aber wohl die *ying-ksi*-Zeremonie, Erneuerung der Tierweihe, und vor allem das Tanzen und Liedersingen, das die Chinesen nicht kennen, ihnen zuschreiben.

Die Liedertänze weisen auf einen engen Zusammenhang mit dem wachsenden Mond hin, da sie meist nachts, am 15. Tag sogar die ganze Nacht, aufgeführt werden. Es ist fast, als gelte die Neujahrsfeier in erster Linie dem neuen Monde. Nach dem ersten Vollmond wird alles schlagartig abgebrochen.

3: Schröder AE9 Monguor

4. Der Alters-Segen *

Bericht

Alte Leute, Männer und Frauen, laden den Lama ein, damit er sie segne und belehre. Das ist ein großes Familienfest. Lange vorher schon wird es vorbereitet.

An einem bestimmten Tage kommen dann die Bekannten und Verwandten, bringen dem Alten Geschenke und gratulieren. Sie werden mit Tee und Kuchen bewirtet. Man singt und tanzt und hält ein Festmahl. Die jungen Leute holen den Hutuktu ab. Wenn er ankommt, tanzen die Frauen des Dorfes, und im Hofe verbrennt man Weihrauch. Der Hutuktu segnet die Festgäste und den Alten.

Am Nachmittag wird dann die Altersweihe vorgenommen. Der Hutuktu macht einige Tormas, welche weggebracht werden. Danach kniet sich der Alte auf die Filzmatte vor den Hutuktu, wird mit Weihwasser gesegnet, erhält Belehrungen und wird mit einer gelben Schärpe umgürtet. Er gleicht dann einem Laienmönch. Der Mutterbruder bestimmt, welchen Lohn der Hutuktu erhält. Am andern Morgen kehrt der Hutuktu in sein Kloster zurück.

Die Weiheperson hat jetzt besondere Gebote zu halten, muß am ersten und 15. des Monats sich zur Betrachtung zurückziehen, fasten und beten. — Nicht alle Leute können sich diese Feier leisten, denn sie ist sehr teuer.

Einzelheiten

Die Weiheperson: Die Person kann eine Frau oder ein Mann sein. Sie soll ein hohes Alter haben; meist ist sie gegen 60 Jahre alt. In diesem Alter sind sie nämlich fromm und besonnen und können die Vorschriften besser halten. Junge Leute sind lebenslustig, heftig und unbeherrscht. — Die Weihe wird nur von einer Inkarnation, Hutuktu, vorgenommen, nicht von einem gewöhnlichen Lama.

Vorbereitungen: Die Vorbereitungen werden im Einvernehmen mit dem Mutterbruder getroffen. Er bestimmt den Tag und den Hutuktu, der eingeladen werden soll. Da an der Feier das ganze Dorf teilnimmt, wird schon lange vorher Geld gespart. Man schlachtet Schafe, Schweine oder ein Rind; bäckt Ölgebäck, Brot und Ölstengel, *san-tzu*, auf Vorrat; richtet Haus und Hof her, brennt Schnaps, kauft neue Kleider und sorgt für die Geschenke des Hutuktu. Dieser schickt schon einige Tage vorher einen oder mehrere Mönche, welche das Zimmer für ihn in Ordnung bringen und die Küche vorbereiten, damit er würdig wohnen und essen kann.

Gratulation und Gästeempfang: Am festgesetzten Tage zieht die Weiheperson ihre besten Kleider an und verweilt in einem saubern Nebenraum. Schon am frühen Vormittag kommen die Besucher, Verwandte und

* Anmerkungen siehe pp. 634-635.

Gäste. Sie gratulieren der Weiheperson und bringen Geschenke; meist wickeln sie noch ein Hada darum, das sie der Person feierlich überreichen. Die Geschenke werden in einem Raum auf eine Lade, meist vor einen Hausaltar, gelegt. Man schenkt Brote, Ölgebäck, Tuch, Hadas, Silbergeld usw. Damit alles nach Sitte und Ordnung geht, wird ein Zeremonienmeister bestimmt.

Von den Gästen ist der Mutterbruder die Hauptrespektsperson. Man geht ihm schon entgegen und überreicht ihm ein Hada. Wenn er kommt, steigt die Weiheperson vom Kang herunter und empfängt ihn. Er überreicht ihr dann die Geschenke und wird auf dem Ehrenplatz mit Tee und Kuchen bewirtet. Dann trinken alle zusammen Tee und Schnaps und brocken zerkleinerte Ölstengel in die Näpfe. — Außer dem Mutterbruder müssen die Tochtermänner und die Kinder der Tochter der Weiheperson ein Hada und Geld schenken. Dafür erhalten sie beim Weggang später ein größeres Entgelt.

Festmahl: Das Festmahl findet im Hofe statt, zuerst für die Männer, dann für die Frauen. Es werden drei Felder abgeteilt, rechts und links für die Gäste und in der Mitte für den Mutterbruder mit den zwei nächsten Verwandten. Diese drei sitzen mit dem Rücken zur Haupttüre des Haupthauses auf einer Filzmatte zu ebener Erde und haben einen niederigen Kangtisch vor sich mit den Speisen; sie werden eigens von den Zeremonienmeistern bedient. Auf den beiden Feldern rechts und links wird im Geviert Stroh gestreut; davor legt man Bretterbohlen und manchmal auch Matten, welche die Tische vertreten sollen. In der Mitte jedes Geviertes brennt ein Feuer, in dem man Tee und Schnaps wärmt.

Das Essen wird eingeleitet mit Tsamba und Tee, der mit Butter und Milch genommen wird. Daran schließt sich Schaffleisch oder Schweinefleisch; je fetter, umso lieber und vornehmer ist es. Es wird sehr viel getrunken. Als Hauptspeise folgt Reis, welcher mit Butter und Zucker und süßen Wurzeln durchmischt ist. — Nach den Männern essen die Frauen. — Während des Mahles sind immer einige frei, die singen und tanzen.

Festsetzen des Gebetslohnes: Nach dem Essen gießt der Zeremonienmeister dem Mutterbruder Schnaps ein. Die Söhne, Töchter und Schwiegertöchter knien vor dem Mutterbruder nieder. Der Zeremonienmeister überreicht ihm ein Hada und beginnt mit dem Verhandeln des Preises. Der Mutterbruder beansprucht teuere Gaben und viel Geld für den Lama; der Zeremonienmeister muß durch seine Redegewandtheit allmählich die Forderungen heruntersetzen, bis man sich schließlich auf eine vernünftige Höhe einigt. Dann stehen die Söhne und Töchter auf, machen Kotou, danken dem Mutterbruder und gehen. Es ist ähnlich wie bei dem *pai-ta*, vor der Leichenverbrennung [1].

Ankunft des Lama: Bereits tags zuvor oder am frühen Morgen sind Reiter zur Lamaserie geritten, den Hutuktu abzuholen. Er kommt gegen Mittag an und wird unter den üblichen Zeremonien ins Haus geleitet. Auf der Tenne vor dem Hoftor tanzen und singen die Frauen aus Leibeskräften. Im Hofe wird das Weihrauchopfer verbrannt und die Muschel

3: Schröder AE9 Monguor

geblasen. Den Lama geleitet man zum Kang im Haupthause; dort ruht er sich aus und trinkt Tee.

Nach geraumer Zeit stellen sich der Mutterbruder und die Zeremonienmeister bei ihm vor, schenken ihm ein Hada und bitten ihn, die Festgäste zu segnen. Draußen vor der Tür des Haupthauses setzt er sich auf einen Stuhl, und alle ziehen mit gebeugtem Haupte vorbei, der Mutterbruder zuerst. Der Hutuktu berührt jedem den Scheitel oder die Stirn mit seinem schweren Gebetbuch. Das nennt man den Lamasegen, von dem die ganze Zeremonie den Namen hat [3]. — Die Weiheperson kommt nicht, sondern wartet bis später.

Die Altersweihe: Nachdem im Haupthaus die üblichen Butterlampen und Schälchen vor dem Hausaltare aufgestellt sind, macht der assistierende Lama einige Tormas, darunter auch ein kleines. Die Tormas werden auf ein Tablett vor den Hausaltar gestellt.

Auf den Boden vor dem Kang des Hutuktu breitet man eine Filzmatte aus und stellt das kleine Torma darauf. Die Weiheperson tritt, gefolgt von dem Mutterbruder und ihren Kindern, herein, kniet sich barfüßig und barhäuptig (die Frauen ohne Kopftracht mit herunterhängenden Zöpfen) auf die Matte, macht dreimal Kotou und bleibt vor dem Torma knien.

Der Hutuktu betet über den Weihekandidaten. Dieser hält die hohlen Hände hin, in welche der Hutuktu aus seiner Kanne Weihwasser gießt. Er trinkt es. Es folgt ein zweiter Guß in die hohlen Hände. Der Weihekandidat spült damit den Mund und speit das Wasser zweimal über das Torma. Mit dem dritten Wasserguß in die hohlen Hände wäscht er sich das Haupt. Schließlich folgt der letzte Guß, mit dem er sich das Gesicht wäscht [4].

Danach besprengt ihn der Hutuktu mit Weihwasser aus der Kanne und wirft Tibet-Gerste, welche er dreimal angeblasen hat, über ihn. Das Wasser weiht er mit den Gewürzen schon vorher, nachdem die Tormas fertig sind. Zum Besprengen gebraucht er die Pfauenfeder, nicht einen Lebensbaumzweig.

Jetzt bringen der Zeremonienmeister, die Tochtermänner und Kinder das Torma, das vor dem Kandidaten steht, zum Hofe hinaus und werfen es fort. Der Mutterbruder bleibt da, und nachher kommen nur noch die eigenen Kinder hinzu. Sie stellen oder knien sich im Nebenraum hinter die Weiheperson und schließen die Tür, weil nur wenig Leute zugegen sein sollen. Nur die Weiheperson bleibt im Lamaraum vor dem Kang knien.

Der Weihekandidat wäscht sich nun wieder auf die oben beschriebene Weise, wird wieder mit Weihwasser besprengt und mit Tibet-Gerste beworfen. Der Zeremonienmeister nimmt einen Eisenlöffel, legt etwas Glut aus dem Feuerbecken des Lama hinein, streut zerstampften Zypressenweihrauch darauf und der Lama wirft wohlriechendes Gewürz darüber. Damit wird die Weiheperson ringsum abgeräuchert und ist nun vollständig rein. Der Hutuktu betet über ihn das Weihegebet und belehrt ihn, welche Gebote er von jetzt an zu halten hat. Diese Gebote beziehen sich auf Fasten, Enthaltsamkeit, Tötungsverbot, Gebet usw. Sie sind für Männer und Frauen etwas ver-

schieden. Die Belehrung geschieht in der Tujensprache, damit der Kandidat sie versteht.

Jetzt folgt das Anlegen der gelben Schärpe. Sie ist etwa eine Hand breit und 4-5 Ellen lang. Es soll keine Seide sein. Halbseide ist erlaubt, meist ist es Baumwolle. Der Kandidat hat sie selber zu besorgen. Diese Schärpe liegt vor dem Hutuktu auf dem Kangtisch und wird zu gleicher Zeit wie die Weiheperson abgeräuchert. Mit Weihwasser wird sie nicht besprengt. Der assistierende Lama legt dem Kandidaten die Schärpe über die linke Schulter und bindet sie unter dem rechten Arm mit einem gelben Faden, der ebenfalls abgeräuchert wurde, zusammen. Das Tuch hat denselben Namen wie die Tuchschleife, die die Lamas über die Schulter werfen.

Da die Weihe erst am späten Nachmittag geschieht, ist es mittlerweile Abend geworden. Jetzt erst nimmt der Hutuktu die Hauptmahlzeit ein. Im Hofe aber sammeln sich die Gäste um das Feuer, wärmen ihren Schnaps und singen und tanzen bis in die Nacht.

Am andern Morgen verrichtet der Hutuktu seine üblichen Morgengebete, trinkt Tee und erhält seinen Gebetslohn: mehrere Kiepen Brot, Fleisch, Geld usw. — Die Gäste haben schon tags zuvor nach dem Festessen je ein Stück Fleisch oder Speck und vier Stück Ölgebäck erhalten. Der Mutterbruder, die Tochtermänner und deren Söhne erhalten acht Ölbrote, ein größeres Stück Fleisch und ein Hada; denn sie haben dem Kandidaten auch mehr Geschenke gebracht als die andern. — Nach dem Morgenimbiß begibt sich der Hutuktu in sein Kloster zurück. Man begleitet ihn nicht, bringt ihm aber die Geschenke ins Kloster nach. Dort stiftet man für die Mönche einen großen Kessel Tee und für die Tempelgötter Lampenbutter [3].

Pflichten und Vorrechte der Weiheperson: Die Weiheperson zählt als Laienlama bzw. Laiennonne. Darum wird sie nach dem Tode auf feierliche Weise in dem vom Hutuktu gesegneten Leichenofen verbrannt. Der Hutuktu, der sie geweiht hat, erhält bei der Übermittlung der Todesnachricht seines Kandidaten zwölf Dampfbrote und drei *tagur*-Brote und muß für ihn besonders beten. Er nimmt auch gewöhnlich die Totenzeremonien vor.

Der Geweihte darf nun sein ganzes Leben lang keinen Alkohol mehr trinken, nicht rauchen, keine Eier und kein Fleisch von gefallenen Tieren und kein Hühnerfleisch essen [4]; nur Fleisch von geschlachteten Tieren ist ihm gestattet. Er hat sich des Geschlechtsverkehrs zu enthalten und jeden Monat sich zur Betrachtung zurückzuziehen.

Das geschieht am ersten und fünfzehnten Tage, es sind Fasttage und Tage der Betrachtung. Meist kommt noch der achte Monatstag hinzu. An diesen Tagen bringt er morgens feierlich das Weihrauchopfer dar. Dann zieht er sich auf den Kang zurück, trinkt „leeren Tee", d. h. reinen Tee ohne Zutaten und ohne Essen. Er hält Betrachtung und betet an seiner Manischnur. Niemand darf ihn stören, auch wenn Gäste kommen; er selber kümmert sich ebenfalls um nichts. Während dieser Zeit darf er nicht schlafen. Auch darf er nicht in den Tempel oder zum Obo gehen. Erst am Nachmittag nimmt er eine Mahlzeit zu sich, die aber besser und reichlicher als gewöhnlich ist [5].

Wörterliste

Altersweihe:	*Ige lama ndziala-* = großes Lama-Einladen.
	törödzudur nogdzi- = Geburtstag feiern.
Zeremonienmeister:	*kâŋguo.*
den Hutuktu abholen:	*ǵdzö niwa* (zweimal) (oder *dâŋwu*, wenn das erste Mal).
Mutterbruder	*nöǵâ*; *achin* (chin.); *ayâŋ.*
Sohn des Mutterbruders:	*ku-chin* (chin.).
Schärpe:	*ǵödzân* (tib. Lehnw.) [4].
unter Gebet in den Lamastand aufnehmen:	*gönien dötwla-.*
Einkehrtag halten:	*pi-chai* (chin.); *gönsöŋ* (tib. Lehnw.) [4].
Mitglied der gelben Kirche:	*gölönba* (tib. Lehnw.) [5].

Anmerkungen

[1] Näheres siehe Kapitel: Totenbräuche und Leichenverbrennung. Auch hier ist die hervorragende Stellung des Mutterbruders besonders auffällig.

[2] Vgl. Kapitel: Empfang des Lama. Ich konnte keinen andern Namen feststellen als *lama ndziala*; *ndziala* hat eine ganze Reihe Bedeutungen, unter anderem auch: einen Hutuktu einladen. Weil die Altersweihe das größte religiöse Ereignis einer Familie ist, wozu der Hutuktu eingeladen wird, wird es eben die „Einladung" schlechthin genannt. Es ist eine Zeremonie, in welcher durch die Weihe eine besondere Beziehung zum Mönchstum hergestellt wird.

[3] Hieraus geht hervor, wie kostspielig die Altersweihe ist. Sie ist darum allein schon sehr angesehen. Ich entsinne mich eines Falles, daß ein junger Mann diese Feier für seine alte Mutter organisierte. Die Leute meinten: „So ein armer Schlucker will eines solchen Ansehens willen sein Vermögen ruinieren. Dieser Gernegroß." Aber sie machten am Festtage selber eifrig mit.

[4] Die Waschung spielt ja in allen Weihezeremonien eine große Rolle, auch Buddhabilder werden gewaschen, bevor sie „beseelt" werden. Vgl. dazu auch FILCHNER: Kumbum, p. 267 ff.; FILCHNER: Om mani padme hum, p. 137-141; ferner das Kapitel: Totenbräuche und Leichenverbrennung.

[5] Zum Ganzen vgl. FILCHNER: Kumbum, p. 199. Die hier beschriebene Zeremonie ist viel ausführlicher als dort und weicht auch etwas ab. Den Namen *Upâsaka* (resp. *Upâsika*) nannte der Gewährsmann nicht. Auch wußte er nicht die Vorschriften im einzelnen. Wohl bestätigte er, daß der Kandidat nach jedem Gebot zu bejahen habe, er wolle es halten. Der Alte hat an sich selber nicht die Weihe vornehmen lassen. Das Volk betrachtet die Weihe-Personen als Laien-Gelong; man wird hier an die Ähnlichkeit mit dem dritten Orden im christlichen Abendland erinnert.

Aus den Geboten ist auch klar, warum junge Leute für die Weihe nicht in Frage kommen. Allerdings kann diese Weihe in jedem Lebensalter, bei oder nach dem Tode, ergänzt werden; dann sind auch junge Leute nicht mehr fähig die Gebote zu übertreten. Die Altersweihe scheint nur die letzte Stufe einer Weihefolge von Laien zu sein, die parallel zu den Weihestufen der Lamas vorgenommen werden. Der Gewährsmann erwähnte einmal eine Art Taufe, bei welcher das *dzawdzi* (tib.) gebetet wird; chinesisch heißt dieses Gebet *hsi-lien-ching*, Gebet des Gesicht-Waschens. Offenbar war die von

FILCHNER beobachtete Zeremonie eine solche Knabentaufe; Om mani padme hum, a. a. O. Später folgt dann noch eine zweite Weihe für junge Leute, die nach dem entsprechenden Gebete *gäńsgur* (tib.)* heißt, auf Chinesisch *san-hun ching*, Gebet der drei Seelen, genannt. So teilte mir der Gewährsmann mit. Leider konnte ich diese Zeremonien nicht mehr aufnehmen.

* *gědzän*: tibetisch *gzan* = die gelbe Schärpe der Lamakleidung. — *gönsön*: tib. *dgoń* = Einsamkeit, *soń*: fortgehen; Sinn: in die Einsamkeit gehen. — *gělönba*: tib. *dge* = Tugend, *sloń* = sich befleißigen, *pa* = zugehörig; Sinn: Ein Tugendbeflissener. — *gesnien*: tib. *dge* = Tugend, *bsńen* = sich nähern. — *gäńsgur*: tib. *dbań* = Gewalt, *bskur* = weihen übertragen. Es ist die Zeremonie der Gewaltübertragung gemeint, wobei jeder Lama einen geheimen Namen erhält (UNKRIG).

5. Totenbräuche und Leichenverbrennung *

Bericht

Ist jemand dem Tode nahe, dann werden ihm die Kleider ausgezogen, falls er auf dem Kang überhaupt solche trägt. Man wäscht, rasiert oder frisiert ihn, wenn es eine Frau ist, und bindet ihn sofort nach dem letzten Atemzug in Hockerstellung. Über die Schulter wird ein Stück Tuch geworfen, welches das einzige Kleidungsstück des Toten ist.

Danach setzt man ihn in eine Totenlade, die wie ein tragbares Haus aussieht, und stopft ihn mit Stroh fest. Die Lade wird in einem Zimmer auf den Boden gestellt, und die nächsten Angehörigen halten dort Totenwacht. Bei jeder Mahlzeit bringen die Leute etwas von den Speisen vor die Totenlade, verbrennen Papier und machen Kotou. Jeden Abend versammeln sich die Nachbarn und Freunde und beten, im Kreise hockend, für den Toten. Einige Tage vor der Verbrennung lädt der Zeremonienmeister einen Lama ein, damit er die Totenzeremonien vornehme und die Leiche verbrenne. Zuvor aber muß der Mutterbruder die Leiche freigeben; das geschieht am Vorabend beim Essen, wenn er Rechenschaft für den Toten und dessen Bestattung fordert.

Die Verbrennung wird außerhalb des Ortes in einem Leichenofen vorgenommen, den man jedesmal an einem andern Orte mauert. Der Lama nimmt dabei fast dieselben Zeremonien vor, wie beim Feuerguß. Nach der Verbrennung werden die restlichen Knochen in einem Holzkasten geborgen und an Ort und Stelle vorläufig begraben. Erst im nächsten Frühjahr übertragen sie die Angehörigen auf den Familienfriedhof. — Kleine Kinder werden nicht begraben. Erwachsene Mädchen verbrennt man ohne Zeremonien still an einem abgelegenen Ort.

Die strenge Trauerzeit beträgt 49 Tage. Zum Zeichen der Trauer wenden die Männer die Kleidung um, und die Frauen entfernen den Schmuck und bestimmte Teile ihrer Kopftracht.

* Anmerkungen siehe pp. 650-658.

3: Schröder AE9 Monguor

Einzelheiten

Herrichtung der Leiche: Kurz vor dem Tode rasieren die Männer dem Sterbenden zuerst den Kopf und dann den Bart. Tritt der Tod aber zu plötzlich ein, so daß sie ihn nicht mehr lebend rasieren können, so unterbleibt es. Nach dem Rasieren entkleidet man ihn und wäscht ihm Hände, Gesicht und Füße, nicht den ganzen Körper. Bei Männern tun das die Männer, bei Frauen die Frauen. Die Frauen behalten ihre langen Haare, ebenso die Mädchen. Man frisiert ihnen einen Scheitel in der Mitte und flicht zwei dreisträhnige Zöpfe, die über die Brust oder den Rücken herabhängen. Bei einem plötzlichen Tode wird die Leiche nur gewaschen und gekämmt; das Waschen geschieht dann nur mit einem feuchten Tuche [1].

Ehe der Sterbende den letzten Atemzug tut, legt ihm jemand eine Manikugel, ein Stück Gold, ein Stück Silber und ein Stück Butter in den Mund. Die Manikugel gewährleistet ihm nach der späteren Wiedergeburt ein hohes Alter [2]. Gold und Silber bezeugen bei der Wiedergeburt, daß er aus einem reichen Wohlstand kommt und auch dann wieder Gold und Silber erwerben wird. Butter ist die vornehmste, alltägliche Nahrung und soll es auch wieder im späteren Leben sein.

Sobald sich am Toten kein Lebenszeichen mehr feststellen läßt, bringt man ihn auf dem Kang, auf dem er verschied, sofort in Hockerstellung, noch ehe die Leiche erstarrt [3]. Die Hände werden bei gekrümmten Armen mit den Flächen zusammengelegt und aufrecht gegen die Brust gedrückt, daß sie das Kinn berühren. Die Daumen werden nicht gekreuzt. Die Handwurzeln werden mit einer Hanfschnur zusammengebunden und diese um den Hals gelegt, so daß die Hände zusammenbleiben und nicht nach vorne herunterfallen können. Dann preßt man die Oberschenkel fest gegen Brust und Arme und drückt die Waden an die Oberschenkel, so daß Füße und Gesäß in einer Ebene ruhen. Damit die Füße ihre Haltung beibehalten, werden sie mit einer Hanfschnur umschlungen [4]. Nun nimmt man ein viereckiges Stück Tuch, ungefähr zwei Ellen im Quadrat, schneidet in der Mitte ein rundes Loch und wirft es dem Toten so über den Kopf, daß die spitzen Enden über Brust, Rücken und Schultern fallen. Dieses Tuch heißt „Totenkleid". Bei Leuten, welche die Altersweihe empfangen haben, ist es gelb; bei jungen Leuten weiß. Es ist einerlei, aus welchem Stoff es besteht [5]. — Alles dies muß geschehen, solange die Leiche noch beweglich ist. Ist sie starr, dann hält sie die Stellung ziemlich unverändert bei.

Die Totenlade: Die Totenlade wird entweder schon lange vor dem Tode oder erst nach dem Tode hergestellt, ähnlich wie bei den Chinesen der Sarg bisweilen Jahrzehnte vorher schon fertig ist. Nur arme Leute zimmern die Totenlade erst nach dem Ableben. Die Lade ist immer aus Holz; aber es ist belanglos, aus welchem Holze sie gemacht wurde; sie wird ja nicht, wie bei den Chinesen der Sarg, begraben, sondern mit dem Toten verbrannt. Die Lade hat die Höhe einer Sänfte oder eines Tragstuhles; der Tote paßt genau hinein. Der Boden der Lade läuft in vier Tragbalken aus,

3:Schröder AE9 Monguor

ähnlich wie eine flache Sänfte. Die Lade ist aber kein einfacher Holzkasten, sondern stellt einen kleinen Tempel dar, mit Dach und Türen und oft sehr reichem Schnitzwerk, ähnlich wie die Totenlade der chinesischen Bonzen [6]. Aber sie hat, anders als diese, auf der Dachmitte noch Sonne und Mond, ähnlich der Spitze einer Manistange; das wird allgemein als notwendig betrachtet. Bemalung und Verzierung der Lade richten sich nach der Wohlhabenheit, der Frömmigkeit und der Anhänglichkeit der Angehörigen.

Totenlade.
(Zeichnung eines Tujen.)

Bestimmte rituelle Vorschriften für die Anfertigung der Lade gibt es nicht. Der Schreiner erhält den gewöhnlichen Arbeitslohn und überdies noch zwölf Brote, zwei Ellen weißes Tuch und ein kleines Maß Weizen (sechs Pfund). Dieses Maß Weizen wird nach der Arbeit auf den Hausaltar gestellt, und der Schreiner legt seine Werkzeuge darauf. Der Hausherr steckt einige brennende Weihrauchstengel dazwischen und stellt die Brote davor. Dann machen alle einen dreifachen Kotou [7]. Das weiße Tuch erhält der Schreiner erst beim Trauermahl.

Aufbahrung: Ist die Lade schon beim Tode vorhanden, so wird die Leiche sofort hineingebracht. Ist sie noch nicht fertig, dann setzen die Leute den Toten in Hockerstellung auf den Kang oder den Boden des Zimmers, worin er verschied. Zuvor legen sie aber eine weiße Filzmatte als Unterlage hin; Stroh gebraucht man nicht. Niemand darf mit dem Toten im gleichen Raume schlafen oder wohnen; wohl in einem Nebenzimmer. Vor der Hockerleiche steht ein Tisch mit zwölf Broten, die von der eigenen Familie stammen, und eine Wasserlampe.

Das Einbringen in die Lade geschieht immer durch Männer. Der Sohn setzt den Vater und die Mutter ein. Der Vater aber nie den Sohn; das besorgen die jungen Brüder oder Vettern. Auch weibliche Personen werden von den Männern in die Lade gebracht. Nachdem dann die Leiche mit Stroh festgestopft ist, wird rückwärts ein Brett von oben eingeschoben. Die Männer waschen sich danach die Hände. Die Lade wird in einem Zimmer auf vier hochgestellte Lehmsteine gestellt, damit man beim Transport später leicht untergreifen kann. Gewöhnlich breitet man vorher noch eine weiße Filzmatte hin. Die Lade eines verstorbenen Hausherrn oder dessen Frau steht immer im Haupthaus; in andern Fällen stellt man sie in das Zimmer, worin der Tote gewöhnlich gelebt hat.

Neben die Lade kommt ein kleines sargähnliches Kästchen, dessen Deckel wie die der chinesischen Särge festgepflockt wird. Es ist das Kästchen, worin nach der Verbrennung die restlichen Knochen geborgen werden. An der Lade lehnt gewöhnlich noch ein Teigroller (Nudelwalze), der bei der Herstellung eines Sarges oder einer Totenlade zugleich angefertigt wurde [8].

3: Schröder AE9 Monguor

Andere Teigroller werden überhaupt nicht gebraucht. Wie bei der Hockerleiche, wird auch vor die Totenlade ein kleiner Kangtisch mit den Totengaben gestellt. Männer und Frauen machen davor Kotou, verbrennen weißes Papier, wie die Chinesen, und weinen laut [9].

Totengaben: Die Tujen opfern vor dem Toten zwölf Brote und eine Wasserlampe [10]. Zuerst muß die eigene Familie diese Gaben darbringen. Neben den Broten und der Wasserlampe steht noch eine sogenannte Papierschale auf dem Boden. Dahinein gießt man nach jeder Mahlzeit etwas Tee, Suppe oder Milch, wirft kleine Stückchen Fleisch, Brot, Gemüse usw. dazu, je nachdem, was die Familie gerade gegessen hat. Der Tote soll bis zum Tage der Verbrennung immer teilhaben am Tische des Hauses. Die Papierschale ist eine gewöhnliche irdene Schale; sie hat ihren Namen daher, daß man nach dem Papierverbrennen die verkohlten Blätter hineinwirft [11]. Sie wird mit der Wasserlampe am letzten Tage vor dem Tore ausgeleert, wenn die Totenlade zum Verbrennen das Gehöft verläßt. Zerbrochen wird sie nicht, sondern kann wieder für andere Zwecke gebraucht werden.

Am dritten Tage nach dem Tode stellt sich die älteste verheiratete Tochter des Hauses mit zwölf Broten ein. Dann werden die Familienbrote vor der Totenlade durch die Brote der Tochter ersetzt. Das nennt man „Brotwechsel". Dieser findet jedesmal statt, wenn eine Person Brote opfert. Der ältesten Tochter folgen der Reihe nach die jüngern, einerlei ob die Leiche schon in die Lade eingesetzt ist oder nicht. Unverheiratete Töchter des Hauses opfern nicht. Sooft jemand Brote opfert, verbrennt er auch weißes Papier und weint laut; die Männer allerdings weinen nicht [24].

Erst nachdem die Leiche in der Lade ist, kommen die andern Verwandten, und es wiederholt sich der gleiche Ritus. Es sind aber nur die Verwandten väterlicherseits. Mit ihnen stellen sich auch die übrigen Bekannten und Freunde ein. Die Verwandten mütterlicherseits kommen erst am Tage vor der Verbrennung, einerlei, ob der Tote ein Mann oder eine Frau ist.

Bei den Totenopfern ist immer zu unterscheiden, ob es sich um eine Person älterer, gleicher oder jüngerer Generation handelt. Die ältere Generation opfert nie der jüngeren, z. B. der Vater nie dem Sohn. Wohl opfert der Mann seiner Frau und umgekehrt. Der Mann opfert auch seinen älteren Schwägerinnen.

Von den zwölf Opferbroten, die jeder bringt, erhält er zwei zurück; zehn werden im Trauerhause verwandt und von den Angehörigen oder Gästen gegessen. Die zurückgegebenen Brote nennt man „zurückgegebener Teller".

Trauertracht: Gleich nach dem Ableben trägt man Trauer. Sie besteht aber nicht wie bei den Chinesen in einer eigenen weißen Kleidung, sondern nur in einer Veränderung der Tracht.

In der Trauerzeit legen die Männer ihre bunten Westen ab und entfernen alles Farbige an ihrer Kleidung, wie Halsborden, Ärmelsaum usw. Ihr langes Gewand wird gewendet und mit dem Futter, oder im Winter mit dem Pelz, nach außen getragen. Sie scheren sich nicht die Haare und lassen den Bart wachsen. Der rote oder grüne Hosengurt aus Tuch wird durch

3:Schröder AE9 Monguor

einen weißen oder schwarzen ersetzt. Statt des Kleidergürtels tragen sie eine dicke Hanfschnur.

Ähnlich wie die Männer, trennen auch die Frauen die bunten Ärmelstreifen, Hosenbesätze, Schuh- und Stiefelverbrämungen ab, besonders alles Rote. Der rote oder grüne Rock über der Hose wird überhaupt nicht getragen. Statt der bunten Kleider zieht die Frau nur ein schlichtes, einfarbiges Obergewand an. Sie legt die Ohrgehänge, Armbänder und den Halsreifen ab, entfernt von ihrem Kopfputz alle Tressen, Quasten, Schnurgehänge sowie die silberne Haarschale und die kupfernen Plättchen. Nur das einfache, starre Gerüst der Haartracht behält sie bei und verklebt noch dessen bunte Streifen einheitlich mit grünem Papier. Darüber legt sie als Kopfschleier ein blaues, grobleinenes Tuch. Ihren breiten und bunten Kleidergürtel ersetzt sie durch einen hänfenen Strick.

Zum Trauertragen sind alle nahen Verwandten verpflichtet, welche auch das Totenopfer darbringen müssen. Eine Ausnahme macht nur der Ehemann beim Tode seiner Frau. Er darf keine Trauer tragen.

Gebetsdienst: Der Gebetsdienst heißt „Gebetstee". Die Verwandten väterlicherseits finden sich täglich im Trauerhause zusammen; gegen Abend setzen sie sich in der Küche um das offene Feuer auf dem Kang und beten an ihrer Manischnur das Mani für den Toten. Wenn sie fertig sind, erhalten sie eine Nudelsuppe und gehen heim. Dieser Gebetsdienst dauert bis zum Tage der Leichenverbrennung. Man braucht jedoch nicht um das Kangfeuer zu sitzen, sondern kann auch vor der Totenlade selber diese Gebete verrichten.

Der amtliche Gebetsdienst wird von einem Lama, wenn möglich von einem Hutuktu, vorgenommen. Dieser erhält im Trauerhause ein eigenes Zimmer, das gewöhnlich unmittelbar an den Aufbahrungsraum stößt, so daß er auf dem Kang bleiben kann, wenn er das Totenoffizium rezitiert. Ein Lama betet nie unmittelbar vor der Leiche. Ein Hutuktu besucht nur am Tage vor der Verbrennung das Trauerhaus und weilt nur eine Nacht dort. Er nimmt auch immer die feierliche Einäscherung mit dem Feuerguß vor. Andere Lamas hingegen können schon mehrere Tage vorher Dienst im Trauerhause verrichten.

Neuerdings laden die Tujen auch chinesische Laienbonzen zum Beten ein. Diese halten sich dann an ihre eigenen Riten. Es kommt auch vor, daß man Bonzen und Lamas zugleich bestellt. Dann ist der Gebetsritus gemischt. Nie aber wird eine Verbrennung vorgenommen, ohne daß irgend ein Religionsdiener vorher die Totengebete verrichtet hätte [12]. Lamas niederen Ranges, die keinen Feuerguß vornehmen können, oder Bonzen, gehen nicht mit zum Verbrennungsplatz, sondern bleiben im Trauerhause.

Für das Gebet erhalten die Verwandten, Lamas und Bonzen eine entsprechende Gebühr, die gewöhnlich vom Mutterbruder bei der Rechenschaftsforderung während des letzten Trauermahles festgesetzt wird. Die chinesischen Bonzen allerdings verlangen schon gleich bei der Einladung einen festen Lohn, sonst kommen sie überhaupt nicht. Die andern Beter, Gehilfen bei der Verbrennung usw., erhalten am Abend vor der Verbrennung oder am Morgen nach der Verbrennung ein Entgelt in Form von Almosen.

Hutuktus und Lamas höheren Ranges ernten oft sehr große Gebühren; es gibt Leute, die bis zu zwei, drei Pferden spenden. Wenn die Angehörigen die Lamas ins Kloster zurück begleiten, nehmen sie einen Block Ziegeltee mit und kochen ihn im großen Tempelkessel für die Mönche, welche mitunter noch eigene Stipendien bekommen, damit sie für den Toten beten. Reiche Leute kaufen zu diesem Anlaß bis zu 300 Pfund Reis und kochen ihn in der Tempelküche mit Zucker und Butter und speisen damit die Lamas. Dazu erhält jeder Mönch noch eine Schale Tsamba mit Butterschnitten. Vor den Tempelstatuen zündet man dann gerne Butterlampen an, manchmal bis zu 1000 Stück. Oft wird eine große Monatslampe gestiftet, die 29 Tage lang Tag und Nacht ununterbrochen brennt; während dieser Zeit hält das Kloster den Gebetsdienst für den Toten. — Wohlhabende Familien schenken dem Kloster auch die Prunkkleider und den Schmuck der Toten, besonders der Frauen. Ein Lama heftet dann den Namen des Verstorbenen an die Gewänder und legt sie vor einem Buddhabild im Tempel nieder. Die Kleider werden später vom Kloster verkauft. Mit dem Erlös halten die Mönche weiteren Gebetsdienst für die Seelenruhe des Toten.

Rechenschaftsforderung der Mutterfamilie: Während die Leidtragenden der eigenen Familie Tag und Nacht neben der Lade kniend Wache halten [13], stellen sich die Angehörigen mütterlicherseits erst am Vorabend der Verbrennung im Trauerhause ein.

Sie müssen aber schon sofort nach dem Tode benachrichtigt werden; das nennt man „Totenmeldung". Der Zeremonienmeister begibt sich mit einer kleinen Flasche Schnaps zum Mutterbruder, um den Tod von dessen Neffen oder Nichte zu melden [14]. Die beiden überlegen nun, wie die Trauerfeierlichkeiten zu regeln sind, wieviel Mönche man zum Beten einladen soll, wie hoch die Gebühren sind usw. Der Mutterbruder ist darauf bedacht, möglichst hohe Forderungen zu stellen, wogegen der Zeremonienmeister weniger ansetzt. Haben sie sich auf den ungefähren Stand geeinigt, dann trinken sie zusammen das Krüglein Schnaps aus. Kommen sie nicht überein, so geht der Zeremonienmeister wieder mit dem Schnaps heim und holt sich bei der Trauerfamilie neue Anweisungen. Mitunter geschieht das zwei- bis dreimal. Eine endgültige Regelung findet erst am letzten Tage bei der Rechenschaftsablage im Trauerhause statt.

Am Vorabend der Verbrennung erscheint der Mutterbruder und mit ihm die ganze männliche Verwandtschaft mütterlicherseits im Trauerhof. Die Frauen der mütterlichen Verwandtschaft kommen nicht [15]. Der Mutterbruder wird vom Zeremonienmeister feierlich empfangen und zur Totenlade geführt. Er und sein Gefolge opfern dort die zwölf Brote, verbrennen Papier und machen Kotou. Während dieser Zeit müssen alle Verwandten große Trauer bekunden und die Frauen lautes Wehklagen anstimmen. Auch der Mutterbruder weint. Nach dieser Zeremonie wird der Mutterbruder ins Haus auf den Kang geleitet, wo man ihm Tee und Brot aufträgt. Er ruht sich ein wenig aus. Die andern Begleiter bewirtet man draußen im Hofe, wo anschließend alles für das Totenmahl und die Rechenschaftszeremonie hergerichtet wird.

3:Schröder AE9 Monguor

Der Mutterbruder wird in den Hof geführt und läßt sich auf einer weißen Filzmatte nieder, die auf dem Boden unmittelbar vor dem Eingang des Haupthauses ausgebreitet ist. Er setzt sich mit dem Rücken zum Hause, das Gesicht zum Manibaum gewandt. Vor ihn stellt man einen Kangtisch. Rechts und links von ihm setzen sich die andern Verwandten mütterlicherseits auf Stroh, und zwar in einem Halbkreis. Vor sie legt man Bretter, welche Tische vertreten sollen. Nun trägt man Ölgebäck, Tee und Pasteten auf. Die Bedienung besorgt die Vetternschaft väterlicherseits [16]. Nach dem ersten Imbiß wird den Gästen Schnaps eingegossen, und die Leidtragenden väterlicherseits kommen mit dem Zeremonienmeister in den Kreis und knien sich vor dem Mutterbruder auf den Boden. Der Zeremonienmeister tritt vor und fordert den Mutterbruder zu einem Trunk Schnaps auf. Er überreicht ihm ein Hada und zwei Stück weißes Tuch und bittet ihn, seine Wünsche für den Toten vorzubringen und die Leiche für die Verbrennung freizugeben.

Der Mutterbruder legt das Hada über seine Schultern, nimmt einen Schluck Schnaps und beginnt seine Rede. Meist fordert er Rechenschaft über die Sorge für seinen Schützling bei dessen Krankheit, beanstandet die geringen Gebühren für den Gebetsdienst, man müsse sich schämen über einen solchen Geiz, der Tote sei immer ein guter Mensch gewesen, der Stolz seiner Familie, er habe Besseres verdient; nun solle man ihm doch wenigstens eine anständige Totenlade schenken und für eine möglichst prunkvolle Verbrennung sorgen; es seien viel zu wenig Lamas eingeladen worden; jetzt möchten sie diese aber mit viel Geld und Reis und Butter entlohnen usw.

Jedesmal wenn der Mutterbruder einen Wunsch oder eine Beschwerde vorgebracht hat und eine Pause macht, läßt ihm der Zeremonienmeister die Schnapsschale wieder füllen und fordert ihn zum Trinken auf. Dann entgegnet der Zeremonienmeister im Namen der väterlichen Verwandten, sucht die Vorwürfe zu entkräften, die Forderungen abzuschwächen und die Anstrengungen der Familie zu betonen. Man hätte dem Verstorbenen in der Krankheit die teuersten Medizinen besorgt, denn wie könne man einen so tugendhaften Menschen vernachlässigen; man wolle auch zu dessen Ehre und für dessen Seele alles tun, was in Kräften der Familie stünde, aber man dürfe nichts Unmögliches verlangen; sterben müsse man nun einmal; die Zeiten seien schlecht, aber gerne wollten sie dem Lama das und das schenken usw. — So geht es zwischen Mutterbruder und Zeremonienmeister hin und her, bis man sich schließlich auf einer Linie geeinigt hat, und der Mutterbruder erklärt, jetzt sei er zufrieden und gebe die Leiche frei. Nun fordert man den Mutterbruder noch auf, die Leiche zu besichtigen, aber er tut das gewöhnlich nicht.

Nach dieser Rede erheben sich die Leidtragenden, machen vor dem Mutterbruder dreimal Kotou und begeben sich zur Totenwacht an die Lade zurück. Der Mutterbruder folgt ihnen und macht vor dem Toten Kotou. Dann werden an die Gäste Almosen ausgeteilt, meist Kleingeld. Das nennt man „Gutes tun"; denn es ist nützlich für den Verstorbenen. Hierauf findet für die Verwandten mütterlicherseits das Essen in einem großen Kreise statt. Gewöhnlich gibt es Reis, bei armen Leuten aber nur Nudelsuppe.

Die Zeremonie der Rechenschaftsforderung hat den Sinn, die Seele des Toten für die Seelenwanderung freizugeben, nach dem Spruch: wenn der Mutterbruder den Mund nicht öffnet, kann der Tote nicht wandern. Hat die Seele keine Ansprüche mehr auf dieser Welt, dann verläßt sie Haus und Hof. Ihre Ansprüche werden vom Mutterbruder vertreten [17]. — Ist kein eigentlicher Mutterbruder da, dann tritt der dem Mutterbruder zunächst Stehende für ihn ein; das ist der, der dem Mutterbruder im Erbe folgt.

Zeit der Verbrennung: Sobald der Tote den letzten Atemzug tut, begibt sich ein Angehöriger zum Wahrsager oder Bonpriester und läßt durch die Geister den Tag des Verbrennens bestimmen. Er betritt aber nicht das Gehöft des Wahrsagers, sondern meldet sich vor dem großen Hoftor an, denn weil er aus dem Hause eines Toten kommt, darf er nicht vor den Göttern erscheinen. Abgesehen vom Geisterspeer, Geistertisch, der Geistersänfte und dem Bonpriester, kann man auch einen chinesischen Laienbonzen fragen. Aber Lamas und taoistische Bonzen bestimmen nie die Zeit. Man gibt nur den Tag an, nicht die Stunde. In der Regel werden alle jungen Leute unter zwanzig Jahren, einerlei ob Mann oder Frau, am Abend bei Sonnenuntergang verbrannt. Über zwanzig Jahre alte Leute verbrennt man morgens bei Sonnenaufgang. Die Brandstätte wird tags zuvor fertiggemacht.

Ort der Verbrennung: Der Verbrennungsort wird meistens vom Zeremonienmeister nach Überlegung mit den Familienangehörigen gewählt. Es kommt dafür nur ein Gelände der eigenen Familie oder der Verwandten väterlicherseits in Frage. Nie darf ein Toter auf fremdem Boden oder dem der mütterlichen Verwandten eingeäschert werden. Besondern Vorzug hat eine Stelle an einem abschüssigen Feldrain, weil sich dort am leichtesten die Feuerung für den Ofen anlegen läßt. Bei der Wahl ist darauf zu achten, daß der Rauch nicht über ein Saatfeld streichen kann. Nach dem Saatfest im Frühjahr sucht man darum einen entlegenen Ort in einer Schlucht oder auf einem Berge auf, wo keine Felder mehr sind. Abgesehen davon, daß die Saat zertreten wird, ist der Rauch einer brennenden Leiche schädlich für das Wachstum und die Ernte. Darum kommt heute, wo sogar die entlegensten Bergfleckchen bepflanzt werden, die Leichenverbrennung immer mehr ab, vor allem in den Tälern, und man begräbt die Toten in Särgen [18].

Wird bei der Leichenverbrennung der Feuerguß vorgenommen, dann geht tags zuvor der Lama selbst hinaus aufs Feld und wählt eine passende Stelle. Zu diesem Zweck knetet er im Hause ein großes Torma und bringt das Torma dorthin, wohin er den Leichenofen gebaut haben will. Vor dem Torma wird dann das Weihrauchopfer dargebracht, jedoch ohne alle Zutaten, Tsamba und Butter ausgenommen; der Lama besprengt das Feuer mit Weihwasser. Während er dann auf einer weißen Filzmatte betet, machen die andern Ketou. Auf diese Weise erbittet der Lama den Platz vom Berggeist für die Verbrennung; auch der Weihrauch und das Torma gelten dem Berggeist. Der Lama nimmt bei der Wahl Rücksicht auf eine ebene Beschaffenheit des Bodens, denn er benötigt für die Zeremonien einen entsprechenden Platz für den Tisch und seine Sitzmatte.

3:Schröder AE9 Monguor

Errichtung des Leichenofens: Nun wird ein Ofen aus Lehmsteinen gemauert. Das Torma wird beiseite gesetzt, und man kümmert sich nicht mehr darum. Zuerst mauern die Männer einen viereckigen Sockel, etwa zwei Ellen hoch und zwei Ellen breit; auf diesem errichten sie den runden Leichenofen, etwa vier Ellen hoch. Er nimmt sich aus wie ein Faß. Auf der Westseite bleibt ein breiter Längsspalt frei, durch den die Leiche eingesetzt wird. Im Sockel läßt man auf jeder Seite ein großes Loch für die Feuerung. Der Ofen wird mit Lehm und Kalk verputzt und dann weiß gestrichen [24].

Leichenofen, *tab.*
(Zeichnung eines Tujen.)

Der Leichenzug: Am Morgen des festgesetzten Tages verbrennen der Mutterbruder und alle Angehörigen des Toten vor der Lade weißes Papier; sie machen dreimal Kotou und stimmen ein lautes Weheklagen an. Vier Träger nehmen die Lade mit der Leiche auf die Schultern und tragen sie zum Hoftor hinaus. Vor dem Tore werden die Wasserlampe und das Papierbecken ausgegossen. Hier wird auch das Stroh verbrannt, welches den Leidtragenden bei der Totenwache als Unterlage gedient hat. Raschen Schrittes geht der Zug zum Leichenofen. Alt und jung, Männer und Frauen folgen in buntem Durcheinander.

Mit ihnen ziehen junge Burschen. Sie tragen Stroh, Brennholz, Zypressenzweige, ein Holzbett oder eine Tür für den Lama, eine weiße Filzmatte und einen großen Eisenkessel für die Butterschmelze. Am Ofen setzen die Männer die Lade auf den Boden. Die Angehörigen verbrennen noch einmal Papier und werfen sich hin zum Kotou. Dann tritt der Zeremonienmeister hervor und richtet einige Abschiedsworte an den Toten. Er sagt etwa folgendes: Wir haben für dich getan, was wir konnten; wir luden die Lamas ein, wir haben gebetet, wir haben Almosen gegeben. Eine schöne Lade haben wir dir gezimmert; du kannst zufrieden sein. So denke denn nicht mehr an uns und komme nicht wieder, den Frieden unseres Hauses zu stören. Sei unbesorgt; wir werden dich nicht vergessen und weiter für dich beten und dir opfern.

Nach dieser Rede teilt er unter die Anwesenden Geld aus. Es ist ein Almosen und heißt „Lade-Geld". Jetzt stimmen die Frauen noch einmal die Totenklage an. Sie haben eine bestimmte Melodie und drücken in freien Worten ihren Schmerz aus. Dann gehen alle heim. Es bleiben nur noch der Zeremonienmeister, zwei Feuerwärter, die Schwiegersöhne, die Neffen und der Lama. Das Feuer wird nur vom Zeremonienmeister und den beiden Wärtern bedient. Die Schwiegersöhne und Neffen sind bei andern Handreichungen behilflich.

Einsetzen der Leiche: Die zurückgebliebenen Männer bringen die Sänfte auf die Westseite des Ofens, wo man den breiten Spalt gelassen hatte. Sie stellen die Sänfte mit dem Rücken an diese Öffnung, ziehen die Holzwand heraus, so daß die Leiche mit dem Rücken frei wird. Unterdessen haben die

Feuerwärter auf dem Ofenboden Zypressenzweige und Holz aufgeschichtet. Die Leiche wird nun, den Rücken nach Osten, das Gesicht nach Westen, in den Ofen auf das Brennholz gesetzt. Dann wird der Spalt zugemauert. Das Gesicht muß deshalb nach Westen gerichtet sein, weil dort das Reich der Seligen liegt, wohin er jetzt zu wandern hat.

Der Lama nimmt nun auf der Westseite des Ofens auf dem Bett oder der Türe, worüber man eine weiße Matte gebreitet hat, Platz. Sein Gesicht ist nach Osten, gegen das Gesicht des Toten gewandt. Vor ihm steht ein kleiner Kangtisch mit seinen Kultgeräten. Daneben liegen zwei Sackleinen, auf die man zwei weiße Tuchbahnen gebreitet hat; darauf stehen die Tellerchen mit den Gewürzen und der Zubehör für den Feuerguß (vgl. den betr. Abschnitt). Auf dem weißen Tuch steht auch ein Tablett mit einem Torma. Der Lama hat es am Morgen im Trauerhaus verfertigt und mitgebracht. Dieses Torma stellt einen Geist dar, der den Toten beschützt und ihn nach Westen ins Land der Wiedergeburt führt. — Der Lama kommt aus dem Westen, dem Lande der Buddhas und geht nach Osten; darum sitzt er umgekehrt wie der Tote.

Die Feuerbereitung: Jetzt wird der Eisenkessel auf drei Steine gesetzt, und man entfacht unter ihm ein starkes Feuer; woher dieses Feuer genommen wird, ist belanglos. In den Kessel wirft man mehrere Klumpen Butter und läßt sie zergehen. Die Männer richten dann die Zündstange her, während der Lama schon mit den Totengebeten anfängt.

Die Zündstange ist ein Stiel von 2-3 *m* Länge. Man kann dazu jedes beliebige Holz nehmen. Auf ein Ende windet man einen dicken Wattestrang. Der Zeremonienmeister bringt nun eine Papierlaterne, worin eine kleine Butterlampe steht. Es muß eine Butterlampe sein; eine Öllampe oder eine Kerze ist nicht erlaubt. In alten Zeiten hatte man auch keine Butterlampen, sondern Kienspanholz von der Öltanne. Diese Lampe darf nicht mit gewöhnlichem Feuer angezündet werden, z. B. mit dem Feuer vom Butterkessel. Es muß neues Feuer sein, das auf den ersten Hieb aus dem Feuerstein geschlagen wird. Bekommt der Zeremonienmeister nicht gleich das erste Mal einen Funken, so darf er es mit dem gleichen Stein nicht das zweite Mal versuchen. Darum hält er eine ganze Reihe Feuerzeuge bereit [18]. Ist nun beim ersten Hieb der Funken auf den Zunder gefallen und hat dieser gezündet, dann nimmt der Zeremonienmeister eine Handvoll Stroh, hält den glimmenden Zunder hinein und bläst das Ganze zu einer hellen Flamme, womit er die Butterlampe anzündet. Hierauf tränkt er die Zündstange im Butterkessel mit flüssiger Butter, hält sie über die Butterlampe in der Laterne, bis der Wattekopf hell aufflammt, und zündet damit durch die vier Feuerlöcher den Ofen an. Währenddessen fährt der Lama ständig mit seinen Gebeten fort. Sobald die Flammen hochschlagen, nimmt der Zeremonienmeister das Seelenführer-Torma und wirft es von oben in den Ofen auf die Leiche; es wird mit ihr verbrannt. Dann nimmt der Lama den Feuerguß vor.

Verbrennung und Feuerguß: Die Zeremonie des Feuergusses ist dieselbe wie sonst auch. Nur wird hier die Butter und das Gewürz auf die

3: Schröder AE9 Monguor

Leiche im Ofen geworfen, weshalb der Lama das Gießrohr über den Ofenrand hält. Das Gewürz wird jedoch vom Zeremonienmeister in die Flammen geworfen. Der Lama nimmt jedesmal nur eine Prise und legt sie auf ein

Schöpflöffel und Gießrohr.
Im Löffel der Donnerkeil, *rdo-rja*.
(Zeichnung eines Tujen.)

Tellerchen, das der Zeremonienmeister in der Hand hält. Ist die Butter und das Gewürz zu Ende, so hört auch der Lama mit seinem Gebet auf und geht nach Hause. Mit ihm gehen der Zeremonienmeister, die Schwiegersöhne und Neffen.

Nur die beiden Feuerwärter bleiben zurück. Sie zerschlagen die Lade und verbrennen sie mit dem Toten und warten, bis die Leiche vollständig eingeäschert ist. Das dauert einige Stunden. Dann stellen sie das mitgebrachte Knochenkästchen ohne die Knochen in eines der Feuerlöcher und bedecken es mit Erde. Über den noch schwelenden Ofen legen sie Bretter, die sie mit Steinen und Erdschollen beschweren, damit Hunde und Wölfe nicht hineinkönnen, und gehen heim. Den Ofen lassen sie allein. Nach drei Tagen werden die Knochen geborgen.

Alle, die bei der Verbrennung beteiligt waren, waschen sich die Hände und räuchern sie in einem großen Weihrauchfeuer vor dem Hoftore ab. Dann trinken sie Tee und halten ein Trauermahl. Der Lama geht meist noch am gleichen Tage zurück in sein Kloster.

Der Feuerguß wird nur bei solchen Personen vorgenommen, welche eine buddhistische Taufe empfangen haben. Alte Leute erhalten dazu noch die Altersweihe und gelten als Laienmönche. Ist jemand ohne die buddhistische Taufe gestorben, so wird sie nach dem Tode noch nachgeholt. Das geschieht vom Lama mit Hilfe eines Brust-Spiegels. Da ja über den Toten kein Wasser fließen darf, hält der Lama ihm den Brustschild vor, so daß sich der Kopf darin spiegelt. Über dieses Spiegelbild gießt er das geweihte Wasser aus seiner Kanne und spricht dabei das Aufnahmegebet [20]. Ein so Getaufter kann jetzt auch, unbeachtet seines jugendlichen Alters, die Altersweihe empfangen und Mitglied der Mönche werden. Dadurch ist jedem Menschen, ob Mann oder Frau, vom zwanzigsten Lebensjahre ab der Feuerguß durch den Lama bei der Verbrennung gesichert. Der Feuerguß ist eine Reinigung für den Toten, ähnlich wie die Taufe.

Gewöhnliche Verbrennung: Findet kein Feuerguß statt, dann folgt auch kein Lama zur Stätte der Verbrennung. Es fallen dort alle Zeremonien fort. Die Verbrennung wird ebenfalls vom Zeremonienmeister, den zwei Feuerwärtern, den Schwiegersöhnen und Neffen besorgt. Aber man gebraucht keine Zündstange, schmilzt keine Butter, schlägt kein Feuer, sondern zündet den Ofen mit irgendeinem Holzscheit oder Streichholz an. Man schaut aber doch, daß man nach Möglichkeit zum Anzünden Zypressenzweige zur Hand hat. Das ist erwünscht, aber nicht notwendig.

3: Schröder AE9 Monguor

Knochenbergung und Nachbestattung: Mit der Knochenbergung wartet man drei Tage. Während dieser drei Tage begeben sich die Familienangehörigen allabendlich zum Ofen, verbrennen dort Papier, machen Kotou, gießen Tee und Suppe auf den Boden.

Am Morgen des dritten Tages versammeln sich die Verwandten väterlicherseits im Trauerhause und trinken Tee. Danach gehen sie zur Brandstätte, und zwar von der eigenen Familie die Männer und Frauen und von den verwandten Familien wenigstens ein Mann, aber keine Frauen, ferner der Zeremonienmeister und die zwei Feuerwächter. Die Verwandten mütterlicherseits kommen nicht mehr. Am Ofen opfern sie zwölf Brote, einige dünne ungesäuerte Fladen, verbrennen Papier und stellen Tee hin. Nachdem sie dann Kotou gegeben haben, scharren Männer und Frauen die Knochen aus den vier Brandlöchern heraus und füllen sie in die Knochenkiste. Es gehen aber nur die kleinen Knochen hinein; denn sie ist nur eine Elle lang und zwei Handbreiten hoch. Der Deckel wird verpflockt wie beim chinesischen Sarg. Die restlichen Knochen trägt man in Händen, Schürzen oder in einer Kiepe auf die nächste Bergeshöhe. Tiere fressen sie im allgemeinen nicht, weil sie brandig sind. Nur Schafe knabbern gern davon. Die Knochen verfallen aber sehr schnell.

Die Knochenkiste setzt man in den Ofen, beschwert sie mit Lehmsteinen und reißt dann den Ofen ein, so daß er einen kleinen Hügel bildend, die Kiste unter sich begräbt. Das geschieht immer, wenn die Verbrennung nach der Ernte in der Zeit vor dem Gräberfest im dritten Monat stattgefunden hat. Am Gräberfest, dem chinesischen *ch'ing-ming*, wird die Knochenkiste auf dem gemeinsamen Familienfriedhof begraben. Der Verbrennungsplatz wird geebnet.

Ist die Verbrennung nach dem Gräberfest, dann wird der Ofen zwar eingerissen und der Platz wieder bebaut; aber die Knochenkiste wird nicht an der Stelle des Ofens begraben, sondern in einem abgelegenen Ackerrain auf eigenem Felde. Erst am nächsten Gräberfest im nächsten Jahre wird sie auf den Familienfriedhof überführt.

Hat die Verbrennung auf einem entlegenen Berge, fern der Familie stattgefunden, dann schlägt man dort ein Zelt auf, wartet bis zum dritten Tage, birgt die Knochen und bringt die Kiste hinab, um sie im Ackerrain auf eigenem Grund und Boden zu begraben. Eine solche Verbrennung darf nie auf dem Gipfel des Berges vorgenommen werden, sondern etwa in halber Höhe. Der Gipfel ist dem Berggeist heilig und darf nicht entweiht werden.

Ist die Knochenkiste im Ofen oder Acker begraben, dann verbrennen die Angehörigen davor weißes Papier, werfen Brotstückchen auf das Knochengrab und gießen Tee davor aus für den Toten. Sodann machen sie Kotou und gehen heim. Im Trauerhause werden die Gäste mit Tsamba und Butter bewirtet. Der Zeremonienmeister erhält zwölf Brote und zwei Ellen weißes Tuch; den beiden Feuerwärtern gibt man je sechs Brote und zwei Ellen Tuch.

Beim nächsten Gräberfest, das meist im dritten Mondmonat fällig ist, versammeln sich alle Verwandten zum Totenopfer auf dem Sippenfriedhof; dann wird auch die Knochenkiste dorthin übertragen. Einige Männer gehen zur alten Bestattungsstelle am Brandplatz, graben die Kiste aus und bringen

3: Schröder AE9 Monguor

sie ohne jede Zeremonie auf den Friedhof. Dort graben sie ein kleines Loch und setzen die Kiste hinein. Das besorgen aber nur Männer, die mit dem Toten von gleicher oder niedrigerer Generation sind. Ein Vater wird z. B. nie seinen Sohn begraben, der Onkel nicht seinen Neffen usw.

Sobald die Grube zugeworfen ist, findet das Totenopfer statt; die Angehörigen verbrennen Papier und Stäbchenweihrauch, stellen Brote, Fleisch usw. hin, gießen Tee, Schnaps, Suppe aus und halten am Grabe ein kleines Mahl. Dann geht jeder nach Hause. — Die Übertragung der Knochen muß jedoch nicht am nächsten Gräberfest sein; man wartet mitunter zwei bis drei Jahre. Aber außer der Zeit des Gräberfestes dürfen die Knochen nicht beigesetzt werden [31].

Die Trauerzeit: Die eigentliche Trauerzeit dauert 49 Tage. Ursprünglich hatten die Tujen kein Hunderttage-Gedächtnis; jetzt aber richten sie sich hierin oft nach den Chinesen.

Während dieser 49 Tage nach der Knochenbergung muß der Hauptleidtragende täglich bei Sonnenuntergang zum vorläufigen Grabe gehen und dort Weihrauch verbrennen, Suppe ausgießen und dreimal Kotou geben. Am 49. Tage aber begibt sich die ganze Familie hinaus, opfert Tee, Brot, Schnaps und verbrennt Papier. Bei dieser Gelegenheit verbrannten früher die Männer die hänfene Haarschnur aus ihrem Zopf und die Frauen die Papierteile ihrer Kopftracht, die sie als Zeichen der Trauer trugen. Weil heute aber Zopf und Kopftracht verschwunden sind, fällt diese Zeremonie aus.

Angefangen vom Todestage bis zum 49. Tage nach der Knochenbergung dürfen die Familienmitglieder des Toten keine Besuche abstatten, auch nicht bei Verwandten. Wollen sie jemand sprechen, so dürfen sie nicht den Hof betreten, sondern müssen die Leute vor das Hoftor herausbitten. Erst recht nicht dürfen sie Tempel besuchen, vor den Götterbildern erscheinen, Weihrauchopfer darbringen oder sonstige Kulthandlungen vornehmen. — In dieser Zeit sind auch gewürzte Speisen, Weißmehl, Butter und Milch verboten. Die Nahrung besteht aus einfachem Tsamba. Alle Ausgänge sind zu Fuß zu machen; reiten darf man nicht; wohl kann jemand ein Lasttier mitführen. — Die Leidtragenden haben sich des ehelichen Verkehrs zu enthalten; auch bei Hochzeiten dürfen sie nicht erscheinen, denn das bringt der Braut Unglück. — Ein trauernder Schamane oder Wahrsager darf in dieser Zeit nicht amten; überhaupt macht die Trauer unrein, weshalb man nicht einmal bei einer religiösen Handlung zugegen sein soll.

Nach dem 49. Tage erlöschen diese Vorschriften von selbst. Eigene Reinigungszeremonien sind nicht notwendig. Man beginnt wieder mit dem Weihrauchopfer im Hofe, rasiert sich und geht den täglichen Geschäften nach.

Totenverehrung: Außer dem Gräberfest, an dem sich alle zum Opfer auf dem Sippenfriedhof versammeln, kennen die Tujen keine Totenverehrung. Ahnentafeln gibt es nicht.

Man denkt nicht weiter über die Seele eines Toten nach; sie hat ihre Wanderung angetreten. Die meisten Leute wissen fast gar nichts von Lohn und Strafe nach dem Tode. Wohl fürchten sie die Toten, besonders wenn

3: Schröder AE9 Monguor

jemand noch mit Ansprüchen oder Schulden an die Lebenden gestorben ist, z. B. wenn der Tote bestohlen wurde, wenn eine Tat noch ungesühnt ist usw. Dann spukt die Seele noch in der alten Behausung herum, bringt Unglück und Krankheit über die eigene Familie, ja Zwist und Tod. In solchen Fällen befragt man einen Wahrsager über die Ursache des Unglücks; und wenn es feststeht, daß es sich um eine Totenseele handelt, so wird im einzelnen bestimmt, was für diese noch getan werden soll. Man geht zum Grabe, verbrennt Papier, opfert dem Toten. Hilft das auch noch nicht, so lädt man einen Lama zu mehrtägigem Gebet ein; dieser macht ein eigenes Torma, welches fortgebracht wird, damit so das Unheil gebannt werde.

Jugendliche und anormal Verstorbene: Knaben werden mit fünfzehn Jahren zu den Erwachsenen gerechnet; sie erhalten eine Verbrennung wie die Erwachsenen, einerlei, ob sie schon verheiratet sind oder nicht. Im Alter von 1-15 Jahren werden sie auf dem Felde ausgesetzt, verscharrt oder einfach verbrannt. Man nimmt keine Totenzeremonien vor. Bei der Verbrennung erhalten sie keine Lade, sondern werden wie die Mädchen eingeäschert.

Wie die Knaben, können auch die Mädchen unter zehn Jahren ausgesetzt, verscharrt oder verbrannt werden. Die Leiche fällt dann gewöhnlich Hunden und Wölfen zum Opfer. Mädchen über zehn Jahren müssen aber verbrannt werden, denn in dieser Zeit kann die Menstruation einsetzen, und ihre Seelen sind dann gefährliche Dämonen, vor denen sogar die andern Geister Angst haben [22]. Die Verbrennung geschieht ohne jegliche Zeremonie, und zwar am gleichen Tage, an dem das Mädchen starb. Stirbt es morgens, so wird es abends verbrannt; stirbt es am späten Abend, so wird es am folgenden Morgen verbrannt. Ein Mann von der eigenen Familie nimmt die Leiche so wie sie ist, mit den Kleidern, über die Schulter, trägt sie in eine abgelegene Schlucht, gräbt an einer Böschung ein Loch, schichtet Stroh und Reisig hinein, legt die Leiche darauf und verbrennt sie. Meist helfen noch einige Leute. Man wartet nicht ab, bis die Tote restlos eingeäschert ist, sondern läßt die noch schwelende Leiche zurück und geht heim. Was übrig bleibt, fressen Hunde und Wölfe. Sobald aber ein Mädchen verheiratet ist, und wären es nur ein paar Tage, erhält es eine ehrenwerte Verbrennung wie jede andere Frau, mit allen Zeremonien, mit Gebet und mit einer Totenlade. Das gilt auch für solche Töchter, welche noch keinen Mann gefunden haben, die aber mit dem Himmel oder dem Manibaum verheiratet sind.

Hat sich ein Erwachsener, einerlei ob Mann oder verheiratete Frau, selbst getötet, so erhält er das gewöhnliche Verbrennungszeremoniell, ohne Feuerguß und ohne Totenlade. Meist wird auch kein Beter eingeladen. Beim letzten Trauermahl aber wird der Mutterbruder scharfe Rechenschaft verlangen über die Ursachen des Selbstmordes, besonders wenn es sich um eine Frau handelt, und er wird auf einem ehrenvollen Totenritus mit einer Totenlade bestehen. Es kommt dann leicht zu Streit.

Gewaltsam ums Leben Gekommene, wie Ertrunkene, Abgestürzte, Erschlagene usw., erhalten eine Verbrennung oder Bestattung wie jeder andere des gleichen Alters.

Solche, die außerhalb des Hofes starben, sei es eines gewöhnlichen Todes, sei es durch Unfall oder Selbstmord, werden stets außerhalb des Gehöftes aufgebahrt, etwa in einem eigenen Zelt oder in einer Höhle. Ist aber ein Selbstmord im Hofe geschehen, so wird auch der Selbstmörder im Hause aufgebahrt.

Personen, die in der Ferne gestorben sind, werden nach Hause gebracht. Ist das aber nicht möglich, z. B. bei Soldaten, dann lädt man einen Lama ein. Dieser schreibt den Namen des Toten unter Gebeten auf ein steifes Blatt Papier und steckt es in ein Maß Getreide (Weizen), welches dann auf einen Tisch in einem Zimmer gestellt wird, in das sonst die Totenlade käme. Davor werden nun alle die gleichen Zeremonien vollzogen, als wäre eine wirkliche Leiche vorhanden. Am festgesetzten Tage wird dieses Blatt Papier auf dem Felde verbrannt, jedoch ganz einfach, ohne Ofen und ohne Lama. Um die Asche kümmert sich niemand. Aber der Lama schreibt den Namen auf ein zweites Blatt, und dieses wird in die Knochenkiste gelegt, welche am Verbrennungsplatz begraben wird[23], bis dann am Gräberfest die Übertragung auf den Sippenfriedhof stattfindet. — Die Zeichen, welche der Lama schreibt, sind tibetisch.

Wörterliste

Totenverbrennung:	*ǵaldē awu-* = ins Feuer setzen.
sterben:	*ugei* (*guei*) *wöldzia* = er ist vergangen.
er ist sitzend gestorben:	*söwa guei wöldzia*; *tsuo-hua* (chin.) = sitzend verwandelt.
Tod eines Bonzen:	*niesā sdzia* = er ist fortgeflogen. *yü-hua* (chin.) = gefiedert verwandelt.
Tod eines Lama:	*siaǵladzia* = er ist zu nichts geworden.
er ist wiedergeboren:	*härga* (*xara*) *rēdzia* = er ist wiedergekommen; *sdziewa*.
Man hat ihn in den Hockersitz gebracht:	*ndāñlalǵadzia* = er ist ins Gleichgewicht gebracht worden.
der Tote:	*guei woldzān kun* = vergangener Mensch.
Totenkleid (Schulterbehang):	*böw-la* (tib. Lehnw.) = weißes Kleid.
Totenklage:	*dö tędzi ula.*
Todenlade:	*odöñ.*
Knochenkiste:	*mula odöñ* = kleine Totenlade.
Wasserlampe:	*ǰdzē dzüla.*
Papierschale:	*tsialdzē pendzē.*
die Kleider umgewendet tragen:	*diela furula mösē.*
Gebetstee:	*rgē tsia.*
Totengebet:	*xar(i)dzān kunē xuǵnuo mani sguorluo-* = dem abgeschiedenen Menschen hinterher das Mani im Kreise (beten).
Gebetslohn für den Lama:	*mbö* (tib. Lehnwort).
Gebetsalmosen:	*odöñ dzied* = Totenlade-Almosen.
eigene Familie:	*dziennāni kudē.*
väterlicherseits Verwandte:	*dziennani šāni* = eigene Verwandtschaft; solche mit dem gleichen Familiennamen.
mütterlicherseits Verwandte, Schwägernschaft:	*urōǵ.* Solche mit verschiedenem Familien Namen.
künstliche Verwandtschaft:	*šāni funi* = Verwandtschafts-Rauch. Nachbarn und Freunde, die die Dienstleistungen von Verwandten beim Gästeempfang, Verbrennen usw. ersetzen.

Knochenherr, Mutterbruder :	*tsigän ysseni daxu* = der weißen Knochen Besitzer ; *ku-chu* (chin.).
Mutterbruder :	*nädä* ; *achiu* (chin.).
Neffe (Schwestersohn) :	*dsie* ; *wai-sheng* (chin.).
Schwiegersohn :	*hurgien* ; *nü-hsü* (chin.).
Schwester :	*agü*.
Tochter :	*fsälsün*.
Er ist als Reiter gefallen :	*tsüroß morina bagäldilä sdzia fugudzia*.
Er ist als Einsiedler gestorben :	*sänrädzi liela guei wöldzia*.
verbrannte Knochen :	*xuodzän yäsä* = trockene Knochen.
Leichenofen :	*taw* (*tab*) (tib.).
Zündstange :	*xuämbar*.
Laienbonze :	*lao shih-fu* (chin.) = alter Meister.
Rechenschaftsforderung :	*bäda* ; *pai-ta* (chin.).
Gräberfest :	*ch'ing-ming* (chin.) ; *sän-min* [21].
westliches Paradies :	*hsi-lo shih-chieh* (chin.) = Freuden-Welt.
Öltanne :	*yu-sung mu* (chin.).
dünne Mehlfladen :	*kan pin-ping* (chin.) = trockene-Küchlein.

Anmerkungen

[1] Warum kein Wasser über die Leiche fließen darf, war nicht zu erfragen ; wahrscheinlich fürchtet man, das Wasser dadurch zu verunreinigen ; es zählt zu den Grundelementen.

[2] Dem Gewährsmann zufolge handelt es sich bei der Manikugel, *manirunu*, um die Pille, die von den Chinesen *chen-ling wan* genannt wird, d. h. die seelenerschütternde Pille. Nach taoistischen Berichten im *shen-hsien t'ung-chien*, Geisterspiegel, wird diese Pille aus dem Saft des sagenhaften *fan-hun-shu*, d. h. des seelenwiederbringenden Baumes, hergestellt. Dieser Baum wächst am Gestade des Westmeeres. Er ist von schwarzem Holz. Wenn man ihn anschlägt, dann tönt er wie das Brummen eines Stieres. Seine Wurzel wird zu einem steifen Sud gebraut, und aus diesem Sud macht man die Pille. Die Pille hat einen überaus starken Duft (auch den Baum kann man schon meilenweit riechen). Dieser Riechstoff heißt *fan-hun hsiang*, d. h. seelenwiederbringender Duft. Berührt man jemanden nach seinem Tode innerhalb drei Tagen mit dieser Pille oder verbrennt man sie vor ihm, so daß der Rauch über ihn streicht, oder legt man ihm die Pille in den Mund, dann wird er wieder lebendig. Unter den Han-Kaisern wurde dieses Räucherwerk als Tribut von den Yüeh-chih geliefert und soll im Palast Tote zum Leben erweckt haben. Diese Pille spielt auch in der Medizin der Lamas eine große Rolle. Es ist die sogenannte Pille der Unsterblichkeit. Die Tujen kaufen diese Pille in den Klöstern. Ihre Farbe ist rot. Nach ihrer Auffassung kann sie zwar nicht den toten Leichnam wieder beseelen, aber sie erweckt den Toten dennoch in einer andern Wiedergeburt zum Leben. — Auch W. FILCHNER (UNKRIG) : Kumbum, erwähnt diese Pille p. 400 unter dem Namen *rilu* und in Anmerkung 1683 unter der tib. Schreibweise *ril bu*. Es ist klar, daß die Tujenaussprache *reru* (*ruru*) nur eine Verballhornung des tib. Wortes ist. CH. DAS hat dafür zwei Schreibweisen : *ril po* und *ril bu* (mit stummem *l*) ; beide übersetzt er mit „ball, globule", und für *ril bu* fügt er noch „pill" hinzu,

ohne auf deren weitere Bestimmung einzugehen (p. 1184/85). Zu unterscheiden ist dieses *ruru* von *nuru*, dem tib. *nor bu* oder *cintāmaṇi*, dem buddhistischen Wunschkleinod. — Nach Auffassung der Lamas und des Volkes vermehrt sich die *ruru*-Pille; vgl. das Kapitel: Erdgotturne. Mitunter trifft man Lamas, die fest glauben, auch die Europäer hätten diese Wunderpille des langen Lebens, weshalb sie auch viel älter würden als Chinesen und Tibeter; sie wollen wissen, daß es in Europa Leute gäbe, die mehrere hundert Jahre alt sind.

[3] Verschieden sind die Auffassungen der Leute über die Hockerlade und den Hockersitz. Von einem alten Ursprung ist ihnen nichts bekannt. Die einen meinen, der Leichnam würde nur deshalb in die Hockerstellung gebracht, weil er sonst nicht in die Totenlade ginge; man sieht dabei die Lade als das Erste und Wichtigere an. Der Gewährsmann sagt dazu, früher hätten die Tujen die Leichenverbrennung nicht gekannt und auch keine Totenlade gehabt. Das sei erst durch die Lamas eingeführt worden. Die Toten hätte man auf den Bergen den Tieren zum Fraße ausgesetzt, so wie es heute die Fandse tun. Er selber wolle sich lieber nach Chinesenart begraben lassen; vor dem Verschnüren und Verbrennen habe er Angst.

Andere behaupten, die Tujen hätten früher ihre Toten in Särgen begraben. Als Beweis führen sie an, daß in Yangchüan, einem alten Tujendorfe, durch Bergrutsch Särge freigelegt wurden; diese stammten wenigstens aus der frühen Mingzeit. Aber dieser Beweis besagt wenig, wenn man bedenkt, daß bereits in der Hanzeit im nahegelegenen Huchutale chinesische Militärexpeditionen stattfanden.

Aber auch ohne die Leichenverbrennung kommt die Totenlade in Chinghai vor. So im Bengbar-Tale, einem Nebental im Hsi-ch'uan. Dort wohnen die sogenannten Chia-Hsifan (Dorffandse), die ursprünglich Mongolen waren und heute sinisiert sind. Auch sie setzen, genau wie die Tujen, die Toten mit Hockerstellung in die Hockerlade, verbrennen sie aber nicht, sondern begraben sie.

Ferner werden in der Hockerlade sitzend die taoistischen Mönche und solche Leute begraben, die sitzend gestorben sind. Interessant ist die entsprechende Ausdrucksweise für den Tod solcher Leute *sōwā guei wōldzia*, sitzend ist er vergangen, im Chinesischen *tsuo-hua*, d. h. sitzend verwandelt werden. Das Wort *sō-* kann sowohl „sitzen" als auch „betrachten" bedeuten. Solche Leute gelten als Heilige, die in Betrachtung in eine andere Welt hinübergingen. Ein Tod in dieser Haltung gilt auch besonders ehrenvoll. Auf dem Grabe dieser Leute errichtet man gewöhnlich eine Tschorte. — Zur taoistischen Sitzbestattung vgl. Bild. Dieses Foto ist gestellt. Der Taopriester von Kanchiapu war gerne bereit, sich in seiner Totenlade fotographieren zu lassen, und machte vor, wie er in die Lade eingesetzt würde. Er hatte diese Lade in seinem Tempel stehen und zeigte jedem Besucher mit Stolz diese schön bemalte Schnitzarbeit. Ein schönes Bild findet sich auch in F. Dransmann, T'aishan-Küfu Guide, p. 19. Es ist die Mumie des taoistischen Priesters Suin, welcher zur Zeit Kanghsi's sechzig Jahre lang auf dem T'aishan wirkte und dort in der Totenlade hockend in der „Grotte des

Unsterblichen" (*hsien-jen tung*) beigesetzt ist. — Zur Sitzbestattung in Ost-Tibet vgl. TAFEL, Tibetreise, I, 236-237, mit Zeichnung.

Daß Tulkus und andere Lamas verbrannt werden, ist überall bekannt. Vgl. dazu die Beschreibung in FILCHNER: Kumbum, p. 240-242. Aber bei der sitzenden Stellung der Lamas, der taoistischen Mönche und der in Betrachtung Gestorbenen ist die Haltung die eines sitzenden Buddha mit untergeschlagenen Beinen und ruhenden Händen, wogegen die Haltung bei den Tujen und den Chiafandse ganz verschieden ist, nämlich die embryonale.

Andere Erklärungen der Tujen, vielleicht die landläufigsten, sagen, daß der Mensch in dieser Stellung im Mutterleibe ruhe und so geboren werde; nackt und in der gleichen Stellung gehe er auch wieder in den Schoß der Wiedergeburt zurück, so wie er gekommen (allerdings umgekehrt). Bei diesem Vergleich drängt sich die Erde oder das Feuer als Symbol der Mutterschaft auf und die Totenlade (oder bei andern Völkern der Sack oder Sarg) als symbolischer Schoß. — Diese Erklärung der Leute hat am meisten für sich. Sie gründet in uralten religiös-kosmogonischen Gedankengängen, welche Geburt und Tod in engen Zusammenhang bringen. Skelette in Hockerstellung liegen aus vielen Kulturen vor, und Menschen in embryonaler Hockerstellung werden in den archaischen Hochkulturen immer wieder dargestellt, und zwar in Verbindung mit den Verschlingergestalten (chin. *t'ao-t'ieh*) und der Unterwelt. Prof. C. HENTZE hat in seinen jüngsten Arbeiten diese Zusammenhänge weitgehend aufgedeckt, weshalb hier darauf verwiesen sei. — Über die Vorstellung, daß der Tote in Schlafstellung gebracht werden müßte, erfuhr ich nichts, wiewohl es bekannt ist, daß die Nomaden dort am Kukunor in dieser Stellung schlafen, was man mitunter auch bei Chinesen und Tujen tagsüber beobachten kann.

[4] Das Binden der Leiche wird nicht als eine Fesselung des Toten betrachtet, um ihn so an der Rückkehr zu verhindern, was bei den Chinesen mit dem Zusammenbinden der Füße beabsichtigt wird. Der Gewährsmann behauptet, die Bindung habe nur den Zweck, die Hockerstellung zu festigen.

Bei der sonst häufigen Verwendung von Schafwolle ist es auffallend, daß man nur Hanfschnüre nimmt. Als Grund geben die Leute an, wenn man Wolle nähme, würde der Tote als Tier mit Wolle wiedergeboren. Das sei bei Hanf nicht möglich; denn in eine Pflanze wird man nicht verwandelt.

Von Hanf als Dämonen-Schreck, wie z. B. bei der Hanfpeitsche der Schamanen, wollte der Gewährsmann nichts wissen. Es mag sein, daß sich hier chinesischer Einfluß geltend macht. Denn auch die Chinesen verwenden beim Toten nur Hanf, welcher auch bei der Trauerkleidung eine große Rolle spielt (Hanfgürtel, Haarschnur, Hanfschleier usw.). Die strenge Trauer wird darum bei den Chinesen einfach „Hanftrauer", *ma-hsiao*, genannt.

[5] Der Schulterüberwurf erinnert sehr an die Schulterkragen der Schamanen. Ein Zusammenhang war nicht zu erfragen. Die Tujen behaupten, daß das Tuch meistens vor der Verbrennung abgenommen wird; man verwende es später als Amulett, da es eine große Heil- und Schutzkraft habe. Dazu bemerkt der Gewährsmann, man könne wohl das weiße Schultertuch vor dem Verbrennen abnehmen, aber es habe keine Zauberkraft und würde zu profanen Zwecken verwandt. Das gelbe Schultertuch hingegen, das ein

3: Schröder AE9 Monguor

Toter mit Altersweihe trage, müsse mit der Leiche verbrannt werden, ebenso die Schärpe, die er damals erhalten habe.

[6] Bei der Lade der *Taoshih* fehlt der Sonnen-Mond-Aufsatz, die bewegliche Rückwand und die Tragstange. Die Leiche wird meist durch die vordere Türe eingesetzt oder von oben her, weil der Dachaufsatz abnehmbar ist.

[7] Diese Zeremonie hat eigentlich nichts mit der Totenlade zu tun. Sie ist üblich nach allen Schreinerarbeiten; man will dadurch den Schutzgott der Schreiner, den *Lu-pan-yeh*, ehren. Es ist eine chinesische Sitte.

[8] Auch diese Sitte scheint von den Chinesen entlehnt zu sein. Der Teigroller heißt auf chinesisch *mien-kan* oder *kan-ch'ang*. Er ist im Durchschnitt 1 *m* lang und 3-4 *cm* dick. Er wird hauptsächlich zum Nudelwalzen gebraucht. Der Teigroller wird von den Chinesen auch *pai-hu*, d. h. weißer Tiger, genannt, weil er bei Wahrsagung oder schamanistischen Zeremonien Sitz des Tigergottes werden kann, ähnlich wie der Geisterspeer Sitz eines Geistes wird. Der Teigroller wird auch so gehandhabt: ein Mann nimmt ihn mit beiden Händen und ruft den Dämon in ihn herab; dann rüttelt und schüttelt sich der Roller.

Der Feind des Teigrollers ist die Dreschwalze, *lu-chu*. Sie stellt den dunkeln (grünen) Drachen dar, *ch'ing-lung*, den ausgesprochenen Gegner des weißen Tigers. — Ferner ist der weiße Tiger ohnmächtig gegen alles, was von Toten stammt oder mit Toten zusammenhängt; er fürchtet Särge, Totenladen, Begräbnisse usw. Darum ist das Sargmachen die beste Gelegenheit, einen Teigroller herzustellen, und darum wird auch der Teigroller an die Totenlade gelehnt. Dadurch wird die Beziehung des Tigers zum Teigroller neutralisiert. — Außerhalb der Begräbniszeit lassen die Leute sehr selten einen Teigroller verfertigen; dann muß der Schreiner die Stange auf einer Dreschwalze, dem Gegner des weißen Tigers, zurechthobeln. Ähnlich wie die Dreschwalze wirkt auch der Mühlenstein; denn er zertrümmert den Spender des „Weißen", d. h. das Getreide, aus dem das Mehl kommt.

[9] Außer dem Knochenkasten sah ich einmal neben einer Totenlade noch ein kleines Holzkästchen von sargähnlicher Form. Darin, so sagten die Leute, lag eine kleine Menschenpuppe. Sie sollte Unglück und Tod vom Hause fernhalten. Der Gewährsmann hatte das noch nicht gesehen und meinte, diese Sitte sei von den Chinesen gekommen. Bei den Chinesen erfuhr ich folgendes: Ist jemand an einem Unglückstage gestorben, — was der Geomant feststellt —, so besteht die Gefahr, daß er noch einen aus der Familie ins Jenseits mit hinübernimmt. Um dem vorzubeugen, sorgt die Familie gleich bei der Beerdigung für Ersatz. In einen Miniatursarg legen sie eine Menschenfigur aus Aprikosen- oder Pfirsichholz, das die Dämonen besonders fürchten. Dieser Miniatursarg wird bei der Beerdigung in der Sohle des Grabes verscharrt, und darauf kommt der eigentliche Sarg. — Die Tujen vergraben den Miniatursarg unter der Knochenkiste. Der chinesische Name für diese Sitte ist *ch'ung-sang*, d. h. Doppel-Bestattung. Man würde es besser durch „Mitbestattung" übersetzen. Daß sie nichts mit Totenfolge und der Doppelbestattung im üblichen Sinne zu tun hat, ist einleuchtend. Es handelt sich hier um eine Art Nachzehrer.

3: Schröder AE9 Monguor

[10] Totengaben und Opferregeln stimmen mit denen der Chinesen überein. Die Wasserlampe, *shui-teng*, ist eine irdene Schale, die halb mit Wasser gefüllt wird; meist kommen noch Bohnen hinzu. Auf das Wasser gießt man eine Schicht Öl. Auf dem Öl schwimmt ein Holzplättchen, in dem ein Docht steckt. Man will auf diese Weise verhindern, daß der Docht zu tief in die Schale hinabbrennt; um Öl zu sparen, füllt man die untere Hälfte mit Wasser. — Die chinesische Teiglampe des langen Lebens, *ch'ang-ming teng*, hat mit dieser Lampe nichts zu tun; sie ist den Tujen unbekannt.

[11] Das Papierverbrennen ist typisch chinesisch.

[12] Die Tujen haben keine Schwierigkeiten, Vertreter verschiedener Religionen zum Beten einzuladen. Es ist mir sogar einmal angetragen worden, das christliche Totenoffizium zu beten. — Andererseits laden auch die chinesischen Buddhisten die Lamas zum Totenbeten ein.

[13] Auch diese Sitte der Totenwacht scheint chinesisch beeinflußt zu sein. Die Leidtragenden knien rechts und links neben der Lade auf Stroh, so wie die Chinesen rechts und links neben der offenen Leiche knien. Des Nachts kauern sie sich zusammen und legen einen Lehm- oder Ziegelstein als Kopfkissen unter, nach dem alten chin. Spruch: *ch'in san, chen k'uai*, d. h. auf Stroh schlafen, einen (Lehm)-stein unterlegen. — Die Leichenwache ist Pflicht für die Ehrfurcht schuldende Generation, chinesisch *hsiao-tzu* genannt, das sind die männlichen Nachkommen und Verwandten ersten und zweiten Grades, z. B. Söhne, jüngere Brüder, jüngere Vettern, Enkel.

[14] Neuerdings melden die Tujen den Tod beim Mutterbruder durch eine schriftliche Mitteilung, wie die Chinesen. Das Ursprüngliche ist aber die Meldung mit dem Schnapskrug, an dem eine Wollflocke gebunden wird.

[15] Bei der Verwandtschaft sind drei Gruppen zu unterscheiden, die mit der Verwandtschaftseinteilung der dortigen Chinesen übereinstimmen: 1. Die eigene Familie, *dzienani kudē*, chin. *pen-chia*. Dazu gehören die Nachkommen in gerader Linie, Sohn, Enkel, Enkelkinder, auch die Töchter, die bereits nach auswärts verheiratet sind. Sie wohnen zusammen in einem Gehöft. 2. Vetternschaft, *dzienani šäni*, chin. *tang-chia-tzu*. Das sind die Vaterbrüder und Vettern, praktisch ist es die ganze Verwandtschaft mit dem gleichen Familiennamen. — Dieser Gruppe obliegt die Sorge für das Begräbnis, während die eigene Familie (auch die Töchter) die Trauerkleider trägt und den strengen Trauerverboten unterworfen ist. Sobald die Töchter aber in ihre Mannesfamilie zurückkehren, legen sie die Trauer ab. 3. Die Schwägernschaft, *urog*, chin. *ch'in-chia, ch'in-ch'i*. Weil hier bei den Tujen jetzt die chinesischen Ausdrücke in Gebrauch sind, seien folgende Namen unterschieden: *ch'in-chia* im strengen Sinne ist die Verwandtschaft der Schwiegersöhne, in die die Töchter eingeheiratet haben. Sie haben einen andern Familiennamen, *wai-hsing*. Die Familie, aus der die Mutter stammt, nennt man *wai-chia*; der Bruder der Mutter ist hier die Respektsperson, der ihre Interessen vertritt. Die Familie, aus der die Mutter des Vaters stammt, nennt man *wei-chia*; auch hier ist für den Vater sein Mutterbruder die Respektsperson, welche beim Tode Rechenschaft verlangt. *Wei-chia* und *wai-chia* haben die gleichen Zeichen, nur die Aussprache ist verschieden. Wörtlich übersetzt heißt es

„die außenstehende Familie", also nicht zur männlichen Linie gehörig. Statt *wai-chia* sagt man auch *niang-chia*, man bezeichnet damit die Familie, aus der die Mutter stammt. Dieser Ausdruck wird auch für die Familie des Lama gebraucht, der ja unverheiratet ist. — Die *wai-chia* oder *niang-chia* erscheint erst am Vortage der Verbrennung.

[16] Beim Begräbnis haben die Tujen folgende Ämter: 1. Der Zeremonienmeister. Dieser besorgt alles, was mit den Bräuchen um den Toten und um das Verbrennen zusammenhängt. Er wird mit dem chinesischen Namen *sang-kuan*, d. h. Bestattungsleiter, oder *hu-sang*, d. h. Bestattungs-Schützer, benannt. Er wird meist aus der Vetterschaft genommen. 2. Der Geschenkwalter. Er nimmt die Opferbrote entgegen und verwahrt sie in einem eigenen Raum. Man nennt ihn auf Chinesisch *k'u-kuan*, d. h. Schatzwalter. — Die Chinesen geben ihm noch einen Sekretär zur Seite, der aufzeichnet, was die einzelnen Gäste geschenkt haben. Das haben die Tujen nicht. 3. Der Gastherr. Dieser ist nur für den Lama da, sorgt für dessen Bewirtung, für dessen Tiere, für die bei den Zeremonien benötigten Sachen, für Brandpapier usw. Die Tujen nennen ihn *käuguo*. Die Chinesen haben an seiner Stelle einen Weihrauchverwalter. 4. Die Köchin. Von den Tujen *dziemä nienie* genannt. — Mit Ausnahme des *käuguo* und der *dziemä nienie* scheinen die Amtswalter von den Chinesen übernommen zu sein.

[17] Über Herkunft und Sinn dieser Zeremonie sind sich die Leute nicht einig. Die Chinesen sagen, es sei ihnen nachgeahmt; die Tujen behaupten, es sei eine alte Sitte ihrer Vorfahren. — Auch die Chinesen haben den Namen *bäda* (*pai-ta*); sie sagen auch *pai-wai* dafür. Für das *pai-ta* haben sie keine eigene Erklärung; das *pai-wai* deuten sie als „profitieren, Vorteil erhaschen". Für beide Worte gibt es keine Schriftzeichen. Das wäre aber nicht so wichtig, da es eine ganze Menge Dialektausdrücke gibt, für die keine Zeichen bestehen. — Der Gewährsmann meint, *bäda* sei ein Tujenwort und würde soviel wie „profitieren, gewinnen" heißen, also genau wie das chinesische *pai-wai*. Wenn diese Sitte nicht weiter im Osten vorkommt, was zu untersuchen wäre, dann könnte man an eine Entlehnung von den Tujen denken.

Das *pai-ta* der Chinesen ist etwas umfangreicher. Zuerst folgt das Anlegen der weißen Trauermütze, *tai-hsiao*, dann die Besichtigung der Leiche, *wang-ku*, d. h. Knochen beschauen; der Mutterbruder heißt in dieser Eigenschaft *ku-chu*, d. h. Knochen-Herr, ein Ausdruck, den auch die Tujen haben. Daran schließt sich die Rede des Mutterbruders, *pai-wai*. Und wenn die Verhandlung dabei zur Zufriedenheit ausfällt, dann folgt erst der Kotou mit dem Totenopfer vor der Leiche. Über die Knochenverwandtschaft vgl. 2. Tl., I, 2.

Auch die Rede des Mutterbruders ist etwas verschieden von der der Tujen. Er verlangt hauptsächlich einen prächtigen Sarg, vornehme Totengewänder und viele Bonzen zur Beerdigung. Ja, er fordert sogar Sachen des Toten zurück, so z. B. die Kuh, die ihn mit Milch versorgte, auch Wertgegenstände, die man als Andenken behalten will; denn da der geliebte Tote nicht mehr unter seinen Angehörigen weile, so wolle man doch aus Anhänglichkeit wenigstens seine persönlichen Gegenstände. Dabei weiß jeder, daß es weniger aus Anhänglichkeit als aus Gewinnsucht geschieht. Auffallend ist

hier die ganz unchinesische Forderung nach der Milchkuh, da die Chinesen fast keine Milch trinken.

Bei den Tujen macht das *pai-ta* einen etwas selbstloseren Eindruck. Man verhandelt hauptsächlich wegen der einzuladenden Lamas und deren Gebetslohn; dies hauptsächlich mit Rücksicht darauf, daß die Seele des Toten zufrieden sei und ihre Wanderung antrete.

Beim *pai-ta* ist also ein zweifacher Gesichtspunkt zu unterscheiden, der soziale, der mehr bei den Chinesen hervortritt, und der religiöse, der von den Tujen mehr berücksichtigt wird. Bei dem ersten handelt es sich um die Geltendmachung der Rechte der Mutterfamilie; beim zweiten um die Seelenvorstellung bei Toten, die offenbar als lebende Leichname gedacht werden. Bei Erklärung des Sinnes ist dieser Punkt ausschlaggebend. Es handelt sich um den Frieden und das Glück der Familie, das durch eine ruhelose Seele gefährdet wird, wenn diese nicht zufriedengestellt wird und weiterwandert. Diese Zufriedenstellung geschieht durch die Sorge um ein anständiges Begräbnis (Kleider, Sarg) und das Gebet der Lamas. Dann ist für die Seele „der Weg geöffnet", wie die Buddhisten sagen; das oben erwähnte Sprichwort der Chinesen erhält hier seinen Sinn. Wie stark diese Vorstellung auch bei den Christen noch weiterwirkt, erhellt sich aus dem umgeformten Spruch *wai-chia pu k'ai yen, wang-jen pu shang t'ien*, d. h. wenn die Mutterfamilie nicht zu reden anfängt, steigt der Tote nicht in den Himmel. — Bei allem aber wird deutlich, wie groß die Rechte der Mutterfamilie sind, die noch bis über den Tod hinaus für ihre Mitglieder besorgt ist.

[18] Neuerdings gebraucht man statt der Feuerzeuge auch Streichhölzer. Aber auch hier muß das Zündholz auf den ersten Strich brennen, sonst wirft man es fort und nimmt ein zweites.

[19] Dies dürfte aber nicht der ausschlaggebende Grund für das Schwinden der Sitte sein, sondern die allgemeine Sinisierung. Es läßt sich überall noch in entlegenen Schluchten ein Platz für die Verbrennung finden; denn auch die Chinesen in den Tälern verbrennen ihre erwachsenen, unverheirateten Töchter an solchen abgelegenen Orten.

[20] Für das Waschen im Spiegel ist aber nicht nur der Grund maßgebend, daß kein Wasser über den Toten fließen soll. Auch bei Lebenden wird das Spiegelbild gewaschen, ebenso bei der Weihe von Buddhabildern. Vgl. dazu auch FILCHNER: Om mani padme hum, p. 137-141. Bei der Stelle: „Dann nimmt er einen kleinen Metallspiegel, zeigt dessen Vorderseite nach allen Seiten und beträufelt ihn mit einigen Tropfen Wasser aus seinem Kultgefäß", handelt es sich nicht um ein einfaches Hin- und Herwenden des Spiegels, sondern höchstwahrscheinlich um das Auffangen der Spiegelbilder der Knaben, die vor den Kampo gebracht wurden, und um das Abwaschen dieser Bilder.

[21] Das Tujenwort *sên-min* ist offenbar nur eine Lautnachahmung des chinesischen *ch'ing-ming*. Der Gewährsmann erzählte, die Tujen hätten in alter Zeit nicht das Gräberfest gekannt, sie hätten es von den Chinesen abgeschaut, was ja auch durch die genau gleichen Riten und die früher behauptete Leichenaussetzung bekräftigt wird. — Unerklärt bleibt aber die Ver-

schiebung einer endgültigen Beisetzung der Knochen bis auf dieses Fest, zumal die Chinesen ihre Toten gewöhnlich sofort auf dem Friedhof beerdigen. Der Gewährsmann bemerkte dazu, daß die Chinesen ihre Toten an bestimmten Glückstagen beerdigen; die Tujen aber hätten für die Toten nicht eigene Glückstage. Der Tag des *ch'ing-ming* sei aber immer ein unfehlbarer Glückstag, und darum warte man bis dahin. Andererseits behauptet er, die Tujen hätten früher nie Friedhöfe gehabt, sondern sie hätten ihre Toten nach Belieben begraben, aber nicht auf gemeinsamem Feld; erst recht sei das nach Einführung der Verbrennung unnötig gewesen. — Man kommt hier wohl kaum an einer ursprünglichen Doppelbestattung vorbei.

[32] Warum die Mädchen so gefährlich sind, war nicht klarzustellen. Vielleicht liegt derselbe Gedanke wie bei dem *pai-ta* zugrunde, daß die Seele unbefriedigt aus diesem Leben scheidet, nämlich, daß das Mädchen nach erlangter Reife seine eigentliche Bestimmung in der Heirat nicht erreichte. Eine Totenheirat, wie z. B. in Shantung, gibt es hier nicht, so daß die Seele nicht zur Ruhe kommen kann. Dieser Seelendämon wird aber nach Aussage der Chinesen und Tujen durch Verbrennung vernichtet. Mir ist der Fall bekannt, daß noch zwei Jahre nach dem Tode ein chinesisches Mädchen ausgegraben und verbrannt wurde, weil es in der Familie immer spukte und ein Unglück auf das andere folgte. Geholfen hat es allerdings auch nicht. — Naheliegend sind gewiß auch schamanistische Vorstellungen. Man braucht nur daran zu erinnern, daß die Bonpriester die Knochenflöte aus den Knochen und die Peitsche aus der Haut eines solchen Mädchens verfertigen.

[33] Die benachbarten Chinesen haben eine ähnliche Sitte. Sie legen die Ahnentafel des Toten in einen kleinen Sarg und bestatten sie auf dem Friedhof. Diese Beerdigung hat rechtskräftigen Charakter; wenn sie vorgenommen wird, gilt das als Beweis, daß die Person wirklich tot ist. Eine Parallele findet sich bei den Chinesen in der stellvertretenden Hochzeit mit einem ausstaffierten Strohmann.

[34] Eine Sitte, die jetzt nicht mehr geübt wird, war bei den Tujen das Ölspeise-Essen am Vorabend der Verbrennung, *bän-sän tsinani*, d. h. Ölspeise kocht man. Die Töchter und deren Mädchen (Nichten) brachten ein Maß Weizenmehl und einen Krug Öl. Beides wurde nach dem *pai-ta* zusammen in einem Kessel geröstet und herumgereicht. Man knetete es zu Klößen wie Tsamba. — Ähnliche alte Tujensitten sollen dem Gewährsmann zufolge jetzt vergessen sein. Man hat sich immer mehr an die umfangreichen Gebräuche der Chinesen angeglichen, und in absehbarer Zeit wird die Totenverbrennung der chinesischen Leichenfeier gewichen sein.

[35] Der Leichenofen kann in verschiedener Form ausgeführt werden. Als die vornehmste Art gilt die, welche dem Leichenofen der Lamas nachgeahmt ist (vgl. dazu die Zeichnung, die von einem Tujen stammt). Es lassen sich Ähnlichkeiten mit dem Unterbau der Tschorten nicht verkennen. Ich sah auf Gräbern von sitzend Gestorbenen Tschorten, die fast eine genaue Nachbildung des Ofens darstellten, nur etwas abgerundeter. — Wenn bei der Verbrennung der Feuerguß vorgenommen wird, dann wird natürlich auch die Bodenzeichnung gemacht, und zwar meistens nicht auf dem Boden selber,

3: Schröder AE9 Monguor

sondern man legt ein größeres Blatt Papier mit der Zeichnung hin; darauf wird dann der Sockel gemauert. Oft werden mehrere Bogen zusammengeklebt. Die Zeichnung ragt bisweilen unter dem Sockel heraus, so breit ist sie. Die Bodenzeichnung variiert natürlich auch in der Dekoration; aber immer sind die Donnerkeile und die Lotosblume dabei. Der Ofen mit der Leiche wird als von der Lotosblume getragen gedacht, aus welcher die Flammen der Lebensverwandlung bei der Verbrennung schlagen. Vgl. dazu den Abschnitt: Der Feuerguß, Anm. 4. — Zwischen dem Leichenofen und der *bum-pa* der Tschorten bestehen sicher Zusammenhänge.

Zur Religion der Tujen des Sininggebietes (Kukunor)

Von DOMINIK SCHRÖDER

(Zweite Fortsetzung)

V. Bräuche um den Ackerbau und das Vieh

1. Das Saat- und Herbstdankfest[1] *

Bericht

Das Saatfest und das Fest des Herbstdankes sind vollständig gleich. Nur haben die Leute im Herbst mehr Mehl und Fleisch, um das Fest zu feiern. Beide Feste dauern mehrere Tage. Eine bestimmte Anzahl Tage ist nicht vorgeschrieben. Man unterscheidet beim Feste das Opfer und die Tänze der Schamanen. Das Opfer wird von dem Saatherrn oder den Dorfältesten vorgenommen. Die Tänze dauern einen ganzen Tag; damit ist auch gewöhnlich ein Markt verbunden.

Die Schamanen errichten einen Mast im Tempelhof, beten mehrere Tage, senden am ersten Abend Krankheiten aus und töten aus der Ferne Kinder oder machen sie ohnmächtig. Am letzten Tage abends, bevor sie den Mast niederlegen, nehmen sie die Krankheiten wieder zurück; dann werden die davon betroffenen Leute wieder gesund.

Die Schamanen sind immer Männer[2]. Sie tragen Frauenkleider und eine Frauenfrisur. Ihre Trommel besteht aus einem Eisen- oder Holzreifen, worüber ein Schaffell gespannt ist. Sie tragen die Sänfte der Mutter-Göttin auf eine Tenne und tanzen davor. Während des Tanzes werden die Trommeln geschlagen. Sie machen allerlei Kunststückchen, und einer kommt in große Trance und verwundet sich.

Das Saatfest findet in der Zeit vom dritten bis fünften Monat statt, das Herbstfest im neunten oder zehnten Monat. Kein Dorf feiert aber beide Feste. Wo das Saatfest ist, ist kein Herbstfest, und wo ein Herbstfest ist, ist kein Saatfest.

* Anmerkungen siehe p. 823.

Beim Saatfest bittet man um Schutz vor Gewitter und um Regen; beim Herbstfest dankt man für die Ernte.

Anmerkungen

[1] Zu diesem Thema vgl. DOM. SCHRÖDER, Das Herbst-Dankopfer der Tujen im Sining-Gebiet. Anthropos 37-40. 1942-45. 867-873. — Der dortige Bericht bringt nur das Opfer aus dem Herbstdankfest, wie es der Alte damals beschrieb. Es ist interessant, darauf hinzuweisen, daß er dieses Opfer als typisch für das Fest herausgriff und die ganze Feier nur nebenher erwähnte, immer mit dem Hinweis, daß die Schamanen eigentlich nichts mit dem Opfer zu tun hätten. Als ich ihn später frug, warum er nicht das ganze Fest ausführlich beschrieben habe, gab er zur Antwort: „Das war zu viel für einen Nachmittag". Zudem habe er das Fest so erzählt, wie es bei ihm in seinem kleinen Dörfchen vonstatten gegangen sei. Dort sei es immer sehr einfach gefeiert worden, jetzt habe er das Fest für sein Dorf ganz fallen gelassen, und sie würden ins Nachbardorf Chichialing gehen, wo es viel länger und größer sei.

Auch hier ist nichts Näheres über die einzelnen Teile gebracht, wie in den andern Kapiteln, weil der Stoff zu umfangreich ist und ein eigenes Thema bildet, das im Zusammenhang mit dem Schamanismus behandelt werden soll. Hier sei jedoch schon vorausgenommen, daß es wohl keine Tujen-Schamanen, sondern chinesische Schamanen sind, die sich über weite Gebiete Westchinas verbreitet finden.

[2] Der Name für diese Schamanen ist *bö*, also das typische mongolische Wort. Die Tujen unterscheiden sie streng von den andern Schamanen und den Bonpriestern. Es sind die von den Chinesen als *fa-shih*, d. h. Zauberer, oder *shih-kung*, d. h. Lehrmeister, bezeichneten Kulttänzer, deren Hauptgöttin die *Niang-niang*, d. h. Mutter, ist.

2. Die Pfahlziege *

Bericht

Wenn im Frühsommer die Saat hochgeschossen ist, lädt man einen Bonpriester ein, der auf einem Berge betet und die Pfahlziege errichtet. Er kommt tags zuvor zum Saatherrn und begibt sich am folgenden Morgen mit den Männern auf den Berg. Dort trinken sie Tee. Der Bonpriester setzt sich auf eine Filzmatte. Vor ihn stellt man einen niedrigen Kangtisch, damit er seine Kultgegenstände darauf lege, und neben ihn setzt man eine Tonschüssel mit Tsamba, Butter, Goldblättchen, sowie eine Schale Wasser und rote Farbe. Das benötigt er für die Torma. Dazu kommt noch ein Tellerchen mit Gerste und die Weihwasserkanne.

Zuerst bringen die Männer das große Weihrauchopfer dar, das während der ganzen Handlung unterhalten wird. Der Bon macht vier kleine Torma, „Unheiltorma" genannt, die er mit allerlei Zugaben auf ein Tablett stellt. Der Saatherr geht mit dem Tablett in die vier Himmelsrichtungen und wirft jedesmal ein Torma fort.

* Anmerkungen siehe pp. 829-830.

Dann macht der Bon das „Wettertorma". Währenddessen schlachten die Männer eine Ziege, stopfen das Fell aus und stecken es auf eine hohe Stange. Diese legen sie mit der Ziegenpuppe vor den Bon nieder. Er bindet vier kleine Holzkeile an die Füße und einen besondern Keil auf die Stirn der Ziege. Die Keile beschriftet er mit tibetischen Zauberzeichen. Dann wird die Stange aufgerichtet, worauf der Bon das Wettertorma samt den Zugaben vor die Stange stellt. Ein großes Weihrauchopfer und mehrfacher Kotou begleiten diese Zeremonie.

Hierauf geht der Bon auf seinen Platz und verfertigt das „Bergtorma". Es hat drei Schichten und ist das größte von allen Torma. Dieses stellt er hinter die Stange. Wiederum wird Weihrauch verbrannt und von allen Kotou gemacht.

Andere Männer haben während der Zeit im Kessel das Ziegenfleisch gekocht. Von diesem Fleische opfert nun der Saatherr den Göttern. Am Schlusse folgt dann ein gemeinsames Mahl, wobei das restliche Fleisch verzehrt wird. Dann gehen alle nach Hause; aber man singt und trinkt nicht wie sonst.

Das ist die feierliche Errichtung der Pfahlziege. Bei der einfachen Art wird nur ein Unheiltorma gemacht, welches die vier andern vertritt, dazu kommt noch das Wettertorma. Das Bergtorma fällt fort, und man bindet keine Zauberkeile an die Ziege.

Hat man die feierliche Errichtung vorgenommen, dann muß der Bonpriester den Sommer über öfters kommen und vor der Pfahlziege Gebetsdienst halten. Im Herbst, nach der Ernte, erhält er von jeder Familie ein bestimmtes Maß Getreide als Lohn. Bei der einfachen Errichtung, ohne Sommer-Gebet, erhält er nur am Tage selber ein großes Brot und ein Stück Fleisch von der Lende der Ziege.

Einzelheiten

Zeit: Die Zeit der Errichtung wird vom Wahrsager bestimmt, und zwar im Ortstempel. Sie fällt aber immer in die Zeit vom dreizehnten Tag im fünften Mondmonat bis zum sechsten Tag im sechsten Mondmonat. Man kann auch den Bonpriester den Tag bestimmen lassen. Dieser benutzt dazu drei Würfel. Die geworfenen Zahlen vergleicht er mit seinem Wahrsagebuch und bestimmt so einen Tag [3].

Ort: Die Pfahlziege wird immer auf dem höchsten Berg der eigenen Ortsgemarkung errichtet, und zwar nur auf einem Berg und nur eine Ziege. Es können sich aber auch kleine Weiler oder Gehöfte zusammentun; dann wird der höchste Berg von all diesen Weilern gewählt [1]. — Der Ort auf dem Berge selber wird vom Wahrsager angegeben, wenn man zum ersten Male die Pfahlziege errichtet. Diesen Platz behält man dann für immer bei. Man gräbt dort ein Loch und deckt es mit einer Erdscholle oder einem Steine zu, damit es nicht bis zum nächsten Jahre zerfällt.

Der Ort ist niemals tabu, einerlei ob gerade die Pfahlziege dort steht oder nicht. Man kann dort die Tiere weiden, Feuer anmachen usw. Auch Frauen brauchen ihn nicht zu meiden.

Personen : Nur ein Bonpriester darf die Handlung vornehmen, nie ein Lama oder ein Wahrsager. Jetzt wird allerdings die Sitte kaum noch geübt, weil die Bonpriester ausgestorben sind. Nur in ganz entlegenen Bergdörfern findet sie sich noch. Die einfache Zeremonie nimmt ein Bon zweiter Klasse vor, die feierliche ein Bon erster Klasse, denn er hat besondere Zauberkraft. Die Tracht ist die der gewöhnlichen Leute, da der Bon ja auch Bauer ist. Er braucht nur den Stirnkranz und ein langes Kleid zu tragen.

Außerdem wirken mit : der Saatherr und sein Gehilfe, die Dorfältesten und überhaupt alle Männer, alle Wahrsager. Es genügt jedoch, wenn nur ein Wahrsager vertreten ist, z. B. ein Schwertschamane, ein Geistertischwahrsager usw. Frauen sollen nicht bei der Zeremonie Zeuge sein, wohl können kleine Mädchen zuschauen.

Der Pfahl : Es kommt nicht darauf an, aus welchem Holze und unter welchen Zeremonien der Pfahl hergerichtet wird. Meist ist es ein 10 *m* langer schlanker Pappelbaum. Für diese Stange muß das Dorf selber aufkommen. Diese Stange wird jedes Jahr benutzt und in der Familie des jährlich wechselnden Saatherrn aufbewahrt. Man kann sie verbrennen, zerhacken usw., wenn sie nach einigen Jahren ausgedient hat.

Die Ziege : Gewöhnlich ist es eine Wollziege ; Farbe, Alter, Geschlecht, Größe usw. sind belanglos. Wohl bevorzugen die Leute Hornziegen gegenüber hornlosen. Um die Herkunft der Ziege kümmert sich niemand ; man kann sie kaufen, sich schenken lassen usw. Nach der Abnahme vom Pfahl im Herbst gehört das Fell dem Saatherrn ; aber es ist so zerfallen, daß es nicht verwendbar ist. Es bleibt daher samt dem Kopf liegen zum Fraß für Wölfe und Hunde. Zu Zauberei wird das Fell nicht verwandt.

Das Unheiltorma : Der Bon wäscht sich Hände und Gesicht und verfertigt aus Tsamba mit Butter vermischt ein kleines Torma von etwa 10 *cm* Höhe und 3-4 *cm* Breite. Dieses stellt er auf ein Tablett oder einen Holzteller. Dazu legt er als Beigaben in allerkleinsten Mengen : rohes Schaf- oder Schweinefleisch, Lauch, Rüben, Brotkrumen, weiße und schwarze Schafwolle, fünf Arten Getreide, Teeblätter, Geld, Silber, Gold, fünf Stückchen Tuch, fünffarbene Fäden, sowie schwarzen und weißen Zucker, und stellt eine Teiglampe mit brennendem Wattedocht dazu. Diese Beigaben gelten auch für die drei andern Torma, also für alle vier kleinen Unheiltorma.

Die Beigaben werden mit den Torma in alle vier Windrichtungen geworfen, während der Saatherr unter Muschelblasen das große Weihrauchopfer darbringt, und der Bon den entsprechenden Geisterbann betet. Der Bon benutzt bei den ersten vier Torma nur die Klangteller und die Knochenflöte, nicht die Doppeltrommel und Schelle.

Bei der einfachen Zeremonie mit nur einem Unheiltorma kann natürlich nur eine Himmelsrichtung beachtet werden. Diese gibt der Bon selber an.

Herrichtung der Pfahlziege : Um die Ziege kümmert sich der Bon nicht. Die Männer räuchern und waschen die Ziege wie üblich und übergießen sie mit Milch ; während die Ziege sich schüttelt, machen sie im Kreise her-

um einen dreifachen Kotou, weil der Himmel das Tier annimmt. Dann wird die Ziege geschächtet und das Blut in einem Becken aufgefangen. Beim Abhäuten schlitzt man die Bauchseite nicht auf, sondern man macht unterm Schwanz einen Schnitt, der gerade hinreicht, das Fell von hinten über den Kopf abzuziehen. Den Kopf schneidet man innerhalb des Fells ab, so daß er ganz und unabgehäutet darin bleibt. In gleicher Weise schneidet man die Füße ab, sie im Felle belassend. Dann erst wird die abgehäutete Ziege ausgeweidet, zerlegt und das Blut mit Fleischabfall in die gereinigten Därme gefüllt. Diese Därme werden mit dem Fleisch zusammen in einem Kessel über einem Erdloch gar gekocht.

Das Fell stopft man mit Stroh, gleich welcher Art, prall aus, so daß Kopf und Beine steif abstehen, und führt von rückwärts die Stange hinein bis zum Kopf. So sitzt die Ziege aufrecht und fest auf der Stange und braucht nicht eigens angebunden zu werden. Dann räuchern die Männer Ziege und Stange mit Weihrauch ab und legen sie vor den Bonpriester hin.

Die errichtete Pfahlziege. (Zeichnung eines Tujen.)

Das Wettertorma: Der Bon ist unterdessen mit dem zweiten Torma, dem Wettertorma, fertig. Es ist genau so groß wie das erste, bzw. die vier ersten Torma. Unter Gebet stellt er es auf ein Holztablett mit folgenden Beigaben: ein bis drei Butterlampen, drei Kupferschälchen mit reinem Wasser, ein Schälchen Gerstenwein, ein Schälchen Tibetgerste oder Weizen, ein Schälchen Teeblätter, ein Schälchen Teigbohnen. — Dieses Torma trägt noch einige bunte Butterblumen. Bei seiner Anfertigung betet der Bon ein eigenes Wettergebet. Manchmal klebt er noch etwas Papiergold auf das Torma.

Zauberdolch, Holzpflock; *mpuru*. (Nach der Zeichnung eines Tujen.)

Die Keile: Nach dem Anfertigen des Torma beschriftet der Bon die Keile. Diese besorgt der Saatherr. Sie haben die Form der lamaistischen Zauberdolche, sind dreikantig, sieben Zoll (23 *cm*) lang und einen Zoll (3, 3 *cm*) breit. Nur das härteste Holz gebraucht man dafür; das sind in jener Gegend nur die drei Sorten: *huang-san-tzu, hei-ts'u, hua-mu* [7]. Ob man sie alle aus einer dieser Sorten anfertigt oder alle Sorten gebraucht, ist gleich. Im ganzen sind es fünf Keile. Der Kopf der Keile ist dreiteilig gekerbt [4].

Der Saatherr legt diese Keile dem Bon auf den Tisch. Dieser beschreibt alle drei Seiten mit tibetischen Zauberformeln. Dazu bedient er sich chinesischer Tusche und des Pinsels oder des tibetischen Bambusstiftes. Der Keil, der für den Kopf der Ziege bestimmt

ist, wird am Kopfe mit einem schwarzen Hada und in der Mitte mit einer schwarzen Schnur oder einer kleinen Kette umschlungen.

Dann schneidet man etwas von der Wolle der vor dem Bon liegenden Pfahlziege ab, dreht einige Fäden, und der Bon bindet damit die Keile fest, an jeden Fuß einen und einen zwischen die Hörner. Alle fünf Keile schauen mit der Spitze nach unten. Aus seiner Weihwasserkanne spritzt er dann Wasser über Ziege und Stange, nimmt eine Prise Tibetgerste, bläst dreimal darüber und streut sie auf das Ganze.

Die Errichtung der Pfahlziege und das Opfer: Die Männer setzen die Stange ins Loch und keilen sie mit Steinen und Erde fest. Die Ziege muß nach Nordwesten schauen, weil von dort gewöhnlich die Gewitter kommen. Sobald die Stange feststeht, bringt der Bon das Wettertorma samt den Beigaben an den Fuß, stellt es ab und geht sofort wieder auf seinen Platz zurück, um das Wettergebet weiterzubeten. Jetzt begleitet er das Gebet nur mit seiner Trommel und der Schelle. Wiederum bringen die Männer ein großes Weihrauchopfer unter Muschelblasen dar.

Das Bergtorma: Daran schließt sich die Anfertigung der Bergtorma. Es ist dreistufig und rund und sieht aus wie eine Pyramide mit etwa 10 *cm* hohen Terrassen. Im ganzen ist es etwa 40 *cm* hoch. Das Torma wird mit rotgefärbter, weicher Butter überstrichen und erhält folgende Beigaben: auf der ersten Schicht Wassertiere, Frosch, Schlange, Fisch, Drache, Schildkröte, ferner kleine Steinchen, Erdklümpchen und schließlich noch einige Spritzer Wasser; auf der zweiten Schicht Bergtiere, Hirsch, Pferd, Yak, Halbyak, Schaf, Ziege, Hase, Fuchs, Wolf und einige Stückchen Holz; auf der dritten Schicht Lufttiere, Phönix, Adler, Pfau, Elster, Taube, Schwalbe, ferner Sonnenscheibe und Mondsichel. Auf die oberste Spitze kommen verschiedene Arten echter Blumen [3].

Diese Figuren werden alle aus Butter und Tsamba in Miniatur vom Bon selber hergestellt. Er setzt das Torma aufs Tablett mit genau denselben Opferbeigaben wie beim Wettertorma. Dieses Torma wird ebenfalls an den Fuß der Stange gebracht, meistens hinter sie und etwas erhöht. Davor kommen Lampen und Schälchen. So stehen im ganzen zwei Torma unter der Pfahlziege. Während der Bon zurückgeht und seine Gebete weiterbetet, verbrennen die Männer wieder Weihrauch.

Das Ziegenopfer: Das Ziegenopfer besteht im Wurf von Opferfleisch. Während der Bon sich von seinen Gebeten ausruht, gibt der Speerwahrsager (oder ein anderer) die Richtung an, in welcher das Opfer zu vollziehen ist, und beaufsichtigt mit dem Schüttelspeer die Handlung. Der Saatherr nimmt aus dem Kessel eine Schale von dem Sud und wirft diese in der vom Wahrsager angegebenen Richtung in die Luft für den Himmel. Dann folgen vier Würfe in die vier Weltrichtungen und schließlich drei Würfe nach Nordwesten für die Wettergeister. Bei jedem Wurf knien die Männer nieder und machen einen dreifachen Kotou.

Damit ist die eigentliche Zeremonie beendet. Die Männer setzen sich

um den Kessel, verzehren das restliche Fleisch und trinken Tee. Dann gehen alle heim, auch der Bon. — Die Torma werden entweder im Feuer verbrannt oder einfach stehengelassen.

Die Verehrung der Pfahlziege: Während des Sommers stellen sich die Bauern einzeln oder gemeinsam vor der Pfahlziege ein, opfern, beten, verbrennen Weihrauch und machen Kotou, um die Saaten vor Hagel zu schützen. Auch der Bon kommt öfters und betet. Früher schlug er sogar für längere Zeit sein Zelt auf und blieb dort wohnen, um stets bei Gewitter für den Wetterbann da zu sein. Das ist jetzt nicht mehr der Fall. Den Wetterbann nimmt jetzt der Wahrsager vor, meist der Speerwahrsager.

Das Abnehmen der Pfahlziege: Nach dem fünfzehnten Tag im achten Mondmonat, wenn die Ernte geschnitten ist, wird die Pfahlziege wieder fortgenommen. Man läßt dann aber den Tag nicht mehr vom Wahrsager bestimmen, sondern richtet sich nach den Umständen. Der Bon wird wieder eingeladen, er macht wieder die Torma und betet. Meist opfert man dann ein Schaf.

Deutungen: Die Pfahlziege soll die Unwetter bannen und die Ernte schützen. Die Sitte kommt nur bei Bauern vor, auch bei den ackerbauenden Fandse. Die Ziege hat eine besondere abwehrende Kraft, weil sie dem Gotte *Däntsien Sän* mit ihrem Kopf als Amboß dient. Er ist Schmied im Wetterministerium [5]. Bei Gewittern hämmert er zwischen den Hörnern sein Eisen, dabei sprühen die Blitze, und glühende Hagelkörner fallen auf die Erde. Dadurch werden die schädlichen Dämonen erschlagen, so daß Saaten und Menschen kein Unglück geschieht [6].

Die ersten vier Torma stellen böse Dämonen dar. Durch das Fortwerfen werden sie vertrieben. Die Beigaben gibt man mit, damit sie zufrieden sind und nicht mehr wiederkommen; es sind Dinge, die man im täglichen Leben braucht.

Das zweite Torma, Wettertorma, stellt die Geister des Wetterministeriums dar. Die Beigaben sind ein Opfer, das sie günstig stimmen soll.

Das Bergtorma stellt den Weltenberg dar. Sonne und Mond kreisen um ihn. Dieser Berg ist das Geisterparadies. Man stellt ihn unter den Pfahl, damit die Geister sich in dieses Paradies zurückziehen und von den Menschen ablassen.

Die Keile stellen die Zauberdolche des Schmiedegottes und seiner Untergebenen dar. Sie sind die Hauptwaffen gegen die Dämonen. Auch der Bonpriester ist ein Schüler und Untergebener dieses Schmiedegottes. Er verehrt ihn besonders und gebraucht beim Dämonenbannen ebenfalls den dreikantigen Zauberdolch. Auch bei den Tempeltänzen (Tschamtänzen) treten die untergebenen Geister des Gewitter-Schmiedegottes mit diesen Dolchen auf. Lamas gebrauchen den Dolch nie. Die drei Kerben bilden drei Knäufe, welche Menschenschädel darstellen sollen. Davor haben die Dämonen besonders Angst, wie überhaupt vor Sachen, die von Toten stammen, wie die Knochenflöte, die Menschenhautpeitsche und die Schädeltrommel.

Wörterliste

Die Pfahlziege:	*aradziäṅ* (tib. Lehnwort) = Ziege ausspannen.
	ima rèdziala (tuj.) = Ziege ausspannen.
Die Ziege:	*ima*; *chü-la* (chin.); *chia-la* (chin.).
Wettergebet:	*dirèdzia xsertsien* (tib. Lehnw.) [6].
	lei-pu ching (chin.) = Wetterministerium-Gebet.
Unheiltorma:	*ǵuax* [6] *ldor* (tib.).
Wettertorma:	*dirdzia xsertsien* (tib. Lehnw.) ? vgl. Wettergebet.
Bergtorma:	*rira* (tib. Lehnw.) = Weltenberg, Sumeru, Maṇḍala.
Zauberdolch:	*mpuru* (tib.) [6]; *ting-shen-chuang*: Geisterpflock (chin.).
Kerben:	*nduodba* (tib. ?)
Zauberformeln:	*snaǵ* (*sènoǵ*).
Bonpriester 2. Klasse:	*xuändie*; *sènoǵsa* (*snaǵsa*) (tib. Lehnw.)
	peng-po (chin.).
Wetterbann:	*satsiöṅ* (tib. Lehnw.) [6].
Das schwarze Hada (am Dolch):	*chao-t'ien p'a* (chin.) = den Himmel bedeckender Schleier.
	darnaǵ (tib. Lehnw.) [6].
Die schwarze Schnur:	*fsiasga* (tib. Lehnw.) = Lasso zum Einfangen der Pferde.
	k'un-hsien sheng (chin.): die Genien bindende Schnur.

Anmerkungen

[1] Wenn der Berg zu weit entfernt ist, schlägt man dort ein Zelt auf und wohnt dort.

[2] Die Zeit fällt mit der zusammen, in welcher die Chinesen ihre Wetterburgen in Ordnung bringen und die Donnerkeile einrammen (*ch'a p'ai*).

[3] Hier ist es eine Darstellung der Welt mit Tieren und Gestirnen, also ein Maṇḍala. Interessant ist, daß der Gewährsmann dieses Torma als Opfer bezeichnet wie auch alle Torma-Beigaben, wogegen die beiden andern Torma Geister darstellen.

[4] Die Form der Zauberdolche ist verschieden. Besonders variiert der Griff; meist sind es jedoch dreifach gestaffelte Totenköpfe. Die Dolche, die ich sah, waren alle aus Eisen. Ich hörte aber auch, daß es früher Dolche aus Menschenknochen gab. So ließe sich die dreikantige spitze Form und der Knochenknauf leicht erklären; es würde auch gut zur Schädeltrommel, Hautpeitsche, Knochenflöte usw. passen. — Die schwarze Farbe bedeutet Eisen.

[5] Die Vorstellung vom Gewitterministerium hat Ähnlichkeit mit dem chinesischen *lei-pu* (Donner-Abteilung). Es sei jedoch dahingestellt, ob Entlehnungen bestehen. Jedenfalls bringt die Volkstradition der Tujen die Bon in besondere Beziehung zum Wetterzauber (vgl. auch TAFEL: Tibetreise). — Über den Gewittergott *Däntsän* (*Däntsien Saṅ*) wußte der Gewährsmann nichts weiter, als daß es im Kloster Rgulöṅ ein Bild von ihm gebe, und daß er ein Schutzgott der Bon sei. *Däntsien* ist nun offenbar eine Tujenverballhornung des tibetischen *dam-can*, „Gelübde wahrend" (cf. CH. DAS, p. 618). Damit ist nur ein allgemeiner Titel angegeben, der auf viele Götter angewandt werden könnte. Nach GRÜNWEDEL (Mythologie, p. 187 ff.), CH. DAS (p. 618) u. a. ist aber der lamaistische Schreckensgott *rDo-rje-legs* (*pa*) gemeint, der auf einer Ziege (Widder) reitet und zum Schutzherrn (*Dharmapāla*) der

Schröder AE9 Monguor

Lehre erhoben wurde. H. HOFFMANN lehnt ihn als tantristischen Gott ab und will ihn als einen alten Bon-Gott bezeichnen, womit er das Richtige trifft, wie die hier beschriebene Zeremonie dartut. Er schreibt dann weiter (Quellen, p. 164): „Interessant ist die allerdings noch nicht bisher bestätigte Angabe JÄSCHKES, wonach *Rdor-legs*" ... „ein ehrsamer Dorfschmied war". ... „Erwähnenswert ist jedenfalls die Tatsache, daß WADDELL auch von einem 'demon blacksmith' redet." Diese Vermutungen können nun durch die Zeremonie der Pfahlziege und die damit verbundene Tradition bestätigt werden. Der *dam-can* ist ein Schmiedegott der Bon und steht in besonderer Beziehung zum Wetterbann und zum Ziegenkult, welcher ja ebenfalls in den Bereich der Bon gehört oder doch zumindest vorbuddhistisch ist. (Man vgl. den alten Namen von Lha-sa, das ursprünglich *Ra-sa* [Ziegen-Ort] hieß und einen Tempel gleichen Namens hatte).

[6] Der Wetterzauber spielt in ganz Chinghai eine große Rolle. Hier handelt es sich um eine reine Bonzeremonie. Weder die Chinesen noch die Lamas üben sie. Und wenn es stimmt, daß die Nomaden sie nicht haben, dann läge hier ein Hinweis auf den engen Zusammenhang der Bon mit dem Ackerbau. — Die Chinesen führen ihren Wetterzauber durch andere Schamanen aus oder durch Laienbonzen, Exorzisten usw., nie durch einen Bon. — Nur sehr vereinzelt trifft man bei Chinesen die Pfahlziege an, und dann ist es am Rande des Tujen- oder Fandsegebietes. So sah ich öfters eine solche in einem Tale am Pei-ch'uan-Fluß, südlich von Hsin-t'ien-p'u, wo ein Chinesendorf war; hier war man von der Regel, daß sie auf einem Berg errichtet sein soll, abgewichen.

Andere Arten des Wetterbannes werden mit Hilfe des Geisterspeeres, des Geistertisches, der Geistersänfte und mit Donnerkeilen vorgenommen. Alle diese Dinge sind Sitz von Gottheiten. Sobald nun ein Unwetter naht, holen die entsprechenden Träger diese Göttersitze, zitieren den Geist und stellen sich im Freien dem Gewitter entgegen. Näheres über diese Zeremonien an anderer Stelle. Der ganze Wetterbann jener Gegend scheint noch ein Erbe von den Bon zu sein. Die damit zusammenhängenden Verhältnisse und Gebräuche erinnern sehr an die Schilderung, wie sie A. TAFEL für die Bon in Ost-Tibet gibt; Tibetreise II, p. 198 ff.

[7] Die Namen waren nicht zu identifizieren; *hung-san-tzu* scheint schwarzes Sandelholz zu sein; *hua-mu* ist Birkenholz. Es soll jedenfalls das härteste Holz sein, das sich finden läßt. Bei den dortigen Holzarten gilt tatsächlich Birkenholz als eines der härtesten; die Leute machen daraus sogar Radfelgen.

[8] *xsertsien*: tibetisch *gser* = golden, *skyem* = Trank. Es ist das mongolische *altan umdaġan*, goldener Trank, ausgegossen beim Obo-Opfer, das Teeopfer vor dem Obo. Ein Opfer an die Lokalgötter. — *guax*: tibetisch *skyeg* (gesprochen *kag*) = Unheil. — *mpuru*: tibetisch *p'ur bu* = Nagel, Pflock; kann auch Göttername sein. — *satsioġ*: tibetisch *sa* = Ort, *skyoṅ* = behüten, bewahren; König, Schützer. — *darnaġ*: tibetisch *dar* = Seide, *nag* = schwarz (UNKRIG).

3. Das Bergschafopfer*

Bericht

Nach Errichtung der Pfahlziege bis zur Zeit der Ernte wird gewöhnlich auf einer Bergeshöhe ein Schaf geopfert. Es ist eine Angelegenheit des ganzen Dorfes. Damit will das Volk den Himmel, den Berggeist und die Geister der vier Weltgegenden bitten, daß sie die Saaten schützen. Das Opfer kann öfters wiederholt werden; aber man opfert jedesmal nur ein Schaf. Das Opferfleisch wird am Schluß von den Teilnehmern gegessen.

Einzelheiten

Zeit: Bei Errichtung der Pfahlziege bestimmt der Wahrsager, wie oft im Sommer und an welchem Tage ein Schaf geopfert werden soll. Er gibt auch an, ob die betreffenden Geister dieses Opfer alle Jahre haben wollen, manchmal ist es nur einmal, manchmal mehrere Jahre hintereinander. Ist in dieser Zeit kein sonstiger Anlaß, so behält diese Wahrsagung Geltung. Nach Ablauf dieser Periode wird wieder neu gewahrsagt. — Hat das Dorf eine Pfahlziege errichtet, dann findet das Opfer immer in der Zeit nach der Errichtung statt. Ist keine Pfahlziege vorhanden, dann kann es manchmal auch in die Zeit der Errichtung der Pfahlziege fallen.

Ort: Das Opfer findet immer auf dem gleichen Berge statt, auf dem die Pfahlziege steht, und zwar vor dieser. Sonst bestimmt der Wahrsager den Platz. Dieser muß beibehalten werden für die Zeit, in der das Opfer fällig ist. Man kann z. B. bei einem dreijährigen Opfer nicht im ersten Jahre den einen und im zweiten Jahre einen andern Berg wählen [3]. Auch der Ort des Wahrsagens richtet sich danach. Es wird angegeben, wo das nächste Mal die Wahrsagung stattfindet. Immer aber ist es eine Bergeshöhe, nie ein Gehöft oder ein Tal, wie z. B. bei privaten Opfern [1].

Personen: Wie bei allen religiösen Zeremonien, werden die Frauen ferngehalten. Es beteiligen sich daran der Saatherr, die Dorfältesten und alle andern Männer und Jünglinge. Jede Art von Wahrsager kann dabei auftreten. Wichtig ist, daß bei dem eigentlichen Opfer immer irgend ein Geist vom Wahrsager zitiert wird und die Handlung beaufsichtigt. — Die Teilnahme ist auch verboten für alle, welche Trauer tragen, und in deren Hof sich eine Wöchnerin befindet. — Leute mit leeren Geräten, z. B. leeren Wassereimern, Kiepen usw. sollen sich nicht nähern. Man schlägt darum vor dem Opfer den Gong, damit sich solche Personen fernhalten [2].

Opfertier: Als Opfertier kommt nur ein Schaf in Betracht, keine Ziege und erst recht kein Schwein. Das Schaf kann jeder Farbe und Geschlechtes sein, auch kastriert. Es muß aber wenigstens ein Jahr alt sein. Ein zu junges Schaf wäre eine Beleidigung der Götter; abgesehen davon, daß das Fleisch für die Teilnehmer nicht ausreichen würde. Meist wird das

* Anmerkungen siehe pp. 834-835.

Schaf gemeinsam gekauft. Jede Familie hat dafür Getreide oder Geld zu stellen; der Eigentümer wird immer entschädigt. Allerdings darf das Schaf nicht aus einer Familie stammen, die gerade tabu ist, z. B. durch Trauer, Wochenbett, Krankheit usw. Solche Familien müssen aber doch ihren Beitrag liefern. Die Hauptsache ist, daß das Tier gesund und fehlerlos ist. Es darf z. B. nicht lahm oder blind sein. Auch vermeidet man allzu häßliche Farben, z. B. ein weißes Tier mit schwarzem Kopf usw.

Gebrauchsgegenstände: Zum Opfer benötigt man einige Eisenkessel, einige Eimer mit Wasser, Messer, Schöpflöffel, Stricke, Blutbecken, Eßnäpfe, Brennholz usw. Zudem nimmt man sämtlichen Zubehör für das Weihrauchopfer mit.

Schlachtung: Die Schlachtung wird mit einem großen Weihrauchopfer eingeleitet, welches von den Männern während der ganzen Zeremonie unterhalten wird. Jeder wirft nach Belieben immer wieder Zypressenzweige hinein, opfert Gerstenwein usw. Dabei wird ständig die Muschel geblasen, so daß man schon von weitem hört, daß auf dem Berge ein Opfer stattfindet.

Junge Männer bringen das Tier heran, binden es los und waschen es mit den Händen vom Kopf bis zum Schwanz. Dann wird es mit Weihrauch abgeräuchert. Ein anderer legt einen weißen Stein in das Feuer. Wenn dieser heiß ist, schöpft er mit einem Eisenlöffel heißes Wasser aus einem Kessel, legt den Stein in den Löffel, streut zerstampfte Zypressenblätter darüber und räuchert damit das Schaf ab. Auch alle Männer, die beim Schlachten behilflich sind, waschen sich Hände und Gesicht, spülen den Mund und räuchern sich ab. Ebenso werden alle Geräte gewaschen und abgeräuchert.

Nun umringt man das Schaf und übergießt ihm Kopf und Nacken mit Milch. Es ist einerlei, welcher Art die Milch ist. Man kann auch Mehl- oder Tsambawasser oder sogar reines Wasser benutzen. Ein gesundes Schaf schüttelt sich auf diesen Guß hin. Dieses Schütteln ist ein Beweis, daß der Himmel das Tier annimmt. Darum machen die Männer im Kreise um das Schaf einen dreifachen Kotou. Nach dem Übergießen mit Milch lassen sie das Schaf einige Schritte frei laufen und fangen es wieder. Falls das Tier sich nicht schüttelt, holen sie sofort ein anderes.

Das Schlachten wird vom Saatherrn vorgenommen. Seine Gehilfen packen das Schaf an den Beinen und Hörnern, drücken es auf den Boden und beugen seinen Kopf zurück, so daß die Kehle sich spannt. Der Saatherr durchschneidet dann mit kräftigem Schnitt Kehle und Schlagadern, und die Gehilfen fangen das Blut unter ständigem Rühren im Becken auf. Von dem Blute soll nichts auf die Erde fallen. Etwaige Blutspuren werden mit Erde zugeschüttet. Hat das Schaf sich ausgeblutet, so wird es abgehäutet. Manchmal bleibt der Kopf am Fell, oder er wird ganz und mit Fell abgeschnitten und abseits auf das Fell gelegt.

Jetzt nimmt man gewöhnlich ein breites Brett, legt das Schaf darauf und weidet es aus. Unrat und unbrauchbare Abfälle werden auf die Seite geschafft. Die Därme werden in warmem Wasser gereinigt und mit Blut und kleinen Fleischwürfeln vom Abfall gefüllt. Der ausgeweidete Körper

wird mit Wasser ausgeschwenkt und zerlegt. Man trennt die Schenkel ab, schneidet die Lenden und Rippenstücke heraus und zerkleinert schließlich alles, damit es bequemer gekocht werden kann.

Kochen: In einem Kessel über einem Erdloch wird Wasser zum Sieden gebracht, worin die Fleischstücke gekocht werden. Frauen dürfen beim Kochen nicht helfen. Gewürze, auch Salz, sind für das Opferfleisch verboten. Auch die mit Blut gefüllten Därme werden gekocht.

Während des Kochens sitzen die Männer abseits, unterhalten sich, beten ihr Mani oder opfern neuen Weihrauch. Ist das Fleisch gar, wird es herausgenommen und auf einem Brett in kleine Scheiben geschnitten, auch Lunge, Nieren, Leber und Herz. Dabei werden auch die Rippen und andere Knochen zerbrochen. Nun schöpft man aus dem Kesselsud mehrere Schalen und gibt einen Teil der Fleischstückchen hinein. Dann ruft man den Wahrsager.

Wahrsagung: Der Wahrsager ruft den Geist und gibt an, in welcher Richtung die Schalen ausgeleert werden müssen. Auch bestimmt er, wieviel Schalen jeweils zu opfern sind. Immer wird dem Himmel und dem Berggeist geopfert, meist auch den Weltengeistern; verschieden ist nur die Zahl der Schalen. Wenn man noch andern Geistern opfern will, wird das eigens vom Wahrsager erfragt. Der Wahrsager bleibt bis zum Schlusse des Opfers in Dienst und beaufsichtigt mit dem zitierten Geist die Handlung.

Opfer: Der Saatherr nimmt die erste Schale und wirft deren Inhalt in der vom Wahrsager bezeichneten Richtung gegen den Himmel. Dann folgen die andern Schalen für den Berggeist und die andern Geister. Bei jedem Opferwurf machen die Männer in der entsprechenden Richtung Kotou. Niemand darf die Fleischstückchen aufraffen oder vielleicht sogar essen. Hunde hält man wenigstens bis zum Ende des Opfers fern.

Mahl: Nach diesem Opfer wird das Fleisch aus dem Kessel genommen und unter die Männer verteilt. Man setzt sich in die Runde, trinkt Tee, ißt Brot, unterhält sich und lacht. Nach dem Mahl gehen alle nach Hause. Ein jeder nimmt seine Sachen mit.

Sinn: Das Opfer wird dargebracht zum Schutze der Saaten[4].

Verbreitung: Das Bergschafopfer wird überall geübt, wo Tujen sind, auch bei den benachbarten ackerbautreibenden Fandse und Chiahsifan[5]. In manchen Gegenden ist es auch bei Chinesen Sitte, aber nicht allgemein. Die Chinesen gehen dazu aber nicht auf die Berge, sondern opfern im Ortstempel.

Wörterliste

dem Berge ein Schaf opfern:	*uladē xoni ʃēnlie-* (*ʃēnlie-*).
Opferwurf:	*dziarin uguo* = wegwerfend geben.
	p'ao-ts'an (chin.) = wegwerfen.
eigene Gemarkung:	*dzienani satsiā.*
leeres Gerät:	*huodzēn sawa*;
	k'ung chia-shih (chin.).

Anmerkungen

[1] Das Opfer kann auch vor einem Obo stattfinden. Dann ist es aber von dem Obo-Opfer zu unterscheiden. Das Obo ist Sitz des Berggeistes, und weil das Bergschafopfer wohl besonders dem Berggeist gilt, wird das Obo bevorzugt. Weil es andererseits zum Schutz gegen Unwetter ist, geht man auch gerne vor die Pfahlziege.

[2] Die Furcht, mit leeren Geräten zusammenzutreffen, ist in Chinghai ganz allgemein. Es bedeutet Armut, vergebliches Bemühen usw. Tujen sprechen z. B. vor einer Reise den Wunsch aus: *huodzēn sawa bi pēngē*, d. h. „ein leeres Gefäß wolle nicht antreffen". Ähnliche Wendungen haben auch die Chinesen.

[3] Der Berg muß immer in der eigenen Gemarkung liegen. Tatsächlich sind bei den Dörfern immer solche Höhen vorgesehen. So liegt nicht weit vom Gehöft des Gewährsmannes ein Berg, der den Namen Schaf-Opfer-Berg trägt, *xoni šēnliedzin ula*, weil dort immer das Opfer stattfand. Er hat bei der zum Teil sinisierten Bevölkerung den Namen *hsien-yang ling*, d. h. Schafopfer-Höhe, oder *sheng-shan*, d. h. heiliger Berg, beibehalten. Nachdem der größere Teil des Dorfes (*yang-chüan*) christlich geworden ist, hat man dort ein hohes Kreuz aufgerichtet, und statt des Schafopfers beten die Leute jetzt dort den Wettersegen.

[4] Der Sinn ist jetzt nicht mehr eindeutig. Es handelt sich sicher um den Schutz der Saaten; aber ob das Opfer in erster Linie dem Berggeist oder den Wettergeistern oder dem Himmel gilt, ist unklar. Die Bergeshöhe und das Obo sprechen für den Berggeist. Der Himmel ist jedoch immer an erster Stelle mitberücksichtigt. — Der Alte sagte, früher hätten sie das Opfer zum Schutz der Tiere dargebracht.

Es ist möglich, daß es sich ursprünglich um ein reines Himmels- oder Berggeistopfer handelte, daß aber dann später mit dem Ackerbau die Wettergötter in den Vordergrund rückten; denn Hagel und Gewitter werden in erster Linie von Bauern und nicht so sehr von den Hirten gefürchtet.

[5] Der hier beschriebene Ritus des Schlachtens und Opferns ist typisch für alle Schlachtopfer. Auch bei Ziegen und bei Schweinen wird in gleicher Weise verfahren. Weil das Schwein bei der Schächtung (es wird nicht betäubt) zu sehr schreit, wird ihm das Maul fest verschnürt. Das Übergießen mit Milch fällt allerdings beim Schwein fort. Auch dem Schafe hält man das Maul zu. Vielleicht ist das ein Rest eines Erstickungsopfers.

Bei längeren Festen wird das geschlachtete Tier nicht sofort zerstückelt, sondern nach Abhäutung und Ausnehmen der Eingeweide auf einen länglichen Tisch oder ein Gestell gebunden, und zwar in natürlicher Haltung, mit gespreizten Beinen, wenn möglich stehend und mit erhobenem Kopfe. So wird es vor die Gottheit oder den Tempeleingang gestellt. Erst am Schluß des Festes wird es zerstückelt und gekocht. Manchmal werden auch die zerlegten ungekochten Teile vor der Gottheit präsentiert.

Die Verteilung von Opferfleisch geschieht meist in der gegebenen Form nach dem Kochen als Mahl. Das Fell erhält meist der Eigentümer zurück, den

Kopf bekommt der Saatherr oder der fungierende Vorsteher. Geladene Bonpriester, Lamas, Schamanen usw. erhalten oft eine Lende, *jou-fang-tzu* (chin.), d. h. „Fleisch-Quadrat", oder einen Schenkel usw. Diese werden dann nicht gekocht, sondern für diesen Zweck beiseite gelegt.

Im übrigen kommen immer wieder kleine Variationen vor. Aber stets folgen sich: Reinigung (Waschung), Schlachtung, Opfer, Mahl. Schlachtung, Opfer und Mahl können manchmal auf verschiedene Tage verteilt werden.

4. Der Flur-Umzug *

Bericht

Sobald im Sommer die Saat in die Ähren schießt, findet der Flurumzug statt. 108 Männer des Dorfes machen sich mit dem Saatvorsteher auf den Weg zur nächsten Lamaserie und holen die 108 heiligen Bücher. Den Lamas spendieren sie dabei einen großen Kessel Tee; vor den Buddhabildern des Klosters opfern sie Butter für die Lampen. Die Tujen der hiesigen Gegend gehen meist zum Kloster Rgulön [1]; der Weg beansprucht jedesmal einen ganzen Tag. Die Bücher werden in den Ortstempel gebracht.

Am folgenden Morgen findet die Prozession statt. Alle Männer des Dorfes und alle Wahrsager finden sich im Tempelhof ein. Zuerst wird ein großes Weihrauchopfer dargebracht. Dann wahrsagen alle Wahrsager der Reihe nach, der Speerwahrsager, der Schwertschamane, die Sänftenträger, die Tischgotträger. Soviele Wahrsager da sind, soviele müssen auch auftreten. Man will durch sie erfahren, wie das Wetter und die Ernte im Laufe des Sommers sein wird.

Ist das Wahrsagen vorbei, so setzt sich der Zug in Bewegung. Allen voraus geht der Speerwahrsager mit dem Speer, dann folgen der Schamane, die Göttersänfte, der Geistertisch, die 108 Bücherträger, einer hinter dem andern. In diesen Zug werden die Trommelschläger, Trompeten und Muschelhornbläser, Zimbel- und Gongschläger eingereiht. Auch alle Fahnen des Tempels werden mitgenommen, und zwar werden sie von den Bücherträgern getragen, die Fahnen über die linke Schulter und das Buch auf dem Rücken. Hinterher folgen zwei Mann mit je einer großen Kiepe Stroh, Zypressenblättern und Weihrauchzugaben und einem Kruge reinen Wassers. Andere Männer schließen sich nach Belieben an.

Während des ganzen Zuges werden die Trompeten geblasen, die Trommel geschlagen und das *Om mani padme hum* gebetet. Der Zug bewegt sich vom Tempel aus gleich auf den nächsten Berg und den Höhenrücken entlang über alle Berge der ganzen Dorfgemarkung. Auf jeder Höhe wird das übliche Weihrauchopfer von den beiden Männern verbrannt, während der Zug selber weiterzieht. Gegen Mittag jedoch wird auf einer eigens dazu bestimmten Höhe Halt gemacht. Nach dem Weihrauchopfer nimmt man eine Stärkung ein. Die Leute bringen Brot, Tee und Suppe schon vorher dorthin. Dann geht der Zug weiter. Erst gegen Abend kehrt man zum Tempel zurück. Am andern Tage bringen die Leute die Bücher wieder ins Lamakloster.

* Anmerkungen siehe pp. 838-839.

Einzelheiten

Personen: Nur männliche Personen dürfen sich am Zuge beteiligen, einerlei, ob es Erwachsene oder Knaben sind, falls sie nur stark genug sind, das schwere Buch zu tragen, und das Mani beten können. Der Saatvorsteher bestimmt, wie viele Personen jede Familie zu stellen hat, damit die Zahl von 108 Buchträgern voll wird. Reichen in einem Dorfe die Leute nicht aus, dann holt man in der Nachbarschaft Hilfe. Auch Chinesen sind zugelassen. — Beim Abholen und Zurückbringen der Bücher ins Kloster kommt es auf die Zahl nicht an, so daß einer zwei Bücher tragen kann. Die tibetischen Bücher sind allerdings recht schwer und groß, da sie zwischen zwei Bretter gebunden sind.

Der Saatvorsteher wird jedes Jahr beim Herbstdankopfer gewechselt. Ihm obliegt die Sorge für alle religiösen Veranstaltungen des Jahres. Er ist jedoch nicht Ortsvorsteher. Weil seine Hauptsorge der Saat gilt, heißt er Saatvorsteher. Der Vorsteher des letzten Jahres ist ihm behilflich [2].

Es brauchen nicht unbedingt mehrere Wahrsager zu sein. Hat aber ein Dorf mehrere, so müssen alle erscheinen. Hat es überhaupt keine, dann lädt es von auswärts wenigstens einen ein. Nie wird ein Lama oder Bonpriester eingeladen.

Zeit: Die Zeit für den Flurumzug wird vom Wahrsager beim Pfahlziegenopfer im Frühling (*aradziäń*) am 13. Tag im fünften Monat bestimmt. Der Umzug selber muß immer im siebenten Monat sein, wenn die Saat Ähren ansetzt, weil gerade in dieser Zeit die größte Gefahr für die kommende Ernte ist, wegen der großen und vielen Gewitter in diesem Monat [3]. Oft wird auch die Zeit in der Lamaserie bestimmt. Da es nämlich viele Dörfer gibt, welche den Umzug halten wollen, so kann es vorkommen, daß zwei Dörfer die gleiche Zeit festsetzen. Darum geht der Saatvorsteher schon einen Monat vorher zum Kloster und frägt, wann die Bücher frei sind. Dementsprechend wird der Tag bestimmt. — Für die Dauer der Zeremonie berechnet man gewöhnlich drei Tage, einen Tag zum Holen der Bücher, einen für den Umzug, einen für das Zurückbringen. Es läßt sich aber ein Tag sparen, wenn man die Bücher gleich in die folgende Nachbargemeinde bringt oder sie dort abholt. In diesem Falle muß das Kloster verständigt werden. Der Umzug muß schon beim ersten Dämmern beginnen, weil sonst ein Tag nicht ausreichen würde.

Ort: Für den Umzug kommt nur die eigene Ortsgemarkung in Frage. Daß sich z. B. zwei Dörfer zusammentun und in beiden Gemarkungen nur eine Prozession halten, ist nicht erlaubt. Man versammelt sich auch immer im Tempel; denn jedes Dorf hat wenigstens einen kleinen Tempel; außerhalb des Tempels oder Tempelhofes wird nicht gewahrsagt.

Gegenstände: Die Bücher sind nicht unbedingt nötig. Eine Bücherprozession findet auch nicht alle Jahre statt, gewöhnlich nur alle drei Jahre. Die andern Jahre hält man den Umzug ohne Bücher. Dabei sind die Zere-

3: Schröder AE9 Monguor

monien aber gleich. Nur wird bei der Zeitbestimmung das Kloster nicht verständigt; es fallen zwei Tage fort, die für den Büchertransport nötig wären. Auch braucht die Zahl der Teilnehmer nicht 108 zu betragen, obwohl man sich der heiligen Zahl wegen darum bemühen soll [6].

Für die Musikgeräte gibt es keine Regeln. Man nimmt mit, was man eben hat. Sicher ist immer die Tempeltrommel — eine Faßtrommel mit zweiseitiger Bespannung — und die Muschel dabei. Die Trommel ist nicht sehr groß und wird an einem Gurt vor der Brust getragen, so daß man sie von beiden Seiten schlagen kann. Das Muschelhorn ist das gleiche wie sonst beim Weihrauchopfer. Die Trompeten sind die gewöhnlichen chinesischen Schalmeien (*la-pa*), auch die Zimbeln und der Gong sind chinesisch.

Fahnen, wie sie beim Flurumzug getragen werden. (Zeichnung eines Tujen.)

Unter den Fahnen gibt es schwarze, rote, gelbe usw. Meist sind sie mit farbigen Borten versehen. Es gibt auch Fahnen mit Bildern, so vom Berggeist. Viele Fahnen haben auch chinesische aufgenähte Sprüche, meist in weißer Farbe. Besondere Tujennamen gibt es nicht für die Fahnen. Die Zahl ist beliebig.

Neben dem gewöhnlichen Zypressenweihrauch nimmt man auch gerne die chinesischen Räucherstäbchen mit; Butter, Wasser, Tee usw. sind genau so erwünscht wie beim andern Weihrauchopfer. Neuerdings verbrennt man auch nach chinesischer Art gelbes Papier.

Die Wahrsager müssen immer ihre Wahrsagezeichen mittragen, d. h. die Gegenstände, welche Sitz des Geistes sind, also Speer, Sänfte, Tisch usw. Während des ganzen Zuges bleibt der Geist in dem betreffenden Gegenstand gegenwärtig, was sich durch Schütteln und Rasseln der Schellen und die Bewegungen der Träger bekundet.

Wahrsagung: Man sucht bei der Wahrsagung möglichst genau zu erfahren, wann und wo die schwersten Hagelschläge niedergehen, wie man sich dagegen schützen soll, ob durch Opfer oder Gebet oder Manibaum u. dgl. Der Saatherr hält dabei dem betreffenden Geist in einer kurzen Ansprache seine Pflichten vor, die er für eine gute Ernte zu erfüllen hat, und sagt ihm, daß man ihm durch Opfer seinen Schutz belohnen wolle [4].

Sinn: Der Umzug beabsichtigt, die Götter zu ehren, damit sie die Saat beschützen und eine reiche Ernte spenden. Die heiligen Bücher haben eine besondere Kraft. Aber vor allem sollen die mitgenommenen Götter die Fluren vor Hagel und Gewitter verschonen. — Auch die benachbarten ackerbautreibenden Fandse haben diese Prozession. Die Chinesen haben sie nicht in dieser Form [5].

Wörterliste

Flurumzug:	*sguora* [7].
Saatvorsteher:	*törödzi* (Oberhaupt); *ch'ing-miao t'ou* (chin.) = Jung-Saat-Herr.
Trompete:	*dön*; *la-pa* (chin.) = chin. Schalmei.
Zimbeln:	*nao* (chin.) = die großen Schlagteller; *rëbuogë* (?).
	ts'a (*ch'a*)-*pao* (chin.) = die kleinen Klangteller.
Fahnen:	*ch'i-tzu* (chin.).
Bücher:	*luän* = Gebet; *ching* (chin.) = Gebet.
Bücherträger:	*luän rëgudzin kun* = Gebete tragende Leute.

Anmerkungen

[1] Über das Kloster Rgulön vgl. Einleitung und 2. Teil, II, 4.

[2] Auch die Chinesen haben einen solchen jährlich neu zu wählenden religiösen Vorsteher. Meist heißt er einfachhin *t'ou-jen*, d. h. Hauptmann, oder man nennt ihn auch *huei-t'ou*, d. h. Versammlungs-(Fest-)Haupt; *ch'ing-miao t'ou* wird auch gebraucht, aber nur für die Zeit der Saatfeste mit den Kulttänzen. — Die christlichen Missionare haben für ihre kirchlichen Feiern und Volksfeste diese Einrichtung übernommen. So gibt es neben den Gemeindevorstehern noch eigene Vorsteher, welche z. B. bei Prozessionen oder zu Ostern die Feste organisieren, die Gäste unterbringen, das Festschaf schlachten usw.

[3] Vgl. die Abschnitte „Bergschafopfer" und „Pfahlziege".

[4] Mit dem Wahrsagen ist gewöhnlich noch ein Opfer verbunden, z. B. Hahnenopfer, Getreide-, Brotopfer usw., wie ich es beobachten konnte.

[5] Die Chinesen haben die Prozession in zwei Etappen. Einmal, wenn die Saat aufgeht. Dann findet das Einrammen der Donnerkeile in die Wetterburgen auf den Bergesgipfeln statt. Sie ziehen mit Musik und Fahnen und der Göttersänfte auf die Berge und führen die mit Zaubersprüchen beschriebenen Holzkeile mit. Das nennen sie *ch'a -p'ai*, d. h. „einrammen Pflöcke". — Eine zweite Prozession findet später im Sommer statt, und zwar alle vierzehn Tage, am ersten und fünfzehnten Tag eines jeden Monates. Diese Prozession nennen sie *chuan shan*, d. h. umherziehen (auf den) Bergen. Hierbei werden nur Fahnen und Musikinstrumente mitgenommen. Früher blies man dabei auch die sonst bei den Chinesen nicht gebräuchliche Muscheltrompete.

Wie der Gewährsmann erzählt, haben die Tujen heute schon weitgehend dieses *ch'a-p'ai*, also den Umzug mit Einrammen von Donnerkeilen, an Stelle des ehemaligen *aradziän* (Pfahlziege) übernommen; und zwar deshalb, weil es kaum noch Bonpriester gebe. Das *chuan-shan* der Chinesen aber sei nicht dasselbe wie ihr Flurumzug, *sguora*. Es finde zwar auch im Sommer statt, aber alle vierzehn Tage, während sie ihre Flurprozession nur einmal abhalten würden. Heutzutage jedoch, wo die Tujen schon halbe Chinesen seien, würden sie es auch einfacher machen, dafür aber öfters, so wie die Chinesen auch.

Was nun eher ist, ist schwer zu sagen. Es scheint, daß es sich nicht um eine lamaistische Sitte handelt; denn nie lädt man einen Lama ein; und auch die buddhistischen Bücher sind nicht notwendig. Wohl aber muß immer ein Wahrsager dabei sein mit dem zitierten Geist. So ist es möglich, daß diese Prozession mit dem ursprünglichen schamanistischen Wetterbannen zu-

3: Schröder AE9 Monguor

sammenhängt, wie es heute noch geübt wird, und daß erst später die buddhistischen Bücher hinzukamen.

Die chinesische Flurprozession macht dagegen einen verarmten Eindruck. Man nimmt nur Fahnen und Musikinstrumente mit. Die Leute beteiligen sich nur sehr schwach daran, und die Prozession dauert nur drei bis vier Stunden. Früher blies man dazu die Muschel, jetzt nicht mehr. Die Muschel ist aber eine Eigenart der Tujen und Fandse, nicht der Chinesen. Ferner wird die Flurprozession vielerorts nicht mehr gehalten. Und das scheint um so mehr der Fall zu sein, je weiter man nach Osten, also in chinesisches Gebiet, kommt.

So läßt sich mit einiger Wahrscheinlichkeit behaupten, daß die Flurprozession weder chinesischen noch lamaistischen Ursprungs ist. Bei Sinisierung der Tujen, resp. der Fandse, wurde sie noch anfangs geübt, verkam dann immer mehr und wurde schließlich ganz fallen gelassen. — Andererseits sind nicht ursprüngliche Elemente hinzugekommen, so die buddhistischen Bücher und die chinesischen Musikinstrumente, wahrscheinlich auch die Göttersänfte, welche fast immer die chinesische *Niang-niang*, die Muttergottheit, beherbergt, und schließlich noch der chinesische Weihrauch und das Opferpapier.

Über die chinesische Donnerkeil-Prozession soll in einer besonderen Arbeit ausführlicher berichtet werden. Hier sei nur bemerkt, daß sie mit den Wetterburgen zusammenhängt. Diese finden sich nur in Chinghai und dessen Grenzgebiet bis Südkansu. Sie dürften wohl in einen schamanistischen Vorstellungskreis gehören.

[6] Das Büchertragen ist eine weitverbreitete Sitte in allen Lamaklöstern. Immer wieder kann man vor allem Frauen sehen, welche die schweren Bücher Band um Band wie einen Rucksack auf dem Rücken um die Gebetshallen des Tempels tragen, was oft tagelang dauert (chin.) *chuan miao*. Viele Tujenfrauen machen in Zeit der Not oder Krankheit ein solches Gelübde. — Es sei nebenbei noch daran erinnert, daß ein Tulku die Gläubigen durch Auflegen des Buches auf die Stirne segnet.

[7] *sguora*: tibetisch *skor* = umkreisen (UNKRIG).

VI. Bräuche bei Unglück von Mensch und Tier

1. Die Tierweihe *

Bericht

Wenn in einer Familie die Kinder sterben, das Vieh fällt, die Ernte zerschlagen wird oder sonst viel Unglück geschieht, zürnt ein Gott. Man muß ihn versöhnen. Manchmal will der Gott ein Tier. Um welchen Gott und um welches Tier es sich handelt, erfährt man vom Wahrsager [1]. Dieser ruft den Geist in den Speer, und man frägt ihn z. B.: „Sollen wir ein Tier weihen?" Er antwortet: „Ja." „Willst du eine Ziege, ein Huhn, ein Pferd?"

* Anmerkungen siehe pp. 842-844.

„Nein." „Willst du ein Schaf ?" „Ja." „Sollen wir es einem Gotte weihen ?" „Nein." „Sollen wir es dem Himmel weihen ?" „Ja."

Dann stellt der Wahrsager den Speer beiseite. Eilends laufen die Leute fort, ein Schaf zu holen. Sie bringen es in den Hof, weil man dem Himmel nur im Freien ein Tier weiht. Ein Mann hält in der Hand ein Tellerchen mit Gerste ; darüber liegt ein schmales rotes Band. Er stellt sich neben den Wahrsager, der wiederum den Gott gerufen hat und unter Speerschütteln die Handlung beaufsichtigt. Jetzt folgt noch einmal eine Befragung, in der man feststellt, wann die Weihe zu erneuern ist.

Danach wird das Schaf vom Kopf bis zu den Füßen mit reinem Wasser abgewaschen. Der Wahrsager nimmt mit der Speerspitze einige Gerstenkörner vom Tellerchen und wirft sie in den Weihrauch, der während der ganzen Zeremonie verbrannt wird. Ein anderer nimmt von dem Weihrauch in einen Hohlziegel und räuchert das Schaf ringsum ab. Dann gießt er dem Tier eine Schale Milch über Nacken, Rücken und Kopf. Dabei knien alle Männer im Kreise um das Schaf, und wenn dieses sich schüttelt, machen sie einen dreifachen Kotou, denn der Himmel hat das Tier angenommen. Der Wahrsager stellt den Speer beiseite.

Nun nimmt man das rote Band vom Tellerchen, hält es in den Weihrauch, knüpft es dem Schaf auf der Schulter in die Wolle und läßt dieses frei. Es kann laufen, wohin es will, denn es gehört dem Himmel.

Jedes Jahr wird dieses heilige Schaf wieder herbeigebracht, und zwar im 1. Monat vom ersten bis fünfzehnten Tag. Dann wird die Weihe auf ähnliche Weise vor dem Geisterspeer erneuert und ein neues Band in die Wolle geknüpft.

Einzelheiten

Ort : Es ist einerlei, wo die Befragung stattfindet ; zuerst muß der Ort sauber gefegt und, falls es im Hause ist, ausgeräuchert werden. Man wäscht sich Hände und Gesicht und bringt im Hof das große Weihrauchopfer dar.

Ist die Zeremonie auf freiem Feld oder auf der Weide, so wird der Platz nicht gefegt ; denn Feld und Weide sind immer rein. Aber stets wird Weihrauch geopfert.

Manchmal ist der Ort der Befragung und der Weihe verschieden, z. B. wenn sich bei der Befragung im Hause herausstellt, daß das Tier dem Himmel geweiht werden soll. Dann geht man nämlich unverzüglich hinaus in den Hof und setzt dort die Handlung fort. — Wird das Tier dem Berggeist geweiht, so begibt man sich vors Dorf auf einen Hügel oder vor das Obo. Kleine Tiere, z. B. ein Huhn, können auch im Hause vor dem Hausaltar geweiht werden.

Weiht das ganze Dorf ein Tier, dann vollzieht sich alles im Tempelhof, ebenso wenn mehrere Familien gemeinsam ein Tier weihen. Ist kein Tempel da, so sucht man ein sauberes Gehöft.

Zeit : Besondere Tage für die Weihe gibt es nicht. Das hängt ganz vom Zufall ab, so wie es sich durch Krankheit, Unglück usw. gerade ergibt. Die Zeremonien werden immer am hellen Tage vorgenommen.

3: Schröder AE9 Monguor

Die Leute sind stets darauf bedacht, daß die Weihe sich unmittelbar an die Befragung anschließt. Darum schaffen sie sofort das Tier herbei. Mitunter kommt es auch vor, daß sie nicht sofort ein entsprechendes Tier finden; es vergehen dann ein bis zwei Tage zwischen Befragung und Weihe. In diesem Falle fährt man nach zwei Tagen unter den gleichen Zeremonien fort. Wiederholt werden nur die Reinigung des Ortes und der Leute und das Weihrauchopfer.

Weiheherr: Der Weiheherr kann sein: eine Einzelperson, eine Familie, ein Dorf, mehrere Familien. Nie aber sind es Frauen. Wohl kann z. B. eine alleinstehende Frau ein Tier geloben, aber dann nehmen andere Männer, z. B. der Mutterbruder, Befragung und Weihe vor. Das kann im Hause der Frau geschehen.

Tiere: Als Weihetiere sind zulässig: Pferde, Maultiere, Esel, Rinder, Schafe, Ziegen, ja sogar Hühner; nie nimmt man Schweine oder Hunde, weil sie unrein sind. Bei all diesen Tieren spielen Alter, Farbe, Geschlecht, Kastration keine Rolle. Weiße oder männliche Tiere werden auch nicht besonders bevorzugt. Große Tiere weiht man jetzt nicht mehr, weil die Tujen nicht mehr die großen Herden besitzen und zu arm sind. Meist gelobt man Schafe und Ziegen. Hühner werden oft gewählt, weil sie am billigsten sind [2].

Die freigelassenen Tiere bleiben gewöhnlich bei der eigenen Herde oder im eigenen Hause; denn sie sind daran gewöhnt. Laufen sie davon, so kümmert sich niemand darum. Pferde, Maultiere und Rinder behält eine Familie immer daheim und benutzt sie nach wie vor. Das war aber ursprünglich nicht so; es ist ein Abweichen von der alten Sitte, bedingt durch Armut und Feldarbeit.

Ein geweihtes Tier darf niemals getötet werden. Es muß eines natürlichen Todes sterben. Wird es vom Wolf gefressen, so braucht es nicht ersetzt zu werden. Tötet ein Bösewicht das Weihetier, dann trifft ihn die Strafe des Himmels oder Weihegottes. Auch darf man unter keinen Umständen ein geweihtes Tier zum Opfer schlachten; das wäre gleichbedeutend mit gewöhnlicher Tötung. Einerlei, wie das Tier ums Leben kam, niemals darf sein Fleisch genossen werden.

Es ist auch nicht gestattet, solche Tiere zu verkaufen oder zu verschenken, denn sie gehören dem Gotte. Wohl kann man es einem Kloster übergeben, wo es bis zu seinem Tode gepflegt und beschützt wird. — Für die Weihe darf ein Tier nicht durch Geld erworben werden; es muß immer geschenkt sein.

Über die geweihten Tiere wird nicht besonders gewacht, so daß sie sich frei bespringen können. Die Jungen zählen dann als profane Tiere und fallen dem ursprünglichen Eigentümer zu.

Ob das Tier dem Gott gefällt, offenbart sich beim Übergießen mit Milch. Schüttelt es sich nicht, so holt man unverzüglich ein anderes; die Zeremonien werden dann wiederholt. Aber jedes gesunde Tier schüttelt sich. Ist keine Milch da, dann löst man Tsamba oder Weißmehl in reinem Wasser auf, so daß es wie Milch aussieht. Manche Leute nehmen nur klares Wasser. Das gehört sich nicht.

Es gibt Götter, welche die Tiere reiten; so z. B. reitet der *Amtsiensa*

auf einer Wollziege und der *Lamusa* auf einem Maultier [3]. — Der Name der Tiere wird aber nicht von dem entsprechenden Gott genommen, sondern vom Weiheband. So heißen die Tiere Weihepferd, Weiheschaf usw. Die Chinesen sagen dafür „heiliges Pferd", „heiliges Schaf" usw.

Weihebänder: Die Bänder werden einfach „das Geweihte" benannt. Wenn auch alle heiligen Farben zulässig sind, so bevorzugt man doch dafür rot oder gelb. Woher das Band stammt und aus welchem Stoff es ist, ist einerlei. Hadastreifen, Kleiderreste, Woll- oder Seidenfäden, alles ist erlaubt. Die Größe ist verschieden, im Durchschnitt eine Elle lang und zwei Finger breit.

Das Band soll dem Tiere am Vorderkörper, und zwar in der obern Hälfte angeknüpft werden, z. B. an Mähne, Stirnschopf, Schulter. Bei Hühnern schlingt man es um den Hals. Verliert das Tier das Band, so wird es nicht ersetzt. — Man kann auch ein Band vom Geisterspeer, von der Geistersänfte usw. abreißen. Aber dann muß es später wieder ersetzt werden. Diese Bänder werden jedoch nicht mehr eigens abgeräuchert; sie sind schon durch ihre frühere Bestimmung rein [4].

Erneuerung der Weihe: Meist findet die Erneuerung im Ortstempel statt. Welcher Tag zwischen Neu- und Vollmond es ist, bestimmt der Wahrsager. Dieser Erneuerungstag muß dann lebenslänglich für das Tier beibehalten werden.

Man kann auch den ursprünglichen Weiheort wählen. — Weiheherr, Weihegott, Weihetier müssen immer dieselben bleiben. Nur wenn ein Tier sich beim Übergießen mit Milch nicht mehr schüttelt, wird ein anderes genommen.

Auch bei der Erneuerung werden alte verlorene Bänder nicht ersetzt. Es kommt aber jedes Jahr ein neues Band hinzu, so daß man an der Zahl der Bänder die Weihejahre feststellen kann.

Verbreitung: Die Tierweihe wird überall dort geübt, wo Tujen wohnen. Die Chinesen kennen sie nicht; nur vereinzelt machen sie es den Tujen nach, wo sie mit ihnen zusammenwohnen. Wohl haben die Fandse (Tanguten) und auch die Lamaklöster die Tierweihe. Dort ist sie viel feierlicher [5].

Wörterliste

Weiheband:	*šdier* (tib. Lehnw.).
	hung-tzu (chin.) = das Rote.
Das Weiheband anknüpfen:	*šdier fuya-*.
Das Weihetier:	*šdier*.

Anmerkungen

[1] Auch hier kann die Wahrsagung durch die Sänfte oder den Geistertisch geschehen, mit denen dann ebenfalls die Handlung überwacht wird.

[2] Im Tujenkloster Rgulön ist die Wahl der Tiere anders. Ein Lama und ein Schamane erzählten: Hunde weiht man nie, auch keine Hühner,

nur Hähne, diese aber in allen Farben. Von Pferden nimmt man nur Hengste; sie müssen schwarz sein mit einem weißen Stirnfleck oder grau (*ch'ing-ma*) von schwarz-weißer Mischfarbe. Von Maultieren nimmt man nur Stuten, keine männlichen Tiere. Deren Farbe ist ein leuchtendes Rotbraun. Bauch, Maul und Augenringe sollen hell sein. Von gewöhnlichen Rindern und Yaks nimmt man nur schwarze Stiere, die einen weißen Stirnfleck haben; ähnlich bei Schafen nur schwarze Böcke, fehlerlos und mit kreisrunden oder doppelgewundenen Hörnern. — Ich sah auch im Kloster dort solche Tiere; besonders schön war das geweihte Maultier; es sah einem wilden Chiang fast gleich. Die hier erwähnten Regeln lassen vermuten, daß es sich um mondmythologische Vorstellungen handelt (schwarz-weiß, kreisrunde Hörner). Auch ist die Bevorzugung von männlichen Tieren auffallend, mit Ausnahme der Maultiere. — Diese Regel ist auch im profanen Leben maßgebend. Leute, die etwas auf sich halten, reiten nur männliche Pferde (Wallach), aber weibliche Maultiere; auch die rotbraune Farbe mit weißer Mähne, weißem Schweif gilt als vornehm. Weiße Augenringe, Bauchdecke und weißes Maul sind bei allen Reittieren jeder Farbe sehr angesehen und beim Preise mitbestimmend. — Interessant ist noch, daß die Lamas von Ziegen keine schwarzen, sondern rotbraune Böcke bevorzugen.

Der Alte sagte, das gewöhnliche Volk würde sich um diese Regeln nicht kümmern, falls sie das Tier nicht dem Kloster schenkten. Sonst sei Farbe, Alter, Geschlecht, Kastration usw. belanglos, falls das Tier keinen körperlichen Schaden habe.

[3] Im Kloster Rgulön werden jeden Monat (am ersten oder fünfzehnten Tag) geweihte Reittiere prächtig gesattelt und auf den Säulengang des Haupttempels unmittelbar vor den Eingang geführt. Dort werden sie dem Gott (*Fo-yeh*) zum Reiten angeboten; dann läßt man sie laufen. — Vielleicht ist in diesem Zusammenhang erwähnenswert, daß die Tulkus (Inkarnationen) der Lamaklöster immer nur weiße Pferde reiten dürfen, die sonst nicht als vornehm gelten.

Welches nun die reitenden Götter sind, war nicht zu ermitteln. Der *Amtsiensa* entspricht dem chinesischen *Tan-chiao hao-hua*, und der *Lamusa* dem chinesischen *Lo-tzu t'ien-wang*, d. h. dem himmlischen Maultierkönig.

[4] Für die Bänder am Weihetier gibt es zwei Namen, welche sowohl vor der Weihe als auch nach der Weihe Geltung haben. Das eine ist der Name *šdien*, genau wie für die Bänder an geweihten Geistersitzen (Geisterspeer, -tisch, -sänfte). Aber während man dort den Gegenstand mitsamt den Bändern *šdien* nennen kann, wird hier niemals das Tier mit dem Band zusammen *šdien* genannt, sondern nur das Band allein; ein Hinweis darauf, daß das Weihetier nicht als vom Geiste besessen aufgefaßt wird.

Der zweite Name ist *šdier*; *šdier* entspricht dem mongolischen *seter*; vgl. DMF, p. 335, „*sdier*, ruban ou pièce d'étoffe attaché à la queue ou à la crinière d'un animal consacré aux divinités courant en liberté. Cf. mo. *seter*, ord. *se'l'er* id.". — Mit *šdier* bezeichnen die Tujen sowohl das Weiheband als auch das geweihte Tier. Das stimmt ebenfalls mit dem mongolischen Sprachgebrauch überein. Nach W. A. Unkrig (Mittlg.) ist *seter* ein

Band, das dem Tier in Mähne oder Schwanz gebunden wird. Man versteht unter *seter* auch das Tier selbst und den Ritus, in dem es geweiht wird. KOVAL. (1346) bringt für *seter* die tibetischen Äquivalente *bsruṅ rtags*. Das bedeutet nach JÄSCHKE (594 u. 212) soviel wie: Schutzgeist-Marke, wodurch deutlich wird, daß das Tier dem Schutzgeist gehört. Weder JÄSCHKE noch DAS haben die Wortverbindung *bsruṅ rtags*.

[5] Die Tierweihe bei den benachbarten Chiahsifan in Beńbar (Hsi-ch'uan) ist ähnlich der hier beschriebenen. Dort nimmt man aber nur zeugungsfähige Tiere, aber keine Esel. Bevorzugte Farben sind fuchsfarbenes Fell mit schwarzer Mähne und schwarzem Schwanz (*hung-tsao-liu*) und eischalenfarbenes Fell mit schwarzer Mähne und schwarzem Schwanz (*yin-k'uo*). Statt eines Stoffbandes nimmt man kleine, handgroße Läppchen (wimpelartig zugeschnitten) in den fünf heiligen Farben und heftet sie zusammen. Gewöhnlich werden sie in die Mähne gebunden. — Die Weihe wird nicht von Privatpersonen, sondern vom Lama, Schamanen oder Bonpriester vorgenommen. Es ist damit ein eintägiger Gebetsdienst verbunden. — Die Tiere werden gewöhnlich weiter zum Gebrauch im Hause behalten, auch geritten; nur darf nie ein Sattel aufgelegt werden, den eine Frau gebraucht hat. Die Erneuerung findet jedes Jahr am gleichen Tage statt, an dem die erste Weihe war.

In der Tat sieht man viele Reiter mit solchen bebänderten Tieren.

2. Das Dämonengeleit *

Bericht

Das Dämonengeleit besteht darin, daß man einen schädlichen Geist aus dem Hause führt und in die Ferne entläßt. Es geschieht auf Anordnung des Wahrsagers bei Familienunglück.

An einem festgesetzten Tage lädt man einen Lama zu sich ins Haus. Dieser betet sechs Tage unter den üblichen Zeremonien und unter Herstellung von mehreren Torma mit den entsprechenden Beigaben, wie sonst auch. Das Gehöft ist tabu, und der Hausherr bringt dreimal am Tage das große Weihrauchopfer dar.

Am sechsten Tage abends verfertigt der Lama das eigentliche Dämonen-Torma, welches mit allerlei Reiseproviant auf einen Tisch vor dem Hausaltar gestellt wird.

Am siebten Tage bringt man das Torma mit einem Reittier, das den Reiseproviant trägt, vors Dorf und entläßt das Tier. Es kann laufen, wohin es will, man kümmert sich nicht darum.

Einzelheiten

Personen: Das Dämonenentlassen kann vornehmen: ein Lama, aber nicht ein Hutuktu, ein Bonpriester, ein Schamane, ein Speerwahrsager oder andere Wahrsager mit Sänfte, Tischgott usw. Den sechstägigen Gebetsdienst nehmen jedoch nur Lamas und Bonpriester vor; das ist die große Entlassung,

* Anmerkungen siehe pp. 846-847.

wogegen die Zeremonie durch einen Schamanen oder Wahrsager allein die kleine Entlassung ist. Wenn auch bei der großen Entlassung der Lama alles allein vornehmen kann, so geht doch gewöhnlich ein Wahrsager mit (Speer, Sänfte usw.). Die Angehörigen der Familie besorgen alles andere, Bereitstellung von Tieren, Gaben usw.

Die Tiere: Als Tiere sind zulässig: Pferde, Rinder, Schafe, Ziegen, Hühner und Hähne. Nicht erlaubt sind Hunde, Schweine, Maultiere, Halbyaks. Hunde und Schweine gelten als unrein. Maultiere und Halbyaks sind zeugungsfähig; darum nimmt man auch keine kastrierten Tiere. Hier gelten nicht die Regeln wie bei der Tierweihe. Die Tiere werden von den Dämonen geritten und tragen auf deren Reisen die Last. Den Hühnern jedoch kann man nichts aufladen; man läßt sie einfach fliegen. Man gebraucht sie darum meistens nur bei dem „kleinen Entlassen". Besondere Zeremonien wie Waschen, Abräuchern werden an den Tieren nicht vorgenommen; auch sind Farbe und Alter belanglos.

Der Reiseproviant: In den Reisesack, der gewöhnlich aus Wolle gewebt ist, verpackt man folgende Sachen: Geld (einerlei welches Geld, falls es augenblicklich nur im Umlauf ist), Tuch (z. B. Baumwolle, Seide, Leinen, einerlei welcher Farbe), einen Strang ungesponnene Wolle, Baumwoll- oder Seidenfäden (keine Wollfäden), Teeblätter, gebackene oder gedämpfte Brote in beliebiger Zahl, einen Eßnapf aus Porzellan oder Ton (keinen gewöhnlichen hölzernen), neue Männerkleider, vornehme Stiefel, Tuchschuhe, eine vornehme Mütze oder einen vornehmen Hut, schwarzen und weißen Zucker, frische, gute Butter, ein Stück rohes Fleisch, Datteln, Äpfel und anderes Obst. Alle diese Sachen müssen neu sein; man darf sie auch nicht ein einziges Mal benutzt haben, denn sonst ist der Dämon nicht zufrieden und kommt wieder.

Entlassung: Am Abend des sechsten Tages verfertigt der Lama ein großes dreieckiges Torma [1]. Der Hausherr stellt es auf einen Tisch vor den Hausaltar, aber nicht auf den Altar. Dazu legt er den Sack mit den Kleidern und Eßvorräten.

Am folgenden Morgen, dem siebten Tage, lädt man den Speerwahrsager ein. Nach einem guten Frühstück ruft er den Geist und stellt genau die Stunde fest, in welcher der Dämon fortzubringen ist. Meistens geschieht es sofort im Anschluß an die Wahrsagung.

Ein Mann nimmt den Sattelsack, der Lama das Tablett mit dem Torma, das den Dämon darstellt, und hinter ihm folgt der Speerwahrsager unter ständigem Schütteln; er muß bis zum Schluß dabei bleiben. Sie ziehen vors Hoftor. Dort wartet ein anderer Mann mit dem Tier. Den Sattelsack legt der Hausherr auf das ungezäumte und ungesattelte Tier und führt dieses am Kopfgestell fort, gefolgt vom Lama, Speerwahrsager und den andern Männern. Der Zug geht auf dem gewöhnlichen Weg vor das Dorf hinaus. Außerhalb des Dorfes führt er das Tier ein Stück querfeldein, nimmt ihm das Kopfgestell ab und treibt es davon, und zwar in eine unbewohnte Richtung, damit es nicht wieder sofort ins Dorf zurücklaufen kann. An der

Stelle, an der man das Tier freigelassen hat, setzt der Lama das Torma nieder. Ein Mann richtet davor eine kleine Brüstung aus Lehmsteinen auf, und zwar mit der Breitseite nach dem Dorfe hin, damit der Dämon nicht mehr zurückkomme. Dann gehen alle nach Hause. Das Tier soll nicht mehr heimlaufen; man kümmert sich nicht darum, was mit ihm geschieht. Es gehört dem Dämon. Falls es später wieder zugelaufen kommt, treibt man es mit Stockschlägen davon.

Die einfache Entlassung: Außer dieser feierlichen Form gibt es auch noch eine einfache Entlassung, die nur einen halben oder ganzen Tag beansprucht. Man lädt einen Schamanen oder sonst einen Wahrsager ein, welcher die Sachen fortbegleitet. Es wird dabei nicht gebetet und auch kein Torma gemacht. Der Hausherr hält ein Huhn bereit und bringt die Reisekleider und Eßwaren auf einem Tablett vor den Hausaltar. Der Wahrsager oder Schamane zitiert den Geist und geht, gefolgt vom Hausherrn, mit dem Tablett hinaus aufs Feld. Dort schüttet man einen großen Strohhaufen auf. Die Sachen auf dem Tablett werden hineingeschleudert und das Ganze angezündet. Während die Flammen hochschlagen, läßt man das Huhn davonfliegen. — Wenn ein Wahrsager amtiert, dann geschieht die Handlung meist morgens. Nimmt ein Schamane die Entlassung vor, dann ist sie erst am späten Abend bei Einbruch der Dunkelheit. Der Schamane folgt im Trancezustand hinterher und schwingt sein Schwert im Kampfe gegen den Dämon. Auch wenn der Schamane beim „großen Entlassen" dem Lama an Stelle eines Speerwahrsagers folgt, führt er diesen Schwerttanz auf; aber das ist immer am hellen Tage [3].

Deutung: Der Dämon, welcher das Gehöft beunruhigt, soll mit allen erdenklichen Gaben und Bequemlichkeiten fortgeführt werden, damit er nicht mehr an seine alte Stätte zurückdenke. Die Gebete des Lama und auch das Torma richten sich nach dem Dämon. Einerlei, ob es eine große oder kleine Austreibung ist, die Wirkung ist dieselbe. Große Tiere können sich nur die Reichen leisten, und meist sind es heute nur noch die Lamaklöster, welche eine so teuere Zeremonie vornehmen. Stiehlt ein Bösewicht das Tier oder die Sachen, dann wird ihn der Dämon strafen.

Wörterliste

Dämonengeleit:	*rèdzòňwa* (tib. ?) *ǵarǵani* = das Fortzubringende bringt man fort.
das Dämonen-Torma:	*dzuor* (tib.) [1].
Sattelsack:	*dadzè* (chin. Lehnw.).
Inhalt des Sattelsackes:	*rdzè* (tib. Lehnw.) (evtl. Proviant).

Anmerkungen

[1] Diese Form von Torma kann man häufig in Lamaserien sehen. Sie sind speziell für Dämonen reserviert. Es ist meist eine Teigpyramide von 30-50 *cm* Höhe. Die Arten scheinen zu variieren. Ich sah solche, die mit Gedärmen behängt waren und Totenkopffiguren trugen (beim Bann des *mBarma* in Kumbum); andere hatten einen Pfeil mit einem Manirad in sich stecken usw. Es handelt sich offenbar um das tibetische *zor*, mongol. = *sor*

(UNKRIG). CH. DAS schreibt unter *zor* p. 1098: „reaping-hook, a sickle, a knife, esp. the weapons employed in combating the evil spirits in the *gtor ma* offerings, such as knife, sword, sling, bow and arrows." Sehr ausführlich ist die Herstellung, Weihe und Verwendung des *zor* bei POZDNEEV: Skizzen (p. 283 ff.) beschrieben: „*Zor* heißt eine dreieckige, innen hohle Pyramide, die aus Teig hergestellt und brennend rot gefärbt ist. Mit dem Stichel werden an ihr Figuren eingraviert, wie Blumen, Kreise, feurige Zungen usw., infolgedessen die ganze Pyramide durch und durch das Aussehen eines feurigen, flammenden Scheiterhaufens erhält. Auf der Spitze wird die Darstellung eines Schädels angebracht, der ebenfalls aus Teig hergestellt ist. Dann aber werden ebensolche Schädel am Fuße jeder der drei Ecken hingelegt. In die Mitte der Pyramide wird ein Pfeil gesteckt, an dem Hadak hängen, und der statt seiner Feder ein kleines Rad trägt ..." usw. (Übers. von W. A. UNKRIG). LESSING behauptet vom Pfeil im *zor*: „To this arrow attached a 'ghost or spirit', as my informants put it" (Yung Ho Kung, p. 148). — Ob und in wieweit dieser Pfeil im Dämonen-Torma mit dem Glückspfeil zusammenhängt, ist unklar. Man faßt das *zor* am einfachsten als Träger der Waffen auf, die von den Dämonen gefürchtet werden. Eine Ähnlichkeit mit dem waffentragenden und Dämonen bekämpfenden Gurtum ist nicht zu verkennen.

[2] Ähnliche Geisterentlassungen gibt es in vielen Variationen sowohl unter den Tujen als auch bei den Chinesen; überall ist der Grundzug gleich: man entläßt den Dämon mit vielen Geschenken, damit er nicht wiederkehre. Auch die feierliche Vertreibung des *mBarma*-Dämons in Kumbum ist nichts anderes als eine solche Entlassung, nur unter komplizierterem Ritus und mit Aufwand ungeheuerer Geldmittel. Der Dämon wird dort von seinem Mutterbruder, einem ausgesuchten Manne, vertreten, während sein Bild verbrannt wird mitsamt den Faden(*mdos*)-Türmen. Im benachbarten Huchutale, z. B. in Kanchiapu, wird er im Teigbild dargestellt und dann von den Kindern zerschlagen und verspeist; in Tsungchai bannt man ihn in eine Art „Stadtburg" (*tu-ch'eng*) und verbrennt diese; weiter aufwärts in Kao-ch'iang-p'u setzt man ihn mit seinem Zubehör auf ein kleines Schiff und läßt ihn davonschwimmen.

3. Die Figurensänfte *

Bericht

Um die Kinder vor Unglück zu schützen, lädt man einen Bonpriester ein. Dieser bringt einen Begleiter mit, und dann halten sie einen siebentägigen Gebetsdienst. Während dieser Zeit verfertigen sie allerlei Figuren aus Tsamba.

Am letzten Tage setzen sie die Figuren in eine Papiersänfte und bringen sie mit zwei Torma an ein Flußufer oder eine Wegkreuzung. Dort wird alles verbrannt. Dadurch hindert man den Krankheitsdämon an seiner Rückkehr.

Einzelheiten

Zeit: Gewöhnlich findet die Zeremonie bei Krankheit eines Kindes statt. Sie kann aber auch sonst als eine Vorbeugungsmaßnahme gegen

* Anmerkungen siehe pp. 849-850.

3: Schröder AE9 Monguor

Krankheit vorgenommen werden. Dann wird mit Vorliebe der dritte oder neunte Monat gewählt.

Ort: Man bleibt im eigenen Hause und geht nicht in den Ortstempel; auch die Bonpriester wohnen im Gehöft. Der Ort ist während dieser Tage tabu. Das Verbrennen der Gegenstände muß immer außerhalb des Ortes geschehen.

Der Gebetsdienst: Für den Gebetsdienst bringen die Bonpriester eine große Doppeltrommel mit, welche an einen Balken gehängt wird[1]; ferner Klangteller, Handglocke, Knochenflöte und tibetische Gebetstexte. Der Gebetsdienst findet viermal am Tage statt, nämlich beim Sonnenaufgang, nach dem Morgentee, am Mittag und am Abend; jedesmal wird im Hofe das Weihrauchopfer dargebracht.

Die Sänfte: Die Sänfte sieht aus wie eine Totenlade, hat also die Gestalt eines kleinen Tempels mit beweglicher Tür. Nur ist sie fast ganz aus Papier, auch der Sonne-Mond-Aufsatz auf dem First. Zunächst macht man einen Boden aus einer weichen Lehmplatte. In diese Platte steckt der Bonpriester an den vier Ecken etwa 1 *m* lange Stäbe als Säulen, verbindet sie mit Querleisten und stellt so ein Gerüst her. Dieses wird mit Papier verklebt. Eine bestimmte Farbe ist nicht verlangt. Das Ganze setzt man auf zwei Tragstangen, daß es aussieht wie eine Sänfte. Darauf räuchern die Männer die Sänfte mit Zypressenweihrauch ab. Den Glühstein gebrauchen sie nicht. Die Arbeit wird nicht auf dem Kang, sondern auf dem Boden gemacht.

Die Figuren: Zuerst wäscht der Bonpriester eine Tonschüssel, räuchert sie ab, gibt Tsamba und Butter hinein und knetet sie gut durch. Im ganzen werden 81 Figuren geformt, neun Arten zu je neun Stück. Die Arten sind: Schaf, Ziege, Huhn, Schwein, Hund, Schlange, Frosch, Pferd und Rind. Diese Figuren setzen die Bonpriester in die Sänfte und räuchern alles zusammen ab. — Sowohl bei der Herstellung der Sänfte als auch der Figuren sind die Männer des Hauses behilflich. Bonpriester und Männer müssen sich jedesmal vorher waschen und abräuchern, sonst dürfen sie nicht Hand anlegen. Die Bonpriester begleiten die Arbeit mit auswendig aufgesagten Gebeten.

Die Begleitgaben: Da die Figuren klein sind, höchstens eine Handbreite groß, ist in der Sänfte noch Platz für allerlei Begleitgaben. Diese bestehen in Tibetgerste, weißer Gerste, Weizen, Bohnen, Hirse und einigen kleinen Broten. Dazu kommen noch weiße und schwarze Schafwolle, weißer und schwarzer Zucker, Geld, eine Rabenfeder, etwas Silber und ein Blatt Papier, worauf die Bonpriester die Bilder der Krankheitsdämonen gedruckt oder gezeichnet haben. Ist alles eingesetzt, so wird die Türe der Sänfte verschlossen und versiegelt und die Sänfte abgeräuchert. Dann stellt man sie vor den Hausaltar auf den Boden. Davor kommt ein dreieckiges Torma und ein weißer Pferdeschädel[2]. Der Schädel wird nicht abgeräuchert. Auf seine Stirn kleben die Bonpriester ein Bild eines Dämons. Manchmal wird noch ein Torma dazu gemacht.

Das Fortbringen: Am Abend des siebten Tages bestimmen die Bonpriester an Hand ihrer Wahrsagebücher genau die Richtung, in welcher die Sänfte fortgebracht werden muß. Sie selber gehen nicht mit, sondern bleiben auf dem Kang und beten unter Begleitung von Trommel, Klangtellern und Schelle die Banngebete. Vier Männer nehmen die Sänfte in die Hand, nicht auf die Schulter, und tragen sie in besagter Richtung zum Flußufer oder an eine Wegkreuzung außerhalb des Dorfes. Andere Männer folgen mit einem Kohlenbecken, einer großen Kiepe Stroh, mit dem Pferdeschädel und dem Torma.

Ist der Zug am bezeichneten Platze angekommen, so wird das Stroh auf den Boden geschüttet und die Sänfte in der festgesetzten Richtung daraufgestellt; nach der gleichen Richtung vor die Türe legt man den Pferdeschädel, und hinter die Sänfte stellt man das Torma. Damit alles gut brennt, schichten die Leute noch etwas Stroh ringsum auf und zünden das Ganze an. Ohne abzuwarten, ob alles in Flammen aufgeht, eilen sie nach Hause, und keiner darf sich umschauen.

Deutung: In der Sänfte wird der Dämon fortgetragen. Beim Verbrennen wird er freigelassen und geht in die Richtung, die durch die Stellung der Türe angedeutet wird. Damit er nicht mit dem Weg in Verlegenheit kommt, wählt man gerne Kreuzwege oder den Fluß, die ja eine bestimmte Richtung haben. Die Tiere und Beigaben sind Geschenke für die lange Wanderung [4]. — Auch die benachbarten ackerbauenden Fandse haben diese Sitte.

Wörterliste

Figurensänfte:	*Iərgundi*; zusammengesetzt aus *Iə* (tib.) = Dämon, *rəgun* = neun (tib.); *ndi* (tib. ?) = vollständig [3,5].

Er hat auf Papier den Dämon gemalt:	*tsialdzirə ilieni xuarladzia*.
Pferdeschädel:	*mori tolgud yəsə*.
Sänftenträger:	*ndi kurgədzin hun* = das Ganze (Sänfte ?) fortbegleitende Menschen.

Anmerkungen

[1] Die Trommel wird mit einem Ring an einen Zimmerbalken mit einem Stricke aufgehängt. Durch den zweiten Ring an der Trommel steckt der Bon einen Finger der linken Hand und zieht so die Trommel stramm, damit sie nicht baumelt. Zugleich hält er noch in der linken Hand einen Klangteller. In der rechten hat er Trommelschlegel und den zweiten Klangteller, so daß er durch geschickte Haltung beide Instrumente zugleich schlagen kann.

[1] Ob der Pferdeschädel das Reittier des Geistes darstellt, war nicht zu erfragen.

[2] Diese Worterklärung des Gewährsmannes ist unsicher.

[4] Diese Zeremonie hat viel Ähnlichkeit mit dem Figurenbann der Schamanen und dem Dämonengeleit. Ob der Bonpriester die kranke Person mit den Figuren berührt und so die Krankheit auf diese überträgt, wie das beim schamanistischen Figurenbann der Fall ist, konnte ich aus den Aufzeichnungen nicht sicherstellen. Vgl. folgendes Kapitel, Anm. 5.

[5] *šergundi* : tibetisch *bse* = Dämon, *dgu* = neun, *k'ri* (gesprochen *thi*) = Sänfte. Sinn : Neun-Dämonensänfte. — *šbawog* : tibetisch *sbal* (gesprochen *bal*) = Kröte, Frosch, *nag* = schwarz (UNKRIG).

4. Der Figurenbann [1] *

Bericht

Bei sehr schwerer Krankheit lädt man einen Schamanen ein, welcher eine Reihe Figuren macht, damit den Kranken berührt und die Figuren am Abend zum Verbrennen fortbringt.

Danach vergräbt er eine Reihe Gegenstände, um die Krankheitsdämonen niederzuhalten. Das Gehöft bleibt in dieser Zeit 3, 5, 7 oder 9 Tage für alle Fremden tabu, je nach der Krankheit, um die es sich handelt.

Einzelheiten

Die Figuren : Zum Figurenbann werden neun Arten von Sachen benötigt. 1. Fünf Papiermännchen [2]. Sie sind etwa 10-20 *cm* groß und von der Art der chinesischen Papierfiguren, welche beim Begräbnis verbrannt werden. Nur tragen sie hier Tujentracht, je nachdem es sich um männliche oder weibliche Dämonen handelt. Man kann sie auch einfach aus einem Stück starken Papiers ausschneiden ; meist jedoch werden sie mit Hilfe von Grasstengeln figürlich zusammengeklebt. 2. Fünf Tsambamännchen. Sie werden nicht gefärbt, sondern behalten die eigentliche Tsambafarbe. Auch tragen sie keine Kleider und werden geschlechtslos dargestellt. 3. Ein Schwein aus Tsamba. 4. Ein Huhn oder ein Hahn aus Tsamba. 5. Ein Hund aus Tsamba. 6. Ein Schaf aus Tsamba. 7. Eine Ziege aus Tsamba. 8. Eine Kuh aus Tsamba. 9. Ein Pferd aus Tsamba. Diese Figuren werden vom Schamanen mit Hilfe eines geschickten Mannes verfertigt, ähnlich wie bei den Figuren der Figurensänfte.

Dann werden sie mit folgenden Beigaben auf ein Tablett gestellt : einem Stück rohen Schweine-, Rind- oder Schaffleisches, einigen Tuchstücken und Fäden in den fünf heiligen Farben für die fünf Männchen, sowie Brot und Geld. Das Tablett setzt man vor den Hausaltar, stellt eine brennende Teiglampe davor und ein Becken mit Zypressenweihrauch oder einigen Weihrauchstäbchen.

Der Bann : Sobald es dunkelt, versetzt sich der Gurtum vor dem Hausaltar in üblicher Weise in Trance. Dann erhebt er sich, ficht mit dem

* Anmerkungen siehe pp. 851-852.

Schwerte in der Luft gegen die Dämonen und begibt sich so zum Kranken. Das Tablett bringt man ihm nach. Er nimmt mit der einen freien Hand eine Figur nach der andern vom Tablett, berührt damit unter ständigem Schwertschwingen und Murmeln von Zauberworten die kranken Stellen des Patienten und stellt sie wieder aufs Tablett zurück [5].

Dann stürmt er hinaus auf die Straße, und die Männer folgen ihm mit den Sachen, während er mit seinem Schwerte weiterkämpft. Sobald sie aus dem Dorfe sind und an einen Kreuzweg kommen, machen sie halt. Ein Mann schüttet eine Kiepe Stroh auf den Boden; darauf wirft man die Sachen vom Tablett hinein. Dann wird das Ganze angezündet. Man wartet nicht weiter, sondern geht eilends nach Hause.

Vergraben der Zaubergegenstände: Vor dem Hoftor bezeichnet der Schamane eine Stelle auf dem Boden: Die Männer graben dort sofort eine Grube. Dahinein setzt der Schamane, immer noch in Trance, neunerlei Sachen. Zunächst stellt er auf den Boden der Grube einen schwarzen Eßnapf; in den Eßnapf legt er glühende Kohlen, gießt reines Wasser darüber und legt ein Eisenmesser, einen kleinen Pfeil und Bogen, einen hölzernen Zauberdolch, eine schwarze Kette [3] und ein Stück Eisen von einem Stadttor hinzu. Über das Ganze stülpt er eine große irdene Schüssel [4]; die Männer werfen die Grube zu und ebnen sie ein, so daß man nicht mehr sieht, wo die Sachen vergraben sind.

Nun begeben sich alle ins Haus. Der Schamane erwacht aus seiner Trance.

Wörterliste

Figurenbann:	*rdzõṅwa* (tib. Lehnw.) [1,5,6].
Figuren (Männchen):	*rdzõṅrë* (tib. Lehnw.) [6].
rohes Fleisch:	*tögõ maxa.*
schwarzer Eßnapf:	*xara iga.*
schwarze Schüssel:	*xara pëndzë.*
Messer:	*tsidëguo.*
Zauberdolch:	*siral(dzin)* [6] *mpuru* = Gelbholz-Zauberdolch.
Kette:	*fsiasga.*
Eisen vom Stadttor:	*badzër-udie timur.*

Anmerkungen

[1] Über den eigentlichen Namen konnte ich keine Klarheit bekommen. Es scheint, daß daß *rdzõṅ* in *rdzõṅwa* dasselbe ist wie in *dzõṅrë*. Die Zeremonie ist der mit der Figurensänfte ziemlich ähnlich.

[2] Auch die Chinesen haben diese Papierfiguren bei ihren Dämonenaustreibungen; sie nennen sie *wu-tao shen*. Es ist aber nicht klar, ob es sich bei ihnen wirklich um fünf oder nur um einen Dämon handelt. Sie werden einmal im *shen-hsien t'ung-chien* erwähnt als *wu-tao lei-shen*, d. h. fünf-wegige Donnergeister, welche die Menschen durch Wind, Regen, Wasser, Feuer, Epidemien strafen.

[3] Der Zauberdolch und die schwarze Kette werden auch bei der Pfahlziege gebraucht; vgl. den betr. Abschnitt. Über die Art des Holzes bei diesem Dolch war keine Klarheit zu gewinnen. Der Gewährsmann nannte es

siraldzin; er übersetzte es mit dem chinesischen *huang-san* (*shan*) *tzu* im Sinne von Gelb-Berg (Holz). Im DFM steht die Übersetzung „armoise", Beifuß. Das kann hier unmöglich in Frage kommen. Es soll eine sehr feste Holzart sein.

[4] Die Kette fesselt die Dämonen, und die Schüssel kappt sie.

[5] Die Sitte, Krankheiten auf Tiere oder Tierfiguren zu übertragen, wird auch sonst von sibirischen Schamanen berichtet. Es ist aber dabei die Ähnlichkeit mit der oben beschriebenen Bonsitte zu beachten. Ursprünglich dürften es richtige Tiere gewesen sein, die geopfert wurden. Erst der Buddhismus hat diese Opfer bekämpft und abgeschafft. Dafür sind dann Substituts-Figuren aufgekommen. H. HOFFMANN: Quellen, p. 176 und 263, schreibt dazu: „... den verhaßten Rivalen die Tieropfer untersagt. In diesem Zusammenhange wird die interessante Tatsache erwähnt, daß man die Bon-po zwang, Abbilder von Yaks und Schafen aus Getreidebrei, sowie hölzerne Hirschköpfe mit breitem Geweih herzustellen, die hinfort als Substitute bei den Opferzeremonien zu dienen hatten. Die zuerst erwähnten, vermittels hölzerner Formen hergestellten Teigfiguren finden heute noch bemerkenswerterweise auch bei den Riten der Lamaisten ihre Verwendung"; vgl. a. a. O., wo auch die Literatur zitiert wird.

[6] *rdzönwa* oder *dzönre*: diesen beiden Wörtern liegt der tibetische Stamm *rdsons* = fortbringen (gesprochen: *dzon*), zugrunde. *siraldzin*: mongolisch *sira modon* = Gelb-Holz. Es ist eine besonders harte Holzart, Phellodendron Amurense (UNKRIG).

5. Die Krankenwaschung *

Bericht

Die Krankenwaschung wird vom Schwertschamanen bei Anbruch der Dunkelheit vorgenommen. Er versetzt sich wie üblich während des Weihrauchopfers in Trance, wirft dann einige Körner der Tibetgerste auf seinen flachgehaltenen Brustspiegel und wahrsagt, um welche Krankheit es sich handelt; dann nimmt er die Zeremonien vor. Am folgenden Tage beginnt das Tabu für das Gehöft, das je nach der Angabe des Schamanen drei, fünf oder sieben Tage dauern kann.

Die Zeremonie umfaßt drei Teile: die eigentliche Waschung, Feuerblasen und Heiltrunk. Die für die Waschung notwendigen Sachen werden von der Familie selber besorgt.

Einzelheiten

Die Krankenwaschung: Die Waschung findet in der Küche statt. Man benötigt dafür folgende Dinge: sieben Schalen frisches Wasser, ein Eisenmesser, ein Türschloß, sieben weiße Steine, eine Schale Schnaps, einige Blumen, drei, fünf und sieben Papierstücke mit bestimmten Gebetstexten, im ganzen sieben verschiedene Sachen.

In der Küche wird nun der Herdkessel gewaschen, abgeräuchert und auf die Feuerung gestellt. Der Hausherr zündet das Feuer an und wirft

* Anmerkungen siehe p. 854.

3:Schröder AE9 Monguor

Weihrauchzweige hinein. Nun kommt der Schamane, bereits in Trance, aus dem Haupthaus in die Küche; in der rechten Hand hält er sein Geisterschwert, während er die linke für die verschiedenen Verrichtungen frei behält.

Zunächst werden die sieben Schalen Wasser in den Kessel gegossen, und der Schamane wirft Weihrauchzweige und Tibetgerste hinein. Dann stößt er sich durch die Kleider sein Schwert in die Brust, zum Beweis seiner Kraft und um sich zu reinigen. Es fließt kein Blut.

Mittlerweile wird der Kranke in die Küche gebracht. Der Schamane entblößt dessen Brust und stößt das oben erwähnte Messer mitten hinein. Es darf kein Blut fließen. Blutet der Kranke, dann wird er nicht geheilt, blutet er nicht, dann ist er gerettet. Die Wunde klebt der Schamane mit einem der Gebetsblätter zu; das Messer wirft er in den Kessel.

Während dieser Zeit glüht ein Mann im Herdfeuer die sieben weißen Steine. Dann nimmt er sie mit einem Eisenlöffel heraus und reicht sie damit dem Schamanen hin. Dieser nimmt einen Stein nach dem andern in den Mund und speit sie in den Kessel. Hierauf wirft er die andern Sachen, das Schloß, die Blumen und die Gebetstexte ins Wasser und gießt schließlich die Schale Schnaps hinzu. Nun wird der Kranke vollständig entkleidet, und der Schamane wäscht ihn mit der einen freien Hand von oben bis unten ab, mit der Hand das siedende Wasser aus dem Kessel schöpfend. Dann wird der Kranke ins Haus auf seinen Kang zurückgebracht.

Das Wasser bleibt im Kessel, und die Leute müssen an den folgenden zwei Tagen, wenn der Schamane schon fort ist, die Waschung wiederholen. Am dritten Tage gießen sie das Wasser vor dem Hoftore aus. Die Sachen, Schloß, Messer usw., können sie wieder für den Alltag gebrauchen.

Das Feuerblasen: Nach der Waschung begibt sich der Schamane in den Krankenraum. Während dieser Zeit entfachen die Männer im Hofe mit Schafmist und Holz ein starkes Feuer. Dahinein legen sie eine Pflugschar und glühen sie weiß. Ein Mann steckt einen Stock durch die glühende Pflugschar und bringt sie hinein zum Schamanen, der immer noch in Trance ist, sein Schwert aber einem andern Manne gegeben hat. Nun packt er die glühende Pflugschar mit beiden Händen mit einem Hada, das an seinem Brustspiegel hängt, leckt sie mit der bloßen Zunge ab, nimmt einen ordentlichen Schluck Schnaps und wendet sich zum Kranken. In starken Stößen bläst er den Alkohol aus seinem Munde über die Pflugschar, wodurch jedesmal ein starker Feuerstrahl zum Kranken geworfen wird. Dann bringt er die Pflugschar vors Tor und legt sie an den Fuß der Hofmauer. Dort wird sie von den Männern sofort mit Erde überworfen und zugemauert.

Der Krankentrunk: Nun geht der Schamane wieder in den Krankenraum. Ein Mann hält ihm einen eisernen Löffel hin. Er reißt ein Stück von seinem Schutzspiegel-Hada ab, legt es in den Löffel und wirft noch einige Gerstenkörner hinein. Dann gießt ein Mann den Löffel voll Wasser, hält ihn ins Herdfeuer, bis das Wasser siedet und Tuch und Gerste durchgekocht sind. Diesen Sud reicht er dem Kranken, welcher ihn sofort hinuntertrinken muß. Damit ist die Zeremonie beendet.

Der Schamane ruht sich von seiner Anstrengung aus, ißt zu Abend und geht heim.

Wörterliste

Krankenwaschung:	*ǵuändzi* (*ruändzie*) *ʃdzə ždani* = der Schamane Wasser kocht.
Schwertschamane:	*sgurdien.*
Messer:	*tsidiǵuo.*
Schloß:	*tsürguo.*
Glühstein:	*söddn̓*; *ts'u-t'an* (*ch'ü-t'an*) (chin.).
Gerstenschnaps:	*min̓-liu dtrasə.*
Blumen:	*tsidzig.*
Gebetstexte:	*dzayän̓* [1].

Anmerkungen

[1] *dzayän̓*: mongolisch *ḑayaǵan* (gesprochen *ḑayan*) = Glück, Schicksal usw.; Sinn: Schicksalsgebet (UNKRIG).

6. Die Hausreinigung *

Bericht

Ist jemand schwer krank, dann nimmt der Schamane mit den Männern des Hauses eine Hausreinigung vor. Dabei wird der Dämon aus dem Hause in eine Strohpuppe gebannt, aus dem Dorfe geschleift und verbrannt.

Einzelheiten

Sachen: Zur Austreibung benötigt man sieben Sachen: 1. Eine Fackel. Sie besteht aus einem Knüppel, den man mit Stroh umwickelt und in Öl tränkt. Es ist wenigstens eine Fackel erforderlich, meist jedoch sind es mehrere. 2. Ein Maß kleiner Kieselsteine, einerlei von welcher Farbe. 3. Eine Ölpfanne. Das ist meist nur ein großer Eisenlöffel, der mit Öl und glühenden Kohlen gefüllt wird, so daß eine starke Flamme entsteht. 4. Pfeil und Bogen. Der Pfeil wird mit Watte an der Spitze umwickelt; diese tränkt man mit Öl und zündet sie an. 5. Eine Hanfpeitsche. Sie ist gewöhnlich sehr lang, bis zu zwei Meter. Man flicht dazu drei sich verjüngende Hanfstränge zu einem Zopfe, der an einem Ende so dick ist, daß man ihn soeben in der Hand halten kann, wogegen das andere Ende fein zuläuft, damit es gut knallt. 6. Ein lebendes Huhn, einerlei welcher Farbe und welchen Geschlechtes. 7. Ein Strohmann [3]. Er ist sehr einfach. Man nimmt einen langen glatten Strohwisch, knickt ihn in der Mitte, schnürt mit Strohhalmen das obere Drittel ab, so daß ein Kopf entsteht, und zieht durch dieses Drittel quer einen kleineren Wisch hindurch, welcher die Arme darstellt. — Alle diese Sachen werden von den Leuten selber besorgt.

Austreibung: Gegen Abend bei einbrechender Dunkelheit versetzt sich der Schamane vor dem Hausaltar in Trance [1]. Während dieser Zeit läuft ein Mann mit dem Huhn vor das Dorf hinaus an eine Wegkreuzung, dreht oder hackt dem Huhn den Kopf ab und spritzt mit dem flatternden

* Anmerkungen siehe p. 855.

Huhn das Blut in alle Windrichtungen. Dann wirft er das Huhn als Speise für die Dämonen fort und geht heim. — Den Strohmann legt man auf die Schwelle des Haupthauses oder in den Hof.

Sobald der Schamane in Trance ist, springt er auf und führt, in wilden Sprüngen durch alle Räume des Gehöftes laufend, den Schwertkampf gegen die Dämonen aus. Ihm folgen die Männer. Es hagelt Steine auf den Boden. Mit den Fackeln kreist man in den Zimmern. Einer hält die Ölpfanne, schluckt Schnaps und bläst ihn über das Feuer in den Raum, so daß jedesmal ein roter Strahl entsteht. Andere knallen mit der Peitsche von Raum zu Raum und schießen brennende Pfeile auf den Boden. So wird der Dämon in die Strohpuppe getrieben. Diese schleift man an einer Hanfschnur oder einem Strohseil zum Tor hinaus über die Dorfstraße bis zum nächsten Kreuzweg, wo das Huhn liegt. Der Schamane folgt fechtend mit seinem Schwert; auf die Puppe regnet es Steine, Hiebe, Feuerpfeile, Feuerstrahlen. Am Kreuzweg wird sie liegengelassen. Die Männer gießen das Öl aus der Pfanne über sie, werfen die Fackeln, Pfeile, Steine usw. darauf und lassen sie schwelend zurück [2].

So wird der Dämon gebannt. Der Schamane geht heim und nimmt sein Abendbrot.

Wörterliste

Hausreinigung:	*rdzönwa* (*rědzönwa*).
die Fackel:	*huo-pa* (chin.).
die Steine:	*tašě*; *sa-shih* (chin.).
Ölbecken:	*ǧal-tuǧuo*; *yu-kuo* (chin.).
Feuerpfeil:	*ǧal sěmu*; *huo-chien* (chin.).
Feuerbogen:	*ǧal lěmu*; *huo-kung* (chin.).
die Hanfpeitsche:	*uluosě yudier*; *ma-pien-tzu* (chin.).
das Huhn:	*tagů*; *huo-chi* (chin.), *huo*: hier = leben.
der Strohmann:	*šdagu kun*; *ts'ao-jen* (chin.).

Anmerkungen

[1] Vor der Austreibung wahrsagt der Schamane mit Gerste auf seinem Schutzspiegel, um welchen Dämon es sich handelt.

[2] Diese Form der Austreibung ist die allereinfachste. Meist werden noch allerlei andere Zeremonien damit verbunden. Ich sah einmal einen solchen Schwertschamanen, wie er bei Chinesen ein Kind heilen wollte. Er warf mit Schwert und Lanze um sich, zerhackte das Huhn, zerhackte einen Strohmann, schwang eine Worfel und ein Sieb, tanzte und schäumte.

[3] Auch die Chinesen gebrauchen oft diese Strohpuppen, welche sie auch ohne Schamanen aufs Feld oder auf Wegkreuzungen werfen. — In dem Tujenkloster der gelben Sekte, Rgulöň, sah ich einmal auch Bonpriester, die vom Kloster geladen waren, um am fünfzehnten Tag eines jeden Monats einen Dämonenbann vorzunehmen. Auch sie machten einen Strohmann, von dem sie sagten, daß der *Namśri* durch ihre Gebete hineingebannt würde. Am letzten Morgen banden sie vor Sonnenaufgang diese Strohpuppe an eine Manistange und zerhackten sie mit ihren Messern.

7. Die Erdgott-Urne *

Bericht

Wenn im Hause Unglück herrscht, dann bestimmt manchmal der Wahrsager, daß der Erdgott erzürnt ist und eine Urne haben will. Diese Urne wird an einem vom Wahrsager angegebenen Tag in die Erde vergraben. In der Urne befinden sich allerlei Gewürze, die von einem Lama eingefüllt werden. Das geschieht nach siebentägigem Gebet in der Familie selbst. Während dieser Tage ist das Gehöft tabu.

Meist sind es mehrere Urnen; denn für eine bemüht man den Lama nicht. Nachdem er am letzten Tage die Urne mit Gewürzen gefüllt hat, übergießt er sie mit flüssiger Butter, bindet sie mit einem Tuche zu, versiegelt die Schnur und malt außen ein *nuru*-Zeichen darauf. Dann wird die Urne abgeräuchert und mit geweihtem Wasser besprengt, worauf der Hausherr sie auf die Lade vor dem Buddhabild stellt.

Vor die Urne stellt man die üblichen Wasserschälchen, Butterlampen, Getreideschälchen usw. Die Urne steht aber nicht auf dem blanken Ladenboden, sondern zuerst legt man ein Blatt Papier als Unterlage hin, streut einige Zypressenblätter und Gerstenkörner darauf und stellt die Urne darauf. Nun kommt der Lama vom Kang herunter, setzt sich auf die weiße Filzmatte vor der Urne und betet das Weihegebet [1].

Während dieser Zeit wird der Speerwahrsager geholt. Er gibt nun genau die Stunde an, in der die Urne eingegraben wird. Der Hausherr stellt die Urne auf ein Tablett, und der Zug bewegt sich hinaus in die vom Wahrsager angegebene Gegend. Der Wahrsager folgt mit dem herbeigerufenen Speergott und gibt dann auf den Fuß genau die Stelle an, wo die Urne begraben werden soll, auch die Tiefe bestimmt er. Meist sind es 1-2 Ellen. Auf den Boden der Grube werden einige Zypressenzweige gelegt. Darüber streut der Wahrsager mit der Speerspitze einige Gerstenkörner, und auf das Ganze legt man einen oder mehrere flache weiße Steine, je nachdem wieviel Urnen es sind, und stellt die Urne darauf. Auf die Urne kommt dann wiederum ein flacher weißer Stein wie ein Deckel. Schließlich wird der Zwischenraum zwischen Urne und Wand ringsum mit Zypressenzweigen ausgestopft und alles mit Erde zugeschüttet, festgestampft und eben gemacht. Dann verbrennen die Männer vor der so eingegrabenen Urne Zypressenweihrauch und machen Kotou. Der Lama bleibt auf seiner Matte noch einige Zeit davor sitzen und betet seine Gebete zu Ende. Dann gehen alle heim.

Einzelheiten

Die Urne: Die Urne ist ein gewöhnliches Tongefäß, wie sie in Chinghai gebrannt werden. Meist sind sie von weißgelber Farbe, etwa 20-30 *cm* hoch, mit einem dicken Bauch und einem engen Hals. Die Urne für den Erdgeist soll ungefärbt und nicht glasiert sein, wenigstens nicht von außen, und soll einen flachen Boden haben. Der Hausherr kauft die Urne selber, wäscht sie

* Anmerkungen siehe pp. 858-860.

gründlich und bestreicht sie außen mit Gips- oder Kalkwasser, denn nur weiße Urnen werden dem Erdgeist geschenkt. Am Schluß wird sie abgeräuchert und ist gebrauchsfertig für den Lama.

Inhalt der Urne: In die Urne kommen die fünf Getreidearten, nämlich: blaue, tibetische Gerste, roter Weizen, weiße Gerste, weißer Reis [2] und gelber Raps. Die Gewürze sind dieselben wie beim Weihrauchopfer, die guten Sechs. Dazu kommen noch kleine Blättchen Buddhagold, Silberstückchen, Korallen, Perlmutterstückchen, manchmal noch seltene Steine oder Wasser, dann fünffarbige Seidenfäden, weißer und schwarzer Zucker, Teeblätter und einige Butterkügelchen.

Das Einfüllen: Zunächst besorgt man einen Mörser mit Stößel, eine große irdene Schüssel und einen sauberen Eisenkessel. Alle diese Gegenstände werden gut gewaschen und im Weihrauchfeuer abgeräuchert. Das Gewürz wird im Mörser zu Mehl zerstampft und dann vom Lama in die Schüssel geschüttet, wo es mit den fünf Arten Getreide gut vermischt wird. Die Menge richtet sich nach der Größe der Urne. Währenddessen zerläßt der Hausherr im Eisenkessel über dem Feuer einen Klumpen Butter. Der Lama gießt mit einem Löffel diese zerlassene Butter zu der Getreide- und Gewürzmischung und knetet alles gut durcheinander.

Diese Mischung füllt er in die Urne, jedoch nur zu einem Drittel. Über diese erste Füllung legt er eine Schicht mit den andern Zutaten, Gold, Silber usw. Dann werden die restlichen zwei Drittel, fast bis zum Rande der Urne, nachgefüllt und mit flüssiger Butter fast bis zum Überlaufen übergossen. Der Hausherr bringt ein gelbes oder rotes Hada (oder Tuch), räuchert es ab und reicht es dem Lama. Der bindet damit die Urne zu, und zwar in dreifacher Lage, wobei die Farben gelb und rot abwechseln können. Auch der Faden, der um das Tuch geschlungen wird, muß gelb oder rot sein und wird vorher abgeräuchert. Ist alles gut verknotet, dann wird der Knoten mit Siegellack überzogen [3] und schließlich mit einem Siegel, das tibetische Zeichen trägt, abgestempelt. Danach malt der Lama mit roter Farbe, meist roter Erde, auf die weiße Urne ein *nuru*-Kleinod, was soviel wie Schatz bedeuten soll. Dadurch wird die Urne als ein Schatz für den Erdgott kenntlich gemacht [4].

Personen: Die Urne kann nur ein Lama herrichten, der besondere Vollmachten besitzt. Man holt nie einen lebenden Buddha dafür. Wohl kann dieser sie in seinem Kloster herstellen und weihen. — Da man die Urnen auch im Kloster bestellen kann (vorrätig sind sie nicht) so kann auch der Hausherr sie dort abholen und zu Hause ohne Lama eingraben. Aber immer muß das unter der Assistenz eines Wahrsagers und in Gegenwart eines zitierten Geistes geschehen. — Will man aber mehrere Urnen begraben, so muß das immer durch einen Lama geschehen, auch wenn die Urnen im Kloster gekauft wurden. — Will man zu Hause mehrere Urnen anfertigen lassen, dann holt man mehrere Lamas zu gleicher Zeit [5]. — Einerlei, ob die Urne von einem oder mehreren Lamas oder vom Hausherr eingegraben wird, für die Zeit ist das Gehöft immer tabu.

Ort: Der Ort, an dem die Urne begraben wird, muß immer so gewählt sein, daß ihn kein Mensch oder Haustier entweihen kann. Niemand darf über einen solchen Ort hinweglaufen. Darum vermeidet man Wege und öffentliche Plätze; denn der Ort wird ja nicht eigens gekennzeichnet. Im übrigen kann die Urne überall eingegraben werden, einerlei ob auf den Feldern oder auf der Weide, im Hof oder im Haus. Ja, man kann sie sogar in Hof- und Zimmerwände einsetzen und vermauern.

Sinn: Der Inhalt der Urne sind die Schätze und Erträgnisse der Erde, alles, was in den Bereich des Erdgottes oder auch des Berggeistes gehört. Man will diese beiden Geister durch diese Kostbarkeiten erfreuen, damit sie die bösen Erdeinflüsse niederhalten und die Menschen vor Unglück schützen. Es ist so, wie wenn man Amtspersonen Geschenke macht [6].

Wörterliste

Erdgott:	*glu(glē)*.
Erdgott-Urne:	*sēnog-der*; *sēnog* (tib.) = meditieren; *der* (tib.) = Urne, Flasche.
eine Urne kaufen:	*sēnog-der bula*; *bula* = kaufen; aber nur für die geweihte Urne gebraucht, sonst heißt kaufen *awu-*.
Inhalt der Urne:	*rdzē* (tib.) [7].
allerlei Füllsel:	*yilē tawa ndzuomladzi* = allerart — Füllsel — vollständig seiend.
Urnenbinde:	*ama budzin* = Öffnung-Gebinde.
Siegellack:	*latsia* [8].
Glückskleinod:	*nuru* (tib. Lehnw.) [9].
Buddhagold:	*fo-chin* (chin.).
Korallen:	*fsurē*.
Perlmutter:	*mādog* (tib. Lehnw.).
Weißer Reis:	*tsigan tudurga*; *no-mi* (chin.).
Gelber Raps:	*sira yānsgar*; *shen-ts'ai-tzu* (chin.) = Geister-Raps.

Anmerkungen

[1] Wie sonst immer, wird auch hier vom Lama ein Torma gemacht, das ins Freie getragen wird. Es war leider nicht mehr möglich zu erfragen, ob dieses Torma auf den Platz gestellt wird, wo die Urne vergraben wird, etwa als Opfer für die zu beschädigende Erde, ähnlich wie beim Haus, beim Feuerguß, beim Leichenofen usw.

[2] Warum hier zweimal Weiß gebraucht wird, weiße Gerste und weißer Reis, ist unklar. Reis wird sonst bei den fünf Sorten Getreide nie benutzt und kommt auch in Chinghai gar nicht vor. Vielleicht ist das ein Hinweis auf südliche Herkunft der Urne.

[3] *Latsia*, wie der Siegellack heißt, ist bei chinesischen Händlern erhältlich.

[4] *Nuru* nennen die Tujen das Glückszeichen, das aus mehreren muschelförmigen Eiern besteht und mit Flammen umgeben ist. Dieses findet sich sehr häufig in der lamaistischen Symbolik und wird auch vom Luft-Pferd getragen. Es ist das *cintāmaṇi*. Vgl. oben: Totenbräuche und Leichenverbrennung, Anm. 2.

[5] Wie die Lamas in Kumbum behaupten, gibt es eine große Anzahl von Schatzurnen, und für jede Art werden besondere Gebete gebraucht. Mit

Vorliebe würde man die Urnen in Obos vergraben. — In Kumbum nennt man die Urnen gewöhnlich *benba*, was dasselbe zu sein scheint wie das tibetische *bum-ba*, Gefäß. Ein anderer Name ist *xdēr-wēm*, was wohl dem tibetischen *gter-bum* entspricht: Schatzgefäß; chinesisch *pao-p'ing*. Der Ausdruck *sēnoġ-dēr* (vgl. Abschnitt: Manibaum und Mittelburg) kommt vielleicht daher, daß die Urne unter gewissen Beschwörungsformeln, *snags* (*dharani*), geweiht wird, also einen Zauber-Schatz darstellt.

Dieser Erklärung zufolge handelt es sich um ein Opfer an den Erdgott. Die Auslegung dürfte aber nicht genügen. Man muß die Urne in ihrem weiteren Zusammenhang betrachten. Sie kommt im Tujen-Brauchtum immer wieder vor, beim Glückspfeil, bei der Rundkrippe, im Obo, in der Tschortenkammer, und zwar in zweifacher Form: einmal als Sitz einer Gottheit, welche durch die Spruchrolle, Seidenwicklung usw. in die Urne versetzt wird; ein andermal ohne diese Gottheit, wie z. B. die Begleiturnen der Mittelurne in der Tschortènkammer und Mittelburg, oder, wie in dem vorliegenden Abschnitt, allein. In diesem Falle ist sie als eine Darstellung der Erde mit ihren Lebens- und Keimkräften und ihren Schätzen aufzufassen, wie oben im Abschnitt über den Glückspfeil dargetan wurde. Im andern Falle nimmt der Erdgott in seinem Reiche (Urne) seinen Sitz. Die Urne gehört eben als ein Teil in die Darstellung des Weltbildes (Maṇḍala), als das Reich der Erdgötter.

Welches diese Erdgottheiten nun sind, ist unklar. Jedenfalls gehören die *ġlu* (tib. *klu*) oder *Nagas* dazu. Aber außerdem wird bei den Tujen auch noch ein anderer Erdgott verehrt, der vielleicht chinesischer Herkunft ist; denn wie die Chinesen haben auch sie ein Schweineopfer zu Ehren des Erdgottes und gewisse Zeremonien der Abbitte, die mit einem Getreideopfer verbunden sind. Sie werden besonders bei Erdarbeiten, Hausbau usw. geübt, oder wenn jemand bei Erdarbeiten zu Schaden kommt. Leider konnte ich diese Zeremonien nicht mehr aufnehmen. Ob dieser Erdgeist männlich oder weiblich ist, läßt sich nicht bestimmt feststellen.

Eine andere in Frage kommende Gruppe sind die *Sman*. Ein Teil der Füllsel heißt ja *ġlu-smän* (tib. *klu-sman*); vgl. oben Kapitel: Das Weihrauchopfer, Anm. 11. Nach H. Hoffmann: Quellen (p. 160 ff.) ist über die *Sman* keine Klarheit zu gewinnen: „Wir können aus den Stellen, an denen sie erwähnt werden, nur eben schließen, daß es sich um Erd- oder Lokalgeister handelt." — G. Tucci: Tib. Painted Scrolls (p. 720 ff.) hält die *Sman* für die weiblichen Gegenstücke der Götter und erklärt die Verbindung zwischen Medizin und Weiblichkeit folgendermaßen: „*sman* means either medicine or women. The connection between the two meanings is perhaps given by the implication, that these *sman* were witches and that they were supposed to be possessed of the healing power with which, in shamanism, women are not rarely endowed." Und weiter unten: „ . . . but nothing prevents us from understanding *'lha* and their wives' . . ." — Wir hätten es also bei der Schatzurne mit den *klu* und deren weiblichen Gegenstücken, den *sman*, zu tun.

Das Vergraben der Schatzurne wird von den Chinesen oft mit dem Vergraben anderer Geschirre gleichgesetzt. Das ist aber zweierlei. Chinesen und Tujen bringen oft Teeschalen, Schüsseln u. dgl. mit der Öffnung nach

unten in die Erde, um die Dämonen zu bannen und niederzuhalten. Diese Sitte entspringt aber schamanistischen Praktiken, wie sie auch die Taoisten haben. So werfen die dortigen Schamanen Teeschalen in die Luft oder auf den Boden, damit die Dämonen gekappt werden (das geschieht, wenn die Schale mit der Öffnung nach unten fällt), z. B. beim Errichten der Wetterburg, beim Messerklettern, beim Krankheitsbann usw.

[7] Über *rdzē* vgl. Abschnitt : Das Weihrauchopfer, Anm. 4. Diese Zutaten werden zum großen Teil von den Chinesen als *yao* (*yüo*) bezeichnet und sind nicht nur im Sinne von Medizin aufzufassen. Unter *yao* fällt alles Mögliche, das eine besondere Wirkung hat : Mineralien, Pulver, Gewürz, Muschel-, Gold-, Silberstückchen und Füllsel der Schatzurne. Lamas aus Kumbum und Bengbar erzählten mir, es gäbe etwa 30-40 Arten von Schatzurnen mit verschiedener Füllung. Eine der kostbarsten ist die, welche *mani-ruru* (Kügelchen) enthält. Diese Kügelchen vermehren sich, sie „werfen Junge", wie die Leute sagen, und erfüllen die ganze Urne ; vgl. Abschnitt : Totenbräuche, Anm. 2. CH. DAS (p. 874) nennt die Urnenbeigaben *bum rdsas* : „twenty-five articles (comprising consecrated objects and various sorts of medicines) required to be kept in the sacred-pot which contains the sacred water." Es handelt sich aber bei ihm um die Weihwasserurne, *bum pa*. Vgl oben das Kapitel : Das Weihrauchopfer.

[8] *latsia* : kommt aus dem Chinesischen ; *la-cha* = Siegellack. *nuru* : tib. *nor bu* ; auch *yid-bžin* genannt = ein Kleinod, das man wünscht (UNKRIG).

8. Der Feuerguß *

Bericht

Bei Familienunglück lädt man bisweilen den Lama ein, damit er den Feuerguß vornehme. Das dauert sieben Tage. Am ersten Tage kommt der Lama mit seinen Begleitern. Sie machen ein kleines Torma, das man ins Freie bringt und wegwirft. Danach wird das Tabu für den Hof eröffnet, indem man einen Zypressenzweig ans Tor hängt. Am zweiten Tage werden drei große Torma gemacht, die auf dem Hausaltar aufgestellt werden. Der Lama betet fünfmal am Tage. Am sechsten Tage nachmittags werden die unmittelbaren Vorbereitungen für den Feuerguß getroffen ; dies besorgen zwei bis drei Lamas, wobei noch wenigstens einer auf dem Kang sitzenbleibt und weiterbetet. Man holt den Speerwahrsager. Er bestimmt unter den üblichen Zeremonien des Speergott-Rufens den Ort für den Brandplatz beim Feuerguß.

Danach fertigt der Lama noch einmal ein Torma an und stellt es auf die Stelle, welche der Wahrsager bezeichnet hat. Er setzt sich auf eine Matte davor und betet die entsprechenden Gebete, während der Hausherr im Hofe das große Weihrauchopfer vornimmt. Dann wird das Torma hinaus vors Tor gebracht und fortgeworfen, damit es die Vögel fressen. Der Lama erhebt sich nun von seiner Matte und macht auf dem Brandplatz die Bodenzeichnung, und die Leute mauern mit einigen Back- oder Lehmsteinen davor eine kleine

* Anmerkungen siehe pp. 867-870.

Brüstung. Die Zeichnung wird für die Nacht mit Säcken oder Brettern überdeckt, damit niemand darüberläuft und sie dadurch verunreinigt.

Am siebenten Tage hält der Lama in aller Frühe seinen Gebetsdienst. Nach dem Frühstück rüsten die Leute draußen alles für die Zeremonie, und der Lama macht noch ein Torma aus reiner Butter. Dieses bringt er hinaus und setzt es auf die Zeichnung des Brandplatzes. Dann folgt die Zeremonie des Feuergusses, wobei allerlei Holz und Gewürze verbrannt werden.

Der Lama betet noch bis zum Abend. Am andern Morgen erhält er seinen Lohn und wird ins Kloster zurückgebracht. Aber manchmal behält man ihn noch einige Tage zum Beten da. — Nach dem Feuerguß bleibt der Hof wenigstens noch eine Woche tabu.

Einzelheiten

Personen: Der Feuerguß kann nicht von Schamanen, sondern nur von Lamas vorgenommen werden. Es sind aber keine gewöhnlichen Lamas. Es kommen dafür nur die drei obersten Klassen in Frage: die *Hutuktu*, die *Tsüordzi* und die *Känpo*. Man benötigt meist drei Lamas. Es genügt, wenn einer von diesen der höheren Klasse angehört; oft aber lädt man noch mehr ein [1].

Der Feuerguß kann von einer Privatperson (Mann oder Frau), von einer Einzelfamilie oder auch vom ganzen Dorf bestellt sein. — Bei der Zeremonie gelten die allgemeinen Meidungsvorschriften. Frauen können zugegen sein, dürfen aber nicht mithelfen.

Ort: Gewöhnlich findet der Feuerguß in einem Gehöfte statt. Geht die Sache vom Dorfe aus, dann bevorzugt man den Tempelhof. Man kann dann auch auf einen Berg gehen, jedoch nicht auf dessen Gipfel, sondern in halbe Höhe. — Die Brandstelle wird stets im einzelnen von einem Wahrsager angegeben.

Für den Ort der verschiedenen Arten von Feuergüssen gelten weiter keine Vorschriften. Eine Ausnahme bildet der schwarze Feuerguß. Dieser darf nie in einem Hofe oder Tempel oder im Dorfe vorgenommen werden. Man sucht dazu eine ganz entlegene Berggegend und hält sich dort in Zelten mehrere Tage lang auf.

Zeit: Der Wahrsager bestimmt schon Tage oder Wochen vorher das Datum. Kann der Lama nicht am festgesetzten Tage kommen, dann bittet man ihn um Angabe des Termins, und der Wahrsager bestimmt dann einen Tag innerhalb dieser Zeit. Die Zeremonie dauert immer sieben Tage; der eigentliche Feuerguß findet stets am Morgen des letzten Tages statt. Verbotene Zeiten gibt es nicht; er könnte auch vorgenommen werden, wenn die betreffende Familie noch ihre Trauerzeit hätte, oder noch eine Wöchnerin im Hofe wäre. Es dürfte aber in diesem Falle z. B. die Wöchnerin nicht zuschauen.

Torma: Im ganzen werden sechs Torma angefertigt. 1. Ein kleines Torma, wie immer beim Lamabesuch. Es ist das Unheil-Torma, nach dessen Wegbringen das Gehöft tabu ist. 2. Am Morgen des zweiten Tages folgen drei große Torma. Eines davon stellt den Gott (Buddha) dar, welchem der

Feuerguß dargebracht wird. Die beiden andern, welche ein wenig niedriger sind, symbolisieren seine zwei dienstbaren Begleiter. Die Farbe dieser Torma ist verschieden, je nachdem, um welchen Gott es sich handelt. Man stellt die Torma vor den Hausaltar oder in die Hauskapelle, und zwar erhöht in eine Kiste, die man mit einem Tuch oder einem Brett überdeckt, damit kein Tier (z. B. eine Katze) sie entweihen kann. Vor diesen Torma reiht man die Weihegaben auf: sieben Schalen reinen Wassers, eine Schale Gerstenwein, eine Schale Zucker, eine Schale Teigbohnen und einige Butterlämpchen. Diese Lämpchen bleiben Tag und Nacht brennen bis zum Schluß der Zeremonien. — Die drei Torma werden bis drei Tage nach dem Feuerguß stehengelassen und dann von den Familienmitgliedern gegessen. Man kann sie auch den Haustieren geben. Im Sommer aber sind sie oft schon so schimmelig, daß sie nur noch für Hunde in Frage kommen. Die Namen der drei Torma richten sich nach den Namen der Götter, die sie darstellen. Es ist so ähnlich wie bei den Ahnentafeln der Chinesen, welche ja ebenfalls aufgestellt und verehrt werden. — 3. Am Nachmittag des sechsten Tages wird ein fünftes Torma angefertigt. Es ist kleiner als die andern und stellt den Erd- oder Berggeist dar, weshalb es auch Erdgeist(Berggeist)-Torma heißt. Der Lama stellt es auf den zum Feuerguß ausersehenen Platz. Davor kommen als Weihegaben: drei Schalen Wasser, eine Schale Gerstenwein, eine Schale Tee, eine Butterlampe und drei Stengel Weihrauch. Der Lama besprengt das Torma mit Weihwasser aus der Wumbakanne, während der Hausherr davor Weihrauch verbrennt. Hierauf läßt sich der Lama auf eine Filzmatte nieder und betet ein Weihegebet, in dem er den Erdgeist bittet, den Brandplatz für den Feuerguß freizugeben. Nach dem Gebet setzt man das Torma auf eine Mauer oder wirft es auf dem Felde weg, damit es die Vögel fressen. Die Farbe dieses Torma ist weiß. 4. Schließlich wird noch ein sechstes Torma am Morgen des siebenten Tages verfertigt. Es ist nicht, wie die andern Torma, aus Tsamba mit Butter vermischt, sondern aus reiner Butter allein. Es stellt den Feuergott dar und ist darum feuerrot gefärbt. Vor dem Feuerguß wird es auf die Bodenzeichnung gestellt und nachher mitverbrannt.

Die Brandgaben: Für den eigentlichen Feuerguß werden folgende Sachen benötigt: 1. Brennholz und Lebensbaumzweige. Sie werden vom Gabenherr (d. h. der eigenen Familie) selber besorgt. Das Brennholz ist eine Elle lang. Es war früher nur Tannenholz in Gebrauch; heute nimmt man gerne Holz der Weißpappel. Man nimmt ast- und knotenfreie, armdicke Stücke, welche der Länge nach gespalten werden. Die Länge und das Freisein von Astknoten ist Vorschrift. 2. Butter, welche für den Feuerguß geschmolzen und ins Feuer gegossen wird. Sie soll nicht zu alt sein. 3. Zwei Stücke Holz vom roten und weißen Sandelbaum. 4. Eine ganze Menge Brandgewürze, welche die Familie selber besorgen muß; das sind: weiße Rapskörner, weißer Hanfsamen, schwarzer Hanfsamen, Weizen, Tibetgerste, weiße Erbsen, Klebreis, weiße Gerste, gewisse tibetische Kräuter, tibetische Blumen, eine tibetische Riedgrasart, Weißgras aus Chinghai. 5. Weiheholz. Das Weiheholz ist je nach der Art des Feuergusses verschieden. Für den

3:Schröder AE9 Monguor

weißen Feuerguß verwendet man Äste von der Weißpappel, im ganzen sind es 46 Paar Zweigstücke. Jedes Stück hat eine Länge von neun Fingerbreiten und muß drei Nebenzweige angesetzt haben. Diese Nebenzweige werden bis auf drei Fingerbreiten Länge abgeschnitten. Die Schnittflächen der Stücke müssen alle rechtwinkelig verlaufen, nicht schief. Die Rinde läßt man daran; man darf sie nicht beschädigen, sonst erhalten der Gabenherr und seine Angehörigen später einen bösen Hautausschlag. Um ein Rissigwerden zu vermeiden, beschmiert man daher die Schnittfläche mit Butter. Statt des Pappelholzes ist auch Tamariskenholz erlaubt. Dieses ist von Natur aus sehr gerade und astfrei. Darum dürfen sie im Gegensatz zu den Pappelstücken auch keine Astansätze aufweisen. Die Länge muß aber die gleiche sein. Die Farbe des Tamariskenholzes ist rot [2]. 6. Die sechs Gewürze des Weihrauchopfers. Sie werden ebenfalls vom Gabenherrn besorgt. 7. Die 74 Arten des Erdgott-Gewürzes, welche der Lama, schon zu Pulver zerstampft, mitbringt.

Herrichtung der Brandgaben: Die Brandgaben macht der Lama am Nachmittag des sechsten Tages zurecht. Er gibt von den Brandgewürzen jedesmal eine einzige Art in eine irdene Schüssel, mischt sie mit den fünf Getreidesorten, übergießt sie mit flüssiger Butter, bestreut sie mit den sechs Weihrauchgewürzen und dem Gewürzmehl der 74fachen Erdgottgewürze, mischt alles gut durcheinander und legt diese Mischung jedesmal in zwei Portionen auf ein Tellerchen, da er beim Feuerguß die Feuergaben in zwei Folgen ins Feuer werfen muß; also soviel Arten, soviel Tellerchen zu je zwei Portionen. Um die Gewürze vor Staub und Verunreinigung zu schützen, werden sie einzeln mit einem Blatt Papier zugedeckt. — Die 46 Paar Weiheholz-Stücke legt man zusammen auf ein eigenes Tablett. Die so hergerichteten Brandgaben besprengt der Lama mit Weihwasser und läßt sie auf den Hausaltar bringen.

Bereitung der Feuerstelle: Anschließend an die Zurichtung der Brandgaben bestimmt der Speerwahrsager den Platz für den Feuerguß; er wählt ihn meist im Hofe. Auf diesen Platz stellt der Lama das Erdgott-Torma mit den Weihegaben. Ist dieses dann fortgebracht, so mißt der Lama mit einer in Gips- oder Kalkmehl geweißten Schnur auf dem Boden ein Rechteck ab, etwa zwei Ellen im Geviert. Die Linien schlägt er auf den Boden, so wie es die Schreiner mit ihrer schwarzen Meßschnur auf Holz tun. In dieses Geviert zeichnet er ein zweites, parallel laufendes Rechteck, das etwa eine Handbreite kleiner ist. Dadurch entsteht ein Rahmen. Auf diesen Rahmen zeichnet er, ebenfalls mit weißem Mehl, mit Hilfe einer Holz- oder Lederschablone [3] acht Donnerkeile, nämlich in jede Ecke und auf jede Seitenmitte einen. Das Kalkmehl wird einfach über die Schablone gestreut, und wenn er diese fort-

Mandala beim Feuerguß.
(Zeichnung eines Tujen.)

nimmt, bleiben die Konturen der Zeichnung zurück. Die Donnerkeile laufen parallel der Rahmenrichtung, stehen also nicht quer dazu. Schließlich zeichnet er noch in die Rechteckmitte zwei sich kreuzende Donnerkeile [4].

Nun bauen die Männer mit Lehmsteinen eine kleine Brüstung auf einer Seite der Figur, während der Lama seine Gebete verrichtet. Diese Brüstung ist terrassenförmig. Die untere Schicht besteht aus zwei Reihen längsgelegter Steine, die zweite Schicht ist einen halben Stein eingezogen, und die dritte Schicht hat nur noch einen Stein. Die ganze Brüstung ist also sechs Lehmsteine hoch. Die Vorder- und Rückseite wird mit Lehm und Kalk verputzt und weiß getüncht. Die waagerechten Terrassen bleiben frei. Auf sie zeichnet der Lama wieder mit seiner Schablone je einen Donnerkeil, also fünf Donnerkeile im ganzen. Diese Brüstung soll den Lama vor dem Feuer schützen, da er beim Guß zu ebener Erde, oder nur ganz gering erhöht sitzt [5]. Nach dem Zeichnen zieht sich der Lama wieder zum Gebet ins Haus zurück.

Der Feuerguß: Am Morgen des siebenten Tages, gleich nach Sonnenaufgang, betet der Lama sein Morgengebet, trinkt Tee und macht das Feuer-Torma. Währenddessen wird draußen nach dem Weihrauchopfer alles für die Feuerzeremonie zurechtgemacht.

Neben den Brandplatz stellt man auf drei Steine einen großen Eisenkessel für die Butterschmelze. Ein Stoß Brennholz liegt daneben. Westlich der Brüstung legt man eine Filzmatte für den Lama; denn er sitzt immer mit dem Gesicht nach Osten. Manchmal stellt man noch einen breiten Kangtisch hin, der dem Lama als Sitz dient. Darauf legt man ein Stück breites Tuch, das er beim Feuerguß zum Schutz über die Knie legt, damit

Anordnung beim Feuerguß.
1. Sitz des Lama; 2. Tisch für Gebetbücher; 3. Tisch für Löffel; 4. Schutzwand; 5. Brandplatz (Bodenzeichnung); 6. Butterkessel; 7. Brett; 8. Tuchbahn; 9. Tablett mit Weiheholz; 10. Teller der Brandbeigaben; 11. Filzmatte. (Zeichnung nach Angabe des Gewährsmannes.)

ihm keine flüssige Butter auf die Kleider träufelt. Neben den Sitz legt man den Feuerfächer, bestehend aus einem Stück weißen Tuches, das mit zwei parallellaufenden Stäbchen versehen ist, so daß es der Lama mit beiden Händen fassen kann. Damit wird das Feuer befächelt; denn man darf es nicht mit seinem Atem verunreinigen.

Vor den Lamasitz und die Brüstung kommen ein kleiner Tisch für die Kultgeräte, Gebetbuch, Schelle usw. Rechts vom Sitz steht ein kleiner Tisch zum Ablegen des Gießrohres und des Löffels. Links neben den Lamasitz wird ein breites Brett oder eine ausgehobene Tür gelegt, worüber man einen Sack und darüber eine weiße Tuchbahn breitet. Darauf kommen das

3:Schröder AE9 Monguor

Tablett mit den Holzstücken und die zwölf Tellerchen mit den Brandgewürzen. Ferner werden bereitgehalten: mehrere Schlagfeuerzeuge oder eine Schachtel Streichholz, eine Butterlampe, eine Papierlaterne und eine Zündstange, wie sie auch bei der Leichenverbrennung gebraucht wird.

Nun kommt der Lama mit dem Feuer-Torma heraus und setzt es mitten auf die Bodenzeichnung auf eine Unterlage von Zypressenzweigen. Die Männer schichten hierum, nach oben sich verjüngend, in Achteckform das vorschriftsmäßige Feuerholz, in der Mitte einen leeren Raum um das Torma belassend. Diesen Raum füllen sie dann mit Zypressenzweigen aus. Hierauf überreicht der Gabenherr dem Lama feierlich ein Hada und bittet ihn, die Zeremonie zu eröffnen. Während er sich auf die andere Seite des Holzstoßes begibt und dort dem Lama gegenüber einen dreifachen Kotou macht, besprengt der Lama den Holzstoß mit Weihwasser und bestreut ihn mit Gerstenkörnern, über die er dreimal hingehaucht hat.

Jetzt schlägt der Gabenherr aus dem Feuerstein auf den ersten Hieb einen Funken, fängt ihn mit Hanfwerg auf, bläst ihn in einem kleinen Büschel Stroh zu einem Flämmchen und zündet damit die Butterlampe an. Mit dem Licht der Butterlampe wird dann die Papierlaterne angezündet. Die Zeremonie und die Regeln sind genau wie bei der Leichenverbrennung. Nun reicht man dem Lama die Zündstange. Er hält den Wergkopf derselben über die Butterlampe, bis er aufflammt, und setzt damit den Holzstoß in Brand. Sobald das Feuer hochschlägt, fallen alle Anwesenden auf die Knie und machen einen dreifachen Kotou. Falls das Feuer nicht gleich brennt, fächelt es der Lama mit dem Tuchfächer an. Nun folgt der Feuerguß.

Der Lama legt sich das Tuch über die Knie, nimmt das Gießrohr, legt es mit dem Ausflußende über die Brüstung, hält mit der linken Hand den Griff und gießt mit der rechten löffelweise flüssige Butter in den Abflußtrichter, so daß sie in einem Strahl ins Feuer fließt und heftig aufflammt. Nachdem er das einige Male getan hat, reicht man ihm die Tellerchen mit den Brandgaben. Mit den drei ersten Fingern der rechten Hand nimmt er jedesmal eine der zwei Portionen und wirft sie unter Segenssprüchen ins Feuer. Dann folgen einige Stücke Holz, dann wieder Buttergüsse, Tellerchen usw., bis alles im Feuer verbrannt ist. Der Lama betet nun noch unter dem Klang seiner Schlaginstrumente das Schlußgebet und begibt sich ins Haus zurück. — Er reinigt seine Instrumente, nimmt seine Mahlzeit, erhält seinen Lohn und reitet am folgenden Tag mit seinen Begleitern ins Kloster zurück, falls man ihn nicht noch für andere Gebete, die nichts mehr mit dem Feuerguß zu tun haben, dabehalten will.

Sieben Tage lang bleibt das Gehöft tabu, und in diesen sieben Tagen wird der Brandplatz so gelassen wie er ist. Danach wird die Brüstung abgerissen, und alle Spuren der Zeremonie werden beseitigt. Die Lehmsteine kann man wieder für profane Zwecke gebrauchen.

Arten des Feuergusses: Es gibt eine ganze Reihe von verschiedenen Feuergüssen, je nach der Gottheit, um die es sich handelt. Meist wird der Feuerguß zu Ehren der folgenden Gottheiten vorgenommen: des Pferdegottes, des Rindergottes, des Löwengottes und des wassergesichtigen Buddha.

Andere Arten richten sich nach der Farbe der Götter. So gibt es einen roten, gelben, weißen und schwarzen Feuerguß. Nach den Farben dieser Götter werden auch die Torma gefärbt, welche sie darstellen. Ebenso wird für die einzelnen Farben eine besondere Holzart gebraucht, so beim roten: Tamariskenholz, beim gelben: Weißdorn, beim weißen: Pappelholz und beim schwarzen: Schwarzdorn. Bei den drei ersten Feuergüssen sind die Zeremonien gleich, nur die Gebete variieren. — Besonders aber weicht der schwarze Feuerguß von den andern ab [6].

Der schwarze Feuerguß: Die Personen sind die gleichen. Der Lama und sein Gehilfe aber schmieren sich das Gesicht mit Ruß ein. Sie tragen auch schwarze Kleider. Alle Gegenstände sind schwarz, das Torma, die Filzmatte, die Brüstung, die Bodenzeichnung usw.

Statt des Brennholzes nimmt man Schweine- oder Kamelmist. Um das schwarze Torma auf der Bodenzeichnung steckt man schwarze Stäbe; daran werden die Därme eines schwarzen Schafes guirlandenartig aufgehängt. Die Därme sind nicht gereinigt, sondern voll Mist. An Stelle der Butter nimmt man schwarzes Leinöl, auch den Mist tränkt man damit, damit er besser brennt.

Die Brandgaben sind: schwarze Gerste, schwarzer Leinsamen, Samen des wilden Rapses, Weizen mit schwarzer Erde vermischt, dunkle Bohnen, schwarz gefärbter Klebreis, schwarz gefärbte Kräuter usw.

Als Weihegaben für die schwarzen Torma, welche die Dämonen darstellen, nimmt man Milch von einem schwarzen Schaf, Urin von einem schwarzen Esel in schwarzer Schale serviert, und als Weihrauch Schweinemist.

Der Ort für den schwarzen Feuerguß ist gewöhnlich eine abgelegene Schlucht. Dort schlägt man schwarze Zelte auf und wohnt mit dem Lama mehrere Tage in der Einsamkeit. Auf keinen Fall darf man den schwarzen Feuerguß in der Nähe von Tempeln oder menschlichen Behausungen vornehmen.

Bei Epidemien wird der schwarze Feuerguß mit Vorliebe angewandt, um die Krankheitsdämonen zu ärgern und so zu vertreiben; denn mit ihnen weicht auch das Unheil.

Sinn: Der Feuerguß ist ein Opfer für die Götter; sie sollen dadurch bewogen werden, Unglück und Krankheit abzuwenden [7]. Genau so wichtig wie die Feuerzeremonie ist auch das siebentägige Gebet des Lama. — Der Feuerguß ist bei Tujen und Fandse verbreitet. Auch in Lamaklöstern wird er vorgenommen.

Wörterliste [8]

Feuerguß:	*dzuntsiog* (tib. Lehnw.) [9], *suri* = Feuerguß gießen, DMF 73.
Feuerplatz:	*taw* (tib. Lehnw.) = Ofen, Feuerstelle.
Unheil-Torma:	*guag dor* (tib.).
	guag = Unheil; Gebet bei Anfertigung dieses Torma.
Erdgeist-Torma:	*glü-ldorma*.
Berggeist-Torma:	*yifula-ldorma*.
Feuer-Torma:	*gal ldorma*.
Erdgottgewürze:	*glu smän* (tib.).
	dalän dierän sämba smän = 74 Stück Gewürze.

Meßschnur :	*ldag pagdzin bödog* = Muster zeichnende Schnur.
Schablone :	*arasä xuar* = Leder-Form ; *tsialdzä xuar* = Papier-Form.
Brandplatzzeichnung (Maṇḍala) :	*tawni xuar.*
Brüstung :	*läṅgäṅ* (chin. Lehnw.).
Gußrohr :	*ige gäṅsär* (tib. Lehnw.) = großer Löffel.
Schöpflöffel für Butter :	*mula gäṅsär* = kleiner Löffel.
Löffel (profan) :	*dziegliu* (Tujen).
Tuchfächer :	*hi yüelwa* = Luft-Tuch.
	rlöṅ yäg (tib.).
Tuch (profan) :	*bosä.*
Zündstange :	*xuämbar.*
Feuerzeug :	*hidie.*
Geschlagenes Feuer :	*hidie gal* = Feuerzeug-Feuer.
Gewöhnliches Feuer :	*arönka gal.*
Beim Feuerguß-gießen gibt es keinen Verlust durch Unwetter :	*dsuntsiog surëwa, dierdzia sdzüen uguei.*
Beim schwarzen Feuerguß-gießen fliehen die Dämonen :	*xara dzuntsiog surewa, mö iliesgä xuoluode pusa sdzia (sdzim).*
Feuerholz :	*taw siṅ* (tib.) = Ofen-Holz.
Weiheholz : :	*yiew (ziew) -siṅ* (tib.).
Tibet-Kräuter :	*dziäṅgöṅ* (tib. Lehnw.) [4].
	tsang ts'ao (chin.) = tibet. Kraut.
Tibet-Blumen :	*känba* (tib. Lehnw.).
	ta t'ou mao hsiang (chin.).
Weißgras (aus Chinghai) :	*ndoluwä* [4] ; *pai-ts'ao* (chin.).
tibetisches Hartgras (Ried) :	*gusia* (tib. Lehnw.) [4].
	tsang hsi-chi (chin.).
Tamariske ? :	*guänbö (xuänbo)* ; *sögä.*
Pappelholz :	*mödä* = Holz.
Weißdorn :	*siraldzin* = Gelbdorn.
Schwarzdorn :	*xara rëguodzä.*
Pferdegott :	*ldamtsëni* (tib. Lehnw.) [4].
	ma-wang (chin.).
Rindergott :	*ndigsier* (tib. Lehnw.) ; *niu-wang* (chin.)
Löwengott :	*sändöṅmani* (tib. Lehnw.) ; *shih-wang* (chin.) [4].
wassergesichtiger Buddha :	*logon rëdziawu* (tib. Lehnw.) [4].
	shuei-lien p'usa (chin.).

Anmerkungen

[1] Andere Tujen behaupten, auch ein Bonpriester könne den Feuerguß vornehmen, was ja auch wenigstens beim schwarzen Feuerguß zu erwarten wäre. Aber der alte Gewährsmann und auch andere Leute streiten das entschieden ab. Nur ein Lama (*gelöṅgba*) käme dafür in Frage ; die Bonpriester würden sich nur mit Dämonenbann befassen.

[2] Über die Symbolik der verschiedenen Holzarten war nichts zu ermitteln. Das wäre interessant, besonders wegen der Forderung der Astansätze.

[3] Die Schablonen wurden früher aus Leder hergestellt. Heute sind sie meist aus Holz oder Pappe.

[4] Wie andere Leute und Lamas erzählen, gibt es eine ganze Menge verschiedener Bodenzeichnungen, die offenbar nur Variationen des Maṇḍala darstellen. So ließ z. B. mein Gewährsmann von einem seiner Verwandten die oben beschriebene Figur zeichnen. Er erklärte sie folgendermaßen

(siehe Fig. p. 863): Die Donnerkeile stellen die vier Hauptweltrichtungen und die vier Zwischenrichtungen dar. Der Kreis mit den gekreuzten Donnerkeilen bedeutet das Fundament des Weltenberges *rirā* (Sumeru); denn dieser ruhe auf einer goldenen Scheibe. Die Donnerkeile bedeuten Ruhe und Festigkeit und Dauer des Weltfundamentes. Ursprünglich seien sie aus Gold gewesen zum Zeichen ihrer Unzerstörbarkeit. Die Päonien seien das Sinnbild des aufblühenden Familienglückes. Der gleiche Sinn liegt auch dem Donnerkeil zugrunde, der in den Schöpflöffel für die flüssige Butter eingelötet ist. — Die Bedeutung der Päonien stimmt mit dem Brauch der Lamaserien und der Chinesen überein, im Hofe Päoniensträucher von verschiedener Farbe zu pflanzen. Tujen und Chinesen meinen, ein reicher, wohlhabender Mann hat immer einen Päonienstrauch vor der Türe. — Statt der Päonie malt man bei der Bodenzeichnung des Leichenofens Lotosblumen. Diese stellten den Lotos dar, auf welchem der Buddha säße, und aus welchem die Flammen der Verwandlung schlügen. Vgl. Kapitel Leichenverbrennung.

[5] Es gibt auch vier- bis sechsstufige Brüstungen. Nach Aussagen anderer trägt auch die Brüstung die Farbe des betreffenden Feuergusses, ebenso die Bodenzeichnung.

[6] Lamas berichten, daß es sehr viele Arten von Feuergüssen gebe, die vier hier genannten seien nur die vier Hauptarten. Auch hätten sie umfangreiche Bücher über die Riten. — Die Beschreibung dieser orthodoxen lamaistischen Riten würde ein eigenes Studium verlangen. Man vgl. dazu LESSING: Yung Ho Kung (p. 150-161). Dort ist von vielen Arten, wie sie im Kloster geübt werden, nur eine beschrieben und auch nur die Phasen „which can be easily observed by the inexperienced visitor" (p. 150). Ohne auf einen Vergleich mit der oben beschriebenen Form einzugehen, sei nur darauf hingewiesen, daß die Grundzüge gleich sind. Von den bei LESSING gekennzeichneten vier Hauptarten stimmt bei meinem Gewährsmann nur die Farbe überein; von den verschiedenen Formen des Brandplatzes (Maṇḍala) und den tibetischen-chinesischen Namen wußte er nichts. Auch sind die Adressaten des Feuergusses verschieden (p. 151); ebenso sind dort andere Brandgaben aufgezählt.

Es ist eben zu beachten, daß es sich bei den Tujen um eine einfache, volkstümliche Form handelt, die auch wieder nach Ort und Verhältnissen der Bevölkerung variiert. Daß das gewöhnliche Volk nichts von der komplizierten und zum Teil tantrischen Symbolik weiß, ist allzu verständlich. Ihm genügt es, wenn die Götter durch die Zeremonie Schutz und Wohlfahrt spenden, und wenn die Dämonen ferne bleiben.

[7] Das Ganze macht sehr den Eindruck eines Feueropfers. Aber der Gewährsmann meinte, damit hätte es nichts zu tun. Es sei ein Opfer an die entsprechenden Buddhas. Der Feuergott würde auch mitverehrt, wie das Torma beweise, aber er sei nicht die Hauptsache. Es ist aber kein Zweifel, daß es sich um ein Feueropfer, *Homa*, handelt (vgl. LESSING, a. a. O.). Allein schon der Tujenname kann nicht anders gedeutet werden als eine Verbalhornung des tibetischen *sbyin-sreg*. *sbyin* wird *jin* gesprochen, was in Anm. 8 (*žüin-tsëg*) ganz deutlich zu ersehen ist. CH. DAS schreibt p. 940 unter *sbyin-sreg*: „burnt offerings as made by Tantrik Buddhists", ... „*sbyin-sreg-gi*

rdsas clarified butter, articles necessary for burnt sacrifices". ... „*sbyin-sreg-gi yam-śiṅ* ... first wood necessary for the offering". (Zu *yam-śiṅ* vgl. das Tujenfremdwort *yiew-siṅ*) „*Homa* is the chief of all fire-sacrificials". — Das DMF hat p. 73 ebenfalls den Ausdruck *dzuntsioġ* und schreibt: „nom de certaines libations et offrandes". cf. tib. *t'sogs* „sacrificial offering". Dann bringt es die Wendung *lama dzuntsioġ fudzuruna* (= *surina*) und schreibt: „le lama fait des libations". Von einer Libation kann hier keine Rede sein, und das ... *tsioġ* (*ts'og*) ist auch nicht das tibetische *ts'ogs*, welches nach Ch. Das (pp. 1032, 1033) soviel wie „Anhäufung" und in Verbindung mit *'k'or* soviel wie „Opfer in einem Kreis (Maṇḍala)" bedeutet. — Obwohl der Gewährsmann nicht in erster Linie das Feueropfer betonte, übersetzte er doch das *dzuntsioġ* mit dem chinesischen *tao huo-t'an* = wörtlich: die Feuerfläche begießen = den Feuerguß vornehmen. F. Lessing (p. 150) hat dafür den Ausdruck *huo-t'an-i-kuei*, etwa: Ritus der Feuerterrasse.

* Zu den hier genannten Namen erfuhr ich in der Mongolenlamaserie tsa-tsang-szu und dem benachbarten Kloster Fu-hai szu oder Hsin-szu (Guämbasoma) westlich von Tangkar noch folgende Einzelheiten und Abweichungen:

Feuerguß: *żüin* (*yüin*)-*tsēġ*; vgl. die Tujen-Verbalhornung *dzun-tsioġ*.

Bodenzeichnung (Maṇḍala): *sdziṅkuor* (tib.)

Trennungsmauer: *lāmbān* (tib.). Vgl. *lāngaṅ* (tujen) und *lan-kan* (chines.).

Gußlöffel: *rgāṅ zār* (tib.).

Butterlöffel (für flüssige Butter): *ṭombō* (tib.).

Feuerholz (das in Achteckform auf den Brandplatz gesetzt wird): *xsiġ ġa* (tib.).

Weiheholz (das mit den Gewürzen ins Feuer geworfen wird): *yām śēṅ* (tib.); vgl. das Tujenwort *yiew siṅ*.

Holz für den weißen Feuerguß: *nia-rēx* (tib.) oder nach einer andern Aussprache: *niāw rsēġ* (tib.); *hsi-fan liu* (chin.) = tibetische Weide; *chi-chua liu* (chin.) = Hühner-Fuß-Weide.

Schwarzdorn: *tsērnaġ* (tib.); oder *sdzirwa* (tib.); *xara tsitsērnaġ* (mongol.).

Holz für den roten Feuerguß: *uombō* (tib.); *balaġ* (mongol.); *sā-liu* (chin.), wahrscheinlich ist das hochchinesische *sha-liu* (= Sandweide) gemeint.

Tamariske: *sōgā*. Dieses Wort ist auf alle Fälle mongolisch und tujen. Auch die Chinesen sagen dafür *so-kai*, offenbar eine Anlehnung an den Laut. Auch von Tibetern hörte ich dieses Wort. Es wird ebenfalls für den roten Feuerguß gebraucht. Man bevorzugt diese Gerten für Peitschenstiele.

Holz für den gelben Feuerguß: *maġa* (tib.); *dziāṅma* (mongol.); *chien-yang liu* (chin.); das Holz wird viel für Mühlenräder gebraucht; es scheint eine Ahornart zu sein. Auch sah ich es viel bei Schnitzern, welche es als das beste Schnitzholz loben.

Feuer-Torma: *dāmbala* (tib.).

gelber Feuerguß: *sēru dżiwi żüin tseġ* (tib.).

roter Feuerguß: *ġöngē dżiwi żüin tseġ* (tib.).

weißer Feuerguß: *siwi dżiwi żüin tseġ* (tib.).

schwarzer Feuerguß: *dżoġguei dżiwi żüin tseġ* (tib.).

Brandgaben: *rdzē* (tib., mongol.).

Butter: *marku* (tib.); *dasu* (mongol.).

Getreide: *nie* (tib.); *tara* (mongol.); mit *tara* bezeichnen die Mongolen dort die tibetische Gerste, *ch'ing-k'o*, welches das Getreide schlechthin ist.
Weizen: *dšö* (tib.); *budē* (mongol.).
Bohnen: *tšamā* (tib.); *burdzieg* (mongol.).
Gerste: *sö* (tib.); *sötara* (mongol.); wahrscheinlich ist es eine Zusammensetzung aus dem tibetischen *sö* und dem mongolischen *tara* (Getreide).
weißer Raps: *yöṅgur* (tib., mongol.); *pei-ts'ai-tzu* (chin.).
indisches Räuchergras: *ǵusia* (tib., mongol.); *wei-tzu ts'ao* (chin.); d. h. Schilfrohr-Gras. Offenbar handelt es sich um das bei FILCHNER: Kumbum, p. 88 und in Anm. 400 bezeichnete Kuśa-Gras, das aus Indien stammen soll.
Butter-Tsamba: *süosēn* (mongol.); ein Gemisch, zu dem auch noch andere Zutaten kommen.
blaue Blumen: *dżēyāṅgē* (tib.); *göxu* (nach anderer Mundart: *köku*) *dzidzigē* (mongol.); *lān-ts'ao* (chin.) = blaues Gras.
Einzelbeigaben: *tsiawar rdzē* (tib.).
vielerlei Beigaben: *ondöṅ rdzē* (tib., mongol.).
Mönchskraut: *durēwā* (tib., mongol.); *ping-ts'ao* (chin.) = Eiskraut; *tao-seng-ts'ao* (chin.) = taoistischer-buddhistischer-Mönch-Kraut; es wird statt *seng* (Mönch) auch das Zeichen für *sheng* geschrieben; das dürfte aber falsch sein. Um welches Kraut es sich handelt, ist mir unklar.

Sämtliche Namen sind nach dem Dialekt der Mönche in Tsatsang-szu aufgeschrieben, die meist aus der Gegend von Dulän (Tsaidam) stammen.

Tsüordzi: tibetisch *c'os* = Lehre, *rje* = Meister. Damit wird der Stellvertreter des Klosterabtes bezeichnet, Lehrmeister. — *Känbö*: tibetisch *mk'an* = Meister, *po* = Partikel. *mk'an po* = Abt eines Klosters, Professor, Haupt einer Lamaserie. — *gäṅsär*: tibetisch *gaṅ sa?* = Röhre. — *dziäṅgöṅ*: ist wohl entstanden aus dem tibetischen *gTsaṅ* = tibet. Provinz, und *sṅo* = Kraut. — *ndoluwa*: hängt vielleicht zusammen mit dem tibetischen *sgrol ba* = die Göttin *Dolma*, helfen, retten; sonst *Tārā* genannt. — *gusia*: tibetisch *ku ša* (aus dem Sanskrit) = botanisch Poa cynosuroides. — *sändöṅmani*: läßt sich auflösen in die tibetischen Wörter *seṅ* (sanskrit. *siṃha*) = Löwe, *gdoṅ* = Gesicht, *maṇi* = Kleinod. Es ist eine Göttin. — *šda(m)tsēni*: läßt sich auflösen in die tibetischen Wörter *rta* = Pferd, *mgrin* (gesprochen *din*) = Nacken, auch Stimme; also: der Pferdenackige, oder der Pferdestimmige. — *logöṅ*: tibetisch *klu* (gesprochen *lu*) = Drache, und *gdoṅ* = Gesicht. Wörtlich also: Drachengesicht (UNKRIG).

(Schluß folgt.)

[continued from p. 870]

Zur Religion der Tujen des Sininggebietes (Kukunor)

Von Dominik Schröder

(Schluß *)

Zweiter Teil: Analyse

Ein allseitiges Bild der Tujenreligion läßt sich erst im Rahmen einer größeren Kulturbetrachtung zeichnen, wobei auch die andern Urkunden aus dem reichen Sagen- und Liederschatz auszubeuten sind. Darüber hinaus verlangt ein Urteil über die kultur- und religionsgeschichtlichen Zusammenhänge einen Vergleich mit den benachbarten Chinesen, Tanguten, Mongolen und Yugur [1].

Zwar wurde darauf in den Anmerkungen des ersten Teiles weitgehend Rücksicht genommen, so daß jetzt schon feststeht, daß die Religion der Tujen und der lamaistischen Nachbarn sich in Vielen nicht voneinander unterscheiden. Aber eine weitere Auflösung und Zusammenfassung der Fragen

* Den ersten Teil dieser Arbeit siehe Anthropos 47. 1952. pp. 1-79, 620-658, 822-870. Zu dem Literaturverzeichnis ebd. pp. 2-4 findet sich ein Nachtrag am Ende dieses Artikels, siehe unten p. 259.

[1] Sehr aufschlußreich wäre auch ein Vergleich sowohl mit dem östlichen Nordchina (Tungusen) als auch mit dem Südwesten. Die Überlieferung der Tujen spricht von einer östlichen Herkunft; und die von ihnen im heutigen Amdo überlagerten Völkerschaften gehörten ursprünglich zu den Ch'iang, von denen große Teile nach Süden ins jetzige Kham, Sechuan und Yünnan abwanderten. Diese Auffassung wurde schon lange von den Chinesen vertreten; vgl. Jen Nai-ch'iang-Schröder: Die Fandse, p. 1 f. Sie wurde jetzt von Prof. Dr. J. F. Rock für die Na-khi bestätigt. Ein Vergleich mit deren Religion rechtfertigt sich umso mehr, da sie die vorbuddhistische Form viel unverfälschter bewahrt hat als die Religion des Stammlandes, das im Wirkungsbereich der gelben Kirche (Kumbum) liegt; s. unten pp. 254 ff. Überdies besitzen die Na-khi eine religiöse Literatur, in der das alte Brauchtum eindeutig festgelegt ist, und die J. F. Rock verarbeitet und veröffentlicht hat; vgl. zum Ganzen J. F. Rock: Na-khi Kingdom; ders.: Nâga Cult I, p. 2 f.; und Muan Bpö, p. 7. Leider konnten diese Arbeiten, die eine Fundgrube für die Kenntnis des vorbuddhistischen Glaubens im chinesisch-tibetischen Grenzgebiet sind, hier nicht mehr gebührend herangezogen werden.

[p. 202 (a)]

würde zu einer Reihe von Sonderabhandlungen anwachsen, welche diese Arbeit, die ja hauptsächlich eine Übersicht sein will, allzusehr überschritten.

Der vorliegende Stoff ist jedoch reichhaltig genug, um die Grundzüge des religiösen Gefüges zu kennzeichnen, das auch eine spätere genauere Ausführung kaum verändern wird. Diese Kennzeichnung sei in einem Quer- und Längsschnitt versucht. Der eine bietet ein Gesamtbild der religiösen Weltanschauung; der andere zeigt die sich mehr oder weniger durchdringenden Schichten der Religion.

I. Das religiöse Gesamtbild

1. Die Gottheiten

a) Die höheren Gottheiten

Unter den höheren Gottheiten sind jene Gestalten zu verstehen, die nicht zu den sogenannten *purġan* gehören, sondern von diesen getrennt mit eigenen Namen aufgeführt werden. Das sind der Himmel (*tieńgëre*), der Berggeist (*yifula*) und die Erdgottheit oder Erdgottheiten (*ġlu*; *itoġa*). Sie scheinen die älteren Gottheiten zu sein und werden später behandelt werden, wenn vom Hochgottglauben die Rede ist.

b) Die niederen Gottheiten

Die niederen Götter lassen sich alle unter dem Gattungsnamen *purġan* zusammenfassen. Das Wort *purġan* ist nichts anderes als das in der Literatur gebräuchliche *Burchan* (*Burkhan*, *Burkan*), welches bekanntlich weithin in Innerasien für „Gott" steht. Die Herkunft dieses Namens ist ungeklärt. Meistens nimmt man eine Verbindung mit „Buddha" an und leitet das Wort aus der Zusammensetzung *Bud(dha)-Khan* ab; s. W. Schmidt: UdG X, p. 573 mit Angabe der Quellen. Diese über die Tungusen handelnde Stelle hebt hervor, daß unter *Burkan* dort vorwiegend fremde Gottheiten verstanden werden, ein Umstand, der auch auf die Tujen ziemlich zutrifft. Eine andere Erklärung bringt das Wort mit dem buddhistischen Grabmonument zusammen (mündl. Mittlg. von W. A. Unkrig); *purġan* sei nämlich aus dem mongolischen *suburġan* entstanden. Das Wort *suburġan* leitet sich wiederum vom tibetischen *spur-k'aṅ*, Leichenhaus, Verbrennungsort, ab. Da im Mongolischen Konsonantenhäufungen vermieden werden, wurde zwischen dem *s* und dem *p* noch ein *u* zur leichteren Aussprache eingeschoben, wie es auch sonst bei andern Wortableitungen geschieht. So entstand aus *spur* durch Umwandlung des *p* (welches die Mongolen nicht kennen) in *b* das Wort *subur*. Das *ṅ* in *k'aṅ* verflüchtigt sich zu einem einfachen *n*.

Mit *suburġan* (*spur-k'aṅ*) bezeichnete man dasselbe wie mit dem tibetischen *mc'od-rten*, Tschorten oder Stupa, was wörtlich „Opfer-Behälter" bedeutet. Die Tschorten bergen jetzt meist die Asche von buddhistischen Heiligen oder deren Reliquien und tragen häufig auch deren Bilder auf der Stirnseite. So verbindet sich mit dem Ganzen der Sinn eines Idols. Die Tschorten oder Stupas oder Suburgane sind also Sitz eines Geistes oder eines Verstorbenen. Es ist eine Gottheit in ihnen gegenwärtig. Sie sind dasselbe,

was sich die Mongolen oder Tujen unter dem Ausdruck *purgan* vorstellen. Bestärkt wird diese Auffassung noch durch die Urnenform der Stupa. Der Unterteil heißt nämlich auf Tibetisch *bum-ba*, Urne, Topf. Wie bei der Erdgotturne und dem *benkan* schon dargetan, sind Urnen oft Sitz einer Gottheit. Diese Vorstellung findet sich auch sonst; und man möchte die Urne in Verbindung mit dem Götterthron bringen, worauf einzugehen hier nicht der Ort ist. Jedenfalls ist das Tujenwort *purgan* späten Ursprungs und buddhistischer Herkunft.

Unter die Gruppe dieser niederen Götter fällt die Gesamtheit der Bewohner des buddhistischen, bonistischen und taoistischen Pantheons, soweit es die Tujen übernommen haben. Eine Sonderstellung scheint der Feuergeist als Herdgott oder Gott des Schamanenfeuers einzunehmen, den SCHRAM in seinem Buche über die Heirat der Tujen so stark hervorhebt. Ich konnte jedoch keine besondere Verehrung des Schamanenfeuers mehr feststellen. Sieht man von dem Feueropfer ab, welches als ein Teil im Ritus des lamaistischen Feuergusses enthalten ist, so verbleibt dem Volke nur noch der Herdgott, der aber nicht häufiger verehrt wird als beispielsweise unter den Chinesen auch. Die Verwendung des Feuers zur Reinigung (Witwenheirat, Feuerspringen, Abräuchern, Glühstein usw.) scheint mit einem Gotte nichts zu tun zu haben. Sie läßt sich rein magisch erklären, weil die Dämonen das Feuer fürchten. Diese gelten ja immer als unrein, wie die allgemeine Redensart *pudag ilie*, schmutziger Dämon, beweist.

Von den andern Göttern verdienen eine besondere Erwähnung die Schamanen- und Wahrsagegötter, die den Geisterspeer, den Geistertisch, die Götterbilder beseelen oder zeitweilig in Besitz nehmen, z. B. der schwarze und weiße Tiger, die große Mutter, der Drache. Ferner spielen eine große Rolle der Freudengott (bei der Hochzeit), der wohl von den Chinesen herkommt, der Pferde- und Rinderkönig, die Weltenrichtungsgeister und die Götter des Wetterministeriums mit dem Schmiedegott der Bon, dem *Däntsien-Sang*, welcher auf dem Bockskopf sein Eisen hämmert, so daß es blitzt und donnert (vgl. Die Pfahlziege, Anthropos 47. 1952. pp. 823 ff.).

Die übrigen lamaistischen Götter haben nicht die Bedeutung im Volke, wie sie zu erwarten wäre. Man kennt noch den *Maitreya*, dessen Bild am sechsten Tag im sechsten Monat nach den Tempeltänzen im Hofe von Êrh-ku-lung ausgehängt und verehrt wird; ferner *Tsongkhapa*, den Gründer der gelben Kirche, chinesisch *pao-pei-fo-yeh*, Edelstein-Buddha, genannt, und den Wahrsagegott *Pekar*, welchen das Volk einfach *sgurdien* (Gurtum) nennt, und der oft in Lebensgröße mit voller Kriegsrüstung an Wallfahrtstagen im Tempel aufgestellt wird. Doch wird dieser lamaistische Orakelgott weniger vom Volke als von den eigentlichen Schamanen verehrt. — Von einer Identifizierung Buddhas mit dem Höchsten Wesen (Himmel) ist im Volke nichts zu merken. Es kennt nichts Höheres als den Himmel. Vgl. weiter unten (pp. 227 ff.).

c) Die Dämonen

Außer von den zahllosen Geistern, den *uluon purgan*, ist die Welt noch von zahllosen Dämonen bevölkert, den sogenannten *ilie*. Sie schaden den Menschen durch Krankheit, Unfall, Mißwachs und Unwetter. Besonders gefürchtet ist

der Pestgott *Barma*, chinesisch *wen-shen*, Epidemiegott, dem der schwarze Feuerguß gilt. Die Gewitterdämonen werden von den Geistern des Wetterministeriums bekämpft. Sie fürchten vor allem die glühenden Kugeln, die vom Amboß des *Dāntsien-Sang* auf die Erde herniederregnen und sie erschlagen.

Die lamaistischen Schreckensgötter, unter denen die Göttermutter *Lha-mo* dem Volke am bekanntesten ist, werden nicht als Dämonen betrachtet. Ihre Hauptaufgabe ist nicht, die Menschen zu peinigen, sondern die wahre lamaistische Lehre vor deren Feinden zu schützen.

2. Das Seelen- und Weltbild

a) Seelenvorstellung

Über die Seelenvorstellungen der Tujen waren eindeutige Angaben nicht sicherzustellen. Aus den geschilderten Totenbräuchen lassen sich zwar mehrere Seelen erschließen, aber die Benennung und Eigenart dieser Seelen bleibt verschwommen.

Für „Seele" kommen zwei Bezeichnungen in Frage: *namsü* (*namšē*) und *suniedzē*. Das Wort *namsü* wird selten gebraucht. Es entspricht, dem DMF (256) zufolge, dem tibetischen *ñams-su*. In Ch. Das läßt sich diese selbständige Verbindung nicht feststellen; wohl findet sich dort p. 476 *ñams* allein in der Bedeutung: „... the soul, mind, spirit as an entity". Das *su* könnte höchstens noch Instrumental-Partikel sein. Man wird wohl nicht fehlgehen, wenn man daher *namsü* nicht dem *ñams-su*, sondern dem tibetischen *rnam šes* gleichsetzt, gesprochen: *nam-še*. Ch. Das (762) übersetzt es mit: „... the mind, knowledge, intellect, memory". H. A. Jäschke aber hat dazu die Erklärung (315): „3. in popular language: soul, e. g. of the departed ...". Den gleichen Sinn hat das viel häufiger gebrauchte Wort *suniedzē*. Es ist das Äquivalent zum mongolischen *sünesün*. Sowohl *namsü* als *suniedzē* besagen nichts Einheitliches, denn es gibt drei Seelen: *nigē kundu ġuran namsü-i*, oder: *nigē kundu suniedzē ġuran-i*, d. h.: „Einem Menschen drei Seelen sind"; vgl. DMF 256. Und welcher Art sind diese Seelen? *torōñ yesē saġdzini, ġuordani sdziewa awura sdzini, ġurandani iliedu ʃurani* (vgl. DMF 361), d. h. „Die erste bewacht die Knochen, die zweite nimmt die Wiedergeburt an, die dritte verwandelt sich in einen Dämon". Mostaert verweist a. a. O. auf Sanžeev: Weltanschauung und Schamanismus der Alaren-Burjaten, Anthropos 22. 1927. p. 585. Aber die Vorstellung von der Dreiteilung ist noch viel weiter verbreitet, jedenfalls in dem lamaistisch beeinflußten Asien fast überall. Auch die Ch'inghai-Chinesen kennen drei Seelen: eine geht in die Unterwelt, eine bleibt bei der Leiche (Knochen), eine irrt in der Welt umher. Diesen drei Seelen ist gemeinsam, daß sie sich vom Körper trennen können.

Die Knochenseele weilt nach dem Tode bei den Gebeinen, und zwar wenigstens solange bis der Ritus des *bāda* vollzogen ist, wodurch sie zufriedengestellt und frei wird. Ihr Anwalt in diesem Ritus und die entscheidende Autorität ist der Mutterbruder des Verstorbenen. Darum heißt er auch sinngemäß im Volke *tsiġan yesē daxu*, d. h. „Weiß-Knochen-Herr"; chinesisch

ku-chu, d. h. „Knochen-Herr". Endgültig frei wird diese Seele bei der Leichenverbrennung, wobei ja die Knochen (besser: das Skelett) bis auf einen kleinen Rest vernichtet werden. Eigenart dieser Seele ist die Clan-Zugehörigkeit, wie sie schon durch den Namen des Mutterbruders und dessen Wichtigkeit zum Ausdruck kommt. Er ist der Vertreter der Muttersippe. Die Sippe aber bestimmen die Tujen, wie die Mongolen und andere Stämme, nach den Knochen. Die Frage nach der Familie heißt bei den Tujen ebenfalls: „Welches sind deine Knochen", *tsini yesĕ yan-i*? Knochen und Clan (Sippe) werden also gleichgesetzt. Somit kann man begründet behaupten, daß die Knochenseele vom Lebensprinzip des Clans getragen wird und sich im Clan fortpflanzt. Wie, das ist unklar. Als Clan-Herr ist der Mutterbruder auch Knochen-Herr. Er übt mehr Rechte über sein Schwesternkind aus als dessen leiblicher Vater und verlangt auch die letzte Rechenschaft. Was aber geschieht mit der so freigewordenen Seele? Vielleicht gibt eine ähnliche Sitte bei den Mandschurei-Tungusen, speziell bei den Birarčen und Kumarčen, darüber Aufschluß. Von deren Seelen-Wanderung in die Unterwelt berichtet S. M. SHIROKOGOROV: „The second river is the Yellow River, after crossing which the soul meets with *Mongoldai Nakču*, i. e. *Mongoldai* 'senior of the mother's clan', which examines the case before allowing the soul to cross the Black River beyond which *Inmun-kan* reigns" (Psychomental Complex p. 142; nach Hinweis in UdG X, p. 563). *Mongoldai*, der Herr des Mutter-Clans in der Unterwelt, tut hier das, was der Knochen-Herr des Toten in der Oberwelt tut: er verlangt Rechenschaft und untersucht die Angelegenheit der Totenseele. Auch das Ergebnis ist das gleiche: die Seele wird frei für ihre Wanderung und die Leiche frei für die Bestattung. Ich konnte diese unterweltliche Entsprechung des *bäda* bei den Tujen nicht feststellen, wenigstens lenkte nichts die Aufmerksamkeit in diese Richtung. Vielleicht fehlt die Verlängerung der Vorstellung bis in die Unterwelt bei ihnen deshalb, weil sie praktisch keinen Ahnenkult üben und darum auch keinen Ahnen-Geist wie den tungusischen *Mongoldai Nakču* kennen. Aber unbewußt können doch noch vergessene Vorstellungen weiterwirken. Jedenfalls fände so eine oft als Ehrsucht und Geiz ausgelegte Sitte eine passende Erklärung. Beim *bäda* gehen nämlich die Hauptansprüche des Mutterbruders auf die Unversehrtheit der Leiche (= kein gewaltsamer Tod) und eine kostbare Totenlade, sowie prunkvolle Totengebete. Wenn man im Anschluß an die Unterweltsitte der Tungusen annimmt, daß der Tote in ehrenvollem, schönem Zustand und zufrieden beim Clan-Herrn der Unterwelt ankommt, dann wird damit auch die Sorge des irdischen Clan-Herrn für seine Clan-Angehörigen dokumentiert, und der Clan ist auch im Jenseits gut angeschrieben. P. W. SCHMIDT suchte ähnliche Verhältnisse bei andern Völkern sinnvoll zu deuten, und zwar im Anschluß an die Doppelbestattung der mutterrechtlichen Agrarkultur. In dieser läßt man die Fleischteile der Vernichtung anheimfallen. Sie sind für den Weiterbestand des Menschen bedeutungslos. Wichtig aber sind die Knochen, die sorgfältig gereinigt und dann endgültig bestattet oder dem Kult zugeführt werden. Diesem Verfahren liegen mondmythologische Gedanken zugrunde: Der abnehmende Mond magert immer mehr ab, bis schließlich nur noch

ein „Knochen" übrigbleibt; dieser aber bekleidet sich langsam wieder mit „Fleisch" und wächst zum Vollmond heran: ein Spiegelbild vom Vergehen und Werden des Menschen. Nach dieser Anschauung ist also das Knochengerüst das „Wesentliche", das Tragende; s. UdG X, p. 742 f. Wenn diese Bedeutung der Knochen so harmonisch in die mondmythologisch-mutterrechtliche Ackerbaukultur hineingehört, dann erklärt sich auch bei den Tujen die auffallende Zuordnung: Knochen — Mutterclan — Mutterbruder. — Auf die soziologische Seite dieser Sitte sei hier nicht eingegangen.

Die zweite Seele geht zum westlichen Paradies (*Tushita*) und wartet auf eine neue Wiedergeburt. Als Strafe für ein lasterhaftes und schlechtes Leben gilt die Inkarnation in niederen Formen, ganz im Sinne des buddhistisch-lamaistischen Lebensrades. Doch haben diese Vorstellungen bei den Tujen nicht viel Kraft. So hört man z. B. wenig über eine buddhistische Hölle, die bei den benachbarten Chinesen eine viel wichtigere Rolle spielt und in vielen Tempeln recht anschaulich abgebildet wird. Wohl fassen die Tujen das Unglück auf dieser Welt gerne als Strafe für frühere Vergehen auf. Diese Seele, die man „Inkarnationsseele" oder „Privatseele" nennen könnte — im Gegensatz zur Clanseele — wird bei der Leichenverbrennung durch das verwandelnde Lotosfeuer für die Inkarnation frei. Der Gewährsmann deutete wenigstens das Lotos-Mandala und das Feuer bei der Verbrennung in diesem Sinne und schrieb ihnen eine verwandelnde Kraft zu. Das besagt nicht, daß diese Seele so lange im Körper weile wie etwa in einem beseelten Leichnam. Vielmehr sollen beim Tode des Menschen die Lamas durch Gebet „den Weg öffnen", damit die Seele zum *Tushita* gelangen könne. Inwieweit sich solche Erklärungen mit der buddhistisch-orthodoxen Lehre decken, sei dahingestellt. Jedenfalls sind die Auffassungen der Leute verschwommen.

Noch unklarer sind die Vorstellungen über die dritte Seele, die sich in einen Dämon verwandeln soll. Man weiß nichts über ihr Schicksal und über die Ursache einer solchen Verwandlung. Aber eine solche Seele ist gefürchtet. Vielleicht ist es diese Seele, die bei Unzufriedenheit nach dem *bäda* im Auftrage der Clanseele die Menschen beunruhigt, in Haus und Hof herumgeistert, Krankheit und Unglück verursacht. Jedenfalls geht ein großer Teil der Opfer und Gebete bei den Totenriten auf Rechnung der Furcht vor dieser Seele. Der stets ausgesprochene Wunsch an den Toten lautet: „Vergiß uns, sei zufrieden, komme nicht zurück". Eine naturnotwendige Unzufriedenheit und eine Art Verfehlung des Lebenszieles haftet der Seele unverheirateter, erwachsener Mädchen an. Sie wird ein Dämon, der so gefährlich ist, daß sogar andere Dämonen vor ihr fliehen, weshalb denn auch die Bonpriester das Material für ihre Knochenflöte, ihre Peitsche usw. von den Leichen solcher Mädchen nehmen. Die Unzufriedenheit und Nichterfüllung kann in diesem Falle nur durch das Unverheiratetsein begründet werden, das ja nach Tujen-Auffassung für ein weibliches Wesen gegen jede natürliche Bestimmung geht. Man darf vermuten, daß dieser Seelenglaube auch stark bei jener Sitte mitwirkt, welche die Tujen „Anlegen der Himmelsfrisur" nennen. Dadurch wird ein Mädchen dem Himmel angetraut und ist nicht mehr mit der Verachtung eheloser Frauen belastet (s. oben). Die Furcht vor den weiblichen Dämonenseelen

ist auch unter den Chinesen verbreitet, und es gibt nur einen Weg, vor ihnen sicher zu sein: die Verbrennung. Im Brauchtum der Ch'ing-hai-Chinesen hat diese Furcht und Verachtung ihren Grund in der buddhistischen Auffassung, daß die Frau ein unreines Wesen ist und diese Unreinheit erst durch den Mann und dessen Nachkommenschaft behoben wird. Verstärkt wird diese Einstellung durch den sehnlichen Wunsch nach Söhnen und Enkeln, was wieder mit dem Ahnenkult zusammenhängt. Diese buddhistischen Beweggründe sind sicher auch bei den Tujen mitbestimmend. Auch bei ihnen gilt die Frau als unrein, wenn auch nicht so schroff wie bei den Chinesen. Die Ahnenverehrung spielt kaum eine Rolle. Doch sind Unreinheit und Dämonie eng miteinander verbunden. Ein ganz gewöhnlicher Ausdruck lautet: *pudaǵ ilie*, unreiner Dämon; *pudaǵ* ist auch die Frau während ihrer Periode.

Die Dämonenseele scheint also in besonderer Beziehung zum weiblichen Prinzip zu stehen. Darum legt sich die Vermutung nahe, daß sie die Fleisch-(Leib-)Seele im Menschen darstellt, welche der Knochenseele gegenübersteht. In Nordost-Tibet und anderwärts trifft man nämlich auf die Anschauung, die Knochen eines Menschen stammten vom Manne und das Fleisch von der Frau. Bei den Tujen ist jedoch dieses Verhältnis deshalb schwer zu bestimmen, weil gerade die Knochenseele so eng auf den Mutter-Clan bezogen wird. Das schließt zwar eine individuelle Zuordnung zum Manne (Vater) nicht aus, läßt sie aber durch diesen zweifellos mutterrechtlichen Zug nicht in Erscheinung treten.

Aus allem ersieht man, daß die Tujen sich über das Fortleben der Seele und das Jenseits wenig Gedanken machen. Ihnen ist es genug, wenn sie auf der Erde in Frieden gelassen werden. Die buddhistischen Vorstellungen sind mehr theoretisch. In der Wirklichkeit trifft man nicht selten auf einen diesseitigen Fatalismus, der sich in dem Spruch äußert: „Unser Leben hat nicht viel Sinn" (wörtlich: umsonst haben wir gelebt). Wenn auch die Seelenvorstellung viel Ähnlichkeit mit der der Chinesen hat, so kennen die Tujen doch keinen Ahnenkult; und es ist auffallend, daß sie nicht geneigt sind, diesen von den Chinesen zu übernehmen. Die Totenopfer bei der Leichenfeier sind eher aus der oben gekennzeichneten Furcht zu verstehen und aus dem Gedanken, die Verstorbenen würden noch unter den Lebenden weilen und bedürften noch der Teilnahme an Speise und Trank. Auch fehlen bei den Tujen alle Grabbeigaben, die den Chinesen so wichtig sind.

Abgesehen vom Tode, kann auch die Seele schon zu Lebzeiten entweichen und davonwandern. Das geschieht im Traum und bei der Krankheit, ja sogar während des gewöhnlichen Schlafes. Wie man sich das vorzustellen hat, zeigt eine Stelle der Gesersage, in der es heißt, ein Unhold sei in Schlaf verfallen und seine Seelen seien in Gestalt einer schwarzen und einer weißen Schlange aus den Nasenlöchern davongekrochen, weshalb er nicht imstande war aufzuwachen. Das Zurückrufen der Seele bildet bei den Tujen-Schamanen eine oft gewünschte Tätigkeit. Dieses Seelenfangen nennt man: *suniedzē xura-*. Doch bei diesem Ausdruck ist unklar, um welche von den drei Seelen es sich handelt.

b) Das Weltbild

Das Weltbild der Tujen fällt weitgehend mit dem lamaistischen zusammen, welches ja im wesentlichen dasselbe ist wie im Alten Orient, im vorbuddhistischen Indien und in Zentralasien. Es besagt für sie keine Besonderheit.

Im Mittelpunkt des Weltalls steht der Berg Sumeru (*rira*). Um ihn ordnet sich die Welt in drei Schichten. Oben kreisen Sonne, Mond und Gestirne. In der Mitte ist die Erdfläche mit den verschiedenen Ländern, Menschen und Tieren. Um das Fundament des Weltenberges liegen die Unterwelt und das Wasser. Diese Vorstellung kehrt ganz oder teilweise im religiösen Leben in bildlicher Gestalt wieder. Am eindeutigsten findet sie sich im Mandala-Opfer der Bon während der Errichtung der Pfahlziege (Berg-Torma). Mehr oder weniger klare Spielarten davon sind: die Mittelburg mit dem Manibaum, die Tschortenkammer mit der Himmelssäule, das Obo, die Bodenzeichnungen (*maṇḍala*) beim Feuerguß und bei der Leichenverbrennung. Himmelssäule und Weltenberg (Weltenbaum) sind vor allem bei der Mittelburg und der Tschortenkammer hervorgehoben. Bei diesen beiden fällt aber auch eine starke Betonung des Reiches der Unterwelt auf, welches in den Urnen dargestellt wird. Sie sind nichts anderes als das Reich der Nagas, die im Bontum eine so bedeutende Rolle spielen und auf die vorbuddhistischen Wurzeln der Weltvorstellung hinweisen. In der Anordnung der Urnen und der Rollen in den Urnen selbst spiegelt sich die Weltordnung nach den vier Himmelsrichtungen und ihrem Mittelpunkt wider. Die Schatzurnen stellen dabei den Reichtum der Erde dar. Sie gelten auch zugleich als ein Opfer an die Erdgottheiten, wogegen die Haupturne Wohnsitz der Gottheiten ist. Inwieweit auch magische Wirkungen dabei beabsichtigt sind, bleibt noch zu untersuchen. Man muß da auch das Eingraben von Gegenständen im allgemeinen berücksichtigen, wie z. B. beim Obo, der Wetterburg, dem Abwehrzauber von Krankheiten, der Errichtung eines Gehöftes usw.

Weniger mit dem Weltenberg zusammenzuhängen scheint das Luftpferd am Manibaum (Maniflagge). Es wird ja häufig getrennt aufgestellt. Die Verbindung mit dem Manibaum verdankt es wohl dem Umstand, daß es zugleich die vier Himmelsgegenden darstellt [2]. Doch läßt sich ein innerer Sinn dabei nicht verkennen. Das Luftpferd ist das Sinnbild und der Garant des Schicksals der Familie, der Sippe. Das menschliche Schicksal aber ist in den Lauf der Welt eingeordnet, so wie das Sippengehöft seinen Platz im Weltenbau einnimmt. Nach Tujenauffassung ist ein Gehöft nicht „vollständig", wenn Mittelburg und Manibaum fehlen. Durch sie wird dem Lebensraum der Sippe die Übereinstimmung mit dem Lebensraum der anderen Lebewesen gegeben.

Die Welt ist aber kein starres Schema; das beweist die Bedeutung des Glückspfeiles. Auch der Glückspfeil stellt auf seine Art die Welt dar: die

[2] Die fünf Stoffzungen an der Maniflagge (vgl. Anthropos 47. 1952. p. 56, Fig. 7) sind offenbar eine Verkümmerung und Verbindung von ehemalig verschiedenfarbigen Luftpferdflaggen; vier davon gelten als die Träger der Luftpferde- oder Wind-Gebieter und sind den vier Weltengegenden zugeordnet. Dieser Schluß ergibt sich aus einem tibetischen Text, dessen französisches Résumé ich Prof. Dr. R. Stein (Paris) verdanke.

Urne versinnbildlicht die Erde mit ihren Früchten, der Pfeil die verbindende Säule zum Himmel. Oft sind dem Mittelpfeil noch vier andere Pfeile entsprechend den vier Weltengegenden hinzugegeben. Neu und bei den andern Welt-Darstellungen (Mittelburg, Mandala usw.) nicht erkennbar ist die Lebenskraft im Glückspfeil. In ihn sind die Keime der Dinge gebannt, die Kraft der Vermehrung und des Lebens. Er gewährt Reichtum, Glück und Lebensfülle. Die Haarbüschel von den Tieren und das Getreide in der Urne bedeuten, daß diese Dinge dem Eigentümer nicht verlorengehen, auch wenn er sie veräußert hat. Die Orakelspielzeuge der Kinder am Pfeil garantieren die Entwicklung des jungen Menschen in der entsprechenden Richtung; die Haare und Kleiderfäden der Braut verbürgen, daß mit dem Verlust der Tochter doch nicht ihr Glück entweicht. Am Glückspfeil kommt die Dynamik der Welt zum Ausdruck, am Mandala (Mittelburg usw.) mehr die feste Ordnung. Weltkraft, Lebenssaft, Keimgrund sind aber hier nicht als *Mana* aufzufassen, sondern aus ihrer Verbindung mit dem übergeordneten Himmel herzuleiten. Die astrale, himmlische Ordnung ist nicht nur das Vorbild ihres irdischen Spiegelbildes; sie teilt auch der Welt ihre Kraft mit, welche beide durchwaltet. Schon die Hinweise im Kapitel über den Glückspfeil bieten manche Anhaltspunkte dafür. Aber diese Vorstellungen lassen sich noch viel weiter verfolgen. Ihre Fäden sind ziemlich verwirrt; sie reichen zurück bis in sehr frühe Kulturformen und sind verknüpft mit der ältesten Art des Verkehres zwischen Himmel und Erde. Alte Opferformen und das Gegenwärtigsetzen von Gottheiten hängen damit zusammen [3].

[3] Der Glückspfeil nimmt also die Stelle des Lebensbaumes ein, dem Menschen, Tiere und Pflanzen ihr Dasein und ihre Entfaltung verdanken; vgl. UNO HOLMBERG: Der Baum des Lebens, p. 69 f. Bei den Na-khi ist dieser Lebensbaum der Wacholder (Juniperus). Ihm wird Wohlstand, Reichtum und Lebensentfaltung der Menschen zugeschrieben; vgl. J. F. ROCK: Muan Bpö, pp. 21, 42, 94. Als Holz des Lebens vertritt der Glückspfeil im Hause auch die Weltachse, ähnlich wie die Mittelsäule in Tempeln, Tschorten, Götterfiguren (menschliche Wirbelsäule), die mit dem tibetischen Namen *srog ŝiṅ* bezeichnet wird, d. h. Lebens-Holz. H. A. JÄSCHKE (Dictionary, p. 585) übersetzt den Ausdruck mit „axle, axletree". Nachträglich sei erwähnt, daß dieses *srog ŝiṅ* wahrscheinlich auch das Äquivalent ist für den Tujennamen der Himmelssäule (*sòṅ-ŝiṅ*) in der Tschortenkammer; vgl. Anthropos 47. 1952. pp. 76, 78, 79. (Pers. Hinweis von Prof. Dr. R. STEIN).

Die Auffassung des Glückspfeils als einer Personifikation des Lebensgottes ist bei den Tujen nicht mehr lebendig. Daß er diese Bedeutung haben kann, beweisen die Na-khi in Südwestchina. Statt der Schatzurne mit dem Glückspfeil der Tujen haben sie einen Korb. Darin befindet sich unter anderem ein Miniaturturm; dieser stellt den Lebensgott dar, *Ssu* genannt, tibetisch *srog lha*. Der Korb ist sein Heim. Der Miniaturturm (*t'a*, „pagoda") kann auch durch einen Pfeil ersetzt werden, so daß dieser den Lebensgott darstellt; vgl. J. F. ROCK: Naga Cult, pp. 146, 250, 251 (nach persönlicher Mitteilung). Die Bedeutung des Lebensgottes und seines Heimes deckt sich mit der Bedeutung des Glückspfeiles und der Schatzurne. — Auf den Pfeil als Träger der Zeugungskraft und der kosmischen Lebenskraft hat auch S. HUMMEL hingewiesen; vgl. Geheimnisse tibetischer Malereien, pp. 8-14 passim.

Es handelt sich hier um ganz alte und weitverbreitete Darstellungen. Die Verbindung von Lebensgott und Ahne und dessen Sitz in einer Urne oder Korb usw. ist bis nach Hinterindien hinein zu verfolgen; und in Alt-China sind wahrscheinlich in den Graburnen und Shangbronzen Vorläufer der Pagode als Sitz des Lebensgottes

Die Herkunft der Welt wird leider nur von spärlichen Dokumenten belegt. Nach der Gesersage und der Spruchweisheit des Volkes ist die Erde durch Quirlen im Wasser entstanden wie Butter (Rahm) in der Milch. Sie schwimmt obenauf und wird von einem Holzpfahl gehalten, der eines Tages zu wachsen und zu grünen beginnt. Dann wird die Erde umkippen und den Weltuntergang herbeiführen. Der physische Himmel schwebt über der Erde an einem goldenen Pflock (Nagel); vgl. dazu DMF p. 115 und p. 445. Hier kommen Vorstellungen zur Geltung, die auf den ersten Blick den oben geschilderten widersprechen, die sich jedoch mittelbar damit verbinden lassen. Es sind letztlich ausgeprägte Varianten aus der indischen Kosmologie (Quirlen mit der Weltsäule; Schildkröte als Erdträger) und hängen mit mongolischen Eigenarten zusammen (Himmelsglocke am goldenen Nagel); vgl. dazu W. LÜDTKE: Die Verehrung Tschingis-Chans. Über den Polarstern als Feldzeichen siehe weiter unten p. 250. Der Erde mit dem Holzpflock (*modē ġadasē*) steht der Himmel mit dem Goldpflock (*xaldan ġadasē*) gegenüber. *xaldan ġadasē* heißt aber bei den Tujen der Polarstern: *xaldan* wegen seiner leuchtenden Farbe, *ġadasē* wegen seiner Ähnlichkeit mit einem Nagelkopf. Eigentlich bedeutet *ġadasē* soviel wie Pfahl, Pflock, Nagel, Zapfen. Der Polarstern wird ja sonst auch als Himmelsachse aufgefaßt. Somit entsprechen sich grünender Weltenbaum (Erde-Holz) und Himmelsachse (Gestirne-Gold). Auch hier legt sich der Vergleich von zwei Weltteilen nahe, die übereinstimmen sollen: oben der Himmel, unten die Erde. Die Vorstellung der sich neigenden und schließlich kippenden Erde mag auf die Beobachtung zurückgehen, daß der Polarstern, die Himmelsachse, nicht im Zenith, sondern im Norden steht. Die Zugehörigkeit von Weltenbaum und Gestirnen wird durch die vielen Rätsellieder der Tujen dichterisch veranschaulicht, wenn sie vom Baume singen, der Sonne, Mond und Sterne in seinem Gipfel trägt; vgl. z. B. SCHRÖDER: Hochzeitslieder a. a. O., Lied I und II. Weitere Zusammenhänge mögen hier übergangen werden. Nur auf die große Ähnlichkeit dieser Lieder mit den Hochzeitsliedern West-Tibets sei hingewiesen; s. FRANCKE: Tibetische Hochzeitslieder.

Man sollte nun bei dieser harmonischen Weltauffassung und ihrer engen Verbindung mit dem Menschen auch eine Projektion des Makrokosmos in den Mikrokosmos erwarten. Im Lamaismus sind diese Entsprechungen ja bis ins Kleinste durchgeführt und finden ihr Sinnbild in dem bekannten Silbenmonogramm, dem *rnam bču dbaṅ ldan*; vgl. dazu FILCHNER (UNKRIG): Kumbum p. 160 ff. Doch diese Kleinst-Entsprechungen der lamaistischen Mönche sind dem Volk zu künstlich. Es weiß nichts davon. Ihm genügt die Geborgenheit im großen Kosmos, in den es buchstäblich hinbaut. Dieses Weltgefühl läßt sich nicht auf geklügelte Spekulationen ein.

oder Ahnen zu sehen, deren moderne Abwandlung die Ahnentablette ist und in gewissem Sinn auch der Herdgott *tsao-chün*, welcher auch *ssu-ming* (Verwalter des Lebens) genannt wird. Das als kurzer Hinweis.

Auf die Ideologie, die dem Ganzen zugrundeliegt (Lebensgott, Kriegsgott, Reichtumsgott, Pekar, Lebensbaum, Glückspfeil, Speer, Ahnentablette usw.) wird eine besondere Arbeit über den Gurtum-Schamanen eingehen; vgl. auch unten pp. 237-253.

3. Der religiöse Kult

a) Die seelische Grundhaltung

Die innere Haltung des Volkes gegenüber den guten Geistern ist das Bewußtsein der Abhängigkeit von ihnen. Von ihnen wird das Wohlergehen auf dieser Welt bestimmt, welches ja im Mittelpunkt des Denkens steht; denn über das Jenseits macht man sich nicht viele Gedanken. Darum ist auch das erste, was ein Mensch tut, wenn ihn ein Unglück oder eine ungewöhnliche Lage überrascht, die Hinwendung zu einem Geist, einem mächtigeren Wesen, welches hier helfen kann. Wie sehr diese Einstellung den Mann aus dem Volke beherrscht, geht aus dem oben erwähnten Grundgedanken des Gewährsmannes hervor, welcher die Einteilung für das ganze Brauchtum bot: „... jetzt werde ich dir zuerst erzählen, was wir für das Glück der Familie tun usw."; vgl. Einleitung, Anthropos 47. 1952. p. 15. Damit wird alles dem religiösen Nützlichkeitsgedanken untergeordnet. Um sich nun zum Zwecke des irdischen Wohlergehens die Geisterwelt gewogen zu machen, bringen die Tujen ihr Opfer und Gebet dar. Den schädlichen Dämonen sind sie jedoch nicht so unterwürfig, sondern sie stehen ihnen mehr feindlich gegenüber und suchen sie mit Hilfe der guten Geister oder durch Zauber zu zwingen.

b) Das Opfer

Die Opferarten

Je nachdem, was geopfert wird, unterscheiden die Tujen folgende Arten: das Weihrauchopfer, Speise- und Trankopfer, Tötungsopfer, Tierweihe. — Abgesehen vom Weihrauchopfer und der Tierweihe haben sie einen gemeinsamen Namen für das Opfer, nämlich *šeňlie*, welches dem chinesischen *hsien* entspricht. So sagen sie z. B. *šdimie šeňlie-*, Brot opfern; *tsidzig šeňlie-*, Blumen opfern; *xonini šeňlie-*, ein Schaf opfern (vgl. DMF 376). Dieser Ausdruck *šeňlie-* kann für nichts anderes gebraucht werden.

Das Weihrauchopfer, das ursprünglich ein Duftopfer war, ist jetzt durch allerlei Zutaten wie Butter, Tsamba, Blumen, Gewürz, Seidenfäden stark erweitert. Aber auch hier wird die Regel aufrechterhalten, nichts zu spenden, was unangenehm riecht. Das Auflegen von Butter und Tsamba, welche die Hauptnahrungsmittel der dortigen Nomaden sind, läßt auf einen alten Hirtenbrauch schließen. Über das ursprüngliche Weihrauchopfer vgl. weiter unten das Kapitel: Der Hochgott-Glaube.

Die Speiseopfer umfassen vorwiegend Brot, Wein, Butter, Tsamba. Man stellt sie vor den Geist hin, z. B. vor den Hausaltar, das Obo, den Manibaum, das Götterbild usw. Wenn man sie fortnimmt und verzehrt, wirft man der betreffenden Gottheit etwas davon zu. Flüssigkeit wird auf den Boden gegossen oder in die Luft gespritzt. Dahin gehört auch die Sitte, vor jeder Mahlzeit den Geistern etwas zuzuwerfen.

Das Tötungsopfer bildet mit der Tierweihe zusammen die Gruppe der Tieropfer, von denen das eine blutig, das andere unblutig ist. Das blutige

3: Schröder AE9. Monguor

Tieropfer vollzieht sich in drei Stufen, welche vom Volk klar unterschieden werden: Schlachtung, Darbringen, Opfermahl. Das klassische Beispiel ist oben im Berg-Schafopfer beschrieben. Das eigentliche Darbringen, meist in der Form des Opferwurfes, wird mit dem Worte „Opfer" bezeichnet. Oft ist zwischen Schlachten und Darbringen und dem Mahl ein ganzer Tag Spielraum.

Dem Schlachten geht das Waschen, das Milchorakel, sowie Freilassen und Wiederfangen des Tieres voraus. Es nimmt sich fast aus wie eine verkürzte Tierweihe, bei welcher ja das Tier ebenfalls freigelassen wird.

Das Darbringen kann auf zweifache Art geschehen. Entweder wird das ganze abgehäutete Tier vor der Gottheit aufgestellt, oder man zerlegt es sofort, kocht es und wirft dann die Fleischstücke mit der Brühe der Gottheit zu. Es kommt auch vor, daß man die gargekochten Stücke auf Tellern vor den Altar stellt, ähnlich wie Brote oder Wein. Ein Rest zentralasiatischer Form ist wohl das Aufstellen der Pfahlziege, analog dem Aufhängen des Felles der Opfertiere bei den sibirischen Völkern. Doch wird bei den Tujen keinerlei Rücksicht auf das Skelett genommen, da ja das Tier zerlegt und mit den Knochen gekocht wird.

Das Opfermahl wird vom ganzen Volke, von Männern, Frauen und Kindern eingenommen. Es ist mir nicht bekannt, daß es Opfertiere gibt, die nur bestimmten Gruppen vorbehalten wären. Wohl werden gewisse Teile als besonders schmackhaft bestimmten Personen vorbehalten, so die Lenden, der Kopf usw. Das Opfermahl wird auch nicht als profaner Akt angesehen. Man faßt es als zum Opfer gehörig auf und hat dafür den eindeutigen Ausdruck: „Das ist ein Teil von unserm Opfer."

Eine Eigenart bei diesen Opfern ist noch hervorzuheben: die Blutscheu. Man vergießt nicht das Blut, sondern fängt es beim Schächten auf und füllt es in die Därme. Das Blut gehört zum Tier und wird mitgeopfert und mitgegessen. Blutspuren auf dem Boden werden sofort mit Erde beworfen und verwischt.

Ähnlich wie das Schafopfer vollzieht sich auch das Schweineopfer, so wenig angemessen die Art und Weise auch diesem Tiere ist. — Das Hühneropfer geschieht ohne viel Zeremonie. Man hackt oder dreht dem Tiere den Kopf ab, schwenkt das Huhn im Kreise, so daß das Blut umherspritzt, und läßt es dann fliegen. Ich weiß allerdings nicht, ob man das Huhn später genießt. In einigen beobachteten Fällen geschah es bestimmt nicht.

Die Tierweihe ist als Opfer schon dadurch eindeutig, daß das Tier vom Menschen einem Gotte als freies Geschenk überlassen wird und normalerweise nicht mehr gebraucht werden darf.

Von einer Menschenweihe, die MOSTAERT (DMF p. 371 unter *šdien*) erwähnt, konnte ich nichts feststellen, es müßte denn sein, daß man die Schamanenweihe darunter versteht oder die Anempfehlung eines Kindes an einen Schutzgeist, dessen Namen es später trägt. Als ein Opfer an den Himmel könnte allenfalls das Gelübde der Jungfrauschaft gelten, zum Zeichen dessen sich ein Mädchen die Haare frei herabhängen läßt; vgl. DMF p. 103, wie man auch das Gegenteil dahin zählen kann, nämlich die Vermählung eines Mädchens mit dem Himmel, deren Zeichen die „Himmelsfrisur" ist; vgl. SCHRAM, Mariage p. 127 ff.

Empfänger des Opfers

Inwieweit der Himmel an allen Opfern teilhat, und welches die ihm vorbehaltenen Opfer sind, wird unten noch erörtert. Als Opfer für die höheren Gottheiten ist das Schwein (außer für die Erde) unzulässig, ebenfalls das Huhn. Sie sind die Opfertiere für niedere Götter und Dämonen.

Ob es ein eigentliches Opfer an die Dämonen gibt, ist fraglich. Bei den Zeremonien um die bösen Geister, z. B. dem Dämonengeleit, der Figurensänfte, den verschiedenen Tormas usw., betrachtet man die mit *rdzẽ* bezeichneten Beigaben als Dinge, die der Dämon nötig hat oder liebt; so das Reittier, die Kleider, das Geld, die Wolle usw. Ferner ist mit diesen Gaben neben dem Willen der Beschwichtigung und des Abfindens noch eine gewisse Geringschätzung des Dämons verbunden, indem man ihm rohes Fleisch, Lauch, Bohnen, unsaubere Gedärme darbietet wie einem wilden, tierischen Wesen. Damit will man ihn zufriedenstellen, auf daß er weiche und nicht wiederkomme. Es fehlt jede Gesinnung der Ehrfurcht und Unterwürfigkeit, wie sie einem höheren Geiste gegenüber kennzeichnend ist und sich sonst im Opfer bekundet. Hier spielt ein ähnlicher Gedanke der Furcht mit, die man auch vor den Seelen der Toten hegt, von denen man erwartet, daß sie den Menschen nicht behelligen und selber zufrieden sind.

Die Vollzieher des Opfers

Alle diese Opfer lassen sich in erster Linie dem Volke als Hauptträger zueignen. Es ist die wichtigste religiöse Betätigung der gewöhnlichen Leute. Sie setzt nur wenig voraus, nämlich eine Gabe und eine Gesinnung. Es bedarf keiner eigenen Schulung, keines umständlichen Rituals und keines Gebetelernens. Die Opferer sind das Familienoberhaupt, der Saatherr oder die Dorfältesten. Gerade diese Laien sind es, die selbst bei den rein lamaistischen Zeremonien oder denen der Bon und Schamanen die eigentliche Opferhandlung vollziehen, z. B. beim Herbstdankfest, bei Errichtung der Pfahlziege oder der Mittelburg. Auch die Tormas, die ja zum Teil als Opfer angesehen werden können, werden meist von den Männern aus dem Volke vor die Götter hingestellt oder nach draußen fortgebracht.

c) Das Gebet

Das spontane und frei formulierte Gebet ist bei den Tujen eine natürliche Selbstverständlichkeit. Sie sind sich auch dieser Gebetsweise bewußt, wenn sie behaupten: „Wir Bauern haben unsere alten Gebete vergessen, jeder betet mit eigenen Worten." (Vgl. SCHRÖDER: Herbst-Dankopfer, Anthropos 37-40. 1942/45. p. 872.)

Außer diesen freien Äußerungen kennen sie auch noch einfache, kurze Gebetsformeln an den Himmel und die Götter; so wenn sie sagen: „Oh ihr Geister, seid doch nicht wie die Menschen!", oder wenn sie an der Gebetsschnur ununterbrochen ihr *„Om mani padme hum"* hersagen, oder wenn sie sich an den Himmel wenden mit dem alten Ausspruch: „Der Himmel weiß." —

Diese beiden Arten von Gebet fassen sie unter dem Ausdruck *yandzila-*, flehen, bitten, zusammen und verbinden es meist mit dem Opfer, um ihre Gesinnung auszudrücken. Das selbständige, reine Gebet ist ziemlich selten.

Das Volk fühlt sich aber mit dieser Art Gebet noch nicht zufrieden, sondern nimmt seine Zuflucht gerne zum rituellen, kultischen Gebet, wofür es die eigenen Stände der Priester gibt: die Bon und die Lamas und die taoistischen Mönche. Das soll nicht heißen, daß diese ausschließlich des Betens wegen eingeladen werden. Aber wie stark die Leute das Beten mit diesen Ständen verbinden, geht aus der gemeinsamen Benennung hervor, die sowohl bei Tujen als auch bei den Chinesen zur Unterscheidung von den Laien gebraucht wird: *nien-ching-ti jen*, d. h. betender Mensch. Dieses amtliche Beten heißt *luom mošē*, Gebete hersagen; genau wie im Chinesischen *nien-ching*. Das ist in den Augen der Leute das klassische, richtige Gebet; etwas fest Formuliertes, nach bestimmten Riten Hergesagtes, durch die heiligen Texte Festgelegtes, so wie die Sutra (*luom*) und die chinesischen *ching*.

So kann man denn sagen, daß das Opfer in erster Linie den Laien zufällt, das Beten aber eigenen Ständen.

4. Die Magie

Über eine eigentliche Volksmagie waren mir fast keine Feststellungen möglich. Es gibt eine ganze Menge von Zauberhandlungen und Verwendung von Amuletten. Im allgemeinen aber holt das Volk dafür Schamanen, taoistische Priester, Bon und Wahrsager. Da die Magie als Hauptziel die Abwehr von bösen Geistern hat, so fällt diese Aufgabe vor allem den Schamanen zu, die ja schon ohnehin mit Hilfe ihrer Schutzgeister die Dämonen bekämpfen. So werden auf diesem Wege Magie und Schamanismus eng verknüpft.

5. Der Misch-Charakter der Tujen-Religion

Aus dem Brauchtum der Tujen geht klar hervor, daß wir es nicht mit einer einfachen Glaubensform zu tun haben, sondern mit einem vielschichtigen Gebilde, welches sich im Laufe der Jahrhunderte entwickelt hat. Es ist ähnlich wie mit der Religion der Mongolen überhaupt, die PALLISEN in seiner Dissertation als Synkretismus bezeichnen möchte. Noch mehr trifft das bei den Kansumongolen, den Tujen, zu. Dieser Synkretismus ist aus zweierlei Gründen verständlich, einem psychologischen und einem geschichtlichen.

Psychologisch gesehen neigt der Ostasiate, auch der Mongole, zum Verhandeln, zum Ausgleich und zur verständnisvollen Duldung. Der Gewährsmann hat das trefflich formuliert: „Alle Religionen sind gut. Das Ziel ist gleich, nur die Wege sind verschieden" (vgl. Einleitung, Anthropos 47. 1952. p. 12). Man will sich nicht ausschließlich auf einen einzigen Weg festlegen, sondern von einem sachlichen Nützlichkeitsstandpunkt her alles auswerten, was einem zum Glück und Wohlstand förderlich ist. Man versucht es mit allen Göttern und ist gern bereit, jeden brauchbaren Geist in seinen Himmel aufzunehmen. Auch das Christentum in China wäre dieser

Neigung schon längst zum Opfer gefallen, wenn es nicht so entschieden auf eine glaubensmäßige und rituelle Trennung bedacht wäre. Man könnte es sonst bald mit seinen Heiligengestalten, Lehren und Riten etwa im Lamaismus wiederentdecken, wie denn auch tatsächlich ein solcher Einfluß aus der frühchristlichen Zeit angenommen wird.

Die Geschichte und Verbreitung der Tujen hat diese seelische Bereitschaft sehr begünstigt und sie mit den verschiedenen Religionen in enge Berührung gebracht. Wer die ursprünglichen Tujen auch sein mögen, so sind sich doch alle Berichterstatter darin einig, daß sie eine bewegte Wandergeschichte hinter sich haben, und daß ihr Grundstock mongolisch ist. Abgesehen von ihren Wanderungen standen sie vielleicht schon mehrere hundert Jahre in ihrem jetzigen Wohnsitz mit den verschiedensten Völkerschaften in lebhaftem Verkehr, wenn sie auch ihre sprachlichen und rassischen Eigenheiten bewahrt haben, so mit den Tanguten, den früheren Herren von Amdo, mit den Mongolen der verschiedenen Einbruchswellen und schließlich mit den nachdringenden Chinesen. Wahrscheinlich wurde ihr ursprünglicher Glaube in vorlamaistischer Zeit weitgehend von der Bonlehre der Tanguten bestimmt, bis dann die gelbe Kirche vom benachbarten Kumbum her ganz Amdo unter ihren Einfluß brachte. Zuletzt ist das Chinesentum, welches mit dem Ackerbau auch entsprechende religiöse Sitten mit sich führte, über sie gekommen, wenn es sich auch in der Religion noch wenig durchgesetzt hat.

Diese eigenartige, durch Geschichte und Umwelt bedingte Stellung macht die Religion der Tujen zu einem bedeutungsvollen Gegenstand der Religionsgeschichte von Amdo und des chinesischen Grenzgebietes überhaupt, so daß es sich eigentlich nicht mehr um die Religion der Tujen allein handelt. Die Tujen-Mönche scheinen sich dieser vorteilhaften Lage bewußt gewesen zu sein und haben selber tätig in die Erforschung der Glaubensformen des Grenzlandes eingegriffen, besonders in die des Lamaismus. Dadurch gewannen sie einen gewissen wissenschaftlichen und religionspolitischen Einfluß. Ein Beispiel dafür bringt CYBIKOV in seiner Einführung zum „*Lam rim c'en po*" (pp. XVI-XVII, übersetzt von W. A. UNKRIG), wo er auf den Ch'ang-chia Hutuktu zu sprechen kommt, der ja aus der Tujen-Lamaserie Êrh-ku-lung stammt: „Aber wie dem auch sei. Die Heimat der Ch'ang-ch'a Hutuktu's nimmt zwischen China, der Mongolei, den Osttibetern, den Tanguten, und früher auch den Uiguren eine solche Lage ein, daß sie besonders als Arena einer Berührung dieser Völkerschaften und der Bildung eines Stammes dienen mußte, der in sich die Züge aller dieser vier Völkerschaften verkörpert. Wenn man ohne geschichtliche Erwägungen ausschließlich die heutige Lage ins Auge faßt, so hat sie nach unserer Ansicht viel dazu beigetragen, daß diese Lamas gewaltigen Einfluß auf die tibetischen und mongolischen Angelegenheiten und auf die Beziehung dieser Völkerschaften zu der Manchu-Dynastie gewinnen mußten." Ich fand das bestätigt, als ich die dortige Lamaserie besuchte. Lassen wir auch die Bemerkung CYBIKOVS über die ethnische Bildung der Tujen außer acht, so muß man doch zugeben, daß dieses Volk viele religiöse Züge von den Nachbarn übernommen hat. Es ist darum auch kein Zufall, daß es gerade ein Tulku (Tuguän Hutuktu) aus dem Tujen-Kloster war,

der im 18. Jahrhundert das einzige bisher bekannte tibetische Buch über sämtliche tibetischen Sekten, einschließlich der Bon, verfaßte. Er hatte ja die verschiedensten Formen stets unmittelbar vor Augen, ähnlich wie auch heute noch das religiöse Brauchtum der Tujen einen lebendigen Musterkatalog in dieser Beziehung darstellt.

Was nun die Elemente angeht, aus denen sich dieses Brauchtum zusammensetzt, so fallen sie fast restlos auf vier Gruppen, von denen jede eine besondere Schicht bildet. Diese vier Schichten sind : der Hochgottglaube, der Schamanismus, die Bonreligion und der Lamaismus. Die Schichten lassen sich aber nicht ohne weiteres aus dem ganzen Gefüge herausnehmen, von allem Nebenwerk befreien und mit einer größeren durchgehenden Lage der zentralasiatischen Religionen verbinden. Das ist nur in größerem Zusammenhange möglich und würde den Umfang dieser Arbeit weit überschreiten, denn die in Frage stehenden Teile sind von beträchtlicher Zeittiefe und umfassen viele Völker. Zudem haben sich diese Schichten gegenseitig durchdrungen, indem die jeweils spätere die Elemente der vorhergehenden aufsog. So hat der Lamaismus trotz seiner ursprünglichen Feindschaft gegen die Bonreligion doch vieles von ihr angenommen. Der Bonglaube hingegen besitzt wiederum eine stark schamanistische Grundlage, und durch alle Stufen hindurch geht ein alter Himmelskult weiter.

Die beiden Hochreligionen der Bon und des Lamaismus in ihrem Zusammenhang mit dem Glauben der Tujen zu erörtern, führt ins Uferlose. Der Schamanismus läßt sich schon eher abgrenzen, kann aber auch nicht erschöpfend dargestellt werden. So bleibt also noch der alte Himmelskult als Hochgottglaube übrig. Dieser wird im folgenden einigermaßen vollständig behandelt, wogegen beim Schamanismus sich die Darlegung auf eine theoretische Skizze beschränken muß. Eine eigene Arbeit wird sich ausführlich mit ihm für das ganze westchinesische Grenzgebiet befassen. Die Bonreligion und der Lamaismus werden nur kurz gestreift.

II. Die Schichten der Tujen-Religion

1. Der Hochgottglaube

In diesem Abschnitt ist es notwendig, neben dem Brauchtum auch noch die anderen Quellen und die kärgliche Literatur heranzuziehen. Abgesehen von dem DMF und „Mariage" (von SCHRAM), die für die Religion eine spärliche Ausbeute bieten, sind die andern Quellen noch unveröffentlicht. Sie liegen jedoch im Originaltext vor. Es sind dies die Gesersage, die Ackerbausage, der Moschushirsch (der erste Teil des unter dem Namen *xoni*, Schaf, bekannten Liederzyklus) und eine Reihe sonstiger Lieder und Märchen, von denen die Hochzeitslieder im Erscheinen begriffen sind (Folklore Studies [Tokyo] 1952).

Der Hochgottglaube der Tujen muß schon früh dem Volke selber bewußt gewesen sein. Schon TAFEL bemerkt in seinem ziemlich zuverlässigen Kapitel : „Die Turen von Wei-yüanpu sind ein ganz eigenartiges Völkchen. Viele sagen, sie hätten nur einen einzigen Gott, an den sie glaubten. Aber sie sind, wie die

Chinesen, auch Buddhisten" (Tibetreise I, p. 246). Der Verfasser teilt leider nicht mit, wer diese „viele" sind. Wahrscheinlich sind es die Tujen selber. TAFEL hat insofern recht, als ein eigentlicher Monotheismus den Tujen unbekannt ist. Andererseits teilen sie mit den Chinesen doch nicht den gleichen Buddhismus. Die Tujen sind Lamaisten, die Chinesen hingegen nie oder nur ausnahmsweise. Aus dem vorliegenden Brauchtum geht nun einwandfrei hervor, daß der sogenannte Eingott der Tujen ein Hochgott ist, der unter der Gestalt des Himmels verehrt wird. Man muß also vom „Himmel" ausgehen.

a) Der Name „Himmel"

rēġuo

Für „Himmel" kennen die Tujen zwei Ausdrücke, nämlich *rēġuo* und *tieńgēre*. Das Wort *rēġuo* wird wenig gebraucht, und dann nur im Sinne von physischem Himmel, Firmament. Es deckt sich vollkommen mit seinem mongolischen Äquivalent *oktarġui*, welches dem tibetischen *mk'a* oder *nam mk'a* oder *gnam* gleichzusetzen ist und soviel heißt wie : Himmel, leerer Raum über der Luft, Firmament, Himmelsgewölbe, Äther, Atmosphäre, Luft. Vgl. KOVALEVSKI p. 430. Auch unter den folgenden mit *oktarġui* zusammengesetzten Redewendungen findet sich keine, die *oktarġui* als eine Gottheit oder einen Geist auffaßt. Vgl. a. a. O. pp. 430-433. Es ist somit scharf von *tengri* (*tieńgēre*) zu unterscheiden und kann mit diesem nicht synonym gebraucht werden. Nur im Sinne von physischem Himmel überschneiden sie sich. Bei den Tujen wird *rēġuo* hauptsächlich als Lichthimmel, Träger der Helligkeit betrachtet. Man fügt darum gerne das Eigenschaftswort *kuġuo* (blau, licht, hell) hinzu, z. B. *kuġuo rēġuo undurwa* (der blaue Himmel ist hoch). Das *kuguo rēġuo* (lichter Himmel) steht im Gegensatz zum *xara gadzier* (dunkle Erde). Beiden ist je ein entsprechender Vogel zugeordnet als Sinnbild der Helligkeit und des Dunkels. So heißt es in einem Hochzeitsliede *xara gadzier mundzini xęla* ; *kuġuo rēġuoni dzindzini xęla* (der schwarzen Erde Dunkelvogel ruft ; des lichten Himmels Lichtvogel antwortet). Hier ist das *rēġuo* zwar in die — wahrscheinlich tibetische — Mythologie von Licht und Finsternis hineinbezogen, aber über eine etwaige Bedeutung des *rēġuo* als Geist oder Gottheit wird damit nichts ausgesagt. (Vgl. SCHRÖDER, Hochzeitslieder). Mag auch der Ausdruck *rēġuo* in seiner Bedeutung als Lichtträger mit dem Worte *tieńgēre* annähernd zusammenfallen, so ist damit sein tieferer Sinn erschöpft und er scheidet für die weitere Betrachtung aus.

tieńgēre

tieńgēre ist die Tujenform des schriftmongolischen *tengri* oder *tngri*. Es kann sowohl den natürlichen Himmel bedeuten wie auch den Himmel als Gottheit. Als natürlicher Himmel wird es mit denselben Eigenschaftswörtern bedacht wie das Wort *rēġuo*, also mit *kuġuo* (blau), *undur* (hoch) usw. Wie dieses steht es auch als Tageshimmel im Gegensatz zur dunklen Erde. Unser Ausdruck „Himmel und Erde" wird bei den Tujen immer mit *kuġuo tieńgēre, xara gadzier* wiedergegeben (lichter Himmel, dunkle Erde). Sie würden nie-

3: Schröder AE9 Monguor

mals einfachhin „Himmel und Erde" sagen. In dieser Vorstellung gehen die Tujen mit ihren altaisch-mongolischen Verwandten Hand in Hand. In seiner Dissertation hat PALLISEN die Verbindung von Licht und Himmel besonders deutlich herausgestellt: Bei allen altaischen Völkern wird nämlich der Himmel zu allererst als Tageshimmel empfunden. Nach H. VAMBÉRY und BARBIER DE MAYNARD gehören die Begriffe „das Licht", „die Helle" in allen altaischen Sprachen zu derselben Wortfamilie wie das *tengri* (Religion der Altmongolen, p. 123). PALLISEN läßt dann für dreizehn Sprachen die Wortlisten folgen, welche diesen Zusammenhang veranschaulichen sollen (a. a. O. p. 123 ff.).

Aber nicht nur als Verkörperung des Lichtes gilt der Himmel, sondern er ist auch Träger der wichtigsten kosmischen Erscheinungen. Das kommt in den vielen alltäglichen Redensarten zum Ausdruck: z. B. der Himmel regnet; der Himmel ist kalt; der Himmel ist heiß; der Himmel donnert; der Himmel ist heiter usw. Somit steht der Himmel schon rein sinnenmäßig als etwas Wichtiges, Erhabenes im Bewußtsein der Tujen; als jener unermeßliche, die Welt umspannende Lichtraum, in dem sich die Naturereignisse abspielen, die den schlichten Menschen so beeindrucken. Es ist nicht das Wort *rēguo*, das in ihnen dieses Bewußtsein weckt, sondern das Wort *tieńgēre*. Offenbar ist es eines der ältesten Wörter, das sie aus grauer Vorzeit gemeinsam mit den andern altaischen Völkern ererbt haben, bei denen es mit dem gleichen Inhalt geladen ist. Man kann es nicht mehr weiter etymologisch auflösen.

Darum eignete sich gerade dieser Ausdruck vortrefflich, um das zu bezeichnen, was wir „Gott" nennen. Hier soll nicht untersucht werden, woher die Tujen, die ja ein Zweig der Mongolen sind, die Verbindung zwischen dem Namen *tieńgēre* und dem Begriffe „Gott" erhalten haben. Das gehört in die Geschichte der Religion der Mongolen oder der altaischen Völker allgemein. P. W. SCHMIDT hat wahrscheinlich gemacht, daß es sich nicht um eine Gleichsetzung des Höchsten Wesens mit dem materiellen Himmel handelt, sondern nur um eine Übertragung des Namens „Himmel" auf den Hochgott; das sei in der Zeit des Übergangs zur Herdentierzucht in den großen Steppen geschehen, wo „sie die ungeheuere Himmelskuppel ungehindert in ihrer ganzen Ausdehnung und mit allen am Himmel sich vollziehenden Naturerscheinungen vor sich haben"; vgl. SCHMIDT: Religionsgeschichte, p. 256; UdG X, pp. 128 ff. Es frägt sich hier: trifft das auch für die Tujen zu und in welcher Weise? Wie wird der Name *tieńgēre* gebraucht, als Gattungs- oder Eigenname? Bezeichnet er wirklich Gott?

Man muß zunächst auf die allgemein mongolischen Vorstellungen zurückgreifen, die ja den gleichen Namen kennen. PALLISEN kommt dabei zu folgendem Ergebnis (a. a. O. p. 126): „Man kann also sagen, daß in diesem Entwicklungsstadium *Tengri* etwa 'Gotthimmel' als Eigenname bedeutete, nicht 'Himmelsgott' und nicht 'Gott im Himmel' oder 'Gott des Himmels', wie es einige Forscher behaupten. ... Allmählich wurde aber *Tengri* zur Benennung des Gottes der Christen und der Mohammedaner gebraucht, und schließlich mit der Annahme des Buddhismus wird dieses Wort dem sanskritischen *Deva* äquivalent, und zahlreiche Gottheiten des lamaistischen Pantheons, die teilweise in dasselbe aus dem alten Volksglauben übernommen wurden, werden

dann auch *Tengri*, mit Beifügung eines bestimmten Eigennamens genannt (vor allem die 33 *tengri* : *ghutschin ghurban Tengri*)." „Also war für die Dolmetscher und für die zahlreichen Fremden überhaupt, die am Hofe des Groß-Chans sich aufhielten und unter denen auch viele Priester aller Religionen vertreten waren, die Bedeutung *Tengri* als Gattungsname 'Gott' schon geläufig und klar" (a. a. O. p. 127). — Später kam, nach PALLISEN, mit dem Buddhismus auch noch der Terminus *burxan* hinzu, der eine Verbalhornung des Sanskritwortes für Buddha sei und bei den Mongolen den Sinn von „Idol, Gottheit, Geist, Götterbild" angenommen habe. (Über die Herkunft des Wortes *Burchan* oder *purġan* vgl. oben.)

Bei den Tujen ist diese Entwicklung schwer festzustellen. Ich habe des öfteren die Leute gefragt, wieviele *tieńgēre* es gäbe. Immer erhielt ich die Antwort : nur einen. Nur einmal meinte mein Gewährsmann, es gäbe auch andere Götter, die man *tieńgēre* nenne. Als er dann diese Götter angeben sollte, wußte er auch nicht einen einzigen. Das ist ein Zeichen dafür, wie nebensächlich bei den Tujen die Bedeutung von *tieńgēre* als Gattungsname gewesen sein muß, da sie so spurlos aus dem Sprachgebrauch verschwinden konnte, falls sie überhaupt vorhanden war. Vielleicht ist die oben erwähnte Bemerkung A. TAFELS von einem „einzigen Gott" auf eine ähnliche Auskunft zurückzuführen. Das *tieńgēre* der Tujen deckt sich also nicht ganz mit dem *tengri* der Mongolen. Die Aufgabe eines Gattungsnamens hat allein das Wort *purġan* übernommen, welches dem mongolischen *burxan* entspricht ; *purġan* bedeutet nicht nur die einheimischen Götter, Geister, Götterbilder, sondern überhaupt alle Gottheiten der verschiedenen Religionen. Mitunter kann es auch einen Dämon bezeichnen. Es wird ähnlich gebraucht wie das chinesische *fo-yeh*, allerdings niemals für einen Tulku. Mit dem Worte *purġan* verbindet sich immer die Vorstellung einer Mehrzahl, was ja für einen Gattungsbegriff wesentlich ist.

Nach allen Erkundigungen und auf Grund des aufgenommenen Brauchtums bleibt *tieńgēre* allein als Eigenname dem Gotthimmel vorbehalten. Die biglotten Tujen übersetzen es allgemein mit dem chinesischen *t'ien* (Himmel) oder *lao-t'ien* (alter Himmel) oder *t'ien-yeh* (Vater „Himmel"). Daß dieses *tieńgēre* ausschließlich nur dem Himmelswesen gilt, tritt besonders klar in der stets gebrauchten Formel zutage : *šge tieńgēre, uluon purġan* (der große Himmel, die vielen Geister). Ganz bewußt wird hier die Einzigkeit der Vielheit gegenübergestellt und auch zugleich zum Ausdruck gebracht, daß der Himmel zumindest soviel an Würde besitzt wie die *purġan*, also auch eine Gottheit ist, bzw. ein höheres, geistiges Wesen sein kann. Was dieser Gottesbegriff nun beinhaltet, ob es wirklich einen Himmel als Hochgott gibt, soll im folgenden klarwerden, und zwar zunächst im Anschluß an den Himmelskult des Volkes.

b) Der Himmelskult

Daß die Tujen den Himmel verehren, dürfte nach allem, was bisher gesagt wurde, außer Zweifel stehen. Es läßt sich auch noch aus der Volksliteratur weiterhin bekräftigen, wie unten von selbst deutlich wird. Somit

handelt es sich hier nur um das Was und Wie der Himmelsverehrung (Opfer, Gebet), insofern es geeignet ist, über den Gottesbegriff und die damit verbundenen Vorstellungen sowie das Alter und die Stellung des Hochgottglaubens Aufschluß zu geben.

1) Das Opfer

Was die Form, die Vollzieher und die Gesinnung des Opfers betrifft, so gilt, was allgemein vom Opfer gesagt wurde. Hier frägt es sich in erster Linie: gibt es Opfer, die in besonderer Weise dem Himmel zugedacht werden oder eine besondere Beziehung zu ihm haben? Das ist ganz allgemein bei jedem Opfer der Fall, insofern es als Primitialopfer aufgefaßt werden kann. Daneben finden sich auch andere Opfer, die — wenigstens ursprünglich — dem Himmel vorbehalten werden, unter denen das Weihrauchopfer und Schafopfer die wichtigsten sind.

Das Primitialopfer

Einen eigenen Gattungsnamen für das Primitialopfer kennen die Tujen nicht. Sie sagen je nach den Umständen: das Erste (das erste Stück, den ersten Tropfen, die erste Schale usw.) dem Himmel zuwerfen. Für „Erstes" gebrauchen sie das Wort *torōṅ*. Es kann als Zahlwort adjektivisch und substantivisch sein, also auch „das Erste" oder „Erstling" heißen. Daneben besagt es auch noch eine Güte, einen Vorzug; so ist z. B. *kuni torōṅ* (der Leute Erster) ein redegewandter Mann, der auftreten kann; oder *morini torōṅ* (der Pferde Erstes) ein besonders schnelles und starkes Pferd. Genau so wird beim Primitialopfer die Gabe einfachhin als *torōṅ* bezeichnet. Ob damit auch eine besondere Güte bezeichnet werden soll, bleibt dahingestellt. Mir ist nicht bekannt, daß man dafür besonders gute Teile nimmt; man wählt nicht lange. Jedoch wird stets darauf geachtet, daß sie nicht minderwertig, verdorben oder unrein sind. Das Primitialopfer gilt stets dem Himmel. Auch dort, wo es mehreren Gottheiten zugedacht wird, steht dennoch der Himmel an erster Stelle. Es lassen sich zwei Arten unterscheiden: das unmittelbare und das mittelbare.

Das unmittelbare Primitialopfer ist so allgemein unter den Tujen verbreitet, daß es jedem auffällt, der je dem Volke beim Essen zugeschaut hat. Meist geschieht es auf folgende Weise. Bei Getränken taucht man den Mittelfinger, welcher der vornehmste ist, in seine Trinkschale, zieht ihn wieder heraus und spritzt den daranhängenden Tropfen in die Luft. Das tut man dreimal hintereinander. Bei Speisen, z. B. Brot oder Fleisch, pflückt man ein Stückchen ab und wirft es hoch gegen den Himmel oder rückwärts über die Schulter. Auf die Richtung, in der man sitzt, kommt es nicht dabei an. Bisweilen kommt es vor, daß man eine ganze Schale vom Getränke ausgießt. Alle bestätigen, daß sie diese Gabe zuerst dem Himmel schenken, ehe sie sie selbst genießen. Erst nach dem Himmel werden sie mitunter auch andern Geistern zugeworfen.

Das Primitialopfer ist tief im Bewußtsein der Tujen verwurzelt. Es muß nach ihrer Ansicht schon bis in die Anfänge der Menschheit zurückreichen. So heißt es in der Gesersage vom Urkaiser *Hamluo Siergän*, als er auf einer

Reise haltmachte und Tee kochte: *„fulan tsiani sdzülgano, tsiani torönni kuguo tiengerdu tsiodlodzi"* (als der rote Tee kochte, warf er das Erste des Tees dem lichten Himmel zu). Noch deutlicher wird das Erstlingsopfer in der Ackerbaumythe bezeugt (V. 680-690), als nach langem Bemühen des Demiurgen die erste Gerste reift und in den Besitz der Menschen kommt: „Als sie nach 7 Wochen schauen gingen, da war die Gerste reif. Der Kopf neigte sich. Mit beiden Händen zerrieben sie diese (sc. die Ähre), die wie eine Peitsche herniederhing. Und als die Körner ausgegangen waren, wollten sie dem lichten Himmel opfern. Jene Gerste opferten sie und neigten das Haupt zur Erde. Doch zu essen gab es kein Mittel." Also noch bevor die Menschen vom Segen der neuen Nahrung Gebrauch machen können, opfern sie dem Himmel die Erstlingsgabe. Im Urtext steht das Wort *šeñlie*, d. h. opfern im eigentlichen Sinn.

Das mittelbare Primitialopfer wird erst auf dem Umwege über ein anderes Opfer an den Himmel gerichtet. Es findet sich fast bei allen Opfern an die guten Geister. Im religiösen Brauchtum wird man kaum ein Opfer finden, das nicht zuerst dem Himmel gilt. Das zeigt sich beim eigentlichen Opferakt, dem Darbringen, und der damit verbundenen Ehrenbezeugung, dem Kotou. So ist z. B. das Opfer bei Errichtung der Pfahlziege oder auch das Obo-Opfer bestimmt den Wettergöttern oder dem Berggeist zugedacht. Und dennoch erhält der Himmel die ersten drei Schalen; erst nach ihm kommen die andern Geister. Genau wie der Mensch zuerst von seinen Gütern dem Himmel spendet, ehe er sie benutzt, so ist es auch bei der Geisterwelt. Man könnte das ein Primitialopfer des Opfers nennen. Es gibt natürlich Ausnahmen von dieser Gepflogenheit, wie etwa beim Feuerguß, Torma, Huhnopfer usw., die mehr in den Bereich des Lamaismus und der Bonreligion gehören. Aber im großen und ganzen wird das indirekte Primitialopfer stets geübt.

Das Weihrauchopfer

Im Abschnitt über das Weihrauchopfer (siehe erster Teil, Anthropos 47. 1952. pp. 43 ff.) wurde betont, daß es in erster Linie dem Himmel dargebracht wird und danach den anderen Göttern. In den Anmerkungen ist die Vermutung ausgesprochen, daß es sich ebenfalls um ein Primitialopfer handeln könnte; denn es ist das erste Opfer des Tages, in welchem der Mensch von allen lebenswichtigen Dingen dem Himmel spendet. Gegen das Primitialopfer spricht jedoch die einfache Form des Weihrauchopfers, die wesentlich in der Verbrennung von wohlduftenden Dingen besteht, von Zypressenzweigen [4], Blumen etc. Das sind aber keine Lebensmittel mehr, falls man vom Wasser absieht, womit die Feuernahrung besprengt wird, um sie zu reinigen.

[4] Wenn hier das volkstümliche Wort Zypresse gebraucht wird, so ist damit immer botanisch der Thujabaum gemeint; cf. Anthropos 47. 1952. p. 46. Der Tujenname *šgua* (= tibetisch *šug-pa*) ist vieldeutig. Der Thujabaum vertritt bei den Tujen immer die Zypresse und vor allem den Wacholder (Juniperus), der in ihrem Anbaugebiet nur wenig vorkommt, und höchstens in den Bergen angetroffen wird. Der Unterschied ist rein materiell; religiös übernimmt der Thujabaum die Stellung des Wachol-

Diese einfache Form des Weihrauchopfers scheint von Anfang an nur dem Himmel vorbehalten gewesen zu sein und ist von hohem Alter. Auch bei den Mongolen ist es als ein Himmelsopfer bezeugt, und bei den Tujen findet es sich in zahlreichen Liedern. Einige Belege sollen das bekräftigen, zunächst aus der Gesersage. In Vers 1-6 werden die Gepflogenheiten des ersten Menschen geschildert: „Man kleidete sich in Baumblätter. Man aß Baumfrüchte. Man legte sich auf Blumenblätter. Wenn man dürstete, trank man Wasser. In der Tagesfrühe verbrannte man großen Weihrauch (*šdeliedzi šge ʃdzań ġarġani*)." In Vers 38-42 wird erzählt, wie der Urkaiser Weihrauch verbrennt, um ein schweres Werk zu vollbringen: „Wie er auf dem riesigen Quellwasser die Erde sollte zusammenquirlen, da war das furchtbar schwer. Und ein großes Weihrauchopfer verbrennend, flehte er den lichten Himmel an (*šge ʃdzańni ġarġadzi kuġuo tieńgērni yańdziladzia*)." Vers 158-167 beschreibt ein anderes Weihrauchopfer des Urkaisers. Er sammelt Blumen (*kānba*-Blumen = Artemisia-Art) auf der Schattenseite des Berges, Wacholderzweige auf der Sonnenseite, schöpft aus dem Flusse reines Wasser, und dann heißt es: „Auf den hohen Berg steigend, verbrannte er großen Weihrauch, flehte den Himmel an, flehte die zahllosen Geister an ... (*undur ġadadu ġaridzi šge ʃdzańni ġarġaya, šge tieńgērni yańdzilaya, uluon purġani yańdzilaya ...*)." Das Opfer wird in diesem Falle auch andern Geistern dargebracht; aber an erster Stelle steht der Himmel. Das wird auch dadurch hervorgehoben, daß es auf einem Berge stattfindet. Es wird von den *purġan* keiner namentlich genannt. Das tägliche Weihrauchopfer wird in Vers 190-193 erwähnt: „Täglich Weihrauch verbrennend, lebte er (sc. der Urkaiser). Von unten stieg der große Weihrauch auf; und der Qualm des Weihrauchs drückte die Himmelspforte auf; und der erhabene *Sdeńlatsien-sań* (= der oberste Himmelsherr) schaute nach unten hinab. (*Udurdu ʃdzań ġarġadzi sōdzamba. dōrōdza šge ʃdzańni ġarġano, ʃdzańni ʃunini tieńgērni udieni baġa niedzia. Sdeńlatsien sań dorodzi nōdzia.*)" Die Beziehung des Weihrauchs zum Himmel ist hier eindeutig. (Näheres über den *Šdeńlatsien-san* vgl. weiter unten.) Ähnlich lautet die Stelle von der Himmelswanderung des Urkaisers, Vers 1221-1222: „Dann kam er auf seiner Wanderung vor das große Himmelstor; und der Rauch des großen Weihrauchs drückte das Himmelstor auf. (*Di yōdzi tieńgērni šge udie tada kurdzia. šge ʃdzańni ʃunini tieńgērni udieni baġa niedzia.*)" Auf der Erde verbrannte man nämlich während der Zeit Weihrauch, damit das Reiseunternehmen, vom Himmel einen Herrscher zu erflehen, gelänge.

Weitere Belege finden sich auch im ersten Teil des Tierliederzyklus, dem „Moschushirsch". Vers 191-201 schildern das Weihrauchopfer folgendermaßen: „Den Moschushirsch zu fangen, gibt es ein Verfahren. Die Nordseite (des Berges) besteige und pflücke grüne Wacholderzweige. Die Sonnenseite besteige und sammle weiße Känba-Blumen. Gehe hinunter in die flache Ebene und sammle gelbe Känba-Blumen. Begib dich ans Ufer

ders und der Zypresse. Prof. Dr. J. F. Rock fand als botanischer Fachmann nördlich von Minchow (Kansu) keine Zypresse mehr, wohl aber noch zehn Arten Wacholder (Persönliche Mitteilung).

des Flusses und verbrenne großen Weihrauch. Den großen Himmel verehre, die zahllosen Götter flehe an. (*Šge ʃdzańbeń ġarġaya, šge tieńgère amudadzi, uluon purġan yańdzilaya.*)"

Nun noch ein Beispiel aus dem Hochzeitslied „Das Vogelpaar". Das Paar, Hirte und Hirtin, singen abwechselnd: „Wenn die Sonne leuchtend aufgeht, pflücken wir grüne Zypressenzweige. Auf die Schattenseite aufsteigend, sammeln wir weiße Känba-Blumen. In die flache Ebene niedersteigend, schöpfen wir klares Wasser. Auf den hohen Berg steigend, verbrennen wir großen Weihrauch; und den großen Weihrauch verbrennend, ist es ein gutes Werk, wenn wir ein Paar sind. (*Šge ʃdzańni ġarġaya; šge ʃdzańni ġarġadza, tsiari ġuori sguren-wa.*)"

Diese Beispiele aus der Volksliteratur können beliebig vermehrt werden. Doch die angeführten Stellen genügen, um folgende Schlüsse zu sichern: 1. Die ursprüngliche Form des Weihrauchopfers war denkbar einfach. Es gehören dazu Wacholderzweige, Blumen und Reinigungswasser. Das Opfer war ein reines Duftopfer. Wenn natürlich auch das Feuer notwendig ist, so wird es nirgends genannt. Nicht einmal der Ausdruck „entzünden" wird gebraucht. Das übliche Wort „*ġarġa*" ist das Kausativ von „*ġari-*" (erzeugen, hervorbringen, aufsteigen), und bezieht sich hier auf den Rauch. Keine Lebensmittel werden geopfert. Die andern Zutaten, Gewürze usw. lassen sich aus dem Lamaismus erklären [5]. Was in der heutigen Form noch an Lebensmitteln mitgeopfert wird, wäre als eine Verbindung eines Primitialopfers mit dem morgendlichen Weihrauchopfer aufzufassen. Aber auch diese Gaben dürfen nicht schlecht duften, was dem ursprünglichen Sinne des Weihrauchopfers ganz entspricht. 2. Das Weihrauchopfer ist nach diesen Texten schon sehr alt. Mögen die Sagen auch notdürftig lamaistisch verbrämt sein, so gehen sie doch auf vorbuddhistische Verhältnisse zurück. Besonders trifft das für die Gesersage zu. Lamaistische Mönche in Kumbum betonten, die Sage habe nichts mit ihrer Religion zu tun. In gleicher Weise findet sich diese Art des Weihrauchopfers in West-Tibet als vorbuddhistisch bezeugt; vgl. A. H. FRANCKE: Tibetische Hochzeitslieder p. 25 f. (Darmstadt 1923). Das vorbuddhistische Vorkommen bei den Altmongolen wurde schon erwähnt. Die Tujen sind aber mongolischer Abstammung, und auch zu den vorbuddhistischen Tibetern haben sie religiöse Beziehungen, wie sich das in den Hochzeitsbräuchen und Liedern zeigt [6]. — Wie weit das Weihrauchopfer zurückreicht, ist im Jagdliederzyklus angedeutet. Wahrscheinlich wurde es schon in der Frühzeit einer Jägerkultur geübt und ist von dort ins Hirtentum übergegangen. Auffallend

[5] Auch J. F. ROCK stellt für die Na-khi eine ursprüngliche, einfache Form fest, Wacholderzweige und Butter; erst später seien die anderen Zutaten hinzugekommen; s. Naga Cult, p. 231 f.

[6] Zur Verbreitung des Rauchopfers s. Anthropos 47. 1952. p. 49. Für den vorbuddhistischen Charakter spricht auch das Vorkommen in Altchina; cf. JEN NAI-CH'IANG-SCHRÖDER: Die Fandse, p. 183, wo das altchinesische Brandopfer mit dem Rauchopfer der Fandse gleichgesetzt wird. Vorbuddhistisch ist auch das Wacholder-Rauchopfer der Na-khi, dessen große Ähnlichkeit mit dem Rauchopfer der Tujen und Tibeter sich nicht verkennen läßt; vgl. die Beschreibungen von J. F. ROCK: Naga Cult, pp. 230 ff.; und Muan Bpö, pp. 18, 34.

ist, daß die Ackerbaumythe das Weihrauchopfer nicht erwähnt. Die Umweltverhältnisse — Bergweide, Wald, wilde Blumen usw. — passen nicht zum Ackerbau [7]. — Hier läßt sich fragen, ob das Weihrauchopfer älter sei als das Primitialopfer. Es hat mit diesem gemeinsam, daß es in den Sagen vor allen andern Opfern genannt wird. Schon der Urkaiser kennt beide Opfer; das Hochzeitslied und das Jagdlied nennen das Weihrauchopfer, die Ackerbaumythe nur das Primitialopfer. Das Verhältnis der beiden Opfer zueinander läßt sich nicht entscheiden. 3. Das Weihrauchopfer gilt immer entweder dem Himmel allein oder ihm an erster Stelle. Es ist ein eigentliches Himmelsopfer. Nur selten richtet es sich an die anderen Geister, die ihrem Sammelnamen entsprechend *purgan* genannt werden, also erst späteren buddhistischen Ursprungs sind. Mit Vorliebe scheint man Bergeshöhen gewählt zu haben, um dem Himmel näher zu sein. Auch heute noch tut man das. Die Tujen sind sich dessen bewußt und nennen als Grund, daß es sich so besser für den Himmel passe [8]. Die Beziehung zum Höchsten Wesen kommt z. B. auch im Hochzeitslied aus Khalatse (West-Tibet) zum Ausdruck. Dort heißt es nach FRANCKE a. a. O. p. 25 f.: „Dieser blaue Rauch, der nach oben steigt, bedeutet, daß mit *brGya-byin*, dem Herrn der Götter, kein Unfrieden entstehen möchte."

Das Schafopfer

Das Schaf als Opfertier ist dem vorliegenden Material zufolge in besonderer Weise dem Himmel und Berggeist vorbehalten, wenn es auch den anderen Göttern geopfert werden kann. Aber nie wird es dem Berggeist allein ohne den Himmel geopfert. Wohl gibt es Schafopfer, die nur dem Himmel gelten, nämlich beim Saat- und Erntedankfest. (Vgl. D. SCHRÖDER: Herbst-Dankopfer, Anthropos 37-40. 1942/45. pp. 867-874.)

Daß es sich um ein eigentliches Himmelsopfer handelt, ist a. a. O. klar ausgedrückt: „Schon aus der ganzen Opferhandlung und den dabei gesprochenen Worten geht hervor, daß es ein Opfer an den Himmel ist. Auf die Frage: 'Ihr opfert also den Göttern im Tempel?', antwortete der Alte: 'Nein,

[7] Die Urtümlichkeit des Rauchopfers erklärt sich letzten Endes aus der Urtümlichkeit des Wacholderbaumes, der als Welten- und Lebensbaum am Anfang der Zeiten steht; cf. J. F. ROCK: Muan Bpö, pp. 18, 20, 21, 132, 143. Da er der erste Baum der Welt ist, konnte auch der Urkaiser (Gesersage) nur diese Zweige zu Ehren des Himmels verbrennen. Das Rauchopfer gehört also in die Welt der religiösen Urtypen, die für die spätere Menschheit maßgebend wurden; genau so wie die Urtypen des ersten Menschen, des Weltenberges und des Lebensbaumes, des Himmels und der Erde, des ersten Obo usw. in jene sagenhafte Zeit zurückreichen.

[8] Vor allem setzt der aufsteigende Rauch dieses Opfer in Beziehung zum Himmel; hier ist die Ausdrucksweise *garga*, aufsteigen lassen, besonders zu beachten. Der Rauch ist wie eine lebende Himmelssäule oder ein lebender Himmelsweg. Daher rührt auch die schamanistische Bedeutung des Rauchopfers; es fördert nicht nur die Trance, sondern ist zugleich Weg und Triebkraft der Himmelsreise. Der Urkaiser der Gesersage verlangt z. B., daß während seiner Himmelsreise das Rauchopfer nicht unterbrochen werden soll; der aufsteigende Rauch stößt gegen die Himmelspforte und öffnet ihm den Eingang; und seinen unfähigen Begleiter schießt er auf seiner Pfeilspitze in die aufsteigende Rauchsäule, worin er zur Erde hinabfährt.

wir opfern dem Himmel' ... 'Dieses Opfer ist eine Himmelsverehrung' ... 'Ich habe es doch schon gesagt; dem Himmel danken wir für die Erträgnisse des Jahres. Er sorgt für Saat und Mensch und Vieh' ..." (Anthropos a. a. O. p. 873). Dieselbe Aussage hat auch für das Saatfest zu gelten, bei welchem die Zeremonien fast gleich sind.

Es ist nun auffallend, daß ausgerechnet in einem Ackerbauritus, Saat- und Herbstfest ein Schafopfer stattfindet. Ich konnte aber später viele solcher Feste besuchen und die eigentliche Form feststellen, welche dem Ackerbau- und Schamanencharakter mehr entspricht. In den Tälern nämlich, im chinesischen Siedlungsbereich, wird kein Schaf, sondern — wenigstens mit Vorliebe — ein Schwein geopfert. Dieses Schwein wird mit vielen Riten umgeben, worunter auch eine regelrechte Prozession mit dem geopferten Schweine stattfindet. Die Schamanen begleiten diese Prozession mit Trommelschlag und Gebet. So beobachtete ich es z. B. in Tsung-chai und Umgebung. In den Bergen hingegen, bei den Tujen, wird mit Vorliebe ein Schaf geopfert, obwohl die Tujen auch Schweine halten. Es bleibt also nur die eine Erklärung übrig, daß die ursprüngliche Form dieser Ackerbaufeste mit einem Schweineopfer verbunden ist, und daß das Schafopfer der Tujen dieses als ein Fremdkörper ersetzte. Der Grund dafür ist naheliegend. Die Tujen sind ihrer Tradition nach einmal Hirten gewesen, und es lassen sich noch viele hirtenkulturliche Elemente bei ihnen aufzeigen. Mit dem Übergang zum Ackerbau hat sich offenbar das Frühlingsfest der Hirten mit dem Saatfest und das Herbstfest der Hirten mit dem Erntefest der Ackerbauer verbunden. Weil nun aber das Schaf ein liebgewonnenes Opfertier war, haben die Tujen das Schafopfer bei diesen Festen nicht preisgeben wollen. In der Beschreibung des Festes ist ja sehr stark betont, daß der ganze Opferritus im engeren Sinne (Schlachten usw.) nichts mit den Schamanen zu tun haben will. Die Opferer sind die Ältesten, also Laien. Der Schamanenritus, hauptsächlich Gebetsdienst und Tanz, läuft nebenher.

Wir haben also im Herbstdankopfer und Saatopfer der Tujen ein altes Himmelsopfer vor uns, welches vom Volke bewußt gepflegt und eindeutig auf den Himmel bezogen wird.

2) Das Gebet

Was oben vom spontanen, unformulierten und freiformulierten Gebet gesagt wurde, gilt auch für das Gebet an den Himmel. Jeder Mensch kann seine Not, seine Bitten, seinen Dank, seine Gefühle dem Himmel gegenüber bekunden, wie es ihm gerade kommt. Aber eines ist hier besonders zu beachten. Während das formulierte Gebet, der Gebetsdienst, im allgemeinen besondern Ständen vorbehalten ist und das Opfer mehr dem Volke, trifft das nicht ganz beim Gebet an den Himmel zu. Eigentliche Gebete von Religionsdienern, die nur dem Himmel gelten, konnte ich nicht feststellen. Dem Himmel gegenüber gibt es also, was Opfer und Gebet angeht, keinen eigenen Stand. Beides ist Angelegenheit der Laien, des Volkes, des Hausherrn oder des Einzelmenschen.

Abgesehen von eigenen Beobachtungen, ist das persönliche Gebet an

den Himmel zur Genüge durch die Stellen belegt, welche für das Weihrauchopfer herangezogen wurden. Fast immer ist dabei ein Gebet, ein Flehen (*yaṅdzi-*) zum Himmel vorhanden. Und bis jetzt ist auch mit jedem Opfer, jedem Kotou an den Himmel stets ein Gebet verbunden, wenigstens ein inneres. (Vgl. Herbst-Dankopfer, Anthropos 37-40. 1942-45. p. 872.) Die einzigen Gebetsformeln des Volkes in der Tujensprache richten sich an den Himmel, nämlich: *tieṅgère mudie* (der Himmel weiß) und: *tieṅgère tsiad sadin wari* (Himmel, Du hältst die Gerechtigkeit). Die Formel *tieṅgère mudie* ist schon aus der Frühzeit der Mongolen bekannt, und sie bezeugt, ein wie altes Erbe die Himmelsverehrung beim mongolischen Grundstock der Tujen ist. Mit dem Gebet ist gewöhnlich auch ein dreifacher Kotou verbunden, wodurch der Mensch in einer umständlichen Zeremonie auch rein äußerlich seine Unterwürfigkeit vor dem Gotthimmel bekunden will.

c) Die Natur und Eigenschaften des Himmels

Die Einzigkeit

Die Erörterung des Namens hat bereits gezeigt, daß die Bezeichnung *tieṅgère* allein dem Himmel vorbehalten ist. Er teilt diesen Namen auch nicht als Titel mit einer anderen Gottheit, wozu noch etwa ein Eigenname einer bestimmten Gottheit gesetzt würde. Diese einzigartige Stellung des Himmels wird noch klarer, wenn man ihn im Verhältnis zu den andern Gottheiten betrachtet.

Die Stellung zu den Gottheiten allgemein. — Das Opfer, die vielen Texte aus den Liedern, das übrige Brauchtum anerkennen überall den Himmel als den Ersten. Das wird kurz und bündig in dem stets wiederkehrenden Ausdruck *šge tieṅgère, uluon purgan* (der große Himmel, die zahllosen Geister) anerkannt. Der Himmel ist der Große. Er wird eigens gegenüber den vielen andern Geistern herausgestellt. Er hat als Erster teil an allen Opfern, ihm gilt — vor allen andern Göttern — der erste Kotou, die erste Huldigung des Tages. Die Tujen sprechen das auch aus: „Was wären die Götter ohne den Himmel, er ist ihr Herr"; vgl. Herbst-Dankopfer, a. a. O. p. 873. — Diese Vorrangstellung hat der Himmel auch jenen Gottheiten gegenüber inne, von denen es scheinen möchte, daß sie mit ihm die Würde teilen, weshalb sie im folgenden kurz zu erwähnen sind.

Die Stellung zum Himmelskaiser der Gesersage. — Die Gesersage kennt drei Himmelsherren, unter denen der *Šdeṅglatsien Saṅ* der höchste ist. Er wohnt mit ihnen zusammen im unermeßlichen Himmelsraum, hier als Aufenthaltsort der Götter ebenfalls *tieṅgère* genannt. Er hat eine Gemahlin, Söhne und Töchter, eine herrliche Residenz, ein prächtiges Heer. Kurzum, der Himmelskaiser und sein Reich sind nach menschlichen Vorstellungen irdischer Khane bis ins einzelne ausgemalt. Sein Sohn wird auf Bitten des Erdenkaisers auf dieser Welt wiedergeboren, um sie von den Unholden zu befreien. Es ist Geser-Khan.

Aber neben dieser Gestalt existiert der gestaltlose, alte *tieṅgère* weiter,

wie die oben erwähnten Zitate aus der Gesersage dartun. Er wird durch Weihrauchopfer verehrt, und man betet zu ihm. Hier ist eine alte Vorstellung mit in die Sage hineingenommen worden. Die Sage selbst ist nicht mongolischen Ursprungs, sondern gehört vielleicht in die Welt der Bon mit ihrer tibetischen Heimat. Sie wurde trotz der Ablehnung der Buddhisten mit vielen buddhistischen Zutaten verbrämt, und die Lamas spielen eine gewisse Rolle darin. Nun hat aber jedes Volk, das die Sage für sich beansprucht, auch die Tujen, sein Eigenes noch hineingedichtet und will die alten Volkssitten irgendwie darin begründet wissen. Wenn darum die Gestalt des Himmelskaisers zwar angenommen wird, so bleibt dennoch der alte *tieńgēre* im Bewußtsein des Volkes lebendig und hält auch seinen Einzug in die Gesersage, ja er bleibt dem Rang nach als die höchste Gottheit bestehen, einerlei, ob sich das harmonisch mit der andern Himmelsgestalt vereinigen läßt oder nicht. Die Einstellung des Volkes läßt sich am besten durch den bereits oben zitierten, hier noch ausführlicheren Passus wiedergeben, Vers 158 ff.: „Auf den hohen Berg steigend, verbrannte er großen Weihrauch, flehte den Himmel an (*tieńgēre*), flehte die zahllosen Geister an (*purǵan*), flehte den *Šdeńlatsien Saṅ* an, flehte den *Warintsien Saṅ* an, flehte den *Sēma Lortsien Saṅ* an." Also zuerst kommt der Himmel, und nach den andern Göttern erst die drei Himmelsherrscher. Klarer kann die Vorrangstellung des Himmels nicht ausgedrückt werden. Es zeigt sich aber auch deutlich, wie hier zwei Anschauungen noch unverschmolzen nebeneinander einhergehen, und wie wenig sich das Volk um innere Zusammenhänge Sorge macht, sondern an dem festhält, was es besitzt. Der *tieńgēre* ist dem Volke die wichtigste Gottheit, und es möchte sie nicht in der Sage missen. Der *Šdeńlatsien Saṅ* hat im Brauchtum keine Bedeutung.

Die Stellung zum Berggeist und zum Erdgott. — Im Kapitel über das Obo, das Weihrauchopfer und an andern Stellen war von einer Dreiteilung der Gottheiten die Rede, nämlich in der Reihenfolge: Himmel, Berggeist und Erdgott, zahllose Götter. Dadurch, daß der Berggeist und Erdgott nicht unter den buddhistischen Begriff *purǵan* eingereiht werden, legt sich ein vorbuddhistiches Alter von selber nahe. Dazu hat der Berggeist Aufgaben, die man dem Himmel zuschreiben könnte. Wie ist das Verhältnis zu ihm?

Die Tujen nennen den Berggeist *yifula*. Ein tibetisches Äquivalent wäre das früher schon erwähnte Wort *ri-bo lha* (Berg-Geist). Der Gewährsmann, welcher selbst diesen Namen trug, übersetzte es jedoch mit dem chinesischen *Shan-shen pao* (Berg-Geist Schutz). (Über die Namensgebung vgl. oben: Die Vollendung des Wochenbettes.) Das führt aber auf eine mongolische Auflösung des Wortes. Und die findet sich nach W. A. UNKRIG in der Zusammensetzung: *ibel* (Schutz) und *ula* (Berg), vgl. KOVAL p. 282. Die Deutung entspricht der chinesischen Übersetzung. *Yifula* wäre also sinngemäß mit „Schützer der Berge" wiederzugeben. Ohne die Herkunft des Namens zu entscheiden, läßt sich jedoch behaupten, daß der Kult des Berggeistes im Obofest seit alters eine mongolische Eigenart ist, die immer wieder in der Literatur berichtet wird. Auch bei den Tujen — wie bei den benachbarten Tanguten — stand das Obofest in hohem Rang; vgl. Das Obo, Anthropos 47. 1952. pp. 63 ff.

Der Berggeist ist kein Schreckensgott, sondern ein milder, fürsorglicher Vater, der Herr der Tiere, dem Wohl und Wehe der Herden am Herzen liegt, der sich um Pflanzen und Bäume sorgt, der sich um die Vermehrung der Menschen kümmert. Er ist der Sachwalter des *ayil* (Dorfes, Stammes) und hütet dessen Waffen. Um ihn versammelt sich das Volk zu Spiel und Tanz, Gebet und Opfer. Obwohl sich also der Berggeist um das Wohlergehen des Volkes müht, wird er auffallenderweise nicht mit dem Schutz von Saat und Ernte in Verbindung gebracht. Im übrigen aber decken sich seine Aufgaben mit denen des Himmels, wenn er auch in erster Linie ein Naturgott ist, der seine Eigenart mit dem Herrn der Tiere und Wälder so mancher sibirischer Völker teilt.

Aber es ist doch ein Unterschied zwischen ihm und dem Himmel. Zunächst erhält der Himmel auch bei allen Opfern an den Berggeist den Vorrang, z. B. beim Obo-Opfer. Während der Berggeist im Obo, seiner Burg, einen festen Wohnsitz findet, also ortsgebunden ist, behält der Himmel seine örtliche Freiheit. Der Berggeist kann auch Schutzgeist der Menschen sein, die sich nach ihm benennen; er kann als Hilfsgeist in den Schamanen eingehen und in der Trance von ihm Besitz ergreifen. Das kommt für den Himmel überhaupt nicht in Frage. Die Leute wundern sich schon, wenn man sich nur danach erkundigt. Vom Berggeist gibt es Bilder und Fahnen; er kann einen Geisterspeer beseelen. Der Himmel ist gestaltlos, bildlos, keiner weiß, wie er aussieht. — Der Himmel ist auch dem Berggeist gegenüber von erhabener Einzigartigkeit.

Neben dem Berggeist hat die Erdgottheit im Obo ihren Sitz, und zwar in der Erdschicht. Ihr Name *ġlu* ist zweifellos das tibetische *klu*, Naga, Drache. Im Mongolischen findet sich dafür das Wort *lu*, welches auch in der Tujensprache viel im Gebrauch ist. Es entspricht dem chinesischen *lung* (Drache). Die Gebräuche mit der Erdgotturne weisen die Erdgottheit der Tujen mehr in den bonistischen Bereich des Naga-Kultes als in den mongolischen. Es ist ganz gut möglich, daß sich hier zwei Typen vermischt haben, bzw. der altmongolische vom späteren bonistisch-lamaistischen überlagert wurde. Nach Pallisen (a. a. O. p. 159 f.) übten die Altmongolen einen Kult der Erdgottheit, die wahrscheinlich weiblich zu denken ist. Dort trägt sie den Namen *itoga* oder, in vordervokalischer Lesart, *etügen* und wird als Schutzgottheit der Heimaterde aufgefaßt. Die Eigenschaften, welche dieser Gottheit beigelegt werden, stimmen mit denen des Berggeistes überein. Es ist auch zu vermuten, daß diese Gottheit mit den weiblichen Schamanen in Verbindung zu bringen ist, welche sich *udugan* (*udagan*, *idugan*) nennen. (Vgl. Koval, p. 386; Uno Harva: Rel. Vorstellungen, p. 450.) Wie die Zeremonien der Erdgotturne zeigen, hat diese Gottheit etwas mit Butter und Seide zu tun (Seidenwicklung, Butterbegießen), ebenso mit Getreide (Gerstenfüllung). Ähnliches trifft für die *etügen* zu, welche als weibliche Gottheit mit der Eigenschaft „fettgesichtig" und „seidengesichtig" bedacht wird. (Vgl. N. N. Poppe: Schaman. Handschriften, Bd. 1, 196/97, Hschr. XI; Angabe nach W. A. Unkrig.) Weitere Hinweise auf den Zusammenhang der Erdgottheit mit dem Ursprung des Ackerbaues und entsprechender Tujen-Mythe müssen hier erspart bleiben.

Einerlei nun woher die Tujen ihre Erdgottheit haben, sie bildet mit dem Himmel und Berggeist eine alte Dreiheit, welche sich die Welt aufgeteilt hat. Nach der allgemeinen Vorstellung der Tujen herrscht der Himmel über den Luftraum, die Wolken, Winde, Blitz, Sonne, Mond und Sterne. Der Berggeist verwaltet die Erdoberfläche: Tiere, Menschen, Vögel, Wälder, Weiden und Berge. Die Erdgottheit regiert über das Erdinnere: die Metalle, Gesteine, Schätze, die Schlangen und das Gewürm, sowie die Saat, die in der Erde schlummert. Diese Aufteilung schließt jedoch den Himmel nicht von den andern beiden Bereichen aus. Nach allem, was bisher gesagt wurde, bleibt er der Herr der Götter und Menschen. Wenn er hier als Mitverwalter der Weltschichten auftritt, so gibt er nur scheinbar seine Teilbereiche auf. Man könnte eher an eine Abspaltung und Verselbständigung gewisser Tätigkeiten des Himmels denken, wie P. W. SCHMIDT es für ähnliche Fälle bei andern asiatischen Völkern annimmt.

Das Wissen des Himmels

Nach den voraufgegangenen Erörterungen ergeben sich die weiteren Eigenschaften des Himmels von selbst. Unter diesen Eigenschaften tritt am deutlichsten das Wissen hervor. Über das Wissen gab der Gewährsmann folgende Auskunft (SCHRÖDER: Herbst-Dankopfer, a. a. O. p. 873): „Beim Weihrauchverbrennen sagt ihr: 'Himmel, du weißt es. Was weiß denn der Himmel?' — 'Der Himmel weiß alles, er kennt die Gesinnung meines Herzens, er weiß, daß ich ihn verehren will.'" — Dieser oft zitierte Spruch lautet wörtlich übersetzt: Himmel wissen; frei: der Himmel weiß; oder: der Himmel ist wissend. Das ist kein Bittgebet, sondern nur einfach eine reine Anerkennung dieser Eigenschaft des Himmels, und sie beinhaltet nach der gegebenen Erklärung ein Allwissen.

Für dieses Volksbewußtsein finden sich noch andere Ausdrücke. So lautet z. B. eine oft gebrauchte Beteuerungsformel für eine Aussage: „Der Himmel ist nicht hoch; der Himmel weiß es (*tieńgère undur guei*; *tieńgère mudiem*)." Der Sinn ist: Der Himmel ist zwar hoch; aber doch nicht so hoch, daß er es nicht wüßte. (Vgl. DMF 416, wo dieser Satz ebenfalls als eine „formule de serment" bezeichnet wird.) Ähnlich klingt eine andere, oft gebrauchte, Redewendung: „*tsimi mö gedzi yidza, tieńgère mudiem*. Habe (ich) dir Böses getan (ist dir Böses geschehen), so weiß es Himmel"; vgl. DMF 416. Damit ist besonders das Wissen über die innere Gesinnung betont.

Nimmt man nun noch allgemein hinzu, daß die ganze Himmelsverehrung in Opfer und Gebet unter der Voraussetzung geschieht, daß der Himmel auch um die menschlichen Nöte weiß, so läßt sich behaupten, daß im Volk das Bewußtsein vom Himmel als dem Wissenden schlechthin sehr lebendig ist.

Der Glaube an das Wissen hängt mit der Allgegenwart des Himmels zusammen. Sie läßt sich zwar nicht ausdrücklich feststellen, aber die Tujen haben doch eine Vorstellung davon, wenn sie sagen: „Der Himmel ist dort, wo man ihn hinstellt (*tieńgère andzi tędza, andzi-i*)." Das heißt dem Sprachgebrauch nach: Der Himmel ist überall. (Vgl. DMF 416, wo der gleiche Sinn erklärt wird.) Diese Redensart scheint offensichtlich von dem starken Ein-

druck bestimmt, welchen das allumspannende Firmament auf das unbefangene Volksgemüt macht, besonders in den Steppen und auf den Bergen am Kukunor. Soweit man auch wandert, ob bei Tag oder Nacht, immer dehnt sich der unendliche Himmel über dem Menschen. Er ist wirklich eine allumfassende Glocke, die sich die Tujen an einem Nagel im Universum befestigt denken.

Die Macht des Himmels

Der Himmel als Spender aller Wohltaten. — Wie es in den einzelnen Kapiteln immer wieder hervortritt, kommen alle Wohltaten vom Himmel. Er spendet Regen und Sonnenschein, verleiht der Saat Gedeihen, schützt Mensch und Tier vor Krankheit. Der Mensch anerkennt das im Opfer, besonders im Primitial- und Herbst-Dankopfer. Das Getreide, die Gerste, führt der Mensch letztlich auf den Himmel zurück. (Vgl. oben unter dem Primitialopfer, Ackerbaumythe, p. 222.) Auch die Kleidung verdankt der Mensch ihm. So heißt es zu Anfang der Gesersage: „Der Himmel spendete Kleider-Wohltat; vom Himmel fiel ein Stiefel herab (*tieńgère dżoġ nàńladzia; tieńgèrdza perlóńgè bödzi rèdzia.*)" (Vers 6-7.) Daß auch andere Götter für die verschiedenen Nöte angerufen werden, beeinträchtigt nicht die Tatsache, daß der Himmel die Ursache auch dieser Wohltaten ist. Anderes wäre nur der Fall, wenn es Dinge gäbe, die unter Ausschluß des Himmels diesen Geistern zugeschrieben würden, was sich aber aus dem vorhandenen Material nicht beweisen läßt.

Die moralische Macht des Himmels. — Die moralische Macht des Himmels äußert sich dadurch, daß der Mensch sein Gewissen in Beziehung zum Himmel setzt und diesen als sanktionsberechtigt, bindend anerkennt. Für das, was wir Gewissen nennen würden, setzt der Tujen einfach das Wort Herz (*sgil*); *sgil* ist nicht das physische Herz, sondern die innere Gesinnung, Herz in übertragenem Sinn. So heißt es z. B. *sgn sgil* (gutes Herz); *tsini sgil diesèn ugua* (Du hast keine ehrliche Gesinnung); *tsini sgil ugua* (Du hast kein Gewissen). In diesen Fällen übersetzt der Tujen das Wort *sgil* mit dem chinesischen *leang-hsin* (Gewissen, lautere Gesinnung). (Vgl. auch DMF 348.) Wie nun die zwei Gebetsformeln, die oben erklärt wurden, dartun, weiß der Himmel um die innere Gesinnung, er kennt das Herz des Menschen: „Tat ich Dir Böses, so weiß es der Himmel", „Der Himmel ist nicht hoch, er weiß es". Da diese Sätze als Beteuerung oder Schwurformeln gebraucht werden, so ist damit nicht einfach eine Feststellung des himmlischen Wissens gemacht, sondern man setzt stillschweigend auch eine Sanktion durch den Himmel voraus, die auf diesem Wissen gründet. Das wird noch deutlicher dadurch, daß man dem Himmel Strafgewalt zuschreibt. Ein vielgebrauchtes Wort ist: „*tieńgère dardzia* (der Himmel hat [sc. ihn] gestraft; d. h. Unglück gesandt)"; *dari-* heißt wörtlich: bändigen; es wird vorwiegend für das Bezwingen störrischer Pferde gebraucht. Ähnlich heißt es auch, wenn man einen übermütigen Menschen demütigt: „*tolgue dari-* (den Kopf niederzwingen)." (Vgl. DMF 45.) Das Volk legt gerne die Unglücksschläge, die einen Menschen treffen, als eine Demütigung und Strafe des Himmels aus.

Als bindende Macht zeigt sich der Himmel vor allem bei der Eheschließung. Nach L. SCHRAM (Mariage p. 71 u. 174) ist der eigentliche Akt der Eheschließung der Kotou, den die Brautleute im Hofe vor dem Himmel und den zahllosen Burchanen vollziehen. Der Himmel steht an erster Stelle. Schon aus der Feierlichkeit, welche die andern Zeremonien überragt, ergibt sich die Bedeutung des Aktes. Genau wie bei den Chinesen ist dieser Ritus vor dem Himmel (bei Chinesen ohne Burchane) rechtskräftig, und die Ehe gilt als geschlossen. Daß dem eine alte Vorstellung zugrunde liegt, zeigt sich in dem überlieferten Liede „Das Vogelpaar", das bei jeder Hochzeit gesungen wird. Darin wird geschildert, wie Hirte und Hirtin beim Weihrauchopfer sich als ein Paar betrachten. (Vgl. oben, p. 224, wo vom Weihrauchopfer die Rede ist.) Dann aber heißt es mit unmißverständlicher Eindeutigkeit : „Den großen Himmel verehren wir und sind ein Leben lang ein Paar (*šge tieńgērni amudadzi, nigē nisēni dzawa dāńlieya*)". Auch die Heirat mit dem Manibaum beim Fehlen eines Gatten gilt vor dem Himmel als rechtskräftig ; vgl. SCHRAM a. a. O. p. 127. Die von der Frau geborenen Kinder heißen auf chinesisch *t'ien sheng tzu* (Himmels-Kinder). Vor dieser Ehe wird dem Mädchen die Frauenfrisur zurechtgemacht ; das nennt man chinesisch *pao t'ien-t'ou* (die Himmelsfrisur anlegen). — Auch das Gegenteil trifft zu, daß ein Mädchen dem Himmel seine Jungfrauschaft gelobt und zum Zeichen dafür die Haare hängen läßt : *arin ʃsdzün tieńgērdē ʃdzē bölġadzia* (das reine Mädchen läßt dem Himmel die Haare lang hängen). — Im übrigen dürfte bei den Tujen die altmongolische Vorstellung von der Auserwählung der Mongolen durch Gott und dessen Herrschaftsauftrag noch nachwirken.

Himmel und Schöpfung. — Wenn die Tujen auch alle Wohltaten des Lebens dem Himmel zuschreiben, so heißt das noch nicht, daß sie auch die Herkunft der Welt von ihm ableiten. Hierüber machen sie sich keine Gedanken : „Auf die Frage, ob der Himmel auch die Erde und die Menschen erschaffen habe, woher sie kämen, gab der Alte keine klare Antwort : 'Wer weiß das ? Wer frägt danach ? Darüber sagt keiner etwas'." (SCHRÖDER : Herbst-Dankopfer, a. a. O. p. 873.)

Der Gesersage zufolge war schon gleich von Anfang an eine Welt mit Lebewesen vorhanden. Auf dieser Welt lebte der „aus sich seiende Lama" (*arāń sündē lama* = P'an-ku). Dieser ist nicht etwa Gott ; denn über ihm existierte ja schon der Himmel, welcher in einem Stiefel den Urkaiser herunterwarf, der von diesem Lama großgezogen wurde. Es wird dann geschildert, wie die Erde sich bevölkert. Schließlich existieren noch Urwesen (Urtiere), von denen auch nicht gesagt wird, woher sie kommen. Hier gehen buddhistische, lamaistische und alte Volksvorstellungen durcheinander und nebeneinander. Aber nirgends ist von einer Schöpfung die Rede, nur der Urkaiser stammt vom Himmel.

Dasselbe findet sich auch in der Ackerbaumythe. Diese behandelt die Ausstattung der Erde durch einen buddhistisch aufgefaßten Demiurgen. Im Mittelpunkt steht dabei die Schaffung der Nahrungsgrundlage durch die Hervorbringung der Gerste aus der Zaubervase und die Einführung des Ackerbaus.

Auch dieser Demiurg kommt in drei Stufen vom Himmel herab. Aber von einer Welt- und Menschenschöpfung ist keine Rede, nur von einer Herrichtung der Welt zu einem bewohnbaren Lebensraum. Die Mythe beginnt: „In der alten Tage Vorzeit, als der Menschen Geschlecht hervorgebracht war, gab es weder Sonne noch Mond; und der Menschen Geschlecht war in Finsternis. Es gab keine Möglichkeit zu leben." Von wo die Menschen kamen, bleibt ungelöst. Es heißt nur *sëmtsien kuni darladzia* (die Gesamtheit der Menschen war hervorgebracht). Man darf aber annehmen, daß dafür auch der Himmel in Frage kommt; denn der Kulturheros (der die Erde ausstattet) stammt ebenfalls vom Himmel, so wie in der Gesersage der Urkaiser der Menschen, und später Geser selbst.

Noch weniger ist von einer Schöpfertätigkeit des Himmels gegenüber dem Einzelmenschen festzustellen. Zwar lautet ein geläufiger Tujenspruch: *suniędzëne tieńgëre xuradzia*, der Himmel hat die Seele genommen (DMF 361); damit ist aber nur die Herrschaft des Himmels über Leben und Tod zum Ausdruck gebracht. Von einer Schöpfung der Seele ist keine Rede. Eine ähnliche Redensart kennen auch die Chinesen: *t'ien shou-la t'a-ti ling-hun*.

Himmel und Schicksal. — Bei der alten mongolischen Bedeutung des Schicksals oder Glückes, die ihre stärkste Ausprägung im Sülde-Kult erfahren hat, liegt die Frage nahe, ob Ähnliches auch bei den Tujen zu finden ist, etwa so, daß es ein über dem Himmel stehendes Schicksal gäbe. — Die Tujen kennen für „Schicksal" drei Ausdrücke: *dzieyan, šdiemdžël, kimori*.

dzieyan wird vorwiegend im Sinne von günstigen Lebensverhältnissen gebraucht, z. B. wenn man sagt: „Das Mädchen hat ein günstiges Geschick erfahren", und damit meint: es hat in eine gute, reiche Familie hineingeheiratet. Das Tujenwort entspricht dem mongolischen *jayagan*, hat aber nicht dessen Wesensinhalt. Die Bedeutung scheint vielmehr von dem ursprünglichen *jayagan* auf den Tujenausdruck *šdiemdzël* übergegangen zu sein.

šdiemdzël findet sich nun eigenartigerweise nicht so sehr in der Umgangssprache als vielmehr in Liedern. So schließen die Tujen-Gesänge sehr gerne mit dem Vers: *moṅġol kuni lōṅšda* (oder: *kimori*) *darlagu, šdiemdžëlgë rëdziġlaya* (um das Luftpferd der Mongolen zu errichten, laßt [uns] ein Glücksfundament legen [= bauen]). Diese Vorstellung schließt sich an das Bild der Mittelburg an. Das Luftpferd gründet in der Mittelburg. Demnach entspräche das *šdiemdžël* der Grundlage für das Schicksal, welches im Luftpferd versinnbildet ist. Hier vermischen sich offenbar alte Vorstellungen mit jüngeren buddhistischen, wodurch im Anschluß an die *Hayagriva*-Gestalt Schicksal und Pferd zusammengebracht sind. Sprachlich läßt sich das Wort *šdiemdžël* nicht eindeutig fassen. Die zweite Silbe *..dzël* ist aber zweifelsohne dem mongolischen *dsol* (*dzol*) gleichzusetzen. Nach Koval. (2386) bedeutet es: Glück, Heil. Koval. bringt dafür das tibetische Äquivalent *stes*. Wenn man beachtet, daß die Tujen durchweg vor einem *e* in tibetischen Lehnwörtern ein *i* einschieben, dann dürfte die erste Silbe *šdie(m)* dieses tibetische *stes* sein, dessen Schluß-*s* stumm ist. Das *m* wäre im Angleich an den folgenden Dental dazwischengeschoben. Dem Sinne nach übersetzen die Tujen *šdiemdžël*

mit dem chinesischen *yün-ch'i* oder *t'ien-ming*. Aber auch das *kimori* geben sie in gleicher Weise wieder. Schon damit ist ausgesprochen, daß das Schicksal unter der Macht des Himmels steht, was auch UNO HARVA für die Altaier und Mongolen hervorhebt (Vorstellungen, p. 144/45). Diese altaisch-mongolischen Vorstellungen lassen sich nämlich zwanglos mit dem *kimori* und *šdiemdžël* der Tujen in Verbindung bringen. Nach UNO HARVA handelt es sich nämlich bei dem Glücksgaranten um den Schutzgeist des Menschen, *zajači* genannt, in Form eines Doppelgängers: „Wenn der Mensch in seinem Leben reich ist, ist auch *zajači* gut gekleidet, reitet auf einem Roß und ist fröhlich" ... „Wenn der Mensch stirbt, entfernt sich *zajači* in den Himmel, wo er in Gesellschaft der Götter lebt" (a. a. O. p. 276 f.). Das lamaistische Luftpferd der Tujen trägt ebenfalls auf seinem Rücken den Glücksgaranten, das Wunschkleinod, kraft dessen der Mensch alles erlangt, was ihm wünschenswert erscheint, also das Glück. Es ist fast von der Wirkung eines Amulettes. Wenn nun nach UNO HARVA der Glücks-Schutzherr mehr auf den Einzelmenschen hingeordnet erscheint, so ist er beim *sülde* der Mongolen auf das ganze Volk ausgerichtet, und zwar durch den Khan; die geschichtliche Entwicklung hat mittlerweile unter den Chinggisiden neun Glücks-*Tengri* daraus gemacht. P. W. SCHMIDT kennzeichnet im Anschluß an BANZAROV das *sülde* folgendermaßen (UdG. X, p. 78): „Der Himmel lenkt die Welt wie der Khan und besitzt sein *sülde* ... Der *sülde* des Khans ist ein Abglanz des *sülde* des Himmels ... Die neun *sülde-tengri* sind ihrem Charakter nach immer dazu da, um zu beschützen. Sie werden dargestellt in kriegerischer Haltung, als wenn ihnen ein Kampf mit jemand bevorstünde, in der Art von Reitern ..." usw. Auch hier ist es der reitende Glücksgott. Es scheint, daß bei den Tujenliedern noch ferne Erinnerungen an diese Zeiten nachklingen: vom Schicksal der Mongolen, das auf dem Glück gründet; oder vom *sülde* des Khans, das unsichtbar seine Untertanen schützt (UdG. a. a. O.). — Wie die Zusammenhänge auch sein mögen, weder nach UNO HARVA, noch nach BANZAROV-SCHMIDT, noch in der Vorstellung der Tujen selber gibt es ein Glück oder Schicksal, welches sich dem Walten des Himmels entzöge.

Zusammenfassung. — Alles, was bisher vom Himmel gesagt wurde, beweist ihn als eine für sich bestehende, unabhängige Gottheit, scharf von allen andern Göttern geschieden, sie beherrschend und die ganze Welt regierend. Sein Name ist „Himmel", nicht im physischen, sondern im persönlichen Sinne. Alles Pantheistische, Animistische und jeder Mana-Begriff bleibt ihm fern. Zwar ist er kein Eingott im strengen Sinne, aber ein echter Hochgott, eine überragende einmalige Erscheinung unter allen andern Gottheiten. Wegen dieser Einzigartigkeit läßt sich nun in der richtigen Deutung das Wort A. TAFELS über die Tujen wiederholen: „Viele sagen, sie hätten nur einen einzigen Gott, an den sie glaubten."

2. Der Schamanismus

Konnte sich die Erörterung des Hochgottglaubens auf das Gebiet der Tujen selbst und die entsprechenden Quellen beschränken, so ist das beim Schamanismus nicht möglich, weshalb eine ausführliche Darstellung nicht mehr zu dieser Arbeit gehört. Sie ist einer eigenen Studie vorbehalten. Hier kann nur skizzenhaft der Grundriß dazu gezeichnet werden, der aber nur eine Theorie darstellt, weil an dieser Stelle auf die ausführlichen Beweise verzichtet werden muß. Die Frage lautet: Welcher Art ist der Tujen-Schamanismus, und wo läßt er sich religionsgeschichtlich einordnen? — Bei den Tujen finden sich drei Arten: der *bö*-Schamanismus (Trommelschamanen), der Gurtumschamanismus (Kriegerschamanen), der Idolschamanismus (mit dem Speer-Wahrsager).

a) Die bö oder Trommelschamanen

Kennzeichnung

Der Name: Der landläufige Tujenname *bö* entspricht dem schriftmongolischen *büge*. Koval. (1242) bringt dazu das chinesische Äquivalent *wu-jen*, die mandschurische *saman*, die tatarische *bugu* und die tibetische *lha-pa*. Der russische Ausdruck bedeutet: Schamane, Zauberer; im Französischen übersetzt er: chaman, enchanteur. Sowohl das mongolische *büge* als auch alle andern angeführten Übersetzungen besagen aber nichts Einheitliches und lassen sich auf die verschiedenen Arten von Schamanen, Exorzisten, ja sogar Zauberer anwenden.

Die Chinesen am Orte und die Tujen übersetzen das *bö* mit *fashih*, oder etwas verächtlich mit *shih-kung*. Die *fa-shih* selbst nennen sich nur mit diesem eigenen Namen. Im Süden Kansus ist Mitteilungen zufolge (P. P. Eichinger, Bockwinkel) noch der Name *wu-shih* im Gebrauch. Wichtig ist, daß alle diese Bezeichnungen niemals für den Gurtum zulässig sind. Die *fa-shih* sind eine eigene, klar abzugrenzende Gruppe. (Auf die Namenserklärungen einzugehen, verbietet hier der Raum.)

Kleidung und Ausrüstung. — Die *fa-shih* tragen eine alte Frauentracht, ohne Ärmel, meist mit Drachenbildern gemustert. Normalerweise haben sie keine Kopfbedeckung, sondern ihre Haare sind nach einer alten chinesischen Frauenmode aufgesteckt, falls sie nicht eine entsprechende Perücke mit Haarknoten, Haarschale und Haarnadel tragen. Diese sind aber nicht immer vorhanden. Bei besonderen Anlässen legen sie jedoch die bekannte fünfteilige buddhistische Krone an, *p'ai-tzu* genannt.

Ihre unbedingte Ausrüstung besteht in der Reifentrommel, der Hanfpeitsche und einem dreizackigen breiten Dolch. Dazu kommen noch andere Gegenstände, je nach ihren Funktionen.

Götter. — Ihre Hauptgottheit ist die große Mutter (*ta niang-niang*), auch Mutter der neun Himmel genannt (*chiu t'ien nai-nai*). Dazu verehren sie noch den schwarzen Tiger und, je nach den Gegenden, verschiedene Lokalgeister. Diese Götter stammen vorwiegend aus dem taoistischen Pantheon.

Tätigkeit. — Ihre Hauptaufgabe ist der Wetterbann, das Saat- und Erntefest sowie Krankenheilen.

Eigenart. — Die *bō* oder *fa-shih* unterscheiden sich von den andern Schamanen dadurch, daß sie keine Trance haben. Wenn man die Leute danach fragt, so lautet die stets gleiche Antwort: „*fa-shih pu fa shen* (die Fashih kommen nicht in Ekstase)." Das stimmt nun nicht ganz. Am Schlusse der Saat- oder Erntefeier versucht nämlich einer von ihnen eine Nachahmung der Trance und verwundet sich mit dem Messer. Das heißt man dann: „*fa ta-shen* (eine große Trance hervorbringen)." Aber es ist überhaupt keine Trance, höchstens ein andeutungsweises Relikt davon; ich konnte das öfters beobachten. So haben die Leute im Grunde genommen doch recht, wenn sie ihnen keine Ekstase zubilligen. — Die Haupteigenart aber faßt das Volk in dem Spruch zusammen: „*fa-shih ch'uei ku, t'iao shen* (die Fashih schlagen die Trommel und führen Geistertänze auf)." Trommel und Tanz ist das Hervorstechendste. Sie tanzen immer in Gruppen vor dem Bild der großen Mutter, um diese zu ergötzen, oder auch vor dem Opferschwein. Das sind keine schamanistischen Einzeltänze, um eine Trance zu erwirken, sondern kultische Gruppentänze nach bestimmtem Ritual. Man kann sie also als Trommel- oder Tanzschamanen bezeichnen, obwohl eigentlich Schamanistisches kaum noch vorhanden ist.

Einordnung

Verhältnis zum neueren sibirischen Schamanismus. — Mit dem sibirischen Schamanismus liegen wenig Ähnlichkeiten vor. Man könnte noch die Trommel als die wichtigste Fortführung aus dem sibirischen Schamanismus ansehen. Größer ist die Verwandtschaft mit dem tungusischen und mongolisch-mandschurischen Schamanismus. Die Trommel hat fast genau dieselbe Ausführung und dieselben Anhängsel wie z. B. bei den Mongolen des Küriebanners. (Vgl. HEISSIG: Schamanen. Folklore Studies 3. 1944. p. 72, Abb. 1-7; ebenso SHIROKOGOROV: Psychomental Complex, p. 297 f.) Am wenigsten scheint die Abwesenheit der Trance zum sibirischen Schamanismus zu passen.

Die Beziehung zu China. — Zunächst ist die Verbreitung zu beachten. Nach persönlichen Feststellungen und verschiedenen Berichten von Chinesen und Missionaren ist der Typ des Fashih über ganz Kansu, Shansi, bis hinein nach den Küstenprovinzen Hopeh und Shantung verbreitet. Im Amdogebiet findet er sich überall, wo chinesische Siedlungen sind, besonders in der Nähe von Sining und Kueiteh (am Gelben Fluß). Er paßt seiner Art nach auch gut zu einem Ackerbauvolk, eben durch die Betonung der Erntezeremonien und des weiblichen Erscheinungsbildes.

Fast alle Herkunftsberichte, die ich sammeln konnte, bezeugen die Abkunft der Fashih von einer Frau, einer Urschamanin. Diese wurde vom *T'ai-shang lao-chün* (ein Titel Lao-tzu's) durch einen Zauberspruch aus einem weiblichen Skelett zum Leben erweckt und erhielt von ihm ihre schamanistischen Kräfte. In Süd-Hopeh sind die Fashih heute noch vorwiegend Frauen. — Ferner werden die Fashih immer in Beziehung zu Toten- und Ahnengeistern gebracht, was ebenfalls der chinesischen Mentalität entspricht.

Die Entstehungssagen und die Gottheiten weisen auch auf einen engen Zusammenhang mit dem Wuismus, bzw. Taoismus hin. (Vgl. De Groot, Religious System, Vol. VI, P. II, 1187 ff.) Die Göttersänfte mit der *niang-niang* ist fast die gleiche wie die dort abgebildete. Die Taoisten, geschworene Gegner der Fashih, behaupten, diese hätten sich als eine falsche Sekte von ihnen abgesplittert. Während die Taoisten eine offizielle und angesehene Religion vertraten, führten die Fashih als Träger der *shen-chiao* (Geister-Religion) bis in die jüngste Zeit ein verachtetes Dasein.

Die Stellung in Ch'inghai. — Offenbar kam dieser chinesische Schamanismus mit den chinesischen Siedlern auch nach Amdo. Er hat dort verschiedene Elemente in sich aufgenommen, seinen ursprünglichen schamanistischen Charakter verwässert und den kultischen Gruppentanz gepflegt. Da von den Bon her der Wetterbann dort sehr in Übung war, hat er auch diesen übernommen, was seiner Art ja nahelag. Wahrscheinlich sind die wetterbeschwörenden Bon in ihnen aufgegangen.

Die Tujen haben ihren mongolischen Schamanismus ebenfalls in diesen Fashih-Schamanismus einfließen lassen und auf diesen den ursprünglichen Namen *bō* übertragen. Ein Tujen-*bō* meinte einmal: „Wir haben mit den mongolischen Schamanen eine Wurzel." Vom Lamaismus ist dieser Schamanismus ferngeblieben, ebenso von den Gurtum; zwischen ihm und diesen besteht vielmehr eine gewisse Rivalität.

Die Frage der *bō* oder *fa-shih* verlangt eine weitgehende Darstellung des chinesischen Schamanismus überhaupt, welche bereits begonnen ist.

b) Die Gurtum oder Kriegerschamanen

Kennzeichnung

Erscheinungsbild. — Bei den Tujen trägt der Gurtum einen roten Mantel, der mit einem Tuchgürtel zusammengehalten wird, einen Schulterkragen, einen Brustspiegel, ein lamaistisches Amulett oder ein Hada (Zeremonientuch) im Brustbeutel, ein Kopftuch, das die Augen verhüllt, einen Schellenkranz um die Stirne und darüber die fünfteilige lamaistische Krone. Seine wichtigste Ausrüstung ist das Schwert, ohne das er überhaupt nicht schamanisiert, so daß man den Tujen-Gurtum eigentlich „Schwertschamane" nennen müßte. Er gebraucht aber auch andere Waffen, wie den Geisterspeer und das Messer. Bei größeren Zeremonien arbeitet er auch mit Sieb, Worfelwanne und fünf Papiermännchen, die im Chinesischen *wu-tao shen* heißen, was man mit „Fünf-Richtungs-Geister" übersetzen könnte.

Der ganze Typ des Gurtum ist der eines Kriegers, welcher im Dämonenkampf das Unheil bannt. Neben diesem volkstümlichen Erscheinungsbild, das ziemlich vollkommen ist, finden sich auch noch einfache, entartete Typen, die sogar über einem modernen europäischen Anzug nur noch die allernotwendigste Ausrüstung tragen, etwa das Kopftuch, den Brustspiegel und das Schwert. Bei feierlichen Schwertkämpfen jedoch treten sie wieder in voller Tracht auf.

Die vornehmste Form des Gurtum ist zweifellos der lamaistische Tempelschamane. Er tritt in prächtigem Waffenrock auf, mit Pfeil und Bogen und

Geisterspeer. Auf dem Rücken trägt er kleine Fähnchen, wie der ehemalige chinesische Feldherr, und erweist sich dadurch als Führer einer Armee, deren Teile durch eben diese Fähnchen dargestellt werden. Wenn man diese Gurtum — z. B. in Kumbum oder Kuo-mang-szu — sieht, denkt man unwillkürlich an die traditionellen chinesischen Theaterhelden. Andererseits erinnern sie in ihrer sonstigen Ausrüstung durchaus an die lamaistischen Kriegsgötter, welche als Schutzherren der Lehre gelten. Zwar lassen sie im einzelnen auch Spielarten zu, aber im großen und ganzen bleibt der Typ dieser Tempelschamanen gleich, und sie werden ganz allgemein wie die Volks-Gurtum mit dem gleichen Namen bezeichnet.

Das Schriftchinesische führt außerdem noch den Namen *hu-ʃa*, was eine Übersetzung von *c'os skyoṅ* oder *Dharmapala* ist. Auch J. F. ROCK hebt deren Ähnlichkeit mit einem Heerführer hervor: „The Dharmapāla are demon-generals who execute the will of the tutelaries, or demon-kings. They are hideous and fierce-looking and each commands a horde of demons" (Na-khi Kingdom, I, p. 210, note 26).

Der Schamanencharakter. Das Wort „Gurtum", im Tujen *sgurdien*, im Chinesischen *ku-erh-tien* oder *ku-wai-tien*, stammt aus der tibetisch-lamaistischen Terminologie. Es kommt vom Worte *sku-rten* und nicht, wie F. LESSING meint, von *skur-bltams*, Körperschlenkerer (F. LESSING: Mongolen, p. 143). Nach CH. DAS (536) bedeutet *rten* etwas, was stützt, trägt oder etwas enthält; *sku-rten* besagt nach ihm soviel wie: der Träger oder das Behältnis einer Person selbst, ein Götter- oder Buddhabild. Auf p. 89 führt er *sku-rten* als eine Abkürzung der drei Aspekte *sku, gsuṅ, t'ugs-rten* an. Nach p. 91 sind *sku-gsuṅ-t'ugs* der Leib, die Rede und das Denken, also die drei Bereiche des menschlichen Handelns oder Leidens: Tat, Wort, Gedanke. Über die kosmisch-mythologische Zuordnung dieser Aspekte zu den Weltengegenden und den fünf *c'os skyoṅ* vgl. weiter unten. Der Ausdruck *sku-rten* besagt also, daß der Gurtum das Behältnis einer Gottheit ist, die in ihm handelt, redet und denkt. Das ist aber nichts anderes als ein ausgesprochener Besessenheits-Schamanismus, auf eine einfache buddhistische Formel gebracht. Der Gurtum stellt eine Gottheit dar.

Ob man den Gurtum im „klassischen" Sinn als einen Schamanen ansprechen darf, ist eine Frage, die erst mit der endgültigen Klärung des Schamanen-Begriffes überhaupt beantwortet werden kann. Man hat sich bei der Bestimmung des Schamanismus bisher zu stark mit dessen sibirischer Form befaßt und besonders den Seelenflug ins Jenseits als ein „klassisches" Kennzeichen hervorgehoben, vor allem beim „Vogeltyp" des Schamanen[9]. Hier ist nicht der Ort, näher auf diese Frage einzugehen, die einer späteren

[9] Die einseitige Bevorzugung des sibirischen Schamanismus findet sich leider auch in dem hervorragenden Werke von MIRCEA ELIADE: Le Chamanisme; darin werden zwar Vergleiche mit andern Erdteilen angestellt und auch die „südlichen" und buddhistischen Einflüsse berücksichtigt; sie werden jedoch nur als zweitrangig und unwesentlich dargetan; vor allem aber ist die so eigenartige Ausprägung des lamaistischen Schamanismus in der Gestalt des Gurtum vollständig übergangen.

Behandlung vorbehalten ist. Es sei aber doch schon vorweggenommen, daß der Gurtum ein echter Schamane ist, von gleichem schamanistischem Rang wie der sibirische. Wer Gelegenheit hatte, einen Gurtum zu beobachten, wird ihn nicht einfach für einen Besessenen halten. Der Gurtum ist ebenfalls an die rituellen Forderungen und Formen gebunden wie etwa sein sibirischer Genosse: Berufung (Vision), Schutzgeist, Prüfung, Tracht und Ausrüstung, Ekstase usw. Zudem deutet vieles darauf hin, daß er früher auch den Seelenflug kannte.

Der religiöse Charakter. — Was bisher von der Natur und Tätigkeit des Gurtum gesagt wurde, zeigt, daß sie auf einer passiven, empfangenden Grundhaltung beruhen, einer Grundhaltung, die dem Kriegerschamanen zu widersprechen scheint. Aber das Abhängigkeitsverhältnis, im Bereiche der „göttlichen" Besessenheit, gegenüber dem Besitzergeist ist eindeutig. Es fehlt die aktive Zwingbarkeit, die Eigenmächtigkeit, wie sie das Wesenselement der Magie darstellt. Die Grundlage ist religiös, nicht magisch.

Der Gurtum kann von sich aus nichts zu seiner Berufung tun. Sie kommt ungewollt, mitunter wider Willen, über ihn. Er wird eines Tages visionär vom Geiste erfaßt, in Ekstase versetzt und erkennt im Gesichte seinen zukünftigen Besitzer. Dieses Erwähltwerden wird am auffälligsten anerkannt bei der Suche der Klöster nach einem Schamanen. Wenn auch die einzelnen Klöster darauf bedacht sind, einen Gurtum zu besitzen, so kann doch kein Kloster einen seiner Insassen dazu bestimmen oder heranschulen, obwohl das bei dem tantristischen Lamaismus zu erwarten wäre. Sie bleiben jahrelang ohne den erwünschten schamanistischen Wahrsager, bis eines Tages jemand gefunden wird, der von einer Gottheit erwählt wurde, ihr Behältnis zu sein. Die Berufung ist ein freies Geschenk, das nicht vererbt wird. Vom Kloster Kumbum ist bekannt, daß es lange Zeit zur Strafe auf einen Gurtum, in dem sich der Orakelgott gegenwärtigsetzte, verzichten mußte.

Alles, was der Gurtum vollbringt, tut er in der Kraft seines Besitzergeistes, ähnlich wie ein Instrument, und nicht auf Grund bestimmter Handlungen, Gesten oder Formeln. Das Herbeiführen der Ekstase ist kein Herabzwingen des Geistes, sondern eine durch die Berufung übertragene zeremonielle Gewalt, die den Geist nicht seiner Freiheit beraubt. Der Schamane erhält erst von seinem Schutzherrn selbst diese Vollmacht, und zwar unter bestimmten Voraussetzungen, wie Enthaltsamkeit, Anlegen der Tracht, Einladungsgebet. Dieses Gebet ist, wie sein Name besagt, keine Zauberformel, sondern ein Lobpreis und eine Bitte; es wirkt nicht aus sich, ebensowenig wie das Anlegen der Ausrüstung allein schon die Gottheit herabziehen würde.

Auch das Bezwingen der Dämonen im Geisterkampf der Trance, das Wahrsagen, Heilen usw. geschieht durch den Geist im Schamanen; er ist eigentlich der Krieger, der Wahrsager, der Heiler. Seine Gegenwart ist wesentlich. Darum fällt das Volk auch vor dem Gurtum nieder und verehrt ihn wie einen Gott. Schließlich hat auch der Schamane selbst seinem Schutzgeist gegenüber die Pflicht der Verehrung; er muß ihm Weihrauch verbrennen, Opfer darbringen, und er betet zu ihm. — Dieser religiöse Charakter des Gurtum schließt jedoch keineswegs alle Magie aus. Wegen seiner besonderen Stellung liegt es

vielmehr nahe, daß er auch sonstige Zauberpraktiken übt; aber dann nicht in seiner Eigenschaft als Schamane, sondern als ein Mensch, dem man besonders vertraut, da er mit der Geisterwelt in Verbindung steht; vgl. oben p. 215.

Einordnung

Der heutige **chinesische Schamanismus** in der Gestalt der Fashih, Wushih oder Shihkung und auch der frühere Wuismus hat keine unmittelbare Verbindung zum Gurtum. Die chinesischen Schamanen sind weiblich orientiert, auf den Ackerbau eingestellt und vererben ihr Amt innerhalb der Sippe; sie haben den Tanz und die Trommel, die Trance ist verkümmert, und die Riten sind taoistisch überwuchert. Das alles trifft nicht auf den Gurtum zu. Er ist der Typ des männlichen Kriegers, kennt keine Trommel, sondern Waffen, und keinen Tanz, sondern Kampf. Er kann sein Amt nicht vererben, sondern erhält es durch Einzelberufung. Auf eine gewisse Gegnerschaft zwischen ihm und den Fashih wurde schon hingewiesen.

Der jetzige **sibirische Schamane** zeigt ebenfalls ein anderes Erscheinungsbild. Auch er kennt die Trommel und übt meist eine Art Tanz. Das Schamanenkleid hat nicht den einheitlichen Typ wie das des Gurtums, und ist mit allerlei Dingen, Eisen, Federn, Figuren usw. behangen. In der Ekstase ahmt er den Himmelsaufstieg oder die Seelenreise nach, die ich beim Gurtum nicht feststellen konnte, wenn auch LESSING (Mongolen, p. 148) eine solche andeutet. Ferner besteht zwischen dieser Art Schamanen, die im Mongolischen *bö* (*böge*) und im Tujen *bō* heißen, und dem Gurtum ein bewußter Gegensatz, den auch LESSING a. a. O. hervorhebt. Auch W. HEISSIG hat die Verschiedenheit dieser beiden Gruppen bei den Ostmongolen angetroffen; vgl. HEISSIG: Schamanen, p. 40. Dort werden die Gurtum auch „Lajing" genannt. Genau wie die Tujen unterscheiden auch die Chinesen zwischen dem *bō* (Fashih) und dem Gurtum (*fa-la-tzu* oder *ku-êrh-tien*).

Die Zugehörigkeit des Gurtum zum Lamaismus steht also in seiner jetzigen Gestalt außer Zweifel. Zunächst fällt sein Verbreitungsgebiet mit dem des Lamaismus zusammen. Man findet den Gurtum in Tibet, Amdo und der Mongolei. Ihn als spezifisch mongolisch zu bezeichnen, wie das mitunter in der Redewendung „der mongolische Gurtum" geschieht, ist irreführend. Er wurde zwar vorwiegend von Reisenden im mongolischen Gebiet beschrieben, aber eingehende Studien über ihn standen bisher noch aus. Für den Gurtum gibt es keinen ursprünglich mongolischen Namen, und der allgemeine Terminus *bō* (*böge*, *bügü*) für Schamane ist nicht auf ihn anwendbar. Alle Namen sind tibetisch.

Welche Stellung aber nimmt der Gurtum im Lamaismus ein? Seine Hauptaufgabe scheint sich in der Darstellung der Schutzgötter zu erschöpfen, die einen besonderen Vorstellungsbereich bilden. Schon bei Erklärung des Namens „Gurtum" wurde auf die drei Aspekte hingewiesen, die unter dem Worte *sku* zusammengefaßt werden. Die lamaistischen Schutzgottheiten tragen nun auch den Sammelnamen „die fünf Körper", neben dem andern Namen „die fünf Könige" (mongolisch: *tabun xaġan*) oder „die Schützer der

Lehre" (tibetisch: *c'os skyoṅ*). R. BLEICHSTEINER hat in seinem Artikel „Srog-bdag, der Herr des Lebens" (Archiv für Völkerkunde [Wien] 5. 1950. pp. 104-138) die Beziehungen zwischen den drei Aspekten, den Himmelsrichtungen und Weltenhütern, die ja mit den fünf Schutzherren zusammenfallen, aufgezeigt. Hier sind offenbar Elemente verschiedener Herkunft im spekulativen Schmelztiegel des Buddhismus unter der beliebten Parallelisierung von Mikrokosmos und Makrokosmos vereinigt worden. Die Gegenwärtigsetzung dieser Gestalten und die kultische Auswertung geschieht durch den Gurtum oder, wie er als Darsteller der Schutzgottheiten auch heißt, den *sruṅ-ba* (*ma*). Beim volkstümlichen Gurtum tritt diese Beziehung ebenfalls zutage durch die Verwendung der in Papier geschnittenen *wu-tao-shen* in verschiedenen Farben, wovon vorhin die Rede war. Es scheint aber, daß diese Beziehung mehr äußerlich ist und dem eigentlichen Tempel-Gurtum zukommt, wogegen der Volksgurtum stärker mit dem Berggeist und Obo verbunden ist.

Der Fremdcharakter des Gurtum im Lamaismus. — Wenn auch die heutige Gestalt des Gurtum, wie eben betont wurde, seinem Erscheinungsbild, seinem Namen und seinem Vorstellungsbereich nach zum Lamaismus gehört, so ist diese Zugehörigkeit doch nicht so eng, wie es scheint.

Zunächst weist die schamanistische Grundlage des Gurtum aus dem Lamaismus hinaus. Wohl hat der tantristische Lamaismus seine besonderen Voraussetzungen für das Verlebendigen und Darstellen von Gottheiten; vgl. dazu GLASENAPP in ZDMG 90. 1936. p. 552 (zitiert nach HOFFMANN: Quellen, p. 206) und H. FINDEISEN: Eine Erscheinung Yamantakas, p. 2 f. Auch die Beseelung der Götteridole liegt in dieser Richtung. Aber diese Voraussetzungen sind für das Schamane-Sein des Gurtum nicht maßgebend. Der religiöse Charakter des Gurtum entzieht sich diesen magisch betonten Riten. Seine Berufung, seine Kraft, sind vom Lamaismus unabhängig. Der Schamane ist Laie. Dasselbe bestätigt W. HEISSIG (a. a. O. p. 40): „Der Layičing gehört jedoch zu keiner geistlichen Gemeinschaft, sondern ist Laie." Erst wenn er Schamane geworden ist, erhält er im Kloster seine Bestätigung und eine lamaistische Belehrung. Die im ersten Teil geschilderten Bräuche um den Gurtum und die Hilflosigkeit der Klöster bei der Suche nach einem Tempelschamanen erhellen diese Tatsache zur Genüge. Das schließt natürlich nicht aus, daß im Einzelfall eine Schamanenberufung auf einen Lama treffen kann. Doch ist das nicht die Regel, wie die große Zahl der Volksgurtum außerhalb der Klöster beweist, wenigstens im Kukunorgebiet.

Ferner scheinen die im Gurtum dargestellten Schutzgötter nicht im Lamaismus beheimatet zu sein; beim Volksgurtum mit seiner Verbindung zum volkstümlichen Berggeist ist das von vorneherein zu erwarten, aber auch nicht minder bei den *c'os-skyoṅ*; denn wo ist beim Lamaismus die Grenze zwischen Originellem und Entlehntem zu ziehen? BLEICHSTEINER schreibt (a. a. O. p. 111): „Die Beziehungen *Pekars* und der fünf Könige überhaupt sind so mannigfaltig und verwickelt, daß eine Entwirrung ungeheuer schwierig erscheint." Aber das eine steht wohl fest: zwei von diesen Königen, *Pekar* und *dGra-lha*, stammen aus vorbuddhistischem Bereich.

Schon der Name *Pekar*, des Besitzergeistes jenes berühmten Staatsorakels von *gNas-c'uṅ*, findet in seinen vielen Formen keine hinreichende lamaistische Erklärung. Mag auch neuerdings TUCCI die Ansicht GRÜNWEDELS bestätigen, welcher im Anschluß an SCHIEFNER den Namen *dPe-kar* vom Sanskritwort *vihārā* (= Kloster) ableitet, so macht diese Erklärung doch zu sehr den Eindruck eines „ad hoc", weil *Pekar* eben zum Klosterbeschützer aufgerückt ist. BLEICHSTEINER vermehrt denn auch, nicht von dieser Deutung überzeugt, die Namenserklärungen um eine neue und leitet das Wort *Pekar* aus dem Iranischen ab; vgl. A. GRÜNWEDEL: Mythologie, p. 182, Anmerkung 2; R. BLEICHSTEINER, a. a. O. pp. 107 und 111 f.

Noch entschiedener als den Namen *Pekars* verweist BLEICHSTEINER die Gestalt *Pekars* in die Fremde: „Mit Ausnahme der Legende ..., wonach der große Magier *Padmasambhava* den Dämon *Pehar* oder *Pekar* aus dem indischen Kloster Odantapuri nach dem von ihm gegründeten Kloster bSam-yas als Wächter und Schatzhüter gebracht habe, sind die Quellen über seine Herkunft aus Ostturkestan ziemlich einig." Zur Bekräftigung zitiert er noch TUCCI: „Der letztgenannte Forscher hält *Pekar* für einen fremden Stammesgott, der später in Tibet eingeführt und von *Padmasambhava* zum Buddhismus bekehrt wurde." BLEICHSTEINER, a. a. O. pp. 110, 111; vgl. auch H. HOFFMANN: Quellen, p. 163.

So wie *Pekar* der wichtigste Vertreter der fünf Weltenhüter, bzw. der fünf *c'os-skyoṅ*, ist, so ist *dGra-lha* die Hauptgestalt unter den fünf persönlichen Schutzgeistern, der mit *Srog-bdag* auch unter die kosmischen Weltenhüter aufgerückt ist. Auch hier ist die Zuordnung von Mikrokosmos und Makrosmos und die gegenseitige Durchdringung hervorzuheben. *dGra-lha*, der wie *Pekar* als Krieger auftritt, gehört in die vorbuddhistische Bon-Schicht. Daran kann nach den Ausführungen BLEICHSTEINERS, der sich auf HOFFMANN stützt, kein Zweifel bestehen; vgl. BLEICHSTEINER, a. a. O. pp. 108 und 118 f.; HOFFMANN: Quellen, p. 171 ff. Hier sei der Hinweis gestattet, daß bei den Ch'ing-hai-Chinesen sich diese persönlichen Schutzgeister in buddhistischer Umwandlung finden, und zwar in den sogenannten „goldenen Lampen", die jeder Mann unsichtbarerweise auf seinem Körper trägt, davon auch zwei auf den Schultern.

Auf die andern Gestalten der fünf Könige einzugehen, erübrigt sich hier, weil über sie einstweilen keine Klarheit zu gewinnen ist. Das Weltbild, dem sie angehören, hat trotz aller buddhistischen Züge doch eine so breite Basis, daß es von Zentralasien nach Indien und in den Alten Orient hineinreicht; denn auch die Weltbergvorstellung und Weltenrichtungs-Ordnung mit entsprechenden Hütern stammt letztlich nicht aus dem Buddhismus, mag sie auch — von ihm übernommen und umgedeutet — wie auf einem „Fahrzeug" über weite Teile des Orients gebracht worden sein.

Der Berggeist, der Hauptschutzgeist der Volksgurtum, ist so offensichtlich vorbuddhistisch, daß er hier nicht weiter erörtert zu werden braucht. Es ist darauf bei Beschreibung der Wetterburgen in Ch'ing-hai zurückzukommen. Über die Berggeister hat HOFFMANN (Quellen, pp. 159 und 166) unter Hinweis auf die entsprechende Literatur berichtet. Er reiht sie als vorbuddhistische

Götter unter den Typ der *rGyal-po*, zu dem auch die *c'os-skyoṅ* gehören, ein. Die Abbildung des Berggottes *Kangchendzönga* läßt eine gewisse Ähnlichkeit mit dem Gurtum erkennen (pp. 166/7).

Die Stellung des Gurtum innerhalb des Lamaismus ergibt also, daß er dort nicht ursprünglich ist. Sowohl das Schamane-Sein als solches wie die von ihm dargestellten Besitzergeister stammen von früheren nichtbuddhistischen Schichten. Lamaistisch sind nur die Anpassung und Dienstbarmachung für die buddhistische Gemeinde als deren Schutzherrn (Kloster), die spekulative Einordnung unter die „Aspekte", die rituelle Verbrämung bei Prüfung und Funktion des Gurtums und gewisse Gebete, schließlich das Angleichen an die Tracht der buddhistischen Gottheiten; also alles mehr oder weniger unwesentliche Elemente. Aber einheitlich geht durch die verschiedenen Darstellungen der Typ des schützenden Kriegers. Somit wird die Frage nach der Herkunft des Gurtum zur Frage nach der Herkunft des Kriegerschamanen.

Die Herkunft des Kriegerschamanen

Diese Frage kann hier im Rahmen einer Darstellung über die Tujenreligion auch nicht annähernd erschöpfend behandelt werden, hängt sie doch eng mit dem Ursprung des Schamanismus überhaupt zusammen. Die folgenden Punkte sind daher nur als skizzenhafte Hinweise für eine spätere Untersuchung aufzufassen.

Kriegerschamane und Bonreligion. H. HOFFMANN schreibt in seinem Buche (Quellen, p. 194) vom *gNas c'uṅ*-Orakel: „Er ist also ein lebendiges Relikt des Bontums im Lamaismus und zwar jener Seite des Bontums, die dem Schamanismus der sibirischen Völker äußerst nahesteht ...". Auf p. 205 kommt er auf die gleiche Feststellung zurück, nachdem er im gleichen Kapitel die schamanistischen Elemente im Bontum herausgestellt hat. Aber der dort gezeichnete Typ des Bon-Schamanen entspricht nicht dem Typ des Gurtum oder Kriegerschamanen. Die Kleidung ist verschieden, und der Bon-Schamane arbeitet mit der einseitig bespannten Reifentrommel (vgl. a. a. O. p. 201). Auch eine Art Kesselpauke wird dabei verwandt. Auf seiner Trommel reitet der Bon-pa in Ekstase himmelwärts. Diesen Schamanentyp schließt HOFFMANN ganz richtig an die heutige sibirische Form des Schamanismus an (p. 202 f.). Zwei wichtige Elemente, die Reifentrommel und der Seelenflug, treten beim Kriegerschamanen nicht hervor. Zwar werden im Tempel, wie ich es in Kumbum und Kuomang-szu beobachten konnte, bei Überführung des Gurtum in die Trance ebenfalls große, doppelseitige Trommeln geschlagen, aber nur von den assistierenden Lamas; und zwar die Trommeln, die auch sonst beim Gottesdienst gebraucht werden. Nicht aber wird die Reifentrommel benutzt, von der HOFFMANN (a. a. O. p. 203) eine Abbildung bringt. Vollends fehlt beim Gurtum die notwendige Beziehung zwischen Trommel und Himmelsaufstieg. Die hier geschilderte Art des Bon-Schamanismus scheint vielmehr ihr Relikt bei den Fashih im chinesischen Kukunorgebiet zu haben, deren enge Beziehung zum Bontum schon oben vermutet wurde, zumal diese Fashih (oder *bö*) besonders gerade in der Gegend von

Kuei-tê am gleichen Fluß, wo heute noch das Bontum ziemlich stark ist, sehr häufig vertreten sind. — Es soll in keiner Weise bestritten werden, daß der Typ des *gNas-c'uṅ*-Orakels ein Relikt aus dem Bontum sei. Aber so wie das Bontum überhaupt kein homogenes Gebilde ist, so wird auch der in ihm enthaltene Schamanismus nicht von einem einheitlichen Typ gewesen sein. Und gerade, wenn das *gNas-c'uṅ*-Orakel ein Relikt aus dem Bontum ist, so beweist das, daß auch hier, wie sonst, wenigstens zwei Schamanentypen vorhanden waren : die sibirischen Trommelschamanen und die Kriegerschamanen [10]. Ein Element, das HOFFMANN deutlich kennzeichnet, muß jedoch beim Kriegerschamanen berücksichtigt werden, nämlich die Zusammenhänge zwischen Vogel und Schamane (p. 199 f.).

Kriegerschamane und Schutzgeister-Helden. — Beim Schamanismus spielen die Schutz- oder Hilfsgeister eine ausschlaggebende Rolle. Diese Geister sind beim Besessenheitsschamanen, also auch beim Kriegerschamanen, zugleich die Besitzergeister. Über die Kriegergestalten der Schutzgeister der Tempelschamanen wurde bereits das Wichtigste gesagt, als von den fünf Königen, besonders von *Pekar* und *dGra-lha*, die Rede war.

Zum *dGra-lha* der Tibeter findet sich das Gegenstück beim Glücks-Schutzherrn der Mongolen, wie er bereits oben im Abschnitt über den Himmelskult (p. 234) geschildert wurde, und zwar in der Gestalt des *dsayači* und dessen Weiterführung im Sülde. Den kriegerischen Charakter der Sülde-Tengri hat der Mongole DORDSCHI BANZAROV in seinem „Černaja vjera ili šamanstvo u Mongolov" (1846) ausführlich beschrieben. Nur ein charakteristisches Zitat sei hier in der Verarbeitung von P. W. SCHMIDT gebracht (UdG, X, p. 79) : „Die neun *sülde-tengri* sind ihrem Charakter nach immer dazu da, um uns zu beschützen. Sie werden dargestellt in kriegerischer Haltung, als wenn ihnen ein Kampf mit jemandem bevorstünde, in der Art von Reitern, in Panzer gekleidet, auf ihren Köpfen Helme tragend, mit Schwertern und Speeren bewaffnet, in der einen Hand eine Knute, in der andern eine Fahne haltend. Sie werden von Falken begleitet, ebenso von einem Löwen, einem Panther, Bären und Hunden." P. W. SCHMIDT macht zu dieser seiner Ausführung die Bemerkung : „Diese Darstellung hat BANZAROW, wie er angibt, entnommen dem IV. Bande der Werke von MERGEN DIYANČI ; er verfaßte das Buch über die diesen Genien dargebrachten Opfer." (UdG. a. a. O.). Über das Verhältnis des *dGra-lha* zum *Sülde* oder zu den mongolischen Glückstengri und deren kriegerischen Charakter sowie ihre Darstellung im Feldzeichen und auf Fahnen (Jusun-Sülde) hat LÜDTKE im Anschluß an POTANIN, WADDEL, GRÜNWEDEL und andere russische sowie mongolische Quellen berichtet ;

[10] Viel eher läßt sich der Gurtum-Typ des *gNas-c'uṅ*-Orakels an *Gšen-rab* selber anschließen oder an den *Dto-mba Shi-lo* der Na-khi, den Begründer des Bon-Schamanismus. Das Zeichen für *Dto-mba Shi-lo* ist *Ssu*, also der Ahnherr, Schutzgott und letzten Endes der Lebensgott der Na-khi-Familie ; vgl. J. F. ROCK : Dto-mba Shi-lo, p. 45, note 2. Damit ist die Verbindung zu den Grundgestalten der andern Besitzergeister des Gurtum hergestellt, die sich ja letztlich ebenfalls als Lebensgott erweisen. — Übrigens gleichen die Dto-mbas mit ihren Schwertern und Dämonenkämpfen („sham battles") dem Gurtum ; vgl. J. F. ROCK : a. a. O. p. 77, Pl. 12.

s. LÜDTKE: Die Verehrung Tschingis-Chans . . ., a. a. O. pp. 110-115. Es handelt sich hier um einen überirdischen Doppelgänger des Menschen, der als kriegerischer Schutzherr gedacht wird, und der Wohl und Wehe seines Schützlings teilt und beeinflußt; vgl. dazu auch BLEICHSTEINER (bzw. HOFFMANN), Srogbdag, p. 118 f. Es ist hier nicht möglich, die Vorbilder und eventuellen Urtypen dieser kriegerischen Doppelgänger und „Alter Ego's" alle anzuführen. Sie sind räumlich und zeitlich sehr verbreitet, wie der Schutzgeisterglaube überhaupt, und reichen über die archaischen Hochkulturen in noch frühere Zeiten (Megalithikum) zurück; vgl. DOMINIK WÖLFEL: Die Religionen des vorindogermanischen Europa. Eine Sonderentwicklung stellen die Süldebanner der mongolischen Khane dar, wodurch auch bezeugt wird, daß es sich bei diesen Schutzgeistern um wirkliche Lokalisationen und Besitzergreifung handelt.

Daß diese Schutzgeister mit Ahnen in Verbindung stehen, zum Teil damit identisch sind, ist ebenfalls zur Genüge belegbar, wie das im Schamanentum immer wieder betont wird. Hier sei noch auf einen besonderen Zug hingewiesen: die schamanistische Verwendung von Rüstungen und Waffen. Mein Gewährsmann erzählte mir, daß die Tujen früher die Waffen und Rüstungen berühmter Volkshelden in die Tempel gebracht hätten, wo sie aufbewahrt wurden. Wenn dann ein berufener Schamane diese Rüstungen angelegt hätte, seien die Kräfte und der Geist des Helden auf ihn herabgekommen. Hier liegt offenbar die Verschiebung einer alten Volkssitte in den Lamaismus vor; denn vordem war der Hüter und Sachwalter des *ayil* (Stammes) der Berggeist im Obo; er bewahrte die Waffen, und in früheren Zeiten wurden auch Rüstungen im Obo vergraben; vgl. oben p. 228 f. und das Kapitel über das Obo. Anthropos 47. 1952. pp. 63 ff. So wie sich die Volksfeste vom Obo später zum lamaistischen Tempel verlagerten, so geschah es auch mit den Waffen und Rüstungen und dem damit verbundenen Anlegen durch den Schamanen. Von hier aus erklärt sich auch die heute noch besonders enge Verbindung des Volksgurtum mit dem Berggeist und Obo und sein kriegerischer Charakter. Daß das Obo eine besondere Beziehung zum Stammherrn und dessen Nachkommenschaft hat, ist bekannt. Ebenso wird von Geser, der ja nach der Tujenversion auch Ahnherr der Tujen ist, erzählt, wie er die überirdische Rüstung anlegte, die für die besondere Aufgabe des Kampfes gegen die Übel der Menschheit im Himmel bereitgehalten wird.

Ähnliches berichtet HEISSIG von den Ostmongolen: „In den Klöstern werden, der Überlieferung zufolge, Waffen, Helm und Kriegsharnische von berühmten, vielleicht sagenhaften mongolischen Helden aufbewahrt . . . Diese Helden und ihre Rüstungen führen den Namen Coyjing (lit. *coyijung*). Jeden Monat ein- oder zweimal sollen sich im Küriye-Banner nach vorhergehendem Beten und Fasten einige Lama-Mönche mit den Rüstungen der Coyijing bekleiden und die dazugehörigen Waffen ergreifen. Über ihre Träger und Rüstungen kommen alsbald die Geister und Kräfte der Helden. Die Lama geraten in Ekstase . . ."; vgl. HEISSIG: Schamanen a. a. O. p. 41. Unter Coyjing sind natürlich die tibetischen *c'os-skyoṅ* zu verstehen. Aber auch hier wirkt die alte Vorstellung weiter, die Kräfte der alten Helden durch Aufbewahren der Rüstungen und Waffen der Nachwelt zu erhalten.

Man könnte diese Sitte eine schamanistische Konservierung des Altertums nennen. Jedenfalls fällt jedem Besucher lamaistischer Tempel und Heiligtümer der reiche Vorrat an Waffen, Bannern usw. auf. Vielleicht geht auch die Tujensitte, die Kleider der Verstorbenen dem Kloster zu schenken, auf diese Vorstellung zurück, wenn sie auch heute nur noch als ein *bosĕ*, eine Gebetsgebühr, aufgefaßt werden. Wo in einem Kloster ein Schamane fehlt, der die Rüstung anlegen kann, wird eine künstliche Figur damit bekleidet. Ein solches mit alten Waffen ausgerüstetes Standbild sah ich einmal in der Pforte des Wahrsagertempels zu dGon-luṅ in sitzender Haltung ausgestellt, so wie auch der Gurtum zu Anfang seiner Trance dem Bilde seines Schutzgeistes im Tempel gegenübersitzt. Das Volk zog an diesem Bild vorbei und gab ihm die entsprechende Verehrung; es nannte diese Figur ebenfalls *sgurdien*.

Der Kriegerschamane ist weit verbreitet und war es schon in vorlamaistischer Zeit. Für seine Anwesenheit in Altchina bietet B. LAUFER deutliche Belege in seinem Buche: Chinese Clay Figures. Er bringt mehrere Abbildungen ausgegrabener Statuetten und datiert diese bis in die Chou-Zeit, in eine „archaic period" zurück; vgl. die Legende zu Plate XVII. LAUFER kennzeichnet diese Figuren ausgesprochen als Schamanen „in the act of throwing a spear during a struggle with demons". p. 277 geht er nochmals näher auf die Deutung dieser Figuren ein: „In the grim faces ... the demoniacal power of these armored knights ... is well represented. The helmet-mask is formed by a bird's head with a strong flavor of the Indian Garuda ... A shawl is elegantly draped around the shoulders, and tied in a knot over the chest, the two iron breastplates being visible beneath it." — Es handelt sich also um denselben Typ des Kriegers wie beim Gurtum: mit Helm, Waffen, Schulterbehang, Dämonenkampf usw. — Es lassen sich sicher noch andere Belege für Altchina anführen, etwa im Anschluß an die neueren Veröffentlichungen von C. HENTZE. — Ebenso dürften solche Typen für Indien, Indonesien und den alten Vorderen Orient nachweisbar sein im Zusammenhang mit den alten iranischen Kriegsgöttern und den entsprechenden Gestalten im Hinduismus, Indra, Shiva usw.; vgl. dazu R. BLEICHSTEINER (gestützt auf GRÜNWEDEL) a. a. O. pp. 111-124.

Kriegerschamane und Vogel. — Die Zusammenhänge zwischen Vogel und Schamanismus sind in der Literatur oft genug hervorgehoben worden. Der Vogeltyp des Schamanen ist einer von den Grundtypen. Meist ist der Urahn des Schamanen, oder der erste Schamane, ein Vogel oder durch einen Vogel inkarniert. Aber auch die Helden der Volkssagen werden oft in Verbindung mit einem Vogelahnen gebracht. So soll z. B. der Geser der Tujen als Kuckuck auf die Erde gesandt worden sein. Gilt diese Beziehung schon allgemein, so läßt sich besonders der Kriegerschamane mit der Vogelgestalt in Verbindung bringen. Man hat zu beweisen versucht, daß seine Rüstung auf den Federpanzer, also auf das Schamanenkleid vom Vogeltyp zurückgeht. Auf die Quellen kann hier nicht weiter eingegangen werden. Der von B. LAUFER erwähnte Federhelm des altchinesischen Schamanen und der federnverzierte Helm des *gNas-c'uṅ*-Gurtums, sowie der Bericht von GEORGI in seinem „Alphabetum Tibetanum" weisen in diese Richtung.

Diese Verbindung zwischen Krieger und Vogel wird erst sinnvoll, wenn man diesen als eine Solarisierung des Ahnen-Helden auffaßt. Sowohl die Mythologien der ältesten chinesischen Ausgrabungen (vgl. die Arbeiten von C. HENTZE) als auch die indisch-altorientalischen Vorstellungen bringen den Vogel (den indischen Garuda) als ein Lichtsymbol in Gegensatz zur Dunkelheit, die gerne als Schlange aufgefaßt wird (Garuda - Schlange). Die geflügelte Sonne ist im chinesischen Altertum, in den archaischen Kulturen Vorderasiens und in der Religion der mittelamerikanischen Hochkulturen eine bekannte Erscheinung, ebenso die Gleichsetzung von Sonnenvogel und König oder Held in Aegypten. Dieses Motiv des kämpfenden Lichtes gegen die Finsternis, des Lichtvogels gegen die Dunkelheits-Schlange findet sich auch in Amerika so weit verbreitet, daß neuerdings PAUL RADIN es als eine grundlegende Lebensauffassung der Völker aufstellt; vgl. RADIN: The Basic Myth of the American Indians; in: Eranos 1949.

Der Kriegerschamane ist letzten Endes nichts anderes als der mythische Urvogel, der zu den menschlichen Ahnen in besonderem Verhältnis steht und die Mächte der Finsternis, das Unheil in der Welt bekämpft. Er ist somit hineinbezogen in die uralte Menschheitsmythologie und das uralte Erlebnis vom Kampfe zwischen Licht und Finsternis, wie es etwa VON OW für die Lebensauffassung des Avesta formuliert hat: „Die eranische Religion griff tief in das Privatleben ein. Hauptaufgabe nach dem Avesta war es: zu kämpfen gegen die Mächte der Finsternis. Diese Idee soll schon die Kleidung des Eraniers versinnbildlichen, welche als Rüstung betrachtet wird" (Ow: Hom, pp. 142 f.).

Die Vogelsymbolik des Schamanismus ist vieldeutig. Im sibirischen Schamanismus tritt mehr die Eigenschaft des Fluges hervor, im Gurtumschamanismus mehr die Eigenschaft des Lichtes. Gemeinsam ist schließlich beiden, daß der Schamane Anwalt des Lebens ist. Licht ist Leben und steht im Gegensatz zu Finsternis und Tod. Darum ist der Schamane als Vertreter des Lichtes und des Lebens notwendig auch Kämpfer und Krieger.

c) Zusammenfassung

Somit schließt sich der Kreis um den lamaistischen Gurtum. Der lamaistische Gurtum entstand aus zwei Komponenten, einer vorlamaistischen und einer lamaistischen. Die vorlamaistische Komponente ist der Kriegerschamane. Dieser hat wiederum zwei Komponenten; eine besondere: die Entwicklung des Erscheinungsbildes aus dem kämpfenden Lichtvogel, und eine allgemeine: den Schamanen als Vertreter des Lebensgottes (gekennzeichnet durch Lebensbaum usw.).

Der Buddhismus fand im Volke am Kriegerschamanen einen Typ, der sich besonders leicht „bekehren" ließ. Er verband mit diesem Volksschamanen die Schutzgestalten seiner Religion. Zu dieser Art von Besessenheitsschamanismus war er durch die tantristisch-magischen Vergegenwärtigungen besonders vorbereitet, so daß er ihn leicht absorbieren konnte. Was dann noch an andern Schamanentypen übrigblieb, wurde durch den neuen „orthodoxen" Schamanismus mit der Ausbreitung des Lamaismus als *xara nom*, schwarzer Glaube, gebrandmarkt und bekämpft. Diesen in der Literatur viel behandelten

Gegensatz findet man bei LESSING in einer Unterhaltung mit seinem Lehrer treffend gekennzeichnet: „... 'Ist denn ein Gurtum kein Schamane?' fragte ich ihn. 'Bewahre, etwas viel Höheres. Was er beschwört, das sind die rechten Geister, nicht die unreinen des *Bö* (mong. geschr. *böge*, Schamane)' ..." (LESSING: Mongolen, p. 143).

d) Der Idol-Schamanismus

Die Berechtigung, vom Idol-Schamanismus als einer Besonderheit zu sprechen, ergibt sich in der Folge von selbst. Man könnte ihn auch einfach „Sach-Schamanismus" nennen, weil eine Sache den Menschen als Schamanen vertritt. Unter den schamanistischen Idolen nimmt der Geisterspeer der Tujen eine bevorzugte Stellung ein.

Der Geisterspeer

Das Verhältnis von Wahrsager und Speer. — Es sei hier zuerst an die Verschiedenheit des Schamanisierens bei einem Gurtum und bei einem Speerwahrsager erinnert (vgl. im 1. Teil die entsprechenden Kapitel, Anthropos 47. 1952. pp. 18-33). Während der Gurtum vollständig besessen ist und sich in diesem Zustande von der Außenwelt seelisch abschließt, bleibt der Speerwahrsager seiner selbst mächtig und wach. Er fällt nicht in Ekstase; nur der Speer wird vom Geiste besessen und wirkt auf den Wahrsager ein. Der Wahrsager muß zwar die besondere Fähigkeit besitzen, den Speer zu „aktivieren" und seine Bewegungen zu deuten, um innezuwerden, was der Geist im Speere will; aber er wird selber nicht innerlich davon erfüllt.

Dagegen ist die Beziehung zwischen Speer und Geist viel enger. Er ist Sitz des Geistes und wird als solcher behandelt. Ähnlich wie ein Schamane erhält er eine Weihe, wird mit einer „Amtstracht" bekleidet: mit Bändern, Glöckchen und Spiegeln. Das Volk verehrt ihn wie einen gegenwärtigen Gott. Um aber tätig durch Wahrsagen, Heilen, Unheilbannen mit der Menschenwelt in Verbindung zu treten oder um nach außen hin lebendig zu wirken, bedarf dieses Speeridol eines Mittelsmannes, der es in die Hand nimmt und auf den es „anspricht". Das ist der „Idol-Halter", der *sdiendzên, rten 'dsin*. Man nennt ihn nicht einen Schamanen; denn nicht er, der Wahrsager, sondern der besessene Speer ist eigentlich der Schamane. Der Wahrsager ist gleichsam nur eine lebendige Verlängerung des Idols, sein Lautsprecher.

Wo ist der Speer einzuordnen? So wie der Speer jetzt gebraucht wird, ist er als eine besondere Art von Idol aufzufassen, wie schon sein Name als Geistersitz nahelegt. Die tibetische Zusammensetzung *rten-mduñ* ist bei CH. DAS nicht zu finden. Aber analog dem Namen *sku-rten* (Gurtum) und dem Charakter des Speeres entsprechend, kann das *rten* hier nichts anderes bedeuten als Behältnis oder sichtbare Darstellung der Gottheit: eine Waffe als Sitz der Gottheit. Das legt die Frage nahe: war der Geisterspeer von vorneherein selbständig, oder ist er nur Werkzeug eines Schamanen?

Der Geisterspeer als selbständiges Idol, also nicht als Ausrüstung des Schamanen, ist im ganzen Tujen- und Bauerngebiet des östlichen Amdo ver-

3: Schröder AE9 Monguor

breitet. Man findet ihn häufig in Tempeln und in Familienkapellen; sogar bei den Chinesen. Wieweit die dortigen Tanguten-Nomaden ihn besitzen, entzieht sich meiner Kenntnis. Der Speer muß aber schon früh eine selbständige Bedeutung im Lamaismus besessen haben; denn in Lamaklöstern trifft man ihn oft an, und zwar meist im Verein mit anderen Standarten (Bannern). Die Geographie des MINCHU-HUTUKTU weiß zu berichten: „In Nanggardse gibt es eine furchtbare Kapelle des Gur, und in ihr befindet sich eine Lanze (*mduñ*), die von den Verehrern als eine heilige ausgegeben und 'Beseitiger der dreizehn Feinde der Religion' genannt wird"; nach W. UNKRIG, Ms., p. 14. Von einem ähnlichen Banner schreibt R. BLEICHSTEINER: „Eine andere Erzählung berichtet über den siegreichen Feldzug eines Barbarenfürsten über China, Hor und Grug-gug, wobei er eine magische Fahne benützte, in die rNam-sras, der Weltenhüter des Nordens mit acht Begleitern gebannt war" (Srog-bdag, p. 111).

Der Geisterspeer läßt sich leicht mit andern ähnlichen Idolen in Verbindung bringen, wie Stabongonen, Wagenachsen, Wetterkeilen und Nudelrollern bei den Tujen, die alle bebändert und mit Glöckchen und Metallscheibchen behangen sind. Auch sie werden von einem Wahrsager genau so gebraucht wie der Geisterspeer. Damit erweist er sich nur als eines unter den vielen schamanistischen Idolen. Daß solche Stab-Idole nicht nur im Kukunorgebiet sehr verbreitet sind, sondern auch an anderen Stellen Tibets, geht aus einer Bemerkung JÄSCHKES hervor: „... the local *lha* are not always represented by figures resembling human beings, but even by sticks, stones and similar fetishes"; p. 599. Und p. 7 spricht er von dem auch durch BLEICHSTEINER zitierten *Pekar*-Idol und bemerkt: „... consisting like most of the popular idols in those countries of a wooden stick or log decked with rags ..."; vgl. auch BLEICHSTEINER a. a. O. p. 112. JÄSCHKE fügt hinzu, daß dieses Idol schon vorbuddhistisch sei. Solche Idole lassen sich für ganz Nordasien nachweisen bis weit nach Osten zu den Inao's der Ainu; vgl. beispielsweise Jos. HAEKEL: Idolkult und Dualsystem bei den Ugriern. Der schamanistische Gebrauch scheint aber nirgends so bezeugt zu sein wie beim Geisterspeer der Tujen.

Eine zweite Verbindung läßt sich vom Geisterspeer zur Standarte, Fahne oder dem Banner herstellen. Der Speer als Standarte ist eine altbekannte Sache, ebenso wie seine Heiligkeit und die Verehrung im Fahnen- oder Standartenkult. Dieser Kult wurde vor allem von den Mongolen in Form der Süldeverehrung gepflegt. Es ist nun gut möglich, daß gerade dieser Süldekult bei der Mongolenbekehrung zum Lamaismus „mitbekehrt" wurde; zumal die Buddhisten in ihrem Siegesbanner, dem *rgyal-mtsan*, ähnliche Vorstellungen besaßen. An dieser Wandlung hätten natürlich auch die mongolischen Tujen teilgenommen. Wahrscheinlich galt die Speerstandarte zugleich auch als Ahnenspeer oder Clanidol; diese Tatsache steht für das neunzipflige Sülde des Chinggis Khan außer Zweifel. Sein Geist und seine Kraft hatten ihren Sitz in diesem Sülde; weitere Einzelheiten und Zusammenhänge können hier leider nicht gebracht werden; man vergleiche dazu z. B. die Ausführungen von W. LÜDTKE: Die Verehrung Tschingis-Chans ..., in: Archiv für Religionswissenschaft 25. 1927. pp. 110-115. Auffallend ist jedenfalls, wie

3: Schröder AE9 Monguor

jeder *ayil* (Clansiedlung) der Tujen bestrebt ist, einen Geisterspeer zu besitzen! Gleiche Ideen lassen sich auch sonst nachweisen. So kennen z. B. die Bhil in Indien den Clanspeer bei religiösen Funktionen; s. W. KOPPERS: Die Bhil ..., p. 182 ff. Noch deutlicher tritt die Ähnlichkeit mit dem Geisterspeer und die Verbindung mit dem Clan bei der Clanstandarte der Chewsuren hervor. Die Form dieser Standarte läßt sich mit ihren Bändern, dem Glöckchen, dem Kugelknauf usw. kaum vom Geisterspeer der Tujen unterscheiden. Auch ihr Clanpriester ist praktisch ein schamanistischer Wahrsager, der mit der Speerstandarte arbeitet. Bei der großen Bedeutung, welche die Standarten unter den Türken und Mongolen hatten (Tuq-Banner) und bei der bewegten Geschichte dieser Völker sind Beeinflussungen und Relikte im Kaukasus von vornherein anzunehmen; vgl. RADDE: Die Chewsuren, pp. 100 ff.; und NIORADZE: Begräbnis, pp. 10 ff. — Sakralspeere sind in Afrika reichlich bekannt, ebenso die Götterstandarten im Alten Orient. Hierher dürften auch die bisher nicht recht erklärbaren skythischen Stangenaufsätze zu rechnen sein, mit ihren Haken und Aussparungen, vielleicht für Glöckchen und sonstige Anhängsel. Es ist durchaus möglich, daß alle diese Standarten nicht nur einfach Repräsentationen und Lokalisationen von Gottheiten darstellten, sondern auch schamanistisch gebraucht wurden nach Art des Geisterspeeres oder der Clanstandarte der Chewsuren.

Weitere Zusammenhänge scheinen ferner zwischen dem Geisterspeer und dem Weltenbaum oder der Weltenachse zu bestehen. Man denke z. B. an die kosmische Bedeutung des Juwelenspeeres in der japanischen Schöpfungsmythologie, wo er eine gleiche Funktion besitzt wie der kosmische Quirlpfahl im milchigen Urmeer der südasiatischen Weltenmythen; s. F. NUMAZAWA: Weltanfänge, p. 345. Vom Weltenpfahl bei den Tujen ist schon früher die Rede gewesen; s. oben pp. 209 ff. Die damit verbundenen Anschauungen sind bei ihnen altes, mongolisches Erbe. Der den Weltenpfahl vertretende „goldene Nagel", an dem das Himmelsgewölbe hängt, wird bei den Olöt-Mongolen als ein Feldzeichen gedeutet, das auf dem Weltenberge *Sumeru* steht, und um das sich alle andern Sterne drehen. Dieselbe Auffassung findet sich bei den Ordos-Mongolen, wo der goldene Nagel oder Polarstern 'das goldene Feldzeichen des Berges *Sumeru*' genannt wird. Bei den Chalcha-Mongolen wird dieser Polarstern-Pfahl, wie bei den Japanern der Juwelenspeer, zum Quirl, mit dem man Kumys schlägt; s. LÜDTKE a. a. O. pp. 115, 118. LÜDTKE möchte die Umwandlung des Weltenpfahles in ein Feldzeichen in eine spätere Zeit verlegen, als die Mongolen schon eine straff ausgebaute Militärorganisation besaßen. Der japanische Juwelenspeer zeigt aber, daß die Grundlage zu dieser Vorstellung weit über das mongolische Zeitalter hinausreicht [11]. Vielleicht ist dementsprechend LÜDTKES Ansicht zu korrigieren: „Auch aus China möchte

[11] Hier sei kurz auf die Bedeutung der Lanze bei den Ngadju Dajak in Borneo hingewiesen. Die Verbindung von Lanze, Flagge, Lebensbaum und „totaler Gottheit" ist dort noch viel offenliegender und bewußter als in Zentralasien und Tibet. Auch die schamanistischen Priester schließen sich als Vertreter der „totalen Gottheit" viel auffallender an diese Vorstellung an als z. B. der Gurtum als Vertreter des Lebensgottes; vgl. H. SCHÄRER: Die Gottesidee, pp. 29 ff., 87, 148 ff.

3: Schröder AE9 Monguor

ich diesen ganzen Vorstellungskreis nicht ableiten; es gibt freilich auch dort ein 'Standarte' genanntes bestimmendes Sternbild; aber nicht am Pol, sondern an der Ekliptik" (a. a. O. p. 117). Jedenfalls ist der astrale Speer oder die Standarte nicht nur Eigentum der Mongolen [13]. Es sei hier auch auf die Ähnlichkeit mit dem früher behandelten, kosmisch aufgefaßten Glückspfeil hingewiesen; s. oben p. 210. — Nach diesen Hinweisen, die sich mehr oder weniger auf den Speer allein beziehen, ist seine Bedeutung im Schamanismus leichter zu verstehen.

Geisterspeer und Schamane. — Zum Schamanen steht der Geisterspeer in zweifachem Verhältnis: einmal als Weltenbaum und als Waffe, dann als eine Verselbständigung und Vertreter des Schamanen.

Beim sibirischen Schamanismus, für den die Himmelsreise-Symbolik so wichtig ist, steigt der Schamane auf der Leiter, dem Baum, dem Pfahl, der Brücke usw. aufwärts in die jenseitige Welt. Im Ritus treten also die verschiedensten Darstellungen dieser Erde-Himmel-Verbindung auf. Was ist da naheliegender, als daß auch der Speer in seiner Symbolik als Weltenbaum oder Spitze des Weltenberges mit hineinbezogen wird? Leider scheinen die Belege für eine rituelle Verwendung des Speeres als Himmelsleiter (Brücke, Bogen) bei den zentralasiatischen Völkern schwer zu erbringen zu sein. Umso mehr muß überraschen, daß bei den entlegenen Australiern der Speer diese Funktion erfüllt. M. Eliade zitiert in diesem Zusammenhang Pettazzoni und sagt in seinem ausgezeichneten Werk „Le Chamanisme", p. 426 f.: „L'arc étant inconnu en Australie, sa place dans le mythe est prise par une lance qui porte un long morceau d'étoffe; la lance s'étant implantée dans la voûte céleste, le héros monte jusque là à l'aide de l'écharpe."

So häufig auch der Geisterspeer bei den Tujen unabhängig von einem echten Schamanen gebraucht wird, so gehört er doch oft genug zur Ausrüstung des Gurtum. Er ist in seiner Hand eine wichtige Waffe. Wie die Waffen und die Rüstung der alten Helden-Ahnen ihm besondere Kräfte verleihen, so zweifellos auch der Ahnenspeer. In der bereits zitierten Gesersage der Tujen nimmt Geser die himmlischen Waffen an sich, welche alle mit dem Beiwort *sdier* bedacht werden, z. B. *sdier lēmu*, *sdier sēmu* usw., heiliger Pfeil und Bogen. Die mit *sdier* bezeichneten Dinge sind aber alle in ähnlicher Weise ausstaffiert wie der Geisterspeer, vor allem durch die bunten Bänder. Dadurch soll eine Weihe, ein sakraler Charakter ausgedrückt werden. — Wenn nun aber kein echter Schamane da ist, so bleibt nichts anderes übrig, als den Geisterspeer zu verselbständigen.

Er muß den Schamanen vertreten und erhält dementsprechend eine vervollkommnete Ausrüstung und eine zusätzliche Weihe, wodurch er als ursprüngliche Waffe zum selbständigen Idol wird. Er wird schutzgeistbesessen. Als Sitz des Sülde ist er schon von vorneherein dazu besonders geeignet. Da er aber nicht lebt und nicht wie ein Mensch auftreten kann, wird ihm ein

[13] Der militärische Flaggenkult der Chinesen ist in seiner bekannten Form zu jung, um altmythologische Schlüsse zu erlauben; vgl. z. B. Doolittle: Social Life, p. 287 f.

Mann zugesellt, der Wahrsager. Dieser übernimmt einen Teil der Handlungen eines echten Schamanen, ohne aber selbst Geistersitz zu werden. Es findet gleichsam eine Aufteilung schamanistischer Funktionen statt: die wesentlichen, inneren sind dem Speer eigen, die unwesentlichen, äußeren dem Wahrsager[13].

Die anderen Idole

Genau wie der Geisterspeer Sitz einer Gottheit ist, welche durch eine Mittelsperson aktiviert wird, sind es auch eine Reihe anderer Idole. Das können sein: der Tisch, die Geistersänfte, Wetterkeile, Wagenachsen, Nudelroller usw. Von diesen sind der Geistertisch und die Göttersänfte die wichtigsten.

Der Geistertisch trägt seinen Namen zu Unrecht, denn es ist kein Tisch, sondern die Darstellung einer Tiergottheit, des schwarzen Tigers. Das wird dadurch bestätigt, daß er bei der Weihe diesem Tiger geweiht wird und als von diesem besessen gilt. Ferner werden unter der Platte die Eingeweide des Tigers angebracht, welche jedoch dem Auge nicht sichtbar sind.

Das Wahrsagen mit dem Tisch geschieht genau wie beim Speer; nur wird er von zwei Personen gehalten.

Diese Gottheit ist nach allgemeiner Aussage den chinesischen Schamanen eigen. Daß sie den Tujen ursprünglich fremd ist, beweist eben die oberflächliche Namengebung *sirie purgan* (Tisch-Gottheit), wo doch in Wirklichkeit die Platte den Rücken bildet, die Tischbeine Tigerbeine sind und die Unterseite die Eingeweide trägt.

Die Geistersänfte hat überhaupt keinen Tujen-Namen, sondern heißt wie im Chinesischen einfach *chiao-tzu* oder *niang-niang chiao-tzu* (Sänfte der Mutter). Nicht die Sänfte ist die Hauptsache, sondern die darin sitzende Götterfigur, welche in möglichster Naturtreue, mit prächtigen Kleidern, richtigen Haaren und fleischfarbenem Gesicht, ausgeführt wird. Das Innere birgt ebenfalls die Eingeweide, das Herz und die mütterlichen Organe. Die Figur wird mit der Sänfte geweiht, wobei die inneren Organe eingesetzt werden.

Auch diese Göttin ist den chinesischen Schamanen (Fashih) zugehörig, welche auch deren Beseelung vornehmen. Häufig tun das jedoch die Lamas in den Klöstern. Zum Wahrsagen wird die Sänfte von vier Mann auf die Schultern genommen, welche dann willenlos den Bewegungen der Gottheit folgen.

Zusammenfassung

Sowohl der Idolschamanismus als auch der Gurtum-Schamanismus bilden erscheinungsmäßig eine Einheit. Sie haben gemeinsam: die Kleidung (= Bebänderung), die Metallscheiben, die Glöckchen oder Rasseln und die Besessenheit durch einen Geist. Sie gehören beide in die Vorstellungswelt der Ver-

[13] Große Ähnlichkeit mit dem Speer als Geistersitz und Wirkeinheit mit dem Schamanen hat auch die Schamanentracht in andern Gegenden. Sie wird von Geistern „durchtränkt", welche Lebenszeichen geben durch Zittern, Bewegen usw.; vgl. ELIADE (SHIROKOGOROV): Le Chamanisme, p. 143. Wenn der Speer als Schamanenausrüstung auch diese Eigenschaft mit der Tracht teilt, so kann das allein doch noch nicht seine große Bedeutung und Verwendung erklären.

bindung zwischen Himmel und Erde und des Welten- oder Schamanenbaumes, der mit Glocken und Spiegeln behangen ist ; vgl. dazu die Mythen der Golden oder die Lieder der Tujen, welche von einem Baum berichten, der Sonne, Mond und Gestirne in den Wipfeln trägt. Beim Menschen-Schamanen sind alle Funktionen in einem Träger vereinigt, wogegen im Idolschamanismus diese Funktionen zwischen Mensch und Ding aufgeteilt sind ; aber diese Aufteilung bildet in ihrer Tätigkeit wiederum eine Einheit. Es frägt sich hier grundsätzlich : Ist nicht der gesamte Idolkult schließlich von diesem schamanistischen Standpunkt aus zu verstehen ? Gewinnt er nicht erst durch den lebendigen Menschen seine eigentliche Bedeutung ? Sicherlich ist manches, was man bisher als „Fetischismus" oder „Götzenkult" bezeichnete, im Grunde genommen nur eine Spielart des Schamanismus, eine statische Dauerform dessen, was der Schamane nur für kurze Zeit unter großer seelischer Aufwühlung darstellt : eine unmittelbare Verbindung mit der Geisterwelt, kultisch genormt und rituell entwickelt ; eine Gegenwärtigsetzung und Verlebendigung von Gottheiten und Dämonen, die der Mensch bei sich haben will.

Hier sei noch einmal betont, daß diese Gedanken nur eine Skizze für eine Theorie sind, deren ausführliche Darlegung nicht hierhergehört.

3. Die Bonreligion

Unter den Bon gibt es drei Gruppen : die Hirten-Bon, die Bauern-Bon und die Kloster-Bon. Diese Einteilung ist rein volkstümlich, ohne daß damit etwas über das innere Verhältnis der Gruppen zueinander gesagt wird ; sie dürften nicht wesentlich verschieden sein. Die Bauern-Bon sind am meisten verflacht und entartet. Sie tragen als einziges Kennzeichen nur noch den künstlichen Borstenkranz, um so den gewaltigen Zopfturban der Hirten-Bon nachzuahmen ; sie sind praktisch schon ausgestorben. — Die wichtigsten Kultgeräte der Bon sind von der menschlichen Leiche genommen : die mit menschlicher Haut bespannte Doppelschädeltrommel, die aus Menschenhaut geflochtene Peitsche (und wahrscheinlich mit einem Knochengriff) die Schenkelbeinflöte und der Knochendolch. Diese Geräte sollen von der Leiche einer unverheirateten, erwachsenen Frauensperson genommen werden. Schon durch die besondere Beziehung zu Skelett und Leiche dürften sich die Bon zu einer alttibetischen Heimat bekennen, welche ja nicht nur das „Schneeland", sondern auch das „Land der Leichen" genannt wird.

Wenn die Bon auch vieles mit den Lamas gemeinsam haben, so ist doch eine Reihe von Zeremonien ihnen vorbehalten, besonders die verschiedenen Arten des Dämonenbannes. Sogar von den Lamas werden sie monatlich am ersten und fünfzehnten Tag ins Kloster eingeladen, wo sie diese Riten vornehmen. Von einem früheren Gegensatz zwischen Buddhismus und Bonreligion ist hier nichts mehr zu merken. Sie teilt auch mit dem Lamaismus das Geschick des allmählichen Verschwindens, ja in der offiziellen Form ist sie ihm schon darin vorausgeeilt. Es ist nämlich eine auffallende Tatsache, daß sowohl die Bonreligion als auch der Lamaismus in dem Maße abnehmen, wie der chinesische Ackerbau sich ausbreitet, obwohl doch gerade die Seß-

3: Schröder AE9 Monguor

haftigkeit der Lamas in den großen Klöstern und die Tätigkeit des Wetterbannes der Bon einer Ackerbaukultur besonders entsprechen müßte. Die Gründe sind gewiß nicht religiöser Natur.

Die Tujen haben aber wahrscheinlich viel mehr vom Bontum bewahrt, als auf den ersten Blick erkennbar ist. Die Heiratssitten und die Volksdichtung dürften noch manches bergen, was diese alte Schicht deutlich macht und sie bis tief hinein nach Tibet verfolgen läßt. Nur ist es schwer, alles vom lamaistischen Beiwerk zu befreien.

4. Der Lamaismus

Die vorausgehenden Ausführungen haben immer wieder gezeigt, eine wie große Wirkung der Lamaismus auf das Volk ausübt. Er hat auch als letzte Form das ganze religiöse Leben am stärksten durchdrungen; er bietet dem Volke eine große Anzahl von Göttern und Heiligen; er schenkt ihm die Manibäume, Gebetsmühlen, Schatz-Urnen, Tschortenkammern, Mittelburgen und Obos; ein wesentlicher Teil der Weltanschauung ist ihm zu verdanken. Zwar muß man dabei den kirchlichen Lamaismus der Klöster und Mönche vom Volkslamaismus unterscheiden, der in seinen verwässerten Gebräuchen unbelastet bleibt von verwickelten Lehren und tantristischen Riten. Aber dieser Volkslamaismus wäre undenkbar ohne den starken Rückhalt und die Dauerwirkung der Klöster, die schon deshalb so volksverbunden sind, weil sich ihre Gemeinschaft ständig aus den Familien des Volkes erneuert. Im religiösen Bilde würde darum ein wichtiges Stück fehlen, wollte man nicht wenigstens in flüchtigen Strichen das Kloster kennzeichnen, welches für die Tujen jenes Landstriches ihr geistiger Mittelpunkt ist. — Die Beziehungen zu Kumbum seien übergangen, obwohl sie nicht zu unterschätzen sind. Man braucht nur daran zu erinnern, daß es ein *Chi-T'u-szu* (Fürst) war, der Kumbum anfangs des 18. Jahrhunderts durch seine persönliche Bürgschaft vor der chinesischen Rache und der Zerstörung bewahrte, so daß sein Clan bis in die jüngste Zeit den Klosterschutz innehatte und die Fürsten (*T'u-szu*) selber bei ihren Besuchen von den Lamas kniend empfangen wurden; vgl. dazu SCHULEMANN, p. 179.

Der Name des Tujenklosters *dGon-luṅ* ist tibetisch. *dgon* (gesprochen *gon*) bedeutet wörtlich „Einöde, Einsiedelei". Im übertragenen Sinn ist es zum feststehenden Ausdruck für „Kloster" (*vihāra*) geworden, weil ein Kloster mindestens tausend Schritt von jeder menschlichen Behausung entfernt sein soll; vgl. CH. DAS, p. 275; *luṅ* heißt soviel wie „Tal, Bezirk". Somit läßt sich *dGon-luṅ* am besten mit „Kloster-Tal" oder „Kloster-Bezirk" oder einfach „Kloster" wiedergeben; denn man hat sich unter einem Lamakloster sowieso kein geschlossenes Gebäude, sondern eine ganze Siedlung mit Tempeln, Hallen, Wohnhöfen, Tschorten, Kapellen, Mani-Häuschen und Obos vorzustellen. Den dortigen Tujen ist *dGon-luṅ* das Kloster schlechthin. Der amtliche volle Name lautet aber *dGon-luṅ byams-pa gliṅ*, ähnlich wie der volle Name von Kumbum *sKu 'bum byams pa gliṅ* lautet. Nach B. LAUFER bedeutet *byáms pa gliṅ* „Tempel des *Maitreya*"; s. FILCHNER: Kumbum, p. V. Nicht

jedes Kloster hat einen solchen Tempel, weshalb er bei einem Kloster immer gerne mitgenannt wird. Der Haupttempel von *dGon-luṅ* birgt ein solches Riesenbild des *Maitreya* auf Seide gemalt, von über 10 m Länge und einigen Metern Breite. Es wird vom Tempeldach her aufgerollt und über die Front in den Hof hinabhängen lassen, meist zweimal im Jahre, nämlich im ersten Monat nach den Tschamtänzen und am sechsten Tag des sechsten Monats. Die Zeremonie heißt *dšamba sguni dielgë*, d. h. das *Maitreya*-Bild aushängen; *dšamba* oder *šamba* ist die Tujen-Aussprache für *byams-pa*. Die Chinesen nennen den Ritus einfach *shai Fuo-yeh*, d. h. den Buddha sonnen. Er bildet für das gläubige Volk den Höhepunkt der Festtage; die Leute pilgern scharenweise herbei, um das Bild durch Kotou zu verehren.

Einen Tujen-Namen für das Kloster gibt es nicht; ihre Bezeichnung *Rgulōṅ* (*Rëgulōṅ*) ist nur eine Verballhornung von *dGon-luṅ*. Auch das chinesische *Êrh-ku-lung* ist weiter nichts als eine Ableitung aus dem Tibetischen. Manche Leute wollen das *êrh* als das chinesische „zwei" verstanden wissen, da es ja das zweite Kloster sei, welches nach der Zerstörung des ersten neu erbaut wurde; tatsächlich hört man auch oft den Namen *Ku-lung* ohne dieses *êrh*. Die Bezeichnung *Yu-ning-szu*, Kloster vom Schutze Sinings, hat sich im Volke nicht durchgesetzt. Sie wird fast nur in Büchern und amtlichen Schriftstücken geführt.

Das Kloster entspricht den buddhistischen Forderungen in vorbildlicher Weise; denn es liegt am Ausgang eines einsamen, bewaldeten Tales und ist teilweise an dessen nördlichen Höhenrücken hinaufgebaut, der den Namen Tuguän-ula, Tuguän-Berg, trägt (chin. T'u-kuan shan). Ein riesiges Obo krönt seinen Scheitel. Über die Gründung des Klosters war wegen der Kürze des Aufenthaltes weder eine mündliche noch eine schriftliche Auskunft zu erhalten. Die Sining-Chronik berichtet nichts darüber. Es scheint aber ursprünglich eine tibetische Gründung gewesen zu sein. Bis zu seiner Zerstörung besaß dGon-luṅ in Amdo eine große Geltung. Dann wurde es von andern Klöstern überflügelt. Die patriotischen Mönche hatten sich im ersten Jahre des Kaisers Yung-cheng auf die Seite des mongolischen Kukunorfürsten (*ch'en-wang*) bLo-bzan bsTan-'dsin gestellt. Die Folge davon war, daß dGon-luṅ von einer chinesischen Strafexpedition im Jahre 1723 mit noch andern Klöstern, worunter sich auch sGo-maṅ-dgon (gSer-k'og-dgon-pa) befand, zerstört wurde. Auf das Ansehen des Tuguän Hutuktu, der sich damals in Peking aufhielt, ließ der Kaiser das Kloster 1733 wieder aufbauen, ebenso sGo-maṅ-dgon; vgl. Hsü Kung-wu, pp. 113, 115; Schulemann, p. 179; Sining-Chronik. Nach diesem Wiederaufbau erhielt dGon-luṅ den offiziellen Namen Yu-ning-szu und einen Gedenkstein, worauf diese Ereignisse vermerkt wurden. Der Text dieses Steines ist in der Sining-Chronik abgedruckt. Den Stein selber bekommt man nicht zu sehen. Die Lamas haben ihn eingemauert, um so der ehrenvollen aber unangenehmen Erinnerung ledig zu sein. Das neue Kloster mußte vor etwa 60 Jahren noch einmal den Dunganenaufstand über sich ergehen lassen, der viele Tujen das Leben kostete. Es hat nie mehr die alte Ausdehnung erreicht, von der noch ein abgelegener Rest übrigblieb, nämlich der Tempel mit der Gurtum-Gottheit *dPekar* und dem Geisterspeer des Klosterwahrsagers.

Heute steht das Kloster unter der Kreisverwaltung von Huchu. Früher war es mit seinen Ländereien, Wäldern und Weiden unabhängig und beherrschte viele abgabepflichtige Tujendörfer. Es zählt etwa 300 Mönche und mehrere Tulkus, die fast alle Tujen sind. Als Filialen unter der Abhängigkeit des obersten Tulku, des Tuguän Hutuktu, nannte mir dessen Verwalter noch folgende Lamaserien: Man-t'ou-szu, einige km nordwestlich; Chin(g)-kang-ta-szu, 20 km nördlich; Chang-chia-szu, 65 km südöstlich bei Lotu; Hua-yüan-szu, 12 km südlich, ein Bonkloster; Hung-ku-szu, im Lianchow-Gebiet (Kansu); Ma-t'i(eh)-szu, im Kanchow-Gebiet (Kansu). Diese Verbindungen bezeugen, wie weit sich die Bedeutung des Klosters erstreckt haben muß. Es war von je eine Pflegestätte der Wissenschaft, und der Ruhm seiner gelehrten Tulkus löste die Tujen aus ihrer Abgeschlossenheit und bezog sie hinein in den weiten Bereich der lamaistischen Welt. Die „Geographie Tibets", in tibetischer Sprache vom Minchu Hutuktu aus dem Kloster *sGo-mań-dgon* etwa 1830 verfaßt, berichtet: „... das Kloster *dGon-luń*, in dem man an die 2000 Kleriker zählt und wo früher lebten: die zwei Wiedergeburten *lCań-skya* und *Sum-pa mk'an-po*, der Verfasser der 'Geschichte der Gelbmützen-Lehre, *tva-ser c'os byuń*', T'uu-bkvan *bLo-bzań C'os-kyi Ni-ma*, und andere namhafte gelehrte Persönlichkeiten"; s. MS p. 40.

Die Bedeutung der lCań-skya Hutuktu wurde schon oben p. 216 erwähnt. Der erste lCań-skya Hutuktu wurde 1641 in Amdo geboren. Seine Vorfahren stammten aus einer Gegend, die „Graue-Weiden" hieß (Mitteilung von Herrn UNKRIG). Dieser Ortsname ist auf die Person übergegangen (*lcań-skya* = Weide-grau). Das Kind wurde als Wiedergeburt des Dharmaśvamin des Klosters dGon-luń erkannt und achtjährig dorthin berufen. Dann wurde der junge Tulku zum Studium nach Innertibet geschickt und kehrte wieder nach Amdo zurück, bis ihn Kaiser Kang-hsi nach Peking berief. Im Dienste des Kaisers und des Lamaismus führte der Hutuktu ein bewegtes Leben als Kirchenpolitiker und Gelehrter. Seine Reisen führten ihn in die Mongolei, nach Tibet und Amdo, wo er z. B. 1709 in dGon-luń und anderen Klöstern die Studienordnung reformierte und mehrere Groß-Lamas einsetzte. Er starb im Jahre 1713; vgl. SCHULEMANN, p. 177 f., wo auch die weiteren Quellen für eine eingehendere Orientierung über den Hutuktu und seine früheren Existenzen angegeben sind. Der lCań-skya Hutuktu zählte zu den vier größten Kirchenfürsten des Lamaismus. Er residierte später in Peking, neben dem Dalai-Lama und Panchen-Lama in Tibet und dem Jibtsun-Dampa in der Mongolei; s. PANDER, Geschichte des Lamaismus, ZfE 1889, p. (202). In der europäischen Literatur wurde sein Name vor allem durch PANDER-GRÜNWEDELS Buch bekannt, das unter dem Titel „Das Pantheon des Tschang-tscha Chutuktu" eine Beschreibung der lamaistischen Götterwelt bietet, die auf einem Bildwerk dieses Hutuktu fußt.

Ähnlich berühmt ist auch die andere Inkarnation aus dGon-luń, nämlich der Tuguän Hutuktu. Eine Erklärung dieses Namens gibt es nicht. Vielleicht ist er eine Übertragung vom Ort auf seine Person; es ist allerdings eher anzunehmen, daß der Name des Berges auf den Hutuktu zurückgeht, als umgekehrt. Die chinesische Lesart der Zeichen dieses Namens

Dominik Schröder, Zur Religion der Tujen des Sininggebietes (Kukunor)

[face p 256 (a)]

variiert zwischen *T'u-kuan*, *Tou-kuang*, *T'ou-kuang*, ein Zeichen, daß es sich um die Lautnachahmung eines vielleicht mongolischen (Tujen-)Namens handelt, etwa *Toġan*. Die tibetische Schreibweise *T'uu-bkvan* ist ebenfalls ganz fremdartig, so wird nach CH. DAS, p. 577, der mongolische Name *Toġan* wiedergegeben. Als erster Tuguän Hutuktu wurde *Nag-dbaṅ c'os-kyi rgya-mts'o* unter Kaiser Yung-cheng nach Peking berufen; er war 1679 geboren und starb 1735; s. SCHULEMANN, p. 178 f. Am bekanntesten ist dessen nachfolgende Inkarnation, der oben bereits genannte Verfasser der religionsgeschichtlichen Werke über die verschiedenen lamaistischen und vorlamaistischen Systeme und über die Gelbe Kirche; vgl. FILCHNER: Kumbum, p. 181. Er soll von 1702-1775 gelebt haben (Mitteilung von Herrn UNKRIG). Auch die Tuguän-Tulkus hielten sich meistens in Peking auf, wodurch die Beziehungen zu ihrem Stammkloster dGon-luṅ weiter nicht litten; es ist auch heute noch so, daß viele Hutuktus jahrelang außer Landes auf Reisen sind, in Tibet, Indien, Mongolei. Der jetzige Tuguän Hutuktu weilte 1948, nach Mitteilung seiner Verwandten aus dem Ch'ang-kou, bereits über zwei Jahre in Nanking im Ministerium als Sachverständiger für das lamaistische Grenzgebiet. Eigenartigerweise waren dessen Verwandte der Meinung, daß jetzt die Tuguän- und lCan-skya (*Ch'ang-chia*)-Inkarnationen nicht mehr unterschieden würden und nur in einem Vertreter aufträten. Klarheit war aus diesen Aussagen nicht zu gewinnen. Es schienen Rivalitäten zwischen dem Clan Li und dem Clan Ch'ang zu bestehen, die beide die Inkarnationsfolge beanspruchten.

Bei der hervorragenden Stellung, welche diese Hutuktus in Peking innehatten, ist es nicht verwunderlich, daß sich auch viele Tujen-Lamas dorthin begaben. PANDER spricht (a. a. O. p. 204) von Man-tzu oder Chinesen aus Sining, denen in Peking 13 Tempel (1889) eingeräumt seien. Diese Man-tzu (= Barbaren) können aber nur Tujen gewesen sein; denn die Chinesen sind keine Lamaisten, und die Tibeter (Fan-tzu) werden von PANDER eigens genannt. Als ausgesprochene Tujen-Lamaserie in Peking gilt das Kloster Sung-chu-szu. Auch heute noch (wenigstens bis 1948) stammen dessen Mönche fast alle aus dem Sining-Gebiet und sind Tujen, wie die Mönche aus diesem Kloster bei einem Heimatbesuch erzählten. Allerdings ist die Zahl sehr zusammengeschmolzen.

Dies alles sind Tatsachen, die bei Beurteilung des Lamaismus der Tujen berücksichtigt werden müssen. Das Volk ist stolz auf sein berühmtes Kloster. Es ist sein Wallfahrtszentrum. Dort trifft sich an den Festen jung und alt. Dort halten sie Pferderennen ab und singen ihre alten Volksweisen. Bei den Tempelfesten mit den prächtigen Tänzen wird die lamaistische Lehre vertieft und veranschaulicht. In den ehrwürdigen, weihrauchdurchzogenen Hallen sehen sie ihre Götter in prunkenden Standbildern, auf Seide gemalt, auf Wänden und Altären. Dort liegen auch die schweren heiligen Bücher des Kandjur und Tandjur, die sie auf dem Rücken um das Heiligtum tragen, um sich von einer Not zu befreien oder ein Gelübde zu erfüllen. In den Tempeln und Höfen sehen sie die Mönche gelehrte Disputationen abhalten, die Schriften vorlesen, die Gebete rezitieren. Sie laden sie ein, in ihrem Gehöft feierliche Götterdienste vorzunehmen, ihren Kindern den Namen zu geben, die Alten

zu weihen, die Jungen zu segnen, für die Toten zu beten, die Leichen zu verbrennen. Der Lama ist ein häufiger und gern gesehener Gast in der Familie. Überhaupt scheint sich das Volk in den wichtigen Lebensstufen dem Mönchsleben anzuschließen. Sogar der Schamane erhält im Kloster seine Weihe. Jede Familie war stolz, wenn einer ihrer Söhne Lama wurde, ja es war sogar ungeschriebenes Gesetz.

So galt es wenigstens noch bis in die jüngste Zeit. Heute aber wollen die jungen Leute nichts mehr vom Lama-Werden wissen. Sie besuchen lieber die chinesischen Schulen und sind auf die neue Bildung bedacht. Das Alte verachten sie und nehmen es nicht mehr ernst. Es hat sich bereits bewahrheitet, was der Minchu Hutuktu vor hundert Jahren in seiner „Geographie Tibets" geschrieben hat: „Diese Heimat des zweiten Siegreichen Tsongkhapa war ehedem in ganz Tibet berühmt ... Jetzt aber steht sie nicht nur unter dem Druck der verblendeten chinesischen und muselmännischen Lehre, sondern es naht die Zeit, da Tibeter und Mongolen dem Kung-tzu, Lao-tzu oder dem Lehrer Naniku von Ssei glauben werden"; MS a. a. O. Wenn man an die neuesten Ereignisse auch in jenem abgelegenen Landstrich denkt, dann sieht man diese kummervolle Vorhersage noch übertroffen; denn auch die Lehren eines K'ung-tzu und Lao-tzu werden die Tujen nicht mehr in ihren Bann ziehen. Auch sie gehören bereits der Vergangenheit an.

Schluß

Im Laufe der Arbeit wurde immer deutlicher, daß die Religion der Tujen nichts Einheitliches und Eigenständiges mehr ist. Sie wuchs vielmehr aus Wurzeln verschiedener Herkunft zu einem bunten Gebilde zusammen. Das ist begründet in der bewegten Vergangenheit der Tujen und ihrer jetzigen Heimat, die mitten zwischen verschiedenen Völkerschaften liegt. Besonders aber hat der Lamaismus diese zwischenvölkischen Verbindungen, sogar bis Lhasa und Peking, gefördert und entscheidend zur religiösen Einebnung beigetragen. In dieser Hinsicht teilen die Tujen ihr Geschick mit den Nachbarvölkern, soweit sie keine Chinesen sind. Ihr Glaube verbindet sich zu einer gemeinsamen Schicht, die sich als lamaistische Volksreligion über den ganzen Einflußbereich der Gelben Kirche hinzieht. Somit sind die früher aufgeworfenen Hauptfragen über den Schamanismus, die Bonreligion, den Himmelskult usw. keine Fragen, die von den Tujen her allein gelöst werden können. Ihre Religion hat eine viel allgemeinere Bedeutung. Gewiß lassen sich einige Besonderheiten feststellen. Doch diese genügen nicht, um über die Herkunft und ethnische Zugehörigkeit des Volkes sichere Schlüsse zu ziehen. Erst recht lassen sich dadurch keine einzelnen Tujen-Gruppen abgrenzen, die gewiß vorhanden sind. Als Quelle für solche kulturgeschichtlichen und ethnischen Zusammenhänge verbleiben fast nur noch die Sprache mit der Volksliteratur, vielleicht auch die Tracht, vor allem aber die Tradition und Schriftgeschichte, die hauptsächlich in chinesischen Berichten enthalten ist. Damit soll die Religion und Volkskunde nicht ausgeschaltet sein; sie muß vielmehr ergänzend und erklärend hinzugezogen werden. Um aber auf rein folkloristischem oder

3: Schröder AE9 Monguor

ethnologischem Wege zu klaren Ergebnissen zu gelangen, ist es zu spät. Das wäre vielleicht vor fünfzig Jahren noch möglich gewesen.

Jetzt aber geht die Sinisierung der Tujen ihrem Abschluß entgegen. Lange hatten sie in religiöser Hinsicht einen starken Rückhalt in der lamaistischen Welt und trotzten dem chinesischen Einfluß, obwohl sie deren Ackerbau vor vielen Generationen übernommen hatten. Heute jedoch haben sie sich aus diesem Rückhalt herausgelöst, ja der Rückhalt selber ist schon sehr morsch geworden. Die Gründe dafür können hier nicht erörtert werden. Die Tujen geben sich selber auf, ihre Sprache, ihre Religion. Wenn ihre Kinder Großväter geworden sind, wird sich die chinesische Kultur wiederum einen neuen Bereich einverleibt haben, der sich von den andern Provinzen nur mehr insoweit unterscheidet, als sich das chinesische Sprichwort anwenden läßt: „Bei zehn Meilen ist die Sprache verschieden, bei hundert die Sitte." — Und dennoch sind alle „Chinesen".

PREFACE

771
175
121

The origin, history, and social organization of the Monguors were studied in Part I,[1] together with the family and economic life. Their religious life is here dealt with as Part II of the same study.

It is common knowledge that the private and public religious life of the Monguors is intensive, and that the Monguors are as fervently Lamaist as shamanist, and also practise rites belonging to neither of these religions.

In dealing with the Lamaism of the Monguors, the purpose is not to study the origin, the history, and the philosophy of Lamaism in general in Tibet and Mongolia; instead, in the first part of the study, emphasis is put on the historical frame within which Lamaism was diffused in the limited region of Huang-chung.

The study is based on local chronicles, the Chinese histories, and all available sources, and also on the experience of a long stay among the people. The author hopes that he has thus attained insight into the history of the introduction, growth, flourishing, and crises of Lamaism, depending on peculiar circumstances of persons, events, and times.

The part played by the Chinese emperors in the diffusion of Lamaism in Huang-chung will be noted, the reasons of the imperial policy explained, and the peculiar legal institutions that were established to promote Lamaism will be recorded.

Local history will provide the data regarding the times, the places, and the peculiar circumstances in which monasteries were founded, and will point to the outstanding position occupied by the lamasery of Erh-ku-lung, situated in the heart of the Monguor country north of the Hsining River. Erh-ku-lung surpassed all the lamaseries of the country for a century. Animated with prodigious activity it founded forty-two daughter lamaseries, enrolling a tremendous number of the Monguor male population in its institutions.

The local history will reveal also that some of the Monguor Hutukhtus of Erh-ku-lung were learned authors of books, and directors of the imperial committee for the translation of the Kanjur and Tanjur from Tibetan into Mongol and that important diplomatic missions in Tibet were entrusted to them by the emperors who appointed them as spiritual directors of the Mongol princes, and from whom they received honorary offices at the capital.

Their influence reached as far as Peking, Mongolia, and Tibet. The colleges of Erh-ku-lung were attended by lamas from Kansu, Mongolia, and Tibet who, upon returning to their own countries, founded monasteries on the pattern of Erh-ku-lung.

These historical facts will explain the influence exerted by the Monguor lamas upon Lamaism, and upon

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

771 175 121 the population of Huang-chung. Note must be taken of these historical facts in order to explain the actual religious mentality of the people of Huang-chung.

In the same way historical events will explain the tremendous crises which affected Lamaism in Huang-chung, and the actual position it occupies in the Hsining country.

A chapter will deal with the organization of the lamaseries in Huang-chung, their material, educational, and religious aspects; their means of subsistence; the subjects of the lamaseries, branch monasteries, lamas, and living Buddhas. In this chapter, details of the numerical strength of lamas, in proportion to the population as a whole, are given. These figures throw light on a subject which has been somewhat distorted by past estimates. They show that the proportion of lamas to the total population is much lower than we have been led to expect. These figures are probably more reliable than those of past estimates; certainly they are more circumstantial.

[795] The inferior position of the Lamaism of the Red Sect in the region will also be better understood when put in its historical frame.

Similarly, the shamanism of the Monguors is approached from the angles of its peculiar connections with Taoism, the conservation of its ritual proper, and its historical connections with the "wuism" of old China and the shamanism of Central Asia. Emphasis is put also on its overwhelming importance in the religious life of the Monguors.

The second part of the study is devoted to the practical aspects of the religious life of the Monguors, its environment of fear and apprehension, and the role occupied in the fabric of daily life respectively by Lamaism and shamanism, and the various rites alien to both religions.

[114] The describing of monasteries, Lamaist monuments, iconography, programs of studies in colleges, theatrical exhibitions by lamas, festivities, and shamanist rites, has been avoided in this part, since all are encountered hundreds of times in books dealing with the subject. Instead, emphasis is put on the specific Monguor aspects of the religious life and rites that are peculiar to them, in order to understand the religious mentality of the representatives of the religions.

A chapter will deal with the death and burial customs, and still another with the cult of "Heaven and all the spirits."

The last chapter of the study will put stress on the often overlooked but important role played by religion in helping the Monguors to keep their identity, traditions and customs, strengthening the social structure of the clans, and preventing their absorption in the Chinese nation. [p. 1(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

122 It is a pleasure to acknowledge with the appearance of the second part of the study, my indebtedness to the Carnegie Corporation and the American Philosophical Society for the grants which enabled me to complete the work, to Mr. Owen Lattimore and his colleagues of the Page School of International Relations at the Johns Hopkins University, and Professor Schuyler Cammann for assistance in the final editing.

000 I owe a special debt of gratitude to Miss Theresa A. Tims, and wish to express my sincerest appreciation for

NOTE ON THE

114 In the pages that follow frequent reference is made to two Chinese compilations, the *Annals* of the *Fu* or Prefecture of Hsining, and of the Province of Kansu. The full titles of these two works are:

1. *Hsining fu hsin chih, New annals of Hsining prefecture,* in 12 volumes containing 40 *chuan* or chapters, compiled between 1755 and 1762 and probably published soon after 1762. The editor of these

I. INTENSIVENESS OF THE RELIGIOUS LIFE OF THE MONGUORS AND THE POSITION OF ITS FORMS

PRIVATE AND PUBLIC RELIGIOUS LIFE

The religious life of the Monguors is very intensive, 771
and not a superficial veneer that scales off easily. Indeed, it has not only a private and a family characteristic, but a social and compulsory aspect, as well.

A missionary, accustomed to living with Chinese, is 781
quite surprised when he comes among the Monguors, 788
by their almost continuous recitation of *Om Mani Padme H'um.*[1] It is repeated by old and young, both men and women, hundreds of times a day, under all circumstances. The mind of the Monguor appears to be fixed on religion in a most unusual way. Mothers, kissing and cuddling their babies, like to say happily, over and over, "Om Mani," "Om Mani," as if thanking Buddha (*Avalokita*) for the baby. The sick, suffering on the *k'ang*,[2] find relief in sighing Om Mani the whole day, hoping to be cured. When hailstorms threaten crops, Om Mani will be said hundreds of times by every terrified farm family, in the hope that Buddha will make the wind change the course of the clouds. When someone [764]
in the village dies, all the villagers gather at night in the courtyard of the deceased, where they sit for many hours saying the Om Mani for the deceased.

[1] The formula *Om Mani Padme H'um* has always been and [104]
still is an enigma. All attempts to explain it remain unsatisfactory. Each lama of a sect, each student of things Tibetan has proposed his own explanation. It appears to be of Hindu origin and not Tibetan. Some trace its appearance in Tibet back to the eighteenth, fourteenth, and thirteenth centuries; and even to the seventh century. See P. Pelliot, *T'oung Pao* 24: 395, 1924. The explanation of the formula seems to vindicate *mani padme* as a vocative of *Manipadma*, the proper name of a female deity.

[2] A small platform, two or three feet high, built with bricks, [104]
upon which the whole family sleeps, sits, talks, sews, etc. In the front of the platform there is a small oven, the smoke from which passes through brick channels under the platform before reaching the chimney so that the platform is always warm.

Index 163

Sodalities, most of them for women, are organized [575] in every village. The members convene to recite the Om Mani as they circle the Bumkhang[8] of the village 781 all day. Whenever a Monguor is in serious trouble, 788 he prays Om Mani, and when a happy event occurs, he gives thanks by Om Mani. Supposedly, all kinds of evil are dispelled and all blessings obtainable by Om Mani.

Monguor families place in the center of their court- 778 yards a high pole with a small flag flying from atop it. Om Mani and other prayers are printed on the flag as an offering, day and night, by the family to Buddha. Prayer wheels, containing hundreds of repetitions of Om Mani printed on paper, are moved by water power, so that Om Mani will be offered continually, as the wheels revolve.

The Monguors have used their Om Mani to such an 781 extent that its true meaning no longer exists. A farmer 788 becoming angry at the lazy oxen, while plowing his fields, will beat them and swear furiously with a well-articulated Om Mani; gamblers, on losing the game, their patience wearing thin, will say Om Mani in a blasphemous tone. While weeding fields, if a lascivious song is enjoyed, farmers say Om Mani, meaning the song is well sung. When a smutty joke is told, lis- [522 teners will say Om Mani, laughing, to indicate it is a 831] good joke. It is said that thieves and robbers say Om Mani as an aid to their practice of larceny. Foreign travelers jest that, if robbers kill their victim, he will have the consolation, when dying, of hearing the killer saying Om Mani. Om Mani can be and is offered under all circumstances: riding horseback, working in the fields or at home, while laughing, gambling, singing, conducting business, and even sleeping.

The Monguor's fondness for and promiscuous use of Om Mani has reduced it to a mockery of its original intent. Nevertheless, it is in fact most often used as a real prayer.

The Monguors are not ashamed to pray in public, to

[8] A structure at the entrance to the village to prevent the [104] entrance of evil influences.

[p. 5(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

twist their rosaries on their wrists, even in the city, or 781
to turn a small prayer wheel all day. While no one 788
understands the meaning of the prayer formula, the Monguor saying his Om Mani intends it as adoration to Buddha.

Religion is a family as well as an individual matter. 794
The chief of the family is its religious head and its rep- 782
resentative. He worships "Heaven and all the spirits" on the roof of the home or in its courtyard. It is his duty to honor the protector-deity of the family. Each family honors the image of its family protector-deity. At the time of the division of a family inheritance, it is the privilege and duty of the eldest son to continue worshipping the old family deity honored by his ancestors. The chief of the family is its representative at the performance of public rites. Attended by his family, he performs the rite of opening the fields in the spring to start farming; he gives orders for the worship of the various kind of spirits honored by the family—"the spirit of the hearth," "the spirit of the stables," etc.—and sets the example by praying the Om Mani and fingering his prayer beads.

The compulsory social aspect of the religious life of 794
the Monguors is evidenced by the fact that the chief of 622
the village and its elders administer both the official and religious life of the people in it. Even as they apportion land taxes among the villagers, according to wealth [65]
and productivity, so do they assess families a fixed sum for religious services. They impose corvées on the villagers for municipal functions as well as for such religious functions as protection against hailstorms or the sacred animal of the village. In the same manner, heads of families are summoned to participate in rites at the temple or on the top of the sacred mountain. The time of religious rites is fixed by the village chief. He performs the community thanksgiving rite just as the family chief does in his own circle.

The village chief is not the only organizer of religious [614]
life in the village. The chief of the clan is its promoter. It is he who offers sacrifice at the clan's ancestor rite. On his triennial visit, the clan chief brings the image of the protector-deity of the clan, so that each village may fulfill its duty of honoring it. He makes inquiry about public worship in the village and the morality of his subjects.

Religious activities are part of the family and social life of the Monguor society. Their social organization is woven into a religious environment. The chiefs of families, villages, and clans are its promoters. All clansmen are obliged to participate in the public rites.

The intensiveness of the religious life of the Mon- 771
guors is further demonstrated by the fact that they are 754
not only known as practicing Lamaists, but also as fer- 756
vent adherents of shamanism, and practicers of many rites which do not seem to belong to either Lamaism or shamanism, being performed by neither lamas nor

[p. 6(A)]

shamans, but by the family, village, or clan chief. Owing to the enrollment of Chinese into the Monguor clans, it is not unusual to encounter Taoist priests performing rites in some villages, or to hear some wealthy Sinicized Monguors, chiefs of clans, or an occasional scholar proficient in Chinese literature, openly claiming to profess Confucianism. We do not consider them Confucianists since they also practice Lamaist and shamanist rites, and because Confucianism is not a religion.

POSITION OF LAMAISM

What is the respective standing of Lamaism and shamanism? Lamaism occupies the privileged position, and has been an overwhelming influence in the country of the Monguors. In nearly every valley, throughout the country, there is a monastery. As many as three hundred lamas live in some of the monasteries; in others thirty, fifty, or one hundred, and in Kumbum two thousand. The monasteries are the only imposing buildings in the country. They are the bankers, money lenders, owners of flour mills, and big sellers of grain and cattle. They command prestige among the Chinese officials because of the protection bestowed upon them by the Central Government of Peking. The moral influence they exert upon the people is unusual.

Nearly every Monguor family has one of its members, a son or an uncle, enrolled in the lamaseries. Thus, ties of kinship bind the people to the religious institution. The chiefs of the clans are the real supporters of Lamaism, though some of them claim to be Confucianists. The Lu T'u-ssu built three lamaseries in his territory and granted large property rights to them; the Ch'i T'u-ssu granted territories to the lamaseries of Erh-ku-lung and Ta-yin-ssu. The Li T'u-ssu built the once outstanding lamasery of Ta-fo-ssu in the center of the city of Hsining. The protector-deity of each clan is a deity of Lamaism. In the mansion of some T'u-ssu one or two lamas are on duty throughout the year, worshipping the protector-deity of the clan. The T'u-ssu are the benefactors of the lamaseries at the time of the religious festivals. It is no wonder the people follow the example set by their chief and adopt his religion. The large-scale spread of Lamaism throughout Mongolia can be attributed to the example set by the chiefs of clans—such outstanding leaders as the Chang-chia, Sum-pa, Mei-chu-erh, and T'u-kuan Hutukhtus, and many less celebrated Living Buddhas, reincarnated in the Monguor country, which seems to be the "Land of the Lamas."

FAILURE OF LAMAISM TO SUPERSEDE SHAMANISM COMPLETELY

Notwithstanding the conditions favoring Lamaism, the Monguors are fervent adherents of shamanism, and occasionally of Taoism. The explanation of this anomaly is to be found in the fact that Monguors do not

[P. 6(B)]

understand the striking incompatibility which exists 829
between the religious and philosophical principles of 771
these religions, while we see the paradox of things which cannot coexist logically, actually coexisting in a very smooth and natural way. The Monguors believe that each of these religions is right, and practice them according to their various circumstances of life. While their knowledge about dogmas and religion is limited and unstable, their religious spirit is unusually developed. What is the reason for this trend of mind, this carelessness concerning differences between religions and philosophical principles? Our illusions and misunderstandings occur because we compare the conversion to Lamaism of the Mongols and the Monguors with the conversion to Christianity of peoples in ancient times, and assume that a similar change of mind took place among the Monguors. We envision churches filled to capacity for weekly worship, people receiving instructions about definite dogmas, children attending parochial schools, learning prayers, studying religion, and being educated in their belief, and we also envision a group of religious leaders, proficient in the religious sciences, but none of these exist or form a part of Lamaism.

The vast and splendid temples in the monasteries 792
are not churches or places where the faithful fulfill in 794
common their religious duties. Lamas recite texts in 796
the temples; laymen do not. There are no spiritual 771
leaders, skilled in religious sciences, to preach and instruct the faithful. Nowhere are there parochial schools for children; nor is anything done to provide serious religious education for the people. Lamaists are like stray sheep without shepherds, for nowhere is there a pastor or rector taking care of definite groups of the faithful. In teaching Christianity, new notions and principles were instilled in the minds of prospective converts. Their incompatibility with the principles of other religions was explained. The prospective converts were taught that they must live according to the principles of Christianity; that in order to do this they would have to change from their way of life to the Christian way, by changing their conduct, feelings, habits, and way of thinking. None of these things are taught about Lamaism. The religious value of the faith is never explained. No zeal is displayed in order to form serious types of Lamaists. The lama does not care about the shaman as he performs his rites; the shaman does not mind, and acts in like manner; the Taoist, considered as the second best, does not bother, for he is very happy to be invited and to earn some money. Shamans are considered the most potent men in certain circumstances, while lamas are believed to be the appropriate performers of certain kinds of rites. Consequently, the two religions are considered equally necessary and equally right.

The fact that serious Lamaists are not formed ap- 771
pears to be responsible for the Mongours still being fer-

[p. 7(A)]

vent shamanists, and provides a reason why Lamaism 771
never succeeded in uprooting shamanism, notwithstanding its overwhelming influence for centuries. Another important factor, without doubt, is in the very nature of the debased Lamaism. Lamas of the Red Sect, who [795]
were the first to come into the country, indulged in nearly all the same magical practices as the old shamans, including bloody sacrifices, except that they performed them in such a way that the people, not interested in philosophical and doctrinal discussions but in having religious men who could avert all kinds of calamities in the most efficient way, jumped to the obvious conclusion that the basic difference existing between shamanism and Lamaism was only a question of more or less proficiency in magical art. Lamaism became a kind of supplementary devotion, stimulating the heart to natural kindness and religiosity, but harmonizing perfectly with all kinds of magical practices, regardless of the performer.

POSITION OF SHAMANISM

The place shamanism occupies in the religious life of 771
the Monguors, and its persistence over centuries under 756
the most unfavorable conditions, seems to be an enigma. The lamas, who outnumber the shamans perhaps a hundred to one, are members of a wealthy institution. The few shamans are mostly poor people who derive a precarious existence from the farming of some fields and the fulfilling of their office. Lamas have temples that glisten with gilt; the shamans have none of their own. Lamas are more or less cultured men; most of the shamans are unable to read. The lama institution enjoys [648]
a high prestige among the Chinese officials, and controls nearly all the levers of power in the country; the poor shaman, living in the village with his family, always at the beck and call of the villagers, is an unknown and powerless entity in the official world. But, in spite of these unfavorable conditions, the shaman remains a figure of importance with his own kind of prestige, in the religious life of the Monguors.

For those who are cognizant of the power of the impact of wealth and decorum upon the societies of the Orient, this fact seems hard to understand. Its explanation is to be found in the general belief that the shamans are mightier than the lamas because they are more proficient in magical art, and in the subduing of evil spirits. People steeped in superstition, beset on every side by malignant spirits, confronted by diseases, misfortunes, and evils, have easy recourse to the men they believe might best help them, and whom they believe best master the technique of undoing the harm wrought by uncontrollable forces, namely, the shamans. This belief in the magical superiority of the shaman is so deep-rooted because lamas, and even Living Buddhas, when squeezed to the wall, unable to cope with uncontrollable forces and events, resort occasionally to their last shred of hope, the shaman.

[p.7(B)]

Confidence in the power of the shaman is so strong among the Monguors and over the whole country, that even Sinicized Mongours and neighboring Chinese from outside the clans never fail to invite the shaman to their homes, even though they have long since abandoned the lamas. Before Buddhism and Lamaism were diffused in central Asia and Tibet, these countries were entirely shamanist. There is much evidence today to show that shamanism still occupies a prominent place in the religious life of these peoples. Mme David-Neel assumes that in spite of the fact that the Tibetans are considered to be Lamaists, most of them, except the learned lamas, are shamanists.[4] 771 756

II. INTRODUCTION OF BUDDHISM AND LAMAISM IN HSINING (HUANG-CHUNG)

NO HISTORICAL DATA BEFORE 1227 IN THE ANNALS OF HSINING

OLD OCCUPANTS OF HUANG-CHUNG WERE NOT BUDDHISTS

The *Annals* of Hsining do not record a single fact concerning either the time or the way Buddhism first was introduced in what is now the Hsining region. Dealing with the temples and monasteries built in the country, the author of the *Annals*, in concluding ch. 15, p. 13*a* incidentally notes: ". . . the country of Huang-chung [Hsining], being properly the region of the Hsiao Yüeh-chih [Indo European Scythians], which had been lost several times at the hands of the Tibetans and the barbarians, it is no wonder that [there] Buddhists are numerous and Taoists are few in number." The author seems to suppose that these Scythians and Tibetans were Buddhist at that early time, but in ch. 30, pp. 1–12 (the only pages concerned with these early Scythians and Tibetans), he does not record any fact concerning Buddhism in regard to either these Scythians or these Tibetans. 175 771 792

No evidence can be offered concerning these Scythians to support the assertion of the profession of Buddhism by that "small branch of Hsining Hsiao Yüeh-chih."[1] However, the main branch of the Yüeh-chih 175 771

[4] Alexandra David-Neel, *Au Pays des brigands gentilshommes* 101, Paris, Plon, 1933.

[1] *Annals* of Hsining, ch. 30. According to the *Annals*, the Hsiung-nu Khan, Mao Tun, having killed the king of the Scythians (202–201 B.C.), a small and feeble branch among them settled in the mountains and mixed with the Tibetans (p. 1*b*). They submitted to the Chinese General Ho Ch'ü-ping (121–119 B.C.) and lived among the Chinese (colonists). They lived in seven groups, numbering in all 9000 or more soldiers, spread over the region of Huang-chung to Ling-chü (colony near Kukunor) (p. 2*a*). During the period Hung-Yüan (A.D. 89–105), refusing to revolt with the Tibetan Mi-T'ang tribes, they helped the Chinese General Tung Hsün crush the revolt. Tung-Hsün gave them the title of *I-Ts'ung-Ch'iang*, and *I-Ts'ung-Hu* (loyally following Tibetans and barbarians, re-

[p. 8(A)]

tribes, chased from Mongolia and Turkistan by the 175
Hsiung-nu between 176 and 165 B.C., finally became 771
unified, and founded the realm of Kushana (between Iran and India), in the first half of our era.[2] When that branch adopted Buddhism is not known, but its third king, Kanishka (A.D. 80–11–, or A.D. 120–162), was a fervent protector of Buddhism.

The Tibetans of Huang-chung, in those early times, [177]
were still buried in barbaric darkness. It was much later, around A.D. 630–650, that Buddhism was first spread among them, and even then it had little appeal for the people on account of the strong opposition of the native *Bön* religion. The second attempt at diffusion by Padmasambhava a century later (775–788 or 797), was more successful.[3] Conclusively, Buddhism had not been spread during this period among these Scythians or the Tibetans.

FIRST TEMPLE BUILT IN HUANG-CHUNG

Buddhism "seems," however, to have been spread 175
into the country in the first centuries of our era, because 792
the author of the *Annals* (ch. 15, p. 2*b*) mentions the "monastery" Pei Ch'an-ssu, and notes: ". . . the 'monastery' is situated five *li* outside the northern gate of the city of Hsining, at the foot of the 'Earth Tower Mountain' "; it is the very oldest monastery of which Han-yin tells: ". . . north of the T'ing of Hsi-p'ing is the monastery of the 'Earth Tower.' "

According to the Chinese "Dictionary of Famous Men of China," (*Chung-kuo ming-jen ts'e tien*) Han-yin was a native of Tun-Huang (Nan hsi-chou) who fulfilled important functions on behalf of Chü-ch'ü Meng-hsün (A.D. 401–439), the king of the ephemeral realm of Pei Liang. Han-yin was the author of several books, among them *The Annals of the Thirteen Chou*. In these *Annals* (p. 8), we read:

the *Shui-ching-chu* records: north of the T'ing of Hsi-p'ing is the 'Earth Tower' temple, (*shen-ssu*); according to the *Shui-ching-chu* the river Huang, turning to the east, passes on the southern side of the 'Earth Tower'; the tower on the northern side leans against the mountain, the original crest being 300 feet high, and looks steep, as if it were artificially cut; at the foot of the tower are the remainders of old walls and of carved walls of the temple (or temples).

---

spectively), which titles are recorded on pp. 6*a*–11*b*. Every time they took sides with the Chinese in quelling the intermittent revolts of Tibetans. In A.D. 184 (p. 11*b*) during the revolt of the Yellow Turbans, which accelerated the fall of the later Han dynasty (A.D. 220), the Scythians revolted with the Tibetan Hsien-lin tribes, and from that time on, their name disappears from the *Annals*; nothing more seems to be known about them.

"The Tibetan chronicles show that in the IXth century, Buddhism had only passed the frontiers of Tibet without having either affected the mind of the people or even the court."

[P. 8(B)]

According to this text, Han-yin does not report hav- 175
ing seen the temple between 401 and 439. He notes 792
only the text of the *Shui-ching-chu*, an earlier geographical work, probably completed before A.D. 265, by an unknown author and largely commented and expanded by Li Tao-Yüan on the basis of his own studies and observations. He died in 527.[4] Han-yin consequently used the original edition of the *Shui-ching-chu* and thus the fact of the existence of the vestiges of the ruined temple (or temples) of the "Earth Tower" before A.D. 265 is evidenced. The *Shui-ching-chu* of Li Tao-Yüan notes *verbatim* the same text (p. 24*b*), adding: ". . . when Han-yin says, 'on the northern side of Hsi-p'ing is the temple of the "Earth Tower,"' he refers to this temple."

NOT A BUDDHIST TEMPLE

The original *Shui-ching-chu* in mentioning, "the temple of the 'Earth Tower' uses the term *Shen-ssu* for "temple." This term is not specific for temples devoted to the worship of Buddha, but rather is used to designate temples devoted to sacrifices to ancestors or to the spirits in general. The text notes that the vestiges of the "temple" were still existing in 265.

The author of the *Annals* printed in 1755 notes the existence of the *Pei Ch'an-ssu*, "the northern temple of contemplation," also called *Yung-hsing-ssu*, "temple of eternal inspiration," situated five *li* outside the northern gate of the city at the foot of the "Earth Tower Mountain." The name of "Earth Tower Mountain," situated five *li* north of the city, was still well known in 1912; the temple was still called *Pei Ch'an-ssu*, which eliminates any doubt concerning the identity of the location of the temple called by these three names.[5] In 1912 a steep winding path led to the temple, which was a deep cavern, and some smaller ones, dug half way up the mountain side. A large, elaborate veranda constituted the entrance. Inside the cavern were statues of Lu tung-ping, Ho-hu-yeh, Ma-wang, and Niu-wang. It is certain that the temple was a Taoist temple. An old Taoist, living in one of its small rooms, took care of it, collecting some grain in autumn from the neighboring farmers and enjoying his job.

IT IS ACTUALLY CALLED PEI CH'AN-SSU

Ch'an-ssu suggests that the builders of the temple belonged to the Dhyana sect, diffused in China by Buddhidharma, an Indian or Iranian Buddhist missionary, who arrived only in A.D. 520 (?) and died in 535.[6] The

[4] A. Hummel, ed., *Eminent Chinese of the Ch'ing period* 2: 970 sq., note by Dr. Hu Shih and *passim* the references concerning the *Shui-ching-chu* in Vols. 1–11 (see "Index of Books," in Hummel, *op. cit.*).

[5] *Yüan huo Chün-hsien chih*, ch. 39, p. 16*a*, erroneously notes: "130 *li* west of the city of Hsi-p'ing is the mountain of the Earth-tower, at its base is the temple (*Shen-ssu*) of the Earth-tower."

[6] O. Franke, *Geschichte des chinesischen Reiches* 2: 299–300, Leipzig, Verlag Von Walter De Gruyter, 1936.

[p. 9(A)]

temple must indeed have been devoted to the worship 175
of Buddha at some time; otherwise the name *Pei Ch'an-* 792
ssu would remain inexplicable. These facts seem to lead to the supposition that the original temple, already ruined in A.D. 265, must have been built by the early Chinese frontier colonists; and because it was not then called by the term *ssu*, the specific appellation for Buddhist temples, but *shen-ssu*, it must have been devoted to the worship of the spirits (of the locality), in the old Chinese manner. Later, after A.D. 520, the ruined original temple must have been converted into a Buddhist temple of the Dhyana sect. From that time on the people must have started calling it *Pei Ch'an-ssu*. Later still the temple, after having been changed to the cult of Taoist spirits, seems to have retained the Buddhist appellation, and the author of the *Annals* seems to have supposed erroneously that the temple was originally a Buddhist temple.

WAS BUDDHISM SPREAD BY COLONISTS OR BY MONKS FROM TURKISTAN?

Buddhism was introduced in China "officially" be- 175
tween A.D. 64 and 67 by way of Turkistan,[7] before 771
the time of King Kanishka of Kushana (80–110 or 120– 797
162), whose realm was situated on the celebrated commercial road connecting the Roman Empire with India and China.[8] Buddhism had been diffused into the petty realms of central Asia, with which the Chinese generals waged war for two centuries (121 B.C.–A.D. 101).[9] The first translators of Buddhist scriptures, mostly of Iranian and Scythian origin, came to China from Turkistan in A.D. 148.[10] All these missionaries, on their way to China, passed through Liang-chou which at that time was one of the most important emporiums in west China. Here lived businessmen from remote countries, subjects of the Roman Empire.[11]

---

[7] Franke, *op. cit.* 1: 410, " . . . nothing is known for sure about the way or the time Buddhism was first diffused in China." However, Franke wrote earlier, Ausbreitung der Buddhismus von India nach Turkestan und China, *Archiv für Religionswissenschaft* 12: 217, 1909, " . . . Buddhism was firmly established in China in the second half of the first century A.D.; it made big strides during the middle of the second century, and rode the crest of the waves during the second half of the fourth century." Grousset, *op. cit.*, 244: "In 65 A.D. there existed sporadically in Kiangsu Buddhist communities, protected by the brother of Emperor Ming-ti. The diffusion of Buddhism seems only to have started on some large scale during the middle of the second century, A.D. . . ."

[8] Grousset, *op. cit.*, 55: " . . . the transcontinental silk trade road, running through Kashgaria (Turkistan) and Iran, was already open in the second century, B.C."

[9] O. Franke, Ausbreitung der Buddhismus von India nach Turkestan und China, " . . . during the three first centuries of our era, Buddhism must have been diffused from Gandhara and Kashmir into Turkistan."

[11] Peter Boodberg, Two notes on the history of the Chinese frontier, *Harvard Jour. Asiatic Studies* 1: 289, Cambridge, [113]
November, 1936, "Besides the two 'Aryan' colonies in Shensi, there are reasons to believe that there existed on the Chinese

[P 9(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

The colonization of Huang-chung started between 121 and 119 B.C. with the transportation of Chinese families from central China, and criminals released from jail (*Annals* of Hsining. ch. 30, p. 2*b*). In A.D. 9 the colonization system was developed on a larger scale in the same way. In A.D. 132 (*Annals*, ch. 30, p. 9) after five new colonies were established, the total number reached only ten. Intermittently, new families and criminals had to be sent to replace those who died or ran away (*Annals*, ch. 30, p. 9*b*). In A.D. 220, after three centuries, the originally walled, small garrison of Hsining was expanded by the building of three new cities, on three sides of it (*Annals*, ch. 30, p. 13*a*). For the first time, Hsining started to become a real city, the only one in the whole country.

It is tempting to suppose that, at the time of the expansion of the city, the temple of the "Earth Tower" might have been built, for it could easily have been protected by the garrison troops who farmed the fields around it. On the other hand, it is an historical fact that Buddhism already had a firm toehold in China in the second half of the second century A.D. It seems possible that among these colonists some might have been professing Buddhists when they arrived in Huang-chung, because Buddhism was the religion of the people. If so, Buddhism might have been imported by the colonists and practiced among them during the second century A.D. However, another possibility is not precluded. Monks who were attendants for the early translators of Buddhist texts (A.D. 148) might have settled in the emporium of Liang-chou, diffusing Buddhism as monks used to do in the oasis cities of Turkistan. Some among them might have tried to go to Hsining to spread Buddhism, after the city had been built and relative security provided. However, no historical data are available to support either of these two suppositions.

More can hardly be said about the diffusion of Buddhism in Huang-chung during the first three centuries of our era, because of the lack of historical data.

WAS BUDDHISM SPREAD BY HSIEN-PI TRIBES?

The region of Huang-chung, and its neighboring countries, upset during the second and third centuries by three noticeable invasions of Hsien-pi tribes which settled in the country, driving out the larger Tibetan

---

border a third colony from the 'Far West,' this time located in modern Kansu. In the list of Hsien dependent on the prefecture of Chang-Yeh we have Li-Chien-Hsien. . . . It is tempting to see in the name of this administrative subdivision of a western Chinese province a variant transcription . . . which is one of the names under which the Roman Orient was known to the Chinese of the Han dynasty. . . . The name of the little Chinese city on the desert road to the West, would indicate that an important Western community must have sent out its sons to the distant land of the Seres to imprint the name of the metropolis on an outpost of the Han Empire." See also M. Medard, Ta-Ts'in, Province romaine en Asie, *Journal de Pékin*, 141 *et. sq.*, 1936.

tribes [12] and assimilating the smaller ones, changed the 175
whole of the population. This raises the question 771
whether Buddhism was spread into the country by these Hsien-pi tribes. It could hardly have been spread by the group of nomadic Hsien-pi tribes called *T'u-fa* which, coming along the Yin-Shan, settled in the region between Lan-chou and Hsining during the second century A.D.[13] No historical data exist concerning the diffusion of Buddhism along the Yin-Shan at that time. Consequently, these Hsien-pi tribes did not spread Buddhism in Huang-chung at the time of their arrival.[14] Two centuries later they founded an ephemeral realm called "Nan-liang," having its capital in Hsining (339–414). For the same reason, Buddhism cannot have been spread at the time of the arrival of the second group of Hsien-pi, called the Ch'i-fu tribes, which in the third century A.D. came from the northern desert, where they lived as nomads along the same Yin-Shan, and then settled in the country of the T'ao River, south of Hsining. They founded the ephemeral realm of Hsi Ch'ing (385–431) with its capital in Ho-chou.[15] Nor can Buddhism, again for the same reason, have been spread at the time of the arrival of a third strong group of Hsien-pi, the T'u-yü-hun tribes which, living as nomads along the same Yin-Shan, settled in A.D. 280 in the neighboring region of Hsining and in Kukunor, and founded a realm which lasted until 672. At the time of the invasions by these Hsien-pi tribes in the country of Huang-chung, they were still buried in barbaric darkness.

WAS BUDDHISM SPREAD BY THE BUDDHIST KINGS OF LIANG-CHOU?

This interesting problem will be approached from 175
geographical and historical aspects. The countries of Huang-chung and Liang-chou are separated by the Nan-Shan (southern mountain range), across which many low passes facilitate communication. During the Hou-Han dynasty Huang-chung depended on Liang-chou.[16] Later on, it was conquered and governed successively by the kings of the ephemeral realms of Ch'ien-Liang, Hou-Liang, and Pei Liang, who resided at the important emporium of Liang-chou.[17]

[17] Wolfram Eberhard, *Das Toba Reich in Nord China*, 180, Leiden, Brill. In 439 T'o-pa Wei conquered Pei Liang, the last of the petty realms which had successively settled in Liang-chou from 345 on. These realms had so monopolized the entire trade of Central Asia that Liang-chou became the most important colony of foreign traders, whose caravans arrived incessantly.

[p. 10(8)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

The Chin dynasty, which started in A.D. 265, had 175
been unable to control its empire, which was invaded by the northern barbarians. The governors of the distant Liang-chou, according to the circumstances, recognized the authority of either the empire or one of the nearest new barbarian kingdoms (Chao, Ch'ing, Wei), or both at the same time, or even declared themselves independent, founding their own kingdoms and expanding their power and influence as far as Turkistan and Huang-chung (*Annals* of Hsining, ch. 30, pp. 14–17).

From 345 until 439 Liang-chou was not only the 175
most important emporium of the West but also the most 771
active cultural center of Buddhism.

The kings of Ch'ien-Liang (345–385) promoted and protected Buddhism.[18] The kings of Hou-Liang (385–401) were as fervent protectors of Buddhism as the kings of Ch'ien-Liang.[19] However, Buddhism reached its highest degree of intellectual activity during the period of Chü-ch'ü Meng-hsün of Pei Liang (401–439), who controlled Turkistan and nearly the entire east of modern Kansu.[20] His counselor was the celebrated Dharmaksema.[21] One is easily tempted to suppose that Buddhism was diffused on a large scale in the countries subjected to unusually fervent Buddhist rulers—and all the more since during the period of 401–439, two [167]
thousand families from Liang-chou were transported to Huang-chung (*Annals* of Hsining, ch. 30, p. 176), three thousand from Yung-ch'ang (ch. 30, p. 18*a*), and five thousand from Ho-chou (ch. 30, p. 18*b*). It seems to be an axiom that in Asia, and especially among

---

Because China at that time was involved in endless wars, many Chinese from Ho-pei, allured by the prospects of peaceful living and profitable trading, moved into Liang-chou. The acquisition of the wealthy and rich emporium of Liang-chou had also been the motive for the expedition of the T'o-pa and the destruction of Pei Liang. The Chinese population of Liang-chou, according to the custom during these ages, were then taken slaves to populate the realm of the T'o-pa.

[18] They built the big monastery and superb tower in the city of Liang-chou, the first grottos of *Sha-chou* (Wieger, *Textes historiques*, 1185), and supported Chih-shih-lün, an Upsaka of the country of the Yüeh-chih, who translated in Liang-chou four volumes of Buddhist texts (*A catalogue of the Chinese translations of the Buddhist Tripitaka*, App. II, No. 35, p. 398, Bunyiu Nanjio, 1930), and the Chinese *Sramana* Chu Fu-nien who translated 12 works (Catalogue . . . App. II, No. 58, p. 405).

[19] The king's counselor was the Indian monk, Kumarajiva, who translated the 200 and more volumes of the Sutralankara (*Nanjio catalogue*, App. II, No. 59, p. 407) in Liang-chou. They built a tower and a monastery in the city, said to contain the relics of the monk (*Annals* of Liang-chou, 30*a*); the monk was very proficient in foretelling the future (*ibid.*, 34*b*, 35*a*.)

[20] *The Bunyiu Nanjio catalogue of Chinese translations of the Buddhist Tripitaka* mentions no less than nine names of learned foreign monks working in Liang-chou, supported by the king, translating 82 works from Indian and Sanskrit into Chinese (App. II, p. 410, No. 61, pp. 64–72). Nan-yang-hu, the nephew of the king was a translator (App. II, No. 83). Walter Fuchs, Zür technischen Organisation der Übersetzungen buddhistischer Schriften in Chinesische, *Asia Major* 6: 84, 1930.

[p. 11(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

the nomadic tribes, subjects adopted the religion professed by their kings or chiefs. Even in Europe there existed the sayings: *Regis ad exemplar* ("Subjects follow the pattern set by the king"), *cujus regio ejus religio* ("Let the religion of each state follow that of its prince"). However, not a single fact is recorded in the *Annals* concerning the building of Buddhist temples or monasteries in Huang-chung during this century of intensive cultural Buddhist activity promoted by the conquerers and rulers of Huang-chung in their capital of Liang-chou. This fact seems to challenge belief. Possibly the insecurity in the country on account of the military actions accompanying the conquest, carried on by the three successive rulers in the span of a century (345–439), and the disturbances following the transportation of such important groups of families, afford the explanation. Perhaps the Buddhist cultural activities did not appeal so much to the people, as to the court and the administrative centers of the capital, and so the impact of Buddhism remained confined to the area of the capital.

The T'o-pa Wei conquered the kingdom of Pei Liang in 439, but at the time it was involved in a serious persecution of Buddhism (438–452).[22] From 445 until 635 endless troubles occurred in Huang-chung, on account of the intermittent inroads of the T'u-yü-hun from Kukunor, and the T'o-pa, Sui, and T'ang dynasties successively had to wage war with them. (*Annals*, ch. 30, pp. 20*b*–24*b*). In 663 there started the intermittent inroads of the T'u-fan until 866 (*Annals*, ch. 30, pp. 25*a*–31*a*). During the Wu-tai period (907–960) China was unable to control Huang-chung. The Sung dynasty (920–1227) was powerless against the Hsi-Hsia and Chin, which successively occupied Huang-chung, but which themselves had trouble with the T'u-fan and Tang-hsiang (*Annals*, ch. 31, pp. 1*a*–8*b*). Finally, the Mongols conquered Huang-chung in 1227 and brought peace into the country. No wonder, during these eight centuries of intermittent troubles and change in the population, Buddhist activities were very limited, and the few existing institutions in depopulated Huang-chung were of minor importance.

HISTORICAL DATA ACCORDING TO TIBETAN SOURCES

However, the lack of information in the *Annals* of Hsining relating to this period is compensated for by data provided by the Tibetan *Blue Annals* of 'Gos lo-tsa-la composed between A.D. 1476 and 1478.[23]

---

[22] Ware, *op. cit.*, 135, ". . . when in the period T'ai-yen (435–440) the province of Liang was conquered and its population moved to the capital, the monks and Buddhist paraphernalia all came East, and the counterfeit teaching increased far and wide. Presently, owing to the large number of Sramanas, an Imperial order was given to unfrock those under 50 years of age."

[23] George N. Roerich, The Blue Annals by 'Gos lo-tsa-la, *Jour. Royal Asiatic Soc. of Bengal*, 1949: 1; 1953: 11. *The Blue Annals* and the *History of Buddhism* by Bu-ston Rin-po-

Buddhism, introduced in Tibet during the reign of 175
King Sron-btsan sgam-po, who died in A.D. 650 or 698, 771
was persecuted by King Lang Darma in either 841 or [798]
901. The persecution lasted for 70 or 108 years.
However, the doctrine continued to exist in Western Tibet (mNa-ris).

In Book II of the *Blue Annals* (pp. 65–66) it is stated that:

dGe-ba rab-gsal started his religious life at the hermitage of Zin-dpon. Three hermits [24] had fled via Khotan, to the country of Hor (Uigur kingdom), during the persecution and proceeding to Amdo met with dGe-ba rab-gsal, born in 892 in the village of Jya-zur situated north of Hsün-hua on the northern bank of the Yellow River. One of these "Three Learned Men of Tibet" ordained dGe-ba rab-sgal who went to Kan-chou (Kansu) for study but could not enter Tibet on account of the famine. In a vision he saw "Asuras" known as the "Nine Brother Dwarfs" residing in the neighborhood of Mount Dantig, who invited him to go to their place where there are great hermitages "promising to become his lay supporters."

In order to combat certain Yogis existing there, he laid the foundation of the monastery of Dantig, disciples joined him; he resided there for 35 years and died at 84 (975). Other celebrated fugitives of Tibet, called "The Six Men from *dbUs* and *gTsan*," who inaugurated the revival of Buddhism in Tibet, had met with dGe-ba rab-sgal, and had their ordination ceremony presided over by his disciple.

The text of the *Blue Annals* presents evidences of the existence of the hermitage of Zin-dpon and the founding of a hermitage at Mount Dantig by dGe-ba rab-gsal in the country where, during that period, there existed "great hermitages."

The text (*Blue Annals*, 65) fixing the location of Mount Dantig notes: "Ri Dantig is situated on the bank of the rMa-chu or Huang-ho, southeast of Kum-'bum and north of Hsün-hua." In the Introduction (p. 17), the author notes that "dGe-ba rab-gsal was born in 892 in Tsong-ka bDe-khams" (north Amdo; according to a local tradition his native village was Jya-zur, situated on the northern bank of the rMa-chu, north of Hsün-hua).

The location of Mount Dantig on which dGe-ba rab-gsal built his hermitage in A.D. 940, southeast of Hsining on the northern bank of the Yellow River, seems to correspond perfectly with that of the Mount Ami ch'ü-lu situated 140 *li* southeast of Hsining on which is built the actually still existing picturesque monastery of Sha-ch'ung. In 1910 its origin had been lost, but various surviving traditions attributed its origin to the Yüan

---

che composed in 1322, partly translated by E. Obermiller, 1931, are the main sources of information for all later historical compilations in Tibet. *Ibid.*, Introduction, 1.

[24] *Idem*, 63, cites Bu-ston's *History of Buddhism*. Obermiller, *Blue annals*, 2: 201. The three men are called *Bodhi-kyi mkhas-pa mi-gsum* or The Three Learned Men of Tibet. They are buried in a temple at Hsining. In dPari, north of Hsining, there exists a stone pillar with the names of three men mentioned on it (verbal communication of Rev. dGe-dun Chos-'phel). I never heard about such facts during my sojourn in the country.

[p. 12(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

period (1280–1368). The site of the hermitage of Zin-dpon being less picturesque, it is hard to identify it with the monastery of Goorong bzan which is a neighbor of Sha-ch'ung.[25]

175
771
[792]

[25] R. A. Stein, Mi-nag et Si-hia, *Bull. Ecole Française d'Extrême Orient* **44**: 229, 1951, identifies Sha-ch'ung (Sha-ch'ung of the Hsining *Annals*) with the monastery of the Rock of Bya-k'yun, below the city of Kui-te, south of Hsining, in the region of the Tibetans situated behind Tsong-ko. He gives details (p. 230) concerning the region of Tsong-ko situated between the cities of Tsong-ko and Shih-ch'eng, where he notes the river of Tsong running in the valley between the cities of Tsong-ko and Shih-ch'eng. The *Annals* of Hsining provide more details; "the River Tsong is east of the city (subprefecture of Nien-pei) (ch. 4, p. 15*a*). The valley of Tsong is situated 30 *li* west of the Great Rapids" (ch. 4, p. 10*b*), which are *circa* 30 *li* east of Nien-pei. "The River Tsong-ko which is north of the old city of Tsong-ko is [also known as] the River of Hsining [Huang-shui]; when the river reaches the city of Tsong-ko it is then called Tsong-ko River. The river changes its name according to the places [through which it flows] (ch. 4, p. 17*a*). South of the subprefecture of Nien-pei, there exists a city of Tsong-ko." The Sung *Annals* note: "The city of Lung-chih, which is the old city of Tsong-ko, depended on the Chou of Hsining. Concerning old Lung-chih there are three: at the time of the Han dynasties the city was situated west of the actual Ning-I [Hsining] in the *Chün* of the western Sea (Kukunor); at the time of the Sui and T'ang dynasties Lung-chih was situated to the southwest of the actual Nien-pei near the Yellow River; at the time of the Sung dynasty it was located to the south of Nien-pei; therefore, it is an error to say indiscriminately that the old city of Tsong-ko was only one city."

[103]

Shih-ch'eng (ch. 7, p. 13*a*) "is situated south of Nien-pei near the Yellow River." But ch. 7, p. 14 notes: "south of Nien-pei is the old city of Hua-ch'eng, which is properly the city of Shih-ch'eng established by the Hu-Wei; because in that region there was a Hua-lung valley, its name was changed to that of Hua-ch'eng hsien in 568 and in 712 the T'ang emperor adopted this appellation." (See also article *K'uo-chou*, *Annals*, ch. 7, pp. 12*a* and *b*.) However, ch. 4, p. 10 notes: "To the northwest of Hsining (region of the Kukunor) is a river running eastward (River of Hsining) passing south of Shih-ch'eng, which joins the river of the northern valley." This text and the former one concerning Tsong-ko seem to point to the strange fact that there have existed in the region of Kukunor a Tsong-ko and a Shih-ch'eng, before two cities called by the same names were established in the region south of Nien-pei.

In modern times the region south of Nien-pei near the Yellow River was separated from Nien-pei by the Ch'ing dynasty and organized as the T'ing of Pa-yen-jung. The Chinese Republic changed the name of Pa-yen-jung to Hua-lung hsien in honor of the old Hua-ch'eng hsien of 568, which at that time had taken over the place called Shih-ch'eng.

Conclusively, the former Tsong River joined the river of Hsining *circa* 10 *li* below Nien-pei; the region of Tsong-ko, Shih ch'eng in later times, was situated in the country south of Nien-pei and constitutes now, completely or at least for its largest part, the territory of Hua-lung hsien, near southwest of Nien-pei and really behind Tsong-ko as Stein notes: ". . . and southwest in Hua-lung hsien near the Yellow River is Sha-ch'ung."

More is available concerning the Tibetan tribes of Tsong-ko and the neighborhood from 1006 on (ch. 31, p. 1 *sq.*) fighting against and exterminating each other in the nomadic pattern; also about the Tsong-ko lama Li li-tsun, who married his daughter to the powerful Tibetan chief Kio-sse-louo, etc., which point to the fact that at that time these lamas belonged to the group of the Red Sect which was permitted marriage (ch.

[p. 12(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Thus, in 940 dGeba rab-gsal, who had started his religious life in the monastery of Zin-dpon, built a monastery in Dantig. At that time there existed in that region "great hermitages" and a temple in Hsining, where the three learned men from Tibet were buried. Later their names were chiseled on a stone pillar in dPari (the region between the Ta t'ung River and Nanshan, reaching to P'ing fan). At what time were the "great hermitages," the monastery of Zin-dpon, and the temple at Hsining built? Were there at that time hermitages in dPari? 175 792

The *Annals of Kansu* 45, 65–66, and the *Annals of Hsining* 30A, 30 a, b, record that during the span of time from the period of the introduction of Buddhism in Tibet (some years before 650 or 696), until its persecution (in 841 or 901), the T'ufan occupied Huang chung and Lungyu from 756 until 842, under the leadership of successive descendants of the imperial T'ufan family (Tsanpu), who appointed their own officials in the country without interference by the Chinese empire. It seems appropriate to assume that Tibetan lamas would at that time have followed the T'ufan tribes in Huang chung, and have built the "great hermitages" and the temple in Hsining, being encouraged by the Tsanpu leaders, the promoters of Buddhism. Thus Buddhism would have been diffused in Huang chung between 756–842 by lamas from Tibet and that is why "great hermitages" and the temple in Hsining existed before 940. 175 [792]

The minor importance of these institutions founded in troubled times, the loss of traditions concerning their origin, and the minor interest of the Chinese scholars for Lamaism, explain the lack of records in the Chinese *Annals*.

Conclusively, from the very beginning of the Chinese colonization of Huang chung until its conquest by the Mongols in 1227, the foundation of the hermitage of Dantig in 940, and the existence at that time, of "great hermitages" in that region, and of a Buddhist temple in the city of Hsining, are the only Lamaist institutions concerning which historical records exist. 175 771

DIFFUSION OF LAMAISM DURING THE YUAN DYNASTY (1280–1367)

When the Mongols conquered Huang-chung, the country was nearly depopulated. They found a few 175

31, p. 2b). Also, more is available concerning the subject in *Kansu chüan shen Hsin-t'ung-chih*, 1909, ch. 46, pp. 6b, 7a and 7b. See also Wolfram Eberhard, *Lokalkulturen* 1: 20, Brill, Leiden, 1942, Shih ch'eng, alte Hsiung-nu Gebiet.

Incidentally, I encountered in the Geographical work of Tsampo Nomankhan of Amdo translated by Sarat Chandra Das, *Jour. Asiatic Soc. of Bengal*, 1887, Pt. 1, No. 1, p. 28: "The north of Machhu is occupied by Chinese, Tibetans, Hor, Mohammedans [this seems to be the region of Pa-yen Jung], in the east of this tract lie the districts called Tantig and Yantig in which Tantig Shelgi is a sacred place." The location seems to be the region directly south of Nien pei. However, in 1910 no monastery existed in that region. [103]

[p. 13 (A)]

Tibetan tribes, remnants of important ones which had 175
fled to Kukunor or Tibet. Mongol troops, divided into small units, were settled with their families under the leadership of clan chiefs at strategic points, in order to prevent possible inroads of hostile neighboring tribes. [563]
A group of Shat'o living in the country since 936 joined the conquerers and was enlisted among the frontier defenders. The descendants of these groups constitute the Monguors to whom this study is devoted. Later there came also groups of Salars, Turks of Samarkand, to whom territories were assigned. More Moslems also settled in the country.[26]

GODAN

The Yüan dynasty is well known for its devotion to 175
Lamaism. In Tibetan and Mongol literature, Godan, 797
the brother of Güyük (the Emperor T'ing tsung, 1246–1251) is celebrated as the first ardent Buddhist Mongol prince who invited to his residence in Hsi-Liang the Sa-Skya Pandita, Chief Abbot of the Sa-Skya sect.

The holy man accepted the invitation and started his "apostolic" journey. He remained seven years in Hsi-Liang successfully diffusing the religion over the entire country.[27]

According to history, the troops of Godan had de- 175
feated the Tibetans northwest of Lhasa in 1239 and 648
destroyed a monastery. The Tibetans asked for negotiations in order to end the war. Godan urged a Tibetan delegate to come to his residence, and Sa-Skya Pandita, to whom this task had been assigned, started his "apostolic" journey on "command" from Godan, in order to avoid the worst. He delivered Tibet into the hands of the Mongol Prince, received a "gold patent," became an official under Godan, and Vice-regent of Tibet. His successors inherited this office.[28] Discontent among the Tibetans over the surrender of Tibet caused a new Mongol expedition to be sent in 1251. More rivalries and discontent had to be crushed again by the Mongol troops in 1267, 1277, 1281, and 1290.[29]

The Mongol emperors, hoping to keep the Tibetans [781]
and Mongols in submission by manifesting reverence for the lamas and promoting their religion, lavishly showered favors and privileges on the lamas and became Lamaists themselves. Emperors and empresses received Lamaist initiation, and the Sa-Skya lama Phagspa, chaplain at court, was allowed to sit next to 175
the emperor.[30] The court of the Mongols was sincerely 771

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Buddhist, and Peking was a Buddhist city. However, the Mongols also favored all religions—shamanism, Nestorianism, Catholicism. 175 771

The impact of Lamaism during the Yüan dynasty was limited to Peking. The number of conversions to Lamaism in Mongolia, and the number of monasteries, were insignificant, since when Altan, Khan of T'umed in 1578, proclaimed the Yellow Church the official religion of the Mongols, the Red Church was very nearly extinct. Possibly the appeal of Lamaism to the Mongols at that time was very limited because the marvels performed by the Red lamas (such as making rain, dispelling hail, predicting the future, rising in the air, subduing evil spirits, protecting the herds by sorcery) had already been performed by their own old shamans for centuries. So, for them, Lamaism could have seemed but another form of their own shamanism. [184]

TA-FO-SSU

In the long list of monasteries and temples recorded in the *Annals* of Hsining, there is mention only of the monastery of Ta-fo-ssu, situated in the heart of the city, with the note: " . . . it is an old monastery built by the Mongols, to which was granted during the Hung-wu period of the Ming (1368–99), the inscription 'Pacified Tibetans' " (*Annals* ch. 15, p. 1*b*). The temple complex in 1915, although in a state of total dilapidation, gave evidence that it must have constituted a fine monastery in former times. The main temple (two stories high) contained three huge statues of Buddhas, nine meters in height. The ruins of four smaller temples were still in existence, as well as a great number of small rooms, the habitations of former lamas. This temple was built by the ancestors of the Li T'u-ssu who fulfilled in Hsining the important office of Yu-ch'eng at the end of the Yüan dynasty. The clan of the Li T'u-ssu belonged to the Ch'u-yüeh tribe of the Shat'o group which founded the Later T'ang and the Later Chin dynasties (923–947). The Shat'o were Buddhists, and the emperors of their dynasties liked to visit the caves of Lung-men where they prayed for rain and snow.[31] They honored especially the Buddhist deity, Pishamen (*Vaisrayana*), one of the "Four Heavenly Kings," guardians of the four directions.[32] This devotion must have been old, because it is said that "Li K'o-yung as a youth once prayed in the temple of Vaisrayana."[33] No wonder then that the Li clan built the celebrated Ta-fo-ssu. However, like most of the Turkish tribes in Central Asia, the Shat'o had two religions. Besides Buddhism, the old Turkish "God of Heaven" was still worshipped by them. After the conquest of North China, the Shat'o also worshipped the gods of the Chinese official religion.[34] 175 792 346 [771]

[P. 14(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

At the beginning of the Chinese Republic (1911), 175
rumors upset the country for a long time, according to 114
which all the temples were to be confiscated and con- 792
verted into schools. The Li T'u-ssu, afraid of having his family monastery confiscated, and being squeezed to the wall, chose the lesser of the two evils. He reluctantly resolved to make some money from it and suggested that I buy it. Hoping to get more information about the history of the monastery, I asked for deeds and about the circumstances under which the Yüan officials had granted to his ancestors, in the heart of the city, the grounds on which the monastery had been built. "Father," he said, "No deeds exist, but is the secular tradition, well known all over the country, not sufficient to allow me to sell the family monastery?" Later, Goorongbzan, the most influential Living Buddha of the Red Sect, was in search of an opportunity to retrieve the old glory of his sect, which had been declining and waning on account of the protection and privileges accorded by the emperors of the Ch'ing dynasty to the Yellow Sect. As he was the sworn brother of the Moslem military commander of Hsining, Ma K'o-ch'en, who was at that time omnipotent, Goorongbzan called on his "brother" to obtain the necessary permission to restore the old monastery, which had been administered for centuries by lamas of his sect. A vehement protest by all the Living Buddhas of the Yellow Sect in the country was sent to the amban and to Ma K'o-ch'en. Eventually the officials confiscated the monastery, and thus ended the Ta-fo-ssu.

SHA-CH'UNG

Traditions still fresh and living, concerning mon- 175
asteries built during the Yüan period, linger among the 792
lamas of the Red and Yellow Sects. A tradition, well known all over the country, asserts that the oldest monastery in the country is that of Sha-ch'ung, situated on the left bank of the Yellow River, 140 *li* southeast of Hsining. It affirms that its founder was Karmabakshi (1203–1282),[35] the lamas belonged to the Karmapa, and that the celebrated Tsong khapa, founder of the Yellow Sect, started his religious career at Sha-ch'ung which went over to the Yellow Sect.

In 1918 I was a guest at Sha-ch'ung, a beautiful 792
lamasery. The temple, in the center of the complex of [346]
buildings, had a gilt tiled roof. It was situated on the Ami ch'ü-lu Mountain, commanding a wonderful outlook over the Yellow River and the surrounding moun-

[35] Gunther Schuleman, *Geschichte der Dalai Lama*, Heidelberg, 1911. At the time of Güyük and Mönke most of the lamas on duty at the court were of Tangut origin and adherents of the Karmapa sect, spread from Tsang to Kukunor. They were proficient in magic, and rivals of the Sa-skya (p. 51). At the end of the Yüan dynasty their chief received an imperial diploma and seal (p. 56). During the Yung-lo period (1403–1424) the most prominent among the bearers of the title of *Ta-pao-fa-wang*, "Great King of the precious law," was the chief of the Karmapa sect (p. 57).

[p. 14(B)]

tainous country. It was inhabited by two or three 792
hundred lamas of Tibetan origin, and had four colleges. The Abbot told me the monastery had been founded by a lama of Amdo, called Don dub. During the Yüan dynasty he had studied in Tibet. He was a learned man. The Abbot pointed to a stupa built on [346]
top of the temple and said it contained the relics of the founder. He went on to explain that Don dub had been the Teacher of Tsong khapa (born in 1357, ten years before the end of the Yüan dynasty) who started his religious career at Sha-ch'üng, and that the teacher brought his pupil to Lhasa when he was sixteen years of age. Then the Abbot led me to a nice building claiming it was there Tsong khapa had lived.[56]

It is not known what kind of monastery Sha-ch'ung 175
was in the beginning; whether it was a small hermitage 792
where a few unmarried Red lamas lived together or only a temple where some married Red lamas gathered at fixed times. The latter, depending more or less on a chief chosen from among them, scattered over the country, their pupils living with them, farming or raising cattle and performing cultural rites when invited by the people to do so. Important lamaseries could hardly have existed at that time, because of the disturbed circumstances. Even if Sha-ch'ung was not the hermitage of Dantig, built in 940 by dGe-ba rab-gsal, it certainly existed at the end of the Yüan dynasty. Two facts seem to support the tradition.

Sha-ch'ung in 1916 was a neighbor of the most im- 792
portant monastery of the Red Sect, whose Living 578
Buddha, Goorongbzan, presided over a group of more than two hundred lamas of his sect. The same year both lamaseries claimed to be possessors of a strip of intervening pasture, and had a fight at close quarters. Many lamas on both sides were wounded. Ma k'o-ch'en, the Moslem commander of Hsining, and sworn brother of Goorongbzan, put an end to the feud which had lasted for centuries. He adjudicated the possession [691]
of the debatable pasture to Goorong, who produced deeds dating from the period of the Yüan, but which the former officials would never recognize because of the influence wielded by the Yellow Sect. This fact supports the evidence of the tradition according to which both lamaseries had existed during the Yüan. The old feud was rooted in the fact that Sha-ch'ung, which belonged to the Red Sect, later went over to the Yellow Sect, while the monastery of Goorong clung to its original Red Sect.

Heffer, Cambridge, 1934. Wilhelm Filchner, *Kumbum Dschamba ling*, 175, Leipzig, 1933. The confirmation of this tradition is found in the Geographical work of Tsampo Nomankhan of Amdo, translated by Sarat Chandra Das, *Jour. Asiatic Soc. Bengal*, Pt. I, 1: 27, "Chya Khyung, the seat of Chhoije Tondub Rinchhen, contains his tomb as well as the residence of Tsong khapa."

[p. 15(A)]

4: Schram M-S (1911-1922) 1957 AE9 Monguor AE9

A second fact is encountered in a publication of Ma Fu-hsiang.[37] For many years he was the most prominent official of Hsining engaged with Tibetan and Mongol affairs. Later, he became governor of Suiyüan Province and a member of the Meng-Tsang Yüan in Nanking. The passage from the publication states: 792 578

> More than 100 *li* southeast of Hsining, on the territory of the 'Ten Tribes,' is the Ami chü-lu mountain upon which was built the monastery of Sha-ch'ung which had more than 1,000 lamas. It was there that Tsong khapa had his hair clipped [entered religion], and remained for more than 10 years, starting his studies and religious life, before he went to Tibet (p. 198).

In 1906 the Chinese started digging for gold in the sacred mountain. The lamas, opposed to the digging, fought and two men were killed. The governor of the province ordered punishment to be imposed upon the lamasery with ruthless severity. Ma Fu-hsiang, being acquainted with the Tibetans, sought to settle the question amicably and went to Sha-ch'ung. The rebelling lamas and 1,000 soldiers of the "Ten Tribes" were determined to fight the Chinese troops. During the long period of discussion, the head of the lamasery repeated over and over that the lamasery and the mountain were hallowed places, because it was there that the founder of the Yellow Church had clipped his hair and remained for more than ten years. He protested that by digging at these spots the "artery" of the Yellow Church would be damaged, and the ruin of its religion be made inevitable (p. 190). Finally, as always in the Orient, a way was found to settle the case, by promising that no more digging would be done on the Sacred Mountain; but on the territory of the "Ten Tribes" digging would be allowed (p. 193). This fact gives evidence of the deep-seated conviction among the Tibetans about the veracity of the tradition and infers the existence of the lamasery at the time of the Yüan period (1280–1367). More traditions exist about monasteries having been built during the Yüan period, as related by the lamas, but they are vague and no names or specific places are indicated nor do ruins exist. However, it is not impossible that the traditions point to the hermitages noted in the *Blue Annals*. The building of the big monastery of Ta fo-ssu by one of the important T'u-ssu clans reveals the fact that Lamaism was a living entity among the T'u-ssu and their Monguors. Is it not too far-fetched to suppose that among the T'u-ssu only the Li T'u-ssu were Lamaist, since it is well known that the Ch'i and Lu T'u-ssu in 1644 were proprietors of monasteries constructed by them, although we do not know when they were constructed.[38] Besides, the facts that the monastery of Goorongbzan existed near Sha-ch'ung, and that in the beginning of the Ming a board of lamas was established, suggest the assumption that in Huang-chung during the Yüan period there probably must

[p.15(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

have existed more insignificant hermitages, scattered over the country. The lack of historical data does not permit further assertion about the diffusion of Lamaism during the Yüan period. 175 771 792

DIFFUSION OF LAMAISM DURING THE MING DYNASTY (1368-1643)

GENERAL POLICY OF THE MING

The emperors of the Ming dynasty followed in the wake of those of the Yüan dynasty, protecting and promoting Lamaism among the Tibetans and the Mongols, in order to hold in subjection the turbulent tribes living in remote countries. This policy indeed was less expensive than that of venturesome military expeditions. 175 662 771

The perspicacious Chinese Ming emperors from the very beginning grasped the capital flaw inherent in the policy of the Yüan, in regard to Tibet. Khubilai must have known that the Tibet of the thirteenth century was not the Tibet of the seventh and eighth centuries, when the Tibetan tribes, united by powerful chiefs and allured by the prospect of plundering, marauded over the western and southern frontiers of China, and in 763 even plundered the capital of China with 200,000 men. Tibet of the thirteenth century was a disintegrated country, divided among antagonistic aristocratic families, each claiming to be the protector and defender of its preferred lama sect and powerful lamasery. The armed struggles between these families had involved, necessarily, the sects they protected, and caused the sects to fight on the side of their protectors and to ruin each other. Thus the doctrinal divergences between the sects seem not to have been the capital cause of the fierce hostility among them.[39]

The appointment of the Sa-Skya great lama as Viceregent of Tibet at the time Godan had fanned the flame of the long-standing animosity and hatred among the aristocratic families and sects, to the extent that five times Mongol armies had to be sent to quell the revolts. Notwithstanding this initial political blunder, Khubilai and his successors continued to extend their special protection to the Sa-Skya sect and to lavish on it the highest possible marks of honor at court.

However, at the end of the Mongol dynasty the powerful aBrigumpa sect had succeeded in overthrowing the Sa-Skya. Therefore, from the very beginning, the Ming dynasty avoided having to back and restore the supremacy of the decaying Sa-Skya or to patronize the most powerful aBrigumpa. It lavishly granted the same titles and favors to chiefs and influential lamas of different sects, using them for its political purposes. On the one hand, all the rival Lamaist sects had to stand on the same footing, and had to curry favors with the emperors, but, on the other hand, more and more favors had to be granted, and Lamaism reached a very high degree in Huang-chung.

[39] Tucci, *op. cit.*, 39, *et seq.* [p. 16 (A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

The author of the *Annals*, dealing with the diffusion 175
of Lamaism in Huang-chung, seems to have neglected 771
completely even the existence of Lamaism before the 114
Ming (1368). He seems very articulate concerning the problem, claiming that its diffusion had really started during the first years of the Ming and that, in fact, by the foundation of monasteries, the granting of titles to lamas, the institution of Nang-suo, Karwa, and Ch'an-shih chia, the outlook of the entire country was changed and the possession and population of Huang-chung assured.

PECULIAR POLICY IN HUANG-CHUNG

Founding of the lamasery of Ch'ü-t'an 175

It is noted in the *Annals* of Hsining (ch. 15, pp. 13*a*, 648
13*b*) that 662

At the beginning of the Ming dynasty San-la, a Tibetan lama of Hsining, wrote a letter to induce the tribes of Han-tung to submit,[40] and built a monastery south of Nien-pei and settled there. He went to court and brought a tribute of horses, and he begged for a rescript to administer the monastery and the tribes, and for the favor of an inscription for the monastery. The Emperor T'ai-tsu (1368–1399), granted his request and favored him with an inscription reading: "Ch'ü-t'an." The Emperor established a board of lamas in Hsining and named San-la the director of the board. From that time on his pupils emulated him in building monasteries; the Emperor bestowed glorious names upon them, and in addition gave rescripts for administering them. Consequently, land and power became monopolized by the barbarian lamas. During the Yung-lo period (1403–1424) there were bestowed, piecemeal, on the lamas, the titles of "Ch'an-shih" (Master in Dhyana), "Kuan-ting" (one whose head had been anointed), "Kuo-shih" (master of the empire); some were even given the title of "Ta-Kuo-shih" (great master or teacher of the empire), "Hsi T'ien Fo Tzu" (Buddha of the western Paradise; Amitabha). To all he gave seals and diplomas, and allowed [their dignities] to be transmitted, and they were ordered to bring, once every year, a tribute to the court.

Because the lamas were held in high esteem among the 175
barbarians, the government took advantage of them in 792
order to keep the barbarians in submission. The people of 622
the frontiers considered the dignity of the lamas as most glorious. For that reason, Tibetans and Monguors who had two sons, were certain to have one of them become a lama. Some even preferred not to have an heir, but ordered their sons to enter religious life. Tibetans and Monguors bequeathed their wealth to the monastery with a request for prayers, leaving their descendants destitute. Thus the barbarians became poorer and the monasteries richer. In each tribe there were people who submitted themselves to monasteries and became like a tribe, the subjects of the monastery [Shabinar].[41] The Chinese officials also entrusted the Tibetan monks with the duty of exchanging tea for horses.

---

[40] E. Bretschneider, *Mediaeval researches* 2: 218. Han tung "was situated in the land, which in the days of the Han constituted all the district of Tun-Huang."

[41] Shabinar disciples. Shabinars are the supporters of the lamas, giving them material sustenance. At first some disciples performed this task. By extension, it came to mean lay adjuncts of the lamasery, and at present it means the subjects of the lamasery.

[p. 16(B)]

4; Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

The first Ming emperor was delighted with the good will and efforts of San-la in bringing the Tibetan tribes into submission; he aimed to set an example of his high appreciation for the achievement, by rewarding San-la in an unusual way, thereby encouraging other lamas to follow his example. San-la appears to have been the first lama to act in this way, which explains the emphasis on his career in the *Annals* and the mention of him also in the general history of the Ming dynasty (ch. 300, pp. 3*b*, 4*a*). It is further recorded in ch. 15, pp. 7*b* and 8*a* of the *Annals*, concerning the appreciation of the Ming emperors for San-la and his brothers that:

175
554
792
662

> . . . in the beginning of the Yung-lo period (1403–1424) an imperial rescript was sent to build a monastery [presumably with a large sum of money]; two lamas of the group received the distinction of Kuo-shih ["teacher of the empire"], three received that of Master in Dhyana; a vast territory was granted; a gold and a silver seal were bestowed, each being 14 inches in circumference; one square jade seal, two ivory ones, and the inscription for a stele. During the Hung-hsi and Hsüan-te periods (1425–35) two texts, composed by the emperors, were again granted for two more steles.

This last text, encountered in the *Annals* of Hsining, is excerpted from the *Ming shih* (ch. 330, pp. 3*b*, 4*a*). It is very informative concerning the pro-Lamaist policy of the Ming, and the position of Lamaism in the country of Hsining at that time. According to the text, the Yung-lo period (1403–1424) was the beginning of the granting of titles to "influential lamas," which explains why no title is recorded for the meritorious San-la who received the chieftainship of the tribes and of the lamasery in the beginning of the Hung-wu period (1368–1399). The same practice concerning the granting of titles, found in the *Ming-shih* (ch. 330, p. 4*a*), mentions that in 1426 the additional title of "great teacher of the empire" and the honor of the fourth official grade had been bestowed on five lamas of note, to whom the title of "teacher of the empire" had previously been granted (1403–1424), because of their merits in helping to quell the revolts. The title "Master in Dhyana" and the honor of the sixth official grade had been granted probably for similar reasons.[42]

[42] The granting of titles, however, did not start with the Ming; the *Wei-tsang-t'ung-chih, Chüan chou* (p. 27*a*), records: "Kubilai [1280–1295] in the beginning [of his reign] granted the title of Ta-kuo-shih great teacher of the empire, to the Sa-Skya lama, Phagspa, and later bestowed on him the title of 'great king of the precious law,' *Ta-pao-fa-wang*. When he spoke to him he called him, honorably, *Ti-shih*, 'teacher of the emperor'; at the same time to lama Tan-pa was granted the title of 'teacher of the empire,' and the number of those upon whom this title had been bestowed was not restricted to one. During the Hung-wu period [1368–1398] the titles of 'teacher of the empire' and 'great teacher of the empire' were only granted to four or five lamas. During the Yung-lo period [1403–1424] the title of 'king of the law' had been granted to two lamas, and that of 'Buddha of the western Paradise' to two

662

The texts are very informative concerning the reason why, and the circumstances in which, titles were granted to lamas, and how Lamaism was as a consequence diffused in the country of Hsining and gained its tremendous influence and power.

The Ming dynasty in 1368 faced a double problem.[43] On the one hand, it had to take possession of the country and to protect it against inroads from turbulent nomadic tribes. On the other hand, the country having been depopulated during the disorders at the end of the previous dynasty, it had to find permanent trustworthy settlers and to attach them to the soil. The first problem was solved by accepting the submission of the groups of Monguors, making their chiefs T'u-ssu, Chinese officials, and wardens of the region and the passes, which they had guarded during the Yüan dynasty, and by means of sending a Chinese army of colonists and released prisoners. The second problem was tackled by favoring lamas, by attracting groups of families subject to them or tribes belonging to them or willing to submit to the empire, and assigning to them vast territories. Lamas were appointed chiefs of the tribes, granted honorable titles and privileges which could be transmitted to their successors. They encouraged the building of monasteries. Mongol tribes from Ordos which invaded Kukunor, driving out or subduing the Tibetan tribes of that country, provided a favorable opportunity to use the influence of the lamas to accept and settle the fleeing Tibetan tribes without territory, who were marauding over the country.

[622]

The evidence for this policy is to be found in the *Annals* of Hsining (ch. 19, p. 3*b*): "The Tibetan Lung-pu-tribe (2,000 families) devastated the country several times. The Chinese armies were unable to make them surrender. Finally the Chinese General Tung-lo invited So-nan-chien-tso, a lama of the monastery of Ta-ming, in order to exhort them to submit." He was successful in his attempt. The author naïvely notes that in the tribe there were "two masters of the empire."

Page 6*a*: "The Lung-pen tribe, administered by a lama, came to settle in the country [and to submit]. Its chief received the title of 'teacher of the empire' and the duty of *Chih-hui*."

Page 6*a*: "The Sina tribe [still governed by a Living Buddha] had a lama with the title of 'teacher of the empire' (because he submitted with his tribe)."

Page 6*a*: "The lama chief of the Ch'ia-erh-chih tribe

other lamas; but to 18 lamas had been granted the titles of *Kuan-ting* or *Ta-kuo-shih*, or both. During the Ching-t'ai period (1450–1456) the titles were granted so profusely that we lose count." P. Pelliot, Les "kouo-cheu ou Maîtres du Royaume" dans le Bouddhisme chinois *T'oung Pao* 12: 671, 1911. The title of "teacher of the empire" was used in China at the time of the northern Chi (550–557); the title is also encountered in north-west India in A.D. 500 and was already known in Central Asia in A.D. 382.

[43] Schram, *op. cit.*, 34.

[p. 17(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

bore the title of 'teacher of the empire,' and fulfilled the duty of *Chih-hui*," for the same reason. 792

Page 8*b*: "The Ssu-hou-mi tribe had a lama 'teacher of the empire' who had been granted a golden seal." (This unusual favor must have been granted for the same sort of reason.) 554 662 175

Page 10*b*: "The Ssu-ngo-ssu-ko tribe, always revolting and plundering, submitted after a lama had settled among them; also the Hsiao-cha-erh tribe (p. 11*a*) settled inside the wall and submitted after a lama living in the western mountains of Su-chou had been sent from Tibet for that purpose. The Pen-la tribe submitted after a lama coming from the south had settled among them." Three more tribes governed by lamas submitted; the Na-erh-pu (p. 5*a*), the Yeh-ch'ü (p. 6*a*), and the Nan-ta (p. 6*b*).

The submission of tribes induced by lamas started at the very beginning of the Ming (1368), and continued during the entire Ming period. The country thus became populated by tribes which professed the Lamaism of the Red Sect. The strong appeal to submit was, on the one hand, the insecurity in the region of Kukunor and, on the other hand, the benefits which attached to submission.

THREE PECULIAR INSTITUTIONS FOR LAMAS

From the very beginning the Ming created in Huang-chung for these lama chiefs three peculiar institutions: the Nang-suo,[44] the Karwa, and the Ch'an shih chia. Nang-suo and Karwa consisted basically of the granting of a territory, the fixing of a yearly tribute, the recognition of the chieftainship of the lama who had brought in the tribe, and of the heritability of that chieftainship. The Ch'an shih chia also enjoyed the privilege of heredity and a yearly allowance of wheat-flour, but no territories were granted to them. 175 792 554 793

This peculiar characteristic of heredity for lamas is explained by the fact that at that time they must have belonged to the Red Sect, and have been married. Red lamas living in the same tribe must have had a chieftain among them who had been granted the privilege of having the chieftainship transferred upon his death to his son. The difference between Nang-suo and Karwa chiefs was that the Nang-suo chief was the leader of a group or community of lamas, so constituted that the entire group was interested in his privileges and benefits. The Karwa chief was a single lama presiding over a small group of subjects. His privileges included only his own family and private interests. The Ch'an shih chia's privileges applied only to him personally. Another important difference between Nang-suo and Karwa was that later, when a group of Red lamas adhered to the Yellow Sect, the Nang-suo privileges of their chief lama were transferred to the intendancy of the monastery, while the privileges of a Karwa chief

[44] Mathias Hermanns, *Die Nomaden von Tibet*, 262, Wien. Herold, 1949.

[p. 18(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

of the Yellow Sect were transmitted to his apprentice (usually his nephew) and remained as before a private interest. 175 792 554 793

Nang-suo

Until 1723 there were eighteen Nang-suo in the country of Hsining. Sixteen of them were abolished after the revolt of that year. Only two managed to survive: the Nang-suo of Editsa, which had sent its allegiance to the Chinese General Nien Keng-yao before the troubles started, and the despised Sina Nang-suo which had been implicated in the revolt but changed its mind after the revolt appeared to be about to fail.[45] This explanation afforded by the Amban of Hsining and the history tallies well with what is told by the Monguors and the lamas all over the country, who disdainfully recall the sayings: *Chien pu kuo Editsa Nang-suo,* "no slyer creature than the Editsa Nang-suo," and *Sina Nang suo chiao ts'ai liang chia,* "The Sina Nang-suo plants his feet in two boats [is untrustworthy]." The Editsa Nang-suo having gone over to the Yellow Sect, the Nang-suo privilege was inherited by the intendancy of the monastery. Editsa was still flourishing in 1910–1920; Sina, however, had passed through a bad period.

According to the *Annals* of Hsining, ch. 19, pp. 6*a* and 6*b*;

> Sina was a group which submitted in 1380 and lived inside the wall, grazing its animals 60 *li* north of Hsining [region of T'o-pa], having a city and houses, and engaging in agriculture; it possessed a Buddhist temple, and its lama had received the title of "Master of the Empire," with silver and ivory seals. It was a group of 500 families, comprising more than 1,500 persons. It offered a yearly tribute of more than 300 horses. One of its subtribes was called the Small Sina tribe and lived in Ku-shan; its tribute was 30 or more horses. Its other subtribe was the Ssu-ta-lama tribe, and lived near the temple of Hsieh-erh-kang-chin; its tribute was 50 or more horses.

After the revolt, troubles did not cease within the Sina tribes, whose subjects had been compelled to participate in the rebellion at the beginning by the Nang-

[45] *Tung-hua-lu,* First year of Yung-cheng period, 3: 23*a*, 25. *Ming-shih-lu,* Yung-cheng period, *Chuan* 12, p. 27. In 1707 Father Regis, S.J., was sent by the emperor, during the period K'ang Hsi, to draw the map of the empire (Henri Cordier, *Histoire de la Chine,* 3: 333, Paris, Geuthner, 1920). He remained in Hsining for a month, visited T'o-pa and writes: "This village is not administered by Chinese officials, but depends on a lama, always chosen from the same family which belongs to this country. This family is the most outstanding one in the country. The lama administers these Tibetans (*Hsifan*) and punishes misbehavior. This people, not wholly subject to China, are rarely summoned by the Chinese officials, and seldom obey their orders. The lama chief does not seem to trouble the subjects very much, providing they honor him and fulfill their obligations toward Buddha, which seem not to be too burdensome. The three or four Armenians who were trading furs in T'o-pa, seemed very pleased with the chief lama, and praised his administration." (J. B. DuHalde, *Description géographique de la Chine,* 49–50, 1736.) Schram, *op. cit.,* 36.

[p. 18(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

suo chief, and had suffered enormously. Finally they refused to deliver taxes to the Nang-suo and asked the Chinese officials to accept them as Chinese subjects. The request was readily granted, and an arrangement was made between the Chinese officials and the Nang-suo by which every year the subprefect of Hsining was to pay 1,500 strings of cash to the Nang-suo; the Nang-suo could only collect the rents, and his subjects were henceforth considered Chinese subjects. This happened after 1755, because the *Annals* (ch. 19, 15*a*), say that "in 1755 the chief of the Sina tribe, which numbered 1,379 persons, resided in the village of the upper Sina lamasery." In 1910 most of its fields had been sold by the Sina intendancy, which had adhered to the Yellow Sect. Its resources were so depleted that the seals of the former Nang-suo had been mortgaged to the lamasery of Kumbum, which thereby acquired the authority to collect the rents from the remaining properties.

The Lung pen Nang-suo is often spoken about in the country. It lived on both sides of the wall in former times and submitted in 1380, together with its neighbors, the Sina tribe, and then moved inside the wall. It numbered 130 families. Its lama chief had received the title of "Master of the empire" and the official rank of Chih-hui. Its subtribe, the Pen-pa-erh had one hundred or more families (*Annals*, ch. 19, p. 15*a*). In 1916 the impoverished chief was still called Nang-suo lama locally. He lived in the Naring Valley. He told me that his lamasery had been destroyed in 1723 and that the lamas had disappeared. His subjects, who had become subjects of the Chinese officials, lived in Ta-Hsiao-Kang-ch'eng. His predecessors had sold nearly all the fields and he could not collect the rents on the remaining fields. His neighbors said that his predecessors had mortgaged his seals to the intendancy of Sina. In early times they had two temples, Lung pen kui ssu and Lung hua [illegible] which were destroyed during the revolt. Only one [illegible]e of one of the temples had been rebuilt and the [illegible]ma still collected some alms among his former 373 families. Often recalled also in local tradition are the Nang-suos of Erh-ku-lung and Seerkok, abolished after 1723. They were important in former times.

Karwa [46]

According to a tradition well known all over the region, thirteen Karwa were established north of the Hsining River during the Ming dynasty. In 1912 seven of them still existed, Li-ch'i, Ch'ien-tsun-urgon, Pei-cha-erh-ti, Sia-mer, Tsan-tsa, Chao-chia, and Huo-puo. There are no records of Karwa south of the

[46] The word *Karwa* is used in the country to designate the residences inhabited by Living Buddhas in the lamaseries; it is also used to indicate a domain and subjects granted by the Chinese emperors of the Ming dynasty to meritorious lamas as their "personal" property with "right of bequeathing" it to their lama successor. It does not mean a grant of domains and subjects bestowed on a community of lamas or a lamasery.

[p. 19(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Hsining River. A Karwa is a kind of mediaeval seig- 175
niory presided over by a lama. Granted by the em- 792
peror, it is a more or less vast domain in which usually 554
forty to fifty families live. Pei-cha-erh-ti Karwa had 793
152 families (*Annals* of Hsining, ch. 19, p. 16*a*). The tenants had in former times been subjects of the lama. There is a temple on the domain, and next to it is the residence of the lama seignior, with granaries. The domain is the personal property of the lama lord who is completely independent of any Living Buddha or monastery. The three lordship lamas I have met told me that the Ming emperors had granted this privilege to their ancestor lamas, each of whom belonged at that time to the Red Sect and was married. Each of these lamas had been granted a Karwa because he had submitted to the Ming with his small tribe, or had induced a neighboring tribe to submit to the emperor or had rendered service to the Chinese army, giving secret information to the officers fighting the revolted Tibetans. They explained the disappearance of the six Karwa which no longer existed by the fact that these lamas did not follow the Yellow Sect and remained married. They said that theoretically among the lamas of the Red Sect one son should succeed the father as lama of the sect, but in reality when the father died his sons divided among them the property and the subjects, and the Karwa vanished, with the result that the temple became the property of the village. The seigniors who went over to the Yellow Sect, however, managed to survive by the fact that the lama lord of every generation adopted only one apprentice lama, to whom he bequeathed the domain. The apprentice was usually one of his nephews, and so the Karwa continued its existence, the lama collecting rents from the tenants and imposing some corvées. After the revolt of 1723 the domains of the Karwa were not confiscated but the subjects became subjects of the Chinese officials. Only rents, not taxes, were allowed to be collected and corvées continued to be imposed.

The lama seignior of the Li-ch'i Karwa (who is a 792
member of the powerful Li T'u-ssu clan) fulfills, of his 796
own free will, an important function at the monastery of Chie-bzang, but he remains the proprietor of his Karwa and has one apprentice who will inherit the domain. Every year on the tenth of the tenth moon, he invites to his small temple four lamas, alternatively, of the Yellow and the Red Sects, to pray from sunrise to sunset for blessings upon his "subjects," who bring a contribution of twenty pounds of butter and five sheep. The lord provides tea and noodles. The subjects all enjoy attending the religious ceremony and the annual dinner, and are used to the custom of going home at sunrise the next day. The Pei-cha-erh ti Karwa is still celebrated for the fasting rites held at its temple, about which more will be said. 792

The lord of the Tsan-tsa Karwa, feeling lonely in his 554
estate, married a young girl in 1914. All the members 428

[p. 19(B)]

of his family assembled and protested, urging that a 792
boy, a nephew of the family, be adopted by the lord 554
as his apprentice, and that a testament should be writ- 428
ten and signed by the officials of the village, in order to make sure that after the death of the lord, the domain and his private property (sheep, cows, horses) would be bequeathed to the apprentice. The apprentice would first have to be sent to the monastery of Erh-ku-lung in order to receive a serious religious education. Not long after the birth of a child to the lord and his wife, the lord died. His wife received a small field and some cattle, but the Karwa was inherited by the apprentice. The domain passes at every generation to a member of the same family (from uncle to nephew). The family retains the right to keep an eye on the regular succession, and so in the country a Karwa is considered to be the property of the Karwa lama and his family. This fact reveals a social tradition existing throughout the country, and the pride of the old families to whose lama a Karwa had been granted by the emperors in former times.

This pride appears to be the reason why, when a lama lord dies without having adopted an apprentice, the whole family convenes and decides to offer the domain to a lama member of the family. However, when there is not such a lama, the members of the family divide among them the domain and private property of the deceased, and the Karwa vanishes.

Ch'an-shih-chia ("Master in Dhyana" families) 175

This institution, dating from the Ming, seems to be 792
in the line of the Karwa. In Huang-chung there was 554
attached to the title of Ch'an-shih ("Master in Dhy- [651]
ana"), the privilege of receiving every year from the Chinese administration a fixed quantity of wheat. At the same time, if the lama happened to acquire some fields on which to build a grain or oil mill, his fields and mills were exempt from taxes. The title of Ch'an-shih appears to have been hereditary. This seems to be the reason why the people always talk of Master in Dhyana "families" and seldom of Master in Dhyana lamas. In the country north of the Hsining River, with which I was best acquainted, there were still several Masters in Dhyana, independent of any monastery, living next to their relatives and each having a small temple of his own. The family tried to provide a nephew as an apprentice, for such a lama would upon the death of his master become Master in Dhyana by the transfer of the original seal and the original patent letters.

Most of these Masters in Dhyana lived in opulence, 554
their families being exempted from land taxes because 428
they were supposed to till the fields of the lama. In Suo-pu-t'an I encountered the Shih-hu Ch'an-shih-chia, a layman, who enjoyed, with his family, the privileges of a Ch'an-shih lama. Since there had been no lama in the family to succeed the previous master he had in-

[p. 20(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

herited the privilege by virtue, he said, of possessing the seal and the patent letters. Every year he received his wheat support and was exempt from land and mill taxes. To him, this condition seemed very reasonable! The same condition existed in Sha-t'ang-ch'uan with the layman Hsiao-ssu Ch'an-shih chia. It is hard to understand how the privilege could have continued after the revolt of 1723, when under orders from Peking all the seals and patent letters granted during the Ming were withdrawn.

These facts shed light on the peculiar way in which Lamaism was diffused during the Ming in Huang-chung, and explain one of the reasons why the monasteries became the proprietors of vast domains, governing subjects and exerting a tremendous influence all over the country.

During the Yüan and the very beginning of the Ming dynasties, small communities of lamas of the Red Sect had been founded by wandering lamas who had attained a certain local reputation for skill in necromancy, or who by asceticism had gained a reputation as holy men, thereby attracting a few disciples. The bonds which bound these married or unmarried men were, without doubt, looser than the bonds which tied the lamas of the lamaseries of the later Yellow Sect. However, it may be assumed that in those times none of these little communities yet exerted a prominent influence upon the country, and for that reason nothing about them was recorded in the *Annals*.

The minor importance of these monasteries seems to account also for the fact, that at the beginning of the Ming (1368), the lama, Sanla, could be appointed chief of the board of lamas. The fact, however, of the institution of such a board at the beginning of the Ming seems to prove that at that time although the communities were small, the total number of lamas was large enough to justify the creation of such a board.[47]

NO LIVING BUDDHAS IN HUANG-CHUNG DURING THE MING DYNASTY

It is noteworthy that at that time titles and benefits were indiscriminately bestowed upon meritorious lamas, lamas who were chiefs of tribes, chiefs of more or less important communities, and even single lamas. There were as yet no Living Buddhas.

The first Living Buddha, recognized as the reincarnation of Tsong khapa (1357–1419), the founder of the Yellow Sect, was Gedun-gyatso who in 1475 inherited the succession of the second head of the sect. The prin-

[47] The Ming policy of the T'u-ssu, Karwa, and Nangsuo institutions, and of the grant of Kuo shih and Ch'an-shih titles to lamas with their respective privileges, was not peculiar to Huang-chung. It was also followed in south Kansu, Lin-t'ao, and Ho-chou, where nineteen T'u-ssu, Kuo-shih and Ch'an-shih, etc., were created. After the revolt of 1723 the Chinese officials of Ho-chou asked for the abolition of these institutions, because of oppressions by T'u-ssu and lamas (*Annals* of the Province of Kansu, ch. 88: 12–13).

[p. 20(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

The prin-

ciples on which succession by reincarnation are founded had existed for centuries, but had not yet been generally applied. The next prominent lama to whom the principles were applied was the Panchen lama of Tashilhumpo. In the next two centuries succession by reincarnation, inaugurated by the Yellow Sect in 1475, spread to such an extent that every monastery, including less important ones, of whatever sect, had its own Living Buddha. Some of them had several in the same monastery.[48] Even the superior of the convent of nuns, situated on the shore of Lake Yandok, having defended her convent against the invading Mongols in 1716, became the incarnation of Palden Lhamo, celebrated all over Tibet and Mongolia, and the potent protector of the Dâlai and Panchen Lamas and Lhasa.

In the first Part of this study it was noted that Palden Lhamo is the protectress of the clan of the Li T'u-ssu, which honors her in a peculiar way.[49] Her picture is carried by the T'u-ssu on his triennial visit to the Monguor villages in order that all the clansmen and the subjects may perform their obeisance before the image. In Huang-chung the passion for Living Buddhas went so far as to declare the father of Tsong khapa a reincarnation, called Achia Bsan, which is the proprietor and grand chief of the Kumbum monastery. Even this was not enough. Tsong khapa's mother was also declared a reincaration, but her reincarnation always appears in a boy, who is the Living Buddha of the monastery of Rardscha, on the upper reaches of the Yellow River. However, according to Lamaist doctrine and rites, the father's reincarnation takes precedence over the mother's. Each reincarnation has a residence in Kumbum, but the father, being the grand chief of the monastery, has his own headquarters.[50]

TEMPLES BUILT DURING THE MING DYNASTY

In analyzing the Ming policy concerning Lamaism in Huang-chung, it is of interest to know how many monasteries were built in Huang-chung during this period.

Included in the long list of temples found in the *Annals* of Hsining there are recorded in ch. 15, pp. 7*b* and 8*a*, the temple of Ch'ü-t'an, as having been built in the beginning of the Yung-lo period (1403–1424); ch. 15, p. 2, the small temple of Hung-t'ung-ssu in the city of Hsining in 1390; ch. 15, pp. 4*b* and 5*a*, the famous monastery of Kumbum, adding that only in 1596 were negotiations begun to enlarge its buildings and to construct a big monastery; in ch. 31, p. 14*a*, in the account of revolts of Tibetans and the inroads by Mongols from Kukunor, it is incidentally noted that the monastery of Hung-shan-ssu, 60 *li* south of Ch'ü-t'an, had been looted and destroyed in 1519, as well as

[48] Maraini, Fosco, *Secret Tibet*, 144, translated from the Italian by Eric Mosbacher, New York, Viking, 1952.

[49] Schram, *op. cit.*, 65.

[50] Filchner, *op. cit.*, 237.

[p.21(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

the temple of T'ieh-fu-ssu, 40 *li* west of Hsining in 1537 175
(ch. 31, p. 15*a*). 792

The information in the *Annals* is restricted to these 346
five poor items. Huth notes[51] that the Third Dalai Lama, Sod-nam, on his way to Ordos in 1582, went from Kukunor to Kumbum and established a college there for the explanation of sacred texts. From Kumbum he went to Ribo-nan-tig (probably the hermitage of Dantig noted on pp. 31 *sq.*), to take a long rest; then, after visiting many big lamaseries, he arrived in the Ordos. I am unable to identify the names of the lamaseries noted here, and am very sceptical about these "big" monasteries, because no ruins, vestiges or traditions of them are preserved. The big monasteries of Huang-chung which have to be studied, were all built in more recent times. The historical data are again very scanty.

CH'Ü-T'AN-SSU, FIRST LAMASERY BUILT DURING THE MING DYNASTY

The first lamasery built during the Ming, according to the *Annals* (ch. 15, pp. 7*b* and 8*a*), is the famous monastery of Ch'ü-t'an.[52] The history of this first lamasery, built by the Ming emperors, is preserved in broad strokes in the text (*Annals* of Hsining, ch. 32, pp. 16–20) of three steles, now demolished. All three give evidence of the high consideration of the emperors for Lamaism.

The first text was granted by Emperor T'ai-tsung (Ch'eng-tsu) of the Yung-lo period (1403–1424), and concerns a "golden" (bronze) statue offered to the lamasery by the emperor. The text notes that the artisans, not succeeding in preparing the mold for the statue, went to eat their meal. While they were gone the mold grew into perfect shape of its own accord. The statue was cast from it and exuded a wonderful perfume.

The second text was granted by Emperor Jen-tsung of the Hung-hsi period (1425). It recalls the merits of Emperor T'ai-tsu of the Hung-wu period (1368–1399), who founded the monastery, ordered the building of a temple, and granted the name of "Ch'ü-t'an," and of Emperor T'ai-tsung who ordered the construction of a second temple.

The third text, granted by Emperor Hsüan-tsung of the Hsüan-te period (1426–1436), ordered the construction of a third temple, after recalling summarily the history of the lama, San-la, and his tribe, and the grant of the monastery and its title.

Legends

The origin of the celebrated monastery is overlaid 538
with a wonderful legend, believed and enjoyed by the people. It should first be remembered that Emperor

[51] Huth, *op. cit.* 2: 227.

[52] Ch'ü-t'an-Gautama, a name of Shakyamuni, means "most victorious on earth."

[p.21(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

T'ai-tsu of the Ming dynasty designated his grandson, 538
Hui-ti, to succeed to the throne in 1399. After three years, his uncle Ch'eng-tsu (Yung-lo period), usurped the throne and Hui-ti perished in a conflagration of the palace. A note added in the history states that it is related that Hui-ti escaped, disguised as a lama, and wandered incognito from monastery to monastery in Yunnan and south China; that he finally returned to Peking in 1440, and died after revealing his identity. This topic seems to be the basis for the legends concerning Ch'ü-t'an. However an "historical" fact may well have provided the fabric from which was woven the legend elaborated by the lamas, since the fact concerns the very province of Kansu.

At the time of the collapse of the Sung dynasty in 1276, the last emperor, Chao-hsien, was made prisoner by the Mongol conquerors in Hang-chou and the Chinese imperial harem was transferred to the north. In 1288 the imperial prisoner was sent (banished) to Kansu (Ho-hsi) in order to study Tibetan sutras. In Kansu he became a lama monk and adopted the religious name of Ho-tsun (mKha-'bcum). He died in 1323 in Kansu, a century before the founding of Ch'ü-t'an.

During the Ming dynasty (1368–1644) Chinese scholars liked to gossip about the possible Chinese origin of the Mongol emperor, Shun-ti,[53] as well as the possible Mongol origin of the Ming emperor, Ch'eng-tsu (Yung-lo period). These tales are well known among the lamas and the Monguors.

A lama, honored for his holiness, lived in secluded 539
retirement on a high mountain near Ch'ü-t'an. He left for Peking one July carrying a small pack held by a light wooden frame, on his back. The heat was tropical and the holy man threw his mantle in the air, where it remained floating over his head protecting him the whole long way, even in the streets of Peking. Emperor Hui-ti, seeing the miracle, renounced his throne, left the palace and harem, and followed the returning holyman to Ch'ü-t'an with two of his ministers and his two brothers, all of whom became lamas.

At first the emperor resided at the very small monastery of Hung-shan-ssu, 60 *li* south of Ch'ü-t'an. He sent his cattle and horses to the pastures of Yao-ts'ao-t'ai and went to Ch'ü-t'an. There he planted his stick at a certain spot and suddenly it turned into a blossoming sandalwood tree; whereupon he decided to build a monastery and a temple around the tree. A dry tree is still shown inside the temple, adorned with ceremonial scarves offered by the worshipping people who pass under its branches in order to receive blessings. Three small trees outside the temple are said to have sprouted from the dry tree.

The emperor had a well dug to be used for watering his horses. A small lama boy, while drawing water, fell

[53] P. Pelliot, L'Edition collective des œuvres de Wang Kouo-wei, *T'oung Pao*, 26: 136, 1926.

[p.22(A)]

into the well and disappeared. Only his clothes were 539
seen in the river with which the well was connected underground. The emperor ordered the well to be filled and had a beautiful tower built over it. The ruins of the tower are still shown to visitors.

There are displayed in the head temple three fine 538
saddles of unusually large size, with stirrups twice as large as those used today, for in former times people of note were taller, bigger, and stronger. The saddles are said to have belonged to the emperor and his brothers. When the emperor died his two ministers, in fear of having their families exterminated, changed their names. The first adopted the name of Chen Lo-kang, and his descendants still live in the Kang-tse Valley near Nien-pei. The other adopted the name of Yang Kang-tsun; his descendants live in Chen fan Valley.

The emperor appointed a member of the imperial family to manage the lamasery. He was called T'ien-hu-chün, and his name was Chu, the name of the imperial family. The appointment was hereditary and the emperor had carved on a slab the provisions concerning the appointment. The descendant of Mr. Chu presided over the ceremony of theatrical representations on New Year's. Later on, a corrupt descendant, after using the revenues and land taxes of the monastery for himself, was killed by the lamas, and the slab was smashed. The plinth which supported the slab is still shown to visitors.

Inside the courtyard of the enormous temple are the ruins of four beautiful stupas built by the Emperor. At the base of each he had buried, at night, immense treasures. One of the previous incarnations of the Living Buddha dug up the treasure from one of the stupas at night and took it to his residential quarters; but within a few moments his palace vanished in a blaze. Since that time, no one has dared to try to remove the treasures.

Upon his death, the emperor was buried in the lamasery. However, the lamas of Hung-shan-ssu claim that the emperor died and was buried in their monastery, and they have the visitor admire their own ruined tower built over a well and their own old dry tree enclosed in their temple. These honored trees, enclosed by a temple, point to the tree of Kumbum which sprouted from the afterbirth of Tsong khapa buried in Kumbum, even as the small trees sprouted from the roots of the old dry one. The tower built on the well points to the stupa of Kumbum, said to be the first monument built at Kumbum. It is hard to say which of these legends is the oldest.[54]

Temples and History of the Lamasery

Inside an enormous rectangular courtyard are three 792
temple halls built in a row; a wall encloses the court- 346

[54] In Kumbum in 1577 there was built a temple enclosing the celebrated tree which was at that time 223 years old.

[p.22(B)]

yard with a large veranda attached to it. On the long wall are depicted scenes of the life of Buddha, painted in Chinese style, similar to those seen in Chinese temples. 792 346

The chief temple hall (A), built on a high terrace, is the most conspicuous, thereby attracting the attention of visitors. It is larger in size and higher than the other two. It is built on the pattern of the luxurious Chinese temples, with a large porch in front and beautiful roofs; a large, magnificent staircase leads to the terrace, which is surrounded by a railing of carved red stone. It is said to have been built according to the pattern of the Temple of Heaven in Peking (built in 1420). Inside the chief temple hall, at its center, is an enormous carved white stone plinth, two meters square, which enthrones the big statue of Buddha, Jo-wo rin-po-che (the gem of majesty—Shakyamuni), gift of Emperor T'ai-tsung, according to the stele.

On either side of this central statue a copper Buddha statue is enthroned on a plinth of white stone, a little smaller in size than the central one. In front of the statues, three big white stone plinths support three huge brass cauldrons. One contains butter, one vegetable oil and wicks burning before the statues, and the third wheat, colza, and spelt, as an offering to the Buddha. It is said that at the bottom of this huge cauldron there are still a few grains dating from the time of Emperor Hui-ti, and consequently they are bigger than normal, just like the saddle and stirrups noted previously. [532] [782]

In these temples hang inscriptions, offerings of the emperors honoring the Buddhas, dating from the periods of Hung-wu, 1368–1398; Yung-lo, 1403–1425; Hung-hsi, 1425; Hsüan-te, 1426–1435; Wan-li, 1573–1619 and Ch'un cheng, 1628–1643.

In temple (B) called the Chü-k'ang, smaller red stone plinths support three copper Buddha statues, and three butter, oil, and grain cauldrons. In front of the central statue, still in the temple, is the famous dead sandalwood tree, adorned with scarves of felicity, its trunk overlaid by large copper plates in order to preserve and support it.

Temple (C), dedicated to Byams pa hlarang (Maitreya—the loving one) is built according to the same pattern, but has plinths of white stone supporting three statues, with two lamps and offering cauldrons.

The display of huge timbers in the construction of the temples reminds one of times past, when gigantic trees adorned the tops of the mountains. Special roads and carts were built to carry the massive plinths to the spot. The ruins of four stupas adorn the courtyard, one on each side of the chief temple, and one on each side of temple (C). Enormous white stone plinths carved in the shape of elephants, support four huge drums and two smashed steles on either side of the entrance.

Ch'ü-t'an, with more than six hundred lamas in the heyday of its glory, founded two large subsidiaries:

[p. 23(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Yao-ts'ao-t'ai ("the terrace of medicinal herbs"), Hung-shan-ssu, and three smaller ones. Yao-ts'ao-t'ai was the vast pasture ground for the herds of the monastery and of the lamas. According to the abbots, it soon developed to the extent of having 200 lamas. Hung-shan-ssu soon had more than 150 lamas and received from the emperor a special grant of 500 taels every year (the reason is not known; *Annals*, ch. 15, p. 8*a*). In 1747 the allocation was still provided by the officials. The Living Buddhas of the three monasteries told me that because most of their lamas were of Monguor origin, their monasteries declined after Kumbum and Erh-ku-lung had been built, and the Monguor lamas had gone over to these lamaseries. However, there are other reasons which caused the decline of the flourishing monastery of Ch'ü-t'an, which at present is in a state of indescribable dilapidation. 792 346 175 792 346

In 1509 the Tibetans of Kukunor, driven from their pastures by the Mongol, I-pu-la, made inroads in Huang-chung. They looted and ruined the branch monastery of Hung-shan-ssu in 1519 (*Annals*, ch. 31, p. 14*a*). In 1558 the Mongols of Kukunor looted and sacked Ch'ü-t'an (*Annals*, ch. 31, p. 16*b*) and the neighboring country; probably Yao-ts'ao-t'ai also. The Moslems, in 1862–1872, wrought terrible havoc on the temples and the palaces of the Living Buddhas, and burned the printing blocks of the library. In 1895 the temple was again looted by the revolting Moslems. Material damage and ruins, however, are reparable, but damage and ruin caused from within the lama institution itself are not.

The troubles started between the mother monastery of Ch'ü-t'an and the branch of Yao-ts'ao-t'ai, which is situated on the rich pasture grounds and forests included in the initial domain of the old monastery granted by the emperors. Very early, a couple of small temples and homes for lamas had been built on the spot, and a superior appointed. Around 1660, according to the abbots, more than 200 lamas lived at the subsidiary and more temples had been built. Its superior, a very learned and holy man, died and was reincarnated. His reincarnation was called Karang bzang and settled at the subsidiary monastery. (At that time the vogue for reincarnations was in full swing.) Very soon the mother monastery had its own reincarnation, the Living Buddha Mei, and four small Living Buddhas. The branch also provided a small Buddha called the Liang-chou fo-yeh. 175 792 578 [775]

With both monasteries having Living Buddhas, friction started between them and lasted for more than two centuries. Jealousy and hatred became deep-rooted. Both monasteries behaved like ducks, appearing calm and unruffled on the surface, but paddling like devils underneath it. The eternal question of the corvées imposed by the mother monastery on its subsidiaries and the demand for land rents kept open festering wounds, and the yearly disputes grew more and more acute.

[p.23(B)]

Finally, in 1885 the branch declared its independence 175
and claimed to be possessor of the pasture and farm 792
grounds and the forests formerly entrusted to its care 578
by the mother monastery. A serious fight at close quarters occurred in the mother lamasery.

Ch'ü-t'an sued the branch to vindicate its rights of 691
proprietor of all the domains of Ch'ü-t'an. The lawsuit 792
was carried to the Court of Justice of the Subprefecture 662
of Nien-pe and lasted for two years. The Chinese officials, lavishly bribed by both groups, finally sent the lawsuit to the Court of the Prefecture of Hsining in order that their friends and superiors might have the opportunity to acquire some wealth and promote the cause of justice. Again, the lamas stubbornly spent their money for two years. Still unwilling to accept the verdict of the judges, the suit was sent to the Supreme Court of the capital of the province. Here the Chinese officials were very happy to meet the interested customers, and the gullible lamas started immediately to sow again, seeds of wealth and happiness in the gardens of the highest officials. For sixteen years the clever officials kept the wheels turning, encouraging both groups, exciting passions and stubbornness, promising to both sides a successful conclusion. The gullible lamas spent money, and the officials milked the meek cows dry. Finally, the wealth of the mother lamasery was exhausted first, so that the branch lamasery won the suit. The branch, during all the trouble, relied on the forests, sold wood, and was in a more advantageous position to "defend its rights." Throughout this long period the Living Buddhas of Huang-chung tried several times to spread oil on the troubled waters and settle the question amicably, but to no avail.

The loss of face for the mother monastery was too 627
humiliating. At night its lamas went to Yao-ts'ao-t'ai 579
and burned its temples; the next day the lamas of Yao-ts'ao-t'ai went at noon to Ch'ü-t'an and burned the palaces of the Living Buddha and killed two lamas. In 1905 the two groups, both bled white, agreed to have the question settled by Living Buddhas. An indemnity was fixed for the two lamas who had been killed, and because the damage caused by the fires was considered to be equal, the problem was settled.

In 1915 there were 285 lamas at Yao-ts'ao-t'ai: at the mother monastery there were only fifty or sixty, most of them children. Five hundred and fifty lamas had left the mother monastery, with four minor Living Buddhas, because they had been compelled to contribute to the expenses caused by the suit, and to fulfill the corvées imposed in connection with it. The administration of the mother monastery, in former times so flourishing and wealthy, was reduced to a minimum. One lama administered the property, a precentor led the prayers in the temple, and all the other duties were fulfilled by the Living Buddha himself. The homes formerly occupied by the six hundred lamas were inhabited by Monguor, Tibetan, and Chinese families.

[p.24(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Ch'ü-t'an was the only monastery in Huang-chung where laymen and lamas lived in the same compound. This fact reveals the mentality of the lamas and the customs of that time. These details were obtained from Living Buddhas and old lamas of Ch'ü-t'an and Yao-ts'ao-t'ai, and in Kumbum and Erh-ku-lung, and among chiefs of the villages near these places. 792 342

STAGNATION IN THE DIFFUSION OF LAMAISM

The building of the splendid monastery of Ch'ü-t'an, the exceptionally favorable disposition of the emperors toward Lamaism, the lavish granting of titles and privileges to lamas who induced Tibetans to submit, all seemed to augur a period of intensive diffusion of Lamaism in Huang-chung. However, for two centuries Ch'ü-t'an remained the only important monastery in the whole country. Two reasons seem to account for this: the insecurity in the region of Huang-chung, and the violent struggle in Tibet between the sects, which depleted the forces of expansion of Lamaism abroad. 175 [771 797] 792 175

It is noted in the *Annals* of Hsining (ch. 31, pp. 12*b*–19*a*) that during the period 1448–1600 there were thirty-seven inroads of Mongols from Kukunor, the Ordos, neighboring Tibetan tribes, or revolts of Tibetans. Fortunately, the construction of Ch'ü-t'an was completed (1426–1436) before the troubles started. Certainly troubled times are not propitious for the building of big monasteries, so Nang-suos and Karwas necessarily remained humble institutions.

Conditions in Tibet were just as unfavorable: Tsong khapa died in 1419. The five biggest monasteries of his sect were built before 1437. The rival Red Sects were still so aggressive as to dare to build their monasteries close to those of the Yellow Sect, and were even able to hinder the lamas of the Yellow Sect from attending (1498–1518) the famous sMon lam New Year religious festival, instituted by Tsong khapa himself.[55] In 1537 eighteen monasteries of the Yellow Sect were destroyed. In 1553 a war broke out with the Galdan monastery.[56] In 1621–1631 Mongols were called in by the Dalai Lama to rescue his sect,[57] but the Mongol Nairamdahu, an adherent of the Red Sect, fled from Mongolia to Kukunor in 1633 and persecuted the Yellow Sect which had spread.[58] Finally, in 1642, Tibet was conquered by the Ölöt Mongols whose chief, Gushi, offered it to the Dalai Lama. Although it is recognized that the effective power of the Dalai began with the Third Dalai Lama, Sonam (1542–1587), his political power was still scanty and questionable; it only began to develop with the Fifth Dalai Lama, Nag-dban Blo bzang (1617–1682), when Gushi Khan renewed in his favor the endowment conferred by Khubilai on the Sa-Skya.[59] 175 771

The support and protection of the Mongols and of the emperors of China saved and established the Yellow Sect, which was on a foundation of rock. In 1717–1719 the Jungar Mongols persecuted the Red Sects and destroyed 550 of their monasteries.[80]

175 648 771 [789]

KUMBUM [81]

The insecurity in Huang-chung and the struggle in Tibet among the sects provide an explanation for the late date assigned to the founding of the celebrated monastery of Kumbum. One and a half centuries after the death (1419) of Tsong khapa, the lama Rintschen Dson dui dschamtso, in 1560, built some "cells" for himself and his ten monks (hermitage). Later, twenty more cells were added. In 1577, seventeen years later, a temple was built close to the "tower," whose walls enclosed the celebrated tree which at that time must have been 220 years old (1357–1577), and a statue of Maitreya was honored in the temple.[82] According to this tradition and the customs of Buddhist India, a tower must have first been built on the spot of the birth of Tsong khapa to commemorate the event. It is not known when this tower was built.

175 792 346

[80] L. Petech, *China and Tibet in the early 18th century*, 44, 71, Leiden, Brill, 1950.

[81] Kumbum, the lamasery of the 100,000 images is, at present, the most celebrated lamasery of Huang-chung, because of its precious trees, which are lilacs (Philadelphus, coronarius; see Rockhill, W., *Land of the lamas*, 67). The main tree sprang from the placenta of Tsong khapa (1357) and is said to have 100,000 images of Buddhas growing on its leaves. Much has been written about the tree. On May 6 and October 3, 1912, and on October 10, 1914, Father J. Essens and I read on the leaves only the two letters *Pa*, the thirteenth letter of the alphabet and *Ya*, the twenty-fourth letter, repeated indefinitely, written more or less correctly where the leaves were easy to reach. They were written with the red earth, which Chinese and Tibetan teachers use to correct the compositions of pupils. The sacred leaves are a wonderful panacea, healing all kinds of diseases of men, women, and children. It has been recorded that in Ch'ü-t'an and in Hung-shan-ssu the same kind of miraculous trees are encountered.

[792 137 755]

It is worth noting what is written regarding the tree (here called a "White Sandalwood") in the Geographical work of Tsampo Nomunkhan of Amdo, *Jour. Asiatic Soc. Bengal*, 1887, Part I, No. I, p. 28: "On the birthplace of Tsong khapa there exists a white Sandalwood tree, on every leaf of which, at the time of the reformer's birth, there appeared a picture of the Buddha Senge naro, supernaturally inscribed. Hence, from the circumstance of a 'hundred thousand images of Buddha' having appeared on the leaves, the town and the monastery is called Kumbum. Even at the present age, images are occasionally said to be seen divinely inscribed on the leaves of the Chandan tree and Sugpa trees of the grove. The enemies of the Gelugpa say that the said images are secretly drawn with pins and needles by the Gelugpa monks." The Chinese call Kumbum T'a-erh-ssu, that is, "The lamasery of the [eight] stupas," because at its entrance there are eight stupas said to contain the ashes of eight Living Buddhas killed by General Nien Keng-yao at the time of the revolt of the Kumbum lamas in 1723. Filchner (*Dschamba-ling*, 160) notes: "They were built at the time of the 31st mK'ampo of Kumbus [date not given] by the chief of Roko, native of Amdo, after eight lamas had been killed by a Chinese prince, ruler of the country."

[82] Filchner, *op. cit.*, 29.

[p:25(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

In 1578, a year after the building of the first temple, the Third Dalai Lama, Sonam, had his historical meeting with Altan Khan of the T'umed, at which the Yellow Sect was proclaimed the religion of the Mongols. It is amazing that neither of them, during their long stay at Kukunor, visited Kumbum (only three days distant), the birthplace of the founder of the sect, or called on Achia, incarnation of the father of Tsong khapa, or took a glance at the first Yellow Sect temple and the miraculous tree. Possibly the temple had not yet been built nor the legend of the tree spread, nor the incarnation of the father of Tsong khapa recognized. However, four years later, in 1582, the Dalai, on his way to the Ordos, visited Kumbum where he founded a school for the explanation of the sacred texts (the school only started in 1600 or 1612) and then went for a long rest, not to Kumbum where the incarnation of Tsong khapa's father must have been, but to the monastery of Ribo Nantig (Huth, 227). Perhaps it was not convenient for the Dalai Lama to take a rest at the insignificant monastery of Kumbum, where neither a school nor the incarnation of Achia yet existed.

In 1600 the Fourth Dalai Lama, Yon tan, on his way to Lhasa for his enthronement, passed through Kukunor, where he remained for three months without even paying a visit to Kumbum and the precious tree or to Achia, the incarnation of Tsong khapa's father! (Huth, 238). In 1652 the Fifth Dalai Lama on his way to Peking did not visit Kumbum. Was Kumbum still so insignificant at that time?[63] According to the *Annals* of Hsining (ch. 15, pp. 4*b* and 5*a*), the decision to build a monastery on a large scale was made only in 1596. This decision does not seem impossible when it is connected with the fact that in 1593 new Chinese troops and colonists arrived in Huang-chung, making the peace prospects seem even brighter (ch. 31 p. 19*a*). At any rate, the monastery of Kumbum appears to have developed very slowly. Its first Tsan njid temple was erected in 1600 or 1612,[64] the Sutra temple of Mysticism in 1649,[65] the palace for the Khampo in 1687,[66] the Pakar temple in 1692,[67] Duinkhor Kalacakra College in 1825,[68] College of Medicine in 1850,[69] and the celebrated gilt tiled roof was put on the temple in 1883.[70] Ac-

[63] W. Rockhill, The Dalai Lamas of Lhasa, *T'oung Pao* 11: 14, 1910. Huth, *op. cit.*, 268.

[65] *Ibid.*, 124.

[66] *Ibid.*, 237.

[67] *Ibid.*, 230.

[68] *Ibid.*, 137.

[69] *Ibid.*, 65.

[70] *Ibid.*, 28. Because so much has been written about Kumbum, this study has been confined to the points relating to our subject. The major part of the lama population of Kumbum in 1910–1920 consisted of lamas of Monguor and Tibetan origin from Huang-chung; lamas of Mongolia have always been numerous, while lamas of Tibet constituted a minor group. Since the troubles in Kumbum in 1908–1909, between the Dalai Lama and Achia Hutukhtu, the proprietor of the monastery—reincarnation of the father of Tsong khapa—which ended with

[p. 25(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

tually, Achia Bsan, reincarnation of the father of Tsong khapa, is the proprietor and chief of Kumbum. 175 792 346

The *Meng-tsang Fo-chiao shih* [71] notes that the series of his incarnations began in 1417 (two years before the death of his son, Tsong khapa!). It says that for fifteen incarnations Achia administered the monastery of Kumbum and was recognized as its chief and proprietor by the five tribes and the inhabitants of the seven valleys, and that he possessed a piece of pasture ground in Chahar. However, it notes also that, in 1746, the name of Achia Hutukhtu (his sixteenth incarnation) was drawn from the celebrated urn in Peking, and that an order was given to write the deeds of a pasture ground in Chahar. This text is a model of ambiguity and full of holes; it suggests that in 1746 Achia received for the very first time the title of Hutukhtu and that his name was registered on the roster of the Living Buddhas in the Mongolian Superintendency, although the process of reincarnation had begun in Lhasa only in 1475. Since deeds were then written, this implies also that at that time pasture grounds were granted to him for the first time. Thus, previous to 1746, no Achia reincarnation, chief of Kumbum, existed. 775

These assumptions seem to be supported by the fact that it was not in 1417, but in 1560, that some poor cells were built for the first time in Kumbum by lama Rintschen Dson dui tschamtso and his ten monks and also by the facts that in 1719 the emperor ordered Skal bzan rgyamts'o, chief of Kumbum, to invite T'u-kuan Hutukhtu to administer the monastery,[72] and that in 1723 mK'ampo Nomun-khan, head of the monastery of Kumbum and nephew of bLo Blzan bstan dsin, stirred the lamas to revolt and was made prisoner and the monastery was burned.[73] Until that time, not a single mention is made of Achia who, as head of the monastery and Hutukhtu, must have been the man responsible in such circumstances. However, the name of the real founder of the monastery is well known, as well known as the two other later heads and chiefs of the monastery. 175 792 346

It is a fact that Achia, created Hutukhtu only in 1746, had to remain in Peking, attached to the committee for the printing and translating of Tibetan books into Mongol, which was presided over by the second incarnation of the Chang chia. "In the last half of the 18th century it seems to have been the vogue for translators to ask Achia for a postscript to their translations. Many works printed at that time bear a postscript 'by 175 214 814

---

the suicide of Achia, there are no more lamas of Tibet in Kumbum. In 1746 the reincarnation of Achia received the title of Hutukhtu from the emperor. From that time on, according to the abbots, the prominent lamas of Kumbum have always been Monguors.

[72] Han Ju-lin, *Pien cheng kung lun*, (*Frontier Affairs*) 3 (5): 16, 1944.

[73] *Yung-cheng Shih-lu, ts'e* 145, *Chuan* 14: 10.

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Achia.' "[74] However, the myth of his previous exist- 175
ences was deeply rooted. "In 1686, a previous exist- 214
ence of Achia, the 16th, is said to have resided in the 814
Yung-ho-kung temple of Peking, which had only been made a monastery in 1743. The roster of famous workers on the committee of translators at that time does not contain the name Achia."[75]

The emperor, after having drastically quelled the 175
lama revolt, permitted the rebuilding of the monasteries 662
of Erh-ku-lung and Seerkok, giving them the text of a 792
less honorable stele to be carved, and imposing on Erh-ku-lung the new name of Yu-ning-ssu, and on Seerkok that of Kuang-hui-ssu. The chief of the monastery of Seerkok (Chie bsan rimpoche) having been beheaded, the Dalai lama in 1727 sent to Peking a learned lama, Tsanpo of Amdo, whom he himself had previously honored by the title of Nomun-kan. In order to rebuild Seerkok, the emperor granted him the title of Hutukhtu[76] and he became Min-chu-erh Hutukhtu, the new chief and proprietor of Seerkok. Since the chiefs of Erh-ku-lung had not plotted in the revolt, they were left undisturbed. Is it far-fetched to suppose that after the disappearance of mK'ampo Nomun-khan of Kumbum, on the request of the Dalai Lama, Achia became the new chief and proprietor of Kumbum in 1746 in the same way that Min chu-erh had become chief of Seerkok? It would have been a fine political gesture for the emperor to ennoble the father of Tsong khapa, chief of the Yellow Church, in order to regain the sympathy of the lamas of the whole Yellow Sect whose group in Hsining he had punished so severely for their irresponsible behavior. It is probably a unique case in the history of Lamaist reincarnations that a layman then became reincarnated as a Living Buddha.

ERH-KU-LUNG

While Kumbum was outgrowing its infantile period, 175
there occurred the humble beginning of the monastery 792
of Erh-ku-lung (1604), on the northern side of the 346

[74] Walter Heissig; *Die Pekinger Lamaistische Blockdrucke in Mongolischer Sprache*, 109, Wiesbaden, Harrassowitz, 1954.

[75] *Ibid.*, 110.

[76] *Meng-tsang Fo-chiao shih* 2: 125. However, Tsampo Nomun-khan of Amdo writes about himself in his well-known Geographical work, 29: "North of Ssi ling is the great monastery of Gahdan Tam Chhoi ling (seat of lama Tsampo Nomun-khan) in ancient times called Amdo Gomang gonpa; at present known as Serkhang gonpa." Sarat Chandra Das adds: "The author is an incarnation of an eminent lama named Tag tse chove, who was invited to be the abbot of the monastery. There are 2,000 monks, many know the Tshan nid philosophy." The work of Tsampo has to be read cautiously. Before 1723 there were 2,000 lamas; at the time of his arrival Seerkok was destroyed. On pages 29 and 30 he gives the names of 18 monasteries built north of Erh-ku-lung and says: "The monasteries are mostly subordinate to the Kumbum and Tsampopa [himself] abbots, in consequence of which those under Je gampo and Phagden have been converted in Gelugpa institutions." However, these institutions had been founded by Erh-ku-lung and nine of them by Seerkok, which abbots had always belonged to the Gelugpa or Yellow Sect.

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Hsining River in the main country of the Monguors. 175
Its Tibetan name is *dGon lung*. *"dGon"* means a her- 792
mitage, hence a monastery; *"lung"* means valley—the 346
hermitage of the valley. In Chinese literature it is called *Ku-lung;* the Chinese and Monguors call it *Erh-ku-lung*. It is situated at the entrance of a valley on the northern side of the T'u-Kuan Mountains. Erh-ku-lung is the mother monastery of all those situated north of the Hsining River. Its lamas in 1911 were mostly of Monguor origin, or Mongols from Mongolia, together with Tibetans of Huang-chung. Its administration was Monguor and its prominent Living Buddhas had always been reincarnations born in Kansu or Kukunor.

Legends

The origin of Erh-ku-lung is overlaid with legends. 792
The saying goes that during the Yüan period (1280- 539
1368) a Buddha appeared to a holy lama of the Sa-skya Sect, called Diasai, absorbed in profound meditation, and ordered him to build a monastery in Huang-chung on a site he designated. The next day the lama started his journey. He wandered many years in order to find the indicated site. Finally, he recognized it at Erh-ku-lung and the Monguors started building a hermitage. A handsome, very intelligent young man of Erh-ku-lung, called Sumpa, asked the lama to accept him as his apprentice and to instruct him. The happy holy man devoted his energy and marvelous ability to educating the young man. More young recruits arrived. The holy lama returned to Tibet with two of the most intelligent novices, one called Chang-chia and the other T'u-kuan. He entrusted the task of caring for the monastery in the meantime to the young Sumpa. The lama died in Tibet and the two novices, after brilliantly completing their studies in Tibet and writing learned books, returned to Erh-ku-lung, performed miracles, and died at the same time as Sumpa. All three were reincarnated and became the celebrated three Living Buddhas, who are the co-proprietors and chiefs of Erh-ku-lung.

At that time a lama of Erh-ku-lung, born in the neighborhood of Chie-bzan, enjoyed the reputation of holiness. After his death he was reincarnated at Erh-ku-lung and was called the Living Buddha Chie-bzan. Another holy lama, born in Har-ch'in (Liao tung), called Wang, died and was reincarnated at Erh-ku-lung as the Living Buddha Wang. These two smaller incarnations, in conjunction with the three former incarnations who received the title of Hutukhtu from the emperor, constitute the board of the monastery, called "wu-ta-nang," which is still in existence. A residence was built by them for Diasai, the holy founder of the monastery, but the holy man failed to return from Tibet. At present, however, two lamas are still appointed to keep the home ready for the eventual return of the departed saint. They enjoy the nominal privilege

[p.27(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

of receiving eighty shares at the time of distribution of alms to the lamas. 792 539

A second legend explains in another way the origin of the monastery, and its peculiar administration by five Living Buddhas. One of the first Dalai Lamas lay dying on his bed in Lhasa from a terrible abscess on his thigh, which was greatly swollen. It would not yield to medical attention. Finally, the state oracle of Lhasa received in his trances notification that five Living Buddhas were confined in the tumor, and had to be released before the abscess would respond to medication. Lamas were sent all over the world to find an enormous sandalwood tree, recently uprooted by a big storm, in which the five Buddhas were confined. A whole army of lamas started in search of the life-saving tree. They eventually found it in the country of Erh-ku-lung. In the presence of an enormous crowd they started sawing the trunk of the fabulous sandalwood tree. Suddenly the teeth of the saw scratched on something which seemed hard as stone, and five statues of Buddhas escaped in the air. With the instinct of homing pigeons they fell on the very spot where a monastery was to be built. This is the origin of the temple and its "Wu-ta-nang." It is said the statues are locked in a closet in the temple, but no one is allowed to see them, the key being kept by the Chang-chia Hutukhtu.

History of the Lamasery

The origin of Erh-ku-lung seems, however, to have been less miraculous. The construction of the monastery started in 1604, after the Fourth Dalai Lama, Yon tan (1598–1616), sent the lama, Don Yod Choskyi rgyamtso, from Lhasa to the region of Erh-ku-lung, to invite and encourage the people to build a lamasery. 175 792

The first great lama was Sumpa Danchos rgyamtso, born in Sumpa close to Erh-ku-lung.[77] He started with a small community, but attracted more and more novices. It was he who laid the foundation for the monastery.[78] Nothing more is known about this lama [79] except that twice he fulfilled the office of *Fa-t'ai* (see p. 61) of Erh-ku-lung, once in 1621 and again in 1649. These facts seem to support the supposition that the newly founded monastery soon flourished, all the more since a branch had been established at RGyud pagrva, the later monastery of Hsien mi-ssu, from the very beginning.[80] Two lamas, one called Chang-chia and the other T'u-kuan,[81] must have been members of

[77] R. A. Stein, Mi-nag et Si-hia, *Bull. Ecole française d'Extrême Orient* 14: 253, 1951. Sumpa possibly originated from the ancient Tibetan (Mi-nag) Sumpa tribe, which had submitted to the king of Tibet. At the time of K'ri sron bde btsan (eighth century) the tribe had been appointed warden of the Sino-Tibetan frontiers of the country of Mi-nag.

[p.27(B)]

the original community. Chang-chia died (1641?), and was reincarnated for the first time in 1642 near the end of the Ming dynasty, (1643) and became the first Chang-chia Living Buddha.[82] T'u-kuan, a lama born during the Ming dynasty, was chosen Fa-t'ai of Erh-ku-lung in 1672. He died and was reincarnated in 1680[83] and became the first T'u-kuan Living Buddha. 175 792

LAMAISM AT THE END OF THE MING DYNASTY

At the very end of the Ming dynasty (1643), Ch'ü-t'an with more than 600 lamas, having branches with more than 350 lamas, was the leading monastery of Huang-chung. Kumbum began in 1560, and in 1644 was still in its period of development. Nothing is known about Sha-ch'ung, though it must still have existed. The hermitage of Erh-ku-lung, founded in 1604, had developed very fast. It had a Living Buddha boy, the Chang-chia, born in 1642. It expanded rapidly and founded hermitages for its lamas, which must have been numerous. Several Nang-suos, Karwas, and Master in Dhyana institutions existed in the country. Domains were given to many lamas who had induced Tibetans to submit to the empire. A small temple may have been built by them, and probably a few small groups of wandering lamas existed all over the country. This seems to have been the situation of Lamaism in Huang-chung at the end of the Ming dynasty.

DIFFUSION OF LAMAISM DURING THE CH'ING DYNASTY (1644–1911)

GENERAL POLICY OF THE CH'ING

The Ch'ing dynasty continued the policy of the Ming, protecting and promoting Lamaism. Its first act was to recognize the *status quo* of Tibet which emerged after conquest by the Ölöts during the troubled period preceding its accession to power. The Ch'ing dynasty, engaged in a terrible struggle with the western Mongols, the Jungars, which lasted for more than a century, from the middle of the seventeenth century to the middle of the eighteenth century, understood the need for a pro-Lamaist policy. Lamaism had a firm hold on the western Mongols as well as on the eastern Mongols and in Tibet. The struggle was so fierce as to induce Maurice Courant to include in the title of his book *L'Asie centrale aux XVIIme et XVIIIme siècles*, the question, *"Empire kalmouk ou empire mantchou?"*[84] It is easy to understand that in such conditions the favorable disposition of Tibet toward the dynasty would 175 648

Pa are designated after the names of localities where they were taught and originated. *Karmapa, Bulugpa*, were taken from the names of their respective teachers. *Kahdampa, Dso-gchyenpa, Chhyay Chhempa*, and *Shi chhyepa* were named after their respective rituals and external *Kriya*.

be an immense asset for its policy in Central Asia and in the neighboring countries of China.[85] 175 648

LAMAISM DIFFUSED BY MONGUOR LAMAS OF ERH-KU-LUNG

During the Ch'ing dynasty, Lamaism reached its highest level of influence and power. Four Living Buddhas dominated this period: (1) the Dalai Lama, (2) the Panchen Lama, (3) the rJe-btsun dam-pa of Urga, and (4) the Chang-chia Hutukhtu, the Monguor of Erh-ku-lung. The Chang-chia reincarnations were towering personalities. During this period they dominated the Lamaist world of Mongolia, Peking, and Huang-chung, and wielded an important influence in Tibet. 175 792

Next to Chang-chia came the T'u-kuan Hutukhtu and the great Sumpa, as celebrated as Chang-chia for their science, learned works and influence at court. Later on, Min-chu-erh, known as Tsanpo Nomun khan,[86] a learned man and chief of the monastery of Seerkok, an old branch of Erh-ku-lung, followed in the wake of the three preceding Hutukhtus. If the names of the chiefs of the celebrated monastery of Labrang, founded in 1708, who were intimately connected with T'u-kuan, and who obtained imperial favors for them and the title of *Erdeni Nomun han* (Huth, p. 332) are added to the glittering list of prominent personalities of Erh-ku-lung, one is not amazed to read in the relations of the Franciscan Fathers written in 1730 in Tibet:

> In my time nearly all the lecturers and lamas of the universities, masters of the Supreme Lama and of the Grand Lamas, who have been born again, came from Amdo, a province from which they do not draw soldiers, (p. 313). . . . Tibetans are generally intelligent, although not equal to the people of the state of Amdo, who are extremely quick (p. 218).[87]

Without a doubt the monastery of Erh-ku-lung profited by the names of its prominent and learned chiefs and lamas. For a long time it surpassed all the other monasteries of Huang-chung. The number of its lamas reached 2,500 in 1723. Its prodigious activity was responsible for the foundation of all the monasteries north of the Hsining River. Since Lamaism, among the Monguors and their clan chiefs, is intimately connected with the monastery of Erh-ku-lung, whose Living Buddhas were mostly born in their country, it is necessary to study Lamaism among them, in the atmosphere of their beloved monastery. In order to gain an insight into the tremendous influence exerted by the

[p.28(B)]

monastery of Erh-ku-lung in the Lamaist world, the 175
three personalities who are keystones of its institutions, 792
will be briefly described.

Chang-chia Hutukhtu

In 1642 a boy was born in the village of I-k'o. He was recognized as the reincarnation of a lama of Erh-ku-lung born into the Chang family (hence his name *Chang-chia*) in the Hung nai Valley, sixty *li* northeast of Hsining.[88] He started his religious career at the age of five at the small hermitage belonging to Erh-ku-lung called T'an rim tarpa. He entered the monastery of Erh-ku-lung in 1651. In 1661 he was sent by Sumpa to Tibet where he studied for twenty years in the most celebrated colleges, knitting friendly relations with the most renowned lamas of Tibet, and teaching and preaching in the colleges. He returned to Erh-ku-lung. In 1682 his beloved teacher, the great lama of Galdan, was invited by the emperor to Peking. Chang-chia, having scored successes in Tibet, seething with ambition, and eager to rub elbows with the rich and the great of the world, hurried off to meet his teacher in Kukunor. He obtained permission from his teacher to follow him on his trip to Peking as a "humble member of his retinue" (Huth, 276). In Peking the teacher recommended his learned pupil to the emperor.[89]

After being chosen Fa-t'ai at Erh-ku-lung in 1687, [554]
the emperor called him to Peking in 1693. Sumpa, leading a big retinue, brought him to the capital. The

[88] Ting Chih-ts'un, Li tai Chang-chia Hutukhtu, *Pien-cheng kung-lün* 6 (4): 4.

[89] Ting Chih-ts'un, Li tai Chang-chia Hutukhtu, *Pien-cheng kung-lün* 6 (4): 4, 1947. Much confusion has existed concerning the origin of the Chang-chia reincarnation. Mayers, *Chinese government*, Hong Kong, Kelly & Walsh, 1896, 3rd ed., No. 598 says: "The metropolitan Chang-chia, re-embodiment of a Hutukhtu, dispatched under the same title, to represent him near the Chinese court toward the close of the 17th century, by the Dalai Lama of that period, received with profound respect by K'anghsi, was assigned a residence at Dolon nor; by decree of Ch'ienlung, the successor of the Chang-chia Hutukhtu, removed his residence from Dolon nor to the Yung-ho-kung, where state services were performed under direction of the Metropolitan who it is said wielded supreme religious sway."

Baron A. von-Stael-Holstein, Remarks on an XVIIIth century Lamaist document, Kuo-hsueh chi-k'an, 401, 1923, says: "K'ang hsi invited the 5th Dalai Lama to Peking, who refused, and Nag-dban blo-bzan cos-ldan (Chang-chia XIV) took the Dalai's place. He is supposed to be the incarnation of Mkhyen-rab-grags-pa hodzer, born in Chang-chia village, Kansu-Kukunor, hence the name Chang-chia."

Walter Heissig, A Mongolian source to the Lamaist suppression of shamanism in the 17th century, *Anthropos*, 48: 499, 1953: says that according to a Mongol source the 5th Dalai Lama sent a lama, Che-sen Chorji to the Manchu emperor T'ai-tsung, with letters and presents. He was delegate to the city of Mukden in 1637. T'ai-tsung appointed the lama envoy to be his own chaplain, praising him as Chang-chia Hutukhtu. Heissig notes (note 132, p. 500) that the Mongol text about the appointment of the envoy as Chang-chia is wrong, because Chang-chia came first to the Manchu court at Peking in 1687.

[p.29(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

emperor appointed him to the office of Jassak Great Lama, the highest office entrusted to lamas in Peking; he bestowed on him the dignity and diploma of Hutukhtu, and a golden seal, together with the eulogistic title, "entirely virtuous, vastly compassionate, great state teacher, one whose head is annointed."[90] He was vested with powers of spiritual control over the Mongols of Chahar. 175 792

The bolt of fame had struck the ambitious Chang-chia. Inner Mongolian, and Khalkha princes and nobles gathered at Dolon nor to adore the great living Buddha.

In 1696–1697, the Chang-chia Hutukhtu, already raised to a high pitch of fame in Mongolia and Peking, was delegated by the emperor to go to Lhasa to bring to the recently enthroned sixth Dalai Lama a seal and diploma, and to convey imperial gifts to the Panchen and the chief lamas of the most important monasteries of Tibet, his former teachers and friends. This diplomatic mission immensely enhanced the prestige of Chang-chia in the Lamaist world of Tibet. Back in Peking, he was showered with gifts by the emperor. 175 792 648 554

In 1709, when he was on a vacation in Erh-ku-lung, the Monguors, exulting with pride, had a feeling for him that was a little short of idolatrous. He reformed the program of studies at Erh-ku-lung and appointed eminent teachers. It is not amazing that the lamas dreamed up an illustrious pedigree for their distinguished Hutukhtu, the favorite of the emperor and idol of the people, and that they imagined thirteen reincarnations preceding the reigning one. The first was no less than Chan dana, a contemporary and disciple of the Buddha himself. As for these thirteen fabulous reincarnations, it is enough to say that the so-called thirteenth rebirth was that of a boy born in Chang-chia village, who became a simple lama and about whom nothing more is known. During the administration of Sumpa he was a simple lama at Erh-ku-lung. After his death a boy born in I-k'o in 1642 was considered to be his reincarnation and consequently was called the fourteenth Chang-chia. This "fourteenth reincarnation," actually the first, recommended by his teacher to the emperor, was the lucky founder of the glorious series.

Chang-chia Rolpa dorje, the fifteenth reincarnation (1717–1786), in fact the second, was brought to Peking at the age of seven. Considered as a miracle child endowed with an illustrious pedigree, he was the playmate and intimate friend of the imperial princes. In 1734, at the age of seventeen, he was sent on a diplomatic mission to Szech' uan (mGar t'ar), with an order to accompany, as imperial envoy, the banished seventh Dalai Lama on his reinstallation in Lhasa. (The Dalai Lama had been banished in 1728.[91]) This second diplomatic mission surrounded the Chang-chia

[90] *Meng-tsang Fo-chiao shih, ti 5 p'ien*, 93.
[91] Petech, *op. cit.*, 157.

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

reincarnations with an aura of glory. At Lhasa the lamas paid enthusiastic adoration to him. Their devotion went so far as to make them struggle and compete for the drinking of a draught of the water Chang-chia had used for his toilet.[92] Back in Peking, Chang-chia asked the emperor to return to the Dalai Lama the confiscated districts of Lit'ang and Batang, and to grant him a subsidy. Only a subsidy of 5,000 taels was allowed.[93]

Rolpa dorje was also a learned man. His appointment by the emperor as chief of the commission for the revision of the translation into Mongol of the *Kanjur* and the *Tanjur*,[94] enhanced his prestige in the learned world, even as his learned works were studied in the colleges of Tibet, Mongolia, and Huang-chung (Huth, 291). In 1725 the Dalai Lama and Panchen Lama received imperial envoys, presenting them with a complete set of the *Kanjur*, together with its supplements, and the complete works of Tsong khapa and the first Chang-chia Hutukhtu.[95]

The Monguor Chang-chia Hutukhtus of Erh-ku-lung, conspicuous for their great abilities, extensive learning, high position at the Peking court, and former diplomatic missions, wielded an enormous influence in the highest Lamaist circles in Tibet. The appointment by the emperor of the regent Gyal ts'ab in Tibet, during the reign of the eighth Dalai Lama (1759–1804) was obtained by the influence of the Chang-chia II.[96] The influence which the Panchen Lama exercised over the temporal affairs of Tibet and the interest he enjoyed at the Peking court through his friend, Chang-chia, the lama primate, made the emperor, Ch'ien-lung, invite him to Peking, where he arrived in 1780 and died of smallpox.[97]

George Bogle in 1774–1775 was trying to get an agreement from the well-disposed Panchen Lama for Indian trade with Tibet. Even more important than the Panchen's promise to send envoys was his assurance to Bogle that he had written the Grand Lama at Peking, who had great influence with the emperor, informing him that the English were now masters of Bengal, that

[94] Walter Heissig, Die Mongolischen Publication und Ubersetzungs Wesen der Mandjuzeit, *Sinologica* 3 (3): 205, 1953. Translations of Vols. 1 to 22 of the *Kanjur* by learned Mongol lamas already existed at the time of Ligdan Khan 1604–1634: the translation of 1717–1720 is almost textually the same as the former. The duty of Chang-chia, head of the committee, consisted in supervising the dogmatical genuineness of the translation. The Mongol translation of Dharani was published in 1759. More than 200 translations of Tibetan works still exist in Mongol.

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Hastings, their chief, had shown him great favor, and that the English allowed everyone to follow his religion unmolested. He closed with the suggestion that the Grand Lama send some people from China to call on Hastings and to visit the principal temples of Bengal.[98] An interesting note encountered in Gunther Schuleman's work tells that the Chang-chia Hutukhtu asked the emperor to allow the Cossacks, prisoners of war interned in a camp at Albazin on the Amur, to invite a priest or pope, and to build a chapel dedicated to St. Nicholas.[99]

The subsequent Chang-chia incarnations until the present one, the nineteenth, enjoyed the same position of eminence, privileges, and titles in Peking under the Empire and the Republic. At the beginning of the Republic, the Chang-chia Hutukhtu was sent to Mongolia to exhort the princes to recognize the newly founded Republic. He was nominated honorary president of the Committee of Mongol and Tibetan Affairs.[100] All these facts seem to bear out the assertion that the Chang-chia Hutukhtus of the monastery of Erh-ku-lung were towering personalities in the Lamaist world during the Ch'ing dynasty and under the Republic, and that they enhanced the prestige of Lamaism among the Monguors and the Tibetans of Huang-chung. When the Chinese Government fled to Formosa for fear of the Communists, the Chang-chia Hutukhtu accompanied it, and at present is living there.[101]

[99] Schuleman, *op. cit.*, 178.

[100] *Meng-tsang Fo-chiao shih, op. cit.*, 11. von Stael-Holstein, *op. cit.*, 401, says: "During the Republic the titles of Chang-chia on his visiting card, support the evidence of the high favors bestowed upon him, 'High class adviser at the president's office; inspector of the Lamaist religious establishments in Peking, Inner Mongolia, Chahar, Wü-T'ai-Shan, Jehol, and Dolon nor,'" 1923.

[101] After completing the present study, I had the opportunity to read a most valuable work by Professor Walter Heissig, *Die Pekinger Lamaistischen Blockdrucke in Mongolischer Sprache*, Harrassowitz, Wiesbaden, 1954. It contains many complementary data concerning the Chang-chia incarnations, and their literary productions, excerpted from Mongol and Tibetan sources, making it possible to complement the information drawn from Chinese sources.

Chang-chia I (1642–1714), by order of Emperor Sheng tsu (K'ang-hsi period 1662–1722) came to Peking in 1693 with an imposing array of fifteen lama scholars, headed by Sumpa, chief of Erh-ku-lung. The emperor granted Sumpa the title of Jassak lama. (At that time Sumpa must have been Sumpa II, a minor Living Buddha.) Each of the fifteen other lamas was granted the title of Sula Blama. Chang-chia asked the emperor for this title as a favor to Sumpa (18). Chang-chia supervised the revision of the Kanjur (19), which had already been started in 1604–1634 by 40 scholars. He was ordered to instruct the Khalkha lamas in Dolon nor and the Mongol princes who attended his lectures, so he wielded a great influence among the princes and lamas in Mongolia (p. 20). In 1710 the emperor contributed to the foundation of the Tantra college in Erh-ku-lung (p. 28). Chang-chia I, a prolific author, died in 1714. The complete works of Chang-chia, written in Tibetan, were translated into Mongol and published in seven volumes in Peking in 1720 (pp. 58, 59). In 1729 there was published in

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

T'u-kuan Hutukhtu

At the time when Chang-chia was at the height of his glory, T'u-kuan, another eminent Monguor lama of Erh-ku-lung, was on the way to becoming his equal. With Sumpa and Chang-chia he was considered the

175
792

Peking a biography of Chang-chia which had been translated into Mongol, in four volumes, by one of his most intimate pupils (p. 63).

Chang-chia II (1717–1786) was still a boy, living in Huang chung, at the time of the revolt of the lamas (1723). The emperor, in order to save the life of the new Chang-chia incarnation, forbade the army commanders to kill boys under fifteen years of age. Chang-chia was brought to Peking at the age of nine (1724). He studied Chinese, Mongol, Manchu, etc., with the son of the emperor, the future emperor Kao tsung (Ch'ien lung period, 1736–1796), and the twelfth prince, who became his friends (64). In the friendship which existed between Chang-chia, the future emperor, and the Manchu prince lies the explanation for the tremendous influence wielded by Chang-chia in Mongolia and Tibet. It also explains the prodigious activity displayed by the board for the translation of Tibetan books and the printing of Mongol books, of which Chang-chia was the chief. The Mongol lamas were elated by the publication of lamaist literature in Mongol, and the Mongol princes offered donations for its printing. Under the leadership of Chang-chia II, 99 lamaist works were printed in Mongol in Peking (p. 72). Chang-chia used his influence to change the trend of thinking of Mongol lamas, who were very fond of writing biographies of saints according to the pattern of the Geser epos (of Tibetan origin). He did not even allow the lamas to read or preserve the epos. It had not been reprinted in Peking since 1716 (87). However, he promoted the fusion (already started during the K'ang hsi period, p. 36) of the legendary Geser with Kuan ti, the Chinese god of war, and also their cult, making of them protectors of the country, to be worshipped by the Chinese military officials (p. 148). Chang-chia laid stress on the production of works in the dogmatic line (p. 106). The revision of the Kanjur was finished in 1720 (during the boyhood of Chang-chia II): From 1741 on, Chang-chia II, with a strong group of scholars, prepared the revision of the Tanjur which was finished in 1749 (p. 85). In 1780 the Panchen Lama attending the celebration of the seventieth birthday of the emperor in Jehol, composed a biography and eulogy in Tibetan of the fifteenth preexistences of Chang-chia II. It was translated into Mongol and was very popular in Mongolia and Tibet (p. 142), as was the biography of Chang-chia I, written by T'u-kuan Hutukhtu I (1737–1802) (p. 158).

[814]

The prodigious literary activity displayed during the lives of both Chang-chia I and II seems to have been notably reduced from the time of Chang-chia III on (1789–1846). In the meantime the Emperor Kao tsung, personal friend and protector of Chang-chia II died (1795); the Mongol princes had become less interested in offerings for the printing of books, and only a few lamas of Alashan continued to indulge in literary productions (165). In Heissig, not a name of a single author of Kumbum is noted during or after the period of this prodigious literary activity. Only ten new productions are noted during the nineteenth century, together with a few reprints of former books (p. 159). After the death of Chang-chia III (1846) his biography was written, starting with those of his previous existences (p. 168). Heissig notes that he does not understand why, in the historical sketch of the life of Chang-chia I, the biography of Chang-chia I written by T'u-kuan I of Erh-ku-lung is omitted (p. 167). He wonders also why the famous *History of the diffusion of Lamaism in Mongolia* written by T'u-kuan II was not printed in Peking (p. 3) during the time Chang-chia II was the chief of the imperial committee. The explanation for these pertinent questions will be

[814]

[p. 31(A)]

co-proprietor and chief of Erh-ku-lung. The figures 175
of these three men throw a lengthening shadow over 792
the glorious monastery of Erh-ku-lung, and over the Lamaist world in Tibet, Mongolia, Peking, and Huang-chung, during the Ch'ing dynasty.

A boy born in T'u-kuan, located at the foot of the T'u-kuan Mountains close to Erh-ku-lung, became a lama at the former hermitage of Erh-ku-lung, which had rapidly grown under the administration of Sumpa. The boy was born in the Wang chia tribe, subject to the Li T'u-ssu, and is said to have belonged to the Li T'u-ssu clan. It is also told that he was born in the Sina tribe in the Ch'ing-yang-ch'uan, in the village of T'u-kuan. The date of his birth is not recorded. However, it is noted that he fulfilled the office of Fa-t'ai at Erh-ku-lung in 1672, at the time when Chang-chia was studying at Lhasa.[102]

A boy born in 1680 was said to be the reincarnation [775]
of this T'u-kuan Lama and was called the Living Buddha T'u-kuan Nag dban C'osky rgyamts'o. The series of the T'u-kuan reincarnations started with him. Upon completing his studies in Tibet, he was chosen Fa-t'ai at Erh-ku-lung in 1705. He founded a hermitage at C'os bzan, where he lived in retired seclusion with seven lamas, meditating and teaching.[103] He was the teacher of the young fifteenth Chang-chia incarnation and the famous Sumpa. He became the equal of Chang- [854]
chia when the Emperor K'ang Hsi called him to Peking in 1715, and bestowed on him gifts, the title of Hutukhtu and a seal. He enjoyed the high esteem of the emperor who, in 1719, ordered the lama, Skal-bzan rgya-mts'o, administrator of Kumbum, to invite T'u-kuan Hutukhtu in order to have him administer his monastery.[104] (Something wrong may have happened at Kumbum.)

In 1720 the T'u-kuan Hutukhtu was sent on a dip- 175
lomatic mission to greet the seventh Dalai Lama on the 792
upper reaches of the Yangtse River on his way to 648
Lhasa.[105] The Dalai Lama had been confined at Kumbum for five years. He was brought to Lhasa with a display of pomp and magnificence. T'u-kuan, in his capacity of imperial envoy, was granted the title of Hutukhtu, the highest imperial distinction for lamas. He assisted at the enthusiastic enthronement of the Dalai Lama and brought letters and imperial gifts to

---

provided by the subsequent troubled history of Erh-ku-lung (see below, p. 36).

Summarizing the literary activities of the Chang-chia incarnations, as chiefs of the imperial committee for the printing of Mongol books in Peking, they had printed in Mongol, during a period of 261 years (1650–1911), 108 volumes of the Kanjur, 226 of the Tanjur and 220 other works (2).

These facts afford conclusive evidence of the very important role played by the Monguor Hutukhtus of Erh-ku-lung in the diffusion of Lamaism in their own country, and in Peking, Mongolia and Tibet.

the Panchen Lama and the heads of the most important monasteries of Tibet, his former teachers and friends.[106] He enjoyed a tremendous surge of popularity in Tibet and was honored in the same way as Chang-chia.

The fame of Erh-ku-lung thus rose higher and higher. In Huang-chung the Monguors were elated and proud of their glorious monastery and their eminent lamas. Back in Dolon nor, the Mongol and Khalkha princes paid him their adoration with the same devotion they had given to Chang-chia. The T'u-kuan Hutukhtu received new titles from the emperor and was showered with favors. A permanent duty was assigned to him at Peking. He obtained for the Great Lama of the monastery of Labrang the title of Erdeni Nomun khan.[107] While on vacation at Erh-ku-lung, he died in 1735 at the hermitage of Rgyab-ri which belonged to Erh-ku-lung.

His next incarnation was T'u-kuan Blo-bzan C'oskyi Nima, born in 1737. He was a celebrated teacher, well known in the Lamaist world for his proficiency in logic and philosophy. He wrote his famous *History of the Doctrines of the Yellow Sects*, which he finished a year before his death in 1802. According to Baradijn, this work, in twelve chapters, is the only Tibetan study dealing with all the Tibetan sects, including those of India, China, and the old Bön.[108] He received from the emperor the same titles as his predecessor and was granted the same favors and the same permanent duty at Peking. In 1790 he built the temple of Hung-ku-ssu, to which the emperor granted the name of Yen-hsi-ssu.[109] He died in 1802. The subsequent incarnations followed in the steps of their predecessors, enjoying the same titles and privileges during the Empire and under the Republic.

Sumpa Hutukhtu

Sumpa Hutukhtu is so called by Sarat Chandra Dass, the celebrated historiographer and chronologist of Tibet. Born in 1704, he is said to be the first reincarnation of the founder of Erh-ku-lung. However, because Erh-ku-lung was founded in 1604, the first Sumpa was supposed to have been a man about twenty or thirty years of age. So it would seem that a second Sumpa was intercalated between them. Sumpa II must have been the reincarnation of Sumpa I; otherwise the denomination of Sumpa is hard to explain. This supposition does not seem to be unusual if we take account of the process used for the first reincarnations of Chang-chia

---

[p.32(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

and T'u-kuan, and the obsession for reincarnations which was in full swing at that time. Sumpa II must have been one of the countless so-called "minor" Living Buddhas who were not listed on the register of Buddhas in Peking, and to whom the title of Hutukhtu had not been granted, but only the title of Jassak Lama. In the same way the minor Living Buddha Sumpa II must have headed the big retinue which brought the "minor" Living Buddha Chang-chia to Peking in 1693, who, only after his arrival at Peking, received his title and became the great Chang-chia Hutukhtu. Until that time Sumpa II, Chang-chia, and T'u-kuan were all "minor" Living Buddhas, living at Erh-ku-lung.

Sumpa III, still a minor Living Buddha, underwent a stiff course of instruction at Erh-ku-lung, under the direction of the celebrated T'u-kuan, after which he was sent for further study to Tibet. The young Sumpa must have been a very intelligent and studious pupil, for in 1726 he had already been appointed mK'ampo of the very celebrated SGoman College in aBras-spuns.[110] At the same time he must have been an unusually strong personality, a man of solidly set opinions, a special individual, a law unto himself, stern and uncompromising, for, in the teeth of strong opposition on the part of the lamas when civil war violently agitated the country, he ordered his lamas to keep quiet and to keep the strictest neutrality because, according to the principles of Buddhism, it is not allowed for anyone, particularly the lamas, to fight and kill.[111] The example was followed by the other monasteries.

Back in Huang-chung in 1730, he founded the monastery of Bshad-sgrab with eighty lamas, and admitted fifteen more from the monastery (hermitage) of Bsam-gtang. He was called to Peking in 1737, and appointed by the emperor as spiritual guide of all the princes and chiefs of Mongolia. His prestige in Peking and Mongolia and the consideration the emperor had for him were extraordinary. The emperor granted him the title of Hutukhtu, but he declined the offer, objecting that it was only fit for religious men aspiring to worldly glory. The amazed emperor answered, "You are a genuine religious man." In Peking he revised all the Tibetan books existent in China, and was rewarded by the emperor with the title of Erdeni Pandita.

In 1745 he was appointed the head of Erh-ku-lung. There, his first step was to scale down the splendor of his environment and to simplify his retinue. Sumpa was a learned man. He wrote the famous *History of the Rise and Downfall of Buddhism in India and Tibet.*[112]

---

[110] Petech, *op. cit.*, 121.

[111] *Ibid.*

[112] Sarat Chandra Dass, Contribution to the history and religion of Tibet, *Jour. Asiatic Soc. Bengal*, 58, 1889. This study is preceded by the translation of the biography of Sumpa.

Tucci, *op. cit.* 1: 147, after giving the content of the work of Sumpa, concludes: "... the work is composed with a wise and discriminating choice of older sources, pointing out for

The Monguor Sumpa was a prolific author, who 175
wrote about all the important subjects related to the 792
curriculum of the studies of lamas. In the official records in Peking, preserved in the Li-fan-Yüan (1793), concerning the subsequent reincarnations of Sumpa, it is said they are indistinct and vague; that maybe they are recorded in Lhasa at the office of the Dalai Lama.[113]

The two Living Buddhas, Chie bzan and Wang, members of the board of five of the monastery of Erh-ku-lung, led a sheltered life in their residences and nothing is recorded concerning them.

SUBSIDIARY LAMASERIES FOUNDED BY ERH-KU-LUNG

The influence exerted upon the country of Huang- 175
chung, and especially upon the country north of the 771
Hsining River, by the lamasery of Erh-ku-lung and 792
its three celebrated personalities was tremendous. The whole country, void of monasteries before 1600, became dotted with institutions of the Yellow Sect, depending on Erh-ku-lung. This unusual fervor for the diffusion of Lamaism seems to account for the disappearance of nearly all the small institutions of the Red Sect in that country, and their absorption into the fold of the Yellow Sect. The forces of expansion radiating from Ch'ü-t'an, Sha-ch'ung, and Kumbum situated south of the Hsining River, never before 1723 matched those radiating from Erh-ku-lung. The reason might be the lack of celebrated, learned, influential monks enjoying the favors of the emperors. This seems to account for the fact that at present a number of small Red communities and two important monasteries of the Red Sect still exist in the country south of the Hsining River.

Sumpa Damchos, the first administrator of Erh-ku- 175
lung, must have been a very capable and intelligent 792
man, devoted to the diffusion of Lamaism. He built his monastery on a solid foundation to prepare learned and pious men. He sent the best of his novices to Tibet to study, and organized studies at home. In the very beginning (1604) he founded the hermitage of Rgyud pagrva,[114] the monastery of Hsien-mi-ssu. In 1915 it was inhabited by 4 Living Buddhas and 160 lamas; it also established two colleges. He founded the hermitage of T'an-rim tarpa, where the young Chang-chia, at the age of five, started his religious life.[115] In 1651, when Chang-chia and T'u-kuan were still children, he se[illegible]e vice-administrator of Erh-ku-lung, Dongrub rgyamat'so, of Mongol origin, to Ta-

---

each subject the main works. He intended to write an encyclopedia from which an idea could be had of the formation and spread of Buddhist thought. . . . It is a rich encyclopedia; harmonious composition is missing. Its value: it purports to be a *summa* of Tibetan historical traditions in which chronicles, myths, saints' lives, political changes, religious doctrines are met, in whose harmony the fortunes of the sacred doctrine of Tsung khapa become a reality and are developed."

[113] Han Ju-lin, *op. cit.* 3 (4): 16.

[114] *Idem* 1: 45.

[115] Huth, *op. cit.*, 272.

[p. 33(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

t'ung wei, in order to build the later famous monastery of Seerkok, Gadan Ch'osling, also called Kou-mang-ssu, and Kuang-hui-ssu.[116] 175 792

The new daughter monastery flourished so fast as to have, before the revolt of 1723, two thousand lamas, and three colleges, among which the Tch'an-njid College was very renowned. Probably very soon Seerkok became an autonomous monastery. It developed to such an extent as to administer nine branches of its own and to have eighteen Living Buddhas within its walls.

Min-chu-erh Hutukhtu, the head of the lamasery, celebrated for his *Geography of Tibet and Mongolia*, is known as the Tsanpo Nomun-khan of Amdo.[117] In 1727 he was sent by the Dalai Lama to court and received from the emperor the title of Hutukhtu. He was showered with gifts and a permanent duty was assigned to him at Peking. He became one of the great Living Buddhas of Huang-chung.[118] [554]

In 1693 the hermitage of Byan-c'ub existed, dependent on Erh-ku-lung. It was here that Chang-chia retired.[119] In 1705 T'u-kuan established the hermitage of C'os bzan where he retired with seven lamas.[120] He died in 1735 at the hermitage of Rgyab-ri, also dependent on Erh-ku-lung.[121] In 1711 the learned lama, Zabsdrun of Temma, near Erh-ku-lung, having been appointed teacher by Chang-chia[122] at the College of Tantras in Erh-ku-lung, founded a branch in Kan-ch'an-ssu which in 1915, had two hundred lamas and two Living Buddhas.

In 1730 the Great Sumpa, on his return from Tibet, immediately founded the monastery of Bshad sgrub with eighty lamas and fifteen from Bsam gtang glin.[123] From 1604 until 1730 the building of hermitages and bigger monasteries was a real obsession among the prominent lamas and chiefs of the monastery of Erh-ku-lung and its branches. The records of the havoc wrought during the crushing revolt of 1723 by the Chinese army reveal more names of sacked and destroyed monasteries: Chie-Bzan with eight hundred lamas, the monasteries of Hsia, Ya, Ku, Chu-erh, Kan-chu-erh, and more than one thousand grottoes in the mountains; also the monastery of Shih-men-ssu with two hundred lamas and two Living Buddhas; Ch'i-chia-ssu with two subsidiaries[124]; T'ien T'ang-ssu with two hundred lamas, three Living Buddhas,

three colleges, and Chiar-too-ssu. Forty lamaseries established north of the Hsining River and in the prefectures of P'ing fan, Liang-chou, Kan-chou and Su-chou, originated from Erh-ku-lung or its subsidiaries and were built between 1604 and 1723. 175 772

The prodigious activity in Huang-chung and the flourishing of the monasteries are, beyond doubt, indebted to the position of eminence enjoyed at court by the three learned Monguor lamas and their reincarnations, and to the initial impulse given to Erh-ku-lung by its first Sumpas. Not only Huang-chung, but the whole Yellow Church derived benefits from the zeal of these fervent Monguors. Their influence was also tremendous upon the chiefs of Outer and Inner Mongolia. In Mongolia the fervor of the converted old adherents of the Red Sect to the Yellow Sect can be ascribed in great part to the influence of the Monguor lamas appointed by the emperor as their spiritual guides. This fact also accounts for the large number of Mongol lamas living in the monasteries of Huang-chung. The Mongol monasteries are also indebted to them for the development and organization of their studies on a serious basis. Their learned books were among those used in the Mongol colleges. Most of their teachers had been pupils of these eminent lamas who had studied at Erh-ku-lung, noted as the highest center of learning at that time. Back in their country they vied in building monasteries.[125]

The position of these learned scholars in Peking and the patronage of the Manchu emperors contributed to the development of that copious production, of encyclopedic and compilatory character, which marks the 18th century in Tibetan literary history.[126] [212]

REVOLT OF BLO-BZAN BSTAN-DSIN AND THE LAMAS

The year 1723 marks a turning point in the history of Lamaism in Huang-chung, and ends with one of those tragedies with which history is replete. At the time, Lamaism rode the crest of the wave of glory and success, monasteries and their affiliates dotted the country of Hsining, especially north of the river and far into the Nan-shan. The number of lamas was countless, the people paid enthusiastic adoration to their Living Buddhas. Each family offered one or more of its sons to the service of Buddha. Emperor K'ang-hsi (1662–1722) lavishly bestowed his favors upon Huang-chung, promoting Chang-chia to be the first lama in rank in Peking, and T'u-kuan to be the second. He invested them with diplomatic missions in Tibet and promoted them as the spiritual guides of the Mongol princes. 175 771

The country was at peace and the future filled with the greatest promise, when suddenly, like a colossus on feet of clay, the luxurious Lamaist institution crumbled and collapsed. The lamasery of Erh-ku-lung with 175 579 771

its 2,500 lamas, from which had radiated a prodigious 175
force of expansion for 120 years, had all its temples, 579
stupas, and homes of lamas burned to the ground; 17 771
villages and 7,000 houses were destroyed. Full scale fighting erupted between the lamas and the subjects of the monastery, against the emperor's army; 6,000 were killed. At Seerkok, the branch of Erh-ku-lung having 2,000 lamas, not a single temple, stupa, or home was left; 700 lamas and 2,000 of its fighting subjects were killed. The chief of the monastery, Chie-bzan Rimpoche, was beheaded. Ch'i-chia-ssu, with its two branches, was leveled to the ground; 500 fighting lamas and 1,000 subjects were killed. The monastery of Chie-bzan vanished in flames; 800 lamas perished or fled. The monastery of Shih-men, a center of revolt, disappeared in a blaze and 700 fighting lamas and subjects were killed. All the lamaseries and important branches situated north of the river were completely ruined; their lamas were either killed or they had fled. At the monastery of Kumbum 300 lamas were beheaded, fled, or were killed. All the temples and homes of lamas were burned, except the head temple.

Nien Keng-yao, commanding the imperial army, said that because of the furious armed resistance displayed by the lamas he had to punish them.[127] The head of the monastery, the mK'ampo, surrendered. The Chinese general informed the emperor about his prisoner. He suggested that by no means should clemency be shown toward him, for he had been the cause of all the trouble, stirring the lamas and the people to revolt. Since nothing more is said about him in the *Shih-lu*, the *Tung-hua-lu* or the *Sheng-wu-chi*, it can be supposed that he was beheaded.[128] During the revolt, two more prominent Living Buddhas were beheaded, Temma gr[illegible]tchen and Nga-ch'i T'u-men-han.[129]

Nothing is recorded about the famous monastery of [712]
Ch'ü-t'an, and I have found it impossible to get any information whether or not it participated in the troubles. Lamas like to keep secret in their fold this dishonorable page of their history. This sudden disaster, which ruined all the institutions of Lamaism in Huang-chung, had more far-reaching harmful consequences in the future, from which Lamaism never recovered.

---

[127] *Shih-lu, Yung-cheng*, ts'e 145, Chüan 14, 10.

[128] These facts are far from the legend as spread by Filchner: that the Ch'i-T'u-ssu was guarantee for Kumbum, that he was the protector of the monastery and that the amban himself could not interfere with the problem of Kumbum. In reminiscence of this fact, the grateful lamas knelt in greeting to the Ch'i T'u-ssu when he attended the festivals at the lamasery. In fact it was customary for the lamas to greet in corps all the T'u-ssu who attended the festivals with their retinue. The same honor was displayed for the Li T'u-ssu and for the Ch'i T'u-ssu at Erh-ku-lung. All the T'u-ssu who fought on the side of the Chinese at that time were intelligent enough to understand that it was not the time to interfere with the problem.

[p.34(B)]

WHAT WERE THE UNDERLYING CAUSES OF THESE CALAMITIES?

The troubles in Lhasa at the beginning of the eighteenth century ruined the influence and power of the Qoshot Mongols in Tibet who had founded the realm of the Dalai Lama.[130] bLo-bzan bstan-dsin, the grandson of Gushi, devising the unification of the Qoshots and the revival in his person of the imperial dream of Gushi, assumed the title of Dalai Hung-T'aichi, and broke into open rebellion against China in the eighth month (September, 1723).[131] His rebellion did not have much appeal for the divided Qoshots, and his power was greatly enfeebled. However, having obtained the tremendous support of the mK'ampo Nomun-khan, superior and chief of Kumbum and his nephew, who called all the lamas and Tibetans of Huang-chung to take sides with him, Bstan-dsin started invading the Chinese frontier and Huang-chung. 175

Since it was feared that Bstan-dsin would perturb Tibet, the Chinese authorities acted with great promptness.[132] Nien Keng-Yao, marshal for the pacification of the distant countries, and General Yüeh Chung-ch'i were provided with strict instructions to furnish a drastic example for the government which had so lavishly bestowed unusual favors on the lamas of Huang-chung. Nien Keng-yao disposed of 900,000 soldiers,[133] of whom 3,000 were soldiers of the Monguor T'u-ssu. He crushed the revolt by March, 1724, and made Bstan-dsin flee with but a few men. The example was drastic. The revolted lamas and tribes were severely punished, and the monasteries destroyed. In the reports of General Funingga, concerning the quelling of the revolt of bLo-bzan bstan-dsin, written in the Manchu language, and sent to the emperor from Hsining, not a single word is encountered about the part played by the Hsining lamas in the revolt or of the drastic repression by Nien Keng-yao, although Funingga three times had defeated the Moslems and Tibetans who helped bLo-bzan. It is not easy to guess the reason for this reticence.[134] 175 579

WHERE WERE THE THREE CELEBRITIES OF ERH-KU-LUNG AT THAT TIME?

The Chang-chia of that time, the second, was still a boy seven years of age. The lamas of Erh-ku-lung had hidden him at the monastery of Chiar-too. Nien Keng-yao, according to orders of Peking, brought the boy there. The whereabouts of T'u-kuan seem mysterious. In 1720 he was in Lhasa, vested with a diplomatic mis- 175

[p. 35 (A)]

sion, but he seems to have been back in Peking before 175
1723. Perhaps he remained at the capital, because Huth [135] tells us that the emperor told him that he was worried about the events in Huang-chung. However, Schuleman says [136] that having been "condoned" he was "brought" to Peking and, a few years later (1729), thanks to his counsel and influence, the emperor allowed the monasteries of Erh-ku-lung and Seerkok to be rebuilt and he contributed to their reconstruction.[137] At that time Sumpa was still a minor Living Buddha, studying at Lhasa. In his later works Sumpa came to the fore with stern uncompromising character in the cause of principles, condemning the acts of lamas who killed human beings. In caustic and cutting terms he frankly put all the blame of these tragic events on the mK'ampo Nomun-khan of Kumbum, on the chiefs of the monasteries of Erh-ku-lung and Seerkok, and on the lamas who caused the ruin of all the monasteries, the destruction of their property, and the death of their subjects, whom they had forced to take their side in the trouble. He defended the line of action and the policy of the emperor and did not put a shadow of blame on the drastic means used by the Chinese officers to crush the revolt.[138]

CONSEQUENCES OF THE REVOLT

The regulations governing Lamaism in Huang- 175
chung after the repression of the revolt were as drastic 792
as the repression itself. They show that the emperor 579
was bursting with indignation, at the appalling ingratitude of the monasteries, for he resolved in dead earnest to use an iron policy in handling the turbulent lamas. All the titles and seals of "teachers of the empire" (*kuo-shih*) and "Masters in Dhyana" (*Ch'an-shih*), granted to outstanding and meritorious lamas during the Ming dynasty, were recalled. The complement of lamas was not to exceed three hundred men for the big monasteries, and ten or more for the small monasteries. Lamas were not allowed to have more than one disciple.

Twice a year the Chinese officials were to investigate the monasteries for observance of regulations for which the abbots had been made responsible, to check the number of lamas, and to prevent the concealing of weapons. All the subjects of the lamaseries had to become subjects of the Chinese administration, and the land taxes accruing to the lamas had to be collected by Chinese officials. The subjects of monasteries became liable to corvées imposed by the Chinese for building cities, digging canals, and for the army. Trials and suits were brought under the jurisdiction of the Chinese courts. Every year the Chinese officials had to grant

each lama a certain amount of wheat and a fixed sum of silver as compensation for the withdrawn taxes.[139] 175 792 579

The revolt of 1723 ruined the former wealth and prestige of the lamaseries. The Chinese officials, who before 1723 had acted reluctantly as humble servants of the chiefs of the lamaseries for fear of the emperor, became their superiors. They acted as such especially in courts of justice, when monasteries and lamas accused each other, or when Chinese brought suit against monasteries. In the minds of the Chinese officials the prestige of Chang-chia and other Hutukhtus of Huang-chung had slipped down many rungs of the ladder of glory. Hutukhtus had to remain in Peking where an honorable office was assigned to them, principally in order to make hostages of them and to prevent new revolts of lamas. Their powers were reduced to honorary dimensions. (The iron hand in the velvet glove!)

Regardless of the fact that titles and distinctions had been granted to the lamas, these drastic regulations were never revoked. Before 1723 the lamas were in the lap of luxury; they collected taxes on their fields which were tilled by their subjects. Now, this primary source of wealth vanished, and their land became of less value.

The boundaries of the extensive properties granted them by the emperors had never been accurately drawn. For the most part, monasteries had simply occupied land adjacent to their property, for at that time they were omnipotent. For more than a century, suits followed concerning the delimitation of the boundaries, which continually shrank, the Chinese officials being eager to sell land to Chinese.

The official revenues of the lamas were restricted to the collection of rents and to a pitifully small amount of wheat and a little silver granted to them yearly.[140] The officials soon substituted poor, cheaper barley for the wheat, and the weight of the grain received was below the official weight; silver was converted into cash and the profit on the exchange went into the pockets of the officials. The subjects of the lamaseries were now subject to the Chinese officials, under whose jurisdiction they were liable to corvée. They were thus withdrawn from the influence of the lamaseries. The once powerful lamas swallowed the bitter pill; evil times had befallen them. The consequences of the revolt of 1723, which had brought Lamaism to such a pass, still prevailed under the Republic.

CONDITIONS OF ERH-KU-LUNG IN 1910–1920

The number of lamas had shrunk from 2,500 in 1723 to 270. Only two of the four former colleges still existed. Eleven minor Living Buddhas inhabited the monastery. The temples, homes for lamas and Living Buddhas, and administrative buildings, had been re- 175 792

[p. 36(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

constructed after 1723, and rebuilt a second time after the revolt of the Moslems in 1872 (at which time the monastery had been abandoned for three years). The internal organization of the formerly flourishing monastery was affected by dissensions among the triumvirate, and peace within its walls was disturbed by the divided lamas, who had taken opposite sides in the conflict. The Chang-chia Hutukhtu left Erh-ku-lung, and more than one hundred lamas followed him. It was a severe blow to the mother monastery. He rebuilt one of his branches, called Ch'ie-bzan, to be his abode on the very rare occasions of his short returns from Peking to the country. He never again visited Erh-ku-lung. The seeds of a callous hostility between Erh-ku-lung and Ch'ie-bzan were planted and their relations cut off. 175 792

The three founders, however, were and remained the co-proprietors of the initial domain, monastery, and branches of Erh-ku-lung. However, each of them, by means of gifts and domains offered to them individually, had built up his own fortune. They hoarded their revenues or used them to found their own branches. In 1910 T'u-kuan Hutukhtu personally was the proprietor of seven branches. He possessed expansive properties on which he built seven villages. He also possessed eighteen oil or wheat mills. His herds of sheep and horses grazed in the Alashan territory and on the domains of T'ien-t'ang-ssu, his former branch, which by 1910 had become an independent monastery. Chang-chia had six branches of his own, eleven villages, nine mills, and very expansive domains. Sumpa had five branches of his own, and wider territories than T'u-kuan and Chang-chia.

The troubles had started not on questions of doctrine or liturgy, but on matters of finance and property. Chang-chia, T'u-kuan, and Sumpa clashed on the question of a territory belonging to the original domain, the status of which T'u-kuan and Sumpa maintained. Chang-chia, however, claimed it to be his property. Finally, the debatable domain was recognized to be the property of the initial domain. 175 792 578

Chang-chia never forgot this loss of face. The money granted by the emperor for the reconstruction of Erh-ku-lung in 1729 was insufficient. Nevertheless, Chang-chia urged that a part of it be used for the rebuilding of his own Ch'ie-bzan. This was refused by the other two and the rift between the triumvirate became wider and wider. T'u-kuan, however, used a large part of his own wealth for the reconstruction of Erh-ku-lung, which lasted for decades. Sumpa, with his own money, built the two colleges, their temples and palaces for Fa-t'ai. Chang-chia refused to make any contribution. After the revolt of 1872 and the destruction of Erh-ku-lung by the Moslems, T'u-kuan and Sumpa rebuilt the monastery. Chang-chia again declined to help.[141] Instead, he rebuilt his own monas- 175 792 [578] 346

[141] It is not surprising that Chang-chia did not print the works of T'u-kuan (see above, p. 31).

[P. 36 (B)]

tery in the most luxurious style. The head temple, with 175
its gilt tiled roof, which had been preserved, was em- 792
bellished and other temples rebuilt. He rebuilt a splen- 346
did palace for himself patterned after the most luxurious palaces in Peking. Chang-chia's Ch'ie-bzan was the wealthiest monastery in the country, with 150 lamas, 2 colleges, and 4 minor Living Buddhas. Most of its wealth was provided by Mongols, among whom the influence and prestige of Chang-chia was proverbial.

Every year, lama expeditions of Ch'ie-bzan traveled 175
in Mongolia in order to collect alms. Chang-chia's 794
prestige was so great that the Queen of the Torgots 648
came to Ch'ie-bzan in 1913, to invite the intendant of the monastery to send an expedition among her tribesmen, for it had been a long time since an expedition had reached her country. I happened to be at Ch'ie-bzan in 1914 when the expedition returned. It had collected 3,000 sheep, 400 horses, and 280 camels, which were loaded with wool and skins.

The breach between T'u-kuan and Sumpa, which oc- 175
curred in 1890, was more tragic. During the rebellion 578
of the Moslems, Sumpa (born in 1854) had fled among 792
the Mongols and Tibetans, north of Kukunor. He met with a Mongol girl, whom he had moved to his branch monastery called Sumpa-ssu. The lama community of Erh-ku-lung, after some years, could no longer stand the disrepute brought on the monastery. It brought [691]
suit against Sumpa before the Amban in the prefectural city of Hsining, claiming he was not a genuine reincarnation. The lama community urged that he be erased from the list of Buddhas, and insisted on the right to search for the genuine reincarnation. For several months the lamas disturbed the whole city with the scandal, and spent money. The Chinese enjoyed all the incidents of the trial. Sumpa lost his face and honor irretrievably. Sumpa, however, was rich and the Amban venal. The Amban finally proposed that Sumpa leave Erh-ku-lung and move to one of his affiliates. This reincarnation (the third) of the illustrious Sumpa, having cut a sorry figure, never returned to Erh-ku-lung, but lived at his branch where, in 1916, his two girls delighted the old age of their father, who was sixty. His eldest daughter had married the son of the chief of the Aruk tribe. In 1916 the old man made a pilgrimage to Lhasa, and the lamas said he was atoning for his sins. No wonder that the Li-fan yüan records lacked information concerning the subsequent reincarnations of the Great Sumpa.

The Living Buddha Ch'ie-bzan of Erh-ku-lung hav- 175
ing a branch monastery of his own, moved into it, 792
appearing at Erh-ku-lung only to attend the festivals. 627
The Living Buddha Wang lived in retired seclusion. 762
Soon after the trial of Sumpa, the minor Living Buddha Tsung-tsa, one of the eleven, followed in the steps of Sumpa and established a family in Tsung-tsa. In the winter of the same year, the minor Living Buddha Seerting was taken and beaten at night by the husband and

[p.3X(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

friends of a lady Seerting was "visiting." He was 175
found the next morning hanging from a beam in his 792
palace. The loss of face had been too tremendous. 627
Erh-ku-lung had become a place of unrelieved misery. 762
The year 1890 was one of the most fateful in the history of Erh-ku-lung.

After the withdrawal of Chang-chia Hutukhtu and 175
Sumpa Hutukhtu, T'u-kuan became the actual omnipo- 792
tent chief of the monastery, and acted and was recognized as such. Because it is customary to hush up dishonorable facts deliberately, Chang-chia and Sumpa were very seldom spoken about. It was a long time before I knew they had been the honored co-founders of the monastery.

The former glorious days of Erh-ku-lung vanished. There were no longer learned men at the monastery, which for a century had been the most celebrated center of learning in Huang-chung. Its renown for science passed to the now flourishing monastery of Labrang. The tragic departure of two of its glorious founders put a blight on it, and left a leaden atmosphere of gloom hovering over it. Troubles had succeeded each other. Kumbum, in the meantime, had made great strides, and became the most celebrated monastery of Huang-chung. It was visited by caravans of pilgrims from Mongolia and Tibet, which no longer cared for, or even paid a visit to Erh-ku-lung. Once at the top of the Lamaist world, Erh-ku-lung became a dim shadow of its former self, a second-rate monastery.

III. THE LAMASERIES IN HUANG-CHUNG

THE YELLOW SECT IN HUANG-CHUNG 792

This chapter will deal with the organization of the lamaseries in Huang-chung. The forty-two monasteries and branches situated north of the Hsining River were built according to the pattern of the old mother monastery of Erh-ku-lung. It seems obvious, therefore, to base the study on this initial institution, the most renowned and flourishing in former times. Because all the lamaseries of the Yellow Sect in Huang-chung have been organized on the same pattern, a general view of Lamaist institutions can thus be obtained.

The study is founded on facts collected during a 121
stay of many years among the Monguors; which may give a better insight into the matter and reveal the trend of mind of the actors.

THE LAMASERIES OF HUANG-CHUNG INDEPENDENT OF LHASA

All the lamaseries in Huang-chung are autonomous 175
units, independent of Lhasa both in matters of admin- 792
istration and appointment of superiors, even in matters of doctrine. The Achia Lama defended the autonomy of Kumbum against the illegal interference of the Dalai Lama in 1908 by committing suicide. This energetic

[p. 37(B)]

revindication of the autonomy of Kumbum by Achia 175
sharply confirms the trend of mind of the Monguor 792
lamas concerning the autonomy of their monasteries.

Not a single lamasery in Huang-chung was founded by the Dalai Lama. Kumbum was founded in 1560 by the lama, Rintschen Dson dui dschamtso, and his ten disciples of their own accord. The fourth Dalai Lama, Yon tan, sent a lama to invite the Monguors of Erh-ku-lung to be so kind as to build a monastery in their country.

Seerkok had been ruined and burned to the ground. The chief lama was beheaded in 1723. Seerkok having no more leaders, the Dalai Lama sent the learned lama, Tsanpo, who was studying at Lhasa, to rebuild the monastery. He bestowed upon Tsanpo the title of Nomum-khan, and recommended him to the emperor. The emperor granted him the title of Hutukhtu. Lhasa no longer cared for Seerkok because it was autonomous, having its own chief.

The other monasteries throughout the whole region were institutions of the Red Sect, such as Ch'ü-t'an, which was founded by the lama San La. Most of them later adhered to the Yellow Sect but maintained their independence. However, some small ties seem to link the lamaseries of Huang-chung to Lhasa. Upon the death of the Hutukhtus of Huang-chung, Lhasa is asked to designate three names to be placed in the golden urn at Peking. One name is drawn from the golden urn thereby determining the new incarnation. However, the three names required for the new incarnation of T'u-kuan Hutukhtu are supplied by his friend, the grand lama of Labrang. The recognition of the incarnation of all the other Living Buddhas of Huang-chung who do not enjoy the title of Hutukhtu is attested to by the Living Buddhas of Huang-chung. Confirmation of this recognition by a minor Living Buddha is sufficient to establish the Living-Buddhahood of lamas deemed by their confreres to fulfill the requirements *ad hoc*.

For more than a century (1600 to 1723) the relations between the monasteries of Huang-chung and Lhasa had been really important, because of the imposing array of learned scholars of Erh-ku-lung who taught in the most important lamaseries of Lhasa, the lamas of Huang-chung who performed their studies at Lhasa, and the several diplomatic missions of the Erh-ku-lung Hutukhtus sent by the emperors to the Dalai Lamas.

It is not hard to understand why Lhasa displayed so little interest in the monastery of Kumbum. The reason is that Kumbum was autonomous. The Third Dalai Lama paid a short visit to Kumbum for the first time in 1583. He insisted on the founding of a school for the explanation of the sacred texts. In 1723 the chief lama of Kumbum was the fateful mK'ampo Nomun-Khan, nephew of bLo Blzan bstan dsin. He received his title of Nonun-Khan from the Dalai Lama.

[p. 38(A)]

From 1715 until 1720 the Seventh Dalai Lama was confined at Kumbum by the emperor. Several visits to Kumbum, made by the Dalai Lama or the Pan-chen Lama on their way to Peking, have to be added in order to complete the scheme of the relations between the two monasteries. 175 792

These facts suffice to prove that the relations between the lamaseries of Huang-chung and the Dalai Lama were of courtesy, friendship, and helpfulness, not those of subordinates with superiors. The independence from Lhasa of the lamaseries of Huang-chung is evidenced by their independence in managing their affairs. Each had its supreme chief, who was the recognized proprietor.

THE INTERNAL ORGANIZATION OF THE LAMASERIES

Each monastery has a supreme chief who is the recognized proprietor of the lamasery and the initial territory granted by the emperor or T'u-ssu for the establishment of the monastery. He is the proprietor of the temples and buildings built by him or his previous incarnations, and of the alms offered to it. In Huang-chung the supreme chiefs of monasteries are all Living Buddhas. At present some of them are minor, others major Living Buddhas. In Kumbum, Achia Hutukhtu is the supreme chief of the monastery; in Seerkok, Min-chu-erh Hutukhtu. In Erh-ku-lung there are three supreme chiefs, Chang-chia, T'u-kuan, and Sumpa, but actually T'u-kuan Hutukhtu alone governs the whole monastery because of the historical circumstances already recorded. Minor Living Buddhas are Buddhas who do not enjoy the title of Hutukhtu, granted by the emperor, and whose name, usually, is not recorded in the files of the Li Fan Yüan in Peking. Minor Living Buddhas, in order to live inside the walls of the great monastery and to build a palace, must obtain the permission of the supreme chief; they are considered as guests of the lamasery. 792

The supreme chief is responsible before the Chinese administration for his subjects' crimes or murders committed in his monastery, or in his domain. He appoints the superiors of the various institutions established inside the monastery and in the branches. In time of trouble between the various institutions he tries to mediate. The extent to which he interferes with subordinates depends not on institutional regulations, but simply on whether he is personally a meddlesome character.

In monasteries the "community of the lamas" is a recognized autonomous unit, with its own wealth, properties (herds, fields, subjects, etc.), administration. It has its own right to bring suit in the Chinese courts, and to establish subsidiaries, whose administrators depend upon it and not upon the supreme chief. The community of Erh-ku-lung has three such subsidiaries: Ta-ssu, Hsiao-ssu, and Hsiao Erh-ku-lung. It was the

lama community of Erh-ku-lung that brought suit against Sumpa and spent the money for the trial, not T'u-kuan Hutukhtu, who would not interfere to prevent the scandal. 792

The colleges or faculties in monasteries are also recognized autonomous units, with their own administration, properties, wealth, gifts, alms, and the right of suing in Chinese courts. I do not have any record of colleges possessing branches, but I suppose they do. [794]

What bond binds these disparate elements together? Usually a Living Buddha who is the supreme chief of a lamasery is honored by the lamas, who know that he is always ready and braced to defend the rights of the institution, like Achia at Kumbum. When the communities or colleges meet with financial troubles, they know that the supreme chief uses his own wealth to make donations to them—"help provided makes sympathy wax." Nevertheless, each institution has its own administration, and the supreme chief does not interfere with its jurisdiction. The governing board of each institution confers with the supreme chief on the appointment of administrative officers and on such matters as the invitation to be sent when a new Fa-t'ai is needed.

If troubles arise the board of the autonomous institution takes advice from the supreme chief, and many difficulties are thus avoided. Finally, the supreme chief has the right to dismiss recalcitrant members, but if an entire group persists in standing up for its rights, and threatens to bring suit in the Chinese court or to quit the monastery, the supreme chief can rarely prevail against them. Nobody can prevent a lama or a group of lamas from quitting a monastery; no vows or bonds tie the lamas to any monastery. Undoubtedly, a great amount of kindness and devotion on the part of the supreme chief toward the members of the monastery is required. This is the real keystone of an effective administration in monasteries whose elements are so loosely united.

ADMINISTRATION OF LAMASERIES: MATERIAL ASPECTS

The administration of a lamasery is complex. In order to get a better insight into the matter the material aspects will be dealt with first, and then the religious and educational.

OFFICIALS AND THEIR ATTRIBUTES

Most Living Buddhas who are supreme chiefs of monasteries live in retirement in their palaces, and are happy to entrust the entire material administration of the institution to a lama intendant, for whom the Tibetan term is Tsuordzi and the Chinese term, Hsiang tso. The few exceptions who are meddlers with the administration are well known throughout the country, and that kind of Living Buddha usually does not get very far with his intendant.

[p. 39(A)]

The appointment of the lama intendant is an act of 792
overriding importance and far-reaching consequences. The supreme chief himself chooses a capable, loyal, and dependable lama and appoints him as Intendant of the Monastery—not of the community of lamas, or of the colleges. The appointment is indefinite and can be transferred to another lama at the will of the supreme chief. Usually, however, it lasts for a lifetime. The intendant is a man of confidence on whom the supreme chief relies completely. He occupies a large courtyard of the administrative buildings constructed in the center of the monastery. The instruments of torture displayed at the gate of his courtyard indicate that he rules its court of justice and is its chief executive by appointment of the proprietor of the monastery.

All important administrative questions of the monastery are discussed between the supreme chief and his intendant: the invitation of the Fa-t'ai's proposed by the boards of the community of lamas and of the colleges, the appointment of procurators and of lay intendants; matters concerning the subjects, the villages, and branches of the monastery; and troubles between lamas or within the community of lamas or the colleges. The intendant knows the lamas of merit and the intrigues, competitions and factions among them. He is invited to attend the meetings between the supreme chief and the boards of the colleges and the community of lamas. Because he is a man of experience, and usually of long residence at that particular lamasery, his advice is respected and usually followed. The ability to mediate is even more important than the manner of authority.

The intendant must be a man who knows the Chinese 792
officials and the intricacies of the courts of justice. He 648
sends the seasonal gifts to the Chinese officials, visits them to knit friendship with them, and knows who among them is well or ill disposed toward the monastery. He also knows the influential persons in the city who are friends of the officials, and who among them can be used if need be for the benefit of the monastery by exerting their influence upon the officials. He visits such people occasionally during the year to offer them gifts, in order to have a foot in the door when needed. Lamas know very well that "Justice cannot stand on its own feet, it needs to be supported and steadied." The intendant must be a man who can see farther ahead than ordinary naive and ignorant lamas and is able, therefore, to dissuade them from bringing lawsuits.

The intendant of the monastery alone disposes of all 792
the wealth of the monastery (not of the wealth of the community of the lamas or of the colleges), its revenues, investment of capital, loans, gifts, and alms received (but not of alms given to the community of lamas or to the colleges). He has to cope with all the expenses of the monastery, and to try to increase the collection of gifts and alms. He is in charge of the provisioning of the monastery, and must see that the procurator secures

[p. 39 (B)]

the colossal amounts of butter that a monastery requires. In the temples of Erh-ku-lung eight butter lamps burn before the statues day and night. Each lamp consumes 180 pounds of butter every year, making 1,440 pounds for the eight lamps. The intendant told me that every year he had to provide a total of more than 3,000 pounds of butter for lamps, kitchen, and tea, and had to send lamas to Kukunor and Mongolia in order to collect this enormous amount. The intendant, in short, is the biggest cog in the wheel of administration. A visitor must inquire for him and pay him a visit, for it is he who cares for visitors and pilgrims of note. 792 [354]

It is easy to understand why it pays to have an experienced intendant, one who creates good relations with the outside Chinese world, acquires benefactors for the monastery, maintains control of the inside world of the monastery and has sufficient influence to be successful in the office, but these things cannot be realized in a few months.

The choice of an intendant who is capable is usually easy, but it is not so easy to find a lama who is, at the same time, capable and always loyal and dependable. Because so much power is vested in him it is not exceptional to encounter an intendant who is getting too big for his britches, stirring up trouble and acting as if none of the rules of the monastery existed for him. He disposes of so much wealth that it is almost impossible to control his financial transactions, and many intendants pile up their own comfortable fortune. They know all the liabilities and the debts of the monastery; they enjoy too much personal influence in Chinese administrative circles, and when things go wrong they can pull many wires in order to save themselves or even to harm the monastery. It is not easy to handle intendants, and it is more difficult to dismiss them, according to the sayings of experienced old lamas.

Next to the intendant comes the procurator (nirwa, in Tibetan; Takuan-chia, in Chinese). He also is appointed by the supreme chief of the monastery, in consultation with the intendant. The appointment is for three or five years, and may be renewed. The procurator supplies the personal needs of the Living Buddha, and under the supervision of the intendant he administers the internal affairs of the intendancy, including the board and jobs of servants, upkeep of buildings, stables, and equipment. He organizes the expeditions that go out to collect alms in Mongolia and Kukunor, keeps the accounts of the collection of revenues and of the corvées imposed on monastery subjects, and judges minor lawsuits. He discusses with the intendant the small loans granted to subjects or other people, dispenses the alms distributed to lamas. He is in fact the lieutenant and usually the protégé of the intendant, through whom he has obtained his appointment from the Living Buddha. If an intendant and his procurator are in collusion, they can easily dupe the supreme chief for a long time. [p.40(A)]

The procurator in turn has an assistant (htie wa, in Tibetan and erh kuan chia, in Chinese), who helps him at the job. He is appointed or dismissed by the Living Buddha at the same time as his superior. The servants under the procurators vary in numbers according to the importance of the monastery. At Erh-ku-lung there are thirty lama servants and ten lay servants. 792

Two lay intendants are also appointed by the Living Buddha. It is customary, after three years, that they present their resignation, which is accepted or refused. Their duties are more honorary than executive. When the Living Buddha goes on a journey they accompany him as masters of his retinue. Under the empire a blue button adorned the top of their hats. They take care of the impedimenta. Arriving at a destination at night, they take care of all necessities at the inn, and then take the visiting card of the Buddha to the Chinese official of the village or the city. The intendant sends them to the city to bring gifts or to greet the officials when he is unable to do it himself, and he delegates them to mediate in the villages. [574]

When the personal wealth of the supreme chief is great enough, he appoints a private intendant and procurator to administer it.

The minor Living Buddhas who are guests, living at the monastery, have their own administration. It is more or less personal, according to their wealth (subsidiaries, villages, herds), and according to their own propensity for caring for their business. Their intendants do not enjoy such influence as the intendants of the important monasteries.

The material side of the administration of the communities of the lamas and of the colleges is identical, consisting of an intendant and procurator chosen by them but approved by the supreme chief. Their intendants are important personages who care for the wealth of the community or the college, investment of capital, revenues of villages, sale or purchase of land, herds, relations with the Chinese administration, suits at the court of justice, judgment of the suits of subjects, care of the subsidiaries and gifts. These procurators provide the food used at the meetings, and supervise the upkeep of the buildings and temples of the community of lamas and the colleges, and of the palaces of their Fa-t'ai's. They manage the expeditions to Mongolia and Kukunor for the collection of alms, distribute the share of alms offered to the lamas of the community or to the colleges, and the collection of the revenues of lands. They are appointed by the supreme chief on the joint recommendation of his own intendant and the board of the community or the college. The intendant of a community of lamas or of a college is therefore always the protégé of the superintendent, although the administration of the community and of the colleges is at the same time institutionally autonomous.

These notes give an insight on the personnel used for the material administration of the Monguor monasteries

[p.40 (B)]

and their attributions; it is identical, probably, in all 792
the monasteries of Huang-chung.

ENVIRONMENT OF THE ADMINISTRATION

In order to gain an insight into the administration of a monastery, of a community of lamas, or of a college, it is not sufficient to know what officials make the wheels turn and what their respective functions are. A knowledge of the environment in which they act is also necessary. This can best be provided by examples, numbered below from 1 to 7. The intendant is ultimately the hub around which the entire administration is built.

(1). In 1914 the Lama Li, intendant of the monastery of Erh-ku-lung, moved his two concubines into a nice building situated in the most remote west corner of the monastery. The three intendants of the lama community and the two colleges protested vehemently to the T'u-kuan against the impudence of the intendant and urged his dismissal, but he was only ordered to move his concubines to the "summer palace" of the Hutukhtu himself, a couple of miles distant from the monastery.

Li was a very capable man, well known all over the 792
country. He had often extricated the monastery from 426
very tight spots. A few weeks before he was given the above order, he had succeeded in sending back to Mongolia a strong group of Mongols who had been dispatched by their prince to urge the long delayed payment of an important debt contracted by one of T'u-kuan's former incarnations. For six months the Mongols had been enjoying life, eating the best food, drinking the best wine, and feeding their animals at the expense of the intendancy. They were resolved to leave the monastery only after full payment of the debt. No one had succeeded in persuading them to leave, not even by proposing to pay half of the debt at once and the remainder the following year. Intendant Li, who had been on duty in Lanchou, was finally summoned by the distressed Hutukhtu. After a few days he had succeeded so well as to make the creditors grant "reverentially" the remission of half of the debt and to make them joyfully agree to urge the payment of the remaining half by the next incarnation of T'u-kuan.

T'u-kuan was greatly indebted to his intendant for 792
the many services rendered to him, but at the same time he was unable to dismiss him for fear he would revive many old troubles and harm the monastery. The intendant was thoroughly aware of this predicament and acted impudently, breaking one of the most basic rules of the Yellow Sect, that of celibacy.

(2) A servant of the intendancy of the old and 792
venerated minor Living Buddha Li of Erh-ku-lung in- 691
advertently broke the big tea cauldron belonging to 628
the community of the lamas. The intendant of the [415]
community of lamas stirred up the turbulent lamas who urged old Li to have a new cauldron cast, but the placid

[p.41(A)]

old Li would not budge. The whole community was 792
humming like a beehive and about to drive the old Li 691
and his intendant out. T'u-kuan Hutukhtu was unable 628
to pour oil on the troubled waters; the furious intendant of the community of lamas, in a flush of excitement, called thirty lamas, went to Hsining and brought an accusation against old Li. At the court the Amban immediately fell under the spell of the placid and respectable Buddha, bent with age, who explained his case peaceably.

The Amban did not allow the thirty or more turbulent lamas to return to the monastery, after they had, with vehemence and arrogance, several times presented their claims before him. He made them wait for the publication of the verdict, and while waiting had them live in Chinese inns, where they spent money every day, bribing the happy officials who would make their hopes run high one day and dash them to the ground on the next, thus making them spend more money. The Living Buddha and his intendant lived at peace at the home of his nephew, the Li T'u-ssu. He was acquainted with the most prominent men in the city, had them working for him and bringing small gifts. After four months the impoverished lamas became as meek as lambs and the Amban deemed the time ripe to pronounce the verdict: "The cauldron had been broken inadvertently. Because the community of lamas drank tea from the cauldron several times every day, the community should bring into his hands $800, and he would take care of the casting of a beautiful cauldron; the intendant and the board of the community should be put in jail until the money was ready." The epilogue of this interesting trial was that after a few days the money was reverentially placed in the hands of the Amban, the intendant and the men of the board were released, and the Amban had a cauldron cast—for $150!

The intendants are powerful elements in a monastery. In this case T'u-kuan Hutukhtu, belonged to the clan of the Li T'u-ssu, as did the venerable old Living Buddha Li. Yet he could not stay the hands of the intendant and the board of the community of the lamas who, incautiously disregarding the relationship between the two venerable living Buddhas were too quick on the trigger in resorting turbulently to the Chinese courts of justice, although they should have known the dangers by experience. The officials know it is impossible to talk sense into such lamas without first making them spend all their money and letting them wait for months at the gate of the court. The lesson given to the lamas is remunerative for the Chinese officials, but the lamas, stubborn as mules, appear again before the judges at the next opportunity, and receive the same lesson all over. Such is the atmosphere of a monastery and its 688
inmates. 792

(3) Li, the lama intendant, of the Living Buddha Lu, 691
supreme chief of the monastery of Yang-k'uo-erh-ssu, 578

[p.41(B)]

was officially appointed chiliarch (*ch'ien hu*)[1] by the 688
Amban, with the privilege of judging the subjects of 792
the monastery. He was thus simultaneously a monastic 578
official and a Chinese civil official. He had amassed a 691
comfortable fortune at the expense of the subjects of six villages belonging to the monastery. A shrewd, capable man, in order to assure his position, he cleverly moved his younger sister near the monastery in order to have the young Living Buddha "acquainted" with her.

Lamas and subjects urged the dismissal of the intendant. The Buddha refused and threatened to accuse the three ringleaders of the rebellion, but the subjects and lamas went to the court of the subprefect of Nien-pe and accused both the Buddha and the intendant. Knowing that the intendant was rich, the judge examining the case put him in jail on the very first day of the trial, to make him understand that the roles were reversed. The sister of the intendant was called to testify, and the Living Buddha lost face before the people of Nien-pe, who attended all the sessions with the keenest interest. Finally, the Buddha was divested of the privilege of having a chiliarch to judge his subjects, and blushing with shame he received a lecture from the judge on the observance of celibacy in the Yellow Sect. The girl was ordered to move far away from the monastery.

The intendant, dismissed from his office by the judge, was released after several more months. He had spent his whole fortune, and had even been forced to sell his fields, cattle, and two oil mills. During the troubles, 70 of the 150 lamas left the monastery. This intendant caused the ruin of the monastery.

(4) The most beautiful bridge in Kansu is over the 792
Ta-t'ung River, opposite the monastery of T'ien-t'ang- 578
ssu, which before 1723 had had three colleges, two 628
Living Buddhas, and 700 lamas, and at this time still had 200. When the supreme chief of the monastery was only seven years of age, troubles had started between the intendancy of the monastery and that of the community of lamas. Each claimed to be the proprietor of the bridge, with the right to collect tolls. The lamas, divided into two groups, became involved in the troubles. For twelve years both intendancies, accusing each other, moved from city to city and from one court of justice to another, and spent all the money of the respective intendancies. The head temple of the monastery was closed for three years. Finally, the Chinese judges having milked the cows dry, abolished the right of the lamas to receive the toll and took it themselves. The peace of the monastery was disturbed to the point that 120 disgusted lamas left. In 1920 only 80 lamas remained, some old men, but mostly children. The stubborn intendencies had preferred to wreck the

[1] "Chief of 1,000 families" is an official, appointed by the Chinese administration, who controls a tribe or group of people. He imposes corvées, collects taxes for the government, mediates troubles, and awards punishments. Although his subjects very seldom number 1,000 families, the title remains the same.

lamasery rather than accept any of the propositions suggested to end the feud.[2] 792 578 628

(5) I was told many times, by two honorable intendants, that it was the heated rivalry between the intendancies of the three supreme chiefs of Erh-ku-lung that had, in former times, caused the departure of Chang-chia Hutukhtu, the rift between the supreme chiefs, and the decline of Erh-ku-lung. There must be a grain of truth in the traditions of these experienced men who, better than we, understand the enormous influence exerted by the intendancies upon the Living Buddhas, and the jealousies between the intendancies.

(6) Most old lamas have a disciple who, upon their death, becomes their legal heir and proprietor of their entire fortune (home, herds, money, etc.). However, it is a noted fact that it is very difficult for the disciple of an intendant to inherit the fortune of his master. The old intendant of the Tenma Living Buddha, supreme chief of the monastery of Kan-ch'an-ssu, became sick, retired, and declined into that stage of life called "second childhood." His disciple, an intelligent boy of fourteen years, following the advice of his shrewd, experienced maternal uncle, Manguru, chief of a Tibetan tribe in Waza, subject to Tenma, secretly moved the comfortable fortune of his master to the home of his rich uncle. When the master died, Tenma, thinking like every Living Buddha, suspected that his old intendant had amassed a fortune at his expense and went immediately to examine his richly furnished home, hoping to find a colossal fortune. The floors of the rooms were turned over, the chimney broken, the sheep, cow, and horse pens dug up several feet deep, but no silver was found. Railing and raging, the Living Buddha drove into his own pens the 150 cows, 40 horses, and 600 sheep of the deceased. 792 428

The maternal uncle defended the disciple, and protested. After a couple of days the deluded Tenma went to Hsining with an imposing retinue of twenty men in order to accuse the disciple and his uncle at the court of the subprefect, of having stolen the fortune unjustly amassed by the intendant. The disciple and his uncle were flogged and thrown into jail, but did not confess to being guilty. After a few days the shrewd uncle made friends with the underlings of the officials by bribing them. He and the disciple were released, and thereupon rewarded the underlings by showing them the way to extort money from Tenma. After three years, the subprefect declared both the uncle and the disciple innocent. Tenma brought suit again at the court of the Amban, where it dragged on for more than four years more, which made the officials happy. They excited his hatred against the disciple and his uncle. But the disciple and his uncle lived in a small inn and 792 691 428

[2] Reginald Farrer, *Rainbow bridge*, 111, London, Arnold, 1921. Farrer was in T'ien-t'ang-ssu during the summer months, studying the flora of the country. He describes the wonderful bridge and includes a picture of it.

[p.42 (B)]

did not spend much money. Tenma, with his retinue, 792
living according to his station, giving bribes and send- 691
ing gifts, spent lavishly. Finally, the disgusted Amban, 428
in order to end the trouble, delegated his power to the Living Buddha of Seerkok.

The intendant of the living Buddha of Seerkok, prompted by the Amban, settled the question after two or three sessions. He condemned Tenma to pay 3,000 taels to the disciple as indemnity for carrying away the cattle. Tenma protested. He was put in the jail [697] of the monastery and manacled. After two months he agreed to pay the alloted sum, and so was released.

Epilogue: For seven years, the stubborn Manguru was the most talked of man in the country because of his courageous resistance to the Living Buddha. He decided to rehabilitate the poor man, on whose chieftain's prestige his tribe depended. He bought a nice black horse, a fine Peking saddle, put a piece of yellow satin on the top of it, and, preceded by a band of Chinese musicians, he and the disciple prostrated themselves and, apologizing, presented the horse.

This case is unique in the annals of Lamaism in Hsining. A stubborn Living Buddha, condemned by the intendancy of Seerkok, was put in jail and manacled. What was the cause of the trouble? Living Buddhas were eternally suspicious of the honesty of their intendants. Noteworthy also is the fact that the maternal uncle, not his father or brother, defended the disciple. In the tribe of Manguru matriarchy is still prevalent.

(7) Last of all, a very important psychology is to 792
be noted regarding injustices perpetrated among the 796
Monguors and Tibetans, and among lamas as well as among Living Buddhas. When an injustice is committed, its perpetrators are pursued by the enraged guardian spirit that protects the wealth of the family involved. According to this philosophy, when intermittent calamities or misfortunes occur in a family and weigh it down, magical rites are to be performed to propitiate the enraged pursuing spirit. (This rite will be studied later.)

This rite was ordered to be performed at his branch 792
monastery by the poor Sumpa Hutukhtu when, after 788
his voluntary banishment, one misfortune succeeded another. He claimed that the misfortunes were caused by the injustices perpetrated by the former and present intendants of his monastery, who had aroused the avenging bolts of the guardian spirits of the families who had suffered their injustices. The same rite was performed at Erh-ku-lung in 1919, on the orders of T'u-kuan Hutukhtu, after he had vainly built a Bumkhang in 1917, in order to put an end to the misfortunes which ruined the monastery. It was performed at Seerkok in 1920, on the orders of the supreme chief of the monastery, Min-chu-erh Hutukhtu, in the same circumstances, and the same explanation was openly proclaimed by both prominent chiefs of the most important monasteries. [p.43(A)]

I remarked that the performance of this rite, not kept secret in the fold of the monastery but put completely on public display, was not very honorable for the intendants. The lamas answered, "When squeezed to the wall and when all other rites have been of no avail, the rite has to be performed." Such facts, without stretching the point, are really informative, concerning the type of the intendants. 792 788

The overriding importance attached to the appointment of the intendant, who can make a monastery flourish or ruin it, may be explained by the enormous influence exerted in a monastery by them, which matches that of the supreme chief of the institutions, and the stumbling blocks encountered by the intendants, which endanger the correct fulfilling of their office. They serve also to gain a true insight into the frame of mind of the administrative world of the monasteries.

MEANS OF SUBSISTENCE OF THE LAMASERIES

DOMAINS

During the Ming and the Ch'ing dynasties, large domains were granted to the monasteries to provide their means of subsistence. In former times it was easy for the emperors to be lavish in such grants in a sparsely populated country. I never had the opportunity to see the old deeds under which the vast domains of Erh-ku-lung and its flourishing subsidiaries had been granted. Its most important domain is that of the Fan-wu-pu, which it shares with its daughter monastery of Seerkok.[3] 792 423 643 434

The Chang-chia, T'u-kuan, and Sumpa Hutukhtus were the favorite Living Buddhas of the emperors. It seems an obvious assumption that private domains were also granted to each of them, because Chang-chia was able to found on his properties six branches and eleven villages. T'u-kuan founded seven villages and seven affiliates, while Sumpa founded five branches, and further it is said he disposed of more domains than both Chang-chia and T'u-kuan. The tax and rent revenues collected on their private properties must have been considerable because Chang-chia built nine oil and grain mills and T'u-kuan eighteen, in order to dispose of their grain. [256]

[3] The Fan-wu-pu (the five tribes of barbarians) are situated in the region of Wei-yüan-p'u. They are: (1) Pei-tsui-pu (Narin valley), (2) Tsan-tsa-pu (east and west Tsan-tsa), (3) Hsieh-tsa-pu, (4) Pu-tsa-pu (near the mountains), and (5) Kuang-hua-pu (west of Wei-Yüan-p'u). The people living in these vast territories were the subjects of these two lamaseries, to which they paid taxes and rent, and were liable for corvées. All the villages from Pei-tsui-pu eastward (Ha-la-chih and Hung nai valleys) belonged to Erh-ku-lung; those westward to Seerkok. In 1910 both lamaseries still collected the rent of these fields, enjoyed the privilege of traveling for alms among these former subjects, and vindicated the right of still being invited by them for the performance of public and private religious activities. In that region the monastery of Erh-ku-lung had built twenty-four oil and grain mills. These domains were administered in former times by the important T'u-kuan and Seerkok Nang suo.

[p.43 (B)]

Concerning Seerkok, the former subsidiary of Erh-ku-lung, it is recorded that it disposed of a property 45 miles (150 *li*) in length and 10 miles (30 *li*) wide.[4] Achia Hutukhtu of Kumbum collected taxes and rents from five tribes of farming Tibetans and the inhabitants of seven valleys.[5] The country for 200 *li* around Kumbum belongs to the monastery; several thousand "tame" barbarians are its subjects.[6] Achia Hutukhtu received from the emperor an extensive region for grazing his herds in Chahar (Inner Mongolia). The contract was written by order of the emperor in 1766.[7] Erh-ku-lung received land from the Ch'i T'u-ssu, where a lot of its subjects farmed. After the revolt of 1723, the Ch'i T'u-ssu responsible for the revolt of Erh-ku-lung lost his title and the subjects who farmed his land. Later he was given a chance to regain his title and subjects, if he could bring those who had revolted to submission. He succeeded, and recovered title and subjects, as described in Part I (p. 50).

It has been recorded that Ch'ü-t'an, which was the first lamasery founded by the Ming emperors, received wide domains so that it was able to build the two large branches of Yao-ts'ao-t'ai and Hung Shan-ssu (*Annals* of Hsining. ch. 15, p. 13). During the Ming dynasty large domains had also been granted to the Karwa and Nang-suo institutions, as noted above. Most of the minor Living Buddhas also possessed domains granted by T'u-ssu or wealthy people, or which they purchased themselves.

If account is taken of all these facts, it is easy to understand why the Chinese officials, who before 1723 could not collect taxes on all these vast domains, harbored an enormous jealousy, and why they exulted after the revolt when the emperor assigned the collection of these taxes to them. The text of the author of the *Annals* of Hsining records (chap. 31, p. 22) that ". . . in 1727, by decree, the emperor in one day, put an end to calamities lasting hundreds of years." This text, on the one hand, proves the rejoicing of the Chinese officials at that time; on the other hand, the loss of these enormous revenues impoverished the monasteries tremendously. The lamas, however, were very proficient in finding a means to cushion the shock to some extent.[8]

RENTS

After the revolt, the lamas could only receive the rent of their tenants in the way in which a rich landowner received them; but it was customary that the government receive the taxes, not directly from the tenants.

[5] *Ibid.*, 143.
[6] *Ibid.*, 11.
[7] *Ibid.*, 143.
[8] In 1948 according to the official data provided by the Bureau of the actual province of Ch'ing-hai (Hsining), only 177 of the 235 Jamaseries, owned collectively about 500,000 *mou* (acres) of land and 5,000 to 6,000 head of livestock. Wang Wen-han, *Pien-chiang tung-hsin* 1: 1–7, 1948.

but from the landowner who, in case the tenant disappeared or became insolvent, was responsible for the tax. In this way the lamas who were landowners had to collect the official taxes from their tenants, and accompany the endless caravans of their tenants' donkeys carrying grain to the official granaries. Before the journey to the granary started, however, each tenant had to measure the grain in the presence of the lamas and with the measure supplied by the lamas, the capacity of which was greater than the official one; this enabled the lamas to set aside a valuable surplus over the vast amount of official taxes. 792 427 651 434 [492] [804]

The properties of the lamaseries, consisting of extensive territories, contain a large part of waste and untilled land on which no taxes are imposed. The industrious intendants developed these properties by means of irrigation canals, and called in new farmers to till the new fields. The legal amount of taxes, however, has always remained the same as the initial amount, because the intendants, by means of collusion and bribery, easily succeed in gaining over the tax collectors. In this way the revenues of the intendancies are greatly increased, and they still receive surreptitiously a very large revenue. Moreover, they are able to store the surplus, which they can grind or sell when prices are highest. 792 423 651 [311 312] 434

HERDS

Sheep, cows, and horses constitute, for many intendancies, a source of revenue. Large herds are grazed in Kukunor or Mongolia where the pastures are larger, smaller herds in the country for local use. Mongol princes and Tibetan chiefs of tribes are always ready to help the monasteries. A contract is made with herdsmen by which the first calves, colts, and lambs belong to the owner, the second-born to the herdsman, and so on. Every three years a lama inspector of the intendancy examines the accounts of the herdsmen and settles with them the number of animals to be sold, and the herdsmen show the skins of the animals which died during the three-year period. If they cannot produce the skins of the dead animals it is assumed that they sold the animals and they must pay the owner of the herds. 792 434 233

OIL AND GRAIN MILLS

These mills are a large source of revenue. The monastery proper of Erh-ku-lung is owner of twenty-four oil and grain mills; the T'u-kuan himself has eighteen, Chang-chia nine. The mills are leased by Monguors or Chinese. The rent of oil mills is 300 pounds of oil for a season's use, besides which it must press the oil belonging to the monastery. The grain miller must grind the grain of the intendancy and at the New Year season give a pig weighing 120 pounds. Most of the oil which is not consumed in the kitchen in the preparation of food, or in the lamps in the temples and homes, is sent by raft to Lan-chou, the capital of the province. 792 434 256

[p.44 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

The oil trade is a very important and lucrative business. Flour is sold in Hsining. The taxes imposed on the mills are very heavy, but the monasteries still enjoy the old privilege granted before 1723, and are exempted from these taxes. Even families in which a Living Buddha has been born enjoy the same privilege, for instance, the Lan family living in Hung nai tzu Valley. Every year, however, the family has to offer 10 pounds of oil at Erh-ku-lung to the intendancy of its Buddha, deceased a century ago. The lamas claim the privilege, which was granted during the Yung lo period (1403–1424), because oil is consumed in the lamps of the temples before the Buddhas, and flour is used by the lamas, the servants of Buddha. 792 [438] 434 651

FORESTS

Only two monasteries possess extensive forests—Seerkok and T'ien-T'ang. Because wood is very scarce in the northern part of the province, forests are an important source of revenue. 792 434 314

TOLL ON BRIDGES

The history of the famous bridge of T'ien T'ang has been recorded. For many years it was a source of large revenue, which finally caused its ruin. 792 434 [494]

The monastery of Kan-ch'an, belonging to the famous Tenma, receives toll on a raft, which ferries passengers across the Ta-t'ung River. Tenma is a very well-known man in the country. His first incarnation, a learned man, was appointed Fa-t'ai in Erh-ku-lung by the first Chang-chia (Huth, p. 279). It is related that he caused the ruin of Erh-ku-lung. In 1723 bLo-bzan bstan-dsin, chief of the revolt, was a prisoner in Hsining, and about to be executed. He heard that Tenma was in the city. Through the guardians of the jail, he implored him to write a letter to the Chinese generals in order to save his life. Tenma, unaware of the consequences of such an act, wrote the letter. The generals got the impression that Erh-ku-lung was mixed up with the revolt, and they destroyed the monastery. This is a fine story, manufactured on the ground out of whole cloth, in order to free the old mother monastery from blame, but why was the blame put on Tenma? 505 175

For many years during the period of my stay, the young Tenma, swelling with ambition, was the most talked-of man in the country for his audacious plan to construct a European suspension bridge over the river, like those in photographs he had seen in magazines. He started buying all the available iron in the country, felling all the big trees growing on the domain of the monastery, and building a large brickyard. Blacksmiths, carpenters, and bricklayers worked for four years. He built four great towers, two on each side of the river. The blacksmiths made enormous iron chains, too heavy to manipulate or to move. He exhausted the entire treasure of the monastery. Troubles started 792 334

[p.45(A)]

among the intendancies and the impoverished lamas. 792 Saddled with debts, and his plans not working out, he 334 was compelled to give up his ambitious dreams and revert to the ancestral raft.

It is said that this holy man enjoyed the gift of bilocation. The people still state that many times many people saw him directing the shifts of blacksmiths and carpenters on the river, and at the same time saw him in ecstatic rapture in the temple.

It was after his financial collapse that he started the trouble with the disciple of his deceased intendant, which lasted for seven years, in order to retrieve his fortunes, only to land in jail in Seerkok. Finally, having debased his name and position of authority, he moved to one of his affiliates in the region of Kan-chou, where he was still living in 1920. Tenma was a typical figure in the world of Living Buddhas in 1910–1920.

COLLECTION OF ALMS IN FAR-OFF COUNTRIES

Expeditions to far-off countries are an important 792 source of revenue. They last for several months and 434 are organized by the various intendancies in their own 431 behalf. Sometimes the supreme chief of a monastery accompanies the expedition. In 1914 T'u-kuan went to the region of the Yellow Tibetans (Uigurs) living around Su-chou. He left on the second of the second moon and was back at Erh-ku-lung in the tenth moon, with 124 cows, 146 horses, 90 sheep, and 2,000 taels. He seemed to be very happy when I visited him after the trip. During the troubles in 1940, T'u-kuan went to Mongolia, among the Urats, and traveled for four years. He visited me at Man-huei in Hou T'ao. He had a lot of trouble entering Hsining with 300 horses and 200 loaded camels because he was suspected of having had connections with the revolting Mongol, Te wang.

When I was in Kumbum in 1912 I met a returning expedition from Kukunor and Ts'aidam with 3,000 sheep, 260 horses, 140 cows, and loaded with butter, wool, skins, and yak hair. All the butchers from Hsining rushed to Kumbum to buy cheap cows and sheep. In December, 1914, I met a caravan of Kumbum returning from Kukunor and Ts'aidam with 6,000 sheep, 150 horses, and 200 cows. On the way they had lost 40 horses. They went to Hsining in order to [427] bring suit against the chief of the tribe on whose territory the horses had been lost. The Amban settled the trouble in one session. He ordered that a kettle containing boiling oil be brought to him. Then he ordered both groups to grasp a one dollar piece he had thrown in the boiling oil. The lamas prostrated, apologized and implored for mercy, but the Tibetan chief tucked up his sleeves and went straight to the kettle. The gesture was sufficient for the Amban. The lamas received two hundred lashes, and were put into jail until a fine of two hundred dollars was brought to the court. [p.45(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

In 1914, in Nien pe, I encountered the unusual case 792
of a lama not enlisted in any monastery, who came back 434
from Mongolia, with 40 loaded camels, to the home of his brother in Kang-tzu Valley, after a trip which had lasted for sixteen years. The shrewd lama had collected alms for himself! He died a few days after his return. His brother thereafter was a rich man.

A large capital investment is required for such ex- 792
peditions. The intendancies buy all kinds of things 484
used by the nomad Tibetans and Mongols. They carry 434
prayer books, paintings and statues of Buddhas, spoons, 443
wooden cups, teapots, kettles, thread of all colors, needles, boots, cotton, silk, satin, combs, tobacco, saddles from Peking, bridles, stirrups, finger and ear rings, charm boxes, toothpicks, ear probers, tweezers, prickers (necessary for the performance of the toilet), cheap synthetic jewelry, and tea.

All these things are loaded on oxen and entrusted to loyal and dependable lamas of the intendancies who set out on the journey. All along the way they sell their wares, adding to each item a scarf of felicity, blessed by their Buddha at home. The trade is carried on by [437]
barter. They accept wool, skins, yak hair, butter, sheep, cows, and horses, claiming they are collecting alms. When the animals they collect along the way become too numerous, they hire Tibetans or Mongols to help drive them. Because they get twice or thrice the cost of the wares and because labor has little value, these expeditions are really remunerative. However, if it happens that a caravan of another intendancy precedes their own, and the Tibetans or Mongols do not need anything more, then "fishing after the net is a losing business"; but according to the figures noted above, the expeditions are usually very profitable.

TAXES

At the seasonal festivals, held on the grounds of the 792
monastery, taxes are collected by the lamas from the 434
merchants of the city, who pitch their tents and do busi- [65]
ness on their territory, and from the Tibetans and Monguors who sell animals and their primitive homespun products.

MONEYLENDING

Lending of money at the Chinese legal rate of 30 per 792
cent interest is the most important source of revenue 434
for the intendancies. The lending of money is far more 426
remunerative than the purchase of land and mortgages, which afford more security. However, the intendancies prefer the bigger interest.

Intendancies dispose of capital to secure the annual subsidy granted to the lamas, the purchase of the important quantity of butter to be burned in the temple lamps, the expenses for the purchase of all the items required for the expeditions in Mongolia, Kukunor and Ts'aidam, and the expenses of the fixed festivals held at the monasteries. Besides these the intendancies dis-

[p. 46 (A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

pose of the amount of money provided from the various sources noted in this section. 792 434 426

Loans are made to Monguors, Tibetans, and Chinese, to shopkeepers, merchants in the city, in fact to anyone who provides serious guarantors. Two guarantors are always required, a lama and a layman.

The Chinese who lend money at the same legal rate of 30 per cent interest are very, very rarely entirely successful in this financial operation, and they know it before they start. After the third year, when the capital is nearly recovered, troubles usually start and new provisions are accepted for a smaller interest, or the problem is brought to the Chinese court of justice, which inevitably decides in favor of the poor party. In China it is the custom for the judge to decide in favor of the borrower and for the richer party to give up some of its rights and benefits. However, the inexorability of the lamas in collecting interest is an attested fact. The proverbs and sayings all over the country go: *"Chiu ming ti k'o-wa, sha-jen ti lama,"* meaning "even merchants who are so eager for money, save the life of a miserable man, but the lamas kill him"; also, *"lama chang nan la, p'o-niang chang nan la,"* meaning "It is not easy to be indebted to a lama, not easy to be indebted to a woman," because nobody can withstand the curses of a woman or the eagerness of lamas. Lamas are noted as loan sharks all over the country.

The people approach the lamas to borrow money and grain, because the people of the country are poor and the lamas dispose of money. On the twenty-fifth of the twelfth moon, the interest is due. In the evening, on the fifth of the moon, groups of young lamas gather in all the streets of the monasteries crying at the top of their voices that the interest has to be brought in by the twenty-fifth. They continue this crying for several days. With this notice the lamas' guarantors set out to find the persons whom they have guaranteed, as well as the layman guarantors, their partners. If they cannot find the hiding debtor, then on the twenty-fifth the lama is tied and lashed with ruthless severity until he pays the debt himself. If the debtor and layman are subjects of the monastery, they undergo the same rough procedure. No mercy is shown until the last farthing is extorted. Subjects do not dare bring suit against the lamas at the Chinese courts, because they cannot stand up against such a rich and influential opponent as the intendant. The lamas try to lend, if possible, to their subjects, to subjects of other monasteries, to T'u-ssu, or rich people who can provide a serious guaranty.

In the Orient, wealth and money are the mightiest factors of influence and power. In this respect the regulations of 1723, which were aimed at undermining and undoing the influence and power of the monasteries, failed almost completely. The monasteries are still the most influential and powerful institutions in the country.

[p. 46 (B)]

SUBJECTS OF THE LAMASERIES

This matter fits into the frame of the material ad- 792
ministration of the monasteries. One of the most important duties of the intendants is the administration of the subjects of the monastery, of the community of the lamas, or of the colleges.

After the revolt of 1723, when the lamas had com- 792
pelled their subjects to rebel together with them, all 651
their subjects were withdrawn from them and made subjects of the Chinese officials. The taxes, formerly imposed by the monasteries on their properties for their own benefit, were imposed by the Chinese administration for the benefit of the empire and collected by the Chinese officials, and, because all Chinese subjects were liable to corvées, the newly acquired subjects were made liable to corvées imposed by the Chinese officials. The subjects of the monasteries became, at the same time, liable to the Chinese courts of justice, and the old right of the monasteries to judge their subjects was abolished. All the ties which bound the subjects to the monasteries vanished and the possibility of a new revolt stirred up by the monasteries was eliminated. The extensive properties of the monasteries were not confiscated, however, so the people who tilled their fields were still obliged to pay rental in return for the use of the fields, in the same way that rents were paid to other proprietors. This was the status which was decreed after 1723 and which still prevailed in 1910–1920.

KINDS OF SUBJECTS

The monasteries in Huang-chung, before 1723, seem 792
to have possessed two kinds of subjects: the tillers of their fields and some Tibetan tribes possessing their own territory, which for an unknown reason had become their tributaries. This latter category, according to the regulations of 1723, was entirely set free from all obligations toward the monasteries.

The origin of the status of the first category of subjects of the lamaseries, the tillers of the soil, is better known, because in the *Annals* of Hsining ch. 15, pp. 13*a* and 13*b*, the author complains that before 1723 a great many families of barbarians had gone over to the lamaseries, leaving their own chiefs in order to become their subjects, and that accordingly the influence and wealth of the lamaseries had greatly increased.

Today, among the subjects of the lamaseries, the Monguor families are the most numerous; then follow Tibetan and a few Chinese families. This fact seems to suggest that, of old, the Monguors constituted the bulk of the subjects of the lamaseries.

In Part I of this study (p. 60) it was explained that 622
the subjects of the T'u-ssu could never abandon their clan chief, and that, because the T'u-ssu were the wardens of the marches and had soldiers, the Chinese officials had to prevent their subjects from abandoning them. Consequently a subject of a T'u-ssu, in order

[p.47(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

to become a subject of a lamasery, had to be relieved of 622
military service, corvée, and allegiance to his clan chief. The loss of a subject for the clan chief meant loss of a soldier, a tiller of his soil, and a payer of land taxes—a considerable detriment to his power and his wealth. It is obvious that the loss of a couple of families did not matter too much, but the loss of numerous families would have disturbed the clan chiefs and made them try to prevent the illegal desertion of their subjects.

However, at that time Lamaism was at the height of its glory and power. Even the discontented Chinese officials had no way to oppose the omnipotent Living Buddhas pampered at the court in Peking, and could not lend a helping hand to the T'u-ssu, urging the return of their subjects and bringing suit over the encroachment on their rights. The T'u-ssu, willy-nilly, saw their subjects leave them in large numbers, lured by the more favorable conditions of living offered by the lamaseries.

In this way the lamaseries assembled the group of 792
subjects referred to by the author of the *Annals*, who of 566
their own free will became genuine monastery serfs ("Shabinar"), free of allegiance to their clan chiefs. In 1723, being the actual serfs of the lamaseries, they were compelled to fight at the side of the lamas, their chiefs, against the Chinese armies, according to the general conditions imposed on serfs and subjects.

PRESENT STATUS OF THE SUBJECTS IN RELATION TO THE LAMASERIES

Notwithstanding the drastic regulations decreed after 1723 in order to loose completely all the ties which bound the subjects to the lamaseries, and to avoid revolts in the future, the subjects still continue to recognize some obligations to the lamaseries.

Farmers Offering Oil and Pigs

From 1723 until 1910, the so-called subjects paid 792
their rent in kind and carried it to the monastery; the 427
farmers were organized in villages, and each village 566
continued to offer as before, in the autumn of each year, a certain number of pounds of vegetable oil to the intendancy whose fields they tilled; it was considered as an offering for the lamps in the temples of the intendency. In addition, every year in the New Year season they continued to bring to the same intendancy a pig weighing 120 pounds. If the scale did not tip 120 pounds, the weight lacking was made up in pork. In former times when subjects married, it was customary for the family of the bride to demand from the family of the bridegroom a portion for the lamas. This [585]
consisted of 30 pounds of pork, and was offered to the intendancy on which the family of the bride depended. At present the 30 pounds of pork are still asked for and presented to the family of the bride, but the meat no longer reaches the intendancy.

[p. 47 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Mongnor AE9

Service for Prayers and Alms Collections:

A strict condition of service continues which compels the farmers of the monastery to invite the lamas of the intendancy, whose fields they till, to perform both public religious rites in the village, and private services in individual families. Lamas of one intendancy or monastery are not allowed to perform these rites among subjects of another intendancy. In the same way, when lamas are touring for alms among the subjects of their own intendancy, lamas of other monasteries are not allowed to tour. 792 571

The intendancies urge the observance of this service even by former tributaries, but it does not always work. The Tibetan tribe of Sumdoo, former tributary of the community of lamas of Erh-ku-lung, accused the intendancy, in 1918, of trying to occupy a part of its territory. The Chinese court, however, recognized the ownership of the debatable ground by the tribe. Sumdoo, having a grudge against the intendancy, invited the intendancy of Seerkok to perform a tribal religious rite. The day preceding the appointed day, a group of furious lamas from Erh-ku-lung, intending to assert their prerogative to conduct the service, arrived and started with the prayers. All the ladies of the tribe, engaged in preparing the food for the three-day solemnity, arrived ranting, panting, and cursing the lamas with feminine fury, and threw their boots at the heads of the bewildered lamas. The lamas, powerless against the infuriated women, returned to their intendancy. 792 571 796 578

The next day, when the solemnities had already been started by the lamas of Seerkok, the intendant of Erh-ku-lung arrived with an imposing retinue to assert his rights. All the men of the tribe vanished, entrusting the emergency to the ladies, who arrived with the same threatening appearance of the former day, and the intendant and his retinue understood that the relations between the intendancy and Sumdoo were sundered forever. This incident illustrates the psychology of the lamas in trying by all means to retain their old rights, even among tributaries with whom all legal connections have been cut off.

Repair of the Lamasery:

The chiefs of the villages inhabited by the subjects of the intendancies are ordered by their respective intendancy to send a fixed number of men to repair the buildings belonging to the intendancy, to chop wood, grind wheat, thresh the harvest, sweep snow, and build roads or bridges. The subjects are still willing to comply with these corvées. 792 466

Travel of the Chief of the Lamasery:

When the supreme chief of the lamasery makes a long journey, the chiefs of the intendancies order the chiefs of the villages to send a couple of horsemen each 792 484 651

[p.48(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

to make up his retinue, and it even happens that a 792
couple of men are asked for from former tributaries. 484
The subjects are thus liable to the corvées of the mon- 651
astery and at the same time to Chinese official corvées.

Administration of Justice

All the subjects of the monasteries are liable to the 792
Chinese courts of justice. It would seem logical to 691
have abolished all the old courts of justice existing at the monasteries, but all intendants still dispense justice to their subjects, expose at the gate of their intendancy the instruments of torture, and have their own jails. The intendants of Erh-ku-lung, Kumbum and Seerkok are even recognized officially by the Amban as ch'ien-hu, i.e., civil officials having the right to judge subjects.

In 1916 the minor Living Buddha of the monastery 792
of Dia-ik, fired by ambition and knowing my good rela- 692
tions with the Amban, importuned me for weeks to have me recommend him for the office of ch'ien-hu. He became ch'ien-hu not only of his subjects, but of the three former tributary Tibetan tribes depending on his previous incarnations. In 1917, with an air of exulting pride, he broke the news to me of having obtained in Peking the title of Hutukhtu. It is hard for a western mind to unravel these administrative mysteries.

The subjects enjoy the right of bringing suit at the 792
Chinese courts, but often they do not do so for fear of 692
retaliation by the intendancies, which they are unable 661
to match. However, since the Republic, more and more cases have been initiated by subjects who, victims of crying injustices, have plucked up their courage to challenge their intendants, because their minds were not insulated from the modern principles taught by teachers and officials. Nothwithstanding the change in the social psychology of the subjects, the intendants, the builders of big fortunes, continue to plant in the hearts of their subjects the seeds of aversion and hatred against themselves. Many of them collect the rent from their subjects with measures greater than the legal one, compelling them to fill them to the point where the grain spills on the ground, and not allowing them to collect the spilled surplus, which they appropriate. Being the most important businessmen in the country, they impose corvées on the subjects in order to carry on their own business, and when the patience of the subjects is worn thin, the clash comes, causing the ruin of the monastery. Such were the conditions prevailing between the subjects and the monasteries in 1910–1920. The monasteries had in the end succeeded in maintaining a firm grip on their subjects, notwithstanding the aim of the regulations, decreed after the revolt of 1723, to withdraw them from the baneful influence of the monasteries.

[p. 48(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

LAMASERIES AS ADMINISTRATIVE CENTERS OF THE COUNTRY AND CONDITIONS OF THE SUBJECTS BEFORE 1723

792 175

The study of the material aspects of the administration of the monasteries and the status of their subjects in 1910–1920, which are the consequences of the revolt of 1723, provides many facts pointing to the situation as it existed before 1723, and makes possible a reconstruction of the conditions in which the lamaseries flourished and their subjects lived before that fateful date.

At the time the Ming dynasty (1368–1644) had succeeded in driving the Mongols out of China, there existed in Huang-chung only the two cities of Hsining and Nien pei, and some fortified walled places which were garrisons established in former times to assure the occupation of the always disturbed country. The Ming started anew the colonization of the depopulated country by transplanting from central China 7,200 Chinese families (Part I: p. 30), accepting the submission of the Monguors, and assigning to each of their groups a definite territory, making them wardens of the country and their chiefs officials of the empire, with the prerogatives of the office of T'u-ssu (Part I: 46 sq.). The city of Hsining was more a military than a civil administrative center.

In order to repopulate the country, the Ming adopted the policy of attracting lamas and settling them in the region with the subjects they induced to submit to the empire. It granted them territories and made the lamas the hereditary chieftains of the groups they had brought in. They were responsible for the tribute to be offered to the emperor and had complete jurisdiction over their subjects. Hence the flourishing of lamaseries, Nang-suos, Karwas. The protection bestowed upon the lamas and the immunity granted to them by the emperor made the dissatisfied Chinese officials keep quiet and swallow their national pride. [168 648]

Consequently, large territories were assigned to the Monguor clans and larger or smaller ones to the lamaseries, Nang-suos, and Karwas, whose inhabitants were completely withdrawn from the jurisdiction of the Chinese officials. Besides these autonomous groups there lived, scattered over the country, some small groups of petty Tibetan tribes, remnants of tribes which had fled from Kukunor or Tibet, depending directly upon the Chinese administration. From among those groups, from among the Monguor clans, and from their own subjects, the lama institutions recruited and increased the number of their lamas.

The chiefs of the lama institutions accredited by the emperor lived in their seigniories like princes, surrounded by a large or small retinue, occupying a more or less elaborate residence built within a compound of temples, the quarters of the lamas, and large granaries. They appointed the staffs of lama officials for administering justice among the subjects (officially appointed 792 175 692 [643]

[p.49(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

chiliarchs still exist in Kumbum, Erh-ku-lung and Seerkok), meting out punishments (instruments of torture are still displayed at lama courts), and imprisonment (the prison of Seerkok still exists); caring for the preservation of peace and order in the territories assigned to them, inquiring about travelers passing through it; administering the distribution of fields, the imposition and collection of taxes, the imposition of tolls on bridges (the bridge of T'ien t'ang and raft of Kan ch'an), and the imposition of corvées. 792 175 692

At the time of the inroads of marauding Mongol and Tibetan tribes, the revolts of Moslems, and the lama revolt against China in 1723, the subjects were compelled by the lamas to take sides with them in combat and in defending the lamaseries and their territories. In short, the privileges bestowed upon the chiefs of the lama institutions before 1723 were far-reaching. They were units, scattered over the country, administering their subjects according to their own rules and customs, entirely free from the interference of Chinese officials.

The lamaseries were the administrative centers of the groups subordinated to them. All the country's wealth flowed into their granaries and treasuries. Moreover, the lamas tended herds of cows, sheep, and horses, built oil and grain mills, and received donations. The lamaseries were the only places where huge sums of money could be borrowed (Li and Ch'i T'u-ssu borrowed money from them by mortgaging parts of their properties). They removed the wealth of the country from circulation and hoarded it or used it to found new lama communities (the tremendous branching out of monasteries between 1600 and 1723). They did not even use it for charitable institutions for the people of the country. 792 175 425 426

The lamaseries, originally built in lonely places and in remote valleys, in order that the monks would not be disturbed in their meditations and studies by the tumult of the world, were in olden times the most animated places of the country. In autumn the subjects carried taxes and rents on long caravans of donkeys to their granaries. The measuring of grain went on, as it did all over Asia, with rumbling noise and cries, bursting with activity for weeks in succession. At the time of exchanging tea for horses all the subjects were interested in the assessment of the horses. The tumult and discussions on the grounds of the monastery lasted for days and days. The selection of the horses for tribute to the emperor was conducted with like tumult and confusion, and often for the same length of time. Two or three times a year large festivals were held at the monasteries. They were attended by all the people of the country interested in horse racing, wrestling, singing, dancing, and in the big fairs held at that time. Chinese traders came from the city, pitched their tents, paid toll to the lamas, and sold their wares. The Monguors and Tibetans also arrived with their homespun 792 175 651 427 [554 443]

[p. 49 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

products and animals for trading. All year long the 792
silence of the holy places was disturbed by the coming 175
and going of caravans of donkeys carrying grain to the 651
oil and grain mills, and returning with flour and oil 427
which was measured with the usual rumble of noise and cries. Throughout the year, groups of subjects never failed to become involved in trials, defending their rights by roaring and crying with vehemence and passion at the court of lamas. Punishments were meted out with ruthless severity, so that cries and screams could be heard throughout the entire monastery—whetting the curiosity and disturbing the meditation of the monks.

The interest of the subjects was centered only on the 175
monastery. There was no need for them to go to the 633
city, since the necessities of life could be secured at the 792
monastery fairs and nobody cared for the Chinese officials, the lamas being their legal officials. Many, many people had never seen or entered a city. The monasteries and their subjects lived their own life, in their own orbit, alien to the city, just as if Chinese officials did not exist.

These conditions changed after 1723 when the lamas lost their privileges and the country developed economically. From that time on the city became the center of the economic, civil, and administrative life; before that time, it had been primarily a military center, engrossed in the protection of the country.

What was the social position of the subjects of the 175
lama institutions before 1723? It seems that religion 792
must have been a subsidiary and not a primary motive 571
for becoming subjects of the lamas, because all of them were spurred by the hope of earning a better living under the lama regime than under the regimes of the Chinese officials or the Monguor T'u-ssu. Having been driven out of their territories by marauding Mongols, they may have hoped to find a peaceful country within the frontier zone of China, on the domains of the lamas. Being groups or tribes, or single families of destitute people, they were happy to submit to lama chiefs, and they were thankful to them for being accepted as their subjects. They did not lay claim to any rights, and the lamas did not consider that they were entitled to any, because they had achieved nothing that could have supported such claims. In this way the lamas strove to make their domains more and more productive, and were only concerned with the duties to be imposed on the subjects, without paying any attention whatever to rights they might have claimed.

The subjects were all on the same social level; there 175
was no more question of nobles and commoners among 565
them. They were all equally subject to taxes and cor- 792
vées, and all of them were tenants of the fields of the lamas. They enjoyed the rights to live, to till the soil, and to consume the surplus of their labor. Since the lamas never sold their fields, the subjects had no opportunity to become proprietors of the soil, as was the

[p.50(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

case with the subjects of the T'u-ssu, and so no out- 175
standing rich families could rise up among them. Since 565
the entire administration was carried on exclusively 792
by lamas, the subjects could hardly incur any important social prestige within their circle, or become leading personalities, and certainly not during the entire Ming period (1368–1644) when intermittent troubles and interruptions of trade curtailed the opportunity to become rich. Accordingly, the lamas effectively controlled the subjects and their domains.

As no written code of law existed, the lama officials 175
helped themselves with a house law on a grand scale, 792
by imposing taxes, corvées, and tribute, mediating 692
troubles in families, meting out punishments and imprisonments for crying injustices. The subjects, pinning their hope on a better living, were submissive and obedient, simply because the chief lama was their lord.

It is easy to understand that the subjects of the monasteries enjoyed no rights of their own, but they depended entirely on the administration of the chief of the monastery and his lama officials.

It may be supposed, however, that capital punish- [631]
ment of the subjects of the monasteries was reserved to the emperor, as it was in the case of subjects of the T'u-ssu. It is not known whether, before 1723, the right of recourse of the subjects to a higher Chinese court existed or not. If it did exist, it must have been nominal, as it is at present.

The living conditions of the subjects, however, must 175
have been for the most part bearable, as evidenced by 792
the fact that so many people applied to the lamaseries 571
to become subjects. Only after 1723 are a few cases known of subjects revolting against the chief lama and his officials, such as the case of Yang-kuo-erh-ssu, and that of the subjects of the Sina tribe, who preferred to become Chinese subjects rather than remain subjects of the lamas. On the other hand, the unbelievably large number of lamas from among the subjects, since every family had a son or an uncle lama, must have disposed the families favorably toward the monasteries and their chiefs, and made the subjects overlook the shortcomings and deficiencies inherent in any human institution.

The reasons why the privileged status of the monasteries lasted for so long in Huang-chung were, first, the insecurity of the country, especially after 1509, and then the influence of the Erh-ku-lung Hutukhtus in Peking.

The chiefs of the monasteries were, at the same time, 175
the temporal and the spiritual chiefs of the subjects. 792
The subjects were compelled to invite the lamas on 794
whom they depended to recite texts in behalf of the families or of the communities, or to perform public or private ceremonies, to the exclusion of lamas of other communities, at such times as epidemics, epizootics, the burying of the dead. They had to make donations at fixed times, when their lamas, their chiefs, came touring for alms among them. Corvées were imposed at the time of celebrations and festivities at their lamaseries.

[p. 50 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

However, no compulsory religious instruction was provided for adults or children in order to make the subjects more fervent, and no schools or charitable institutions existed. The subjects were never compelled to attend ceremonies in the temples, for only lamas recite texts in temples, and temples are not what we are accustomed to calling churches. Finally, the religious activities imposed on the subjects reflected more a material than a spiritual interest, and bound them closer to their chiefs. 175 792 794

If we take into account the period of incredibly rapid increase in the founding and branching out of monasteries, the number of lamas must have been tremendous. Certainly the revolt of 1723 and its drastic suppression largely prove this assertion. Necessarily, the absorption into the lama communities of a large proportion of the male population of the country must have adversely affected productivity. Men who became lamas were not only withdrawn from production, but had to be fed by the depleted population. It is easy to understand that in such circumstances trade and industry could by no means develop and flourish. The large groups of lamas did not produce anything; they merely consumed the production of the country and hoarded its wealth. Their economic role was simply that of consumers, and so the economy of the country was necessarily agricultural and limited to its needs. 175 792

The same conditions existed in the two cities of Huang-chung and in the garrisons. There the soldiers and the relatively feeble population consumed what the colonists could produce. Only later on, when peace was restored, communications with the capital of the province assured, and trade had become possible, could the cities and the whole country develop and emerge from the former limited agricultural economy—an outlet had been found for the products of the country. The farmer, assured of the possibility of selling as much as he could produce, started producing to the peak of his capacity. These conditions seem to explain the deadly stagnation prevailing in the country from 1368 to 1723.

These seem to have been the conditions of lama Buddhism between 1368 and 1723 in Huang-chung, the privileged legal position of the temporal and spiritual chiefs of large and small lama institutions, the important role played by the monasteries, Nang-suos and Karwas, centers of the public and private life of the country, the bursting activity displayed inside the walls of the monasteries, the conditions of the subjects of the monasteries and the economic consequences arising from the tremendous number of the male population which had become lamas.[9]

[9]H. H. Vreeland, 3rd, Mongol community and kinship structure, *Human Relations Area Files*, New Haven, 1954. After the completion of the present study, there appeared this outstanding study dealing with the Khalkha Mongols of the Narobanchin territory, the Chahar Mongols of the Taibas pasture and the Dagor Mongols of the Nonni River valley. The study [13]

[p. 51(A)]

BRANCH LAMASERIES

175
792

It has been noted how at Erh-ku-lung there existed from the very beginning a real passion for the founding of hermitages, which began as affiliates and later became independent monasteries. Not only did the three founders of the monastery found their own branches next to those of the monastery, but the lesser Living Buddhas, the communities of lamas, and the colleges followed their example. According to the superiors of the monastery, and the general testimony in the country, forty-two branches proceeded from Erh-ku-lung. Several times prominent lamas told me that the founders of branches had a predilection for them at the time of their founding, but later they invariably became a burden.

ADMINISTRATION AND OFFICIALS

175
792
794

The first act of the founder of a branch was to appoint a rector, Nirwa (Nerpa), as chief of the new community. At the beginning, when the group of lamas was still small, he held the entire authority in his own hands. Later on a lama disciplinarian, Ge-ko, a precentor, Um-dse, and an adviser to the rector were added, and the administration was complete. For a very long time, the rector also had the function of procurator. The rector and the disciplinarian were appointed by the founder of the subsidiary for a three years' tenure of office. Later, precentor, adviser, and procurator were chosen by the community. The rector and the disciplinarian were invited to the mother house to receive their appointment. The whole community of the branch had to come to the mother house in order to invite and to acknowledge the new authorities by

---

concerning the lamasery of Narobanchin, based on data provided to the author by the Dilowa Hutukhtu himself, co-proprietor of the institution, gives a unique insight into the nature of a lamasery, situated in the open Gobi desert, among nomadic tribes insulated from the impact of the Chinese civilization and culture, and in its adaptation to the tribal, social and economic environment. The history of the founders is noted, the way the banner princes granted territories, allowed their subjects to abandon them in order to become plain subjects of the lamasery, the legal status of the lamasery and its subjects, the rendering of justice by the lamas, the interesting administration of the temple wealth and property, the means of subsistence of the subjects, the levies, services, and corvées imposed by the lamasery, etc. This study sheds light on what the social and economic conditions of the subjects of the Monguor lamaseries must have been before the revolt of 1723, and is a perfect foil to the actually existing conditions of the subjects of the Monguor lamaseries. This study for a long time will remain a standard work in this special field. The study of shamanism among the Dagor Mongols (p. 250) is a very valuable contribution to the subject of shamanism among the Mongols; many new facts and peculiar conceptions concerning souls, death, and spirits are secured and their impact upon the family life exposed. The peculiar position and behavior of the shamans in the Dagor society is very instructive.

The chapters concerning the social organization, economic life, and kinship and property structure of these tribes are of equal importance, but they do not fit into the frame of this study.

[p. 51(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Mongnor AE9

prostrations and by presentation of the ceremonial scarf. 175
They escorted them to the branch where a sheep was 792
killed and a dinner enjoyed. 794

DOMAINS AND REVENUES

An affiliate, in order to enjoy viability, had to possess 175
a territorial domain. The mother house, where possible, 792
assigned to it a part of its own domain; where this was 571
not possible, the founder made arrangements to provide 794
a domain. The T'u-kuan bought some ground for his affiliate of Ma-t'i-ssu. Every year the affiliate had to pay the interest of the capital thus invested, amounting to 60 taels or 36½ bricks of tea. The rector of the affiliate was bound to account for the material administration of his institution, receipt of rents, selling of trees, investment of the capital of the affiliate, and herds, and required a fixed sum to be sent out of the revenues to the intendancy of the founder. Finally, the intendant of the founder supervised the material administration of the subsidiary. When recalcitrant subjects refused obeisance, the rector and the disciplinarian sent them to the mother house, but such subjects would quit the monastery before they were summoned to see the founder.

OBLIGATION TO A FA-T'AI WHEN INVITED

When one of the members of the subsidiaries is invited to take the office of Fa-t'ai (Lob-pon) at the mother house, he is never allowed to decline the invitation, even after the subsidiary has become entirely independent, and even if the man thus summoned to officiate as invited Fa-t'ai is a Living Buddha or the supreme chief of the independent monastery. This custom seems to be general.

OBLIGATION TO JOIN THE RETINUE OF THE CHIEF OF THE LAMASERY

When the founder of the affiliate makes a long journey 175
or accompanies an alms expedition to far-off countries, 792
the branches must send lamas to make up his retinue. 484
When the T'u-kuan Hutukhtu went to Peking to fulfill the assignment entrusted to him at the capital, even the independent old branches were kind enough to present a couple of lamas each to enhance his prestige. When he went to Peking for the last time, seventeen independent branches sent lamas. Lamas like to visit the capital, since it is a remunerative business. In the Orient a traveler always does some business on the way, especially an eminent personage such as T'u-kuan, traveling as a state official. He and his retinue enjoyed [534]
the privilege of going everywhere free of taxes.

AUTONOMY OF BRANCH LAMASERIES 175

How did the subsidiaries become independent? The 792
tragic events which occurred at Ch'ü-t'an and Yao- 794
ts'ao-t'ai have already been recorded. Although such 571

[p. 52 (A)]

tragic events seldom happen, independence is never acquired without friction between the daughter and mother houses. Usually the difficulties begin with the crucial problem of the delivery of the share of revenue required by the intendancies of the founders. The separation usually occurred, according to old lamas, at a time when the mother house was involved in inextricable difficulties and unable to assert its authority, or when the founder was still in the prime of life. 175 792 794 571

The obsession for having Living Buddhas started in Erh-ku-lung in the second half of the seventeenth century with the incarnations of the founders. Very soon some of the subsidiaries endowed themselves with their own Living Buddhas, partly for decorative reasons and partly in anticipation of a possible rupture with the founders. These Living Buddhas eventually seized a favorable opportunity provided by circumstances to declare their independence and take possession of the territory formerly allocated to the subsidiary. On the other hand, it is easy to understand that subsidiaries, which had developed to the point of having several hundred inmates, or two thousand as in Seerkok, split away (from the mother house) when they had capable authorities, or when the intendancies of the mother house were too exacting and greedy on the question of collecting a share of the revenues of the subsidiary. At such a time the veneer of filial devotion easily scales off.

This was the case with the affiliate of T'ien-T'ang with its seven hundred lamas, two Living Buddhas, and three colleges. Its founder, T'u-kuan, squeezed to the wall, understood the gravity of the situation and made the best of a bad bargain, granting independence after it had been declared, provided the duty was acknowledged of presenting a yearly allocation to the intendancy of one of the Living Buddhas of T'ien-T'ang, the teacher in a former incarnation of T'u-kuan (this was a delicate gesture), together with the right to graze his herds on the domain of the new monastery. The conditions were gratefully accepted and good relations between the former daughter and its mother house continued.

The branch of Ta-ssu, depending on the community of the lamas of Erh-ku-lung, had troubles with the intendancy of its founder concerning the crucial question of the exaction of revenues. It happened that one of the lamas of Ta-ssu, scion of the noble family of the Lu T'u-ssu, died. The shrewd lamas invited the supreme chief of the lamasery of Ch'ü-t'an in order to inquire whether the departed lama had or had not been of the stuff of which Living Buddhas are made. The intelligent Living Buddha of Ch'ü-t'an easily understood the meaning of the fervent lamas and declared that the noble lama was already reborn in the family of the Prince of Alashan, and it happened that the wife of the noble Lu T'u-ssu was a princess of Alashan. This was a double blessing sent by the Buddha! Independence was immediately declared, backed by the in-

[p.52(B)]

fluential family of the Lu T'u-ssu and the Prince of Alashan, and a new monastery was born. The community of Erh-ku-lung was powerless. 175 792 794

It sometimes happens that a branch not having its own Living Buddha does not wait to declare its independence. Chai-ya, a small branch of forty lamas dependent on T'u-kuan, possessed some forests; the selling of trees was its primary source of revenues. The subprefect of P'ing-fan confiscated the forest in 1912. At the time, rumors were spread all over the country concerning the confiscation of the domains of all the monasteries. T'u-kuan, deeming it not the appropriate time to accuse the subprefect at the capital of the province, did not help the branch to recover the forest. The frustrated and infuriated branch boldly declared its independence and thereafter had no further relations with the founder. 571

Kalang, an old, independent affiliate of Labrang, founded its own branch, Pi-t'ang. Pi-t'ang flourished and Kalang declined. Pi-t'ang prepared to invite a Living Buddha to move into its establishment, but Kalang refused permission. The lamas of the lamaseries fought among themselves in 1912, and the Moslem General, Ma K'o-ch'en, sent troops to quell the troubles. In 1915 the country was troubled by the Pai Lang (White Wolf) brigands, and the old feud flared up again. Kalang accused Pi-t'ang at the subprefecture of Hsün-hua. Finally Kalang refused to accept the verdict of the subprefect and prepared to fight Pi-t'ang. The general, Ma K'o-ch'en of Hsining, sent his troops, and twenty-one fighting lamas of Kalang and seven Moslem soldiers were killed. Kalang had to pay an indemnity of $10,000 for the soldiers killed. The members of the intendancy were put into jail and Pi-t'ang was declared independent by the Moslem general. These facts give an insight into the problems of the subsidiaries, the very loose ties which knit mother and daughter houses, the reasons which cause a scission, and the ways in which their separation may be achieved and independence acquired. Very often the part played by the intendants is paramount in creating the breach between mother and daughter houses.

LAMA ARMY

At present, the lamaseries of Huang-chung no longer have a regular armed force of lamas who are maintained by the lamasery, as is still the rule in Tibet. The only record encountered in the *Annals* of Hsining (ch. 28, p 13) concerning a lama army is a supplication sent to the emperor during Cheng-te period (1506–1521) by the Chinese officials of Hsining, asking that the farmers of Hsining be exempted from the burden of supporting the lama army. At that time there existed only the important lamasery of Ch'ü-t'an, with its subsidiaries, some Nang-suos and Karwas, and the lamasery of Sha-chün. From the relatively small number of lamas at that time, it may be assumed that the lama army con- 175 792 701

[p. 53 (A)]

4: Schram M-5 (1911-1922) 1957 AE9 Mongnor AE9

sisted of lamas and the subjects of the monastery. However, during the revolt of 1723, the lamaseries were in full bloom, and must have had soldiers, because the Chinese General, Nien Keng-yao, blamed the lamas for fighting furiously, and the monasteries for being the depots of weapons. It may be assumed that after the revolt of 1723 the lamaseries were not allowed to have armies. However, during the revolt of the Moslems in 1895, the lamas of Kumbum attacked the stronghold of the rebels in To-pa as auxiliaries of the Chinese regular armies.[10] Nearly all the monasteries at that time except Kumbum were destroyed and burned.

INTERFERENCE OF THE EMPEROR AND T'U-SSU WITH THE LAMASERIES

In Europe during the Middle Ages, many monasteries and abbeys had a bad time. The princes and kings granted vast domains to religious orders to encourage them to branch out into their territories. The grants were gratefully accepted and abbeys built, but some among the gracious donors, in a surge of religiosity, went so far as to appoint an official for the collection of land taxes and the administration of the domains, whose duty it was to furnish the revenue to the abbots in order to free the monks of material troubles. Often these officials were relatives of the donors, and collected most of the taxes for themselves, and the monasteries, unable to make ends meet and to uphold and develop their institutions, had no means of protesting against the relative of the prince. Very often princes started interfering in the administration of the monasteries and claimed the right to appoint an abbot of their own, often a relative. After unworthy abbots were appointed the monasteries relaxed, with the consequences that might be expected.

I know of only two similar cases of interference in Huang-chung. The Lu T'u-ssu of Lien ch'eng had established three important lamaseries and granted vast domains to them. In 1727 the census records for the monastery of Ku-ch'eng show 140 lamas, for Lien-hua 100, and for Pao-nen-ssu 191, a total of 431 lamas. Next to them the T'u-ssu had founded two smaller monasteries, Hsi ssu and Kan-ch'an ssu, which received smaller domains from him. Two among these five monasteries had no Living Buddhas, so that the T'u-ssu appointed himself the intendant; and every three years, at appointment time, troubles arose.

The case of Ch'ü-t'an has been recorded. According to the legend the monk, Emperor Hui-ti, had appointed his relative hereditary administrator of the domains, and a tablet had been erected testifying to the appointment. The fact is, that the real emperor of the

[10] Susie Carson Rynhart, M.D., *With the Tibetans in tent and temple*, 92, London, Fleming Revell, 1902; see also M. S. Wellby, *Through unknown Tibet*, 281, Philadelphia, Lippincott, 1898.

[p. 53 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Yung-cheng period, not the monk Emperor Hui-ti, had 643
appointed the administrator, who was killed. 175

Possibly the precarious position of the Li and Ch'i 792
T'u-ssu, their financial troubles, which compelled them 622
to mortgage parts of their domains to Erh-ku-lung and Seerkok, enfeebled their influence and power, and prevented them from interfering with the administration of the monasteries which had received domains from them in former times. On the other hand, Erh-ku-lung and Seerkok, before 1723, had prominent Hutukhtus whose influence superseded that of the T'u-ssu. Only these two cases are known to me.

IV. ADMINISTRATION OF THE LAMA-SERIES: EDUCATIONAL AND RELIGIOUS ASPECTS 792

It seems necessary in dealing with the educational and religious aspects of a monastery, its rules, discipline, and colleges, to know beforehand to what kind of subjects the initiation into the monastic life and religious training is given. The subjects of the monastery are its main source of lamas.

LAMAS

LACK OF CANDIDATES

The superiors of all the monasteries complained bitterly about the want of religious candidates. In fact they declared that at this time (1911–1920) there existed in Huang-chung only two monasteries still having the four colleges (Kumbum and Sha-ch'ung), and the fact that so many monasteries were shadows of their former selves was the consequence of the lack of religious candidates.

CAUSES CONTRIBUTING TO LACK OF CANDIDATES

The situation in Huang-chung in 1910 was no longer 175
the same as that before 1723. After the crushing of the 177
revolt, the country had enjoyed peace, and developed and prospered tremendously. Chinese settled in great numbers in the thinly populated country, filled with hopes for a comfortable living. Chinese officials became more and more numerous. Chinese *literati* came to take the helm and to enforce on the uncivilized Monguors, Tibetans, and lamas admiration for the superior Chinese civilization.

First of all, the Monguors, not insulated against the impact of Chinese culture because a large number of Chinese had already been enrolled in their clans, and because their T'u-ssu were already far along in the process of Sinicization, underwent the process in differing degrees. In Huang-chung, even as in the northwest border countries of China, the first consequences of the process of Sinicization are a pride in being considered Chinese, and a scorn for lamas, whom they be-

[p. 54(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

gin to consider as barbarians. When a Monguor family 173
starts losing its identity, no more children become 177
lamas, relations with the monasteries vanish, and no more alms are offered. A lamasery situated in a Chinese environment cannot maintain itself. The schools [371]
with Chinese teachers, established in the country, exert a baneful influence on the recruiting; boys who attend Chinese schools no longer become lamas.

The bulk of the endless number of lamas was pro- 175
vided in former times by the Monguors and Tibetans 792
of Huang-chung. At the time Erh-ku-lung, Seerkok, and T'ien-t'ang ssu rode the crest of the wave of glory and learning, a respectable number of Mongols of Kukunor and Mongolia, and Tibetans of Kukunor, enrolled in the monasteries of Huang-chung, but this glorious time has long vanished. Kumbum, possessing very rich revenues, is now the only prosperous lamasery in the region; a number of Mongols and Tibetans from Kukunor are on its roster. Since the troubles with the Dalai Lama (1909) very few Tibetans from Tibet proper visit and live at Kumbum (1910–1920). At present, in most of the monasteries, the population consists of older lamas and young boys. At Seerkok, Ch'ü-t'an, and T'ien-t'ang a lot of Chinese or Sinicized Monguor lamas are enrolled, even Chinese boys, mostly children of poor Chinese families. The lamas of Erh-ku-lung asserted that these monasteries were on the way to losing the real monastic spirit. Seerkok in 1723 had two thousand lamas; in 1890, according to Rockhill,[1] it still had seven hundred lamas; in 1910 only about three hundred. Four hundred lamas deserted the monastery during the last twenty years, disgusted by the public misbehavior of the supreme chief of the monastery.

He was the second reincarnation of the glorious Min chu-erh Hutukhtu, author of the celebrated *Geography of Tibet and Mongolia*, well known in Europe. Seerkok, in order to retrieve its former position, managed to reincarnate two of its small Living Buddhas, one in Mongolia, the other in Tibet, pinning its hope on fresh recruits from Mongolia and Tibet. However, the Chinese element among the lamas was already too strong. Chinese lamas had forged ahead and were invested with the most important offices, which kept new recruits away. Without doubt, another cause contributing to the lack of candidates was the troubled situation existing in the monasteries of the country. One after another, they passed through harrowing experiences which caused their ruin. This predicament, of their own making, sets the tongues of the people wagging, brings disrepute on the institutions, and disgusts the parents to the extent they refuse their boys permission to join the lama corps. These seem to be the two important reasons causing the lack of candidates.

[p.54 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Mongnor AE9

NUMBER OF LAMAS IN HUANG-CHUNG

Fantastic figures concerning the number of lamas are encountered in publications on the subject.[18] Concerning Huang-chung, we possess a census of lamas and lamaseries (*Annals* of Hsining, ch. 16, pp. 6, 9, 10, 12) existing between 1729 and 1735. Although the census returns used are largely mere estimates, they seem to have at least a general reliability. However, because there is no comparable census of the secular population, it is impossible to determine the proportion of lamas to the male population at that time. 175 792 162

After the revolt of 1723, each lama was to be given a certain amount of wheat yearly, for his subsistence.[2] At the same time, the number of lamas to be allowed in the big monasteries was fixed at 300, and in the small monasteries at 10 or more. A register was kept by the official containing the name and age of each lama. Lamaseries which had more than the allotted number of lamas could only get support for 300 of them. Certainly Kumbum with 3,000 and Seerkok with 700, surpassed the quota, if not in 1730, without doubt later on. It may be supposed that in this period those of the larger lamaseries that were short of the number of lamas allowed made provision (through bribery) to have the largest possible number recorded. The total figure noted, according to the census, is 5,543 lamas, living in the four subprefectures of Hsining, Nien-pei, Ta-t'ung, and Kui-te, scattered among 77 lamaseries.

According to the situation in 1910 very few of the large monasteries reached the quota of 300 lamas, except Kumbum which is said to have had 3,000. Therefore, if we suppose that the total number of lamas in the four subprefectures reached 10,000, our estimate would certainly be sufficient. Regarding the excessive number of lamas in one lamasery, it must be borne in mind that the lamas are always prone to exaggerate; for instance, the number 3,000 for Kumbum is not the number of lamas dwelling in the monastery, but the number of parts or "shares" into which the gifts distributed to the lamas are divided. The distribution differs in each monastery. In Kumbum for instance, at each distribution each of the Living Buddhas receives 50 parts, as do the five Fa-t'ais; other officials receive 20, 10, and 5 parts, etc. In this way the actual number of lamas is reduced to 2,000. [431]

At the time I lived at Kumbum the number of lamas

[18] W. W. Rockhill, *op. cit.*, 215, cites with approval a Chinese estimate that for every family in Tibet there were three lamas.

[2] The census (1729–1735) records in the prefecture of Hsining 2,611 lamas. Each lama received yearly 1.6 *tan* of wheat; each of the 961 lamas of the subprefecture of Nien-pei received yearly 1.7 *tan* of wheat; each of the 1,331 lamas of the subprefecture of Ta-t'ung received yearly 2.7 *tan* of barley; each of the 690 lamas of the subprefecture of Kuei-te received only 0.24 *tan* of barley. The 5,543 recorded lamas of the four subprefectures of Hsining received subsistence grants of 9,040 *tan* of grain as compensation for the taxes the 77 lamaseries were no longer allowed to collect after the revolt of 1723. *Annals* of Hsining 16: 6*b*, 9*a*, 10*a*, 12*a*.

[p. 55 (A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

who attended the morning ceremonies in the central hall never exceeded 800 or 900, although all the inmates of the monastery had to attend the exercise. This fact led me to make inquiries, and this was the explanation given by the officials of the monastery, and confirmed by officials of other monasteries where the same rule exists. In 1779, only fifty years after the destruction of the lamaseries in Huang-chung and the fixing of the official census, the Panchen Lama on the way to Peking, where he died from smallpox, remained for a few months at Kumbum. "In Amdo were 50,000 lamas in all the monasteries whom he entertained with food, besides distributing alms of one 'san' to each monk."[3] To people conversant with the geography and history of the country, this number seems fantastic.

The most recent and reliable data concerning the figures of the lamas in the province of Ch'ing-hai were secured by Mr. Wang Wen-han in 1948.[4] He made his inquiries on the basis of the recent official census provided by the Min-cheng t'ing or "people's (local) government office." Since the establishment in 1928 of the province of Ch'ing-hai, which encompasses the whole of Kukunor, Yu-shu, and large territories around Kui-te and Ta-t'ung hsien, formerly considered as barbarian regions, 13 subprefectures have been established, in which there are 235 lamaseries having 26,534 lamas. In the remote barbarian Yu-shu only there are 99 lamaseries with 10,665 lamas. The entire population of the new province being 1,346,320 inhabitants of which 683,802 are males and 662,518 females, the proportion of lamas should be one for every 26 males. However, the computation is very confused, because of the lack of figures for the lama population in minor lamaseries and the addition of new territories, and it is impossible to find out the number of lamas in the former prefecture of Hsining, on which my own computation was based. The article by Mr. Wang gives a better insight into the number of lamas and their proportion in relation to the entire male population of the province, and one which is notably smaller than the proportion usually cited by travelers. Although all census returns are always an estimate, especially in the Orient, the study by Mr. Wang is very interesting, because for the very first time in history we have an approximate census of the population and of the lamas in 1948.

CENTERS FOR RECRUITING LAMAS IN HUANG-CHUNG

San-ch'uan, the fertile territory assigned to the Li T'u-ssu during the Ming period, is renowned for the recruiting of lamas. A saying goes: *"Shan-hsi ti k'o-wa, San-ch'uan ti lama"* meaning, "Shan-hsi [province] is the most prolific in merchants, and San-ch'uan

[3] Sarat Chandra Dass, *Jour. Asiatic Soc. Bengal*, 28, 1882.

[4] Wang Wen-han, Ch'ing-hai Meng-Tsang jen-ming chih tsung-chiao hsin-yang, in the review *Pien-chiang t'ung-hsun*, No. 1 : 1 and 2, 1948.

is the most prolific in lamas." It is a known fact that of 175
old the clan of the Li T'u-ssu was fervently addicted to 792
Buddhism, and that the big monastery of Ta-Fo-ssu was built by the Li clan in Hsining during the Yüan dynasty. During the Ming dynasty a lama of the Li clan received the Karwa privilege, which still exists. The T'u kuan Hutukhtu was born in the Wang tribe, subjects of the Li clan. There are still two minor Li Living Buddhas at the monastery of Erh-ku-lung. In San-ch'uan there also live subjects of Ch'i, Na, and Kan T'u-ssu. Most of the San-ch'uan lamas like to enroll in Kumbum where the key offices are filled by them. It is a public secret that at various times friction and disputes have arisen in Kumbum between groups of [578] lamas competing for the possession of the lucrative offices. As the outcome of this kind of competition, the administration of Kumbum is completely in the hands of Monguor lamas.

The next center of recruitment is the Hung-nai-tzu Valley, the birthplace of the first incarnation of the famous Chang-chia Hutukhtu, and inhabited mostly by Monguors and Tibetans. It is customary among them to have only one of the brothers marry, while the others become lamas. Their devotion to having lamas in the family goes to the extent of buying a boy for the [608] monastery in case no male descendants are born. Several families have become extinct through lack of male descendants.

If account be taken of the number of monasteries and branches founded by Erh-ku-lung during the seventeenth and eighteenth centuries, the fervor of the Monguors for becoming lamas must have been considerable. At present, this fervor has diminished to a large extent. Many families have not provided a lama for at least two generations; the ties which bound them to the lamaseries seem to have become looser.

WAYS AND MEANS OF RECRUITMENT

A lama, possessing some wealth, likes to have a disciple who will help and serve him to his dying day, and enable him to enjoy peacefully a ripe old age. A poor lama cannot afford the luxury of a disciple. According to the regulations of 1723, a lama is allowed to have only one disciple. However, when the rule is relaxed, rich lamas may have two or three; most of the Living Buddhas have two. The lama usually tries to choose his disciple from among his nephews or from among the children of well-to-do families, which later will help to support the disciple and indirectly his master.

The choice is made before the child has reached the age of seven. If the family agrees, the lama offers a ceremonial scarf to the father and a brick of tea to the mother. The agreement cannot thereafter be retracted. At the time the child is seven or eight years of age the mother prepares a lama costume for him. On an auspicious day he is led by his father to the lamasery.

[p. 56(A)]

Many parents with only one boy pass through a bad time when a lama friend comes to ask for him as his disciple. Once in a while the lamas are very exacting and do not hesitate to predict the most terrible calamities in case of refusal. In 1913 the old man Chao of Lu-men-chih Valley who was seventy years of age was, after twenty years, still under the influence of the prediction of calamities made by a lama of Erh-ku-lung in the event he should refuse to give up his son. 175 792

A rich old Tibetan named Pao, father of an only son of six years, told me how the Living Buddha of Hsien-mi-ssu came to ask for his boy. The old man had begged the Living Buddha, prostrated himself and cried with his wife before him, for days in succession, and proposed to offer his beautiful mule, the best in the whole country, but to no avail. On the one hand the promises of blessings, and on the other the prediction of calamities, caused him to make the painful decision to offer his son.

There are children smitten with severe disease who are dedicated by their parents to the service of Buddha in the event they should recover, and children sent to the monastery by parents of large families. Very often it is difficult for these parents to find a lama who will assume the duty of caring for them, and arrangements are made between the lama and the parents concerning the support and the upkeep of the child. The bonds which tie such pupils to their masters are looser, and when they are able to stand on their own feet they try to find a way of making their own living. These are the usual ways of getting pupils. In all these cases the parents, not the children, make the decision for them to enter the monastic life. No question of vocation or willingness to devote a lifetime to the service of Buddha is considered by the children. The vocation consists of the decision by the parents and the readiness of a lama to accept the child as a pupil.

Children who are physically deformed or disabled, or children of butchers or notorious thieves are not allowed to become pupils. It is also said that children who do not care when a raven comes and sits near them are not fit for the monastic life.

However, I met an exception in Chie-bzan in 1913. A Tibetan named La, after being married for two years, living uncongenially with his wife, sold his horse, cows, and sheep, and, leaving a couple of cows and calves to his wife, became a lama at Chie-bzan.

PUPIL AND MASTER

NOVICE

175 792 571

On an auspicious day, a father arrives at the monastery with his son. The boy presents to his master lama the traditional scarf of felicity, a couple of packets of Chinese noodles, and prostrates himself nine times. The boy receives the name of his master, for lamas are not supposed to have any family. The adoption is finished, master and novice constitute one family, and

[p.56(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

the boy will obey his master as he obeyed his parents. 175
By this ceremony, which is a real adoption, the novice 792
is constituted the legal heir of the fortune of his master, 571
who usually possesses a home or a small courtyard inside the monastery, some animals, and money. The novice will stay with and serve his master his whole life, the master caring for his subsistence, keep, and education.

FIRST VOWS

After a few days, on a new auspicious day, the cere- 792
mony of the taking of the first vows is performed. In [782]
the early morning, the master himself shaves the head of his pupil. It is said that a layman is not allowed to be present at that moment. Five Gelüng [5] lamas arrive; one of them sits against the wall of the k'ang, and the other four, in pairs, sit opposite each other. The kneeling novice holds incense sticks in his hands and the Gelüng starts the ceremonial prayers, reciting the thirteen traditional vows which the novice repeats after him. Nine prostrations are given before a picture of some Buddha, and the chief of the Gelüngs makes a speech. The boy thanks the Gelüng and his master by prostrations, and the vows are taken. From that time on the boy is called *Wendee*.[6] In some monasteries only two Gelüngs preside over the ceremony; at Seerkok, only one. The master then enters the name of his pupil in the roster of inmates of the monastery. The master alone is the judge of the aptitude and religious vocation of his pupil.

The master starts the education of his pupil by teach- 792
ing him how to arrange the house altar, sweep and 874
keep the house clean, care for the stables, collect cow dung for fuel, draw water, milk the cows, tend the animals, graze the cattle, prepare food and tea. The novice is the genuine servant of his master, a cheap laborer. However, when the novice is not engaged in domestic duties, he receives religious education from his master, which starts with the study of the alphabet and reading of texts, and at the same time he repeats daily after the master and commits to memory the texts recited in the head temple. When he has learned them he is allowed to attend the morning ceremonies and to share the benefit of hot tea every day, to partake of the many meals, fixed according to the calendar of the monastery, and participate in the distribution of the alms.

Memorizing is the most important point in the program of studies. Later on, the master helps his pupil to read and to commit to memory the texts used at funerals, for diseases, to protect the herds, the harvest, etc., because these texts will help him to make a living in the future. Every morning the pupil recites the prepared texts before his master. During his spare time, when he is not engaged in domestic duties, he has to

[6] *Ibid.*, 171, Ge-nen-Bandi-Rab-brun—Gelüng.

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

commit the texts to memory, punishments being in- 792
flicted if he is slack in his scholastic duty. No haste 874
or fuss is made about the matter of study, for master and pupil possess endless years for the job. No dignitary at the monastery inquires about the studies of the pupil or the teaching of the master; the intellectual and religious education is a family matter, a duty between master and pupil.

SECOND VOWS

At the age of eighteen the novice takes his second 782
vows and is called *Gelüng*. According to the rules, the 792
vows are only allowed to be taken at the age of twenty, but at eighteen, one year is added for his father and one for his mother, and the required twenty years are complete. The ritual for the taking of the second vows, which number 253, is the same as for the taking of the first vows. A minor Living Buddha or a Fa-t'ai is invited to preside over the ceremony, after which an official religious name is given to the novice. The family and friends of the novice are invited to attend this important rite and they bring gifts with them, such as meat, rice, raisins, jujubes, Chinese noodles, rolls. A dinner is served, and each of the guests upon leaving for home receives two rolls from the novice.

The taking of the 253 vows is the highest rung of the ladder of Lamaist dignities reached by 99 out of 100 lamas in Huang-chung. Although the appellation of "lama" is officially reserved for monks who have passed this stage, in Huang-chung it is commonly used for all monks who have taken the second vows, and usually indiscriminately for all people who wear the lama clothing.

Old lamas naïvely admitted that in former times a [484]
lot of lamas of Huang-chung used to go to Lhasa to complete their studies and to obtain higher titles, but that at present, because the former reputed centers of learning in Tibet had fallen into a state of deterioration, no lamas are traveling to Tibet. It may be that the monasteries of Huang-chung have declined, and no appeal for serious studies is felt among the lamas. During the Moslem revolt of 1872, hundreds of lamas fled to Tibet and came back after the rebellion without having seized the opportunity to increase their knowledge.

After the second vows, the scientific and religious 792
education is complete. The lama can then read a text 874
more or less correctly, without understanding it. He cannot write a letter, but is able to recite a number of texts, which he has committed to memory in order to assure himself a living. Every morning he attends the ceremony in the main temple, where instruction is given which very seldom has any appeal to him, since he cannot grasp its confused meaning, being engaged the whole day long in domestic duties. No elementary or high schools exist at the lamaseries; there is no special instruction for boys and teenagers; no religious guid-

[p. 57(B)]

ance is provided by an experienced spiritual director 792
and adapted to the needs of turbulent young people. 874
There is no novitiate. A young lama's director is his own master, who himself has received no scientific or religious training. The pupil tries to imitate the older lamas. He listens to their conversations and observes their actions. This lack of real education makes an experienced man pause.

RELATIONS BETWEEN PUPIL AND MASTER

The Wendee, after becoming a Gelüng, does not leave 792
his master, but continues to serve him to his dying day. 571
A lama enjoys the highest respect and love of his family, especially when he is young. His master allows him to make frequent visits to his parents, for it pays him to do so. The saying goes that lamas are quite like married girls. When they visit their family, they take nothing with them and ride an empty horse, but when they leave their father's home their horse is loaded with gifts. The lama never returns from his parents without having received some clothing from his mother, having his clothes mended, and having received some sweet rolls, meat, and pickled vegetables. His parents slaughter a sheep or kill a pig, and a piece of meat is sent to the lama and his master. The master enjoys these small gifts and they help smooth the relations between master and pupil, who have to live congenially together, enduring each other's shortcomings and deficiencies. The intelligent master tries to cultivate good relations with the family of his pupil because this will help to make the pupil obedient and avoid friction between them.

Old, experienced lamas told me often that the problem of the pupil is of overriding importance and is a nightmare to many lamas. The young people now are not as unsophisticated as in old times. The master, an uneducated man, who has never learned to restrain his own passions and temperament, is usually not a man qualified to educate a wild pupil, but the fault does not always lie only with him. The stumbling block in the [867]
education of pupils is to be sought, not usually in the home of the master, but outside the monastery, where the pupil goes every day for hours on end, to collect fuel or graze the animals. Boys of seven, eight, and ten years of age meet with teenagers, already thoroughly corrupt, who pervert them and plant in their hearts the seeds of evil weeds which are likely to thrive for the rest of their lives.

Among these groups of young lamas all the short- 792
comings of the masters of the monastery are discussed, 867
the pitiful conditions of the pupils, the disappearance of 571
pupils, the accusations at the Chinese courts of masters by their pupils, the successful removal of a part of the master's wealth by the pupil. These young folk listen all night long to the conversations of the older lamas, who know, to the last detail, all the scandals of the lamas and of the monasteries of the whole country, who

[p. 58(A)]

talk of commerce and business deals, and about the interesting places they have visited. In this way the youngsters come to know about a great deal of unedifying material which they discuss, with relish and interest, when they meet outside the monastery, and so the spirit of commercial adventure is cultivated in them, and the passion to see places and to wander. This poisoned atmosphere, woven around them, has a pernicious bearing on their careers. In the long run, the young lama receives his education outside the monastery in the groups of unrestrained young lamas, and in the evening at the home of his master when old lamas talk unguardedly. In the Orient there are no secrets.

772 867 571

In 1913 I was a guest at the monastery of Hsien-mi. One night the rich intendant of the community of lamas arrived after an absence of three weeks. His two disciples, sixteen and nineteen years of age, had disappeared after being beaten by him for insubordination. Finally, he had found them at the monastery of Shih-men, five days distant from Hsien-mi. By dint of promises he had succeeded in bringing them back home. Two days later I arrived at the monastery of Chu-erh. Two pupils had just undergone a terrible ordeal. One had stolen 50 taels from his master and the other had concealed the stolen money. Punishments were inflicted on both the thief and his accomplice with ruthless severity.

The old rector of the branch of Hua-Yüan-ssu, depending on Erh-ku-lung, had borrowed from a rich Monguor 200 taels. Trusting his pupil, thirty-six years of age, he had sent him with the money to the Monguor. Three months later the Monguor again asked for his money. Then the pupil disappeared and the rector had to pay the sum again. A year later the pupil returned and apologized. The rector was happy to see him again.

An old, sick, asthmatic lama, a friend of mine, came to get some medicine. His young pupil, sixteen years of age (this was his second disciple), had come back after wandering for a year. The asthmatic old man had implored him not to act in that way any more, and had promised to give him a horse and to defray all the expenses of a trip to Lhasa, after he reached his twentieth year of age.[7]

The disappearance of the young lamas is the greatest concern of the old lamas. Punishment is enough to make them leave. Often two or three young men, lured by adventure, decide to abandon their masters and disappear, taking their leave for months or years. The masters, not knowing whether they will return, cannot make provision to search for another pupil, for in case a master's pupil should return, and in the meantime another pupil had been taken on, suit could be brought in the Chinese courts by the former pupil to obtain the wealth of the master and a definite separation.

[7] Rynhart, *op. cit.*, 36, 37, more about this matter.

[p. 58 (B)]

Even this kind of trouble is mild enough. It is more serious when the pupil accuses his master in the Chinese court, alleging that living with his master is impossible, and demanding a part of his wealth. Such impudent acts of audacity happen from time to time. I asked the subprefects of Tat'ung and Nien-pei, and the Amban, about the reasons given for such accusations. All three told me, "Father, you do not know the secrets of the monasteries. The alleged reasons are always, in the long run, the same as those used by the daughters-in-law when they accuse their fathers-in-law." 792 571 691

A lama cannot stand having such accusations put on public display by an unscrupulous pupil who aims at getting hold of his wealth, for even if he wins the suit, his entire wealth has vanished. The pupil knows perfectly well how much his master is worth, and tells the officials and the underlings of the court how much they can expect to benefit. Such a suit makes the court happy. An intelligent lama, therefore, always tries to invite influential people to mediate the quarrel and to work out an agreement, consenting to give up a part of his fortune and to separate from the pupil. The lama can then begin again with another pupil, while he still has something to his name.

The life of a lama is not a bed of roses. Even if he should be an affluent individual, insecurity over the attitude of his uneducated pupil, fears of having the pupil accuse him at the Chinese courts, and the possibility of losing his fortune, must always hover in the background. 792 571

The life of the pupil is not a bed of roses either.[8] Not having received any real religious education, having no serious occupation, living a lazy life, the prospect of having to serve, who knows for how many years, a master who is becoming old and has many weaknesses and imperfections, is not alluring. On the other hand, being in the prime of life, used to engaging in domestic duties, enjoying the company of young people of dubious behavior, the pupil is not disposed to dedicate all his energy to study and devote himself entirely to a perfect monastic life.

These seemed to be the conditions prevailing between masters and pupils in the monasteries of Huang-chung in 1910–1920, which became evident after observing the lama life at close quarters for several years.

THE IDEAL MONGUOR LAMA IN HUANG-CHUNG

It was always very interesting to inquire, among well-acquainted, serious lamas, and among young pupils, how a "good" lama behaved the whole day long. The answers given are summed up in the following statement, bearing evidences of a long-standing tradition and of a general uniformity in the concept of a "model," or "ideal" lama. 792 157

In the very early morning the master awakens his

[8] Rynhart, *op. cit.*, 129, 130, 131.

[p. 59(A)]

pupil, who prepares tea. He presents a cup of tea to 792
his master and enjoys one with him. In the winter he 157
kindles the brazier. Then he sweeps the courtyard while his master rises. He brings him a basin of hot water, so that he may wash his face. He wipes the dust from the house altar and the furniture, and prepares the ritual tea to be offered before the Buddha image (a yellow powder consisting of several kinds of pounded roots mixed with water). The master fills the brass cups, displayed in a row before the image, taking care not to spill a single drop outside the cup. Master and pupil recite the ritual prayer, prostrating themselves as long as the prayer lasts. Fervent lamas are accustomed to make 108 prostrations with their pupil. Everyone assured me that this is really hard work, especially in wintertime.

After the ritual the pupil empties the brass cups, pouring out the ritual tea in the courtyard in a place assumed to be clean, and cleans the cups. About this time the conches are blown and the drums beaten in the central assembly hall, and master and pupil go to attend the morning ceremony. They then come back to their quarters, and, after driving the oxen and horses to pasture, the pupil places the text book on the lap of his master and then with his back turned to the master recites the lesson indicated for that day. If he fails, the master inflicts corporal punishment and fixes the lesson for the next day. The pupil then prepares breakfast, after which he goes out to collect fuel. He is back at noon in order to serve tea and tsamba to his master. The ritual tea is offered again before the images, with prostrations, and the pupil, free for the whole afternoon, is then allowed to relax with his friends outside the monastery. He has to be back by the time the sun is as high as two posts, in order to prepare the evening meal of noodles and tea, which the master enjoys sitting on the k'ang while his pupil squats on the floor. After the kitchen chores are finished and the animals tended, the pupil starts memorizing texts for the next morning. When it is time to go to bed, a last and third ritual tea is offered, with prostrations, before the image on the house altar, and master and pupil sleep next to each other on the k'ang. A pupil is never allowed to go to bed before his master.

During the long winter nights, in order to have an [805]
idea of the time, the good lamas fix three sticks of incense, end to end. To the third stick is attached a thread with copper coins. This device is suspended above a basin. When the third stick has burned down, the thread with the coins falls into the basin. The lama awakes and kindles a new series of three sticks of incense. He repeats this process a third time. When the coins fall for the third time the pupil is awakened and he starts the day's chores as before. If it happens that, when master and pupil are ready to attend the morning ceremony, the dawn is still some way off, they return to their slumbers; but if it is at hand they must, ac-

[p.59 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

cording to the rules, occupy the time in meditation or prayer. 792 157

A good lama should daily, once in the morning and once in the afternoon, walk around the monastery saying his beads and prostrating himself at the small shrines along the ritual way. In the fourth moon he makes the same round, prostrating himself the whole way along. This is said to be really exhausting work.

Every year a good lama enters a retreat at home for two weeks. He does not leave his room, talks with no one, and cancels all appointments with visitors. He prays and reads texts the whole day and offers the ritual tea four times daily before the image. A good lama never sits on a bench or chair, but always squats [516] cross-legged on the floor or the k'ang, barefooted, his clothes adjusted decently. He eats only mutton, beef, or pork, never the meat of the horse, donkey, hare, or [262] chicken, or fish or eggs. Lamas are not allowed to raise sheep, goats, pigs, chickens, or donkeys. A model lama lives in retirement, avoiding mixing with the groups of lamas who play chess and cards all night, or indulge in endless gossip, or tell smutty jokes and indecent stories, for the saying goes that "nothing is dirtier than the tongue of a lama." A good lama deals with books with reverence, putting them, wrapped in a yellow silk scarf, before the Buddha statues, carrying them on his back when traveling. A good lama does not even go to say prayers at private homes, when invited by the people; he does not leave the monastery.

These notes, given by older lamas and young Wendees, reveal what lamas think about an ideal lama and what sort of ideal is held up before young lamas. However, in order to be able to become an "ideal lama" some wealth is required, or at least an honorable competency, and it is precisely the lack of this primary condition which provides the clue to most of the miseries of individual lamas and the ruin of many monasteries.

HOW LAMAS PROVIDE FOR THEIR SUBSISTENCE

792

Lamas have to earn a living, because support furnished by the monastery is insufficient. Poor lamas try to find a full-time job in the several intendancies of the monastery or with the minor Living Buddhas, or by accompanying expeditions to collect alms, or by working in the printing offices. Many find a part-time [466] job carrying water every day for several rich lamas, driving animals to the pasture grounds and then back home again, selling cow dung and fuel. Lamas like to be hired, by a lama whose pupil has abandoned him, to search for and bring back the strayed pupil. Lamas try to buy a young, nicely built horse or mule, and are happy to hire young lamas who will work every day at breaking it to the saddle, in order that they will be able to sell it in the cities or in Lhasa, where such animals command a good price. Lamas

[p.60(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

proficient in the art of gelding, are well known to the farmers and can earn money by this skill. Others, skilled in the diseases of domestic animals, are busy all year writing prescriptions and selling medicines. 792

Still others work as doctors and earn a pretty good living. After examining the six different pulses of the patient, an agreement is made. The doctor guarantees the cure after a certain number of days, and demands immediate payment of an agreed sum, or of an animal, according to the seriousness of the disease. Then follows the prescription and the medicine. Other lamas are engaged in the tailoring business and sell cloth, silk, and brocade. Lamas like to be hired by devout people to make pilgrimages to celebrated monasteries for their intention. I once saw a lama reading texts for three days in the temple of medicine. Two bricks of tea put near him were the salary for the reading, which had been requested by a sick Monguor. I was told at Kumbum that many lamas, hired by Monguors or Tibetans, made a good living by prostrating themselves 108 times every day, for a fixed number of days, before a celebrated temple. Lamas try to be invited by their family, relatives, or friends of the family to pray at their home for several days for an agreed intention. If a sheep or goat is given as payment, they manage to put them, ear-marked, into the herds of some family, and thus in time many lamas come to own a small herd. [759] [760]

If you need some musk or saffron, or *p'ulu* cloth[9] or other products of Tibet, within an hour a lama will show up with what you want, ready to close a deal. It is the same if you need animals or a fine Peking saddle. A few lamas travel over the country to sell books. Lamas who have money in hand are ready to lend it, providing there are satisfactory guarantees. If you are calling on lamas and a lama visitor shows up, they talk business after a few minutes, always business. It was interesting to ask the young lama boys about the means used by the lamas to earn a living. They knew perfectly well how each lama made money, what his profits were, and how much he owned.

It is easy to understand that the mind of a people endowed with such a roving eye for business is not bent on prayers and meditations, and that such people are not committed to monastic life with passionate devotion. Perhaps the environment in which the lamas live, their daily conversations, the successes scored by lamas in trade, stimulate the passion to acquire more and more wealth in order to be able to live at ease in a

[9] W. W. Rockhill, *Diary of a journey through Mongolia and Tibet in 1891-92*, 67, Washington, Smithsonian Institution, 1894, describes *p'ulu* as woolen fabric woven in pieces, usually thirty feet long and about nine inches wide. The best kinds of this cloth come from Ulterior Tibet. The most popular colors are red, purple, striped and white with red and blue dyed crosses. The fabric is used in China to cover saddles or trim seats of carts. *"P'ulu"* is the Chinese transcription of the Tibetan name of this cloth, *"p'ruk."* [p. 60(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

ripe old age, with the result that they turn out to be 792
steady and sound business men, wearing religious clothes. Necessarily, the precepts and rules of the monastic life come more often to be honored in the breach than in the observance, and so the lamas drag each other down hill.

COMMUNITY OF LAMAS

How does a lamasery control its members and provide for their education? This is done through two organizations, the community of the lamas and the colleges or faculties.

Lamaseries have to control their lamas because they are responsible to the Chinese Government for the crimes and injustices caused by their members. Many lamas not dependent on any lamasery live in the country dressed as lamas and earn their own living, and do not involve any lamasery in the troubles they might cause.

In order to become a member of a lamasery, the name of the applicant must be entered on the roll of the organic community of the lamas. This carries with it permission to live in the monastery, to share its benefits and support, and to become a member of any college. The organic community of the lamas administers the entire lamasery; it fixes the rules observed by all the lamas of the institution; it sees to their observance and inflicts punishment for infractions. The community of the lamas is the hub around which the entire lamasery revolves. It possesses its own wealth and has its independent administration, as has been explained (p. [42]
38). The main temple of the lamasery is its property and in it all the lamas have to convene in the early morning to read texts. Every time the main temple is destroyed (as by revolts or fire), the organic community of the lamas must rebuild it.

In December, 1912, the vast temple of Kumbum dis- 175
appeared in a furious blaze after the morning conven- 792
tion of the lamas. The adjacent temple, containing the [42]
dried trunk of the fabulous tree, was preserved, but the entire precious library, splendid old tapestries, precious embroidered streamers, paintings, the large Buddha painting, 21 meters in length and 15 meters in width, which was hung every year on the mountain at the festival, two enormous butter lamps of massive silver, the entire wardrobe and masks used in the theatrical performances, silver *chortens* containing the ashes of celebrated Living Buddhas, disappeared in the blaze. The guardians of the temple disappeared at full speed. Devoted old lamas testified that Tsong-khapa had punished Kumbum whose old fervor had decayed. I saw the whole community, old and young, devoutly carrying the ashes of the temple on their backs into an enclosure, because it was stated that the ashes, hallowed by the prayers said in the temple, must not be allowed to be desecrated. The intendants of the community of the lamas toured the Tibetan and Mongol countries

[p. 61(A)]

for the next two years collecting alms; Seerkok offered 175
a thousand big trees, Labrang $6,000, Erh-ku-lung 792
$1,000. After three years the temple was rebuilt.

In 1910 the same thing happened at the monastery of Chu erh under similar circumstances.

ORGANIZATION OF THE COMMUNITY OF THE LAMAS

FA-T'AI, CALLED "MASTER OF THE DOCTRINE" ("LOB-PON" OR "MK'AMPO")

792
The supreme chief of this independent institution is 794
the Fa-t'ai. His office is the most honorable one a 534
lama may fill. Fa-t'ais are chosen from among respectable lamas with a blameless record, celebrated for their knowledge. Not only lamas are invited to that office, but even Living Buddhas. Most of the eminent lamas in the country have been Fa-t'ais in nearly all the big lamaseries in Huang-chung. It has been recorded that a lama, even a Living Buddha, who is a member of an affiliate, never declines the invitation to fill this office at the mother house. Each college also has its own Fa-t'ai.

The office of Fa-t'ai is held for a term of three years only. The intendancy proposes to the supreme chief of the lamasery the name of the desired lama, and, on obtaining the consent of the supreme chief, sends lamas with the invitations. The Fa-t'ai lives in a beautiful residence and has as many lama servants as he desires. He is supposed to be the spiritual director of the institution which invited him, and to possess the power to reform the behavior of the lamas and to urge even stricter observance of the rules. It has been recorded how the stubborn Sumpa of Erh-ku-lung demanded in Lhasa the complete neutrality of the lamas of his community at the time when all the lamas of Lhasa prepared to participate in the civil war, and that finally the example set by him was followed by all the lamaseries of Lhasa. The same thing happened in Kumbum in 1895 at the time of the rebellion of the Moslems. The Fa-t'ai (m'Kampo) was the Living Buddha Mina, [669] a quiet and peaceful man, who ordered the lamas to prepare only to defend the lamasery in case of attack. However, Shertoch, another Living Buddha of Kumbum, more turbulent and still recalling the destruction of the monastery except for the temple containing the celebrated tree during the revolt of 1862–1874, stirred the lamas to attack the enemy in the Moslem stronghold of T'opa, fighting on the side of the Chinese Army. After the first attacks had been unsuccessful, and several lamas had been killed, the war party grew bitter against Mina, who had to resign the post of Fa-t'ai and for some time was in fear of his life.[10] Achia, the chief and proprietor of Kumbum must have been an irresolute man, for he did not interfere even in such critical circumstances.

[10] Wellby, *op. cit.*, 281. Rynhart, *op. cit.*, 72, 92.

[p. 61 (B)]

The Fa't'ai even has the power to redress the mal- 792
administration of the intendancies, but all these powers 794
are more nominal than effective, because the name of 554
the Fa-t'ai-to-be is proposed by the intendancies themselves to the supreme chief of the lamasery. They know very well which Fa-t'ais are bent on reforms and set in their ways, and in order to secure the peace of the lamas and their own, they avoid proposing the name of "trouble makers." The Fa-t'ais, on the other hand, are practical Orientals. They know their appointment lasts for only three years, and that, if they should start with reforms, they would meet with the general covert opposition of the intendancies and of all the lamas, and their reforms would be hamstrung, so why borrow troubles if the next Fa-t'ai would undo what his predecessor had built up?

Therefore, the powers of a Fa-t'ai in Huang-chung are in practice reduced to theoretical and honorary dimensions. They are venerated as the learned supreme teachers of the community and occupy the highest seat in the main temple, next to that of the supreme chief of the lamasery. They very seldom attend the ceremonies in the temple, except when a rich pilgrim invites the community to read texts in his behalf. They attend the ceremony at the time of the festivities in order to enhance the prestige of the community, and march in procession with a stately measured tread to the temple, with the traditional splendor of their retinue. In the fourth, sixth, and eighth months they preach in the temple for the lamas for a few days. The rest of the time they live a happy, peaceful life in their residences, devoting their time to study and meditation, and entrusting, as their predecessors did, the whole direction of the institution to the intendant, who in the final analysis governs the entire institution. Fa-t'ais are inclined more to the speculative than the practical side of life.

A Fa-t'ai has to be a rich man in order to be able to fulfill his office. On the one hand he receives a small salary and at the time of the distribution of alms he receives as many shares as the supreme chief of the lamasery, but the flow of donations is irregular and unpredictable. On the other hand, a Fa-t'ai, several times a year, has to entertain the lamas of the community in a more or less sumptuous manner, with tea, butter, *tsamba,* mutton, beef, rice, raisins, and rolls. Each lama has to take home a fixed number of rolls. These repeated entertainments of lamas, four or five times a year, are the big expenses which a poor Fa-t'ai cannot afford, and they explain why poor but celebrated lamas decline the offer of the office of Fa-t'ai in large communities.

INTENDANT

Every day, during the morning assembly, a few re- [62A]
marks are made to the community by the intendant concerning the observance of rules, the decorum required of lamas, the punishments inflicted the previous day

[p. 62(A)]

for infractions of the rules, the reform of some misbehavior, the arrival of distinguished guests or pilgrims, the offer of important gifts, and special religious ceremonies asked for by devout people. Herein consists the entire direction and instruction of the lamas, except for those who study in the colleges. 792 [626] 554 794

His role has been explained. He is the chief executive of the institution and administers its wealth. He has his own residence; his courtyard is his court of justice, where all the suits of the lamas and of the subjects are judged. All the officials of the institution receive his orders; he has one or two procurators helping him in the material administration, commanding a number of servants varying in accordance with the importance of the lamasery.

DISCIPLINARIANS

Their function is a really important element in the government of hundreds of uncivilized lamas and turbulent young folk living in the same lamasery, most of whom wander correctly along the path of monastic life more from fear of severe corporal punishment than for pure love of Buddha. I never saw a master of discipline in the lamaseries wearing a delightful smile. More often they seemed to be the type of tormentors that might step out of a picture of the Eighteen Buddhist Hells. No wonder the lamas, especially the young folk, dread them. 792 626 794

Usually there are two disciplinarians appointed by the Fa-t'ai for a term of one year. Often they have been proposed for the position by the intendant and his councillors. The disciplinarian presides over a number of lictors. During ceremonies in the temple the disciplinarian maintains order among the older lamas and keeps a constant eye on the novices. A breach of silence or any irreverence is punished instantly by blows from his rawhide whip. He takes note of the presence and absence of lamas at the morning ceremonies, and must investigate to find out whether lamas, not enrolled in the monastery, or laymen, are remaining with their friends at night inside the lamasery, and is responsible in general for the observance of the rules of the monastery.

Permission is required from the intendancy to leave the lamasery for a long time. Business deals are not to be made too ostentatiously. At night lamas may gather with friends to relax, talk, play cards and chess, but are not allowed to make much noise or to disturb the sleep of their neighbors. Gambling is not allowed, nor is the drinking of liquor. At night, the disciplinarian with some of his lictors, armed with rawhide whips, makes a tour of the lamasery. Lamas found brawling, quarrelling, or fighting are brought to the court of the intendant, where penalties are meted out in various brutal forms. The time of the festivities is a difficult one for the disciplinarians, when merchants pitch their tents, and lamas and people drive bargains. [773 525] 784

[p. 62(B)]

Very often fights occur, for no important deal is closed 792
in the Orient without brawling or quarrelling. At that 626
time the disciplinarians and their lictors are on duty 794
all day and night.

At festival time women are allowed in the monastery, and relatives are allowed to visit their lama and stay at night in his home, after permission has been obtained from the intendancy. Several old lamas explained to me that the disciplinarian has to be changed every year in order to prevent the lamas from becoming too well acquainted with him, and arranging by bribery to break the rules. How officials, with such a terrible exterior appearance, can be approached so easily to be bribed is shrouded in mystery. For this reason, in all the lamaseries of Huang-chung the disciplinarians are said to be changed every year.

PRECENTOR—UM-DSE

In every lamasery there is a precentor, the leader of 792
the texts recited at the assemblies in the temple. He 794
is usually a man endowed with a voice that resounds in a deep, low, grave tone. At the same time he is the master of ceremonies who trains the officiants. He opens the prayers in a loud voice, in a special low register, the others taking up the chants in unison at the top of their voices.

COUNCILLORS

In larger lamaseries there are usually four councillors, older lamas, appointed by the Fa-t'ai for three years on the recommendation of the intendant. They constitute in effect, with the intendant, the administrative board of the institution. Before the name of the appointee is proposed to the Fa-t'ai, the intendant refers the proposal to the chief of the lamasery. The result is that the nominally supreme powers of a Fa-t'ai within his institution are in practice curtailed, and the influence wielded by the intendant upon the supreme chief of the lamasery being usually unlimited, the intendant is in reality the supreme ruler of the institution.

The rules to be observed in the lamaseries by all the inmates include the non-admittance of women, the non-admittance at night of laymen, or lamas who are not on the roster, and the obligation to attend the ceremonies prescribed for the members of the community. All other rules conform with the elementary standards of good behavior.

COLLEGES

In important lamaseries, colleges have been estab- 792
lished, theoretically as centers of higher education. 794
Some foreign travelers call them "universities." In 873
Huang-chung the only requirements for becoming a member of one of the four traditional colleges and reaping the benefits of the institution, are to be a member of the organic community of the lamas and to know the prescribed texts recited at the meetings held at the temple of the college. Accordingly, the majority

[p. 63(A)]

of the members of a college, at the time they enter, 792
have previously received only the training of ordinary 794
lamas, which consists of learning to read and write 873
more or less correctly. Old lamas, as well as young Wendees, from the time they fulfill these two conditions, are allowed to apply for membership if the colleges have an appeal for them. A lama is not compelled to enter any college. If he does, the manner of joining or leaving a college is the same as described for joining or leaving the community of the lamas. Every lama is allowed to remain a member of a college for as long as the appeal of the college persists, and usually he remains a member for the whole of his lifetime.

Each college is an independent unit within the lamasery, having its own wealth and administration, its own temple, administrative buildings, and residence for its Fa-t'ai. The administration of the colleges is built on the pattern of the organization of the community of the lamas, with the same kinds of officials, and enjoying the same kinds of autonomous rights and privileges.

The four colleges are: (1) The College of Philosophy [871]
and Metaphysics, (2) The College of Ritual, Magic and Astrology, (3) The College of Medicine, and (4) The College of Sacred Scripture and Monastic Rules.

In Huang-chung at present (1910–1920) nothing more is required from the members of a college than attendance at the ceremonies in its temple and at the instruction given by the Fa-t'ai on a few fixed dates. There are no regular courses with compulsory attendance, no program of studies is required to be completed within a certain number of years, there are no compulsory examinations, and no obligation to take any degree or diploma. No director supervises the studies of the members of the college; studies are a personal matter, depending on the initiative of each individual.

A lama who has some feeling for study, who possesses some money provided by his family, or whose master is willing to spend some money for his education, goes to see a learned lama taking with him some meat, noodles, raisins, sugar, and some money, and prostrates himself, offering the ceremonial scarf and asking the lama to be his teacher. Usually, three or four lamas manage to become pupils of the same master. At fixed times they have to bring presents to the [875]
teacher. The study of the book designated by the master starts with committing the text to memory, and [876]
recitation before the master. Two or three times a week the master takes time to hear the recitation. Student and master are in no hurry; once in a while the master is too busy to teach, or one of the students is prevented from attending the lesson. The students all engage in domestic duties. Their capacities and fervor for study are not the same. After a few weeks one of them is memorizing the fourth, one the tenth sheet, and so on. After several weeks more, a couple of them have no further desire for study and drop out.

[p. 63(B)]

The master starts with the explanation of the text 792
after the student has finished memorizing it, and so it 794
happens that, after some time, one pupil is studying a 873
second or a third book, while the others are still study- [876]
ing the first one. It is hard to teach pupils who have
not received the same educational preparation and who
progress at an unequal pace. The lack of elementary
schools and high schools compels the master to adapt [872]
his teaching to the capacity and enthusiasm of each of
the students, and inevitably the study loses its interest
for pupil and master.

It is no wonder that very few learned lamas are encountered at present among the lamas of Huang-chung. The Living Buddha Goorong bzan, of the Red Sect, was the only man celebrated for his learning all over the country during the period 1910–1920, and he enjoyed this reputation among lamas of the Yellow Sect as well as the Red Sect. In Kumbum there was also a learned Living Buddha, Chao-hsi, who was said to have given instruction in the lamasery of Galdan in Tibet. In June, 1920, he was invited by the community of lamas of Kumbum to give instruction for ten days, and Kumbum seized this opportunity to invite all the lamas of Huang-chung to attend the ceremony, remembering that each attendant should offer a ceremonial scarf to the preacher, and bring his food with him. Kumbum, however, would offer two butter-teas to the participants each day. I was at Hua-yüan, a branch of Erh-ku-lung, at that time, and the intendant, in order to have his lamas attend the instruction, himself offered to provide them with the food for twelve days; but only 12 among the 58 lamas went to Kumbum.

In 1914 I was told that among the 3,000 lamas of Kumbum, 1,300 were members of the College of Philosophy, 350 of the College of Ritual, Magic and Astrology, 200 each in the College of Medicine and the College of Sacred Scripture and Monastic Rules. All these numbers have to be reduced according to the ratio previously noted for the 3,000 lamas of Kumbum, but the proportion is the same for the members attending the colleges. Thus, among the 3,000 lamas 2,000 or two-thirds were enjoying a higher educational training in the colleges, and they remained members of the colleges for the whole of their lives. This was generally true for all of the colleges of Huang-chung.

The reason for the unusual attendance at the col- 792
leges is not that these institutions are centers of higher 554
education, but rather that they provide meals for their 873
members. The richest colleges, able to give the great- 814
est number and the choicest meals, are the best at- 262
tended, such as the College of Philosophy. Another
attraction of this very popular college, teaching the
most arduous of all the sciences, is the relaxation provided by the public disputations. The schedule of the
meals provided by the various colleges supports these
statements: [p. 64(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

1st month from 3rd to 18th, 3 cups of butter tea and tsamba, in all the colleges. 792
2nd month, all through the month, 3 cups and tsamba, for philosophers only. 557 873
3rd month from 11th to 16th, 3 cups and tsamba, in all the colleges. 814 262
4th month from 1st to 7th, 3 cups and tsamba, in all the colleges
5th month, all through the month, 3 cups and tsamba, for philosophers only.
6th month from 1st to 10th, 3 cups and tsamba, in all the colleges.
8th month, all through the month, 3 cups and tsamba, for philosophers only.
9th month from 15th to 19th, 3 cups and tsamba, in all the colleges.
10th month from 22nd to 29th, 3 cups and tsamba, in all the colleges.
11th month, all through the month, 3 cups and tsamba, for philosophers only.
12th monthly from 1st to 7th, 3 cups and tsamba, in all the colleges.

During the first, second, eighth, and eleventh months there is an exception. During each of these months, the philosophers four times enjoy two cups of rice, meat, and raisins. Rich pilgrims are accustomed to ask for special ceremonies and prayers more often in the College of Philosophy than in the other colleges, and each time they offer rice, meat, raisins, and alms. The philosophers thus enjoy more extra dinners than the members of other colleges, and receive greater shares at the distribution of alms. It is not amazing that a lama who can hardly make ends meet, but is endowed with a philosophical brain, considers it more educational to enroll in the College of Philosophy than in the others. Herein lies the practical attraction to the study of philosophy.

PREDILECTION FOR THE COLLEGE OF PHILOSOPHY, ITS CAUSES

The public disputations are the next attraction. 792
Among the huge numbers of members of the College 814
of Philosophy there are always some exceptions. Small 873
groups of students are encountered who are genuinely interested in study and under the direction of competent professors invited by them, they undergo a severe course of instruction. Two or three times every week they are engaged in public disputations, attended by all the members of the college. Students studying the same book form the center of a numerous audience, squatting on the ground of the courtyard in the open air. These disputation exercises have been described by many authors; it is sufficient to record that the same circles always enjoy the biggest attendance, not for the interest of the subject disputed, which is rather mild, but in order to enjoy the virtuosity of celebrated de-

[p. 64(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

792 814 873

baters who are always the same and fond of displaying their ability.

792 544 873

Not a few among them are real actors, who would honor the stages of the best theaters in the civilized world. Their poses, mimicry, jokes, verve, double meaning suggestions, affected sounds, and their knack of keeping the people amused, whet the curiosity and provide a real relaxation. Nearly the whole community huddles around them, even the old lamas who are used to sitting sleepily at these compulsory, boring meetings, for whom the novelty has worn off many, many years ago, and who have never been interested in the subject itself, strain their ears and huddle a little nearer to the stage and relax happily.

The Yellow Sect has always been fond of dialectic. The T'u-kuan Hutukhtu of Erh-ku-lung was celebrated for his logic in the learned world of Tibet, Mongolia, and Huang-chung.[11] The dialectic methods of Nagarjuna are particularly enjoyed by the philosophers. He used to "prove," in the most incredible ways, the nonexistence of the world, of his proper self, and even of Buddhism.[12] The debaters try by means of recitation of endless memorized texts to stagger their opponents, and by tortuous questions to entice them into snares of sophism and to prove the most unbelievable theses. The attractive public disputations help to break the monotony of the monastic life, and to provide a couple of hours of relaxation.

It was said that once in a while some students passed official examinations and obtained titles and degrees, but I never had the opportunity to be present at such ceremonies.

Both these reasons explain the unusual attraction toward the College of Philosophy of the large number of lamas, who even lack the education of a student of an elementary school, and also the stubborn perseverance of the old lamas in continuing as members of the college.

792 873 794

The conditions for becoming a member of the other colleges and the method of study are identical with those of the College of Philosophy. The lamas have to attend only one compulsory service in the early morning in the main temple, as required by the organization of the community of the lamas, and have plenty of time to attend the exercises prescribed by other colleges in the morning and afternoon; they even have plenty of time to indulge in domestic duties and commerce. It would be instructive to make a comparison between the standard of the studies in Huang-chung and that of the celebrated lamaseries of Tibet, as described in nearly all the works concerned with the subject.[13] After investigating the situation in Huang-chung, I harbor suspicions concerning the punctilious observance of the pro-

gram of studies, elaborately built up and highly vaunted, 792
and the knowledge and education sometimes attributed 873
to the lamas in Tibet and Mongolia. My opinions seem 794
to be justified by the opinions of other authors, who have lived for years among the lamas, knowing their language and being themselves Buddhists.

The learned Buddhist, Mme Alexandra David-Neel, 792
who lived in the lamaseries of Tibet and Huang-chung 157
for many years, knew the language very well and was 829
always sympathetic to the lamas, giving "philosophical" justifications for much questionable behavior, but she confesses:

> At the morning exercise are intermixed subtle philosophy with commercialism, high spirituality with feverish pursuit of vile satisfactions, which are impossible to separate from each other; novices, educated in this whirlpool of contrary influences, follow one or another of them, according to their nature and the direction given to them by their master.[14] In Tibet the clerical education has produced only a "small number" of selected literary men, a "large number" of slothful brutes, joyous, gay fellows, and picturesque blusterers, and all these various characteristics, if they do not show up in every lama, are at least "simultaneously deeply ingrained in the nature of all of them." [15]

Kawaguchi, a learned Japanese Buddhist monk, who went to Lhasa to study Lamaism in the learned centers of Tibet, states that they graduate from the college after having studied for twenty-one years; they study especially the Buddhist Catechism and philosophy. They are from thirty to thirty-six years of age when they graduate.[16] It may safely be said that their purpose in entering the priesthood is only to procure the largest possible amount of fortune as well as the highest possible fame in that entirely secluded world of theirs. They do not seek religious truths or practice religious austerities for the work of delivering men and leading them to salvation, but they study to acquire fame, wealth, and influence, and there is nothing deep in their religious life, and 999 out of 1,000 have no conception of the problems of future life.[17] He states also that their faith is a veritable mass of superstition.[18]

These two learned Buddhists seem to confirm my suspicions and to reveal the philosophy and the behavior of the lama institutions. They corroborate my [123]
own observations, made at various institutions during the same span of time. A single fact may account only for the mentality of a single man; a multitude of facts, however, reveal the mentality of an entire corporation.[19]

[p. 65(B)]

LIVING BUDDHAS

ABODE

Living Buddhas who are possessors of lamaseries, 792
live in them; Living Buddhas who do not possess their 794
own lamasery, ask permission of the supreme chief of 342
a lamasery to live as a guest on his property and to build a residence. Usually this kind of poor Living Buddha tries to dwell in a rich and celebrated monastery, where pilgrim caravans come and plenty of alms are offered. By having a share in the alms it is easier for them to make a living. This is also the reason why lamas prefer to be entered on the rolls of these rich institutions. Many Living Buddhas who have monasteries of their own like to have another residence in a celebrated lamasery such as Kumbum or Labrang.

These buildings enhance the splendor of the lamasery and are usually built by the tribesmen of the Living Buddhas. A stele is erected in the courtyard, with the names of all the people who contributed to the building expenses engraved on it. Larger or smaller buildings are added in order to provide quarters for them when they visit the lamasery. All the important Living Buddhas in the country possess such more or less luxurious residences in the celebrated lamaseries, built by their intendancies. This kind of residence is called Karwa. In Kumbum there are 83, in Labrang 40, in Erh-ku-lung 14.

WHAT IS A LIVING BUDDHA? 792

A Living Buddha is the incarnation of a *Bodhisattva* who, having attained the highest perfection, has potentially become a Buddha. He renounces the blessedness of *Nirvana* and makes a vow to remain in this world in order to promote, by example and teaching, the salvation of as great a number of its creatures as possible. His vital essence thus passes from body to body—because the body, like every material aggregate, is destined to dissolve—but it remains immaculate in its acquired unalterable purity and holiness.[20]

APPLICATION OF THE SYSTEM IN HUANG-CHUNG

It has been recorded that the theory of succession by 792
reincarnation only started in Lhasa in 1475. In 78
Huang-chung, the first known Living Buddha was Chang-chia, born in 1642. No records exist concerning the appearance of the first Living Buddhas in Ch'ü-t'an, Kumbum, or Sha-ch'üng. However, it may be taken for granted that these lamaseries would not have had their Living Buddhas as early as 1642, but it was probably close to that time that they began to follow the example set by Erh-ku-lung, rather than suffer in competition with it.

At any rate it seems that succession by reincarnation must have started and been practiced on a large scale during the period from 1600 to 1723, when numerous hermitages and branches arose all over the country of

[20] Tucci-Ghersi, *Secrets of Tibet*, 38, London, 1935.

[p. 66(A)]

Huang-chung, and the mother lamaseries became firmly established. 792 775

PROCEDURE OF BECOMING A LIVING BUDDHA IN HUANG-CHUNG

The first incarnations of the five great Hutukhtus started as minor Living Buddhas, in the same way as the innumerable minor Living Buddhas who still spring up every day. A lama who is celebrated for his saintliness and wisdom, for his zeal in the diffusion of the religion, and for his blameless life, and is considered by his friends to have displayed the signs of approaching the final illumination, may be acknowledged by them after his death to be a Bodhisattva, to have renounced the blessedness of Nirvana, and to have made the vow to remain in this world for the salvation of all creatures. However, in Huang-chung the acknowledgment of lamas has to be sanctioned by a Living Buddha, whether a minor or a great one. The Panchen Lama confirmed that Chang-chia was the incarnation of a Dharmasvanin Graspa-odzer [21]; K'ri-c'en Blogros rgyamts'o confirmed the Bodhisattvaship of T'u-kuan.[22] It has already been noted that Chang-chia declared, on a morning in 1913, that the Wang Fa-t'ai of Ch'ie-bzan was a Living Buddha, and the Living Buddha of Ch'ü-t'an declared that the nephew of the Lu T'u-ssu, a Lama of Ta-ssu, was a Living Buddha.

It is a known fact that much private influence is brought to bear in the selection of Living Buddhas, in order to secure the appointment of scions of noble, wealthy, and influential families, or to provide some other benefit. It has already been recorded how the lamas endeavored to obtain the protection of the most powerful T'u-ssu. Therefore, the first incarnation of the series of T'u-kuan Hutukhtu was caused to appear in the clan of the Li T'u-ssu, and two more Living Buddhas were incarnated in this clan, the old and young Li Living Buddhas. At the beginning of the Ming, a lama of the Li clan had already become a Karwa lama; the Karwa still exists and is administered by a lama of the Li clan. The nephew of the powerful Lu T'u-ssu recently became a Living Buddha, as has been noted and at the same time the branch lamasery of Ta-ssu became independent. One of the incarnations of T'u-kuan was a lama of the lamasery of Ku-ch'eng belonging to the Lu T'u-ssu; one of the incarnations of Chang-chia was born in Too long, which belongs to the Lu clan. Seerkok, as already noted, arranged to have two of its minor Living Buddhas reincarnated, one in Mongolia and one in Tibet, in order to attract lamas from these countries to fill up its depleted roster, but without avail. 792 662 775 [622]

One of the incarnations of T'u-kuan appeared in Siamar, in the Tibetan family of Ts'e-bdurk, the richest and most influential in the region. The parents, with their daughter, went to Lhasa on a pilgrimage of

[22] *Ibid.*, 281.

[p. 66 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

thanksgiving for the honor bestowed upon the family. 792
Some time later, the nephew of T'u-kuan, of the Ts'e- 662
bdurk family became the reincarnation of the Living 775
Buddha of Labrang, the most intimate friend of T'u-kuan for many generations. It was T'u-kuan who, in Peking, obtained the title of Erdeni Nomun-khan for the Living Buddha of Labrang.[23] After the death of the Living Buddha of Labrang, T'u-kuan is invited to cast the horoscope in order to indicate the place where the reincarnation of his friend will occur, and *vice versa*.

SEARCH FOR THE INCARNATION

This problem has been dealt with by many authors. 792
Therefore, only data concerning Huang-chung will here 795
be recorded, because they may help to reveal the social 648
psychology of the Monguor lamas and of the Monguors. Upon the death of one of the great Living Buddhas of Huang-chung, the Dalai Lama is invited to cast the horoscope indicating the place of rebirth. Usually two or three boys seem to fulfill the requirements. Their names are sent to Peking and put in the traditional urn, according to the protocol established by imperial edict in 1793,[24] from which one is then drawn. The name drawn is supposed to be that of the genuine incarnation. For minor Living Buddhas, another Living Buddha is requested to render the service.

Usually the place of rebirth is indicated in terms as 792
vague as the oracle of Delphi, and lamas go to find the 795
candidate, but old lamas have admitted to me confi- 662
dentially that soon after the death of a Living Buddha 787
some lamas of the intendancy are sent to investigate where children were born around that time, and in what wealthy family, and actually it is usually one or two years before the horoscope is cast. Sometimes the horoscope is so vague that it is many years before the boy is found. The rebirth of Achia of Kumbum who died tragically in 1909 was found after six years, and two boys fitted the requirements. The two names were sent to Peking, and one was chosen. At that time the lamas of Kumbum were in a hurry, fearing that Achia would no longer reincarnate because of the fateful circumstances of his death. When the boy is found, lamas have him select from among several items displayed (beads, cups, etc.) the things he used in his previous existences. This is performed in the presence of lamas only.

Wonderful legends are told about the reincarnations 538
of Erh-ku-lung. T'u-kuan, bent with age, went on foot 775
to Peking, incognito, in order to heap up piles of merit. At night, in Lien-ch'eng, a good but poor lady prepared his food, and in the morning when he left she offered him her last piece of brick tea. T'u-kuan died in Peking and was reborn in the child to which the poor but charitable lady gave birth. It was her reward.

---

[24] W. W. Rockhill, The Dalai Lamas of Lhasa, *T'oung pao* 9 (1): 55, March, 1910.

[p.67(A)]

The horoscope concerning the incarnation of Chang-chia was on one occasion extremely vague. "Reborn in the province of Shan-hsi," it said; nothing more. Lamas, after looking for six years, did not find the boy. Tired and despondent, they entered a Chinese inn, at the same time that a boy seven years old was returning from school. He looked at the lamas, and never having seen lamas before he started laughing. His mother immediately said, "It is the very first time I ever saw my boy laughing that way." Suspicion arose in the hearts of the lamas. They asked the lady for lodging for the night, but she flatly refused. The boy implored his mother again and again to allow them to stay. Then the lamas understood, the boy was the incarnation. They knelt before him, offering the ceremonial scarf of yellow satin, and acknowledging him as their Living Buddha. The boy smiled in the most happy way. They presented the traditional scarf to the Chinese parents, who refused to let the boy go because he was their only son. Finally, when 5,000 taels of silver were promised, the parents agreed. The lamas bought two fine mules and a cart, and returned with their Living Buddha to Erh-ku-lung. 175 775 792 787

The young Living Buddha Li had been dead five years, and the horoscope revealed he would reincarnate this time in a certain family Li. On the twenty-fourth of the fourth month, in the village of Li-chia-t'ai in the Naring Valley, there was a festival at the San-pao temple. The old Li Living Buddha, a venerable old man, adored in the country, attended the festival, as he had done for many years. All the children fled upon his arrival. Squatting on the ground in front of a big tent, he talked with the crowd. A poor boy, clothed in rags, ingenuously came close to the old man, whose beads he twisted around his tiny arms. Finally he sat in the old man's lap, and the old man understood and placed a red ribbon around his neck.

When he got back home, the intendancy decided that the genuine incarnation had been found. Lamas were sent to congratulate the parents, and to offer the ceremonial scarf. The Li T'u-ssu, the elders of the village, and the maternal uncle of the boy were invited to make preparations for the installation of the new Living Buddha. The intendancy prepared a dinner and the guests decided that 500 taels should be offered to the parents; a silk gown and velvet boots to the grandfather; a long coat to the maternal uncle; a long coat in flowered silk to the Li T'u-ssu, chief of the clan; a mare and a Peking saddle to the father; a beautiful cow to the mother, and 30 ounces of tea to each of the other members of the family. [431]

The next day the village offered a dinner. Thirty lamas arrived on horseback to lead the boy to his intendancy. On the way, two small groups of lamas on horseback were waiting to congratulate the boy, offering the scarf and prostrating themselves. The next day, before the dinner prepared by the intendancy, the boy was led to the temple where texts were read and the 175 775 792

[p.67(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

whole community lavishly entertained. The guests 175
were entertained at the intendancy. After dinner, 400 795
taels instead of 500 taels were presented to the parents. 792
Then the guests, bursting with righteous indignation, started cursing the intendancy and a feverish discussion broke up in a violent wrangle. In the scurry and confusion and unexpected hurly burly, all the lamas of the monastery and the intendants arrived to patch up the trouble. The 500 taels were paid. After ten years I heard the people of Li-chia-t'ai still cursing the intendancy.

In 1894 the intendancy of T'u-kuan got into trouble over its last incarnation. A lama boy, seven years of age, who lived at the lamasery of Ku-ch'eng which belonged to the Lu T'u-ssu, was recognized as the incarnation of T'u-kuan. Lu T'u-ssu, the lamas of Ku-ch'eng, the family of the boy, and the entire village objected, and did not allow the boy to abandon the monastery without having the intendancy pay 5,000 [431]
taels to the family. The most influential mediators were invited by Erh-ku-lung in order to find a compromise. Sheep and cows were killed every day, plenty of wine distilled, and lamas and the whole village had a wonderful time enjoying dinners and drinks for ten days. Finally the compromise was reached that 3,600 taels should be paid to the family and various gifts offered to the T'u-ssu, the intendancy of Ku-ch'eng, the members of the family, and the mediators. The intendancy of T'u-kuan, which was known all over the country to be rich and wealthy, the lamas, the whole of Ku-ch'eng, and the family of the new incarnation, thus seized the opportunity to share in their own way a part of the honor befallen to Erh-ku-lung by discovery of the reincarnation.

It happens, however, that once in a while the horoscope seems to be cast in the wrong way. A nephew of T'u-kuan, two years of age, was recognized to be the incarnation of the minor Living Buddha Kao of Ch'ie-bzan. At five years of age, upon the death of his parents, he was taken to the intendancy, but seemed to be an idiot. In 1918, at thirty years of age, he was still only allowed to leave the intendancy once a month, in order to climb the mountain to the Obo and to burn incense.

EDUCATION OF THE MONGUOR LIVING BUDDHAS

Usually at the age of seven or eight the new Living 792
Buddha is brought to the lamasery, led by a splendid 871
procession of lamas, and installed in the luxurious intendancy, where a group of lama servants scrape and fawn in his presence, cater to his whims, and do his bidding.

The Orient is the country of decorum; the traditional splendor of the oriental courts is proverbial. The Liv- [511]
ing Buddhas of all the sects are extremely fond of decorum, and try to impress the uncivilized people by a display of munificence and wealth. For this reason

[p. 68(A)]

even minor Living Buddhas live in luxurious residences, 792
with a private chapel and servants. Admittance to the 871
Living Buddha is very complicated; no one is even al- [811]
lowed to enter the kitchen, at the entrance of which, [784]
when the Living Buddha is present, is a high stone, whitewashed and covered with a ceremonial scarf.

The first duty of the intendant is to acquire for his 792
new master two lama teachers of good repute and ex- 871
tensive learning, in order to provide for the education 554
of the pupil. The first lessons consist of training the 292
boy, grooming him for a big throne, to handle the protocol, as one to the manner born. The new pupil, clad in shining garments of embroidered silk, has to learn again and again to proceed with a stately, measured tread to his throne, which is draped with silk of royal yellow; to sit down gracefully, adjusting his clothes decently, and wearing a professional smile. He has to be trained by constant repetition to handle with elegance the stick with tufted end, and with solemnity to touch with it the heads of adoring pilgrims, nodding his head at the same time and smiling with calmness and serenity.

An old master told me that it takes weeks and weeks 792
before a pupil sits well in the saddle, and that after 554
months and months the exercises always have to be 869
repeated, because, he said, the dignity of the pupil and 868
the repute of the master are involved. At the same time, he said, the teacher has to instill in the pupil the idea of the eminence of his state in life, to make him conscious that the people adore him and that he really can procure the salvation of all beings. He has to explain his illustrious pedigree in order to enhance in him the sense of his dignity.[25]

No wonder that travelers meeting Living Buddhas, 157
particularly young Living Buddhas, are impressed by the serious omnipotent look on their faces. It is a common saying that all Orientals are born actors, and the joke is well known, "Dress a beggar with the clothes of a governor of a province, and he will immediately play his role to the peak of perfection." Living Buddhas, however, receive an intensive training.

The little Living Buddha then starts reading and 792
writing, memorizing texts and repeating them before 875
his masters, who inflict corporal punishment when he [876]
fails to measure up to their expectations. The master, after punishing the pupil, kneels before him and apologizes for having been compelled to mete out punishment to so eminent a Living Buddha. It would seem that Living Buddhas, like ordinary lamas, are not very interested in poring over books and racking their brains over philosophical problems. The last T'u-kuan, born in 1894, had two masters, one from Erh-ku-lung and one sent by his friend the Living Buddha of Labrang. The master from Labrang, after some years, gave up all hope of making a learned man of his pupil, and packed

[25] Schuyler Cammann, *The land of the camel*, 79, 80, 94, New York, Ronald Press, 1950. Rynhart, *op. cit.*, 127, 128.

[p. 68(B)]

his bag and returned to Labrang. The master of the 792
well-known bridge-builder, Temna, convinced that his 875
pupil was not of the stuff of which philosophers are made, saddled his horse and went back home. It seems that such instances often occur.

Bit by bit, I pieced together the interesting curricu- 792
lum of T'u-kuan. At seven years of age he entered the 871
intendancy of Erh-ku-lung; at nine years of age he 484
was sent to Labrang (two weeks riding on horseback) to study with a couple of young Living Buddhas there; at twelve he was back in Erh-ku-lung, at thirteen he went to Peking, and congratulated the Emperor at New Year's; at only sixteen years of age he was back at Erh-ku-lung; at seventeen he returned to Labrang for study; at nineteen he went back to Erh-ku-lung and went on a vacation with his family for four months.

After that he went with an expedition collecting alms among the Uigurs of Kan-chou and Su-chou, and on a second one to Mongolia, which took three and one-half years. His studies lasted over a period of seven or eight years, with intermissions of several years. It is said that the masters of the Living Buddhas never [875] leave their pupils; they accompany them on the journeys and are said to teach philosophy and metaphysics while riding horseback during the whole of the journey. Most of the Living Buddhas and Lamas, however, go through life with only a sketchy background in Lamaist learning.

What about the frame of mind and the religious for- 792
mation, the interior spiritual life, the meditations and 156
contemplations of Living Buddhas who, from the prime of life, are fed on unwholesome values by a master, swelling their pride, flaunting their superiority above others, and inflating their self-importance? What of the consequences to the minds and hearts of these teenagers of basking continually in the adulation of a group of flattering admirers, who feign to have for them a feeling that is little short of idolatrous, being always wrapped in a shining coat of adoration, wearing a look of portentous solemnity, as if the face wore a mask? Without doubt some of them are carried away with their own play-acting and like to move in this misty land of Utopia. Probably for many of them the scales will, one day or another, weigh down their eyes and bear evidence of their loss of touch with reality.

An old teacher of Living Buddhas once revealed to 792
me that the biggest problem for teachers is to keep 875
young men, for whom studies have not the slightest appeal, occupied all day long. They are bored by their dull and uneventful life and, upon coming of age, strike out for themselves. They have outgrown the time when corporal punishment could be inflicted. They fritter the time away on trifles, on investigating all the vices of life among the servants and former novices of their previous incarnations. They play chess and cards, and, lazing the time away, they prepare their own ruin. A large number of them are buds that will never bloom.

[p. 69(A)]

BEHAVIOR OF THE LIVING BUDDHAS OF HUANG-CHUNG

Some facts will explain this matter better than philo- 792
sophical considerations. 276

In 1916 the Living Buddha of the monastery of Sha- 691
ku-ssu (Yung ch'ang hsien), an old branch of Erh-ku- 157
lung, was an inveterate opium addict and had ruined his monastery. In order to retrieve his financial position in an easy way, he called on the Living Buddha of the monastery of Nan-ying (Liang chou), saying that he remembered in all the minutest detail having loaned, five generations ago, to his honorable confrere of Nan-ying, three herds of horses, five of sheep, three of cows, and 300 taels, and that this debt had never been paid; because he was poor and his confrere rich he would like to have his confrere take care of the matter.

The answer of the equally shrewd confrere was that [696]
he did not at all remember such an enormous debt, although he remembered in all possible detail the events that had happened during five generations. Thereupon the living Buddha of Sha-ku-ssu brought suit against his confrere at the Court of Justice in Liang-chou, claiming that his confrere knew all about the question, but that his pathological craving for money made him throttle his conscience and commit this crying injustice. The confrere reciprocated along the same line, exposing the opium addict before the interested audience; but because in China a rich man must always give up some of his rights in favor of the poor, the rich Living Buddha was ordered to give ten horses, and his poor confrere was able to continue smoking his opium for some time.

The reason alleged by the opium smoker should be 792
well known among lamas and Living Buddhas. It was 157
the same that was used by the Dalai Lama at Kumbum 578
in 1909. In autumn he arrived at Kumbum with the traditional splendor of an Oriental potentate. Monguors, Tibetans, and Chinese ran to Kumbum to honor him. The Dalai Lama and his retinue were savage and arrogant; their animals were turned loose among the crops in the fields. Every day troubles arose over the sheep and flour offered by the mandarins, and the Dalai Lama, swayed by foolish pride and insolence, insisted on transferring three lama officials of Kumbum. Achia, defending his rights, denied the Dalai Lama permission to interfere with his administration of the lamasery.

The reason alleged by the Dalai Lama was that in one of his previous existences he remembered having been an incarnation of Achia and supreme chief of Kumbum. But Achia, without losing his balance, flatly denied the fact because he did not remember such an incarnation. Furthermore, he pointed out that the Dalai Lama was the incarnation of Tsong khapa, who was the incarnation of Chen-resig, while he himself was the incarnation of Tsong-khapa's father. He wondered how a son could behave so insolently and impudently

[P.69(B)]

toward his father, and he could not understand how the 792
same individual could happen to be the incarnation of 157
the father and the son. Then Achia talked to him like 578
a father, telling him to be more circumspect and to behave more decently, for many tales were already spreading about his behavior with Tibetan women. Liberties of that kind, he said, outraging the Lamaist conventions, were not allowed at Kumbum. The lamas of Kumbum, breathing fire and brimstone, prepared their weapons and called together lamas of neighboring monasteries. The officials of Hsining (the Amban, the General, the tao-t'ai, and the prefect) were in a hurry, and went to Kumbum with troops in order to prevent a clash. Finally, in order to get rid of the Dalai Lama as fast as possible, they decided to let him appoint three lama officials and then to depose them after his departure. The Dalai Lama left, and the three appointed officials also left as quickly as possible for fear of being killed by the Kumbum lamas. The deposed officials assumed their jobs again, but Achia, deeming that he had ir- [762]
retrievably lost face, cut his throat. Several times I heard this tragic story, told by the Amban himself and by the officials at Kumbum.

The Dalai Lama cut a sorry figure in Hsining in 792
1909. The residence of Achia, destroyed by fire in 157
1895, was still not rebuilt in 1914, although all the materials for the reconstruction had been ready since 1909. The wood had been offered by the Tibetan Chief, Kach-htjir, and a contract had been written by the intendancy, promising Kach-htjir and his relatives the privilege of always staying at the residence, whenever they visited Kumbum.

Chao, the Living Buddha of Sia-mar, was a most celebrated man all over the country for his skill in patching up troubles, his unusual eloquence, proficiency in using the double-edged sword, of menaces and threats, soft words and blandishments. However, his influence lay in his cultivated acquaintance with the Chinese officials, to whom he paid visits and offered lavish gifts, and whom in due time he would use and provide with lawsuits that would benefit them. He was credited with having marvelous abilities and of being a powerful man. The saying went around that his special [828]
kind of intelligence weighed so heavily on one side of his body, that the soles of a new pair of shoes, after a few days, were always run down on the same side—the side where his intelligence was pressing the most.

He had obtained the office of chiliarch, the old privilege of judging the numerous tribes formerly subjected to his predecessors. He started abolishing, among his subjects, the smoking and planting of opium, with Draconian severity, and flogging and fining addicts of alcohol. He compelled the Chinese, to whom his subjects had transferred lands, to return the fields. Wherever there happened to be a festival, he pitched his tent and waited to render justice. Young women who had eloped and had been brought back by his retinue of

[p.70 (A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

twenty Tibetan soldiers, were flogged on such occasions 792
in order to make a drastic example of them. Whenever 157
people had a serious conflict, this Living Buddha was invited as arbitrator. He extended his zeal with prodigality, indulging his greedy fondness for display, and cultivating his reputation for knowing how to straighten out problems that seemed to be in a hopeless muddle. These activities absorbed all of his time and energy.

Cha-ik Hutukhtu followed in the wake of the Living Buddha of Siamar, building up his influence among the Chinese officials by means of gifts and visits, and by obtaining of the illustrious title Hutukhtu. He was never at home.

The Living Buddha Pu of Seerkok was fond of beau- [526]
tiful and fast horses. Every three days he participated in the morning races in the city of Hsining, riding his own horses in competition with the Moslems, who raised the best horses in the country. He was a better success at riding horses and breeding them than in philosophy and metaphysics; he was never seen in the temple.

The supreme chief of Seerkok, incarnation of the celebrated and learned Min-chu-erh, had a job at Nanking in the Bureau of Tibetan and Mongol affairs, but spent all of his spare time in Shanghai, indulging in expensive distractions and sorely depleting the funds of his intendancy. Back in Hsining, the community of the lamas stirred up trouble by not allowing him to return to the monastery, and preparing to bring suit against him at court, claiming that he was not the genuine incarnation. The T'u-kuan Hutukhtu told me in Man hui, Hou-t'ao, in 1940 that he had sent his intendant to Seerkok in order to avoid scandal and to smooth the ruffled feathers of the lamas, and that after several weeks, Min-chu-erh, his behavior having been on display in the city of Hsining, had succeeded in returning to Seerkok, protected by a retinue of thirty Moslem soldiers loaned by General Ma Erh-hsiang.

It was delightful to encounter once in a while a good Living Buddha, who was really loved by the people. In Hsien mi monastery the Goomang Buddha, an old man, was engaged all year long in making up packages containing medicine, on which he blew his blessings and which he distributed gratis to people who come from far away to receive them. It was a panacea, which [757]
healed all kind of diseases of men, women, and children.

Dealing with fasting rites for laymen, there will be recorded the example of a really outstanding Living Buddha, the old Li. Modest and unassuming, adored by the people, his preaching developed and revived the sense of religiosity and of justice and humanity. His beneficent influence radiated far beyond the circle of fasters, into families and the administration of villages. He was at that time, among the Living Buddhas, the only educator of the Monguors, a benefactor of the Monguor society. [p.70(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

LAMAISM AND MONASTICISM

The study of the preceding topics will help in understanding what the Lamaist institution in Huang-chung, called lamasery, consists of fundamentally. It can best be done by means of defining the respective positions of its chiefs and its subjects. 792

In speaking about lamas and lamaseries, the terms "monk" and "monastery" are used indiscriminately, because we have no other terms. However, except for the facts that the lamas observe celibacy and that the lamaseries possess corporate wealth, it is impossible to compare the lamaseries with Christian monasteries.

The lamasery is a place where people gather for a spiritual purpose which is void of any definite qualification; where no direction is provided in any way to the inmates, who are absolutely free to adhere to whatever doctrine they wish.[28]

Lamas take the first and second vows, promising to Buddha to be faithful to them. They take no vows of submission to the chief of the community, promising nothing to him except to remain celibate and to observe the rules of the community, to attend the exercises in the temple, and not to disturb the peace of the lamasery.

The chief of the lamasery has no right to impose any duty on the lamas. A salary is paid for the fufilling of any office, and those who do not intend to earn the money, do not apply for the job. The chief of the lamasery has no right to interfere with the studies or the scientific trend of mind of the lamas. He only has the right to urge their presence at the ceremonies and knowledge of the texts recited at the meetings, because lamas attending the assembly receive a remuneration of tea, *tsamba*, meal, and a share of alms.

The chief of the lamasery has no right to interfere with the religious and spiritual education of the lamas. These fields are under the jurisdiction of the individual master who directs the studies of a pupil. The lamas have the right to bring suit against each other at the Chinese courts, and the pupil has the right to bring suit against his master, without interference from the chief of the lamasery. 792 554

The amazing respective positions of a chief of the lamasery and the lamas are crudely demonstrated by the facts of the admission of a lama to the lamasery, his retirement from it, and the conditions existing between them after the abandonment. Admission into a lamasery in Huang-chung is not complicated. Every unknown man who wears lama clothes and who goes straight to the courtyard of the intendancy of the monastery, presents 100 copper cash and asks for admittance, is given a scarf of felicity. He is led to see the intendant before whom he prostrates himself and to whom he presents the scarf; he promises to observe celibacy and the rules of the monastery, and to attend the morning ceremonies. His name is entered on the 792

[28] David-Neel, *op. cit.*, 100.

[P.71(A)]

roll of the inmates and from that time on he becomes 792
a member of the community, and is able to reap the benefits of his membership. The same rule exists for admission to the colleges.

Nobody cares about the past of the newcomer, nobody inquires about the name of his country, his parents, or the reasons for his arrival. The lamas know very well that inquiries about these matters are of no avail, for if he were a dishonorable man he would certainly not reveal his past. Therefore, it suffices to say that you are coming to worship a certain Buddha honored at the lamasery, and that the period required to satisfy your devotion will probably be long, maybe a year, two years, or more. Then you have to try and find yourself a home in the lamasery, renting a room from a lama, or sharing a room. The proprietor of a courtyard has to report the names of the lamas living in his yard. In small institutions the control is easy, but in large ones, like Kumbum, it is impossible. Frequently, lamas assured me that there was always a number of non-registered lamas, mostly of the traveling businessman type, living at the homes of their friends.

Withdrawal from the lamasery is as easy. Every lama is free to abandon the lamasery forever, at any time. He has only to inform the intendancy of his departure. Only lamas who are guarantors for debts are not allowed to leave, as long as the business is unfinished. A lama is free to sell his courtyard to another lama, and to leave at any time. Usually, a number of lamas leave after the distribution of alms. Once a lama has left the monastery, it has no obligation to care for him any more, unless he has been a guarantor or has committed an injustice against the lamasery. The rector of Chiar-too-ssu, a branch of Erh-ku-lung, left the [792] monastery, bought property adjacent to it, and without changing his lama dress for the clothes of a layman, lived with his wife unmolested. I encountered three or more lama doctors, celebrated for proficiency in their art, who lived with their wives, still wearing their religious garb. Even the son of one of them was dressed as a lama.

If a lama whose name is inscribed on the rolls should be informed by his friends of a charge made against him at the intendancy for moral reasons or theft, he leaves the lamasery in time to avoid the punishments which are meted out with ruthless severity, and moves to another lamasery. Most of the time, a lama would be advised to leave by the intendency itself, for intendancies are reluctant to inflict such punishments, in order to avoid scandal.

In Kumbum, in 1912, I saw a lama, accused by a 792
husband for visiting his wife, beaten unconscious before 627
the main temple, while the community read impreca- 684
tions. Half his face was blackened with soot; a paper 681
hat, half black, half white, was put on his head; and the traditional oval was impressed on both his cheeks

[p. 71 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

with a burning ram's horn. He was carried outside the 792
monastery wall by lamas. Ashes were spread all the 627
way along in order to prevent his "spirit" from finding 684
the way back to harm the lamasery. A large group of 682
lamas followed. He was thrown on the ground, stripped
of all his garments, amid the shouts of the lamas and
the long blare of trumpets, and the group returned to
the monastery without looking back. A round mark [685]
is burned on thieves. It is impossible for those so
marked to enter any monastery.

At the time of the festival at Erh-ku-lung in 1912, 792
three young lamas molested a young lady, causing her 684
death. They fled the same night. The whole village 682
of Too-long accused the monastery at Hsining, which
was unable to trace the murderers and had to pay
an indemnity of 3,000 taels, after spending far more at
court. The whole country was bursting with righteous [627]
indignation. It was a tremendous loss of face for the
lamasery.

Lamas not only lack the vow of obedience, but also 792
the vow of poverty. It has been explained how lamas 511
retain their own wealth and the means they use for in-
creasing it.[27] Among the lamas are rich individuals
enjoying a happy life, possessing a beautiful courtyard,
clothed with silk and brocade, riding the finest horses
and mules of the country, served by as many lamas as
they wish, and there are poor individuals who have
trouble making both ends meet—ill fed, ill clothed,
working the whole day. Nobody takes care of them
because wealth is a personal matter, and no vow of
poverty exists. It has been explained how the lack of
the vow of poverty is responsible in a large part for
the loss of spirit in the monastic life, and how from
this lack originate most of the vices encountered among
the lamas and the ruination of monasteries.

Lamas lack the vow of chastity, for chastity reaches 792
farther than celibacy. The Buddhists know this very 831
well and the texts prove it.[28]

The reform of Tsong-khapa, the founder of the Yel- [185]
low Sect, aimed at return to the traditional monastic
life, based on celibacy and serious study. The sense
of the necessity of celibacy still seems to prevail among
the Monguor lamas. This assumption seems evidenced
by the facts that the communities of lamas bring suit at
Chinese courts against even supreme chiefs of lama-
series, and intendants who betray their vows, as was
the case with the Living Buddhas Sumpa, Lu-chia, and
Min-chu-erh, and even with Li, the intendant of the
T'u-kuan Hutukhtu. It was the same with the Living
Buddha Seerting who was caught red-handed by the

[27] The wealth possessed by a lama, his courtyard, etc. are inherited by his apprentice; in case he dies without having an apprentice, his wealth is sold by the intendancy; prayers are said by the lamas and alms given to them. If a lama who is proprietor of a courtyard marries, his courtyard is taken by the intendancy.

[28] L. de la Vallée Poussin, *Morale bouddhique*, 79, Paris, Librairie Nationale, 1927.

[p.72(A)]

villagers, who also did not permit such liberties to Living Buddhas. Feeling the stigma attached to his exposure, he committed suicide. It also seems to be evidenced by the fact that penalties are still inflicted upon lamas, in the crudest forms, for infraction of this rule. This stigma is still attached to those who fail to meet their moral obligations. 772 831 [762]

The reform by means of serious study, however, seems to be a failure among the Monguor lamas of the present times. Among so many Monguor Living Buddhas and lamas, only the Living Buddha Chao-hsi of Kumbum enjoyed some repute, but in order to cause the lamas to attend his instructions, special benefits had to be provided for them. Very few among the Living Buddhas and lamas are interested in study at the present time, and, having nothing to occupy them all day, become involved in vice. Army officers and directors of schools are aware of the necessity of keeping young folk busy the whole day long, alternating fixed jobs with recreation. The lamas, however, except for attendance at the morning convention, which lasts only an hour, have to kill time making their own living. [185] 792 461

In the whole region of Hsining not a single school has been established by the rich monasteries, in order to promote the instruction of the Monguors and the Tibetans. Even at present in the lamaseries not a single elementary school exists for the lama boys, and no religious education is given to them. Not a single lama takes care of the spiritual needs and instruction of the adherents to their religion who live in a given area. Not a single hospital has been founded in order to assuage the pains and sufferings of the sick Monguors and Tibetans. The universal charity of Lamaism does not consist in love for one's neighbor, but in a platonic compassion for the universal sufferings of humanity and of all living things and for the impermanence of all existing beings. Lamas are not sisters of charity; they pass the sick draped in their cloak of indifference.[29] 772 871

---

[29] Kawaguchi, *op. cit.*, 373, notes: "Among Buddhist believers there has been scarcely anyone who has ever given any thought to social problems. The priests of ancient times were generally recluses who paid no attention whatever to the application of their religion to the needs of the practical world or to making the principles of true Buddhism as distinct as possible." [792 771 175]

Kawaguchi, a learned Japanese Buddhist, conversant with the Tibetan language and literature, went to Tibet to study Lamaism, and wrote an instructive note on Lamaism (p. 410). "I confine myself only to a popular exposition of the subject. Lamaism is constituted by two main branches; the older, the 'red cap sect' subdivided into many branches, and the later, the 'yellow cap sect.' They all agree upon cardinal points and in the formula for attaining perfection. The founder of the old sect was a Tantric priest, 'Lobon Padma Chungne' born in Cabul. He enjoined on his disciples the practices of flesh-eating, marriage, and drinking liquors, in order to attain Buddhahood . . . details I cannot give, for they are full of obscenity. The old sect, extremely popular in Tibet, has undergone considerable modification by lamas. . . . I note the reaction against the old sect by Atisha [from India, eleventh century], later by Tsong Khapa [fifteenth century]. The principle of Tsong Khapa was that priesthood must stand on asceticism. Therefore he urged

[p. 72 (B)]

More has been done by the chiefs and elders of the villages in promoting justice, creating respect for elders, restoring peace in families, defending the position of the women, preventing adultery, punishing the faults of the youngsters, and making the families happy than by the lamas. 792 626 888

I felt really happy to encounter among this tremendous number of lamas the single exception of the old Living Buddha Li, who in the fasting exercises taught the older people to crave pardon for their faults and to pray, and to hear them say that they were happy to have heard comforting words from the mouth of the old man.

V. THE RED SECT IN HUANG-CHUNG

GENERAL ASPECTS AND FORMER CONDITIONS OF THE RED SECT IN HUANG-CHUNG 795 792 175

In Huang-chung, there are not only lamas of the Yellow Sect, the reformed sect of Tsong khapa, but also of the Red Sect, which still adheres to the rules observed before the reform. The red lamas marry, and live, scattered over the country, with their wives and children. They till their fields and raise cattle, indulge in wine and tobacco, eat garlic and nearly all kinds of meat. They perform their rites when invited by the people and live under the direction of a superior, who has far less power over them than the superior of the yellow lamas has over his subjects.

At home they wear the dress of the lay people; when performing rites they wear the usual lama dress—a red gown, the red hat, and a shade before the eyes, adorned with fringes of the five ritual colors. They use the same ritual paraphernalia as the lamas of the Yellow Sect, but they like to use a drum made of two skulls, and to blow a trumpet made of a human thigh bone; they recite their own texts. They seem to lay stress on the cult of water springs. All of them have the duty to perform the Rite of the 108 Springs, which lasts for 129 days, at least once in their lifetime. Some among them perform this rite two or three times. Well versed in magic, they are capable of performing not only the rites performed by the Yellow lamas, but also many other rites prohibited for the Yellow lamas. [292] [534]

All the lamas of Huang-chung belonged to the Red Sect in former times. The lamas of Ch'ü-t'an, the Nang-suo, Karwa lamas, the Dhyana family lamas, the lamas belonging to small monasteries or hermitages,

---

abstinence from carnal desires, liquor, and he enforced the rules of moral discipline. However, he did not denounce the images worshipped by the old sect, representing men and women in offensive postures, but gave to them a new interpretation of an abstract nature. . . . Externally the two sects do not differ much from each other." And on p. 434: "I am compelled to say that Lamaism has fallen, and that it has assumed a form quite contrary to that to which its great reformer Tsong Khapa elevated it, and I am sincerely sorry for this degeneration." [792 771 175]

[p. 73(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

the lamas living secluded in the mountains, all indulged 795
in magic. It is not known when most of them went 792
over to the Yellow Sect, perhaps between 1600 and 175
1723; nor is it known when the first lamas of the Yellow Sect penetrated the country, diffusing the reform. If account were taken of the date 1560, when a small hermitage of ten Yellow lamas started at Kumbum, and developed slowly; and the date of 1604 when Erh-ku-lung humbly began, it may be presumed that until that time the Red Sect was the only one prevalent in Huang-chung, living a precarious existence owing to the intermittent inroads and revolts in the country. Only after Gushi Khan had conquered Tibet in 1636 and [648]
offered it to the Dalai Lama and after the Ch'ing dynasty (1644) had established the supremacy of the Yellow Sect, and the hated rival sects had been enfeebled, can it be assumed that the Yellow Sect entered a period of success in Huang-chung.

It was often said that, after the encounter of Altan Khan with the Dalai Lama in Kukunor (1577), where Altan proclaimed the Yellow Sect the official religion of the Mongols, and built a temple, the sect started diffusing on a large scale in Huang-chung. This assumption is hard to prove on account of the hatred fostered against the invading Mongols, and the disturbances in the country, for in 1591 the Monguor troops with the Chinese Army burned to the ground the temple built by Altan fifteen years before,[1] and the Mongol, Nairamdahu, persecuted the Yellow Sect in Kukunor in 1633.

PRESENT CONDITIONS OF THE RED SECT IN HUANG-CHUNG

795

The conditions under which the Red lamas lived 794
during the Ming period, in the always disturbed country, seem to have been akin with those under which they now live in the region north of the Hsining River. A small number of them are encountered in villages there. Lamas of several villages, constituting a small group, choose from among them a chief, who holds the position for one year. They possess their own small temple where, four times a year, they gather for seven days in order to read their texts, perform their rites, and discuss their own topics with their chief. Some of them have a pupil who receives training from his master. Each of them tries to be invited by the people to perform rites that are paid for. Not having a monastery or a Living Buddha, the institution lacks a backbone.

After 1642, when the Yellow Sect started the prac- 175
tice of Living Buddhas in Huang-chung and developed 795
its strong organization, two of the most important Red groups south of the Hsining River, where the Red lamas were more numerous, managed to have their own Living Buddhas. In the group of Goorong bzan near

[1] *Annals* of Hsining, ch. 31, 18*b*. [p. 73(B)]

Sha-ch'ung, and the group of Kan-cha Valley which 175
had living Buddhas, the original temple yard became a 795
monastery, and the loose group thus got a chief invested with authority over his subjects and wielding influence in the country.

The small groups of Red lamas north of the Hsining River, however, had no Living Buddha. Twice a year they invited the Living Buddha of Kan-cha, and four times a year went to Kan-cha, in order to attend their rites, but for a long time now the Living Buddha has only been invited every two or three years, and the lamas seldom go to Kan-cha—all the more since Kan-cha, being in a state of dilapidation, has lost its attractiveness. It had been destroyed by the Moslems in 1868–1872, and its important library of printing blocks was burned; it has not yet been restored.

The monastery of Goorong bzan, however, is flourishing. The Living Buddha is a strong personality [792] bristling with activity. Acknowledged as the most learned Living Buddha, all over the country, even by the lamas of the Yellow Sect, he is trying to restore the former glory of the Red Sect. His difficulties with the lamasery of Sha-ch'ung, and his intentions to restore and occupy the monastery of Ta-fo-ssu, situated in the center of the city of Hsining, have been recorded. His monastery is in fine shape, the temples are as beautiful as most of the temples of the Yellow Sect. Four times a year more than two hundred of his red lamas convene for seven days, for the reading and explanation of texts, and the performance of their rites. Goorong and the dignitaries of the monastery preside over the convention in the same way as those of the Yellow Sect.

Tibetans like to make pilgrimages to his lamasery [648] and offer their donations. It is a well-known fact in Huang-chung that among the Red lamas there are more learned men than among the Yellow lamas. However, the bulk of them are only versed in the recitation of the texts used at the performance of their rites, and possess only a smattering of knowledge in their religion. They attach an unusual importance to the strictest observance of all the rites during their performances. Their religious training seems to be directed in that way, for they claim that the slightest omission or error in the rites and in the recitation of the texts completely spoils the efficacy of the rite.

The subject of the different kinds of Red Sects and 795
the deities honored in their temples may be passed over 792
here, because it has been dealt with by many authors. The peculiar feature of the Red lamas' institution in Huang-chung is the only subject of our study.

Among the Red Living Buddhas, the son succeeds the father, as the Living Buddha. Goorong, a tall, upright man of immense strength, hard as nails, begot nine sons from his two wives. Four of his sons are Living Buddhas, three of them in Red monasteries south of the Yellow River. Goorong is called the father of the Living Buddhas. He is a modern man, who has visited

[p. 74(A)]

Peking, Nanking, and Shanghai. He rides a bicycle, 795
walks his smallest sons in a European baby carriage, 792
likes photography, delights in playing a phonograph, enjoys working with electricity at home and in the temple. He possesses all kinds of medical instruments and gives injections. He is reputed to be very proficient in magic, and is the most talked-about man in the country.

RELATIONS BETWEEN THE RED AND YELLOW LAMAS IN HUANG-CHUNG

The feud between the two sects in Huang-chung 795
never seems to have been as fierce as it was in Tibet, 628
where lamas fought each other and destroyed each 578
others' monasteries. The reason seems to be the 792
troubled circumstances in the country. The people, the Red lamas, and their small institutions suffered tremendously on account of the inroads. The whole country was impoverished. The diffusion of the Yellow Sect, under such conditions, necessarily began on a small, unnoticed scale and when peace was restored the Yellow Sect was protected by the emperors and the Red Sect was powerless.

None the less, Reds and Yellows know their history well, and the embers of the old antagonism are still smoldering under the ashes. The troubles between Goorong and Sha-ch'ung, and the vehement protest of all the Yellow Living Buddhas of Huang-chung, when Goorong was trying to occupy the Ta-fo-ssu, give evidence of this. South of the Yellow River, in the subprefecture of Kui-te, lamas of the Yellow Sect recently prevented the Red lamas of Keura from rebuilding their temple. The trouble developed into full-scale fighting, and lamas on both sides were killed. The lamasery of the Yellow Sect was burned to the ground by the Moslem troops, who restored order. The Yellow Living Buddha fled, but the lamasery had to pay a heavy indemnity. On the north of the Hsining River, however, both sects seem to live congenially, because the Yellow Sect is omnipotent and the Reds are a minority, having not a single monastery in the country.

When the Red group of Erh-chia-ting near Erh-ku- 795
lung built a new temple, the T'u-kuan Hutukhtu of 792
Erh-ku-lung offered them seven big trees and sent his intendant to attend the ceremony of the inauguration of the temple. The lamasery of Chu-erh, of the Yellow Sect, allowed the Red group to build a temple on its property. Even the intendant of one of its Living Buddhas was a Red lama. In 1915 I saw Red and Yellow lamas performing rites together at the Karwa of the Yellow Chao lama. It has been recorded that the Yellow lama, chief of the Li Karwa, alternately invited four lamas of the Yellow and of the Red Sects to perform the yearly usual rites at his Karwa.

Lamaseries of the Yellow Sect invite Red lamas to perform the rite intended to appease the avenging spirits of persons who have suffered injustices at the hand of the lamasery. The secretary of the Living Buddha Lu

[p. 74 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

of Yang-k'ou-erh, who belonged to the Yellow-Sect, 795
was a Red lama. Such anomalies happen because 792
family ties closely knit the members of both sects. The father of the intendant of the lamasery of Ch'ie bzan, which belongs to the Yellow Sect, was a Red lama, and the father of the novice of the intendant, also. I met four lamas of the Yellow Sect, pupils of a learned lama of the Red Sect, who boarded at his home.

At the monastery of Hsien-mi, the father of a young 175
lama of the lamasery, which belongs to the Yellow 795
Sect, was a Red lama. One night, in my presence, he unbosomed his grudge against the supreme chief of the lamasery who had refused permission for his Red Sect to build a temple on the property of the lamasery. "Our sect," he said, "is as the ear of the wheat plant, and the Yellow Sect is as its straw. We occupied the country and diffused our Sect long before the Yellow Sect was born. Our scriptures are so numerous that a man cannot finish reading them during a lifetime. The Emperor Ch'eng-tsu, of the Yung-lo period (1403–24), granted us extensive properties—and then came the Emperor K'ang-hsi, who protected the Yellow Sect and oppressed our Sect." These facts reveal the frame of mind of both sects, and their mutual behavior in Huang-chung.

Although the lamas of the Red Sect constitute a small minority, scattered over the country, and possess only two Living Buddhas, they exert an important influence and play a considerable part in the religious life of the Monguors.

THE RITE OF THE 108 SPRINGS

In order to give an insight into the real psychology of 792
the lamas of the Red Sect, and their attitude toward 795
magic, the Rite of the 108 Springs will be described. 789
It is performed in order to acquire magical power.

The lamas living north of the Hsining River practice the Rite of the 108 Springs at least once in their life. Those among them who have enacted it two or three times are considered by the Monguors as the most potent. It is said that very few lamas of the Yellow Sect are interested in the rite, although serious lamas of the Yellow Sect told me many times that the T'u-kuan Hutukhtu had enacted the rite together with a Red lama, after the Bumkhang he built seemed ineffective, and the troubles in his lamasery had upset him. I could hardly believe it, because the rite is not enacted to honor or to get the protection of spirits of the springs, but is thoroughly magical, and its aim, according to the lamas of both sects, is the increase of magical abilities. At any rate, because the lamas of the Red Sect all practiced it, and are said to be bound to enact the rite, it sheds a true light upon the fundamental character of the lamas of the Red group, who seem to be as fond of magic as the shamans.

Springs of water are situated mostly at the foot of [323]
mountains, in deep valleys, and in lonely spots which

[p.175(A)]

are supposed to be the favorite abodes of evil spirits. 792
The Red lamas go to these springs in order to meet 795
these demons, to frighten them, to combat them, or to 789
obtain their assistance. So goes the saying of the [273]
Monguors and the lamas of both sects.

The rite is a back-breaking work. It lasts for 129 days, more than four months. It is practiced by a single lama, never in a group. Usually a fervent Monguor accompanies the lama for some days, to carry his luggage and prepare his tea. I got the information from two such men and from people living in Waza, near a spring where the lama performed his rite.

Sometimes the lama has to wander a long way to reach a spring, and sometimes three or four springs are situated one next to the other. The rite is carried out in winter and starts with a retreat of seven days at home, during which the lama, three times during the day and three times during the night, prays and reads texts, rattling the drum made of two human skulls, blowing the trumpet made from a human femur, and ringing the bell. He is not allowed to get a long sleep or to stretch himself out on the ground. He has to sleep in a sitting position, is not allowed to undress during the 129 days, or to enter any home or cave.

I saw a Red lama who lived near the monastery of Hua-yen start his journey. All the neighbors, men, women, and children, accompanied him to the first spring. He carried on his back, in a light wooden frame of thin laths, the felt mat on which he would sleep at night, a book of texts, a picture of Padma sambhava, the chief saint of the sect, some flour, butter, tea, a cauldron, and a small tent made of white cotton cloth. If, on the way, he should happen to lose one of these items, he is not allowed to replace it. He wore a long red coat, lined with sheepskin; on his head a red hat and over his eyes a green shade, with fringes. In his right hand he held the double-skull drum, and in the left hand the trumpet. He is not allowed to speak during his wandering from one spring to another, but mutters prayers all the way along, beating the drum at the same time.

Upon reaching the first spring he puts the frame down, blows three times on the trumpet in the direction of heaven, then starts the ritual dance three times around the spring to the time of the rattling drum, describing ritual designs on the ground. He beats the ground with his heel to the time of the drum beats, then stands on one leg, completely immobile, for a long time. Thereafter he pitches the tent, displays the picture, and sits crosslegged in front of the tent reciting texts for a long time. In the meantime, the villagers had prepared tea, and he starts talking with them. People are not allowed to indicate the spot of the next spring or to ask in what direction he will move the next day. He eats the meal offered by them. He is not allowed to drink alcoholic beverages, eat garlic, [269]
leeks, or radishes. He eats only mutton. The remains of the meal offered to him are not allowed to be

[p.75 (B)]

carried home. Before sunset his meal has to be finished 792
and the people gone. At this first spring he stays for 795
seven days. 789

Twice a day he prepares tea and eats *tsamba* along the wayside. When people see a practicer of the rite passing near the village, they all follow him, prepare his tea and his evening meal. He enjoys the real veneration of all the Monguors and the Tibetans. He remains for seven days at the first spring, praying, dancing, three times during the day and three times during the night. It is said that during the night, the time of the demons, he summons all the demons of the country, wages his ritual war with them, subduing them, or making friends of them. At night he has a terrible time, exercising his magical abilities and increasing his magical capacities. The demons do not let him sleep a wink. All kinds of terrifying tales are spread in the country about his nightly experiences.[2]

At dawn he gathers stones and builds a small cairn; then he starts for the next springs, remaining only one day at each of them and performing the same rites. At the 54th spring he stays for seven days, as at the first one, then continues his pilgrimage until the 108th, where he again enacts seven-day rites. Then all the Red lamas of the country, the people of his village, the chiefs and elders of the neighboring villages come to meet him and lead him home in order to perform the final rite, which simulates the incineration of corpses and includes a recitation of texts together with all the lamas. Sitting on a throne in front of the ritual oven in which wood is burning, he pours boiling butter on the wood, acting like an officiant at a real incineration. After this rite he is heartily congratulated and receives some gifts: sheep, butter, tea, sugar, raisins. I never obtained an explanation of this last rite, or of its connection with the pilgrimage of the 108 springs.

Springs of water play an important part in the re- 792
ligious life of lamas and of the Monguors. It is not 795
unusual to see lamas of the Yellow Sect, even Living 789
Buddhas, sitting for hours in silence at the edge of a 823
spring, slowly beating its surface with a flat broad lath. It is said that this practice produces happiness and peace of mind.

On the fifth of the fifth month the Monguors honor 792
the spirit of the well from which they draw water. 795
They make a *Wei-sang*[3] near the well, plant a stick 789
to the top of which is affixed a bouquet, and prostrate themselves. The whole family wash their hands and faces with the water in the first bucket drawn, and rinse their mouths. Tea is prepared and all of them drink several cups, for it is said that this tea prevents all kind of diseases. At the same time they bury an urn near the well, thanking the spirit of the earth where

the well bubbles, for providing them with water during the whole year. 792 795 789

HERMITS

In the region of Hsining there lived, around 1880–1895, only two hermits. One lived in the region of Waza in a cave in the mountains, and the other in the mountains around Hsien-mi. Both were strangers, who never divulged their names, or country of origin. They were not attached to any monastery and had no relations with the neighboring people. Each had a donkey which he used when he went to collect some flour and tea, for which they graciously thanked the donors and then returned to their caves. If some gifts were offered to them, they brought them to the monasteries and prostrated themselves before the closed doors of the temples for a whole day, and then returned to their caves without having said a single word to the lamas. The people said that they heard them reciting texts, ringing bells and beating drums the whole day long. Twice a day they built a fire and prepared their meals. They did not visit the people and did not like to have the people visit them; they refused all invitations to say prayers at the homes of the Monguors. During the terrible epizootics which decimated the cattle all over the country (1890–1893), they refused requests to pray for peace in the country. Their mysterious behavior intrigued the people, who could not get in touch with them. Then they disappeared, and nothing more was heard about them. They were not the kind of miracle workers so often described in records of travelers. 792 [343]

Monguors, talking about them, affirmed that in former times many lamas lived a sheltered life in caves, and possessed the art of working miracles. [789]

In 1723, at the time of the revolt of the lamas and the destruction of the monastery of Seerkok where 2,000 lamas lived, it is said that the General Nien Keng-yao destroyed more than 1,000 caves in that country.[4] Because lamas in former times received the same education as at present, and were as eager for wealth and worldly glory as those of today, one is inclined to doubt such a fantastic number of hermits. I am inclined to think that genuine hermits did not grow on every bush, and that all these wonders and miracles did not occur at every street corner.

VI. SHAMANISM

INTRODUCTION

This chapter is not an investigation of the origin of shamanism or its philosophy and religious fundamentals. Rather it aims to be a description of the type of the Monguor shaman, his training in 1911–1921, the spirits 756

[4] Han, Ju-lin, *Pien-cheng kung-lün*, 3 (I) : 47. The text does not say that recluses lived in them.

[p. 76(B)]

he honored, and the rites he performed. It will afford 756
an opportunity to study a shamanism influenced by Taoism, honoring Taoist gods, but conserving its original character and living congenially with Taoism. The suppleness of shamanism which, according to the cir- [177]
cumstances, adapts itself as well to Lamaism as to Taoism, adopting heterodox doctrines and honoring alien gods,[1] challenges belief. However, it discloses the power of which it disposes, conserving its original rites which betray its origin and basic character. It is interesting to note how rites resist the wear of time better than doctrines.

The facts were all gathered during the ten years I lived among the Monguors, and were checked many times by shamans, chiefs and elders of villages, men and women, and children in the schools, all of whom had attended shamanist rites their whole life long. I at- [123]
tended their rites several times. Since I was best acquainted with the rites of the region situated north of the Hsining River, most of the facts concern that region.

The Mongols call the shamans *BÖ*, the Monguors call them *BÖ*, on account of the lack of the vowel Ö in [178]
their dialect. *BÖ* and *BÖ* seem to be a genuine Mongol term. The Chinese of Huang-chung call them *Fa-Shih*, "Master of Magic."

It is not easy to give a definition of shamanism and of shamans who live in a world beset with innumerable good and evil spirits with which the objective of their life is to deal.

The study of shamanism is still very confused, and 756
authors are even unable to find a definition with which 771
they will all agree. W. Schmidt defines the shaman as "a man who is supposed to have the power of making his own person a dwelling place for the spirits, who will speak out of him, but he keeps the power to dominate those spirits and to subdue them to his own will and wishes."[2]

Mircea Eliade, describing the shamanism of Asia, stresses primarily the phenomena of ecstasies and of trance, by means of which the shamans enter in communication with all kinds of spirits—originally with the Supreme Spirit of Heaven, who corresponds morpho- [176]
logically with the Supreme Spirits of the archaic religions—and with the souls of ancestors and the departed. This communication with spirits, residing in the three worlds (heaven, earth, underworld) is symbolized by ascensions to heaven of the shaman or descents into the underworld, the calling down of spirits along the rope or the ladder. The basic element of shamanism consists not of the incorporation of spirits

by the shaman but of the ecstasy caused by the ascension or descent.[3] 756 771

Åke Ohlmarks considers arctic and subarctic shamanism. The arctic "genuine shamanism" is founded on a psycho-pathologic base, and originated in the arctic regions out of the hysteria peculiar to this region; the subarctic shamanism originated in primeval magic influenced by the arctic shamanism. The shaman, by means of ecstasy, provides communication between the three worlds, connected by means of an axis (tree, post, or rope) along which move spirits and souls, including those of the sacrificed victims.[4] [171]

In the course of this study reference will be made frequently to the Bön religion, because many facts relating to shamanism are encountered also in Bön, and even in Lamaism. A few words regarding Bön seem to be advisable.

According to Helmut Hoffman[5] the meaning of Bön is not known (p. 137). Bon is the old religion of the Tibetans which existed before the introduction of Buddhism in Tibet in the seventh century (p. 135). It is the Tibetan form of a primitive animism that once spread all over Northern and Central Asia, this animism often being thoroughly blended with genuine shamanist principles (p. 208). At present, the systematized Bön religion is a composite. Its original nucleus was the belief in and fear of good and evil spirits (p. 135) and the worship of Heaven considered as a god of the universe, "Weltgott" (p. 156). Around this nucleus was built a façade made up of elements of the debased but more developed Buddhism (Lamaism) (p. 138), in which also animist-shamanist principles played and still play a prominent part (p. 197). Bön, in competing with Lamaism, adopted many of its rites and institutions and composed its literature according to the pattern of Lamaism.

In the primitive Bön, existing before the introduction of Buddhism in Tibet, Heaven was worshipped not only as an impersonal power, but also as a personal God (p. 156). Hence communication between Heaven and earth was secured by means of a rope or ladder, the "way of the spirits" (p. 153), and by means of the post supposed to reach heaven.[6] Bön likes to emphasize

[p.171(B)]

the cosmic tree on the mount Meru. In addition the 756
whole series of good and evil spirits were both honored 771
and combatted in the effort to make them inoffensive. Hoffmann concludes that it is hard to trace a sharp dividing line between the old Bön and shamanism.

It is instructive to read the review of Helmut Hoffmann by R. A. Stein [7] in order to get an idea of the confusion still persisting regarding the subject. Stein holds that the definition of Bön, said to be the religion of the Tibetans before the introduction of Buddhism, is not easy to write down, because Bön as a religious system is only known in its later state of development when it seems to be a variant of Lamaism. Bön conserves more archaic traits of the old popular religion than Lamaism does, but it does not enjoy a monopoly (p. 98), because the facts relating to Bön are encountered in Lamaism as well as in shamanism. The problem of the Iranian origin of Bön is difficult to solve (p. 99). The fact that the Bön worshipped the spirit of Heaven as a personal Supreme Deity seems to have to be taken with cautiousness (p. 101).

Kawaguchi [8] notes that originally Bönism very much resembled Hinduism, but now in theory it is almost Buddhism. Shorn of its sacrifices, its toleration of marriage and use of intoxicants, it is only Buddhism under another name.

SOCIAL AND ECONOMIC CONDITIONS OF THE MONGUOR SHAMANS WITHIN THE CLAN

The social conditions of the shamans are the same as 756
those of the commoners of the clan. They are not 554
exempted from land taxes and corvées, but no special corvées are imposed upon them by the chiefs of the villages. They receive remuneration for the performance of rites in behalf of the community. The shamans enjoy no privileges in the Monguor community as was the rule in the time of Chingis Khan.

The Monguor shamans do not live in monasteries, 756
where they might give spiritual help to the people; they live in various parts of the villages, each with his wife and children. Their economic mainstay is tilling the soil and breeding cattle; their subsidiary occupation is the performance of shamanistic rites either for the community of the village or for private families when invited by them. The margin of subsistence of most of the shamans is rather narrow.

No bonds tie them to the village where they are liv- [571]
ing; shamans of distant villages are invited by the villagers, and the shamans living in the village are frequently overlooked. Some shamans, celebrated all over the country for their proficiency in the art, are invited more often than others by village communities or private families.

The activities of the shamans are not limited by the

[7] R. A. Stein, *Journal Asiatique*, 1952: 97.

[p. 78(A)]

boundaries of their clan. They are invited in every 756
clan indiscriminately, and even performed rites among Chinese and Tibetans outside the clans.

In some villages there are two or more shamans; in others only one, or none at all. The shamans are independent of each other and are not confederated in a guild. They have no chief to whom they are subjected, but all the shamans are enrolled as members of the guild of the Taoist priests of the Chinese city. The chief of that guild orders them to carry out in the city, in collaboration with them, the rites for saving the moon and the sun at the time of an eclipse. The chief of the guild is appointed by the Chinese officials for the [648] patching up of quarrels among the shamans. In the event that a shaman breaks the rules of the guild, a letter from the chief of the guild to the prefect of the city is sufficient to put the shaman in jail. The shamans have to contribute also toward defraying the expenses of the guild. This fact, as has been noted, is really abnormal and infringes upon the rights of the T'u-ssu. It will be explained later.

In comparing the actual social conditions of the shamans among the Monguors with those of the shamans among the Mongols in former times, it is manifest that shamanism has fallen into decay. "The forest clans often had at their head shaman magicians, who were reputed to have intercourse with the spirits. A shaman that was at the same time the leader of the clan or tribe, bore the title of 'Biki,' a title occasionally borne also by members of the steppe aristocracy."[9] Sha- [651] mans were, at that time, exempted from taxes and corvées.

It may be that these ancient conditions account for the tradition, prevalent among the Monguors, that in former times each village had its own shaman and only one; that the temple of the village was administered by the shaman and used for the cult of the spirits of the village, by the villagers only. At present the temple is the property of the village and administered by the community, but still only the villagers are allowed to enter their own temple. There is no admittance for strangers.

WHAT IS A SHAMAN ACCORDING TO THE MONGUORS AND ETHNOLOGISTS?

According to the Monguors, the shaman is a man who interposes between men and spirits, either as a

[p. 78(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

friend of each, in case of good spirits or, as a protector 756
of men in case of evil spirits. He devotes himself, and gives himself up wholly to the service of certain definite spirits which take possession of him, and which he gathers in his drum. They sometimes speak by means of his mouth, help him to call up other spirits which he sees and hears talking in his drum, and with which he is able to speak. The spirits help him to arrange appointments with other spirits, bestowing blessings and boons, and helping him combat evil ones, which play havoc and work damage. According to the Monguors, he is a more powerful man than others, able to save the villagers when their happiness is imperiled and the world in a mess.

Why did the shaman devote himself to the service of his special spirits? In very old times one of his ancestors, according to the shamans, had been singled out and ordered by these special spirits to devote himself to their service. These spirits had ordered him to continue this service, generation after generation, and had promised to shower blessings on him, and to help him in averting troubles from his customers. These spirits taught the initial shaman the method of serving them, of beating drums, of performing rites, and today's shamans have to discipline their behavior according to these instructions. Thus every shaman is a descendant of an initial shaman chosen and compelled to serve certain definite spirits. The initial shaman now being in contact with these spirits still provides his descendant shamans with the means of communication with them, and secures their aid and support for the successful achievement of their duty. This seems to be the specific belief of the shamans themselves, and of the Monguors about the shamans.

According to the ethnologists, "the strongest evidence of the ingenuity of the shaman lies in the fact that the shaman possesses the power to take into himself spirits, which speak by means of his mouth, but which he controls and makes obedient to himself."[10] Ethnologists assert that, physically, shamans suffer from nervous diseases, and are easily excited.[11] They are unbalanced people with a marked disposition to all kinds of illusions and hallucinations.[12] Cases of epilepsy, idiocy, mental breakdown, and insanity have been noted among the shamans.[13] This record is not very flattering or inspiring.

SUCCESSION OF THE SHAMANS

The care and the protection shown by the spirits for their initial shaman and his successors are most effective. They interfere even with the choice of the boy who has to succeed to the incumbency of a shaman, by

[10] Schmidt, *op. cit.* 9: 243.

[13] Nioradze, *op. cit.*, 3. Eliade, *op. cit.*, 7. [P, 79(A)]

guiding the father shaman to indicate which among his 756
sons fills the bill of requirements in the most appropriate way. The general belief among the Monguors is that the avocation of a shaman does not depend on the individual or on any other person, but on the spirits, who select the person who is to discharge the duty.

The succession, according to the Monguors, is necessarily inherited by one of the sons of a shaman. This is explained according to the Monguor mentality. It has been noted that, since the worshipping of a spirit once begun by a family should never be discontinued, for fear of calamities which would be sent by the abandoned spirit, the eldest son therefore has to perpetuate its cult. In a more imperative way, when the head of a family has dedicated himself to the cult of a spirit, the duty of a member of the same family to continue this dedication is far more urgent. Since it can never be neglected, one of the sons has to assume the duty.

When a shaman, however, has no sons, he indicates his successor among the sons of his brothers and adopts him. The boy will inherit his wealth and substance and become a shaman. If he did not adopt a son during his life, a family council convenes in order to indicate one of their boys to succeed to the deceased shaman, for the future of the whole family is at stake. The Monguors harbor a deep conviction that the whole family is responsible for the continuation of the dedication of a member to the cult of the spirits, and that the family would not be able to withstand the calamities entailed by such neglect.

The Monguors say that in former times, when the [462]
shaman had no sons, one of his daughters discharged the duty, but at present there are no more female shamans. Many times I received from the Monguors this explanation which, according to their trend of mind, seemed logical.

When I asked the shamans why they accepted only their sons or nephews as pupils, and never sons belonging to families in which there were no shamans, they always answered that such boys could not become shamans. They said their old ancestor had been chosen and ordered by the Twelve Tengris themselves to honor them; that the way of practicing their art had been taught to him by the Twelve Tengris themselves and that consequently their "family" had to discharge this duty. "We have to honor our shaman ancestors," they said, "because when we are fulfilling our duty their spirits come to us, helping us serve the tengris; they know the way of approaching the tengris; they live with them and know them, make them take possession of us, and make them help us in every way. Without the spirits of our ancestors we are unable to perform the rites, to call up our Tengris and to combat evil spirits. The spirits of our ancestors know us, and protect us, because we are their descendants, and so do the Twelve Tengris; but our ancestors will not help strangers and our Tengris recognize only our family as their servants;

[p. 79 (B)]

therefore a member of an alien family can never become 756
a shaman."

When I asked whether all the Monguor shamans served the twelve spirits, the answer was that they did, and then I objected, not understanding why, that the family names of the shamans were not the same. They answered that the spirits had chosen ancestors of different families to become shamans, but all these things had happened centuries ago. This explanation seemed to be full of holes.

DIFFERENT KINDS OF SHAMAN

BEHAVIOR AMONG SHAMANS AND BETWEEN SHAMANS AND MONGUORS

Shamans always said that in the mountains south of 756
the Hsining River were shamans serving only evil 628
spirits, who were therefore called "black shamans." 565
They dedicate themselves to the evil spirits, and to 754
Erlik Khan, their chief, and unleash them to harm the people. The "white shamans" must drive away the evil spirits and undo their harm; they serve only good spirits and are devoted to them in the same way the black shamans are devoted to the evil spirits.

White shamans never have friendly relations with black shamans and never give their daughters to their sons, or take brides for their sons from among them; one group despises the other. The white shamans always boast of their superior power, and the thorough efficacy of their good spirits over the evil spirits, and are convinced that their group existed long before the black shamans came into existence.

The Monguors are really afraid of the black shamans. They never give their daughters to them, and shun them because they know they are dangerous fellows. When a black shaman is traveling through the country and asks to stay for the night in a Monguor village, the horror-stricken Monguors never dare to refuse to comply with his demand, and so display the most gracious hospitality for fear he might unleash the evil spirits and harm the village. The black shamans know they are shunned and that they have no friends in the world. They are dominated by an inferiority complex. When they encounter anyone on the road, they retire to the wayside and allow the wayfarer to pass first.

This attitude toward the black shamans is understandable, but why it exists in the same way toward the white shamans is an enigma. The white shamans living in the village are always invited by private families and the communities to provide aid and support in all kind of troubles; they are said to be the servants of the good spirits. Notwithstanding this, the Monguors do not like to have friendly, intimate relations with them. The white shamans are never invited to dinners and feasts for births of children, marriages, or funerals. Ordinary people never either marry their girls to sons of white shamans or permit their boys to marry girls of white shamans. No white shaman is

allowed in the intimacy of the family; he is shunned. 754
He is also dominated by an inferiority complex, and ac- 756
customed to letting a wayfarer pass first on the road. 628
He knows that he does not belong at the top of society, 565
for during the empire, the Monguors say, no shaman was allowed to compete for literary degrees. Their profession was discredited in the same way as that of tailors, barbers, and comedians. The social standing of the shamans and the influence they wielded in former times are really beyond all comparison with their poor condition of today.

But do the Monguors never call the black shamans in [578]
order to perform their rites? A couple of facts will be recorded about Monguors who, in order to take vengeance on enemies, invited black shamans to cast spells upon them at night.

NO ENTHUSIASM AMONG THE MONGUORS FOR THE DUTY OF SHAMAN

It is a well-known fact all over the country that sha- 756
mans generally have an aversion to their office and do not like to carry out their functions, but, bound by the choice of their father shaman, and knowing that a refusal would be fraught with all kinds of evil consequences, they discharge their burdensome, non-remunerative duty. The Monguors say that in families where there are no shamans, permission would never be granted by the parents and the chiefs of the families for a member of the family to become a shaman.

In the Valley of Hung-nai there are no more shamans 756
at present. During the terrible Moslem rebellion, all 798
the shaman families were exterminated. The inhabitants of the valley, afraid of the burdens attached to this profession, no longer allow their sons to become shamans. They prefer to honor the more lenient deities of Lamaism and have their sons become lamas. They invite shamans of other villages to perform shamanistic rites in their village every year in the spring and at hail time; the other rites are all performed by lamas. Shamans, however, according to their own ideology, assert that no more shamans can arise among them.

Several times I heard the typical story, later attested 756
to by No Kuang-li, that when he was a boy a member of his family was ordered by his father shaman to succeed him. The unwilling boy was compelled to accompany his father at the performance of all kinds of rites, to learn the usual prayers, and to submit to the peculiar training. When his father died, the boy tried to get rid of the duty, but the family council decided that he had to comply with the choice made by his father. The boy's nerves were on edge and he went on a rampage; his health was impaired, his mind was seriously affected and he had a mental breakdown. He roamed for months in the mountains, shunning all kinds of people and finally was found hanging from a tree. After so many years this fact was still recorded and explained by the Monguors as being a punishment meted out by the spirit who had selected that boy as its

minister. Such recollected facts always sear the mind 756
of the Monguors, convincing them that the spirit is to be obeyed, and that it is a terrible spirit.

When we take stock of what has been said of the behavior of the Monguors toward the shamans, the inferiority complex of the shamans, the exacting requirements of the spirit, and the poor remuneration of the office, it is no wonder that the shamans do not enjoy their profession and meet their obligations with revulsion. What is more remarkable is that the same trend of mind exists among all the shamans all over Asia.[14]

DEDICATION AND TRAINING OF THE MONGUOR SHAMANS[15]

Usually the son succeeds the father, and the father is the trainer of his son; the father has no other apprentices. However, during the slack season of agricultural routine, it is not unusual to see sons of different shamans staying for a couple of months with a shaman relative, celebrated for the proficiency of his art. The boys recognize the shaman as their master.

The training of the shaman boy starts when he is 756
about ten years of age. At that time the father invites 968
the elders of his family and some shamans, he kills a sheep and performs the ceremony of the dedication. The boy kneels with incense sticks in his joined hands. The shamans beat drums, perform a dance before the picture of the twelve spirits especially honored by them, and before the staff placed before the picture. A shaman, holding the staff in his hands, then invites the spirits to descend into it. When the staff starts shaking, he makes the announcement to the spirits of the dedication of the boy to their service, and asks them whether or not they approve the dedication of the boy. The invited spirits make the staff shiver and shake more and more in the hands of the shaman. The shaman states that the boy is accepted and dedicated for his whole life to the Twelve Tengris; that they will help him, but will get him into serious trouble if he gives only lip service to them; that he is no longer his own master, but is linked to them by the dedication; then he describes the most terrible calamities which are in store for undutiful shamans, while the staff shakes feverishly in his hands. A dance is performed around the boy while drums are beaten and the ceremony is completed. The gamut of all kind of misfortunes and calamities visited on undutiful shamans will be dinned in his ears in all circumstances, so that the boy, living in an atmosphere of fear and apprehensions, will reach his manhood. Stress is to be put on the fact that the shaman is dedicated to the Twelve Tengris who descended into the staff.

 756 868

A small drum is prepared for the boy and the father teaches him to beat it in the right tempo; he teaches him the usual prayers. Every day in the morning and at evening he will sit cross-legged with his father in front of the picture and the staff, beating the drum, receiving instruction and asking for explanations. The father teaches him the pasting of flags and streamers with white, red, and yellow paper, the cutting of all kinds of paper designs; the kneading of all kind of dough figures used during the rites; the application on red paper of the usual seals. He also teaches him the different kinds of dancing, and how to attack imagined spirits or defend himself against them, with sword and spear; and how to use the whip, the staff, and the knife. Special stress is put on athletic exercises in order to strengthen and supple the muscles and bones, and also on all kinds of acrobatics, climbing up poles, jumping on tables, executing dangerous pirouettes. Because all the shamanist [535] rites are accompanied by dances, peculiar stress is put on moving with grace and elegance with measured steps to the beating of the drum. The best dancers among the shamans are very celebrated all over the country. All shamans are acrobats and fine dancers.

Most shamans are proficient in the art of producing tones and words without any motion of the mouth, so that the listeners are induced to refer the sound to spirits speaking in the drum and answering the questions proposed to them by the shaman. They are wonderful ventriloquists. This art is used at the time the spirits are called up in the drums, and long conversations are held between them and the shamans.

The apprentice, from the very beginning, accompanies his father in performing shamanist rites. He learns with enthusiasm and vigor, for the boy is eager to beat drums, play the acrobat, dance with the elders and imitate them, but at the same time he sees and hears his father conjuring the spirits, calling them up, attacking and chasing evil spirits. He sees the awful rictus of his mouth and jaws, the painful contortions of his whole body; he hears him, worked into a frenzy, predicting the future; and sees his eyes in a fixed stare. Hundreds of times he sees and hears the same rites performed for sick men, and hears the shaman talking to the villagers at the general rites of spring and autumn. Because the [796] same things are said and done over and over again, he remembers them all by heart. The novelty, however, of beating drums, wears off very fast, and unconsciously he starts living in a new world of spirits, acting and thinking in the way of the shamans. He believes his father and the other shamans, he becomes hypnotized by their words, gestures, and acts, and he starts seeing and hearing spirits himself. He gets the conviction that, protected by the twelve spirits to whom he is dedicated, he can also subdue evil spirits and act as the agent of good ones, and he becomes a shaman.

Helping his father and other shamans for years and having himself alone performed rites, eventually when

his father becomes old and retires, he accepts his incumbency. No more formalities are required, for he is not the shaman attached to the village and does not live at its expense. 756 868

INTELLECTUAL AND RELIGIOUS TRAINING OF THE APPRENTICES

The intellectual education of shamans is of a very low standard. Shamans are unable to read Mongol or Tibetan books. Their prayers are said in Chinese, but because the apprentices never attend schools, they are not able to read Chinese books or to write a letter. [211] The elders teach them to write a small number of Chinese characters, used on the few inscriptions pasted on the pole or on the doors and walls of the temples, but most of the time they print the inscriptions by means of engraved wooden blocks. They have, however, a few [212] small prayer books written in Chinese and copied by the most intelligent among them, or by Monguor friends. These prayer books are not printed. Monguors and shamans assured me that they did not possess any books explaining their doctrine. No wonder that the instruction differs, from teacher to teacher. It was always impossible to get a coherent explanation from the shamans about religious subjects. They do [779] not pore over books or rack their brains over theories or philosophical or religious problems. Their science is more one of fantasies, anecdotes, and miraculous tales concerning a number of spirits, told during the performance of the rites. I suppose the instruction of the apprentices would consist of being taught about the same items dealing with the spirits honored by the shamans [796] at the rites of spring and autumn. More will be said about the subject.

The conclusion seems to be that the intellectual and religious training of most of the shamans is neglected and only superficial, and that the physical training ranks first. Many apprentices, in order to perform their physical training and acrobatics, go for months to shamans celebrated in that field. Finally it is said that the education of the apprentices is carried on by accompanying the shamans; their eyes and ears are their real teachers. Some exceptions, however, seem to have existed always, even in these latter times.

Many times I heard the Monguors speaking about a famous old Lu shaman, who died around 1904. The old man went every year to the mountains of Waza with his own apprentice and the apprentices of other shamans. They lived in the caverns, fasting the whole time and sleeping only a few hours during the day. All night they were honoring their spirits, fondling and cajoling them and learning about fighting the evil spirits in the mountains, who every night attacked and combatted them. When they left the mountains, they were exhausted and emaciated from the exertion. The apprentices of the old Lu were said to be the best shamans in the country. Two among them are said to have died by jumping over a precipice in the mountains.

[P.82(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

A lot of anecdotes, overlaid with fabulous legends, 756
are told about powerful shamans who lived in former 538
times. A famous shaman of Too long was invited to cure a dying man. The man died before his arrival. The soul of the shaman, after the completion of certain rites, went to see Erlik Khan, the King of Hell, and examining the files he found that the man had died several years before his destined time. The soul of the shaman came back; he performed a set of new rites and the man came to life and lived for several more years. I wondered how such anecdotes, known all over Asia, were spread among the Monguors. The overall con- [868]
clusion, after all the talks about old famous shamans, was always: "We no longer have the stuff of which shamans are made, for the apprentices are no longer trained in the right way."

MONGUOR SHAMANS AND NEUROSIS

What about the general statement of the ethnologists 756
that shamans are victims of neurosis? It is said of the 158
brutal training of the apprentices among the nomads, in opposition to the most elementary principles of pedagogy, that nothing could have been devised, better calculated to unseat the reason and to form pitiable neurotics of them.

In former times, according to the Monguors, the training of the Monguor shamans must have been very similar. The recent cases of the two apprentices of the old Lu shaman seem to evidence this assumption. On the other hand, it is a known fact that among the hereditary diseases neurosis is the most frequently inherited. Because children of shamans must marry children of [582]
shamans, the danger of inheritance is increased and it creates a predisposition to produce more easily suggestions and hallucinations among the members of such families. The fact of the suicide of the boy No, unwilling to become a shaman, is suggestive. It seems, therefore, not too far fetched to suppose that the shamans and their apprentices easily get the conviction of seeing spirits and hearing them talk. Because they will see and hear them, they act accordingly, notwithstanding their actual superficial training. On the other hand, for neurosis, as for all diseases, the question of plus and minus is always open, but the morbid basis of the disease is always existent.

Some of the shamans performing the rites seem to act as though in a play, straining for effects. They give the profession a black eye, while others seem to mean business and to act as real shamans. After all, the fact remains that shamans never dare to quit the profession, notwithstanding that it is a poor means of livelihood.

SHAMAN DRESS AND IMPLEMENTS

DRESSES

The shaman when not performing rites for communi- 756
ties or private families, dresses in the same way as the 292
Monguors, but while acting as shaman he wears a special

[p.82(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

costume, as follows: a long Chinese gown of black cloth, 756
with a large flat collar, in the manner of the Taoist 292
priests, crossing over the chest and buttoned on the left side. Over the gown he wears a coat of silk, adorned with flowers or dragons, having large sleeves and reaching below the knees. The coat is similar to the one worn under the empire by distinguished Chinese. The black color of the gown is unusual in the country and is confined to the shamans. Stress should be put on the startling difference existing between the simple official dress of the Monguor shaman and the official dress of many shamans among the nomads, whose main article of costume consists of a large mantle adorned with superstitious paraphernalia and symbols. Clothed in the mantle the shamans feel themselves possessed by their spirits; without it, they cannot perform their rites. This mantle is said to be worn by the black shamans living in the mountains south of the Hsining River. No traditions are prevalent to the effect that the Monguor shamans used the mantle in former times, but it is always said that they never wore it.

CINCTURE

The long black gown is belted by a long strip of black 756
cotton, wrapped a couple of times around the waist, as 293
all lay people do. The shamanists among the Mongols of Ordos take off their girdle [16] four times a year, while performing their important rite by means of prostrations, facing the sun. Chingis having escaped with his life from pursuing brigands took off his girdle, put it around his neck, and facing the sun, prostrated nine times.[17] Among the Monguors the girdle has not the same importance. Monguor shamans and shamanists never take off the sash when they honor "Heaven and all the spirits" or perform rites.

The Mongols of Ordos, if the bridegroom happens to become sick on the day of the marriage, marry the bride with his belt.[18] The Monguors do not perform such marriages, but when a girl has relations with a traveling guest, she asks for his girdle and name. If she becomes pregnant, she ceremoniously marries the girdle, is called Mrs. so-and-so, according to the name of the guest, and her child is similarly named.[19]

CAPS [20]

The Monguor shamans use three kinds of caps, all 756
three black in color: the first is a kind of toque, a brim- 292
less pliable bonnet having a tassel of dog hair on top. 302
This cap is similar to that of the Chinese Taoist priests. On the top of the cap, next to the tassel of dog hair, a hole is left through which is seen a hairpin which holds

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

the hair coiled inside the cap. All the shamans wear the pigtail, which they coil when performing rites. 756 292 302

Traditional pictures of Taoist saints show that these worthies were wont to wear their hair in a knot on the top of the head. The Manchu Tartars conquered China and compelled the people to adopt their coiffure and shave their heads except on the top, where it was allowed to grow long and be braided as a pigtail. The *sai kung*, like the whole nation, had to submit to this order, but with pious conservatism they have preserved the ancient orthodox fashion on behalf of their altar service; that is to say, while officiating they coil their hair into a knot upon their heads and cover the shaven part around it with a wig of braided human hair.[21] [175]

The Monguor shamans, however, do not wear the wig.

The Manchus not only preserved their traditional style of dress and haircut, they even compelled Chinese men during the period of invasion to adopt Manchu dress, shave their heads, and grow the queue. This enforced change was so bitterly resented by the Chinese that many times they chose rather to die, or lose their heads, than obey the Tartars in these ceremonies. The literary inquisition launched during the Ch'ien-lung period reveals that, in the eighteenth century, a Chinese who yearned for the old cap and garments was still considered a dangerous rebel.[22] [648]

The second headdress has the form of a sack, of black cloth, tightly bound around the head. A tail, three feet in length, is fixed on this cap. Plaited with red rope around a twisted black rope of cloth, the tail which is thin at the bottom and thick at the end, is rolled on the head, but released when the shaman is executing acrobatic evolutions.

The third one is a crown, in form like the *chod pon* of the lamas,[23] divided in front into five parts, bearing a crude picture of the god of the five roads, the Wu-tao-shen, whose disciples the shamans claim to be. (Shamans never wear a crown with the five Dhyani Buddhas; their antagonism toward Lamaism is too pronounced to do that; they never will perform rites in a Buddhist temple of the village.)[24]

THE DRUM

The drum is one of the important implements of a shaman. It is used to invoke the spirits during the performance of the rites; the spirits enter into it and ritual dances are performed in time with the beat. Every shaman has his own drum, and generally another in reserve. Upon the death of the shaman his drum is buried with him in the coffin, for it is a personal object. The boy apprentices receive a drum of smaller dimensions from their father, on the day of their dedication to the twelve spirits. Apprentices who receive part of their 756 534 [766]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Apprentices who receive part of their training for a couple of years from another shaman, during the summer time, and who acknowledge him as their master, offer him a gown upon completion of their education. In return, they receive a drum from him. The rules of apprenticeship among the shamans are the same as those already noted for other apprentices, such as carpenters. 756 534 [874]

The overwhelming magical significance attached to the drum by the nomad shamans is lacking among the Monguor shamans. Among the nomads, when the apprentice, after completing his depressing training, beats the drum for the first time, he becomes hypnotized and tranced.[25] Although the Monguor shamans consider the drum a sacred magical object, the same overriding importance is not attached to it.

The drum is built in a primitive way. A handle is attached to an iron circle with iron rings, which produce noise when the drum is beaten. On the iron circle is stretched a piece of goatskin, which has been soaked in water and shaved. On its surface are often painted crude pictures of heaven, with the sun, moon, the big and the little dippers, stars and clouds. The drumstick is usually made from peachwood or strips of goat hide twisted together.

THE KNIFE

The shamans use a knife when driving away the evil spirits. The knife is twelve inches long and two inches wide, and pointed at the end. To the handle are attached noisemaking iron rings. Sometimes the Chinese knife used for cutting noodles is substituted. 756 413 293

THE MAGIC STAFF

The staff, which is of wood, seems to be an important tool.[26] To the top is affixed a copper mirror surmounted by a three-pronged iron fork to which tassels of red rope are attached. The staff ends in an iron point, so that it may be planted erect in the ground during the time when council with the spirit is asked for. The magic staff is a tool used by lamas and Taoists as well as by shamans. The staff of the lamas differs from that of the shamans in that the mirror is surmounted by a copper skull, while above the skull is the point of a spear. The staff of the Taoists has an octagonal shaft with an iron point on top.

Each time, before performing a rite, the shaman asks his spirits in the staff about the most fitting rite for the circumstance, the sacrifice to be offered. The answer is supplied by the twelve spirits making the arms of the shaman shiver, and so he knows how to conjure evil spirits who harm persons, families, or herds. It is always called *Yang-t'ou san-ch'iang*. (I could never get an explanation of this Chinese term.) The staff is used when the shamans go into private families in order 756 793

[p.84(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

to drive away evil spirits. It is not used during the ceremonies celebrated in the temple of the village. The staff is considered to be endowed with magical power and is planted before the picture of the Twelve Tengris honored by the shaman at his home. It is honored like an idol; the shaman burns incense and prostrates himself before it. 756 793

Every time a shaman uses his tools they have to be purified. By smoking them above a fire of cypress boughs. It is said that some laymen who honor a special spirit are able to use a staff and to call their spirit into it.

SPIRITS HONORED BY THE SHAMANS

The problem of the spirits honored by the shamans involves the very interesting question of how and to what extent shamanism and Taoism became mixed and interwoven among the Monguor shamans—a question which is all the more interesting because it has often been written that shamanism and Taoism are strongly linked together. In order to tackle the problem it is necessary to determine whether the spirits honored by shamans and Taoists are the same, whether the ways of worshipping them are similar, and what may have been the reason for the intermixture of the two religions. 756 177 171

SHAMANS, DISCIPLES OF THE TAOIST GOD OF THE FIVE ROADS

The most baffling and confusing fact in this respect is that all the Monguor shamans overtly claim to be disciples of the "god of the five roads," the Wu-tao-shen, who is a Taoist god. 756 776 171

When the chiefs of the villages invite a shaman to perform his rites of spring or autumn for the community, they send one of the elders with an official invitation written on a slip of red paper, "to [sir] Hsien-sheng so-and-so, disciple of the god of the Five Roads." During the Mongol dynasty the term *Hsien-sheng* was only used for Taoist priests. On New Year's the shamans send to the chiefs of the villages and to outstanding people a card reading, "Happy Congratulations of so-and-so, disciple of the god of the five roads." It has already been noted that the crown worn by the Monguor shamans represents the god of the Five Roads, that one of the caps worn during the performance of the rites is the cap of the Taoist priests, and that the pattern of their gown, except for its color, is the same as that of the Taoist priests. It has been noted that the Monguor shamans are members of the guild of the Taoist priests of the city. When a shaman dies he is buried wearing the crown of the god of the Five Roads. If one adds that many of the temples in the villages in which the shamans perform their rites are dedicated to the god of the Five Roads, and that at the same time more Taoist statues are honored in them, it gives the impression that the shamans are a kind of Taoist. Not only does the cult of the god of

[p. 84 (B)]

the Five Roads link them to Taoism, but also the cults 756
of Lung-wang (the Dragon King, provider of rain), 776
Niang-Niang (the Mother Goddess of children), Ho Hu 171
(provider of rain), Hsüan-t'an (guardian deity against hail), Ma-wang (the Horse King, protector of horses), and Ts'ai Shen (the god of wealth). During the performance of their rites these gods are called up, and are supposed to come to attend the gathering of the community. The dialogues between the shamans and the Taoist deities gave the illusion of attending a real Taoist assembly.

All these facts evidence the assumption that the shamans worship the gods of Taoism.

"GOD OF THE FIVE ROADS"

The Monguor shamans during the performance of 175
their rites in spring and autumn never fail to assert be- 776
fore the public that they are the real disciples of the 756
god of the five roads, who was created god by the emperors of the Chou dynasty (1122–256 B.C.) and that the General Chiang Tze-ya ordered them to worship him, teaching them the way of honoring him, and promising that he would provide his aid and support to them in the most trying and straightened circumstances, and would never falter.

This explanation, in crude Taoistic fashion, is a far cry from that of nomad shamans who assert that the good spirits had sent from heaven a shaman eagle to teach their ancestors the way of combatting the evil spirits,[27] and from the explanation given by the same Monguor shamans that their ancestors were chosen by the Twelve Tengris. These ambiguous and equivocal explanations seem really to cancel one another out. According to their own explanation their shamanism is ultimately founded on a mandate received from a Chinese general.[28]

The real history of the famous god of the Five Roads I never had the opportunity to find out. In some temples I read the two following inscriptions, "Duke Mu of Ch'in raised him by imperial patent to Wu-tao; prince Chuang of Ch'u gave him, by imperial grace, the title of General"; and "General Mountain before the carriage of King Chou: the spirit of T'ai mountain raised him to Wu-tao." These two inscriptions seem to be as apocryphal as the saying of the shamans, and assign to a period earlier than reliably recorded history the creation of the god. The cult of the god of the Five Roads, however, seems to be widespread along the northwestern borders of China. I met it from

[27] Nioradze, *op. cit.*, 2–3.

[28] Wieger, *Textes historiques*, 1658–1659, 1841, Ho Kien-fu, 1903. Chiang Tze-ya was traditionally the Shang general who became a counsellor to the founder of the Chou dynasty. He died in 1120 B.C.; twelve centuries later, during the Han dynasty, he became a very popular god of all kinds of pickled stuff. In 731, during the T'ang, he was created "war god" by the Taoist Emperor Huang-tsung, and an order was given to build temples to him.

[p. 85(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Hsining across Ning-hsia to Sui-yuan, and Father W. Grootaers noted in the region of Wan-ch'üan (Kalgan), 109 temples of the Wu-tao shen,[29] most of them smaller than they had once been. The representations of the god of the Five Roads in the temples are all very similar. The reason for this similarity in temples so distant one from another may be that the Chinese painters used printed books in which they found the stereotypes and traditional representations of the whole series of spirits. They also used books containing all kinds of inscriptions appropriate to the different special spirits and to the spirits in general, and this explains the uniformity of the inscriptions and paintings encountered all over the country.[30]

776 756 175

TEMPLES OF THE GOD OF THE FIVE ROADS

The abode of the god consists generally of three rooms (*chien*) situated on the north side of a mud or brick walled courtyard. On each side of the courtyard are another three or more rooms for storage of all kind of paraphernalia used for processions and for the kitchen. The entrance is in front of the abode of the god. According to the topography of the country the temple is sometimes built against a mountain without taking account of the points of the compass. In the middle of the three rooms of the front building there is always placed a sedan chair in which is the statue of a female deity clad with a more or less precious robe, or there is the statue of a male deity, such as Wu-tao or Lung-wang. The female deity usually represents the goddess, Niang Niang (mother goddess of children); seldom, Shui-mu, the goddess of the water. The statue seems to be the center of attention for the whole building. It is carried in procession when the people are praying for rain, or for protection against hail. Every year the statues of the goddesses of the temples of Sha-t'ang Valley are carried to the temple of the god Erh-lang,[31] locked up with the god for one night and brought back the next day. The god is said to enjoy the visits of all the goddesses. This curious custom will be discussed later.

756 778 776 346 532

On the walls of the three rooms are frescoes depicting the god of the Five Roads, who is never alone, but associated with other gods. In the central panel the god sits on a large chair, represented in the customary fashion of a corpulent Chinese general, with long black beard, military cap, red coat over armor, large loose

756 776 346 532

[29] William A. Grootaers, Temples and history of Wan-ch'üan, *Monumenta Serica*, 13: 232, 1948. What is said in this very valuable study, in Chap. 2, on the Wu-tao temples, concerning the arrangements of the temples, the images and frescoes, even the inscriptions, tallies completely with my former notes. This is the first and only study made in China concerning all the temples built in a limited area, affording interesting data for the history of religion and the history of the country.

[30] *Ibid.*, 239.

[31] Grootaers, *op. cit.*, 263. The identity of this spirit seems not to be the same in North and Middle China.

[p.85(B)]

belt at the waist, the legs sprawled apart, boots with 756
thick soles on the feet, and a sword in the hand. On 776
the eastern panel is painted another general, the god 346
of the Mountain (Shan Shen) in nearly the same pos- 532
ture. On the western panel is painted an older man with white beard, vest, a yellow robe, hands hidden in his large sleeves; he is the god of the Earth (T'u-ti Shen). Why these three gods are always placed together is a mystery.

In the foreground of the three images on the east is the god P'an-tze, the judge, holding in his hands the "register of the living and the dead" (Sheng-ssu p'u). On the west is a horned, black-faced devil with red skin, holding the "Tablet to hook souls" (K'u hun p'ai). It is a strange gathering of disparate gods whose association is a puzzle. The association of these gods in the same temple explains the fact that some shamans, when performing rites, wear a crown with only one image, that of the god of the Five Roads, while others wear a crown with three images (Wu-tao, Mountain god, Earth god), and some wear the crown with five images, adding P'an-tze and the black-faced devil. It is no wonder that one also sees in some temples of the god of the Five Roads the inscription: "Wu-tao, Mountain god, and Earth god, protect this village, that it may get peace." All these disconcerting anomalies do not bother either the shamans or the Monguors.

In temples, so far distant from one another, we find not only similarity in the representation of the god of the Five Roads and his associates, but even in the subjects painted on the frescoes on both the side walls of the temple. Father Grootaers calls the subject, "the pursuit of the evil ones," explaining that "the god honored in the temple is shown on horseback, engaged in a pursuit against the powers of evil, which he then brings back enchained."[33] What, however, may have been the original mystical or ascetic meaning is not known, but the subject seems wonderfully adapted to the circumstances of the country of Hsining and the mentality of the people. The region of Hsining is mountainous. The most terrible yearly scourges, dreaded by the people, are the summer hailstorms devastating their crops. They are supposed to be produced by evil spirits, who must be combatted and subdued. The specific means used by the shamans in order to protect the crops against that scourge will be recorded later.

On the eastern wall is painted the picture of a hail- 756
storm. The pictures in Hsining are more fantastic and 532
in better keeping with the imagination of a Chinese painter than the pictures seen by Father Grootaers. An old, wickedly shrewd Chinese woman with disheveled hair blows wind and storm by means of a pair of bellows. A fat Chinese, elaborately vested, extends his arms, and black, threatening clouds gush effusively out

[33] Grootaers, *op. cit.*, 220. [p.86(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

of his large sleeves—he is the spirit of the clouds. Another corpulent Chinese god pours a torrent of rain out of the urn of the rainbow, which he holds in his hands. A Chinese girl, standing in the sky, flashes two metal mirrors producing terrific lightning. A spirit with athletic appearance, having a couple of long wings attached to his back, clashes a hammer and chisel together with fury, producing thunder. All over the scene big hailstones rattle down on crops and herds of fleeing sheep and cows and people with bleeding faces. Horses, cows, sheep, birds, serpents, and a couple of men lie dead on the ground. In the sky the three famous gods on horseback, with a whole retinue of dragon riders led by the devil, and the judge accompanied by a wolf and tiger, start the pursuit of the evil doers. It is a terrific picture for people who know by experience the havoc wrought on their crops by hailstorms. 756 532

In front of this awful picture on the western wall is displayed the pageant of the victorious return of the gods and their retinue, riding spirited horses, with banners on high, tiger and wolf with mouths and teeth red with blood from devouring the evil doers. The whole procession is proceeding toward the gate of a walled town where an immense crowd, on bended knees, waits to thank and congratulate the gods.

These two pictures are never lacking, either in the temples of the dragon gods of Ho-hu, Hsüan-T'an, or in those of the goddesses of children. This fact is really significant and reveals the people's dread of hailstorms.

The God of the Five Roads with his associates, over whom he seems to preside, is supposed to be a protector against hailstorms, so much dreaded by the people.

All these cumulative facts prove without question that the Monguor shamans have adopted the gods of Taoism and honor them. [177]

SHAMANS AND THEIR OWN TWELVE TENGRIS

The problem of the spirits honored by the shamans is not exhausted by the cult of the god of the Five Roads and his associates, since they still honor their own old spirits, calling them, "Our Twelve good Tengris, the most potent among the spirits." The young shamans are dedicated to the Twelve Tengris and not the god of the Five Roads. Moreover, the shamans honor at home the Twelve Tengris and not the god of the Five Roads. 756 776 532

Who are the Tengris? Most of the pictures I saw were very primitive and painted by shamans themselves; those painted by Chinese artists were better. The pictures represented four rows of three Chinese warriors riding horses and wearing bow and quiver; a man on foot, with bow and quiver, accompanied each of the soldiers. In the center of the picture there was painted a man, not a warrior, bigger in size than the others, dressed in black, with a black face and beard, riding a white tiger and holding in his hand a knotty staff. I was curious about them, and was told that the black tiger rider was the chieftain, the leader of the

[p.86(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

group, and also, that on old images painted before the Moslem rebellion, the twelve warriors and their servants were represented as Mongols, and not Chinese, and further, that a couple of modern shamans recently added to their pictures of the warriors, three Chinese girls riding on horseback, whom they called the "three small grandmothers," the *San Hsiao Niang Niang*. 756 776 532

The conviction existing among the Monguor shamans that the Twelve Tengris are their original and proper spirits is too general and too definite, and the behavior of the shamans toward them is too significant to be simply ignored or explained away. Further, the Monguors and the shamans know very well that shamans are not Taoist priests, and for that reason they call them *Bö* or *Fa shih*, "Masters of Magic," and not *Tao-shih*, "Masters of Tao," and they know very well that the rites performed by the shamans are not the same as those performed by Taoist priests in the country. Therefore, a rational explanation should exist.

CULT OF THE TWELVE TENGRIS TRACED

In the last month of the year the houses had to be cleansed and purified of all kinds of evil influences and spirits. At the palace of the prince a group of young boys, frightening and cursing the evil spirits hidden in the rooms, cried out that the "12 spirits" were on the way to hunt down and annihilate them; a group of 12 men, disguised as animals, led by the official exorcist (*Fang hsiang*) started pursuing the evil spirits.[33] 756 776 796

The eleventh on the list of the pursuing spirits was the "tiger," who was reputed the fiercest destroyer of all producers of calamities. Tigers are supposed to be the fiercest enemies of evil spirits . . . the tiger was the first dancer among the 12 performers of the rite.[34]

The tiger was the white tiger.[35]

[34] Marcel Granet, *Danses et légendes de la Chine antique*, 319, 299–320, Paris, Alcan, 1926.

[35] *Ibid.*, 306. Ch. de Harlez, *Le livre des esprits et des immortels*, 176, Bruxelles, F. Hayez, 1893: "The nature of the white tiger, according to the *Shen-hsien t'ung chien* (18th century) seems to be at least ambiguous . . . the tiger is the strongest expression of the *Yang* principle (principle of power); the tiger lives 1,000 years and becomes white only after 500 years; its claws and the powder obtained by the burning of its skin are the most powerful; the thunder is its voice, talismans; or is produced by the noise of walking heavenly tigers. . . . In the regions of the west, at Fung lung, lived a white tiger accustomed to drinking human blood; every year the people offered a human sacrifice to it in order that it might desist from killing men. Chang Tao-ling (patron of the Taoists) ordered it to desist from this practice; the tiger left the country and disappeared forever. . . ."

Owen Lattimore, The gold tribe 'Fishkin Tatars' of the lower Sungari, *Memoirs Amer. Anthropol. Assoc.* 40: 62, 1933: " . . . spirits like the bear, and especially the tiger, seem to be extremely rare as familiars (of the shamans), though they appear sometimes as enemies in the course of 'great spirit' ceremonies . . . I have heard only once of a shaman who apparently had a tiger familiar; he was regarded as a person much to be dreaded." "Shamans rely on animal spirits, the eagle, sturgeon, weasel, the *ulki* (an animal of the squirrel family), and otter appear to be the commonest familiars [of the shamans]."

[p.87(A)]

On the doors, on New Year's, was pasted the image of the tiger.[36] 756 776

These texts excerpted from the book *Lün heng* written by Wang Ch'ung, who died in A.D. 80–100, record rites practiced during the centuries before our era, and reveal that the twelve spirits were supposed the most powerful in the matter of driving out evil spirits, and that among the twelve, the White Tiger was paramount. 796

The cult of the twelve spirits led by their chieftan (Fang hsiang) combatting evil spirits seems to have been very popular in China. It was very tenacious, for it was still performed during the Liao dynasty, A.D. 907–1125. Wittfogel and Feng note: " . . . at the end of the year, 12 shamans, led by a great 'Wu,' sang, shouted, rang bells, and walked (or danced) around the tents with arrows in their hands, fighting off the spirits. Then they retreated to special tents for seven days." [37]

The cult of the twelve spirits of the Monguor shamans seems to be related to the old cult of the twelve spirits in the disguise of animals, among which the White Tiger was paramount, the whole group being led by a chieftain, the Fang hsiang. Although in their pictures twelve warriors are represented plus the black rider on a white tiger, they always call the picture "the picture of the Twelve Tengris," and not the picture of thirteen spirits, or the picture of the White Tiger. They assert that they are the servants of the twelve spirits, their apprentices are dedicated to the twelve spirits, and the Monguors who honor the picture at home as a protector of the family, always call it, "The picture of the Twelve Tengris." They no longer know that the twelve warriors represented, in old times, twelve spirits in the disguise of animals, among which the White Tiger was paramount. However, all these facts seem to evidence that it is deeply ingrained in their consciousness that they honor Twelve Tengris, and no more, which are the enemies and destroyers of evil spirits. What is really astonishing is that, notwithstanding that the origin of the cult is completely lost, they continue to paint twelve warriors, and to put in the center of the picture a big white tiger mounted by a rider holding, not weapons, but a knotty staff in his hand. In this way the prominent role played in old times by the white tiger seems to be conserved, for a tiger occupies the center of the picture. What is even 756 776 [532]

W. Heissig, Schamanen im Kürye-Banner, *Folklore Studies* 3: 1: 44, Peking, 1944. The shaman in the Kürye-Banner wears an apron during the performances, representing the skin of a brown spotted tiger.

more astonishing is that the most potent rite performed 756
by the shamans against hail is called, all over the coun- 776
try, the Rite of the White Tiger, and that inside the mound built at that time is buried the effigy of the White Tiger with the black rider. Even today they still call the black rider the leader of the whole group, but nobody is able to explain why he is represented with a coat of black paint.

The three essential elements of the old cult are still represented in the picture, the twelve warriors representing the animals, the White Tiger being the most prominent, and the leader being the Fang hsiang of olden times.

Still another conclusion is to be drawn from the tradition that in former times, before the revolts of the Moslems, the twelve warriors were represented as Mongol warriors, and the fact that the twelve warriors are called *Tengris*, the Mongol term for a "heavenly being," and not *shen*, the Chinese term for a "spirit," notwithstanding that they call the other spirits by the Chinese name. Therefore, it seems obvious that the ancestors of the Monguor shamans must have belonged to the groups of Mongols who were settled in the country of Huang-chung by the Yüan dynasty, and that they came to Hsining bringing with them their Tengris from Mongolia. Monguor shamans seem to be of barbarian rather than Chinese stock.

Still another problem remains unsolved. The Mon- 756
guors are a fusion of two important groups, Mongols 184
and Shat'o Turks. We seem to be able to detect the [174]
share of the shamans of the Mongol group in the shamanism of the Monguors, but what has been the share of the Shat'o group? To be sure, the Shat'o were as shamanist as the other Turkish groups of Asia. Did they practice the cult of the Twelve Tengris before they settled in the country in 939? What kind of shamanism did they practice? It would be very interesting to know something about the cult of the Twelve Tengris and the role of the White Tiger among them in former times, but no data are available concerning their shamanism and at present the shamanist practices in the different groups of Monguors seem to be all the same.

We only know that the Shat'o who founded the dynasties of Hou T'ang and Hou Chin, like most of the Turkish tribes in Central Asia, honored the old Turkish "God of Heaven." After their conquest of North China the Hou Chin emperor, in 927, made offerings at the winter equinox, outside the city, to the "Barbarian God" at the hill of the White Marshal. When the emperor died, two of his best horses were sacrificed on the Western Mountain. The horse was the most important offering among all the Turkish tribes. Sacrifices were made on the tops of mountains. They liked to worship mountains. The Shat'o liked to visit the Buddhist caves of Lungmen. It is well known that the Turks had a cave myth and that with it was connected a cave

[p.88(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

cult—but in spite of these scanty facts our problem remains unsolved.[38] 756 184

MONGUOR SHAMANS—WU OF OLD CHINA—SHAMANS OF CENTRAL ASIA

The leader of the twelve spirits is, according to the texts, the Fang hsiang, an exorcist belonging to the class of sorcerers who were specialists in the art of neutralizing all kinds of harmful influences and used by the princes for that purpose.[39] "This group, called *Wu*, was an old priesthood of China, spontaneously produced by the animistic religion . . . it still bore supreme sway in the former Han dynasty" (202 B.C.–A.D. 8).[40] The Wu included the kinds of male and female shamans that are encountered all over Asia (Wu are recorded among the Hsiung-nu in 91 B.C.).[41] They were proficient in exorcising spirits of evil and illness, calling down gods and human spirits, going into trances and being possessed, telling the future.[42] Later the Wu were recognized by the official priesthood, who used them in their official ceremonies for calling down spirits and regulating the seats of the gods at sacrifices.[43] 756

In the *Chou-li*, 1122–256 B.C., are recorded the duties performed at court by these *Wu* scorcerers many centuries before our era, in summoning good spirits in order to drive out evil ones.[44]

Wittfogel and Feng write:

> In our translation we have called the *wu*, shamans. This term is generally used to designate the religious functionaries of Inner and Northern Asia, whose status does not depend upon an officially institutionalized position but is derived from power received "directly from the spirits as a gift or grant." In Asia two types of shamans may be distinguished—the arctic and subarctic. The latter exhibit less ecstasy and only rarely have recourse to frenzy or trance in the performance of their magic and prayers. Among the Ch'i-tan, as among most Altaic peoples, shamanism was definitely "subarctic" and possession was more the exception than the rule.[45]

The Wu in China up to the present time act in the same way, using bells, drums, swords, scepter, whip, dagger, dancing, and the calling down of spirits.[46] At present they are called *Shih-kung* (masters). They represent themselves publicly as priests of Taoism.[47] Chinese law considers them as belonging to the wide class of secular Taoist priests.[48] The capacity of be- [171]

coming Shih-kung can hardly be obtained except by in- 756
heritance, from a line of able priestly ancestors. They adopt no pupil who is not the son of a colleague,[49] and they use Taoist gods for their own purpose.[50]

CULT OF THE TWELVE TENGRIS SPECIFICALLY SHAMANIST

The Monguor shamans seem to belong to the Altaic classification. The traditions concerning the antiquity of the cult of the Twelve Tengris and the preference of the Monguor shamans for the cult are not to be overlooked. An obvious reason for this preference may be found in the fact that the range of activities of the Tengris is more far reaching than that of the Wu tao shen, the god of the Five Roads, because the Tengris combat all kinds of evil spirits while the god of the Five Roads and his associates combat only the hail spirits.

However, the basic reason for the preference among 774
the shamans for the cult of the Twelve Tengris is 756
deeply rooted in the peculiar philosophy of shamanism as it exists in Asia. According to Dioszegi, there existed

> two notions, from the time Shamanism was still in formation, concerning the combats of the shamans with evil spirits: the first assumes that the shaman himself, having taken the shape of an animal, is engaged in the struggle; the second, that the guardian spirit of the shaman, having taken the shape of an animal, waged war.[51]

The Tungus tell of two shamans who changed themselves into bear and tiger, fighting in the presence of the people, and of shamans who assume one of the animal spirit forms to travel a long way.[52] Concerning this philosophy Shirokogoroff notes:

> . . . the group of spirits associated, at least by name, with animals is very numerous . . . by the Northern Tungus these are not considered as animals but manifestations assumed by the spirits; there are the tiger, bear, wolf, fox, snake, dragon, deer, roe-deer, dog, horse, carp, cuckoos, falcons, hawks, eagle, etc.[53]

The old specific shamanist concept concerning animal-like beings (spirits) waging war with evil spirits lies at the base of the Tengris cult. It was realized in the rite of the twelve animal spirits who, long before our era, drove the evil spirits out of the palace of the prince.

This peculiar old philosophy must have caused the ancestors of our Monguor shamans to choose for themselves the cult of the Twelve Tengris and to dedicate themselves to these animal-like Tengris. Today the Monguor shamans unconsciously continue to perform the same dedication and to practice the same cult. The

philosophy, therefore, explains the Rite of the White Tiger performed today by the Monguor shamans against hail, and the same principle (as we will see later) is applied in the rite of the "goat skin" and of the "wooden raven" against hail. The same philosophy is encountered in the facts previously related by Owen Lattimore among the Fishkin Tatars, by W. Heissig in the Kürye-Banner, and by Shirokogoroff among the Tungus. In all the studies concerning shamanism in Asia this philosophy is attested.[54]

774
756
[171]

Therein lies the reason why the Monguor shamans practice the cult of the Twelve Tengris and why it must be said that the Monguor shamans are genuine shamans, belonging to the Altaic classification. No hints are available to suggest that the Twelve Tengris were not the initial spirits to which the ancestor of the Monguor shaman dedicated himself, and we have no hints to fix the time when their ancestor shaman lived. It may only be assumed that the Monguor shamans already served the Tengris at the time of the Yüan dynasty when they settled in Kansu, because their Tengris at that time were represented as Mongol warriors and because the shamans in Mongolia practiced for centuries the subarctic form of shamanism.

MONGUOR SHAMANS ENTER THE TAOIST GUILD

It is a well-known fact that among the

771

> South Mongolian tribes of the Ordos, Tümed and Chahar regions as well as among the North Mongolian Khalkha . . . Shamanism and other "unorthodox creeds" had since been "outlawed" by the code of the Jassaktu Khan, by the religious proclamation of Altan Khan (1577) and the corresponding decree of the Siditü Gabcu in Khalkha (1587), [but that] certain undercurrents of a popular Chinese Taoist mysticism, known there under the name of *Bon-po* (Bö), had continued for some while, but at the death of Ligdan Khan (1634) the Yellow Sect was well established in these parts of Mongolia.[55]

"Outlawed" does not mean that these "unorthodox creeds," these Bon-po, etc., disappeared because of codes, proclamations, and decrees, for their existence is still attested; but they were persecuted or their activities were restrained.

The Red Sect, patronized by Mongol and Ming emperors and Mongol chiefs, fought a fierce battle against shamanism and Bön. The Yellow Sect fought against the Red Sects from 1558; to these former edicts may be added that of 1640, which had stipulations concerning the suppression of shamanism. "Forty-eight princes and chiefs of Mongol tribes convened in order to fix the so-called 'Mongol-Oirat regulations.'" Among them were Mongol princes of Khalkha, Jungaria, Kukunor (near Hsining) as well as of Siberia, and later two

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

more supplementary decrees of Galdan Hun-tai-ji were added to them.[56] 771 628

From 1558 until 1640, regulations of Mongol chiefs followed each other, aiming primarily at the destruction of shamanism. The Monguor shamans must have known these facts, for news spreads rapidly among barbarians. At the same time they saw the favors bestowed in the country on lamaseries, Karwas, and Nang-suos, by the Ming and Ch'ing dynasties, and they saw Erh-ku-lung, at the height of its glory, founding successively its forty-two branches, each having celebrated lamas. Life or death was the question for the Monguor shamans of Hsining. 756 175 795 575

It is tempting to suppose that the shamans, living in the quasi-independent territories of the T'u-ssu, near cities in which lived Taoist priests who were organized in guilds officially recognized by the empire, might have sought refuge with the Taoists in order to save their institution and traditions and that they might willingly have entered the guild of the Taoists, whose gods they worshipped for centuries.

If the shamans themselves had been opposed to enrollment in the guild, which entailed pecuniary disadvantages for them and the performance of non-remunerative rites in the city, surely the T'u-ssu, whose subjects they were, could easily have prevented the infringement of the rights, since their Monguors were only responsible to them for corvées, and since their subjects were not enrolled in Chinese guilds. Precisely herein lies the stress of the assumption that without the willing cooperation of the shamans, shamans never could have entered the guild, and when they entered the guild it was through fear of persecution by the Yellow Sect. According to this assumption, the shamans could have entered the Taoist guilds before the revolt of the lamas in 1723 and the catastrophe which befell Lamaism. It is easy, therefore, to understand the reluctance of the shamans to perform any rites in the temples dedicated to deities of Lamaism or to wear the crown of the five Dhyani. On the other hand they willingly perform rites in all kinds of Taoist temples, except the temples of Kuan-ti (God of War). I never obtained an explanation of this; in the whole Monguor region no Kuan-ti temple exists, while all the temples of the Monguors, which are the centers of the religious life of the village, are Taoist temples, and most of the protectors of the families belong to Taoism. Monguors cannot miss their shamans who only perform rites in Taoist temples.

CONCLUSION

The conclusion of this chapter seems to be that the Monguor shamans honor two kinds of spirits—one, spirits belonging to Taoism, and the other, spirits belonging to their shamanism proper; that the Monguor shamans are related to the group of old Wu priests 756 [776]

[56] V. A. Riasanovski, *Customary law of the Mongol tribes (Mongols, Buriats, Kalmuks)*, 29–35, 1929. [A 90(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

existing in China from the dawn of history, who are 756
considered akin with the shamans of Central Asia; that the Monguor shamans probably entered the guild of the Taoist priests before the catastrophe which befell Lamaism in 1723 in order to save their institution, but that they still harbor the conviction that they are genuine shamans and not Taoist priests. The fact that during the performance of their rites they act as shamans, and not as Taoist priests, will give evidence for this assumption.

VII. THE KURTAIN

THE TYPE OF THE KURTAIN

Among the Monguors there is encountered still another type of possessed man whom they call a *Kurtain* (Tibetan, *Skurgdien*), and whom the Chinese call *Fa-la-shih* or *Ku-wai-tien*. He is found most frequently in genuine Monguor families, and plays an important role in the religious life of the Monguors.

A farmer, shepherd, or laborer—anybody, old or young, poor or rich, even a lama may become a Kurtain but well-to-do or rich men seldom do so. Several times I was told, by old Monguors, that in former times in San-ch'uan a woman subject of the Li T'u-ssu discharged that duty.

A Kurtain is a man who, all of a sudden, is seen to 756
be possessed by some spirit. It happens most often at 757
the time of a terrific storm, when he is helping combat the hail spirits, or at the feast in the spring when he sees a possessed shaman worked into a frenzy, or at night while attending the awful ceremonies which are performed to appease the avenging spirit of a suicide. Suddenly he starts speaking indistinctly, nervously gesticulating with his arms and hands, acting in an unusual way. Arriving at the temple supported and led by his companions, he declares himself to be possessed by so-and-so, a spirit who compels him to be his disciple. Such Kurtains, the Monguors told me, are usually the genuinely possessed. They always added, however, that they suspected the authenticity of Kurtains who become possessed by dint of weeks and weeks of exacting exercises in which they study how to imitate the behavior and trances of old Kurtains.

The "Kurtainship" is never inherited in the family. 756
The possessed is singled out by the spirit himself to be his disciple, and after his death, the spirit chooses another disciple in another family. Thus, no duty is imposed on the family to continue providing a successor to the Kurtain, and the honoring of this spirit. Kurtains are not like the shamans described above, whose families are bound to continue the service of the Twelve Tengris accepted by their ancestors. Shaman boys must receive a training by their masters in order to learn how to become possessed. Upon the genuine Kurtain, however, the possession is forced unexpectedly and then

[p. 90(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

for the first time the Kurtain starts an exacting training 756
which lasts for several weeks. This consists of dancing, vaulting, fencing practices, for he has to be in top trim in order to appear on the stage. He must discipline himself to the rules of a possessed man, in order to acquire the required disposition favorable to ulterior possession by his spirit.

It is customary for spirits to have only one disciple in the village. When he dies another appears, usually after a short time, but occasionally even after a long time, to discharge the duty. When a Kurtain grows old, his spirit abandons him and chooses a younger man to take his place. Kurtains, according to the Monguors, are very often really savage and violent when they are in the full bloom of their youth. The people are more scared of them than of shamans. Later, as they grow older, they become more moderate and calm. The genuine Kurtains, according to the Monguors, have their nerves easily excited. They do not look straight at the interlocutor, shun the company of men, and are rather fond of not talking. I got the same impression. Monguors do not trust much those who brag and boast about their prodigious achievements. It is also said that many Kurtains have their nerves on edge and feel excited and anxious between the fifteenth and the twentieth of the month. They feel hysterical and terrified at the time of storms.

BY WHAT SPIRITS ARE KURTAINS POSSESSED?

The Kurtains, who are not very numerous, are said 756
to be mostly possessed by spirits of Taoism, never by 776
the Twelve Tengris of the shamans or by the Heavenly Spirit. It has already been said that many temples of the villages are dedicated to the "Wu-tao-shen," some to the dragon spirit, others to the spirit of horses, or the spirit of cows; a few to Ho-hu and to the Mother goddess, to the god of Riches and Wealth, but in all those temples there is always in evidence a nice sedan chair where the statue of the Mother goddess or the dragon god or Wu-tao is enthroned. The reason is that it is customary to have a sedan chair in each village to be carried in the processions. Most of the Monguors honor at home the picture of the same Taoist spirits, although some honor Lamaistic deities. It has been noted above that in a few villages there is also a Buddhist temple apart from the temple of the village, but these temples are never the center of the religious life of the village. No wonder that most of the Kurtains claim to be the disciples of Taoist spirits. A few Kurtains claim to be possessed by deities of Lamaism.

AUTHORIZATION OF TESTS OF THE KURTAINS

The Monguors, having found themselves tricked 756
many times, harbor a guarded and skeptical mood, and 571
distrust new Kurtains. Since they suspect the au-

[p.91(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

thenticity of their possession, the Kurtain has to provide 756
evidence of being possessed, which has to be tested and 571
checked by qualified men, before they can enjoy the benefit of a "diploma" showing their credentials. Not only the Monguors but the lamas ask for a serious test.

If the Kurtain claims to be possessed by a Lamaist 756
deity whose incarnation is living at the lamasery, the 787
test is provided by this Living Buddha himself, who 571
is the best qualified man for the examination. If there is no such incarnation at the lamasery, the Kurtain has to invite the Living Buddha, or a Fa-t'ai, to offer him a gift, and implore him to make the test. In case the Kurtain claims to be possessed by a spirit of Taoism, the chiefs of the village urge him to pass the test before a Living Buddha anyhow, for only the Living Buddhas are supposed to possess the required yardsticks *ad hoc*. Old Kurtains cannot test the authenticity of new Kurtains. In the event the Kurtain declares himself to be possessed by a deity of Lamaism, the community of the village defrays the expenses required for the test. If he declares himself to be possessed by a spirit of Taoism he has to defray the expenses himself.

The test of a Kurtain possessed by a Taoist spirit is 756
carried out as follows: the Living Buddha, who sits on 787
his throne under the porch of the main temple with all the lamas, while the temple yard is packed to capacity with a curious and interested crowd, orders the Kurtain to sit beneath the steps.

The Kurtain wears the usual gown worn by the Monguors (seldom a red one) bound round the waist with a sash of red cloth. On a piece of red cloth, covering his head, is fixed a small copper mirror, shining on his forehead; a large red ribbon encircles his head, on which are sewn a lot of small bells. If he happens to be possessed by the spirit Wu tao shen, the spirit of the five roads, he wears a crown of that spirit. Over a large "cloud collar,"[1] which comes down over his shoulders, passes a red rope to which is attached a bigger copper mirror adorned by red, yellow, green, and blue ribbons or *khata*, dangling on his chest. On his back are sewn a couple of red and green handkerchiefs.

He sits erect on a low Chinese table, his legs always [516]
sprawled apart, imitating the exact posture of the god of the Five Roads, even though he may be possessed by the dragon god. The representation of this Chinese warrior, his theatrical attitude seen everywhere in all the temples, must have impressed the Monguors to a very large extent. On the knees of the Kurtain is

[1] This collar seems to hint at a part of the garments worn by the old Mongol princes "Ils (les princes) ont encore une autre forme (l'habit): un collet nommé 'Jaqa' sur les épaules et sur le dos, et qui finit des deux cotés en pointe aigue; il ressemble à un echiquier. Ce bord pend sur les deux épaules. Il est toujours fait en brocart ou en peau de zibeline." H. Serruys, *Pei-lou fong-sou*, Les coûtumes des esclaves septentrionaux, *Monumenta Serica* **10**: 145, 1945. For the "cloud collar" (*Yün-chien*), see S. Cammann, The symbolism of the cloud collar motif, *Art Bull.*, March, 1951.

[p. 91 (B)]

placed a sword, and near him a dagger and a long whip. 756
He never uses the drum, which is the specific tool of 787
the shamans.

Shamans, Kurtains, and all kinds of people possessed by good spirits, are everywhere accustomed to assuming the duty of defending their customers against evil spirits. They are fighters and protectors and therefore use all the weapons befitting the job. The Kurtain, in his theatrical attitude, is most aggressive; in his acts he is violent and savage. Shamans, however, by means of their elegant dances, first try to soothe the ruffled feathers of the malignant spirits and to make their spirit protectors feel well disposed.

A fire of cypress twigs is lit before the Kurtain, who prays some version of Om Mani or the *swork'a* prayer of his spirit protector, inviting him to descend into him, while the lamas beat the drums. The Kurtain becomes excited and starts shaking his head, causing the small bells attached to his headdress to ring, making sounds like the bells on the bridle of a running horse. He shakes them more and more furiously, for a long time, becoming more and more excited, and is supposed to be possessed. The shaking of the head is the specific behavior of the Kurtain; hence the Chinese all over the country call him the "head shaking Kurtain"—*Yao t'eou fa-la-shih*. Then the Living Buddha starts asking him about the danger of hailstorms in the next summer, about the next harvest, the peace in the country, in the village, in the lamasery. Then, jumping up on his feet, he does a really furious dance. Bounding savagely, he works himself into a frenzy and starts playing with his sword, cutting and fencing against imagined spirits. He grabs the whip and beats it against the ground with deafening blows. Chasing and pursuing spirits, he jumps in all directions pretending to pierce with his dagger one enemy after another. Finally, dripping with sweat, having used all his weapons, one after another, he is ordered by the Living Buddha to sit down and keep quiet.

Then the Living Buddha asks him of whose spirit he is the disciple, and asks for explanations and the history of his spirit. In the event that the answers satisfy the Buddha and the dances are in conformity with the choreographic rules, the Buddha puts a *khatag* around his neck and declares that he is the genuine disciple of so-and-so (a spirit). Holding in his hands some ropes of cloth, dyed red, he blows on them several times, as Living Buddhas do when they bestow special blessings. He ties them around the neck of the dancer, takes a handful of barley and throws it on him, saying: "Spirit so-and-so is truly your spirit, act accordingly in order to honor him." The Kurtain is then declared officially to be the accredited disciple of the spirit, and all the evidence seems to substantiate the fact of his possession. Having succeeded in the test, the esteem of the people follows the Kurtain in the wake of his achievement. His prestige is enhanced, and surrounded with an aura of success; he will start a new career.

[p.92 (A)]

However, if he does not satisfy the requirements, and 756
does not acquit himself creditably, if his answers are 787
wrong and his dances inadequate and inelegant, he fails abjectly. The angry Buddha, rebuking and snubbing him, pulls off one of his boots and throws it contemptuously and disdainfully at the head of the Kurtain, upbraiding his impudent audacity, saying: "You are not possessed by a spirit, but by an ox, go on." All hopes of the candidate are dashed forever; the trust of the people in him is uprooted. He goes away discomfited, dishonorably evicted, and the possession is finished. The Kurtain cannot withstand the verdict of a Buddha who blocks his way. Twice I attended such a test, once at the monastery of T'ien-t'ang and once at Ch'ie-bzan. I inquired about the fantastic tales current all over the country, concerning the fact that the authenticity of the Kurtains can be tested by making them lick white-hot iron, pierce their chest with a sword, walk and sit on thorns. Always the answers were that in olden times when the Kurtains were more potent, they could stand such tests, but the present Kurtains are not made of the same stuff as in olden times, and therefore these tests can no longer be made.

TESTS OF THE KURTAINS POSSESSED BY A LAMAIST DEITY

The Kurtains possessed by Lamaist deities seem to have possessions of a lower grade. The Kurtain of Seerkok was said to be possessed by the deity Kortong (?) whose incarnation was one of the minor Living Buddhas staying at the monastery. The Kurtain of Erh-ku-lung was possessed by the minor deity Nie-bturk bzan whose incarnation, of second or third rank, was living at the monastery. The pictures of both deities, which I saw at the Karwa of these incarnations, represented the familiar type of the hundreds of Buddhas quietly sitting crosslegged absorbed in meditation, but the men they possessed were none the less furious Kurtains. Learned lamas did not have any knowledge of Kurtains possessed by the so-called guardians of the faith, which are pictured as terrible, cruel warriors. They asserted that all the possessions were manifestations of minor deities, and they could not easily explain how furious Kurtains were possessed by peaceful deities. Concerning the question of the possession of a lama by a Lamaist deity, they deemed it possible, but did not remember such cases in the country.

I never had the opportunity to attend a test ceremony for the kind of Kurtains possessed by Lamaist deities, but the information acquired from Living Buddhas, [115]
lamas, and laymen, seemed to show that little difference existed between the tests of both kinds of Kurtains. The subjects, their avocation, and training are similar, as well as the theatrical performance in the court of the main temple. The Kurtain is attired in the same way and uses the same weapons in the same way, but he must wear on his head the crown of the five Dhyana

[p. 92 (B)]

Buddhas. The special *swork'a* or prayer honoring his deity is read by the lamas, and the Kurtain is proclaimed to be a genuinely possessed man. Then he is ordered to memorize his *swork'a* and to recite it before each performance, it being an invitation to his deity to descend into him. 756 787

Then follow the usual recommendations given to all Kurtains about continence on the day of a performance, not to act when his wife is giving birth and at mourning time, not to indulge in wine, to keep his weapons (sword, whip, and dagger) in a decent place and not to use them for other purposes; to give a performance at the monastery at the annual pageant time and in the families where his deity is specially honored, and always stress is put on the obligation to be loyal, honest, and dependable, so as not to cast a blight on the institution. Every time I heard this last recommendation, I remembered what the Monguors had said so many times, that among the Kurtains more dubious fellows are encountered than among the shamans, and for that reason the shamans are invited more by them than the Kurtains. They always added the story of the famous Kurtain of Toolong, which was seared in their mind. It seems really typical and sheds an unfavorable light on the institution. [844]

Many years ago, the Kurtain of Toolong used to predict whether there would be outbreaks of arson in autumn when the crops were heaped upon the threshing floor. In this way he earned a pretty good living, because the crops of the people who had invited him for the performance of his rites were preserved and those of the incredulous people were burned at night. The whole country was really disturbed. However, suspicions arose and the arsonist was taken redhanded one night. He turned out to be the old father of the Kurtain. The chief and the elders of the village hung the old man by his thumbs from a tree and he received a well-deserved lashing to make him reveal the instigator of the arson. Reeling with dizziness and pain, welts and bruises all over his body, the father accused his son, and the Kurtain was hung up and tortured. The infuriated villagers came within a hair of killing him. His mandate of disciple of the spirit was gone forever. Such events are very prejudicial to the Kurtains. They cast a blemish on their group and are commented on all over the country for years, and so the saying goes that there are few good genuine Kurtains, and for that reason all have to be tested.[2] 756 685 [627]

Some of the Kurtains not only upset the villagers once in a while, but even land the monasteries in serious trouble. A fact well known in the country runs, that on the fifteenth of the first moon in 1914, the lamas of the important lamasery of Seerkok invited their Kurtain, possessed by the deity Kortong, to the ceremony carried out in honor of the deity, with great pomp and display. 756 579

[2] DeGroot, *op. cit.*, 1238, notes a similar case of a *Wu* arsonist.

[p.93(A)]

The feast is celebrated all over the country. The 756
Kurtain is dressed by the lamas in a splendid, long green 579
gown with large sleeves, cut according to the style of the gown worn by Taoist priests. On his back are fixed a couple of small flags, and on his head he wears a helmet. He wears a sword, and holds in his hands a bow and three arrows. He is costumed like the warriors often seen in the theatrical exhibitions performed by Chinese actors.

The Living Buddha Kortong, incarnation of the deity, opened the pageant in the main temple, sitting on his throne presiding over the ceremony. The lamas, cross-legged, sat in a circle in the temple. The Kurtain sat on his low Chinese table in the center of the gathering of the monks with his legs sprawled wide apart. The throng crowded into the forecourt, following the display by looking through the open doors of the temple. The lamas started singing in unison the *swork'a*, and the Kurtain shook his head, ringing his small bells. Becoming excited, he danced his furious dance, worked himself into a frenzy, and played with his sword, whip, and dagger. Then he ran out of the temple, shot three arrows in the air, drank a draught of ox blood out of a bucket and spat it on some handfuls of barley which he threw in the direction of the audience, who tried to catch them in the skirts of their gowns. These grains are supposed to cure all kinds of illness and procure [342] fertility for the women. However, the grains once they fall on the ground lose their magical efficacy.

Then followed the customary questions. The Kurtain all of a sudden again became so mad and wild as to unsheath his sword, and killed an employee of the tribunal of the subprefecture of Ta-t'ung, who was attending the show. The Kurtain fled after his savage exploit and disappeared. The lamasery was saddled with the trouble and had to pay a very substantial indemnity. This fact, well known all over the country, is always recalled when Monguors talk about the violence and ferocity of the possessed Kurtains. It is no wonder that, during the exhibitions of Kurtains in the village temples, some people are often frightened out of their wits, take to their heels in panic, and leave the temple.

It happens more often that the Kurtain troubles the 756
feast of the spring, performed by shamans in the village. 578
At the moment when the people are devoutly and happily listening to the prophesies of the shamans, concerning the auspicious prospects for the harvest, a Kurtain arises and furiously asserts that his spirit has revealed to him that terrible hailstorms will destroy the crops of the village. In the southern valley, in the village called "the Eleventh House of the Li T'u-ssu," in 1914, a serious fight started between the shamans and the Kurtain, who was carried away unconscious. The Kurtain brought suit against the shamans at the Chinese court. The prefect delegated the guild of the Taoist priests to settle this matter between religious people.

[p. 93 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

The Kurtain was obliged to apologize to the shamans, 756
offering a sheep, and also had to offer a sheep to the 578
deity who protected the village.

During the exhibitions at Erh-ku-lung, the Kurtain 756
was decked in a splendid, long green gown, belonging 292
to the lamasery and fashioned according to that of the Taoist priests. He wore on his head the mitre of a Living Buddha. He did not wear his helmet or the sword; his appearance was less warrior-like and terrible than that of the Kurtain of Seerkok, although he seemed still to represent the type of Chinese theatrical general, with flags on his back, sitting with open sprawled legs, in spite of having had the Buddhist mitre on his head and the Buddhist staff in his hand when the exhibition started. Furthermore, the ceremonies were the same, with cypress fire, recital of the *swork'a*, drumbeating, head shaking with ringing bells, prophesying, whip, and dagger.

The lamaseries are glad to have a Kurtain, because 756
they enhance the interest at the annual pageant. These 571
yearly exhibitions seem to be the principal job of a Kurtain possessed by a lama deity. Once in a while, however, when troubles occur, when the lamasery is sued at court, he is invited to prophesy the issue of the case, but most of the time the lamas solve their own problems. His position at the lamasery seems to be of a very secondary order, according to what lamas say.

Later there will be described the role the Kurtain plays in the community of the village, and in the private life of the Monguors.

Among the Wu of the present time in China is en- 756
countered a category of possessed men and women who 771
seem to be of the same type as the Monguor Kurtains, who are not admitted into the group of the Wu (as the Kurtains are not admitted into the group of the shamans) because they did not pass the traditional tests of the Wu and did not receive the initiation.[2] It sometimes happens that some of them transfer their business to their sons.[3] Their original possession, their behavior during the possession, are very similar with those of the Kurtains,[4] sitting on a stool before an altar, drowsily staring, yawning, shaking the head, furiously playing with a sword, prophesying and expelling evil spirits.[5] They are called *fa chang*, "Chief of Magic," while the real Wu is called *shih kung*, "Master," or *fa shih*, "Master of magic."

My data, as given above, seem not to tally completely 114
with the very valuable study of F. Dominik Schröder in *Anthropos* **47**: 27–33, 237–248, 1952, but they are based on notes collected among the Monguors, and among lamas who lived over practically the whole region, and may contribute to an understanding of the subject.

VIII. PRACTICAL ASPECTS OF THE RELIGIOUS LIFE OF THE MONGUORS

Having explained the internal structure and organization of Lamaism and shamanism among the Monguors during the period of 1910–1920, and having characterized the ministers of both religions, Living Buddhas, lamas, shamans, and Kurtains, it remains to study in what ways these religions are practiced, and what is the frame of mind of the Monguors toward these religions. 128

After having explained the world of religion and fear in which the Monguors live, first the public rites performed in their society will be dealt with, and then the private rites enacted by them. A chapter will deal with their death and burial customs. Another chapter will deal with the cult of "Heaven and all the Spirits."

The last chapter will put stress on the often overlooked but important role played by religion in helping to preserve the identity of the Monguors, maintaining their traditions and customs, and strengthening the social structure of the clans in order to prevent their absorption by the Chinese.

It should be borne in mind that among the Monguor clans of Hsining, some are of Turkish and some of Mongol origin, but that from the earliest times in Central Asia tribes mixed with tribes; tribes were torn to pieces and scattered over enormous distances, and absorbed by other tribes. On the other hand, it must be remembered that our Monguors, before they were converted to Lamaism, were religious groups who prayed. Among them sacrifices were offered by the heads of the families and of the tribes, and by the shamans. They had previously met peoples practicing Buddhism, Manichaeism, Nestorianism, and also Chinese Taoists, Confucianists, and Buddhists. Even after becoming professing Lamaists, they still remained shamanist, and preserved notions and practices originating from other religious sources. 771

It is a real paradox that Lamaism, contaminated with magic which is diametrically opposed to any religion, denying theoretically the existence of a soul and of God and spirits, has created among its adepts a new enthusiasm of fervor and religiosity. By means of stressing the principle of reversion of merits, it developed the notion of personal responsibility and of duty, by teaching that all good and bad events in this life depend on the performance in the present or former existences of good or bad deeds. Although, according to the fundamental doctrine of Buddhism, the bad acts are irreparable, means are provided to extenuate their inevitable consequences, and even to transfer acquired merits to others, and hence arose the doctrine of universal charity, the alluring physiognomy of Buddhism. 779

However, the Monguors and Tibetans of Huangchung, in a way that is even illogical, do not take account of the philosophical aspects of Lamaism. They do not care for the doctrinal discussions concerning the 829

[p.94(B)]

question of whether a substantial principle underlies the 829
soul or not, or whether *nirvana* could be a state of happiness without there being consciousness of it. They do not care for the philosophers who discuss the existence or the inexistence of this world, of their own being, and even of Buddha himself. They only approach Lamaism from the moral and the practical angles. They endeavor to practice the rites of Lamaism, to heap up merit as prescribed by Lamaism in order to be reborn after this life, which they greatly enjoy, in a paradise of felicity where Buddha, as benevolence incarnate, will make them more and more happy every day, for the duration of time. However, this seems to be only one side of the religious frame of mind of the Lamaist Monguors and Tibetans. The other side seems rooted in the practicality, so often found among uncivilized peoples, which, in order to make more sure of attainment of the religious goal, to enjoy more blessings in this life, and avoid calamities and miseries, leads them to practice shamanist rites and rites belonging to other religions at the same time. This seems to be the complicated frame of mind of the Monguors and Tibetans of Huang-chung who are deeply religious.

Since the objective of this study is the explanation of 114
the religious frame of mind of the Monguors, there will be noted along with the rites the questions ingenuously asked by the children in the schools concerning the topics, the considerations and impressions occasionally expressed by men and women, the dialogues of shamans with the spirits denoting the hopes and the fears of the attendants and their beliefs. All these minute details will help to raise the curtain which shrouds the religious mind.

THE WORLD OF RELIGION AND FEAR IN WHICH THE MONGUORS LIVE

The sense of religiosity is planted in the hearts of the 829
Monguors in early life, in the family circle. Its main 869
feature seems to be fear, rather than love. The children 782
every day see their mothers performing a lot of religious practices in order to avoid the displeasure or punishments of innumerable malignant spirits which beset them everywhere. Their mother's warnings are dinned into their ears, not to do this, not to do that, for fear of being unhappy, because the spirits are very touchy, and a trifle can upset them. In this way the dread and terror of malevolent spirits cut deep furrows in their hearts, and when a hailstorm is about to destroy the crops, the oil lamps on the house altar will be lit in a hurry and the children will fall on their knees invoking Heaven and all the spirits and praying Om Mani, for [789]
as long as the threat lasts. They imitate their elders who implore, on bended knees, and urge the gods with piteous pleas, saying innumerable Om Manis and "Heaven and all the spirits" for the protection of their crops. Children cannot forget to their dying day the

[p.95(A)]

anxious moments of the terrible events caused by evil 829
spirits, which the good spirits could not master. 369

Every day, in the early morning, they climb with 782
their grandfather to the top of the roof, or go into the courtyard before the *manikan*[1] to honor "Heaven and all the spirits," doing the Wei-sang,[2] and looking at the old man who prostrates himself devoutly, they invoke with him "Heaven and all the spirits" and recite Om Mani, in order to get blessings and protection against the alarming evil spirits. When somebody is smitten with a severe disease, they repeat after grandfather, "Heaven and all the spirits" save our mother, save our father, Om Mani, Om Mani. The children know that at home, the altar and the manikan are the most respected items; they know that spirits preside at the gate of the courtyard, at the well, at the stables, and that they protect the cattle. They know at what time and how they are to be honored, and what is to be done to avoid their wrath. The children live at home in an atmosphere of religion and fear, and when they grow up they are convinced that honoring the good spirits is a requisite for the reaping of good crops, the breeding of healthy cattle, the enjoying of the daily bread, and the protection from evil spirits on the prowl to hurt them.

A logical consequence of such a frame of mind is 777
that Monguors never perform any important act with-

[1] In the middle of the courtyard is built a circular manger in which is planted a tall post. On top of the post are often, the Lamaist designs of sun and moon and a circle; a flag is attached to the post printed with Tibetan texts and the "Wind Horse" (Chinese, *Lu-ma;* Tibetan, *rlung-rta*) carrying the jewel symbol (*Norbu*). It is called *manikan,* that is, "the mani post," because the popular "Om Mani" is printed on it.

[2] *Wei-sang* (fdzan garga): *Wei* is a Chinese word meaning "kindle"; *sang* is the Tibetan word *Bsang* meaning "cypress incense." It is the rite performed before sunrise, daily during the first and fourth moon, or only on the first, eighth, or fifteenth of the month, by the heads of Monguor families for "Heaven and all the spirits"; it is also enacted simultaneously with most of the important rites. Some straw is spread in a small oven, a few pinches of pounded cones and leaves of cypress are strewn upon it, and a few pinches of flour, of roasted wheat or spelt, and a few drops of pure water are sprinkled; then all is lit and the odoriferous cypress smoke billows up. It is an "odoriferous offering," not a purifying rite. To these three essential components some devout people like to add a pinch of the six usual pounded spices, dried flowers, red or white sugar, threads of five colors, a little butter or fat; some use wine instead of water, and blow the horn and prostrate themselves three times. Prayers are not said at that time. In performing the "big wei-sang" entire branches of cypress are burned. Lamas are fond of the rite, and even during shamanist rites it is observed. The oven wherein the rite is performed is constructed before the manikan or on the roof of the living room; sometimes it is performed on the edge of the manger. In time of epidemics, etc., the whole family never fails to enact the rite as a group. See also Schröder, Zur Religion der Tujen des Sininggebietes (Kukunor), *Anthropos* 47 (1): 43, 1952; 48: 222, 1953. The famous "Wind Horse" is said by some to bring wealth to the family. Others explain that the horses are offered to the roaming souls in the air (which everybody fears) in order that they might pass unmolested; also Eliade, *op. cit.*, 239–245; also W. Schmidt, *Ursprung* 6: 67.

[p.95(B)]

out having carefully inquired whether it is propitious 777
and whether it is a lucky day for such an action. They invite a lama of the Red or Yellow Sect, a Chinese Taoist priest, a shaman or Kurtain, to consult about the problem. Such information is required for the starting of agricultural activities, the building or repair of houses, the northern side of which would perhaps not be allowed to be repaired this year, and the southern side only next year, in order not to offend the spirits. These consultations have to be held for marriages, funerals, the starting of a journey, gelding of animals, vaccination against smallpox, even for the perforation of the ear lobes of a girl for wearing earrings.

A Monguor never starts a long journey without hav- 784
ing attached to his pigtail some copper coins of the [784]
Yüan dynasty to prevent the breaking of arms or legs in the event the horse should fall.[3] The girth of his saddle and the halter have to be made with white hair of cows or with wool; the girdle of the rider, however, requires black hair, to conform with the demands of the spirit of horses. The horseman never ties his horse to the door of a house, for the spirit of the door will hurt him. After finishing his devotion, in passing by an Obo, the horseman is not allowed to linger on top of the pass lest the spirit of the Obo punish him. If a horseman encounters some fresh water running down the road, or if he meets a woman carrying a bucket of water, these are good omens pointing to the favorable disposition of the spirits toward him.

While walking with the intendant at the lamasery of Seerkok, we met two donkeys carrying water. Immediately I received the congratulations of the intendant for the propitiousness of the spirits toward me, and he recounted the fact to the dignitaries of the monastery. However, when a woman carrying an empty basket sees a rider, she flees at full speed, in order to prevent mischief for the horseman. It is a bad sign to see a snake or hare crossing the road, and the traveler avoids encountering a nuptial procession. In carrying the clothes of a deceased at the monastery, the collar and sleeves of the clothes are put on the saddle in such a way as to hang on the left side; the collar and sleeves of clothes of a living man are hung on the right side lest the rider should die soon. Never say to a horseman that he is riding a poor animal, but congratulate him on his strong horse, for otherwise it is unlucky.

Never walk on a sheet of paper, or put your hat on 777
a book, for Buddha will punish you. Never talk about 784
possible calamities or they will certainly harm you. When a new gate is built to a courtyard, a rich man who has plenty of children and particularly boys, has to be invited to pass through the new gate first, in order

[3] The Ordos Mongol horse breakers never omit attaching to the whip a coin called *Wu chou* in order to prevent dangerous falls. The coin is called the "stirrup coin" because the old character for *Wu* (five) represents two stirrups, the upper parts of which are adjustable. (Communication of Father A. Mostaert.)

[p.96(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

that the family may become rich and be blessed with 777 children. If a beggar happens to go through first, the 784 gate has to be rebuilt. A guest never enters directly the home of a friend, lest he might harm the family. Never prepare a hare or chicken for dinner for a guest, because it would harm him. When two friends, having a long talk at night, see the black top of the lamp wick showing the shape of a flower, they congratulate each other, smiling, for the spirit promises to both a happy event in the family. If a crow caws on the roof, it has to be driven away immediately lest a member of the family die or get sick. A member of the family will certainly die soon if a parson crow (hooded crow) enters the door; a calamity is imminent if a magpie cries in the evening, even if, at night, foxes howl, horses neigh, and dogs bark. If a hen crows trouble will surely start in the family, the harvest will be bad, and maybe the Moslems will rebel.

A bride on her wedding day is not allowed to be put on the horse by a "half man," a widower or bachelor; her makeup is not to be done by a "half woman," a widow or a girl, for fear of becoming soon a "half woman." A person dreaming at night about unlucky events, spits for a long time in order that ominous events will not befall him. Never give things to children which are entire, for example, hold over a bit of the frosting of a cookie. The same rule is observed when something is given to a beggar, for fear the guardian spirit of your wealth, should wreak vengeance and the family be impoverished. When drinking tea or wine, or eating food, always throw a bit of it over your shoulder, or sprinkle a few drops, thereby feeding the hungry souls roaming all over the world, in order not to be harmed by them. Never urinate in a river, or facing the sun or the moon, or at night in front of the manikan. At night never appear completely naked before the manikan, or you will surely be harmed. All the taboos after childbirth and funerals are scrupulously observed.

These few facts give an insight into the mentality of [156] fear prevailing among the Monguors concerning the whole army of malignant spirits which surround them. No wonder that the whole day long they cast horoscopes in order to avoid all possible harm. These few facts will help to understand the world of religion and fear in which the Monguors live and practice their religion.[4]

[4] The very valuable study of F. Johan Frick and F. Franz [113] Eichinger, Tiere in Volksleben, Museum of Oriental Ethnology, *Folklore Studies*, Supplement No. 1. Ethnographische Beitrage aus der Ch'inghai Provinz (China), 125 sq., Charles E. Tuttle Co., Rutland, Vermont, U. S. A. (1925), concerning the region of Huan-Yüan, west of Hsining, inhabited by Tibetans and Chinese, neighbors of the Monguors, provides interesting and minute details related to this special field. Because Tibetans and Chinese are enrolled in the Monguor clans, many of those beliefs and practices are necessarily encountered among the Monguors. The study helps to shed light on the frame of mind and the world of fear in which the Monguors live. Similarly,

[p. 96 (B)]

IX. PUBLIC RITES

RELIGIOUS ACTIVITIES IN REGARD TO HAILSTORMS

In the mind of the Monguors is seared the belief in 782
an incredibly prodigious medley of gods, malignant 731
spirits, and ferocious ghosts, and consequently all events in life, happy or unhappy, must be approached from that angle.

In this chapter will be considered the calamity most [132]
dreaded by the Monguors, which does the most harm and ruins them most frequently. It is the scourge of hailstorms, which every year ruin the crops of many villages, reducing the already narrow margin of subsistence of the villagers to a minimum, and bringing many families to the verge of famine.

It is obvious that this calamity is supposedly caused 821
by malignant spirits and it is no wonder that the whole 829
religious energy of the people is bent on securing all available means and ways to avoid disaster. No wonder that the people, scared to death, seek refuge in religion against a scourge caused by evil spirits—first of all in the religion credited with the greatest potency, without refusing the help of others less potent, imploring the aid of good spirits, and engaging in a life and death struggle with the evil spirits.

In all their village temples, accordingly, one encoun- 782
ters the picture of the god of the Five Roads, the 796
Taoist combatant of hailstorms, amidst the awful 789
scenery, previously described, whether or not the temple is dedicated to it. The shaman is invited to perform his most efficient rites against hail because he is believed the most conspicuous for his great abilities in the field. All the Taoist spirits, to whom temples in the country are dedicated, are invited by the shaman to come down into the temple yard and to participate in the performance of the rite in spring. The shaman conveys to them the sympathy of the villagers and their gracious offer of hospitality, in order that they might help their village, and after the shamanist rites have been performed the villagers still indulge in Lamaist activities against hailstorms.

No wonder that, from New Year's on, the villagers are obsessed by the problem, and never fail where a Kurtain is possessed by the god of the Five Roads, to invite him on the third day of the year for an exhibition

---

the study of F. Franz Eichinger, Kinderlosigkeit und ihre Be- [113]
kampfung in der Volksmedizin, *ibid.* 167 sq., is very instructive and unique. The author, during two years as member of the Chinese Health Committee in Ming-hsien, Lin t'ao, Ho-chou, and Labrang (East Kansu), traveled four months with the committee in the region of Hsining, Kung-ho, Hsing-hai (Monguor territory) and seized the exceptional opportunity to gather ethnological notes, which open vistas in this special field and give a better understanding of the frame of mind of the family concerning this capital topic; the care of children, the means of getting this blessing, the fear of being bereaved of them and the physical causes of this bereavement [p.97(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

attended by the whole community. Then he sits on his 782
low table, in theatrical military attitude, shaking his 796
head and ringing his bells. At the moment his spirit 789
possesses him, the cypress fire is increased. The whole attendance, kneeling, worships the spirit dwelling in him with incense sticks in their hands and prostrations. The chief of the village, on bended knees, asks humbly first of all, for protection against hail in the summer and for a prophecy concerning the peaceful reaping of the harvest. Then the spirit, by means of the Kurtain, promises a peaceful summer, or specifies what kind of rites have to be performed to achieve the benefit of peace.

In villages where there is no Kurtain, the chief of the village, with the elders and a member of each family, orders the statue to be carried in the sedan chair into the temple yard, while the whole audience kneels with incense sticks in their hands; the cypress fire is lit. The chief, kneeling, asks the spirit about the hail scourge. If the sedan chair becomes so heavy as to crush down the carriers, the prognostication seems awful, and the chief proposes to perform such or such a rite; if the sedan chair continues crushing the carriers, a propitiatory sacrifice is promised, the attendance craves for pardon, and the sedan chair is carried into the temple.

In the first days of the New Year, all over the country, the talk runs only on the predictions proferred in neighboring villages about hailstorms. In every family horoscopes are cast several times. It is a real obsession all over the country and nobody seems to be entirely assured, despite the reassuring answers of the spirits, for so many times the hopes have been illusory. Unfavorable predictions seldom mar the spirit of the festivities of the New Year. After New Year's the busy agricultural season begins with the carrying of fertilizer, plowing, and sowing. The fields turn greener and greener every day, and at the beginning of the fourth moon (May), immediately after the spring rites, performed in order to implore good crops, the preparations for the rites against hail are begun.

A month from now, all over the country, on mountains, or on hills, or on hillocks and knolls in the valleys there will be seen here a stretched goat skin, its legs spread out and pierced with daggers, the head erect with a dagger between the horns, impaled on a pole. There, a rudimentary manikin, its outstretched arms made with boughs, holding a bow and an arrow; next to the manikin a wooden hammer and raven all stuck on poles. These are the places where rites have been performed against hail, and inside some of the mounds dwells the spirit protector against hail, the celebrated White Tiger. Every Monguor village and nearly every Chinese village in the country have many such hills. The outlook for the country has become depressing for the Monguors. [p.97(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

RITE OF THE WHITE TIGER

The most important rite against hail is the one called the Rite of the White Tiger, performed by the shaman. Once in a while a Taoist priest and even a Red lama try to enact it. However, the following year a shaman is invited again by the distrustful villagers, for the rite belongs to the black magical art and is more in keeping with the attributions of the shaman. 798 756 [792] 789

It is performed in May, before the time of the hailstorms. The original and complete rite is not enacted every year, but certainly it will never be omitted the year after the crops have been destroyed. If a year passes peacefully, then the following year only a supplementary rite will be enacted, strengthening the original one. If for many years the crops have been preserved, the original rite will nevertheless be performed again, for fear the original magical power may have faded.

It will be noted that the shaman deposited, in the temple under the bushel, the bottle he used for capturing a human soul with which he nurtured the spirits. The seventh day after the performance of the spring rites, the chief of the village and the elders go to the temple to take the bottle and bushel away, and they ring the temple bell. A member of each family arrives carrying incense sticks; the sedan chair, with the statue inside, is moved into the middle of the courtyard of the temple. All those present, holding incense sticks, kneel before the sedan chair, and the chief of the village asks the god whether it is certain the crops will be reaped peacefully, and whether the hail will be certain not to play havoc. Despite the formal promises of the shaman seven days ago, suspicions are still harbored. Then according to the ceremony already noted (the sedan chair crushing the carriers, etc.) and according to the pointers given by the spirit, the chief of the village decides to invite the shaman. [774]

The shaman and three or four of his confreres examine the country and fix the place where the rite is to be performed. It is always within the boundaries of the village, on a hill or hillock, usually at the northwest corner, because hailstorms usually come from that direction. An auspicious day is chosen for the performance, and a list of all the required items for the rite is given by the shamans to the chief of the village. Here is what the list transmitted to the chief of the village of Toolong by the shaman contained: 20 black bowls; 15 wooden stakes, 2 feet in length; 15 tiles, 15 bricks, 15 eggs; 15 wooden planks, two feet long and 2 inches thick; 5 small hand mills, 5 axles and a cart wheel; an iron chain, which had been used to tie a dog, and a lock; 5 bell neckstraps with bells which had been used on horses; a mill stone, the corpse of a boy or baby, a living white dog and a white cock, water drawn from 10 different wells, 5 lions made of glazed pottery, used to adorn roofs; 6 earthen jars, among them 2 of bigger size, and a kettle; a pivot of a millstone, a pivot of threshing rolls, 2 threshing rolls, a plowshare, a harrow,

some iron taken from 4 city gates, some earth gathered 789
on four city walls, earth collected on 5 different moun- 796
tains, some earth taken in the prison of the city, 12 756
kinds of medicines; a small wooden white tiger, his rider painted black; 2 Buddha images, 2 mantles worn by statues in temples, bones of a dog, 2 skulls of a wolf and of a fox, a human skeleton, a pair of filthy trousers of a young woman, a living cat, a snake and a wooden raven. (Is it possible to imagine a more heterogeneous collection of items?)

On all these items are painted cabalistic designs, which are encircled with vermilion and painted with a brush dipped in the mixed blood of a white dog, cat, and cock.[1] All the items, in order to be effective, are to be stolen from other villages. Young folk are designated by the chief of the village to steal the required items, and if they do not succeed in the job, they have to buy the objects with their own money. If such thieves are accused at the court of the T'u-ssu, the community has to indemnify the defendant. At the times when these rites are performed, everybody in the country watches at night. All the stolen items are locked up in the temple and guarded at night by elder people, whose sleep is not so sound as that of young men. Deep secrecy is kept about the required items.

On the evening of the day fixed, the shamans arrive, clothed in the black gown; the chief of the shamans alone wears the flowery coat. All the shamans wear the black cap with long tail. After sunset the villagers arrive and the temple is closed tightly. A hog and a sheep are offered, while the attendants prostrate themselves, holding incense sticks, and the shamans dance and beat drums. In the deepest silence, they go to the place prepared for the rite, holding banners. All the heterogeneous items required are loaded into a cart. A hole fifteen feet in depth has been dug beforehand. Its upper part is shaped in a circle, the middle part is square, and the lowest part triangular.

The chief of the shamans descends into the pit alone. His whole body is enveloped in red cloth; he wears a [292
cincture made of hemp, such as the people wear at 764]
funerals. Holding in his hands the whip and the ritual knife, he takes off his shoes and hose and puts on shoes made from hemp ropes. His pigtail is unplaited, and his hair disheveled. Some youngsters, their heads enveloped in a red cloth, descend with him into the pit. They communicate by signs and tokens, for it is forbidden to utter a single word inside the pit. The shamans beat the drums outside the pit.

In the center of the triangle one of the biggest jars 782
is deposited, inside of which are put the corpse of the 756
baby or boy, and the different sorts of earth. All items 796
are covered with a piece of red cloth and the kettle is 789
inverted over them. The chain is wrapped around the jar and fastened with the lock. The pair of trousers,

[p.98(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

the skeleton, bones and skulls are deposited around the 756
jar, with the living snake enclosed in a basket. The 796
triangle is filled with earth, level with the base of the 782
square. Then five stakes are fixed in the earth, and 789
bowls, eggs, bricks, tiles, lions and hand mills are put around them. In the midst are erected the threshing rolls, on which is put the millstone, in the center of which is fixed a stake to support the cart wheel, to which the planks are nailed; the interspaces are filled with the remaining items. The whole is covered with boughs, and the pit is filled with earth level with the ground.

The attendants start howling like madmen, jumping and leaping around the pit in the pitch dark night, brandishing banners, while shamans dance, and beat drums and cymbals. The cart axle, sharpened to a stake, is fixed in the earth upon the pit; on it is written "Throne of the White Tiger." Some bowls placed upside down and bricks and tiles are put around the stake and the tiger; four more stakes are fixed in the ground according to the four points of the compass, and a mound is erected upon the pit. Next to the mound is placed a big wooden box containing the living white dog; a small mound is erected upon it so that the dog may see the light and breathe air through a hole. The dog will live for some days; it will howl and finally die.[2] On the other side of the big mound is erected a similar small mound, opposite the dog's mound, in which is

---

[2] Wittfogel and Feng, *op. cit.*, 271, note 166, note that both [171]
the Liao (Khitan) and the Chin (Jurchen) sacrificed dogs. M. Granet, *Danses et légendes*, 527, records that in ancient China men used to pull the ears of a dog to make him bark, in order to drive away the bird-demon. W. Koppers, Der Hund in der Mythologie der Zirkumpazifischen Völker, *Wiener Beiträge*, 386, 1930, records that the Yao tribe buried a live dog, together with a live thief, in order that the spirit of the thief should stay in the grave; also 378, the cow used at the sacrifice for the dog ancestor of the Yao had to be stolen, in the same way that the Monguors have to steal the dog for the hail rite, and other items.

Shirokogoroff, *op. cit.*, 92, a similar case of burying a dog alive is noted: "In case of some very bad disease the Manchus sometimes bury a live dog and cat near the entrance of the house. The dog and cat may move, which may be seen a certain time after the burial when the earth is reopened; it is considered as a very bad sign if they should go away together." He further notes, p. 92, that souls of dead people are supposed to eat dog meat; p. 210, that dogs carry the souls in the lower world; p. 179, that dog blood, like dog skins, make the clan spirits run away; dog meat is tabooed. Doolittle, *op. cit.*, 231, notes in China a heavenly dog who devours small children and is combated by a giant, represented surrounded by children shooting arrows against a dog walking on the clouds. The barking of a dog at night frightens the evil spirits. De Harlez, *op. cit.*, 464, records that the crowing of the rooster frightens the spirits at night and in the morning. A wooden rooster is put above the entrance of the courtyard to frighten the evil spirits. A living rooster is attached to the coffin when it is carried to the grave, in order that it may frighten evil spirits. In time of epidemics a white living rooster is carried, fixed on top of a stick, in the processions. See also Eliade, *op. cit.*, 405; Eberhard, *Lokalkulturen*, *op. cit.* 1: 29, 38; the same, *Randvölker Chinas*, *op. cit.*, 38.

[p.99(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

entombed the living cock in a box. It will live and die under the same circumstances as the dog. 756 796

I was told by several reliable old men that years ago an old Chinese begger instead of a dog had been buried alive, and that once in a while a little child, stolen in a far-off village, is still buried if, for three or more years in succession, hail has struck the village. The shaman in such cases requires it. Mothers told me that the elders always enjoin them to watch the small children with special care during the time these rites are performed. 782 789

When the rite is completed all the participants face the northwest, the direction from which the hailstorms usually come, and throw stones at the evil spirits, howling like madmen, uttering the most obscene threats, and taking the wildest aggressive attitudes, while the shamans crack their whips and dance a threatening dance, conjuring the evil spirit in wild gyrations. The wild act is performed three times. On the spot a big fire is lit with cypress boughs, and all the attendants, shamans included, jump over it in order that the evil spirits may no longer follow them, and in order to get purified. After a last dance in the temple yard, the whole audience enjoy themselves, making fun, eating the pork and mutton, and drinking plenty of wine.

During the whole month, day and night, corvées are imposed by the chief of the village on different shifts of four young men, relieving one another, in order to watch the mound. A small cabin is built for the watchers. Nobody is allowed to approach the mound during the whole month.

This rite gives an insight into the power wielded by the shamans and their controlling influence upon the people, who even resort to human sacrifices, when required by them. The secret about these facts is strictly kept, men are enjoined not to talk about it with women and children, and only after years, and in general terms, do the facts incidentally leak out. Among the Twelve Tengris is the famous White Tiger, the dread and terror of evil spirits, and for that reason the rite is called the Rite of the White Tiger.

THE RITES OF THE TAOISTS AGAINST HAIL

The Taoists are mostly invited to perform their rite in neighboring villages inhabited by Chinese. Once in a while they are invited by Monguors who recanted their origin, but often, when the hail has struck these villages, the more efficient Monguor shaman with a greater reputation is invited the following year to try his rites, even by Chinese. 782 789

The Taoists use three kinds of rites: the rite of the spirit Wang-lin-kuan, of the goddess Niang-Niang, and of the five thunderbolts (wu-tien-cheng). Here, also, is a mystifying thing. Although the Taoists in the country do not overtly honor the White Tiger, they always write the name of the White Tiger on the stake

[p. 99 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

buried in the mound, before the name of the spirits whom they officially use for combating hail. 782 789

Is it far fetched to suppose that the Taoists do this because it is universally recognized that the rite of the shamans, using the White Tiger, outranks their own, and that in order to succeed they must act in this way?[3]

A stunning fact also is that the Taoists, and lamas of the Red Sect in the country, when performing that kind of rite are very fond of using nearly the same group of disparate items to be buried in the pit, except for the white living dog and cock. Can the sacrifice of two living beings be too basically shamanist to be performed by pure Taoists?

STRENGTHENING OF THE OLD MOUNDS

In keeping with the basic principle of shamanism, the spirits after some time lose their powers and are subject to decay. Consequently, they have to be nurtured and strengthened in order that they may continue to help their followers effectively. The rite performed against hail, the pit with all its disparate items, and the famous rider and the White Tiger buried inside it are liable to lose their protectiveness, so every year more power has to be added to the mounds. In every village old mounds exist, built by the ancestors. According to the indication of the guardian spirit of the village, the building of a new mound is ordered from time to time because the last one has lost its power. However, the villagers believe that some effect can still be obtained from the old mounds, and in order not to lose that benefit, they strengthen every year the efficacy of all the old mounds built inside the boundaries of the village. The shaman is invited by the Monguors to do the job; the Taoist priest is invited in the Chinese villages, but seldom in Monguor villages. Both shaman and Taoist act in the same way. Small paper banners are prepared and wooden hammers and ravens, and also stakes with cabalistic designs and the inscription, "The Throne of the White Tiger god," and manikins made with boughs, holding bow and arrows. All these items are smoked by the shaman, over burning cypress boughs, before they are used. The rite takes a whole day. 782 796 [776]

A sheep is offered in the temple; water is poured in its ear to be sure the spirit agrees to the victim. The sheep is killed and offered, a dance and the beating of a drum is performed by the shaman. A "throne" (stake) is thrust in the ground in front of the temple

[3] F. W. Grootaers, in his very interesting monograph (*op. cit.*, 238), notes two inscriptions encountered on the frescoes of the temples of the god of the five roads in Wan-Ch'üan (Kalgan) "Holding bound the wolf and the tiger" and also, "Mountain general who holds bound the wolf and the tiger, *Wu-tao* god who catches the monsters" and he notes these inscriptions are, of course, not the products of the local imagination, but are copies by the local calligraphers from a popular anthology of "Inscriptions for all occasions." These calligraphers knew the history of the Twelve Tengris, among which is the White Tiger. But the wolf is unexplained.

[p. 100(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

gate (throne of the White Tiger god) and a black bowl is put on the roof of the gate. 782 796

The parade starts on the left side of the village (shamans start on the left side and lamas on the right side), with banners at the head, and the horn (ox horn) is blown. On every mound the same rites are performed: a dance, a throne (stake) thrust into the mound, two black bowls buried near the throne, some paper banners planted, one hammer and one raven fixed on a stick, and the manikin, with bow and arrow pointing to the northwest. Some earth is added to the mound, which is put in good shape. The parade turns three times around the mound; on the third turn the whole group faces the northwest and howls three times, and then they start toward the next one.

When they return to the temple the shaman starts his dance, while the audience kneels and makes prostrations. Then the offered sheep is divided into as many parts as there are families in the village, and each receives a part. The tail and a hind leg are given to the shaman. On the most important mound, a plank is erected (it has to be stolen to be effective), on which a sealed statement is pasted, forbidding the pasturing of animals in the crops during three months and fixing fines for a horse, cow, or sheep caught straying in the crops. Pasturing of animals and chopping of fuel on the sacred mountain of the village are forbidden as is the felling of trees for three months and the singing of obscene songs in the village. The spirits must not be disturbed or offended, and liberty is not allowed to be taken with the conventional morals. The fines consist of a fixed amount of oil, incense sticks, paper, or cash, to be devoted to the upkeep of the temple.

MORE PRECAUTIONS AGAINST HAIL

LAMAS INVITED TO RECITE TEXTS

782 789

Despite the promises of the shamans on the feast of spring, the performance of shamanistic rites on a new hill, and the strengthening of the old hills by means of adding magical power to them, in the fourth month the chiefs of the villages invite two or more lamas to recite texts for a couple of days, on top of the highest mountain situated inside the village land. Maybe Buddha might lend a helping hand also, and in order to assume his protection they organize a procession with the 108 sacred books of the *Kanjur*.

PROCESSION WITH THE SACRED BOOKS

A chief is appointed for the performance of the rite. He goes, with 108 men of the village, to the lamasery to borrow the books. The village defrays the expenses of a collation of butter tea with *tsamba* for the lamas, and a fixed amount of butter to be burned in the lamps before the Buddha statues in the temple. The next morning the procession starts from the village temple with at least one member from each family [illegible]

[p. 100(B)]

4: Schram M-S (1911-1922) 1957 AE9 Monguor AE9

cypress offering. Wei-sang, is first performed in the 782
temple. A shaman, or lama of the Red Sect, summons 789
into his staff the spirits who predict the success and the opportuneness of the rite. He steps to the head of the procession with the spirit-laden staff, followed by a group of horn blowers and banner and drum bearers. Then come the statue of the temple, enthroned in the sedan chair, the table and stake gods, and the 108 bearers of the heavy books, one after another, while the music plays, and Om Mani prayers are devoutly recited the whole way. The procession tours around the limits of the extensive village lands, making stops on the highest mountains or most elevated spots, where the ritual cypress burning is done and where the whole group walks three times around the spot. When they return to the temple the ritual cypress offering closes the ceremony. The procession usually lasts for a whole day. The next day the books are returned to the monastery.

The procession involves the whole male population of the village. The bearing of Buddhist books is said to be very effective, as are the praying of Om Mani, the offering of tea to the lamas and of butter for the lamps, and the shamanist spirit-laden staff, the table and stake gods, and all the other Taoist statues of the temple which tour the village at the same time. All available heterogenous forces contribute to the success of this specifically Buddhist rite. Usually this procession with the books is performed every other year; in the intervening year it is performed without the books.[4]

THE GOAT SKIN RITE

After such displays of all kinds of religious rites, however, the Monguors, still unassured, perform the celebrated goat skin rite enacted by a shaman or a lama of the Red Sect, who is proficient in subduing the hail spirits in a direct way by magical power. The rite is enacted on the highest mou[illegible]n of the village—not on the sacred mountain. A h[illegible]e of cypress branches is kindled, which lasts during [illegible] entire time of the performance of the rite. The lama makes a big *torma*[5] and four smaller ones; then with *tsamba* and butter he kneads various crude figures of animals living in the water, birds of the air and of animals living on the earth.[6] Small pieces of meat are also prepared. The lama or shaman recites his awful incantations and ritual

[4] Schröder, *op. cit.*, Der Flur Umzug, *Anthropos* 47: 835, 1952. More details are available in this valuable study.

[5] *Torma:* a small pyramidal cake, round or triangular, made with *tsamba* and butter; often pieces of butter or gold or silver paper are fixed upon it. It seems to represent an evil spirit on which incantations and ritual curses are proferred, on which all kind of inauspicious and calamitous items, sins and spiritual impurities are supposed to be loaded. It is thrown far away after the ceremony, often with a display of hatred and contempt, and with it calamities seem to be removed. (See more in Filchner, *Kumbum Dschamba ling, op. cit.*, chap. XIV.) [104]

[6] According to Hoffman, *op. cit.*, 138, the dough figures represent the spirits of the upper, middle, and underworld honored in the old Bon religion. Shirokogoroff, *op. cit.*, 125.

[p. 101 (A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

curses upon the *tormas*, which will be thrown to the evil 782
spirits—the big *torma* in the direction of the northwest, 789
and the small ones in the direction of the four points of the compass. In the meantime the goat is killed and skinned, the head and hoofs being left attached to the skin which is then stretched and fixed on a post. Magical daggers are attached to the feet and head. The goat in threatening attitude faces the northwest, where the hail spirits are supposed to dwell, and challenges them. Then horns are blown and *tormas* thrown and the goat will protect the crops against hail during the whole summer.[7] The Monguors assert that in former times they did not use the goat for this purpose, but the horse, and that a horse skin was fixed on the post.[8]

RITE ON THE HIGHEST MOUNTAIN OF THE VILLAGE

Since the village is still uncertain and disturbed after all these resources have been exhausted, it is customary that on an auspicious day, without the attendance of representatives of any religion, the chief of the village, with the elders and a member of each family of the village, go to the top of the highest mountain of the village. They go with banners, drums, cymbals, horn, in front, and carrying the god or goddess of the temple in the sedan chair, in order to implore, under the vast dome of the blue sky, the protection of "Heaven and all the spirits." In a primitive oven, built with superimposed stones, a bushel of cypress leaves, pounded and passed through a sieve, are burned with some butter and roasted spelt, colza, linseed, and wheat (the kinds of grain planted by the Monguors), and some water is sprinkled over it; 108 butter lamps made with dough are lit and prostrations are made nine times. The customary cry is howled to all the spirits, notifying them of the act of adoration for them all, and the god or goddess sitting in the sedan chair seems to implore "Heaven and all the spirits" with the villagers together. Finally, prostrations are given to the god or goddess in the chair, and

[7] According to Shirokogoroff, *op. cit.*, 215, among the reindeer Tungus of Transbaikalia on the grave, "a reindeer is killed, its skin is left together with the antlers and hoofs, fastened upon a bar horizontally fixed to two trees and left hanging there. This is the reindeer which will be used by the spirit (soul) of the deceased for going to the lower world. If there is no reindeer they use a horse and its skin in the same function and manner."

Owen Lattimore, The Gold tribe "Fishkin Tatars," *Memoirs Amer. Anthropol. Assoc.* **40**: 57 and 379, 1933, notes that the Gold tribe, "Fishkin Tatars," use "two slender stakes or wands, on the top of which are impaled two wooden beast figures, with four legs and tail. The legs are made by sticks thrust through the body and protruding at both sides. They looked to be otters, perhaps weasels, or sables . . . There are two wands, one much more short and slender than the other, each impaling a Keku (cuckoo or wood-pigeon) . . . these divinities keep guard over the whole house and courtyard."

[8] See Schröder, *op. cit.*, *Die Pfahlziege*, 835, where a philosophical explanation of the rite is provided. For the horse sacrifice among the Buryat Mongols, see Jeremiah Curtin, *A journey in southern Siberia*, 44 *sqq.*, Boston, Little, Brown, 1909.

[101 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

the chief of the village asks him or her whether "Heaven and all the spirits" will really preserve the crops.

At times of epidemics, epizootics, and big calamities, the same rite is performed. However, at that time the rite is performed on the sacred mountain of the village. This rite, in which elements of Lamaism and shamanism are intermixed with profusion, performed on a high mountain under the dome of heaven by the chief of the village without representatives of any religion, seems to recall the times when the chiefs of the families and of the tribes were the priests of the religion.

CALL OF THE GODDESSES ON THE GOD ERH-LANG

An unusual practice, peculiar to the thirteen villages situated in the Sha-t'ang Valley, which have a goddess in the sedan chair, is to be recorded. The inhabitants of the thirteen villages are Monguors who had left their T'u-ssu and had become subjects of Erh-ku-lung before 1723, and then became Chinese subjects after the revolt and renounced their identity to the extent of speaking only the Chinese language, although they know pretty well that their ancestors were Monguors. However, their wives, who have abhorred dressing in the Monguor fashion, are even today upon death laid out in the coffin dressed in the famous Monguor skirt, because, they say: "How would it be possible to meet the ancestors after death without wearing the Monguor skirt!" [9]

On the fifth of the fourth moon, a group of thirty strong young folk of each village goes to the Hsiao nan ch'uan (little south spring) carrying the goddess of their temple (Niang-Niang) sitting in the sedan chair, wearing her beautiful mantle, earrings and bracelets, in order to have her greet the god Erh-lang in his temple and spend a night with him. The tradition requires that the thirty youngsters observe strict continence for twenty-one days before the trip, and restrain themselves from indulging in drinking wine and eating garlic, leeks, and onions. According to the old Monguor custom, they plait into their pigtails a tassel of green cotton cords and wrap their heads with red cloth, in order to be insulated against all kinds of noxious influences of evil spirits. Each of them carries a strong club, the upper part of which is wrapped in red cloth for the same reason. The irregularity of this unusual practice is due to the fact that while today genuine Monguors do not observe this tradition, these groups of renegade Monguors are eager to stick to it, asserting that it is a genuine old Monguor custom. The Chinese in the country, however, do not practice the custom.[10]

---

[9] I never could get the explanation for the unusual fact that these thirteen villages had become the proprietors of their own fields, or the reason for which Erh-ku-lung had sold them to them, liberating them from all obligations to the monastery.

[10] The Chinese practice a similar rite. In order to obtain rain during the time of persistent droughts, they make a pilgrimage, barefooted, with willow twigs twisted around their heads, to caves dedicated to the goddess Kuan Yin, where there is a

[A102(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

The groups join each other on the way. Friendly 796
and high-spirited, they start early in the morning, with 782
banners, drum, and cymbals in the lead. The sedan chairs are put in a row at the foot of the high hill of the temple of the god Erh-lang. The stalwart fellows, with clubs clenched in their fists, are guards of honor of the goddesses, who stay next to their respective sedan chairs, waiting to climb the hill. The tradition runs that the crops of the village whose goddess first reaches the temple will be infallibly and positively protected against hail and prodigiously blessed. As soon as the cry for departure is howled out, the thirteen groups feverishly run to the top of the hill with their goddesses, howling, cursing, cutting their way, thrusting at one another, climbing by fits and starts, falling, leaping, jumping like savages, foaming at the mouth. The chair of the goddess who makes the mark is placed nearest the throne of the god. The door of the temple is closed. The fellows take their meal and rest in the side rooms of the temple.

They return home the next day. On the way back the villagers stand waiting on the road in order to learn whether their goddess won the race or not. On the trip to the temple the fellows were friendly to one another; on the return, however, the groups are excited, angry and seething with jealousy and frequently have a serious fight with clubs. In 1913 the sedan chair of the victorious goddess of the village of Wu-ch'i was smashed, but according to custom no suits are allowed [672] for smashed heads, broken noses, bleeding faces, and torn clothes. After the famous expedition, the villages start their rites against hail in the village.

The aim of the pilgrimage of the goddesses to the temple of the god Erh-lang is to obtain his protection from hail and special blessings upon the crops of the village. They are dressed in full attire and decked out in jewels. What is the reason for sending goddesses to call on the god Erh-lang and to try and court his favors? Why is the call not made to another god such as the god of the Five Roads, the recognized protector from hail?

All over the country, Erh-lang is said to be the god [776] of the River of Hsining, whose course he ordered, and to be interested in preserving the country from hail. He is said to have opened the rocks of Hsiao hsia (the

celebrated sacred spring. They carry with them the statue of [771] the god of the rain (the dragon king) from their village temple and put it in the cave, next to that of the goddess, for a whole night, in order that the goddess may sooth the ruffled feathers of the angered dragon king, and move him to pour down streams of rain to save the dying crops. Potanin, who traveled in Kansu in 1884–1886 [*Tangutsko-tibetskaya okraina, tsentral'naya Mongoliya*, 334, 1893], notes a similar practice among the Monguors of San ch'uan, subjects of the Hsia-wu T'u-ssu, in order to obtain rain. Potanin, *ibid.*, 409, also notes the struggle against hail practiced among those Monguors by their shamans, but because his description fails to point to the building of mounds, the white tiger, Wu-tao-shen, etc., he seems not to have understood the core of the rites. (I am indebted to Father J. Spriet for the translation of these passages.)

[p. 102(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

small rapids), 30 *li* east of Hsining, causing the region 796
of Hsining, which was a large lake in former times, to 782
dry up. He is said to have been a beautiful man, with strong classical features, taller than the men of today, and endowed with fabulous strength. He played with huge rocks as children play with marbles, and was very fond of two enormous dogs which he tied to the rocks of Hsiao hsia with chains so heavy that only he could move them. He is represented in the temple as a man of gigantic proportions, sitting on a large throne wearing yellow robes and cap, and the insignia of an official.

Father Grootaers [11] encountered this god in sixteen Erh-lang temples in Wan-Ch'üan, and notes that Erh-lang, son of Li Ping of the Han dynasty (A.D. 25–220) was famous for his works on dikes in Ssu-ch'uan Province, and became an object of the cult. However, he notes that another Erh-lang, son of Yang Chien of the Sung dynasty (beginning of the twelfth century A.D.) is also renowned for the same kind of work, and is represented with a dog at his feet. This detail, encountered in the temples of Wan ch'üan, enabled Father Grootaers, because of an inscription found on a fresco in the grottoes of P'u-fo ssu, to assume that the Erh-lang of Wan ch'üan must be the son of Yang Chien, object of a cult in Hopei Province. It seems possible that, on account of the popular tradition, the Erh-lang of Hsining with his enormous two dogs and heavy chains must also be Erh-lang, son of Yang Chien. However, how Erh-lang became the object of a cult in Hsining, and at what time, are facts shrouded in mystery. Anyway, Erh-lang, the beautiful god, is said to enjoy the annual visits of the fine goddesses of Sha t'ang Valley and to extend his protection from hail and blessings upon the crops in thanks for their gracious call.

The observance by the young people of twenty-one 821
days of continence and the restraint from indulgence in 782
wine and garlic and onions, the sending of the goddesses for a call on a god, and the custom of locking them up for a night in the temple in order to court the sympathy of the god and to reap the benefit of his protection, open up some chinks, letting in some light into the disturbed religious frame of mind of the people. Significant also is the extent of the fear of hail which makes them resort to all available means in order to get help and assistance against it.

OLD CUSTOM RECALLED

Old Monguors always recall that in former times, 789
when the shamans were still proficient in their art, it 756
was said they never failed to combat the hail. They threw stones stained with blood of white dogs in the direction of the hail spirits, shot with bloody arrows and moved stuffed horse skins. But now the shamans

[11] Grootaers, *op. cit.*, 262–263. See *Folklore Studies Supplement No. 1*: 229, 1952, Erh-lang, son of Yang Chien is said to have buried two of the nine suns in the region of Kui-te (south of Hsining), and the hot wells existing in the region are thus explained. See Eberhard, *op. cit.*, *Lokalkulturen*, *Fuchs* 1: 40.

[p. 103(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

no longer have the stuff of shamans, and the belief of the young folk in the gods is waning and fading away. 789 756

OFFER OF BONES TO THE SPIRITS OF HAIL

On the last night of the year, a group of youngsters is called by the chief of the village and ordered to gather sackfuls of bones and to carry them to the mountain top, from where devasting hailstorms usually come destroying the crops in summer. They are ordered to burn the bones to the "spirits of the hail" in order to thank them for their protection during the year and to beg them to extend their protection for the next year. Around New Year's, every family kills sheep or pigs, and bones are available everywhere. All kinds of bones are satisfactory, provided a full sack is secured. It is known that in the arctic culture the peculiar offer to heaven consisted of the offer of the skull and the long bones of animals (for bones contain marrow). It was the offer to the dispenser of life.[12] 782 789 796

Many times I asked for explanations about this rite, but nobody could give any. The answer always was the same: we are accustomed to do so in order that the crops may be protected against hail, and the hail spirits be propitious next year.

LAST REGULATIONS OF THE CHIEF OF THE VILLAGES

In the evening the shamans and the villagers return after having strengthened all the old mounds. The chief of the village makes a stereotyped speech: "In former times, the great emperor of all the Mongols divided his subjects into groups, attached to the service of the spirits of the temple. In keeping with that tradition of our ancestors we designate today groups of two men each who, day and night, will relieve one another and will stay at the temple in order to give warning of impending hailstorms. The two men who will be on duty during the next day, will sleep the night before in the temple, for continence is required of the watchers. When a storm appears in the northwest, they will beat the drums and cymbals, blow the horn, and ring the bell. Another group which we designate today will, when the bell rings, instantly leave their homes and run hurriedly to the principal ritual mound carrying with them the god of the temple in the sedan chair and all the other gods, the drums, cymbals and horn, and banners. They will take with them some black bowls, which will be placed upside down on the center of the mound. In the temple incense and cypress boughs will be offered, the throne (stake) of the god, erected in front of the temple gate, will be thrust deeper in the ground, and the bowls on top of the roof of the entrance will be turned upside down." The speech is finished. The other gods mentioned in the speech are stakes, octagonal in shape, the upper part of which represents a human head. (Taoists use octagonal stakes when they perform the rites against [622]

[12] Schmidt, *op. cit.*, 3: 542. [p. 103(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

hail.) A grim, ghastly mask and a piece of red cloth 782
are fixed on the head of the stake. A small Chinese 789
table, covered with strips of red cloth to which is at- 796
tached a copper mirror, is considered to be a spirit in the same way.

FIGHTING THE HAILSTORMS

When the hailstorm appears threatening and the evil 731
spirits are about to loose their avenging bolts, the 789
youngsters on the top of the hill wave banners, beat drums and cymbals, blow the horn, brandish aggressively the sedan chair with the god sitting inside, and the stake gods, in the direction of the storm, howl, curse the evil spirits by means of the most obscene vocabulary, and take obscene attitudes in order to frighten them. I saw such a scene in the village of T'ao chia chai, a Chinese village of which some people were Christians, and was told that the Monguors act in just the same way.

If the storm is avoided, incense is burned, prostrations are made, and the group comes back, proud and high spirited because their performance achieved victory. But if the storm breaks with lightning, lighting up the whole valley, and thunder rumbling terrifyingly, pouring down torrents of water and rattling hail, the whole group starts fleeing in confusion, with the sedan chair and all the gods, straight down the hill, through the fields and the rivers to the temple. It is said that when this happens the youngsters lose control over the gods they are carrying; that the gods, defeated by mightier ones, unable to withstand the struggle, abandon the battlefield and themselves flee, irresistibly pulling with them their carriers, without caring for roads, precipices, or rivers. The terror throws the village into confusion and consternation. The gods could not stand against the terrible evil spirits of the hail; hopes are frustrated and the crops destroyed. The prospect of bad times, with privations and sufferings, haunts every family.

SHAMANS AND STATUES OF THE TEMPLES

The statues in temples are assumed by the Monguors 778
to be the seat of the spirits. Several facts have already 532
been recorded, in keeping with that assumption. Statues 756
decide about the invitation of the shaman for the performance of the new rites against hail. They pull their carriers irresistibly over fields and precipices, or make themselves so heavy as to become immovable and crush the carriers under their weight. According to the Monguors, the unusual power residing in the statue is due to special rites performed by the shamans.

In the stomach of every statue is a square opening capable of being closed and opened. Every time a new statue is made, the shaman is invited to animate it by means of dancing, beating drums, and inserting in the hole a live snake, a live raven, a live frog, and the intestines of a sheep and a pig. All these items have to

4; Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

be purified by smoking over cypress boughs, and a 778
sacrifice of a sheep or a hog is required. Every three 532
years the stomach is opened and the decayed animating 756
items are removed. New ones must take their place, because after three years their power has faded away. The Monguors invite the shaman most proficient in this art to perform the rite, since magical efficacy does not seem to be the same among all shamans and for that reason statues are assumed to be the seats of the spirits.

The statues in Lamaist temples need, in the same way, magical bowels; however, the lamas put Tibetan texts inside the statues. The magical power of the statues lasts as long as the Tibetan texts are uninjured.

The role played by the snake in the therapy of debilitated spirits is noteworthy. It will be seen later that the old mountain spirit of the Obo, protector and proprietor of the valley of Sha-t'ang, was healed and rejuvenated by a lot of medicines, among which the snake ranked first.

The table often mentioned above is said to be the seat of the White Tiger, and is used everywhere. It is a low Chinese table, adorned with strips of red cloth or silk and a small copper mirror in front. The four legs represent the legs of the tiger, while on the underpart of the table are painted the intestines and genitalia. It must be animated by the shaman. Often used instead of the sedan chair, it is carried by four men whom it crushes beneath it, or pulls fore or aft when asked for a decision.

CONCLUSION

This chapter gives supporting evidence for the as- 821
sumption that in the fabric of the religious life of the 829
Monguors, the struggle against the hail spirits and the 771
means of avoiding harm from them are a real obsession and play an overwhelming part. All summer this fear troubles the peace of mind, and mars the happiness especially of older people and chiefs of families. No wonder that every day around noon Monguors start examining the northwest corner of the sky. Everybody, putting on a brave front, brags and boasts about the efficacy of the rites, trying to bolster their wavering courage, but telling beads and muttering "Om Mani," hoping that finally Buddha and "Heaven and all the spirits" will help them.

Another conclusion of this chapter seems to be that the shamanist White Tiger bears the brunt of the struggle against the evil spirits of hail, and that the Taoist god of the Five Roads and his associates who are magnificiently enthroned in all the village temples, on whose walls they score brilliant successes defeating the evil hail spirits, play a very modest secondary role in the rank and file of the other good spirits and Buddhist deities supposed to lend a hand in the struggle. The Monguors have remained as convinced shamanists as the Turco-Mongol tribes of former times.

The struggle against the hail spirits by an entire com-

[p. 104 (B)]

munity, obeying day and night the orders of the chief 821
of the village, pooling all its efforts and putting them 829
at his disposition, reveals the old clan spirit of nomads 771
united in the struggle against forces from abroad; it reveals that the entire community resorts unanimously to religious practices in order to preserve its means of subsistence and that religion in time of fear and distress is a means of securing the cohesion of the group. The civil and religious authority vested in the same chief make religion a constituent of the social organization. This note will be brought out several times further on, in the study of the religious life of the Monguors.[13]

X. VARIOUS PUBLIC RITES

PUBLIC RITES ON NEW YEAR'S

At midnight on New Year's the bell of the temple of 796
the village rings. A group of villagers, comprised of a member of each family, led by the chief of the village, the military commanders and the elders, arrive to honor "Heaven and all the spirits" in the courtyard of the temple, by lighting a big cypress fire, offering steamed bread, raisins, and butter, pouring a libation of wine, and prostrating themselves holding incense sticks in their hands. The chief of the village says: "Heaven and all the spirits, we thank you for all the blessings of the past year, bless us during this New Year, give us good crops, and guard us from hail." Then they return home in order to perform the traditional family rites of New Year's.

On the third, as already noted, the chief of the village, the elders, and a member of each family go to the temple of the village in order to learn the prophecy of the sedan chair or table god, about the events of the New Year. In villages where there is a Kurtain possessed by the spirit of the temple, he is invited for an exhibition, which is attended by the whole community. This New Year's exhibition is the only public office discharged by the Kurtain in the community. After the exhibition there follows the Rite of the Sacred Animal.

During the first month of the New Year, in the villages where there is a temple dedicated to a Lamaist deity, some lamas are usually invited by the community to say prayers for three to seven days, for the peace of the villagers.

---

[13] Potanin, *op. cit.*, 397-399 *sqq.*, describes accurately the interesting elaborate rite performed by shamans, enthroning a new image of a Taoist deity (the dragon king), as the new family protector in a Monguor family (probably at the moment of the division of the family inheritance). The performance is a blend of shamanist and Taoist rites. The opening of the eyes of the image and its animation, etc., are performed in the genuine Taoist fashion. The shamanism of this group of Monguors seems to be more adulterated than that of the Monguors living on the northern side of the Hsining River; the deities they honor are all Taoist deities.

[p. 105 (A)]

Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

RITE OF THE SACRED ANIMAL OF THE COMMUNITY

Almost every village has its own sacred animal, which 778
is always a male animal. The Monguors say that in the old days they used to consecrate a stallion, but at present they use mostly the bull or the he-goat, and very rarely the ram, stallion, or mule. The villages have only one sacred animal.

The preference of the Monguors for the bull is easy to understand, for their economy is actually agricultural. Their preference for the he-goat is explained by the fact that the animal is a noted symbol of reproduction and fecundity.[1]

Therefore the preference of the Monguors for the he-goat is not a mystery, for the aim of the rite consecrating an animal to the deity protector of the village and giving thanks for blessings received is to secure for the herds the blessings of fecundity.

The sacred animal of the community likes to come back to the temple of the village where a stable is built for it and where it is fed with peas, at the expense of the villagers. All day long it is free to mix with the herds of the village which it likes to follow.

The bull used is the Tibetan yak, for it produces a kind of hybrid cow, stronger than that bred in the country, and peculiarly fitted for farming. So it is easy to understand that the change in economy has been the reason why the bull has been preferred to the stallion, for farming depends on cows and oxen.

The bull is a troublesome animal, often roaming far away into the country. In summer, when the crops are growing in the fields, it does a lot of harm, but nobody dares to beat or to drive it away, for it is the sacred animal. After two or three years its savage instincts reappear and it may even pursue men. The hair of the he-goats and bulls is never clipped, so they are wild in appearance and everybody is afraid of them.

In 1914 the bull of the Naring Valley ripped open the belly of a Monguor of Long ta. The village of Naring Valley presented apologies, indemnifying the [262] family, killing the bull, and offering the meat to them, for villagers are not allowed to eat the meat of their own sacred animal. The next New Year's another bull was consecrated.

Bulls and he-goats are always consecrated by the 796
chiefs of the communities in the temple yard of the 778
village, on the third day of the New Year, to the guardian deity of the village, never to "Heaven," for no temples are dedicated to heaven. The ceremony is attended by a member from each family. The animal is cleansed, smoked, washed and combed in the courtyard, then led before the open door of the temple in front of

[1] N. Poppe, Zum Feuerkultus bei den Mongolen, *Asia Major*, 1925: 135. He writes: "The known fact that of old, the Mongols attributed a special significance to the he-goat is also related by Plano-Carpini, who notes that the Mongol chiefs always fed he-goats at home; that many people taught that the he-goat was related to fecundity, is a well-known fact."

[p. 105 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

the statue or picture of the guardian deity of the village. 796
The chief of the village pours milk mixed with water, 778
while all the participants kneel, holding incense sticks in their hands. The animal shakes its head, and ribbons are attached and red paper is pasted on the horns.

Every year the animal must be presented to the deity in the temple on the third of the New Year. It is a quite dangerous and difficult job, assigned to the youngsters of the village, who wash and comb the savage bull.

The Tibetans in the country perform the Rite of the Sacred Animal in the same way.

The monasteries also feed a sacred animal. They never use a bull or he-goat, but the stallion and sometimes the mule. They never use their sacred animal for riding; it freely roams the country. The ceremonies of consecration are the same: washing, smoking, pouring of milk, prostrations, attachment of ribbons, but in the temple a special prayer is said by the lama community for the reproduction of the animals. Every year, on the third day of the New Year, their animal must be presented to the deity in the courtyard of the temple. The stallion must be saddled, for the deity is supposed to take a ride on the animal on that very day. The lamas say that it is difficult to saddle a savage stallion. I could never get any information about the deity to which their animal is consecrated.

SHAMANIST RITES OF SPRING

PREPARATIONS

The reaping of a rich harvest is the dream of the 796
Monguors. After sowing is done, a religious rite is 241
performed by the shamans, not by lamas, in order to gather fine crops in autumn. The rite is performed in every Monguor village, and many Chinese villages follow the same practice. From the second until the fourth month the shamans are very busy going from village to village. In autumn, when there is plenty of grain, preparations for the feast are started. In every family, according to its wealth, spelt is gathered for the distillation of wine; wheat collected for the making of noodles, rolls, and vegetable oil for the baking of bread. It is all put in the temple for safekeeping.

A few days before the feast, the chief of the village 796
with the elders impose corvées on the villagers ordering them to prepare all the required items. Reliable men and women are chosen, because it is important that nobody should eat a roll or drink a cup of wine before all items have been offered to the gods. Consequently, faithful adherents to the traditions are carefully chosen and they take an oath accordingly. Three big loaves, each three feet in diameter, are prepared; thirteen smaller ones, called cartwheels; a large number of steamed rolls, and baskets of smaller ones steamed or boiled in oil; one or two pigs are killed, poor villages kill a sheep; chore-men are sent to the city to buy paper, incense sticks, colors, firecrackers. All the items are locked up in the temple.

[p. 106(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

The day before the feast, a couple of shamans arrive 796
with their apprentices, to paint and paste paper flags and streamers, print flower designs and inscriptions, and prepare the "thrones" of the spirits expected to attend the meeting. A "throne" is a sheet of red paper on which are printed the words, "throne of god so-and so." It is pasted on the wall of the courtyard of the temple. A large sheet, that is a big throne, is prepared for the souls of the last three generations of deceased villagers. In the middle of the courtyard the shamans erect a pole thirty feet high,[2] to the top of which is pasted a triangular banner made of red paper, trimmed with yellow paper strips. Under the banner is fixed a circle covered with yellow paper; a bit lower is hooked horizontally a two-pronged fork with two rolls impaled on the prongs, and nine streamers with flower designs and inscriptions pasted on its handle. Supplementary streamers, always attached to the pole, are offered in thanksgiving for a happy delivery or recovery from illness. In front of the pole a long table is prepared for the offerings. The statues of the gods honored in the temple and the god sitting in the sedan chair are set out in front of the table. Before the "throne of the souls of the deceased villagers" are placed the offerings of the community: tea, wine, rolls, raisins, noodles, meat. A long rope is fixed on the roof of the entrance gate, and is pulled to the top of the pole, from which it falls down on the long offering table. Halfway down the rope from the top of the pole, a long bag of cloth is attached containing nuts, peas, and jujubes, all made of dough. The rope is called the "highway rope" (*ma-lu-sheng*), the rope along which the spirits will come down and depart. It is made with hemp shackles and is supposed to be endowed with celebrated magical power, since the spirits walked on it. The shackles are very effective talismans for the protection of the sick and small children.

At midnight the two shamans and their apprentices [756]
honor "Heaven and all the spirits" in the courtyard. They offer on a plate small rolls in which are fixed candles made of paper imbued with oil. They also light some butter lamps, set off fire crackers, prostrate themselves and beat drums and cymbals. They take a meal and then go to rest.

The feast, organized in order to reap a good harvest, starts by honoring "Heaven and all the spirits" at night, under the twinkling stars, in the courtyard of the

[2] The pole and the rope play an important role in the ceremonies performed by the shamans in the village temple, and in those performed in private families in honor of their guardian deities. Pole and rope assured communication between the gods and man. Pole and rope must be planted and attached by the shamans in order to be efficacious. The manikan pole (see above, p. 95, n. 1), planted in the courtyard is said by many people to have the same meaning. Because the pole and rope rites are so unusually suggestive, they are enjoyed by the people, and their use is widely spread all over Asia by shamans. Shirokogoroff notes the rites among the Tungus (*Psychomental complex*, 336), etc. Eliade, *op. cit.*, 120, 368, 381.

[p. 106(B)]

temple. Shamans devoted to the cult of evil spirits 796
would not perform that rite, say the Mönguors. Neither the chiefs of the village, the elders, nor the people attend this midnight rite. Around eight or nine o'clock the following morning, six or eight more shamans arrive. Drums are beaten, and the chief of the village and the elders arrive to greet them. All the villagers go to the temple. Most of them bring their private offerings of rolls, wine, incense sticks, paper, while some among them paste on the wall of the temple the throne of their own ancestors and place some offerings before it. The temple is crowded to capacity with people dressed in their festival best. The shamans finish their meal, drink wine, and start the rites with the invocation of the spirits.

FIRST DAY

INVOCATION OF THE SPIRITS

The shamans, wearing the black gown, flower-deco- 796
rated silk coat, and the crown of the god of the Five 756
Roads, stand erect before the pole and start beating the drums. The villagers prostrate themselves nine times toward the pole, in time with the command of the chief of the village, holding incense sticks in joined hands, and sit on their heels waiting. The elders sit in the first rows. The shamans start dancing before the pole, keeping time with the beating of the drums and cymbals; they become more and more excited, when all of a sudden their chief points at the rope fixed on top of the roof of the entrance gate and cries: "Here they are, the Twelve Tengris!" and continuing to point at the rope, he follows them with his finger and eyes, just as if he were seeing the spirits climbing along the rope that reaches to the top of the pole. He grasps the end of the rope lying on the table, and runs with it, straight to the throne (sheet of red paper on the wall) prepared for the Twelve Tengris and their leader. He holds reverently the end of the rope against the throne, so that the spirits may step unhurt onto the throne. The other shamans and the apprentices run to the throne and prostrate themselves; the whole audience prostrates itself with incense sticks in the hands and the chief shaman starts greeting the spirits: "We are so glad to honor you"—and the audience repeats each time the words of the shamans and prostrates itself—"You must be tired from the long journey. . . . It is kind of you to have come so far. . . . We are very happy to honor you. . . . Please sit down among us, the throne is a poor one, but be so kind as to excuse us. . . ." Then the shamans ask them about the coming of the other spirits, whether they have already started their journey. Suddenly he points again at the roof of the gate, and sees the God of the Five Roads with his four associates. Then one after another come the god of the highest Obo of the region, the dragon god, the dragons of the five lakes, of the four seas, of the nine rivers, of the eight streams, of the new rain; the goddesses of the nine heavens, the three girl goddesses, the heavenly gen-

[p. 107(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

erals, the heavenly warriors, the god of the wind, the gods honored in the Monguor villages, then the spirits honored in the private families of the village, the souls of the last three generations of ancestors of the villagers.[8] Every guest is ushered to his throne, greeted, and congratulated in the same way. The shaman has a gentle talk with each of them, while the audience prostrates itself in reverential silence. Finally, drum and cymbals are beaten and the shamans dance with feverish gusto, the dance of thanksgiving for the arrival of all the guests, in order to make them happy. 796 756

ENTERTAINMENT OF THE SPIRITS

Then follows the next act—making the spirits propitious and well disposed (*nan shen*). The shamans and the apprentices kneel in rows before the pole, with incense sticks in their joined hands in the same way as the audience. It is the most important and enjoyed moment of the day. It reveals the peculiar, but typical, religious frame of mind of shamans and Monguors. In the deepest and most solemn silence, the chief of the shamans starts talking with the spirits. He gives a detailed account of all the offerings displayed on the table and before the thrones of the gods—sheep, pig. "All these offerings are brought by the people who are kneeling before you . . . notwithstanding the fact they all had a hard time this year, they enjoyed spending that money for you. If it were possible, they would have given more . . . please enjoy their offerings. . . . You are their superiors, their chiefs, your power is unlimited. . . . All these people trust in you and are confident of you. . . . You came from so far, climb[illegible] high mountains, crossing dangerous rivers . . . in order to sit down for a while with them in this poor courtyard.

[8] A couple of facts already encountered reveal two principles of the philosophy of the shamans concerning the duration of the existence of the spirits and the human souls. Spirits are not eternal; they weaken and become exhausted and old and consequently fade away. The famous White Tiger on the old mounds became old and had to receive new invigoration; a typical fact will be recorded of the great spirit of one of the five great Obos of the country, which had become old and had to be rejuvenated. Spirits are not eternal; even the spirits of the statues become completely exhausted after three years, and every three years the shaman has to replace the exhausted forces with brand new ones. [779 776]

The souls of the deceased of only the last three generations are honored and nurtured at the time of the rite of spring. When illness is ascribed to malignant souls of the deceased, the shaman, outside the courtyard, traces three small circles, and one more expansive; food is placed in the three small ones to nurture the souls of the deceased ancestors of the last three generations only; in the big circle is placed food for the roaming alien souls. These facts reveal an articulate belief that souls of the ancestors last three generations only, and also that hungry souls are dangerous beings. [775 765]

In old China the souls of the deceased kings after five generations, princes after three, nobles after one, lost their original protecting power and were relegated among those of the group to whom personal offerings were refused (H. Maspero, *Chine antique, op. cit.*, 186). They were already far on the way toward decaying and fading away.

[p. 107 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

. . . These people are very happy and thankful for your kindness. . . they are happy to be so close to you, and they all hope you will be so kind as to preserve the peace of the village, protect the mountains and pastures, the crops and the herds against hail, and protect the children and the elders." 796 756

During the talk of the shaman, the people repeat his words while prostrating themselves. Some among the shamans really have the knack of saying things that go to the marrow of the bones. Such shamans are always invited, and are beloved by the people. Their talk is long or short, according to the inspiration of the moment and the circumstances, and at that moment the audience is in a really prayerful mood.

After the speech, all the shamans start their most gracious dance, honoring the kind spirits. Then for a long, long while the shamans sit down. They beat the drums softly, and the chief shaman, the whole time listening to his drum, makes the statement in stereotyped terms that "The gods just finished their council and have decided that during the three summer months, the crops will be protected against hail and the village will enjoy peace. The gods have decided that during the three winter months the people and the herds will enjoy peace and be preserved from illnesses. It has been decided by the gods and the decision is irreversible." The people prostrate themselves thankfully, repeating: "Irreversible." Then the gods decide that for the faithful, who are not remiss in the duty of burning incense every day during the four seasons, thieves will not find a way to come into their houses; that wolves, prowling to harm the herds, will no longer be able to open their mouths; that the swords of brigands, if they come, will bend and be useless; that childless women will enjoy this year the hope of giving birth to a boy.

After the promises of the gods, the souls of three generations of deceased villagers are honored. The shamans, standing erect before their throne, beat drums and prostrate several times, pouring wine before their throne, making the libation. Then the chief shaman gives them an account of all the offerings deposited before them by their descendants. He invites them to taste the offerings and to enjoy them, repeating several times that the descendants are happy to be in their presence and the attendants repeat his words. Finally a last dance is performed before the pole, prostrations are made, and the attendants leave the temple. By then the sun is setting, the gathering having lasted a whole day.

The shamans are very proficient in the art of predicting and promising the blessings really desired by the villagers. Although all the promises will not be implemented, the people leave the temple in a happy mood, hopeful and satisfied, for everybody likes the predictions concerning the fulfillment of his hopes and wishes. The children in the schools and the women remember very well the details of these talks, which

[p. 108(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

have gone straight to their hearts. In order not to get a warped view of the talks of the shamans at these religious feasts, it must be said that the talks were not always sugary and sweet, adorned with delightful promises fitting the moods and feelings of the audience. Two unusual events happened, one in Too long in 1909, and the other in Hsin yüan-p'u in 1914 at the feast of spring. These were described to me several times by different Monguors and Chinese, because they were so well known for their unusualness and because they were fraught with terrible forebodings. 796 756

During the rites, at the moment when the people, kneeling in deep religious silence, were waiting for happy promises of the spirits, the shaman, listening to the spirits speaking in his drum, threw the attendance into confusion and terror, declaring the inauspicious disposition of the spirits, and foretelling threatening calamities in store for the villagers, such as hail, epizootics, diseases. The shaman saw in his drum the aversion in the hearts of the spirits and heard the bitter words on their tongues, because of the lack of fervor in the cult of the guardian spirit of the village; the disregard of the youth for them; the lasting feuds and discords among the families of the village, unwilling to overlook their petty differences.

The distressed audience was suddenly thrown into the throes of despair. All hope for blessings was dashed to the ground and crumbled in a heap. Everybody shuddered at the thought of hail and diseases. The audience, caught in a web of indecision, did not dare to laugh the threats to scorn. Predictions of impending calamities are never viewed in a light vein. The congregation was like a ship without a rudder, lashed by big waves of fear and apprehensions. Then the chief of the village said, "Let us prostrate ourselves and ask for forgiveness for our shortcomings and deficiencies," and he asked the shaman for a solution of the problem. In Hsin-yüan p'u the shamans agreed to attempt to propitiate the spirits, although, according to them, only a small hope remained. In desperation, trying to propitiate the angry spirits about to loose their avenging bolts, they danced their gentlest dances, listening to the drum, talking with the spirits, leaning towards the drums, flattering, cajoling, wheedling, apologizing, promising for the future, while the audience prostrated itself incessantly. Finally the chief of the shamans, with a glint of victory in his eyes, declared that the scales of mercy had been successfully weighted, but that an additional pig had to be offered. Breathing vows of deathless devotion, the audience was happy; solace had been brought to their sadness. Such scenes are recorded by the people to their dying day, with all the details.

In Too long, however, the angry spirits stuck by their decision. The shamans recommenced their dances, the people prostrated themselves, and the shamans, unsuccessful in pulling the heartstrings of the gods, de-

[p. 108(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

clared that their power was too weak and unavailing, 796
that more shamans would have to be invited, and that a 756
big hog would have to be prepared. A few days later more shamans succeeded in the same way as in Hsin-yüan p'u.

This shamanist rite of the first day tallies wonderfully [171]
with that of the Wu among the Chinese and the Hsiung-nu in 91 B.C. At the time of the state sacrifices, the Wu were ordered to call down the gods and human ancestors and to lead them to their "thrones," beating drums and dancing while a band of Chinese musicians played appropriate music. They pierced the future, knew the wishes of the gods and the ancestors, knew the desired sacrifices, and were proficient in predictions.[4]

Taoist priests in the country never perform such rites, 792
which are peculiar to the Monguor shamans, who after so many centuries have preserved them faithfully. They give an insight into what, centuries ago, was the religious practice of the Chinese and the surrounding barbarians, and what it is at present among the Monguors. The fantastic invitation and calling down of the spirits, their coming one after another along the rope, which the shaman pretends to see moving with his own eyes, with whom he talks, as if to persons in front of him, whom he greets cordially, is straight in the hallucinatory line specific to shamans. The best among the shamans go so far as to communicate their feelings by means of words and gestures to the well-disposed audience already believing in the reality of the rite and in the capacity of the shaman to see and communicate with gods and souls. They go so far as to make the 796
people feel happy to approach, face to face, the spirits and souls; to sit in their presence; to honor them, and trust entirely in them. To be sure, a religious feeling is awakened by the shamans at the meeting. All my [781]
Monguor informants asserted they were happy at that time and enjoyed the rite.

This is the only time during a whole year, when the community of a village prays and honors its gods and ancestors in a group. It was said that nobody would miss attending this rite. No wonder that the Monguors esteem and love their shamans, especially since the lamas never practice such a rite for a whole community.

RITES OF THE SECOND DAY

The second day is a busy one, since four rites are 796
performed: (1) possession by the White Tiger spirit, 756
(2) the greeting of the Goddess of Joy, (3) leave-taking of the spirits, and (4) the nurturing of the spirits of the temple.

POSSESSION BY THE WHITE TIGER

Very early in the morning, after breakfast, the shamans, beating drums and cymbals, sit around the pole

[4] De Groot, *op. cit.*, 1188–1190; 1201–1208, 1247.

[p. 109 (A)]

in front of all the spirits invited the day before, talking with them and asking for their protection upon the village. The guardian of the temple, acting as representative of the whole village, kneels behind them with incense sticks in his joined hands, answering and repeating the prayers. The rite lasts for about an hour. 796 756

Around ten o'clock a lunch is served to the shamans and wine is poured in profusion. All the villagers, dressed in their festival best, flock to the temple to attend the ceremony of the possession of the chief of the shamans by the White Tiger spirit.

For a long time the shamans play and have fun. While the apprentices beat drums and cymbals, they start dancing; they get excited, display all kinds of acrobatics; dance on their knees holding their heels in their hands; dance on their heads; turn cartwheels; keep whirling; jostle one another. They are stimulated to compete with one another in accomplishing the queerest eccentricities. It is not unusual for a couple to get into a quarrel and start fighting and for one or another to fall down in a fainting fit. [535] [578]

When the excitement reaches fever pitch, the chief of the shamans exchanges his cap of the god of the Five Roads for the black cap with long tail. With his arm nude, the whip fixed into the collar, drum in hand, he starts a wild dance which lasts for a long time. He stops once in a while and cracks the whip. He takes threatening and aggressive attitudes, brawls loudly and indistinctly, and grins, distorting mouth and jaw bone. With his whole body writhing and supposed to be possessed by the White Tiger spirit, he cuts his arm with a razor, making it bleed. The women rush to the shaman and apply paper to the wound. These papers are efficacious talismans for the protection of children, and are sewn on their clothes by their mothers. In former times, old Monguors said, potent shamans pierced their cheeks with an arrow and bent the blade of a sword predicting the future with wonderful accuracy, but today shamans can no longer do that. These rites are in line with the activities of Wu and shamans.[5] [785]

GREETING OF THE GODDESS OF JOY

Around two o'clock the rite of *ying hsi-niang* is performed, the meeting with, and the greeting of, the Goddess of Joy. This rite is purely shamanistic. The Chinese perform a similar but more quiet rite, on New Year's day, meeting and greeting the "spirit" of joy. Monguor youngsters like to imitate the Chinese and enjoy the same merriment. However, the real Monguor rite is the following one performed by the shaman: [776]

On the large threshing floor of the village is placed a table with offerings. The villagers sit around the edges of the floor in order that the shaman may have room for the performance and the evolutions. All the shamans wear the black cap with long tail, and keeping

[5] De Groot, *op. cit.*, 1212. [p. 109 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

time with the beating of drums and cymbals perform their wildest dances for a long time. Usually three or four among them seem to be possessed. All of a sudden the chief of the shamans becomes excited to fever pitch, and howls "go to the goddess." Then, followed by the other shamans, he grasps a chicken and, dancing with fury, bites its neck and jerks off its head in a wild movement. Grimacing with distorted face, and glittering eyes, he throws the bleeding chicken head in the supposed direction of the goddess, uttering dreary cries and indistinct sounds. After the rite is accomplished, the people go home for dinner. It is indeed a savage means of greeting "a goddess of joy," with a bleeding head and with such wild appearance. 796 756

The split-personality of the "good" shaman who the first day was so gentle, so kind, so considerate for the spirits, shows up more and more; he has to see blood and to offer bloody sacrifices.

LEAVE-TAKING OF THE SPIRITS

After sunset all the villagers come to the temple. In some villages the women are not allowed to attend the evening rites, but elders asserted that in former times the women were admitted everywhere. [562]

A hundred small lamps are prepared, the cup made with dough and the wick with twisted cotton wool. Into the cup is poured vegetable oil. The lamps are displayed in rows on the offering table in front of the pole and the statues. The shamans first perform the usual dance, keeping time to the beating of the drums. The leave taking of the guest spirits is called the "opening of the highway" (*k'ai ma-lu*). A bridge[6] is to be built over which the guests are supposed to pass. A big roll is put on each of the four corners of the table, and a larger one in the middle; a paper banner is placed on each of the five rolls. A lamp is lit near the banners and a plate put near each of them; on the middle plate is placed the head of a chicken. [354]

The chief of the shamans asks the shamans and the apprentices for the meaning of the five rolls. The five rolls mean the five mountains; the five lamps, the five lakes; the five wicks, the five dragons; the banners, the incense which billows up into the sky. Why is the head of a chicken put on the middle plate? In order to steady the *Yin-Yang* (male and female principle of the Taoists). The chief shaman writes, around the roll in the center, the eight Chinese cyclical characters and asks for the explanation of each of them. If one of the shamans or apprentices is unable to answer he is scolded and upbraided in front of the whole gathering.

A bridge is constructed for the spirits from one end of the table to the other by disposing two rows of rolls in which are planted brand new chopsticks; on both sides of the bridge are planted incense sticks in smaller rolls. The shaman asks again for explanations: Is there still another way existing above that bridge or not? An- [442]

[6] Eliade, *op. cit.*, 419. [p·110(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

swer: the galaxy. Who walks on the milky way? Yu 796
Huang,[7] preceded by the green dragon and the White 756
Tiger. Under the bridge is there still another bridge
or not? The dangerous bridge leading to Hell, over [775]
which passes the king of Hell, Erlik, preceded by the spirit with the head of a cow and the spirit with the head of a horse, and where spirits are waiting, who devour passing souls. What is our bridge? The bridge of the spirits.

The building of the bridge of the spirits and the con- 796
fused explanations of the shamans, mixed with Taoist, 756
shamanist, and Bön principles, reveals, nevertheless, 772
the philosophy claiming the existence of three worlds: 779
the upper, middle, and lower worlds, each with its own population.[8] A hint has already been given of this philosophy, in describing the rite of the stretched goat skin and the molding of clay figures, etc. At any rate the bridge provides a wonderful opportunity for the shamans to display their philosophical abilities and their proficiency in the art of telling of the nine and more heavens, one more beautiful than the other; the eighteen hells, dark and terrifying; the severe judgments after death presided over by Erlik or the Chinese Yen wang; the explanation of the three souls; shamans flying on drums to heaven, are unique occasions for story-tellers, sparkling with wit, to reap big successes.

At that time, shamans never fail to explain the ap- 776
pointment of their ancestor shaman by Chiang Tze-ya 538
as servant of the god of the Five Roads; they never 544
fail to narrate captivating episodes from the epic of Gesar. All kinds of problems are dealt with, and a lot of fun is had. The most ridiculous answers are given to the most ridiculous questions. One shaman asks for the explanation of why in each wheat grain there is always a small groove? The answer is that in the beginning of the world there was no wheat. Tengri made a wheat grain, but it seemed to be too big; with the nail of his right thumb he parted the grain in two parts. Still it seemed to be too big, and so he parted it again and then a third time. The fourth time, just when he was about to cut the grain in two parts again, it appeared to be all right without cutting through it, so he left the grain only half cut through, and so all grains of wheat have a little groove in them. This story was told to me several times by children who attended the meeting and said that the shaman told them so.

Another story, which gives us a better insight into 796
the nature of that kind of meeting, is told when a sha- 756
man is asked at what time and why men started seducing 831
women, and women started eloping? An interesting 773
sociological and moral question! Tengri wanted to have men and women. After kneading red earth and water a whole day, he moulded seven men; then he

[7] The most popular god of modern China who received letters patent from the Emperor in A.D. 1017. Wieger, *Textes historiques, op. cit.*, 1846.

[8] Hoffmann, *op. cit.*, 138. Shirokogoroff, *op. cit.*, 125.

[p. 110 (B)]

took straw, and with fine cord tied it in the shape of 796
seven women. The fourteen manikins were put in the 756
sun to dry into shape; the tengris went to sleep. Erlik, 831
chief of the underworld and antagonist of the Tengri, 773
made a terrific storm rage and one of the straw ladies finally blew away. When these thirteen figures came to life, one of the men was lacking a wife. Monguors enjoy this story and ask the shamans to tell it every year. Another of the big subjects dealt with at the meetings is that of bad dreams. Because the meetings often end in telling smutty and filthy stories, women in many villages do not attend the evening meetings. The shamans at that time compete with one another for winning the highest marks in that kind of virtuosity. Often the chiefs of the villages, when they invite the shamans, enjoin them not to go beyond certain limits.

When the meeting starts to drag, the chief of the 756
shamans makes preparations for the leave-taking of the 796
spirits. The shamans perform a dance, while the audience kneels. The shaman again enjoins the people to ask for benedictions. He has a last talk with the spirits, thanks them for the visit, reminding them of their promises, and invites them ceremoniously, one after another, to return to their splendid abodes calling them by the most pompous titles. Firecrackers are set off, and shamans dance; the people prostrate themselves and the spirits go back along the rope to their abodes.

While the shaman throws three handfuls of wheat and jujubes into the air, the people try to catch them, as they fall, in their skirts; they mix them with the seeds for next year. A hard pull on the rope fixed on the pole breaks the bag containing jujubes made with dough, coins, and peas. Everybody tries to grab a couple of them, for having been touched by the coming and going of the spirits they enjoy their celebrated magical power. Sick persons eat them in order to be healed, and women so as to become pregnant. The fork with the two rolls is unbalanced; the rolls fall and are picked up; they are reduced to crumbs and are panaceas against all kind of ailments.

NURTURING OF THE GODS OF THE TEMPLE

This rite is the last one and may be the most im- [776]
portant. The shamans explain that the spirits in the 796
temples are to be nurtured once a year, in order that 756
they may be able to protect the village against hail. 782
Here the split personality of the Monguor shamans shows up in its crudest reality.

The shamans explain, and the Monguors strongly believe their explanation, that in former times a human sacrifice was urged every year by the spirits. Other shamans say that the sacrifice was needed only every seven years, in order to ward off hail, epidemics, epizootics, etc.[9] The present rite takes the place of the

[9] This tradition, concerning the yearly human sacrifice demanded by the spirits, seems to point to the fact that in old

[p. 111 (A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

former human sacrifices; consequently blood and the soul of a deceased person is needed for the nurturing of the spirits. 776 786 782

The rite is performed at night. The shamans and the young folk leave the temple in order to capture the soul of a deceased human being. Sometimes they go far away, according to the indication of their spirits. Five fortresses are built by means of incense sticks planted in the ground in the form of a square, one at each corner according to the points of the compass, and one in the center. Circles are drawn around each of them. Then follows the beating of the drums and cymbals, dances, and cracking of the whips on the ground. The chief of the shamans howls at the top of his voice, "Is the northern fortress already built?" All the shamans answer by howling in the same way; this is repeated for each of the fortresses. Nuts and dates are thrown by the chief of the shamans on the four corners, and on the center; he throws some of them into the air, to attract the roaming souls of deceased people. A bottle is planted in an inclined position in a bushel containing wheat, and is supported by burning incense sticks. The shamans start their wildest dance, drearily howling at the tops of their voices, and cracking whips, in the middle of the pitch-dark night. The burning incense sticks no longer support the bottle, and it falls flat; the chief of the shamans rushes to the bottle, grasps it, and runs as fast as possible to the temple, followed by the other shamans and the young folk.

The temple gate is shut tightly. A new wild dance follows, until all of a sudden the chief of the shamans grasps a chicken, jerks off its head, and gathers its blood in a pot. He cries again, asking the gathering three times, "Are the souls here?" and runs inside the temple rooms and presents the bottle containing the gathered souls at the mouth of each of the statues and the painted gods on the walls, cajoling, wheedling and caressing them saying, "Eat, eat please! Do you like it? It is a wonderful meal, eat some more, there is plenty." Then taking the pot with blood he performs the same ceremony, "Drink, drink!" The spirits are nurtured.

He takes the pot containing the horoscope sticks placed in the temple, throws them on the ground and

---

times the White Tiger devoured a person every year, as mentioned above. There is a widespread belief in human sacrifices demanded by spirits in India and Tibet (A. David Neel, *Mystiques et magiciens du Tibet*, 207, Paris, Plon, 1929. L. A. Waddell, *op. cit.*, 516). It is noted by Helmut Hoffmann (*op. cit.*, 175), as practiced by the Hsienpi in Manchuria and Mongolia at the beginning of the year; it was well known in China in former times (De Harlez, *op. cit.*, 79. Wieger, *Textes historiques*, Index, Sacrifices Humains, 2164). Helmut Hoffmann, *op. cit.*, 161–162, also notes spirits called *Sri* eagerly attacking small children, sucking their blood, and devouring them. Garma Sanschejew (*op. cit.*, 592), notes among the shamans belief in a kind of spirit eager to attack and devour the children; parents know that when children start crying suddenly such spirits are around. No wonder that this belief, spread all over Asia, is still very strong at present among the Monguors.

[p. 111 (B)]

examines their position. "All right!" he cries. "all 796
events will be all right this year, the village will enjoy 756
peace and thrive; this year you will be preserved from 782
hail!" A piece of red cloth is tied with a red rope on the bottle, which is put under the empty container inside the temple for seven days.

After all the rites have been accomplished, the villagers go home taking with them their own thrones of the ancestors and as many paper banners and streamers as possible, in order to place them with the deities honored at home. The shamans and the elders have a meal and plenty of wine for the whole night. The next morning the shamans leave; they came riding empty-handed on a donkey, and go back driving the donkey, laden with rolls and offerings, some wheat, and a meager payment in cash.

FEAR OF HUMAN SACRIFICES

During the second, third, and fourth months, the time 782
during which these rites are performed in one village 784
after another, everywhere children are encountered 789
wearing around their necks strips of filthy, stinking 751
cloth, with which the women had wrapped their feet (for they do not wear stockings). The heads of some children are covered with a handkerchief containing dog hair; the foreheads of some children are scratched and lightly wounded. Several times a day the children are enjoined not to eat jujubes or nuts lying along the way or in the temple yards, for fear that the spirits, avid for human sacrifices, might allure them and take their souls. Everywhere it is said that, notwithstanding the rites taking the place of the former human sacrifices, once in a while some of the spirits take a child. All these practices are used in order to frighten the spirits and to preserve the children desired by this kind of evil spirit. If, during these months, a child dies, everybody is convinced that his soul has been taken by the terrible spirits.

These practices give evidence that the belief in human 782
sacrifices required by spirits is deeply ingrained in the minds of the people. At that time, meeting children so [115]
arrayed affords a fine opportunity to collect details about the rites of spring, and the talks of the shamans, and to get an insight into the religious trend of mind of the people. These facts make it plain that the Monguor shamans, honoring Taoist spirits and performing most of the rites of the Wu of China and of the shamans living in the neighboring countries, have preserved their urge for human sacrifices. The Monguor shamans nurture the weakened, exhausted spirits in the temples with captured human souls. The burying of the Chinese beggar in the mound, in order to succeed in the struggle against the hail spirits, and the occasional capturing of a boy for the same purpose, facts attested by many trustworthy men, give evidence of the assumption. However, constraint is imposed [illegible]
upon them by a more civilized environment than that

[p. 112 (A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

of Tibet. Chinese laws, and the presence of their 782
powerful enemies, the lamas, ready to harm their in- [B82]
stitution constrain them to act cautiously and to re-
strain their savage nature.

The rites against hail, performed after the rites just described, have been recorded in Chapter IX.

CULT OF THE MOUNTAINS

The cult of the mountains must be very old. It seems 795
not to have originated in Lamaism, and does not fit in the frame of its philosophy, but rather to have been accepted and ritualized by it to a very large extent.

Concerning the Monguors it has been noted, that the 175
Shat'o, like most of the Turkish tribes of Central Asia, 795
made sacrifices on top of the mountains and that the horse was their most important offering.[10] It is a fact of common knowledge that in old times the Mongols also honored the gods of the mountains. Chingis Khan lived in this atmosphere. Temuchin (Chingis Khan), in order to avoid a band of Merkits, galloped away to Mount Burkan Kaldun. Having escaped alive, he exclaimed, lifting his face to the sky: "Mount Burkan has protected my miserable life; henceforward, I will ever sacrifice to it and bequeath to my sons and grandsons the duty of sacrificing to it." [11]

The Monguors explain the cult of the Obos and of 795
the sacred hill of the village by asserting that the coun- 776
try between the Ta-t'ung and Hsining Rivers belongs to five powerful spirits or deities who reside on the tops of the five highest mountains of the country, where celebrated Obos are built for them. These spirits claim the worship of the people living on their territory, grazing herds and farming. They are kind to their worshippers, protecting their herds and fields, but they punish the unbelievers. "It is our duty to honor them," say the Monguors earnestly, "for if we were remiss in our duty we would surely court disaster."

These five spirits do not possess the entire territory in a group, but each of them is supposed to wield power over the country surrounding its own mountain. Consequently it receives offerings and worship only from the people living within its supposed circumscription.

Besides these five important mountain spirits, other less important ones are honored, mostly on the passes or on higher mountains. Their cult is not general, but is practiced only by the people living near the passes and by travelers.

In connection with this peculiar mentality about the 795
territory having its proprietors is to be noted the cult of 778
the sacred hill honored in each Monguor village, for in

[10] Eberhard, *Conquerors and rulers, op. cit.*, 91.

[11] Vladimirtsov, *The life of Chingis-Khan, op. cit.*, 29. H. G. Quaritch Wales, *The mountain of God*, A study in early religion and kingship, 7: 170, London, Bernard Quaritch, 1953: "Fundamentally the 'old Asiatic Religion' is the worship of the divinity of earth and its energies concentrated in some mountain and in the superhuman virtue of kingship." Reviewed by Clarence H. Hamilton in *Far Eastern Quart.* 13 (3): 370, 1954.

[p. 112 (B)]

the same way the territory of the village is supposed to 795
have its owner who also resides on the sacred hill, not 778
on the highest mountain of the village. This spirit lays the same claims to thorough ownership over the village's fields and obligatory worship from its inhabitants.

The Monguors and Shat'o, descendants of old nomads, who used to honor spirits residing on the tops of the highest mountains and to recognize them as the proprietors of the entire country, were unable to get rid of this old trend of mind. They must have applied the same religious notions to the sacred hill of their villages when they exchanged their nomadic economy for the agricultural, and so the change of economy not only brought about adaptations in the field of their social organizations, but also in the field of their religion and cults.

It is common knowledge that the notion and cult of 795
a spirit proprietor of the earth are very old and wide- [17]
spread all over China also.[12] From the earliest times on, this spirit used to be honored in rudimentary shrines built in the fields by each farmer, and in a temple in each village, but the Monguors, old nomads, had to have a sacred hill and to have this spirit residing on top of a hill. Therefore, besides the cult of the five spirits of the five highest mountains, they practice the cult of the proprietor of the village on the sacred hill of the village. However, because the proprietor resides on a hill, they build a small Obo and plant a pole like that on the Obos built for the five big spirits. Several times I was told by Monguors that the cult of the sacred hill is the same as the cult of the earth god (T'u-ti-yeh) of the Chinese, and not the cult of a mountain spirit; that their earth god is the goddess Etogon; further, that the sacred hill is not the highest mountain situated in the boundaries of the village, but a hill or a notable elevation. Many villages do not have mountains inside their boundaries.

OBLIGATIONS TOWARD THE MOUNTAIN GODS

The behavior of the Monguors regarding the moun- [776]
tains and village gods seems to suggest that this cult is based on the principle of the ownership, the dominion of the country, by a god, and on the principle of its lordship over the people living on its territory. This dominion and lordship of the god is to be recognized by means of sacrifices and offerings.

The same frame of mind and philosophy concerning
these gods is encountered all over Asia [13] Buddha once [17]
enjoined his followers in India never to omit making an offering to the god of the spot where they were dwelling.[14]

In every lamasery of Huang-chung, therefore, is encountered a temple dedicated to the god of the spot oc-

[p. 113(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

cupied by the monastery. In big lamaseries the cult of 795
this god resorts to the attributions of members of the college of rites.[15]

Every Monguor, together with his entire family in 795
their best clothes, who attends the ceremony of the start- 782
ing of the plowing of the fields, will honor in the fields [241]
the god of his fields, by burying an urn (called the precious bottle), making libations, burning incense, and offering bread. No Monguor will build a court yard, sheep or cow pen without burying an urn in the ground, thereby recognizing the lordship and dominion of the spirit of the spot, and obtaining his permission to occupy it. In the center of the courtyard, under the manikan and the manger, the Monguors used to bury five urns and invite a lama to recite texts for one, two or five days, sprinkling holy water and throwing spelt on them. This old rite has become a thoroughly Lamaist rite, to which each lama attaches his own mystical explanations.

However, frequently the Monguor invites a Chinese geomancer; he plants the manikan himself, buries the urn, and offers a sheep or a chicken. This principle is so deeply ingrained in the consciousness of the Monguors that they will never proceed with the rite of the cremation of a corpse without having previously recognized the ownership of the god of the spot, and obtaining its permission by buying from it the spot required. Thus, the mountain and village gods seem to belong to the category of the earth gods for whom, in old China, victims and offerings were buried in the ground.[16] For that reason urns are buried for mountain and village gods as well as for earth gods.

The precious bottle (urn), the most important offering in the cult of the gods of the mountains, the village, and the earth, is usually prepared by a lama of the Yellow or the Red Sect, performing more or less elaborate rites, sometimes for days. He uses some [823] powder of gold, some silver, coral, turquoise, and copper coins of the K'ai-yüan (713–741) and T'ai-p'ing (1850) periods, things which are said to comprise the five precious materials. He gathers some grains of five kinds of cereals, threads of five colors, different kinds of medicines, incense sticks, and some tea leaves. All these substances are pounded for a long time with a pestle in a mortar and poured into a small urn, while the lama blows on them and recites texts. Finally molten butter is poured into the urn, level with the opening. Two pictures are pasted on the urn: one of a Lamaist deity and one of the dragon spirit. The urn is covered with a piece of red cloth. The use of the urn is known all over China; such urns can be bought in all pharmacies, in lamaseries, from Taoist priests, and from shamans. The contents of the urn are not always the same, for several kinds are said to be used. Lamas make a business out of the urns, for usually the slightest unhappinesses, illnesses, and calamities, are

[p. 113 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

said to be caused by the offended god of the spot who must be propitiated by the offering of an urn. 795 782

Consequently, these proprietors and lords of the country and the villages are supposed to extend their protection to their worshippers, blessing their herds and crops and preserving the country against hail, epidemics, and epizootics and providing propitious rain. No wonder that the temples in many villages are dedicated to the god of the mountain, and that one can read on village temples the inscription, "[may] the God of the Five Roads, the gods of the mountain and the village, protect the village."

The cult of the five important mountain gods will be dealt with first, followed by that of the sacred hill of the village.

CULT OF THE OBO

A mountain god is honored by means of an Obo.[17] 795 On the top of the sacred mountain is planted a big pole 778 which secures communication between spirits and man, even as at the time of the shamanist feast of spring, and the planting of the manikan in the courtyards. Stones, mostly white ones, are piled in a big heap around the pole, enclosed with a wooden fence, painted white. Sticks, very often shaped as spears and long arrows, often painted red at the top and black at the bottom, with a tassel of red wool attached to them, are planted in the stone heap, as well as some twigs of cypress. On the top of the pole, and on most of the sticks, are fixed prayer flags, pieces of white cloth on which prayers are written with Tibetan characters, and with the "Wind Horse" printed on them. To white and black ropes (of which one end is bound to the pole and the other to small poles or sticks fixed in the ground), are attached some shoulder bones and various small bones of sheep, small prayer flags, pieces of red dyed wool. Often some small stone heaps are built around the Obo; bigger flat stones form an offering table in front of the heap. No irreverent or immodest acts are permitted in front of the pole. No information was available concerning either the way of building Obos, or the items buried inside under the pole, because I knew nobody who had met the builders of Obos.[18]

THE FIVE GREAT OBOS IN THE COUNTRY

These five chief spirits, owners of the country, are 778 not only honored on the tops of their respective moun- 782 tains. Because it is impossible to climb the mountain 795 every day, there is built for each of them, inside the monasteries of the Yellow Sect nearest the mountain, a small temple, in which lamas daily honor them. So, the temple of the spirit Amni Chokker of the Obo near the lamasery of Ch'u erh is built in that monastery. There is one exception: the small temple of the spirit

[17] Stress should be put on the correct meaning of the cult of the Obo so as not to identify it with the cult of Heaven, as so often happens in studies concerning the religion of the nomads.

[18] Schmidt, *op. cit.* 10: 68–69.

[p. 114(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Amni Chialip of the Obo in Waza is built inside the courtyard of a rich Tibetan, Manguru. I was told by him that every day he lit a taper and burned incense. Women, and girls, even his wife or daughter-in-law, were never allowed to enter the small temple. The same prohibition existed for the women against visiting this kind of temple in the monasteries.

When and how are the five owners of the country honored? On an auspicious day fixed by a lama, usually of the Red Sect, at the end of the fifth moon, and usually during the sixth moon, five delegates from every village assumed to be situated in the circumscription of the territory of the spirit, are sent to the mountain. They carry a tent and drive some sheep which have been washed and combed, with red paper pasted on their horns and ribbons attached to their fleece, and a piece of red cloth eight feet long on each of their backs. The men also bring some spears and arrows painted red and black, miniature bows, firecrackers and the famous "precious bottle" (the urn).

The first day, at evening, all the representatives of the villages pitch their tents at the foot of the celebrated mountain and pass the night in merrymaking. The next day, being the auspicious day, in the early morning the chief and the elders of the village, with a large crowd of villagers, arrive to attend the rites to be celebrated on top of the mountain. Chinese merchants pitch tents and do business at the foot of the mountain.

After breakfast all the chiefs of the villages with the villagers go to the Obo. One group after another sets off firecrackers before the Obo, plants in the stone heap spears and arrows, and attaches new flags and pieces of wool and bones, and reverently bury their precious bottle in a deep hole. On the crude offering table, the killed sheep is offered, broth is thrown first toward "Heaven" and then to the four points of the compass for "all the spirits," the famous Wei-sang rite is performed and libation made, while the groups kneel and prostrate themselves. After the rites of each village are performed by the chiefs, a group of lamas, mostly of the Red Church, perform on behalf of the entire community a big Wei-sang rite, beating drums, blowing horns, and chanting some prayers; they all turn three times around the obo.

In the afternoon at the foot of the mountain an immense crowd of men and women enjoy the horseraces and the wrestling,[10] singing and drinking. At sunset most of the people leave, but groups of young folk pass the night around the tents, merrymaking. On the morning of the third day, the tents are rolled up, all the

Description of the horse races in the sixth moon at the Obo by the Mongols of Outchimts'in and wrestling (on p. 109), attended by the author; also Owen Lattimore, *Mongol journeys*, 274, New York, Doubleday, 1941, with interesting description of the festivities attended by the chiefs of the Banners, etc.

[p. 114(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

people leave, and the spirit of the mountain enjoys in 795
undisturbed silence his ownership over the country. 796

Concerning the offering of sheep, Monguors assert that in former times their ancestors offered a horse on top of the mountains, but that at present, for lack of horses, a sheep is offered and not a pig, because the offer of a sheep is more convenient; a sheep can be driven to the top of the mountain, a pig has to be carried; the killing of a sheep takes less time and requires less utensils, which are not available on top of the mountain.

THE SICK OBO SPIRIT HEALED

The villages situated in the valley of Sha-t'ang, be- 782
longing to the circumscription of the big spirit of the 756
celebrated Obo Lung-wang, had poor crops, spoiled by very bad hailstorms, for three years in succession. The saying went that the vitality of the spirit was declining and that it could no longer prevent these terrific calamities. The shamans were invited to restore its debilitated strength. The chiefs and elders of all the villages together with the inhabitants went in a group to the Obo, with a group of shamans, headed by drums and flags. A big cypress fire was built; the people knelt around the Obo with incense sticks in their hands. The shamans, beating drums, danced in front of the Obo; the eldest among them, in pathetic terms, invited the sick spirit to sit down in the midst of its devoted worshippers. He spoke to the spirit in the sweetest way, just as if he was in its presence and was seeing it, caressing, consoling, and comforting the old spirit. He invited it to look at the kneeling worshippers, and protested that they really loved it, and the shamans would offer a dance in order to entertain the old spirit.

After the dance was performed, in the most gracious way, the sick spirit was supposed to be happy. The shaman, like a good mother, persuaded the spirit to take some medicines in the most affable way. He said that he had prepared for it the most efficient medicine, that it had never failed to restore the strength of Obo spirits. The shaman dug a deep hole near the Obo. The precious bottles of each village were put into it first, then a box containing seventy living snakes [20] of different kinds and colors. The shaman explained to the spirit the different kinds of ailments healed by the different kinds of snakes, and then the hole was filled up. Each village offered its sheep, firecrackers were set off, prostrations, libations and Wei-sang rites were conducted, and a last dance was performed by the shamans. Then the medical performance was closed. The spirit was supposed to be bursting with vitality again,

[20] Shirokogoroff, *Psychomental complex*, 182. The Tungus use the snakes for making poisonous bullets. The big snake is styled by the shamans the most important spirit who gives advice to the shaman, p. 246. See also Waddell, *op. cit.*, 368, *Snakes and Nagas*; also Heissig, *op. cit.*, 48, Spirits who cause diseases flee from the snakes.

[p. 115 (A)]

and the group then marched three times around the 782
Obo. I heard the details of this unusual rite from 756
Monguors who had attended the ceremony.

Just as women are not allowed to enter the temples of the spirits of the Obo, and are excluded from the rites performed at the top of the Obo in the sixth moon, they were also excluded from these rites of restoration of the forces of the spirit of the Sha-t'ang valley. It is [562] for this reason that the Obo festivities, horse races, wrestling, in the sixth moon, are performed at the foot of the mountain, so that women can attend. When women encounter an Obo on their way, they always avoid passing in front of it—the "front" being usually the south or southeast.

The mentality of the Monguors regarding the spirit of the Obo explains their reverence for them. A Monguor will always dismount from his horse when he passes an Obo. He will never fail to add some white stones to the heap, to cry at the top of his voice, honoring the spirit, to prostrate himself nine times, to throw some coins, some flour, a roll of bread on the stone heap, or to smear some butter on the offering table.[21]

It is not only the common people who act in this way. I saw the T'u-kuan Living Buddha, when passing the Obo of Sung-hua-ting, send some lamas ahead to perform the rite of Wei-sang.

CULT OF THE SACRED HILL OF THE VILLAGE

The cult of the sacred hill of the village is performed 795
like the cult of the Obos. A small Obo is built on 782
top of the hill, and a pole is erected. Under the pole is buried the "precious bottle" (urn), the specific offer to the earth god; ropes with flags are attached to the pole and spears planted in the stone heap piled around the pole. Obviously, the dimensions of this Obo are smaller than those of the Obos of the five mountain spirits, and perhaps because of this they are not called Obo, but the "sacred hill of the village."[22]

On New Year's each family sends a member to the sacred hill to enact the rite of Wei-sang and libation. On the fifteenth of the first moon the chiefs of the villages, with the elders and the inhabitants, officially go to the sacred hill, offering a sheep, performing Wei-sand, burying an urn, and making a libation. On the third of the fifth moon a similar group performs the same rites, in order to strengthen the vitality of the spirit of the sacred hill, which, according to the Monguors, must be in full strength in order to help avert hailstorms. Epidemics and epizootics are supposed to be caused by the outraged spirit of the sacred hill, [753] which must be propitiated by a sheep offering and Wei-sang rite, performed by the whole village.

Devout people go on the first and fifteenth of the month to perform Wei-sang and libation. Monguors

[21] Schröder, *op. cit.*, 63.

[22] R. Rahmann, Remarks on the sacrifice of Heaven of the Na-khi, *Monumenta Serica* 13: 406 *sqq.*, 1948.

[p.115(B)]

devoted to the practice of throwing in the wind slips 795
of paper on which are printed the Buddhist "flying 782
wind horses" are accustomed to performing this rite on the top of the sacred hill.

It is not permitted to cut wood, to graze animals, or to hunt on the sacred hill. In old China, the god of the earth was the tree itself, planted in a small forest.[23] The Monguors plant the Obo post in the hill, and do not allow the cutting of bushes growing on it, or the grazing of cattle. In every village the sacred hill is very conspicuous, because of the wealth of the bushes growing on it which seem to create the illusion of a small forest.

CONCLUSION

The worshipping of the mountain gods consists in the sacrifice of a sheep (or a horse), the burying of an urn, the planting of spears, the lighting of a cypress fire, prostrations, and marching three times around the Obo.

All these rites are performed by the villagers, led by the chiefs and elders. After these rites are performed, lamas start reciting texts, beating drums, and making *tormas*. This fact seems to reveal that the lama rites are additional rites of later times, that the cult of the mountain gods existed long before the lamas appeared in the country, and was performed by the communities without them. The cult preserves the old ritual used at the worshipping of the mountain gods.

The old philosophy concerning the nature of the [772]
mountain gods, their dominion over the country and control over its people, is still fresh and living. It is clearly manifested by the burying of an urn, the specific, grateful offer to a god who is regarded as owner of the earth, which contains the specimens of all the kinds of blessings and treasures provided by the earth. This philosophy places the mountain gods in the category of the earth gods. It is typical also that in every urn they never fail to put an offering of medicines, which reveals the philosophy concerning the decay of the gods whose lives have to be nursed and reinvigorated.

However, the Monguors could not explain the meaning of the planting of the spears near the pole. The explanations encountered in books relating to this puzzle seem to be unsatisfactory and arbitrary.

Taking account of this philosophy and the religious environment in which the Monguors live, claiming to have gods and Tengris as proprietors and dominators of the country, it seems easy to understand that little room is left for thinking about a God, Creator of the Universe, and that this notion is completely absent in their philosophy. Only once is the "Spirit of Heaven" recalled during the performance of the whole rite on top of the mountain—at the time the broth of mutton is ladled and thrown to the four points of the compass, honoring all the gods and spirits. However, the "Spirit of Heaven" is called first and the offering is made first

[23] Maspero, *op. cit.*, 168. [p. 116(A)]

to it, in the way the Monguors are used to doing at the 795
time of the offering to the guardian deity of the family.[24] 782

RITES OF AUTUMN

THANKSGIVING RITE

The autumn feast, called by the Monguors "Thanks- 796
giving meeting," is intended as an act of thanksgiving for the harvest reaped.

In the ninth or the tenth month, when the harvest is reaped and threshed, the chief of the village convenes with the elders to agree upon the choice of the shamans who should be invited, and upon the manager and the helpers who should be appointed in order to prepare the feast. Usually small villages invite one shaman, [756] bigger villages two or four; the number of the shamans invited depends also on the abundance or meagerness of the harvest. The shamans are usually chosen from among those who performed the rites in spring or the rites against hail.

The appointed manager of the ceremonies goes, taking with him a bottle of wine, the ceremonial scarf, and an invitation written on red paper "to the master of magic, so-and-so, disciple of the god of the Five Roads"; he fixes with him the date for the ceremony, suiting his convenience. At that time the shamans are very busy performing the same rites in a number of villages. Because the rites of spring had been performed by shamans, shamans should be invited for the present rite and not lamas or Taoist priests.

Each family of the village contributes its part of the required wheat flour for the steaming of rolls, the needed barley for the distillation of wine, and cash for buying the sacrificial hog or sheep. Big villages sacrifice a hog, small villages a sheep. The appointed preparers of rolls and wine take the oath not to eat the rolls or to drink the wine before they have been offered to the spirits.

The evening before the feast day, the shamans and their apprentices arrive in order to prepare the pole and flag, to paste paper banners and streamers, and to print some Chinese inscriptions on red paper. The items are fixed and pasted on the walls and doors of the temple yard, the display of red and green and yellow paper banners turning the usual feeling of monotony and loneliness of the temple yard into one of joy and happiness.

The ceremony starts in the early morning at sunrise, with the erection of the pole. On top of the pole a white cloth flag is attached on which are printed Tibetan prayers or cabalistic designs. To the middle of the pole paper streamers are attached. While the pole is being put down into the hole of the big stone, designated for that purpose, the shamans beat the drums, build a fire in the yard, throw some cypress leaves into it, and sprinkle water on it. On windy days stones are heaped

[24] See Vreeland, *op. cit.*, 96, for the more elaborate Obo cult in the Narobanchin territory; 178, among the Chahar Mongols; 256, Dagor Mongols.

[P.116(B)]

around the base of the pole to steady it. The villagers 796
do not participate at the erection of the pole. After the shamans' breakfast, taken with some of the elders, the bell of the temple is rung and the drums are beaten to call the people for the ceremony.

A group of young folk had already been sent early in the morning to all the hills, situated within the boundaries of the village, where rites had been performed against hail, to remove the stakes, the raven, the hammers, manikins, and goat skin, planted by the shamans in the spring. All these items are stored in the side rooms of the temple. Although the shamans did not accompany the group removing the items, it is said that their presence is required in order to store them.

The long offering table is removed from the temple and placed in front of the pole. A big fire is built in front of the pole and the table, in the center of the temple yard; cypress boughs are thrown into the flames and water sprinkled on the fire. Shamans and helpers purify their hands and utensils in the smoke of the cypress boughs. In the early morning the hog is killed by cutting its throat. The blood is collected, the skin shaved, bowels cleansed, and blood mixed with flour and spices is stuffed into them, and they are exposed on the offering table. The victim is washed and smoked above the fire only. If a sheep is offered, water is poured into the ears, or milk is poured on its back (never done for a pig); the throat is cut and the blood collected and filled into the bowels in the same way. The sheep is skinned and put on the table upon the skin in its entirety, without the head; thirteen big rolls are deposited next to the victim (thirteen rolls are offered to spirits and shamans, and only twelve to the dead), at the time of burial, with a vase containing vegetable oil, a jar containing wine and two bushels with wheat, some peas, spelt, and linseed, the kind of crops reaped by the Monguors. All these offerings are the gifts of the community.

In the meantime, the villagers arrive at the temple: men, women and children, with their own offerings of rolls, meat, raisins, cookies, which they deposit on the table.

The shamans, wearing the flowery coat and the crown 796
of the god of the Five Roads, start the rite by a beating 756
of the drums. The audience kneels in a half circle around the fire, in front of the pole and the table. The chief and the elders of the village, in the first row, hold incense sticks in their joined hands. The chief of the village pours first a libation of milk and wine on the ground before the fire and throws several handfuls of pounded cypress cones and leaves on the fire and sprinkles water. When the smoke billows in the air, he kneels, and prostrating himself says, "Old Father Heaven you know that we thank you for the harvest," and the whole audience prostrates itself three times in deep silence. Then the shamans beat drums in a slow tempo and the thanksgiving ceremony is finished.

[p.10X(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

A large part of the hog is instantly prepared for a collective dinner, the remainder being divided in as many parts as there are families in the village. Each family has to partake of the sacrifice and receive a piece of meat and one roll. The manager of the ceremony presides at the division, while shamans and apprentices each receive thirteen rolls and a piece of meat. 796 782

Planks are placed in rows in the temple yard and straw is spread on both sides of them. The audience sits down on the straw and starts dining and drinking. When the sun is about set and the dinner finished, the shamans beat the drums, the audience kneels, the chief of the village pours a last libation on the ground, throws some cypress leaves into the fire and sprinkles water. The pole is taken down while the audience prostrates three times. Paper banners and streamers and inscriptions, are burned in the fire. For that reason some Monguors call the rite "paper burning rite." The villagers go home and the next morning the shamans leave.

MEANING OF THE RITE

The rite is a genuine one of thanksgiving for the harvest reaped, striking in its simplicity. Thanks are given in the temple yard of the god who is the protector of the village—not to that god, but to "Old Father Heaven" only, as is said distinctly by the chief of the village. It has been noted before that "Heaven and all the spirits" are never honored inside temples or inside rooms, but always in the open air, in courtyards, on top of the roofs, on high mountains. Here is a case where, during the whole rite, the protector god of the village is not even mentioned, although the rite is performed in its own temple yard. The performance of the rite is perfectly in line with the general worshipping of "Heaven and all the spirits" as practiced by the Monguors. 796 782 776

An amazing fact is that shamans are invited to the ceremony, but at the very moment of the performance of the rite the chief of the village himself acts as sacrificer, as the representative and chief of the community, in the same way as we already noted that the chief of the family gives thanks on the roof of his house to "Heaven and all the spirits," offering the reeking rolls, steamed with the flour of the very first reaped wheat. The role played by the shamans is, in fact, secondary, and seems to have no immediate connection with the rite, but rather with the rites of preventing hailstorms, which had been successful. The invitation to the shamans to participate at the rite appears, except for the fact of the planting and removal of the pole, to be an act of kindness and courtesy of the villagers toward the shamans for their happy achievement. The people give thanks themselves for the harvest reaped to "Old Father Heaven" alone, the "Old Father Heaven" who provided their subsistence. 796 782 [622] [756]

But is this formula not borrowed from the Chinese, who use it under the same circumstances in all their

[p. 117 (B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

villages neighboring the Monguors? This assumption, it seems, should be considered because of the fact that so many Chinese who use the formula are enrolled in the Monguor clans, and that so many Monguors who have lost their identity to the extent of having lost their own language, and being ashamed to assert their Monguor origin, boast of being Chinese, and of belonging to a more civilized culture.[25]

XI. PRIVATE RITES PERFORMED WITHOUT REPRESENTATIVES OF RELIGION

SACRED ANIMALS IN PRIVATE FAMILIES

Monguors do not honor the "spirit of Heaven" as a family deity nor do they perform, at present, bloody or non-bloody sacrifices to Heaven. Non-bloody sacrifices, in which the animal is not killed but allowed to wander at will, are a real economic sacrifice because the animal cannot be sold or put to profitable use; but this practice does not really fit the frame of an agricultural economy because the sacred animals cause a lot of damage in the fields. It even happens, as has been noted, that persons are injured and killed by sacred bulls. No wonder that the Chinese, devoted to agriculture, do not practice this rite in China. The Monguors, however, are very fond of the rite, which originated in the nomadic economy, and this fact betrays the original economy in which their ancestors lived.

Almost every Monguor family has its own consecrated animal, which usually is a female sheep—seldom a ram.

On the third day of the New Year, the animal is led into the courtyard. The whole family is in a hustle and bustle washing the feet and the fleece of the animal, and devotedly combining the fleece. Never before has the animal enjoyed such a fine appearance. The sheep is led into the living room before the picture of the deity protector of the family. All the members of the family kneel devoutly with burning incense sticks in their joined hands. They look on with feverish anxiety as the chief of the family pours milk, mixed with water, first on the head of the animal, then into its ears. The sheep frantically shakes its head and at that very moment the whole family starts prostrating itself three times toward the picture of the deity and then toward the animal, smiling, crying with happy enjoyment *"ling liao"* ("the deity accepts our offer"). Thus, the animal is supposed to be consecrated. The family are in a happy mood, with a gleam in their eyes, for the deity will protect the cattle. The more frantically the sheep shakes its head, the better it augurs for the future.

The incense sticks are planted before the picture of the deity honored in the family and the chief of the family and all its members attach red and yellow ribbons

[25] Schröder, Das Herbst-Dankopfer der T'u-jen im Sining-Gebiet, *Anthropos* 37–40: 867, 1952.

[p. 118(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

to the ears of the sheep and all over its fleece. Everybody endeavors to attach a couple of ribbons. 715 825

The sheep will join the herd as before; its wool will be sheared twice a year, as is done for the other sheep, but it will never be killed and will be allowed to die naturally. If it dies during the year, next New Year's another one will be consecrated and will take its place, for every family has to have its sacred animal. 231 [778]

But what if the sheep does not shake its head? This is conclusive proof that the deity is angry and ill disposed toward the family. Dread and terror instantly show upon their faces. All the members of the family, startled and panic stricken, look at one another distressed, dejected, and in deep gloom, for everybody feels that this fact bodes ill for the future. Bowing their heads to the ground and lifting their hearts in humble entreaty, they beg pardon and ask the deity to overlook their offences, to accept the offer. Then milk is poured again, and if the sheep still obstinately refuses to shake its head, it is finally removed. [787]

Then, in the living room, the situation is examined to be sure the predicament is of their own making. Maybe they had been too remiss in honoring the deity; maybe the spirit does not like the discord and resentment reigning in the family; maybe the deity wants a more valuable sacrifice? After renewed prostrations and promises for the future, the conclusion is always that the only hope remaining is to consecrate a more valuable animal, a young female mule, for they know that it is impossible to get around the spirit and defy it with impunity, and that anybody who tampers with its plans is riding for a fall.

The female mule is led into the courtyard and washed; tail and mane are combed. Two red hot stones are dropped in a utensil containing boiling water, which is adjusted under the nose of the animal so that the vapors may enter the nostrils, purifying the animal interiorly, as it has been cleansed exteriorly. The animal is led through the door of the living room, and in front of the picture of the deity. Milk, mixed with water, is poured on its head and in its ears—the head shakes. Ribbons are attached on mane and tail. The animal will be used in the same way as other animals, but never will it be sold. It is allowed to die a natural death.

The Monguors whom I asked for explanations always replied in the same way, that the rite is always performed only on the third of the New Year, by the head of the family, without Red or Yellow lamas or shamans; that the animal is always consecrated to the guardian deity of the family, inside the living room, in front of the picture of the guardian deity. Because the "spirit of Heaven" or "Heaven and all the spirits" are never honored as family protectors, the animal is never consecrated to the "spirit of Heaven" or to "Heaven and all the spirits."

If it happens that the family spirits are the spirits of the mountains, the rite is always performed in the

[p. 118(B)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

same way in the living room, never outside. They said that the aim of the rite is to obtain blessings upon the cattle and their reproduction, and that therefore gelded or old animals are never used. The custom excludes the use of donkeys, hogs, hens, and dogs. Custom does not allow the family to sell or to eat its sacred animal. They all said that the rite was never performed because persons in the family were smitten with severe diseases, or calamities had overcome the family, since other specific rites exist to obviate these miseries. The rite is only intended for the reproduction of animals and to give thanks for blessings upon them. They also said that the staff spirit was never consulted when a new animal had to take the place of the former. The shaking of the head of the animal, when milk mixed with water was poured upon its head and in its ears, was sufficient evidence that the animal was accepted by the family protector. These notes do not agree completely with those of Dom. Schröder in his very interesting article "Die Tierweihe." (*op. cit.*, 839). I write them down according to my notes which I checked many times, because the rite interested me very much.

According to the explanation of the Monguors the rite does not intend to make of the animal an "animal spirit"; the animal is not possessed by the spirit. The aim is to offer to the family protector an animal for which, if the spirit does not agree, a more valuable offer is substituted. When it agrees, however, they all cry: "The offer is accepted!" Because the animal is accepted by the spirit, it partakes of the respect of the family and prostrations are made to the spirit and to its animal. If the rite were a shamanistic rite, the shaman, who is always at hand, would certainly have been invited to perform it.[1]

Poor families must have their sacred animal also, and for this purpose they exceptionally use a rooster, very seldom a he-goat; the ritual for the consecration is the same. Every year, on the third of the New Year, the sacred animal is presented to the deity in the living room, washed, combed, and lavishly adorned with ribbons, while the family prostrates itself. If the sacred animal is a mule, it must be fed on that day with bread. Milk is poured on the animal only once, on the day of the consecration.

The rite must be very old, and must have belonged to a nomadic economy in which horses were offered. At present the rite continues to persist, but it is performed with other animals.[2]

Among the Mongols of Ordos, the rite of the sacred animal is well known and widely practiced today. The animal is consecrated to all kinds of deities, Chingis-

[1] Garma Sandschejew, Weltanschauung und Shamanismus der Alarèn Burjaten, *Anthropos* 23: 938, 1928.

[2] It is worth while to note that the rites of the sacred animals of the communities and of the private families are performed on the Chinese New Year (which usually occurs in February) at the time the lambs are born, the happy time of the harvest of the nomads.

(p. 119(A)]

4: Schram M-5 (1911-1922) 1957 AE9 Monguor AE9

Khan included (for Chingis is a devoutly honored deity), to the fire and to the Obo. The rite is performed in private families by lamas. Stallions are consecrated besides other animals.[3] The tenets of the religion of the Mongols seem to be as confused as those of the religion of the Monguors.

The rite used to be performed by the Turks.[4] Marco Polo, traveling through Turkistan on the way to Peking, notes the rites of the sacred animal—in this case a sheep.[5]

This rite is not to be confused with the well-known rite of the aspersion with milk of mares after the summer solstice. On an auspicious day the mares are milked and the milk is immediately mixed with sour cow's milk, so that it will become sour after a few minutes. This sour milk is thrown to the four points of heaven, with a wooden ladle, while prayers are said. The rite is performed in honor of all kinds of deities of Lamaism; all kinds of gods of heaven; of Chingis, his wives, his sons, and companions; to the spirits of mountains.[6]

CULT OF THE FIRE

A very old element of the old religion of the Turco-Mongols is the cult of the fire, whose specific offer was butter.[7] This cult had already existed in the arctic culture, "wir gehen wohl nicht fehl wenn wir wenigstens die Wurzeln irgendeine religiösen Feuer Kultus schon in die arktischen Urkultur eingesenkt lassen."[8] Fire is supposed to carry the offerings to the supreme deity.[9] It is one of the essential elements of the old religion of the nomads.[10] Among the Ch'i-tan, the god of the fire, perhaps the prototype of the sacred fire of the Mongols, received considerable attention during winter.[11] Among the Ch'i-tan, the burning of big fire-wood was originally

Father Mostaert also notes (*Monumenta Serica* **1**: 335, n. 19, 1935) that among the Mongols this rite, which is performed by laymen, is not specifically for Heaven but for all the Burkhans, Tengris, etc. The koumis (mare's milk) is cast from a ladle toward the four points of heaven; there is not a ladle-full for Heaven alone. This rite follows the summer solstice, by which time the colts have been born. It seems to be a thanksgiving rite, a rite of first fruits, specifically enacted for the reproduction of the horses. The Monguors, no longer having herds of horses, lack this rite.

part of the investiture ceremony of the emperor.[12] Dur- 372
ing the funeral ceremonies for the emperor, the new 776
emperor, facing the fire, made a libation and bowed thrice.[13] At the end of the year, in front of the hall (in open air), an offering of salt and sheep fat was made to the god of the fire by the shamans, and the emperor bowed twice before the fire.[14]

Butter was the original offering for the fire god among the Mongols and the Aryans.[15] Fire is worshipped among the Monguors in two ways: by fire in the open air, and fire on the hearth.

FIRE IN THE OPEN AIR

At marriages, a big fire is kindled in the courtyard 585
where the marriage rites are performed and the dinner 372
is served. The prostrations "to Heaven and to all the spirits" are made by the young couple in front of the fire. When the bride leaves the home of her parents a fire is built in the courtyard and speeches are made; the dinner is taken in front of the fire.[16]

During the celebration of the rite of the sixtieth birthday a big fire is built in the courtyard. First of all, at midnight on New Year's, a big fire is kindled in the courtyard and prostrations are given. The fire is not allowed to go out during the whole day, and this rite is performed before all the other rites.
